- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  1. Applicable standards of the American Architectural Manufacturers Association (AAMA), including but not limited to:
    - a. AAMA/WDMA/CSA 101/I.S.2/A440 Voluntary Performance Specification for Windows, Skylights and Glass Doors - A North American Fenestration Standard.
    - b. AAMA 1503- Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections
    - c. AAMA 2605 Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.
    - d. AAMA 611 Voluntary Specification for Anodized Architectural Aluminum.
    - e. AAMA 901 Voluntary Specification for Rotary & Linear Operators in Window Applications.
    - f. AAMA 902 Voluntary Specification for Sash Balances.
    - g. AAMA 910 Voluntary Life Cycle Specifications and Test Methods for AW Class Architectural Windows and Doors.
    - h. AAMA 505 Dry Shrinkage Performance and Composite Thermal Cycling Test Procedure.

2. Standards of ASTM International which are referenced in other Articles in this Section.
3. National Fenestration Rating Council (NFRC) Documents and Rating System, including, but not limited to:
  - a. NFRC 100 Procedure for Determining Fenestration Product U-factors.
  - b. NFRC 200 Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.
  - c. NFRC 500-2010 Procedure for Determining Fenestration Product Condensation Resistance Values.

**THE WIND PRESSURES ACTING ON THE WALLS MUST BE CALCULATED BY THE STRUCTURAL ENGINEER AND INDICATED ON THE DRAWINGS AT CORNERS AND CENTERS OF WALLS FOR PROPER WALL, WINDOW AND CURTAIN WALL DESIGNS, AS APPLICABLE.**

- C. Delegated Design: A qualified Professional Engineer registered in Michigan, employed by the window manufacturer, shall design aluminum windows, and all accessories, for this project. The windows shall be manufactured, assembled and installed to withstand the structural load requirements as specified in this Section, and according to the Building Code. Expected loads calculated for the building, based on the wind load data indicated on the Drawings. Refer to Part 2 Performance Requirements for additional information.
- D. Installer Qualifications: Engage an experienced Installer who has completed installation of aluminum windows similar in design and extent to those required for the project and whose work has resulted in construction with a record of successful in-service performance.
- E. Single-Source Responsibility: Obtain aluminum window units from one source and by a single manufacturer.
- F. Manufacturer Qualifications: A manufacturer capable of fabricating aluminum windows that meet or exceed specified performance requirements and of documenting this performance by certification and labeling.
- G. Manufacturer's Preconstruction Testing Agency Qualifications: Qualified according to ISO/IEC 17025 and accredited by ICC-ES for preconstruction testing indicated.
- H. Product Options: The drawings indicate the size, profiles, and dimensional requirements, and aesthetic effects of aluminum windows and are based on products of a specific manufacturer. Aluminum windows by indicated approved manufacturers will be considered, provided deviations in dimensions and profiles are minor and do not alter the aesthetic effect as judged by the Owner and Architect. The burden of proof of equality is on the proposer.
- I. Tested Units: Provide window units that were successfully tested by a qualified independent testing laboratory, for the window manufacturer, to demonstrate compliance with specified standards.
- J. Field Testing: The Owner's independent Testing Laboratory will validate testing of windows installed in the building.

1.5 MANUFACTURER TESTING

*REVISE EXAMPLE TEST METHODS AND SEQUENCE IN SUBPARAGRAPH BELOW TO SUIT PROJECT AND COORDINATE WITH TESTS REQUIRED IN "PERFORMANCE REQUIREMENTS" ARTICLE. CONSULT MANUFACTURERS AND TESTING AGENCIES FOR GUIDANCE ON APPROPRIATE REQUIREMENTS FOR PROJECT.*

- A. Preconstruction Testing Program: Perform tests specified in "System Performance Requirements" Article on manufacturer's laboratory samples in the following order:
  - 1. Structural-performance preloading at 50 percent of the specified wind-load design pressure when tested according to ASTM E 330.
  - 2. Air infiltration when tested according to ASTM E283.
  - 3. Water penetration under static pressure when tested according to ASTM E 331.
  - 4. Structural performance at design load when tested according to ASTM E 330.
  - 5. Repeat air filtration when tested according to ASTM E 283.
  - 6. Repeat water penetration under static pressure when tested according to ASTM E 331.
  - 7. Structural performance at maximum 150 percent of positive and negative wind-load design pressures when tested according to ASTM E 330.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Check actual window openings by accurate field measurements before fabrication and show recorded measurements on shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of the Work.
  - 1. Where field measurements cannot be made without delaying the Work, guarantee opening dimensions and proceed with fabricating aluminum windows without field measurements. Coordinate construction to ensure that actual opening dimensions correspond to guaranteed dimensions.

*GLASS WARRANTY IS SPECIFIED IN THE GLAZING SECTION.*

*NOTE THAT STANDARD WARRANTY IS FREQUENTLY 5 YEARS, WITH 10 YEARS BEING AN OPTION AVAILABLE AT ADDITIONAL CHARGE.*

1.7 WARRANTY

- A. Assembly Warranty: Provide a complete parts and labor warranty for a minimum of 10 years from the date of Substantial Completion according to the following terms.
  - 1. Manufacturer agrees to repair or replace components of aluminum windows that do not comply with requirements or that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:
    - a. Structural failures including, but not limited to, excessive deflection.

- b. Noise or vibration created by wind and thermal and structural movements.
- c. Water penetration through fixed glazing and framing areas.
- d. Failure of operating components.
- e. Glazing failure, including gasket shrinkage.
- f. Glass defects and failure as specified in the Glazing Section.

**RETAIN APPLICABLE WARRANTIES FOR PROJECT.**

- B. Fluoropolymer Finish Warranty: Manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied fluoropolymer finishes within specified warranty period.
  - 1. Deterioration includes, but is not limited to, the following:
    - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
    - b. Chalking in excess of a No.8 rating when tested according to ASTM D 4214.
    - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

**VERIFY AVAILABLE WARRANTIES AND WARRANTY PERIODS FOR FINISHES WITH MANUFACTURERS LISTED IN PART 2 ARTICLES. FLUOROPOLYMER FINISHES ARE ELIGIBLE FOR 10 YEAR WARRANTIES.**

- 2. Warranty Period: 10 years from date of Substantial Completion.
- C. Anodized Finish Warranty: Manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied anodized finishes within specified warranty period. Any metal forming or welding must be done prior to finishing.
  - 1. Deterioration includes, but is not limited to, the following:
    - a. Color fading more than 5 Delta-E Hunter units (square root of the sum of square Delta L, Delta a, and Delta b) as determined by ASTM D 2244.
    - b. Chalking in excess of a No.8 rating when tested according to ASTM D 4214.
    - c. Cracking, checking, flaking, or blistering.
  - 2. Warranty Period: 10 years from date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Window Manufacturers:

**SELECT WINDOW DESIGN BASED ON PERFORMANCE WITHIN THE LISTED MANUFACTURERS. THE FOLLOWING MANUFACTURERS OFFER FIXED AND OPERABLE WINDOW UNITS THAT MEET SPECIFIED PERFORMANCE LEVELS. VERIFY PERFORMANCE LEVELS FOR VARIOUS UNIT TYPES AND SIZES IN**

*THE PROJECT BECAUSE NOT ALL PRODUCT LINES AND SIZES FROM THE MFRS BELOW MEET THE PERFORMANCE SPECIFICATIONS.*

*REVIEW NFRC WEBSITE FOR LISTING OF WINDOWS CERTIFIED TO MEET PERFORMANCE STANDARDS.*

1. Graham Architectural Products.
2. Kawneer Company, Inc.
3. Wausau Window and Wall Systems.
4. Traco.

B. Acceptable Fluoropolymer Coating Manufacturers:

1. PPG Industries.
2. Valspar Corp.
3. Akzo Nobel.

## 2.2 PERFORMANCE REQUIREMENTS

*PRIMARY ENERGY PERFORMANCE REQUIREMENTS INCLUDE THERMAL TRANSMITTANCE (U-FACTOR), SOLAR HEAT GAIN COEFFICIENT, AND AIR INFILTRATION AS DEFINED BY ASHRAE/IESNA 90.1-2007. RELATED AND ADDITIONAL ENERGY PERFORMANCE CONSIDERATIONS INCLUDE CONDENSATION RESISTANCE AND VISIBLE LIGHT TRANSMITTANCE. OPTIONS IN SUBPARAGRAPHS BELOW ARE EXAMPLES ONLY. REVISE VALUES TO SUIT BUILDING ENVELOPE AS DEFINED BY ASHRAE/IESNA 90.1-2007. REVIEW PERFORMANCE WITH RESPECT TO U OF M DESIGN GUIDELINES FOR DESIGN AND CONSTRUCTION SID-D "ENERGY AND WATER CONSERVATION" AND RELATED STANDARDS. COORDINATE WITH DIVISION 08 SECTION "GLAZING".*

A. Provide aluminum windows engineered, fabricated, and installed to withstand normal thermal movement, wind loading, and impact loading without failure, as demonstrated by testing manufacturer's standard window assemblies representing types, classes, grades, and sizes required for Project according to test methods indicated.

*CONSULT WITH STRUCTURAL ENGINEER TO DETERMINE PROPER PERFORMANCE GRADE, WHICH IS BASED UPON WIND SPEED AND EXPOSURE CATEGORY.*

B. Provide aluminum windows that comply with AAMA/WDMA/CSA 101 Performance Class AW and Performance Grade [ ].

*ALWAYS RETAIN PARAGRAPH BELOW.*

C. Factory testing indicated in paragraphs below shall demonstrate compliance with requirements indicated in AAMA 101 for air infiltration, water penetration, structural, and thermal performance for type, grade, and performance class of window units required. Where required design pressure exceeds the minimum for the specified window grade, comply with requirements of AAMA 101, Section 3, "Optional Performance Classes," for higher than minimum performance class.

D. Air infiltration: Maximum 0.4 cfm per square foot at 6.24 psf pressure differential when tested in accordance with ASTM E283.

E. Water Penetration:

1. No uncontrolled water leakage at 12.00 psf static pressure differential, with water application rate of 5 gallons/hr/sq ft when tested in accordance with both ASTM E331 and ASTM E547. Repeat static water test after application of design test pressures.

**NOTE THAT THE FOLLOWING INFORMATION AS DETERMINED BY PROJECT'S STRUCTURAL ENGINEER MUST BE SHOWN ON DRAWINGS.**

F. Structural:

1. Structural Loads: As indicated on Drawings.
2. Uniform Load Deflection Test
  - a. No deflection of any unsupported span L of test unit (framing rails, muntins, mullions, etc.) in excess of L/175 at both a positive and negative load of design test pressure psf) when tested in accordance with ASTM E330.
3. Uniform Load Structural Test:
  - a. Unit to be tested at 1.5 times design test pressure, both positive and negative, acting normal to plane of wall in accordance with ASTM E330.
  - b. No glass breakage; permanent damage to fasteners, hardware parts, or anchors; damage to make windows inoperable; or permanent deformation of any main frame or ventilator member in excess of 0.2 percent of its clear span.

G. Thermal:

1. Thermal Transmittance (U-factor) Fixed glazing and Framing Areas: U-factor of not more than 0.55 Btu/sq. ft. x h x deg F as determined according to NFRC 100.
2. Thermal Transmittance (U-factor) Operable Window Glazing and Framing Areas: U-factor of not more than 0.55 Btu/sq. ft. x h x deg F as determined according to NFRC 100.
3. Solar Heat Gain Coefficient (SHGC): Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than 0.40 as determined according to NFRC 200.
4. Condensation Resistance: Provide units tested for thermal performance according to AAMA 1503 showing a condensation resistance factor (CR) of 60.

**SELECT ABOVE OR BELOW. ABOVE PUTS RESPONSIBILITY ON DESIGNER AND NEEDS TO BE CONFIRMED BASED UPON BUILDING OCCUPANCY FACTORS AND SHOULD BE VERIFIED WITH MECHANICAL ENGINEER. BELOW PUTS RESPONSIBILITY ON MANUFACTURER.**

**CRF CALCULATOR TOOL IS AVAILABLE AT:**

**[HTTP://AAMANET.ORG/CRFCALCULATOR/1/334/CONDENSATION-RESISTANCE-FACTOR-TOOL](http://AAMANET.ORG/CRFCALCULATOR/1/334/CONDENSATION-RESISTANCE-FACTOR-TOOL)**

5. Condensation Resistance: Provide units tested for thermal performance according to AMMA 1503 showing a condensation resistance factor (CRF) such that there shall be no formation of condensation in any form on glazing and framing.

**INSERT PROJECT SPECIFIC DESIGN VALUES BELOW.**

- a. Indoor design temperature:
  - 1) Winter: []
  - 2) Summer: []
- b. Indoor humidity:
  - 1) Winter: []
  - 2) Summer: []
- 6. Thermal Movements: Provide window units that allow thermal movement resulting from the following maximum change (range) in ambient temperature when engineering, fabricating, and installing aluminum windows to prevent buckling, opening of joints, and overstressing of components, connections, and other detrimental effects. Base engineering calculation on actual surface temperatures of materials due to solar heat gain and nighttime sky heat loss.
  - a. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

H. Operable window units shall successfully pass operating force and deglazing test requirements of AAMA 101 and life-cycle test requirements specified in AAMA 910.

**INCLUDE BELOW IF PROJECT CONTAINS THE FOLLOWING OPERABLE WINDOW TYPES**

- 1. Projected casement window units shall successfully pass the following test requirements as specified in AAMA 101:
  - a. Torsion test on an unglazed ventilator.
  - b. Horizontal and vertical concentrated load tests on latch rail of each ventilator.
  - c. Torsion load test on intermediate frame rails.
  - d. Vertical concentrated load test on intermediate frame rails over each ventilator.
  - e. Balance arm load test.
- 2. Projected awning window units shall successfully pass the following test requirements as specified in AAMA 101:
  - a. Hold-open arm or stay-bar load test.
  - b. Torsion test.
  - c. Horizontal concentrated load test.
  - d. Vertical concentrated load test.

I. Labeling: Per ANSI/ASHRAE 90.1-2007, provide a permanent nameplate, installed by the manufacturer, listing the U-factor, SHGC, and air leakage rate. The label may be the NFRC energy performance label or the AAMA performance label.

**2.3 DESIGN REQUIREMENTS**

**INCLUDE THE PARAGRAPH BELOW TO CONTROL THE RELATIONSHIP OF VISION AND SPANDREL PANELS WHEN BOTH ARE INCLUDED IN THE PROJECT.**

- A. Uniform Glass Plane Requirement: Within the same wall opening, fabricate windows to align the exterior surface planes of vision glass with spandrel panels.
  - 1. Maximum out-of-plane dimension for vision and spandrel panels: 1/8-inch.
  - 2. Where applicable, align metal filler panels in the same plane as adjacent spandrel panels.

**2.4 MATERIALS**

- A. Aluminum Extrusions: Provide alloy and temper recommended by the window manufacturer for the strength, corrosion resistance, and application of required finish, but not less than 22,000-psi ultimate tensile strength and of the following thickness and depth at any location for main frame and sash members.

*BELOW ARE 2 COMMONLY USED SIZES. 2-1/4-INCH DIMENSION IS NOT RECOMMENDED FOR VENTILATORS OVER 15 SQUARE FEET IN AREA, OR WITH VERTICAL DIMENSION GREATER THAN 78-INCHES.*

- 1. Main Frame Depth: 2-1/4 inches.
- 2. Main Frame Depth: 3-1/4 inches.

*DELETE BELOW FOR SINGLE- AND DOUBLE-HUNG UNITS, OR FOR OTHER TYPES IF NOT REQUIRED.*

- a. Provide ventilator members of depth matching main frame.

- B. Fasteners: Provide aluminum, nonmagnetic stainless steel, epoxy adhesive, or other materials warranted by the manufacturer to be noncorrosive and compatible with aluminum window members, trim, hardware, anchors, and other components of window units.

*RETAIN THE PARAGRAPH BELOW.*

- 1. Reinforcement: Where fasteners screw-anchor into aluminum less than 0.125 inch thick, reinforce the interior with aluminum or nonmagnetic stainless steel to receive screw threads or provide standard, noncorrosive pressed-in splined grommet nuts.

*GENERALLY RETAIN THE PARAGRAPH BELOW. MODIFY AS APPROPRIATE IF USE OF EXPOSED FASTENERS IS PERMITTED.*

- 2. Exposed Fasteners: Except where unavoidable for application of hardware, do not use exposed fasteners. For application of hardware, use fasteners that match the finish of the member or hardware being fastened, as appropriate.

- C. Anchors, Clips, and Window Accessories: Fabricate anchors, clips, and window accessories of aluminum, nonmagnetic stainless steel, or hot-dip zinc-coated steel complying with the requirements of ASTM A 123; provide sufficient strength to withstand design pressure indicated.

*CONSIDER INCLUDING BELOW FOR STRUCTURAL STRENGTH, OR TO CLOSE OFF OPENINGS THROUGH CONSTRUCTION*

- 1. Provide continuous structural anchor clips.

- D. Sealant: For sealants required within fabricated window units, provide type recommended by the manufacturer for joint size and movement. Sealant shall remain permanently elastic, nonshrinking, and nonmigrating. Comply with Division 07 Section "Joint Sealants" of the Specifications for selection and installation of sealants.

**2.5 HARDWARE**

- A. General: Provide the manufacturer's standard hardware fabricated from aluminum, stainless steel, or other corrosion-resistant material compatible with aluminum and of sufficient strength to perform the function for which it is intended.

*DELETE BELOW IF NO PROJECTED WINDOWS.*

- B. Cam Handles: Provide manufacturer's standard cam-action sweep lock/handle of solid white bronze.
  - 1. Finish: Polished (chrome white).
  - 2. Finish: Oxidized (dark bronze).

*DELETE BELOW IF NO DOUBLE HUNG WINDOWS.*

- C. Handles: Provide manufacturer's standard stainless steel wire pull.
  - 1. Stainless Steel Finish: Satin, natural.
  - 2. Aluminum Finish: Match window frame.

*RETAIN THE NEXT PARAGRAPH WITH CASEMENT AND PROJECTED WINDOWS. SPECIAL EGRESS TYPE FOUR-BAR FRICTION HINGES ARE ALSO AVAILABLE FOR CASEMENT WINDOWS WHERE WINDOWS ARE ALSO USED FOR EMERGENCY EGRESS.*

- D. Four-Bar Friction Hinges: Comply with AAMA 904.
  - 1. Provide concealed four-bar friction hinges with adjustable slide shoes of nylon or other nonabrasive, nonstaining, noncorrosive, durable material.

*RETAIN FOR LARGE VENTS IN CASEMENT WINDOWS. VERIFY WITH WINDOW MANUFACTURERS.*

- E. Butt Hinges: Provide heavy-duty 5-knuckle butt hinges with nylon bushings complying with AAMA 904. Finish and color to match frames.

*RETAIN ROTARY OPERATORS BELOW IF DESIRED FOR AWNING, AND CASEMENT TYPE WINDOWS.*

- F. Gear-Type Rotary Operators: Comply with AAMA 901 for rotary operators. Comply with ASTM E 405, Method A, when subjected to operating moments and closing torques indicated in AAMA 101.
  - 1. Operator shall operate all ventilators simultaneously, securely closing them at both jambs without use of additional manually controlled locking devices.

*DELETE TWO PARAGRAPHS BELOW IF NO CASEMENT WINDOWS.*

- G. Single Point Locks: Provide manufacturer's standard cam-action lift lock of solid white bronze. Color to match ventilator frame.

*BELOW FOR LARGE CASEMENTS REQUIRING TWO LATCHING POINTS (NOTE THAT CASEMENT WIDTH MUST BE OVER 2.5 FEET FOR MULTI-POINT LATCH).*

H. Two-Point Locks: Provide manufacturer's standard 2-point, cam-action lift lock of solid white bronze. Color of exposed parts to match ventilator frame.

*DELETE BELOW IF NO SINGLE- OR DOUBLE-HUNG WINDOWS.*

I. Cam Action Lock: Sweep lock and keeper on the meeting rail.

*SELECT BELOW FOR HOUSING PROJECTS.*

J. Limit Device: Heavy-duty, concealed arm, custodial-key operated limit device designed to restrict occupant operation of ventilator, but permit full operation with custodial key. Provide Truth 99 series or equivalent by window manufacturer. Provide in residential applications, and where indicated.

*INCLUDE BELOW WITH EITHER LIMIT DEVICE SPECIFIED ABOVE. MODIFY VALUE BELOW TO SUIT PROJECT.*

1. Set devices to limit opening to 6 inches, clear, from window frame member to vent frame.

*RETAIN THE NEXT PARAGRAPH WITH DOUBLE-HUNG WINDOWS.*

K. Counterbalancing Mechanism: Comply with AAMA 902.

*RETAIN ONLY ONE OF THE TYPES OF SASH BALANCES BELOW.*

1. Sash Balance Type: Concealed spiral type of size and capacity to hold sash stationary at any open position.
2. Sash Balance Type: Concealed tape spring type of size and capacity to hold sash stationary at any open position.

## 2.6 ACCESSORIES

A. General: Provide the manufacturer's standard accessories that comply with indicated standards.

*DELETE OPTIONAL OR ACCESSORY ITEMS IN THIS ARTICLE THAT ARE NOT REQUIRED. COORDINATE ITEMS RETAINED WITH PROVISIONS CONTAINED IN THE "MATERIALS" ARTICLE.*

B. Panning and Trim: Provide panning and trim as shown with anchors as required to securely fasten trim and panning items to window units and adjacent substrates. Provide concealed anchors where possible. Provide units of profile and dimensions indicated, but not less than 0.062-inch-thick extruded aluminum. Miter and cope corners, and dress smooth. Finish to match window units.

*ANCHOR CLIPS REFERENCED BELOW ARE FOR 2-PIECE SNAP-ON TRIM. DELETE BELOW IF ONLY ADHESIVELY APPLIED "L"-SHAPED TRIM IS INCLUDED.*

1. Interior Trim: Provide 2-piece extruded aluminum box type trim with continuous anchor clips for trim exceeding 36 inches in length.

*DELETE BELOW IF NO ADHESIVELY APPLIED "L"-SHAPED TRIM.*

2. Interior Trim: Anchor "L"-shaped trim pieces with continuous adhesive tape strip applied to surface in contact with adjacent wall/partition substrate only.

**COORDINATE BELOW WITH WINDOW SCHEDULE**

- C. Insect Screens: Provide insect screens for each operable exterior sash or ventilator. Locate screens on the inside or outside of the window sash or ventilator, depending upon window type. Design windows and hardware to accommodate screens in a tight-fitting removable arrangement, with a minimum of exposed fasteners and latches.

**RETAIN ONLY ONE OF THE NEXT TWO PARAGRAPHS IF SCREENS ARE REQUIRED. COMBINE THE PARAGRAPHS IF THE CONTRACTOR IS TO HAVE AN OPTION IN SELECTING SCREEN FRAME MATERIAL.**

- 1. Screen Frames: Fabricate frames of tubular-shaped extruded or formed aluminum members of 0.040-inch minimum wall thickness, with mitered or coped joints and concealed mechanical fasteners. Finish frames to match window units.
  - a. Provide removable PVC spline-anchor concealing the edge of the screen frame.
- 2. Wire Fabric Insect Screen: Provide 18 by 16, mesh of 0.011-inch-diameter black anodized aluminum wire, complying with FS RR-W-365, Type VII.

- D. Compression-Type Glazing Strips and Weatherstripping: Unless otherwise indicated, and at manufacturer's option, provide compressible stripping for glazing and weatherstripping such as molded PVC gaskets complying with ASTM D 2287, or molded expanded EPDM gaskets complying with ASTM C 509, Grade 4.

**SLIDING-TYPE WEATHERSTRIPPING BELOW IS FOR DOUBLE-HUNG WINDOW UNITS.**

- E. Sliding-Type Weatherstripping: Provide woven-pile weatherstripping of nylon pile and resin-impregnated backing fabric. Comply with AAMA 701.2.
  - 1. Provide stripping with integral centerline barrier fin of semirigid plastic sheet of polypropylene.
  - 2. Provide weatherstripping locked in to extruded grooves in the sash.
  - 3. Provide sliding-type weatherstripping where sash rails slide vertically along the unit frame. Provide compression-type weatherstripping at the head and sill of each operating sash.

**CONSIDER INCLUDING BELOW.**

- F. Insulation: Blanket or batt type meeting ASTM C 665, Type III, Class A, fiberglass.

**2.7 FABRICATION**

- A. General: Fabricate aluminum window units to comply with indicated standards. Include a complete system for assembly of components and anchorage of window units.
  - 1. Provide units that are reglazable without dismantling sash or ventilator framing.
  - 2. Prepare window sash or ventilators for glazing except where preglazing at the factory is indicated.

*REVISE BELOW TO SUIT PROJECT.*

3. Provide units that are capable of being reglazed from the building interior, except at spandrels or other inaccessible conditions.

*INCLUDE THERMAL BREAK CONSTRUCTION FOR ALL PROJECTS.*

- B. Thermal-Break Construction, General: Fabricate window units with an integral, concealed low-conductance thermal barrier, located between exterior materials and window members, in a manner that eliminates direct metal-to-metal contact; and that complies with the following:
1. Products comprising the system shall have been in use for not less than 5 years.
  2. Systems shall have been tested to demonstrate resistance to thermal conductance and condensation, and to show adequate strength and security of glass retention.
  3. Systems shall be capable of transferring shear during bending under design loads by promoting composite action between the exterior and interior extrusions.
- C. Weepholes: Provide weepholes and internal passages to conduct infiltrating water to the exterior.

*DELETE THE PARAGRAPH BELOW IF THERE ARE NO LINES WHERE VENT FRAMES LAP THE WRONG WAY TO SHED WATER.*

- D. Provide water-shed members above side-hinged ventilators and similar lines of natural water penetration.

*DELETE THE NEXT PARAGRAPH IF SUBFRAMES ARE NOT REQUIRED. SUBFRAMES PROVIDE A NEAT, SEALABLE PERIMETER FOR RENOVATION WORK. THEY ARE USUALLY NOT REQUIRED FOR WINDOWS IN NEW SURROUNDING CONSTRUCTION.*

- E. Subframes: Provide subframes with anchors for window units, where shown, of profile and dimensions indicated but not less than 0.062-inch-thick extruded aluminum. Miter or cope corners, and weld and dress smooth with concealed mechanical joint fasteners. Finish to match window units.

*MODIFY PARAGRAPHS BELOW TO SUIT PROJECT REQUIREMENTS.*

1. Provide subframes at all wall openings to receive window units.
2. Locate subframes at sill, head and jambs of openings.

*DELETE THE PARAGRAPH BELOW IF MULLIONS ARE NOT REQUIRED.*

- F. Mullions: Provide mullions and cover plates as shown, matching window units, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections, in the manner indicated.

*DELETE THE NEXT PARAGRAPH IF GLAZING STOPS ARE NOT REQUIRED (AT STRUCTURAL-GLAZED TYPE WINDOW SYSTEMS FOR EXAMPLE).*

- G. Glazing Stops: Provide screw-applied or snap-on glazing stops, coordinated with glass selection and glazing system indicated. Finish glazing stops to match window units.

*DELETE THE PARAGRAPH BELOW IF PREGLAZING IS IMPRACTICAL. GLASS SIZES LARGER THAN 60 TO 100 UNITED INCHES MAY BE DIFFICULT TO HANDLE WITHOUT DAMAGE. IT IS ALSO POSSIBLE THAT THE INSTALLATION OR ANCHORAGE SYSTEM WILL NOT PERMIT PREGLAZING. VERIFY WITH WINDOW MANUFACTURER.*

- H. Preglazed Fabrication: Preglaze window units at the factory. Comply with glass and glazing requirements of the Division 08 Section "Glazing" of these specifications and AAMA 101.

## **2.8 FINISHES, GENERAL**

- A. Comply with referenced AAMA Voluntary Specifications for detailed finish requirements.

*DELETE BELOW IF NO CURTAIN WALL*

*TYPICALLY SPECIFY FINISHES IN CURTAIN WALL SECTION.*

- B. Finish aluminum windows to match other adjacent glazed aluminum curtain wall components, when applicable. Refer to Division 08 Section "Glazed Aluminum Curtain Walls" for finish requirements.

*DELETE 2 ARTICLES BELOW IF SPECIFIED IN CURTAIN WALL SECTION.*

## **2.9 FLUOROPOLYMER ALUMINUM FINISHES**

*RETAIN FINISHES IN PARAGRAPHS BELOW TO SUIT PROJECT. FLUOROPOLYMER FINISH IS PREFERRED BY THE U OF M.*

*IF RETAINING MORE THAN ONE, INDICATE LOCATION OF EACH ON DRAWINGS BY TYPE. COORDINATE WITH DESIGNATIONS IN THIS SECTION. ALUMINUM-FRAMING SYSTEMS ARE AVAILABLE WITH DUAL FINISHES, ALLOWING DIFFERENT INTERIOR AND EXTERIOR COLOR FINISHES.*

*IF SPECIFIC PRODUCTS ARE REQUIRED, NAME COATING MANUFACTURERS AND PRODUCTS.*

- A. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to metal surfaces to comply with coating and resin manufacturers' written instructions.

*TYPICALLY, ONLY USE THREE-COAT FLUOROPOLYMER FINISH WITH METALLIC FINISHES.*

- B. High-Performance Organic Finish: Three coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

**BELOW IS TYPICAL COLOR CHOICE.**

- C. Color and Gloss: Non-metallic solid color, dark bronze; low gloss, as selected by the Owner.
- D. Field Touch-Up Materials: Fluoropolymer coating produced specifically for field touch-up work by same manufacturer as shop applied coating.

**2.10 ANODIC ALUMINUM FINISHES**

**USUALLY RETAIN ONLY ONE OF THE FINISH SYSTEMS SPECIFIED BELOW. IF MORE THAN ONE IS REQUIRED, INDICATE THE LOCATION OF EACH ON DRAWINGS OR INSERT A DESCRIPTION OF THE LOCATION OF EACH SEPARATE FINISH.**

- A. Class I Clear Anodized Finish: Anodic Coating: Class I Architectural, clear film thicker than 0.7 mil, complying with AAMA 611.

**RETAIN THE PARAGRAPH ABOVE IF CLEAR FINISH IS REQUIRED, OR THE PARAGRAPH BELOW IF A COLOR ANODIZED FINISH IS DESIRED.**

- B. Class I Color Anodized Finish: Class I Architectural, film thicker than 0.7 mil with integral color or electrolytically deposited color, complying with AAMA 611.

**SELECT COLOR BELOW OR MODIFY WHEN APPROVED BY THE OWNER.**

- 1. Color: Dark bronze.
- C. Finish Appearance: Variations in appearance of butting or adjacent anodized aluminum elements are acceptable if within 1/2 the range indicated in approved samples. Noticeable variation in the same element is not acceptable.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

- A. Inspect openings before beginning installation. Verify that rough or masonry opening is correct and the sill plate is level.

**EDIT PARAGRAPHS TO SUIT PROJECT FROM THE OPTIONS BELOW.**

- 1. Masonry surfaces shall be visibly dry and free of excess mortar, sand, and other construction debris.
- 2. Metal surfaces shall be dry; clean; free of grease, oil, dirt, rust and corrosion, and welding slag; without sharp edges or offsets at joints.

**3.2 INSTALLATION**

**DELETE THE NEXT PARAGRAPH IF THERE IS NO CURTAIN WALL OR ALUMINUM STOREFRONT WORK CONTAINING ALUMINUM WINDOW UNITS.**

- A. Refer to the Division 08 Sections "Glazed Aluminum Curtain Walls" or "Aluminum-Framed Entrances and Storefronts" for installation requirements of aluminum window units in [glazed curtain walls] [aluminum entrances and storefronts.

**COORDINATE THE NEXT THREE PARAGRAPHS AND DRAWINGS IF ALL WINDOW UNITS ARE INCLUDED IN GLAZED CURTAIN WALL WORK.**

- B. Comply with manufacturer's specifications and recommendations for installation of window units, hardware, operators, and other components of the work.
- C. Set window units plumb, level, and true to line, without warp or rack of frames or sash. Provide proper support and anchor securely in place.
1. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials by complying with the requirements specified under paragraph "Dissimilar Materials" in the Appendix to AAMA 101.
- D. Set sill members and other members in a bed of joint sealant or gaskets, as shown, to provide weathertight construction. Refer to the Division 07 Section "Joint Sealants" for compounds, fillers, and gaskets to be installed concurrently with window units. Coordinate installation with wall flashings and other components of the work.
1. Compounds, joint fillers, and gaskets to be installed after installation of window units are specified as work in the "Joint Sealants" section.

**ALWAYS RETAIN BELOW FOR NEW CONSTRUCTION. FOR WINDOW REPLACEMENT PROJECTS MODIFY OR DELETE BELOW DEPENDING UPON EXISTING CONDITIONS.**

- E. Refer to the Division 07 Section "Air Barrier" for coordination with air barrier terminations around windows.
- F. Loosely pack cavities around window perimeter between existing construction and window frame or subframe members with fiberglass insulation; pack accessible cavities of window frame with fiberglass, according to window manufacturer's instructions.

### 3.3 FIELD QUALITY CONTROL

**RETAIN PARAGRAPHS BELOW TO DESCRIBE TESTS AND INSPECTIONS PERFORMED BY THE INDEPENDENT TESTING AGENCY EMPLOYED BY THE OWNER. RETAIN "FIELD QUALITY-CONTROL REPORTS" PARAGRAPH IN "SUBMITTALS" ARTICLE. EDIT TO SPECIFY PROJECT SPECIFIC TESTING REQUIREMENTS.**

- A. Testing Agency: Owner will engage a qualified testing agency for witnessing field testing, determining that the tests are performed correctly and making the final determination whether the aluminum windows have successfully passed the tests.

- B. Testing Activities: Testing and inspecting of representative areas of window shall take place as installation proceeds to determine compliance of installed assemblies with specified requirements. Owner will determine locations and timing of testing.
- C. Test Area: One window at corner and center of wall, per each wall elevation, including surrounding wall construction, at heads, jambs and sills.
  - 1. Perform at least three tests, prior to 35, and 70 percent completion, and before installation of interior walls and finishes.
- D. Windows will be considered defective if they do not pass tests and inspections.
- E. If test area fails to meet the specified air infiltration or water penetration requirements, Contractor shall submit description of proposed remedial work for Owner and Architect's information.
  - 1. Remedial work shall be incorporated into the test specimen for retesting.
  - 2. Cost of retesting shall be responsibility of Contractor.
- F. Remedial work which results in successful retesting of test specimen shall be incorporated in installed system for entire Project.
- G. For each area which fails field testing, 1 additional area of equal size shall be tested for both air infiltration and water penetration.
  - 1. Cost of testing of additional areas shall be responsibility of Contractor.
- H. When installation is 50 percent complete, Owner and Architect will select 1 additional location for testing in accordance with AAMA 501, as specified above.
  - 1. For each area which fails field testing, 1 additional area of equal size shall be tested for both air infiltration and water penetration.
  - 2. Cost of testing of additional areas shall be responsibility of Contractor.
- I. Testing agency shall submit copies of inspection and test reports to Owner, Architect and Contractor within 48 hours after date of test.
- J. The Owner reserves the right to select additional test areas as required, without limitation, subject to correction and remediation as specified herein.

**3.4 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section "Full Project Commissioning" or "Project Commissioning for Small Projects" and other requirements of the Contract Documents.

**3.5 ADJUSTING, CLEANING, PROTECTION**

- A. Adjust operating sash and hardware to provide a tight fit at contact points and at weatherstripping for smooth operation and a weathertight closure.
- B. Clean aluminum surfaces promptly after installation of windows. Exercise care to avoid damage to protective coatings and finishes. Remove excess glazing and sealant compounds, dirt, and other substances. Lubricate hardware and other moving parts.
- C. Clean glass of preglazed units promptly after installation of windows. Comply with requirements of the Division 08 Section "Glazing" for cleaning and maintenance.
- D. Provide final protection and maintain conditions, in a manner acceptable to aluminum window manufacturer, that ensure window units are without damage or deterioration at the time of Substantial Completion.

*REVISE BELOW TO SUIT PROJECT AND COORDINATE WITH DRAWINGS.*

**3.6 WINDOW SCHEDULE**

- A. Double-hung windows
  - a. Counterbalancing mechanism.
  - b. Cam Action Lock.
  - c. Lift Handle: Applied sash lifts on bottom rail of lower sash (2 per sash).
- B. Projected casement windows
  - 1. Hardware: Provide the following operating equipment and hardware:

*DELETE THE NEXT PARAGRAPH IF IT IS NOT REQUIRED.*

- a. Rotary Operator.
- b. Friction Hinges: 2 per ventilator.

*SELECT HINGE TYPE ABOVE OR BELOW. CONSIDER ADDING A REQUIREMENT FOR LIMIT STOPS TO PREVENT PROJECTION BEYOND WALL SURFACES WHERE THIS IS DESIRABLE.*

- c. Butt Hinges: 2 per ventilator.

*RETAIN BELOW FOR EITHER HINGE TYPE*

- 1) Provide ventilator operation that permits inside cleaning of the outside glass face from the interior.
- 2) Provide 3 hinges on units over 4 feet high or 4 feet wide.

*SELECT ONE OF THE SASH LOCKS BELOW BASED ON WINDOW SIZE / LOCATION. NOTE: MODIFY TEXT IF NECESSARY TO PROVIDE FOR 2 LOCKS ON UNITS OVER 3 FEET, 6 INCHES WIDE.*

- d. Sash Lock: Cam action lock.

*RETAIN BELOW FOR WINDOW UNITS WITH VENTILATORS OVER 6 FEET ABOVE THE FLOOR.*

- e. Sash Lock: Pole-operated cam action lock.

*SPECIFY BELOW FOR SLEEPING ROOMS.*

- f. Limit Device.

*PROVIDE INSECT SCREENS IN HOUSING PROJECTS AND FOOD PREPARATION AREAS ONLY. SCREENS ARE GENERALLY NOT REQUIRED FOR UNIVERSITY PROJECTS*

- 2. Insect screens

C. Projected awning windows

- 1. Hardware: Provide the following operating hardware and equipment:
  - a. Rotary operator
  - b. Friction Hinges: 2 per ventilator.

*SELECT HINGE TYPE ABOVE OR BELOW. CONSIDER ADDING A REQUIREMENT FOR LIMIT STOPS TO PREVENT PROJECTION BEYOND WALL SURFACES WHERE THIS IS DESIRABLE.*

- c. Butt Hinges: 2 per ventilator.

*RETAIN BELOW FOR EITHER HINGE TYPE*

- 1) Provide ventilator operation that permits inside cleaning of the outside glass face from the interior.
- 2) Provide 3 hinges on units over 4 feet high or 4 feet wide.
- d. Hold-Open Device: Automatic locking hold-open arms (2 per ventilator).

*SPECIFY BELOW FOR SLEEPING ROOMS.*

- e. Limit Device.

*PROVIDE INSECT SCREENS IN HOUSING PROJECTS AND FOOD PREPARATION AREAS ONLY. SCREENS ARE GENERALLY NOT REQUIRED FOR UNIVERSITY PROJECTS*

- 2. Insect screens

D. Fixed windows

END OF SECTION 085113

BuildingName  
The Description of the Project  
P00000000 0000

**SPECIFICATION DIVISION 8**

NUMBER            SECTION DESCRIPTION

**DIVISION 08 OPENINGS**

SECTION 087100 - DOOR HARDWARE

**END OF CONTENTS TABLE**

**DIVISION 08 OPENINGS**  
**SECTION 087100 - DOOR HARDWARE**

*REVISION HISTORY*

*APRIL 2005 - UPDATED SWEEP SEALS, JAMB SEALS AND THRESHOLDS.*

*FEBRUARY 2007 - UPDATED TO REMOVE SPECIFIC REFERENCES TO RICK HADDEN. QUESTIONS REGARDING CORE TYPE, KEYING, AND BUILDING STANDARDS SHOULD BE DIRECTED TO A LOCKSMITH AT THE KEY OFFICE. IN GENERAL, AVOID USE OF SPECIFIC CONTACT NAMES IN SPECIFICATION.*

*DECEMBER 2008 - ADDED SUBMITTAL REQUIREMENTS, ADDED ACCESS CONTROL PRODUCTS AND UPDATED PRODUCT NUMBERS.*

*JANUARY 2013 REVISED FORMATTING AND CONTENT*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including Standard General Conditions, Supplemental General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, apply to this Section.

*EDIT BELOW TO SUIT PROJECT.*

- B. Related Sections:
1. Division 6 Section: Architectural Woodwork.
  2. Division 8 Section: Aluminum Entrances and Storefront.
  3. Division 12 Section: Laboratory Casework and Fixtures.
  4. Division 28 Section: Access Control and Monitoring System.

**1.2 SUMMARY**

- A. Section Includes: Door hardware as indicated on drawings and in schedules

*EDIT BELOW TO SUIT PROJECT.*

Hinges.  
Closers.  
Double-acting closer/pivot sets.  
Door Operators.  
Small Formal Interchangeable Cores (SFIC).  
Locks and latches.  
Strikes.  
Latches.  
Stops.  
Silencers.  
Push/pull sets.  
Exit device (panic set).  
Astragals.  
Flush bolts.

Coordinators.  
Trim protector bars.  
Kickplates.  
Sweep seals.  
Jamb seals.  
Automatic door bottoms.  
Electrically activated hold-open devices.  
Thresholds.  
Removable Mullion.  
Concealed power transfer.  
Door position switch.  
Request to exit sensor.

**TYPICALLY DELETE BELOW. INCLUDE FOR PROJECTS WITH ALUMINUM ENTRANCES AND STOREFRONT.**

- B. Products specified under this section but provided under sections:
1. 08410: Aluminum Entrances and Storefront.

### 1.3 SUBMITTALS

A. Submittals: Submit the following:

1. Manufacturer's product literature.
2. Schedule of hardware showing application to project.
3. Furnish templates to each fabricator of doors and frames, as required for preparation to receive hardware.

**INCLUDE PARAGRAPHS 4 & 5 BELOW FOR PROJECTS WITH ELECTRIFIED HARDWARE.**

4. Wiring Diagrams: For power, signal, and control wiring and including the following:
  - a. Details of interface of electrified door hardware and building safety and security systems.

**RETAIN FOUR SUBPARAGRAPHS BELOW IF ELECTRIFIED DOOR HARDWARE IS COMPLEX. IF ONLY ELECTRIC STRIKES ARE REQUIRED, THIS LEVEL OF DETAIL MIGHT NOT BE NECESSARY.**

- b. Schematic diagram of systems that interface with electrified door hardware.
  - c. Point-to-point wiring.
  - d. Risers.
  - e. Elevations doors controlled by electrified door hardware.
5. Operation Narrative: Describe the operation of doors controlled by electrified door hardware. Include description of how the opening is to function at all times, including normal operation, upon activation of the building fire alarm system, and upon loss of power.

**TYPICALLY DELETE BELOW -- INCLUDE FOR PROJECTS IN BFS BUILDINGS WITH SPECIAL LOCKING ARRANGEMENTS THAT IMPEDE EGRESS (I.E. DELAYED EGRESS, DOOR INTERLOCKS)**

6. Special locking arrangements in buildings under the jurisdiction of the State of Michigan Bureau of Fire Services (BFS) require submission of the following documents to BFS for door locking review:
  - a. Floor plan showing door locations to be locked and type of hardware and equipment scheduled for installation.
  - b. A description of the "sequence of operations" of the door locking system outlining operation during normal operation, upon activation of the building fire alarm system, and upon loss of primary power the fire alarm system.
  - c. Product literature for the door hardware and related equipment, including locks, control equipment, accessory equipment, power supplies, and any other hardware used.

**DELETE "MAINTENANCE MATERIAL SUBMITTALS" ARTICLE BELOW IF LESS THAN 20 TOTAL LOCKSETS ARE INCLUDED IN PROJECT.**

#### **1.4 MAINTENANCE MATERIAL SUBMITTALS**

- A. Attic Stock: Provide additional locksets, complete with levers, escutcheons and other specified trim, but not including cylinders, as follows:
  1. For each individual lock function type, provide additional locksets of the same function in the following quantities:
    - a. For less than 20 locksets: No attic stock.
    - b. For 20 locksets or more, but less than 100 locksets: 2 additional units.
    - c. For 100 locksets or more: 4 additional units.
    - d. For each 50 additional locksets over 100 units: 1 additional unit.
  2. When 20 or more locksets of all function types are scheduled, but less than 20 are of a single function, provide 2 additional locksets of functions selected by the Architect from the range of function types included in the Project.
  3. Deliver attic stock units to Owner's Key Office in manufacturer's original packaging. Clearly mark each box with Project title, including building and description, and University of Michigan Project Number.

#### **1.5 QUALITY ASSURANCE**

**INCLUDE PARAGRAPHS A AND B IN EVERY SPECIFICATION SECTION. EDIT THE REFERENCE STANDARDS FOR PROJECT REQUIREMENTS.**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  1. NFPA 70: National Electrical Code.
  2. NFPA 80: Standard for Fire Doors and Other Opening Protectives

3. NFPA 252: Standard Methods of Fire Tests of Door Assemblies.
4. ANSI A 156 series standards applicable to each particular type of hardware.

**PART 2 - PRODUCTS**

*THE HARDWARE INCLUDED IN THIS SECTION MAY NOT BE SUITABLE FOR SPECIALIZED FIRE-RATED DOORS - I.E. FRP DOORS, LARGE WOOD DOORS, EXTENSIVE GLASS, ETC. CONSULT WITH DOOR AND HARDWARE MFRS TO DETERMINE UL LISTED HARDWARE. COORDINATE SPECIALIZED HARDWARE WITH KEY OFFICE TO ENSURE MAINTAINABILITY.*

**2.1 HARDWARE, GENERAL**

- A. Standards: Where base material and quality of finish are not otherwise specified, comply with ANSI A 156 series standards applicable to each particular type of hardware.
- B. Fire-Rated Door Assemblies: Where fire-rated door assemblies are indicated, provide door hardware rated for use in assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C, unless otherwise indicated.
- C. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.

**2.2 HINGES**

- A. Provide 5-knuckle, 2 ball-bearing hinges; swaged; inner leaf beveled; with square corners; nonremovable pin, complete with set screw (knurled pin not acceptable); and as follows:

*SELECT FULL MORTISE UNLESS OTHERWISE REQUIRED.*

1. Type: Full-mortise.
2. Type: Half-surface.
3. Type: Half-mortise.
4. Type: Full surface.

*TYPICALLY SELECT STEEL FOR INTERIOR DOORS AND FOR ALL FIRE RATED OPENINGS. STEELS IS APX HALF THE COST OF BRASS*

*SELECT BRASS FOR EXTERIOR DOORS, OR WHERE CORROSION IS EXPECTED (HIGH HUMIDITY, POOL AREAS, ETC.) BRASS IS MORE DURABLE THAN STAINLESS FOR THESE EXPOSURES.*

5. Base Metal: Steel.
6. Base Metal: Stainless Steel.
7. Base Metal: Brass.

*SELECT FROM VARIOUS FINISHES, OR RETAIN THE FOLLOWING. FINISH METALS ARE PLATED OVER STEEL OR BRASS, OR IN THE CASE OF STAINLESS STEEL AND BRASS, THE BASE METAL MAY BE FINISHED.*

8. Finish: To match "Finishes" requirements of this Section.
9. Size and Weight: Provide hinges sized as follows:

**BELOW FOR MOST STANDARD DOORS.**

- a. Doors not wider than 3 feet 6 inches nor taller than 7 feet 6 inches:
  - 1) Size: 4-1/2 inches by 4-1/2 inches; 0.180-inch thick.

**ABOVE FOR HEAVY, HIGH-FREQUENCY DOORS. BELOW IS ECONOMICAL HINGE FOR MEDIUM WEIGHT, AVERAGE FREQUENCY DOORS.**

- 2) Size: 4-1/2 inches by 4-1/2 inches; 0.134-inch thick.

**BELOW FOR EXTRA LARGE DOORS.**

- b. Doors wider than 3 feet 6 inches or taller than 7 feet 6 inches:
  - 1) Size: 5 inches by 4-1/2 inches; 0.190-inch thick.

**ABOVE FOR HEAVY, HIGH-FREQUENCY DOORS. BELOW IS ECONOMICAL HINGE FOR MEDIUM WEIGHT, AVERAGE FREQUENCY DOORS.**

- 2) Size: 5 inches by 4-1/2 inches; 0.145-inch thick.

**DELETE BELOW UNLESS 1-3/8 INCH THICK INCLUDED. NOTE THAT BELOW SELECTION IN FOR AVERAGE FREQUENCY SERVICE DOORS - MODIFY VALUE TO .180 FOR HIGH FREQUENCY DOORS**

- c. Doors 1-3/8 inches thick and not wider than 3 feet nor taller than 7 feet: 4-1/2 inches by 4 inches; 0.134-inch thick.

10. Manufacturer: Hager, Ives, McKinney, or Stanley.

**USE BELOW FOR ALL ALUMINUM STOREFRONT DOORS, EXTERIOR HOLLOW METAL DOORS AND VERY HIGH FREQUENCY AND/OR HEAVY INTERIOR DOORS. ALSO USE AS STANDARD FOR HOUSING WORK.**

- B. Continuous Gear Hinges: Provide units designed for heavy-duty, high-traffic use in new applications. Fabricate units of Class I anodized, 6063 T6 aluminum alloy with polyacetal thrust bearings.
  - 1. Color: Clear anodized
  - 2. Color: Dark bronze anodized.

**BELOW IS STANDARD. ALSO AVAILABLE ARE RETROFIT UNITS THAT COVER BUTT CUT OUTS ON EXISTING FRAMES, AND A VARIETY OF FULL- AND HALF-SURFACE UNITS - SEE PRODUCT CATALOGS**

- 3. Manufacturer/Model: Select Products Limited, SL-11HD, or equivalent products of Hager-Roton or Pemko.

**2.3 CLOSERS**

- A. Provide closers with field-adjustable, full-range sizing feature capable of complying with manufacturer's size recommendations for application indicated; and complying with applicable portions of the Americans with Disabilities Act (ADA).
  - 1. Manufacturer/Model: LCN, 4000 Series "Smoothee"; no substitutions.

**SELECT ONE OF THE FOLLOWING. IF CLOSER IS BEING SPECIFIED TO INCLUDE A STOP USE ONLY THE CUSH-N-STOP.**

- a. Series No.: 4010 series (mounted on pull side of door).

- b. Series No.: 4020 series (mounted above door on push side).
- c. Series No.: 4110 series (mounted on push side of door).
- d. Series No.: 4110 series with 3077 SC spring cush arm (mounted on push side of door).

**INCLUDE BELOW IF CUSH UNITS ARE SPECIFIED.**

- 2. Provide "cush" units with cush shoe support.
- B. Unless otherwise indicated, mount closer bodies on room side (not corridor side) of doors. Refer doubtful conditions to Architect for decision.

**THE FOLLOWING CLOSER/PIVOT SET CAN BE USED TO HANG AND CONTROL DOUBLE-ACTING DOORS OF WOOD, ALUMINUM OR HOLLOW METAL CONSTRUCTION. SIMPLE DOUBLE-ACTING HINGES CAN ALSO BE USED, BUT REQUIRE LARGE CLEARANCES TO WORK PROPERLY.**

**2.4 DOUBLE-ACTING CLOSER/PIVOT SETS**

- A. Provide concealed, double-acting closer for installation in hollow metal frame, and adequately sized in accordance with manufacturer's recommendations to suit door type, size and application.
  - 1. Provide units with manufacturer's standard adjustable auxiliary stops.
  - 2. Manufacturer/Model:
    - a. LCN No. 6030. No substitutions.
- B. Accessory Hinges: Provide manufacturer's standard center pivot sets designed specifically for use with indicated closer.
  - 1. Manufacturer/Model: Ives No. 7255. No substitutions.

**THE FOLLOWING IS THE UNIVERSITY STANDARD ADA DOOR OPERATOR. NOTE THE FOLLOWING:**

**IF A DOOR OPERATOR IS USED IN LIEU OF PHYSICAL OPERATING CLEARANCES ON THE EGRESS SIDE, IT MUST BE CONNECTED TO EMERGENCY POWER (I.E. BUILDING GENERATOR). BATTERY BACKED OPTIONS ARE NOT AVAILABLE. (NFPA 80)**

**ON ALL FIRE RATED DOORS, DOOR OPERATORS ARE REQUIRED TO BE CONNECTED TO THE BUILDING FIRE ALARM SYSTEM (NFPA 80). IF DOOR IS TIED TO BUILDING FIRE ALARM SYSTEM, COMMUNICATE RELATED OPERATIONAL ISSUES TO BUILDING MANAGER. COORDINATE WITH DESIGN MANAGER.**

**2.5 DOOR OPERATORS**

- A. General: Of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated.
  - 1. Type: Low-energy power operated, complying with ANSI/BHMA A156.19.
  - 2. Connections: For power and control wiring.

3. Adjustment Features: Fully adjustable without removing entrance doors, including
  4. On/Off Feature: On/off/hold-open switch controls electric power to operator.
- B. Electromechanical Operators: Self-contained overhead units, with closing speed controlled by gear train and dynamic braking action of electric motor and with manual operation and spring closing when power is off.
1. Closing Mechanism: Power-assisted spring operated.
  2. Mounting: Surface mounted
  3. Manual Operation: Requires less than 15 lbf to set door in motion when power is off, according to ANSI/BHMA A156.19.
  4. Activation Device: Manufacturer's standard 4-inch diameter round stainless steel push-plate switch with contrasting-colored, engraved message. International symbol of accessibility and "Push to Open."

***EDIT BELOW TO BE PROJECT SPECIFIC.***

- C. Manufacturer/Model: LCN, Model 4642 (for push side mount) or 4631 (for pull side mount). No substitutions.

***INCLUDE THE FOLLOWING FOR DOORS CONNECTED TO BUILDING FIRE ALARM SYSTEM.***

- D. Provide acrylic sign adjacent to door actuator:
1. Copy: "Push button disabled during fire alarm"
  2. Color, font, and details to match building standard room signs.

**2.6 SMALL FORMAT INTERCHANGABLE CORES (SFIC)**

***RETAIN BELOW IF DEMOLISHING EXISTING DOORS***

- A. Salvage existing cores and reinstall in new devices.
- FOR CONSISTENCY AND EASE IN KEYING IN EXISTING BUILDINGS, VERIFY WHICH MANUFACTURER'S CORES ARE USED IN THAT BUILDING. SPECIFY CORES FROM SAME MANUFACTURER AND KEYWAY FOR NEW DOORS. CALL KEY OFFICE TO OBTAIN CORE TYPE AND KEYWAY INFORMATION.***
- B. Provide small format 7-pin removable cores to match building standard.
1. Manufacturers:
    - a. Best.
    - b. Medeco Keymark.
    - c. Schlage Everest.
- C. Provide keying in a masterkey system to be designed by Owner. Keying is the responsibility of the Contractor; and shall be performed by the cylinder supplier. Deliver keyed cores to the University of Michigan Key Office for installation by Owner. Contact the Owner's Key Office (764-3481) for questions concerning keying.

**RETAIN BELOW FOR PROJECTS WITH EXTERIOR DOORS OR LARGE INTERIOR AREAS. COORDINATE WITH CM.**

- D. Construction Locks: In each exterior door, provide temporary cylinders, installed simultaneously with the lock. Temporary cylinders shall remain for the duration of construction.

**2.7 LOCKS AND LATCHES**

A. General:

1. BHMA A156.13 (mechanical); A156.25 (electromechanical), grade 1.
2. Provide mortise type, lever handle locksets equipped to receive SFIC.
3. Provide knurled handle surfaces on locksets to hazardous areas, including mechanical rooms, elevator machine rooms, electrical closets and substation rooms, and stairways.
4. Manufacturer/Model of Locksets: Unless noted otherwise for specific function noted, provide one of the following:
  - a. Sargent 8200 Series.
  - b. Corbin Russwin ML2200 series.
  - c. Schlage L Series.

B. Mechanical Locksets:

**BELOW ARE EXAMPLES OF TYPICAL UNITS. VERIFY TRIM STYLE DESIRED. LNJ NOTED BELOW IS TUBULAR LEVER ARM WITH SMALL ROUND ETCHUTION. GENRALLY, MATCH STYLES IN ADJACENT PORTIONS OF BUILDING. CONTACT A LOCKSMITH AT THE KEY OFFICE FOR INFORMATION ON EXISTING LOCK STYLES.**

**ANSI FUNCTION CODES LISTED BELOW IF AVAILABLE. USE CODE TO DETERMINE EQUIVALENCENCE BETWEEN MANUFACTURERS DURING SUBMITTAL PHASE.**

- a. Office Lockset with thumb turn: ANSI function F04
  - 1) Sargent LNJ x 8205.
  - 2) Schlage L9050
  - 3) Corbin Russwin ML2054

**ALL CLASSROOMS SHOULD BE LOCKABLE FROM INSIDE THE ROOM AND PROVIDE VISUAL INDICATION OF DOOR STATUS ON CLASSROOM SIDE. REVIEW DESIRED FUNCTION WITH USER - SHOULD THE DOOR REVERT TO LOCKED OR REVERT TO UNLOCKED STATE AFTER IT IS OPENED?**

- b. Office Locksets for Classroom use:
  - 1) Office Lockset: Schlage L9050 with indicator 09-611 x XL12-431
  - 2) Office Lockset with Automatic unlocking: Schlage L9056 with indicator 09-611 x XL12-431.
- c. Passage Lockset: ANSI function F01; Sargent LNJ x 8215.

**THE FOLLOWING SPACES SHOULD HAVE STORE ROOM FUNCTION SETS: PHONE CLOSETS AND TELECOMMUNICATION ROOMS, MECHANICAL ROOMS, ELEVATOR MACHINE ROOMS, SUBSTATIONS AND TUNNEL DOORS.**

- d. Service/Store Room Lockset: ANSI function F07; Sargent LNJ x 8204.
- e. Privacy Lockset with "Occupied" Indicator and keyed override: Schlage L9496.

- C. Electromechanical Locks: Solenoid driven; mortise latchbolt; with strike that suits frame; keyed override, with request to exit switch.

*BELOW IS ELECTRICALLY UNLOCKED DEVICE FOR ACCESS CONTROL INSTALLATIONS. EXTERIOR LOCKS IN POWER OUTAGE. MECHANICAL EGRESS ALWAYS AVAILABLE.*

1. Electromechanical (Fail Secure): Sargent LNJ x 8271 RX.

- D. Digital Locksets

*USE BELOW FOR ALL ANIMAL HOLDING ROOM APPLICATIONS. FOR OTHER USES, ANOTHER LOCK FUNCTION MAY BE NEEDED. PROGRAMMING IS DONE AT THE LOCKSET; SOFTWARE NOT NEEDED.*

1. Battery-powered, self-contained electronic locks; consisting of complete lockset, mounting hardware, SFIC, strike, and with features and accessories indicated. Provide key override, low-battery detection and warning, LED status indicators, and ability to program at the lock.

*PART NUMBER BELOW IS KEYPAD ONLY WITH LEVER STYLE TO MATCH SARGENT J-STYLE LEVER.*

- a. Manufacturer/Model: Schlage only; Model CO-100-MS-70-KP with TLR Tubular lever style. No substitutions.

*USE BELOW FOR LSA APPLICATIONS. COORDINATE FUNCTION WITH LSA REP AND CLASSROOM OPERATIONS. PROGRAMMING DONE AT THE DOOR VIA SOFTWARE AND HANDHELD DEVICE. HAS INCREASED FUNCTIONALITY OVER CO-100 DEVICE ABOVE.*

2. Battery-powered, self-contained electronic locks; consisting of complete lockset, mounting hardware, SFIC, strike, and with features and accessories indicated. Provide key override, low-battery detection and warning, LED status indicators, and ability to program at the lock.

*PART NUMBERS BELOW INCLUDES LEVER STYLE TO MATCH SARGENT J-STYLE LEVER.*

*PART NUMBER BELOW IS KEYPAD ONLY*

- a. Manufacturer/Model: Schlage only; Model CO-200-MS-70-KP with TLR Tubular lever style. No substitutions.

*PART NUMBER BELOW IS MAG STRIPE ONLY*

- b. Manufacturer/Model: Schlage only; Model CO-200-MS-70-MS with TLR Tubular lever style. No substitutions.

*MAG STRIPE AND KEYPAD DEVICE ALSO AVAILABLE - SEE MFR LITERATURE.*

## 2.8 STRIKES

- A. General: With each lockset, furnish companion strike as indicated, for installation on door jamb.
- B. Mechanical Strikes: Provide handed-type strike plates with curved lip; flat (non-handed) strikes are not permitted.

**USUALLY RETAIN THE FOLLOWING UNLESS CERTAIN THAT EXTENDED LIPS ARE NOT REQUIRED.**

1. Provide strike plates with extended lips where required to protect door frame and trim from being marred by latchbolt. Provide strike plates that project not more than 1/8 inch beyond door frame trim at single doors; and flush with face of doors at double (pair) door applications.
2. Provide custom-fabricated strike plates at existing door frames if required for compatibility with new lockset or latchset units. Fabricate units of base metal and finish specified. Provide units manufactured by Accurate Hardware Inc., or equivalent.

**USE THE FOLLOWING ELECTRIC STRIKE FOR SINGLE ACCESS CONTROL DOORS THAT ARE NOT RATED. TYPICALLY KEY OFFICE PREFERS USE OF ELECTROMECHANICAL MORTISE LOCKSET OR PANIC DEVICE.**

**NOTE THAT ELECTRIC STRIKES REQUIRE USE OF PASSIVE INFRARED REQUEST TO EXIT DEVICE (PIR RTE). COORDINATE WITH ELECTRICAL.**

- C. Electric Strikes: Provide electric door strikes of the appropriate model for the associated door's lock.
1. Manufacturer/Models:
    - a. Von Duprin, 6000 series (6112 or 6215).
    - b. HES, 1006, 9600, and 9400 series.

**BELOW FOR LOW FREQUENCY CLOSET DOORS ONLY.**

## **2.9 LATCHES**

- A. Touch latches: Latch unit consists of concealed, integral latching mechanism and spring that releases and springs door into open position when face of door is pushed.
1. Manufacturer/Model: Ives No. CL12, complete with related strike.
- B. Roller latches: Forged bronze roller latches with rubber roller. Furnish units designed to be mortised into door, and with adjusting screws on face of latch. With each roller latch, furnish companion strike for installation on jamb.
1. Manufacturer/Model: Ives model no. RL30, or equivalent products of Rockwood or Door Controls International.

## **2.10 STOPS**

- A. Provide rubber exposed resilient parts; size and mount units to comply with manufacturer's recommendations for the exposure condition. Reinforce the substrate as recommended.

**SELECT ONE OF THE FOLLOWING.**

1. Color of Resilient Parts: Black.
2. Color of Resilient Parts: Gray.
3. Manufacturer/Model: Rockwood model indicated, or equivalent products of Brookline, Builder's Brass Works, Ives, Stanley, Door Controls International.

**SELECT ONE OF THE FOLLOWING TO SUIT PROJECT AND SUBSTRATE.**

- a. Model No.: 442 (floor mounted).
- b. Model No.: 440 (floor mounted, limited door bottom clearance).
- c. Model No.: 409 (wall mounted, hollow wall expansion anchor).
- d. Model No.: 410 (wall mounted, plastic).
- e. Model No.: 411 (wall mounted, expansion shield).

**CONSIDER BELOW FOR APPLICATIONS WHERE FIXED STOP IS IMPRACTICAL. TYPICALLY RETAIN FOR HOSPITAL PROJECTS.**

**VERIFY THAT STOP IS COMPATIBLE WITH CLOSER SPECIFIED. NOTE THAT INTEGRAL STOPS ARE AN OPTION FOR SOME CLOSERS.**

- B. Concealed overhead door stops: BHMA A156.8
  - 1. Manufacturers/Models:
    - a. Glynn-Johnson 410 series.
    - b. Rixson 6 series.
    - c. Rockwood 14000 series.

**2.11 SILENCERS**

- A. Provide manufacturer's standard profile silencers of 1/8-inch thick hard rubber for metal door frames as follows:
  - 1. Manufacturer: Ives or Rockwood.

**2.12 PUSH/PULL SET**

- A. Provide pull handles and push plates with concealed mounting fasteners wherever possible, and as follows:

**SELECT BELOW AS APPROPRIATE TO PROJECT.**

- 1. Material: Solid stainless steel.
- 2. Material: Solid brass.
- 3. Material: Solid nylon plastic.

**SELECT ONE FINISH BELOW.**

- 4. Finish: Satin.
- 5. Finish: Polished.
- 6. Finish: Gloss.

**SELECT ONE COLOR OPTION BELOW.**

- 7. Color: Clear and transparent.
- 8. Color: INSERT COLOR
- 9. Manufacturers:
  - a. Rockwood models indicated.
  - b. Baldwin.
  - c. Brookline.
  - d. Builder's Brass Works.
  - e. Corbin Russwin.
  - f. Ives
  - g. Stanley.

**BELOW ARE EXAMPLE ONLY, NOT UM STANDARDS**

- 10. Model numbers:

- a. Push Plates: Rockwood; No. 71 (6 inches by 15 inches)
- b. Pull: Rockwood; No. 112 (13 inches by 1 inch diameter).
- c. Pull: No. 71 (6 inches by 15 inches) base plate.

*EXIT DEVICES BELOW ARE TOUCH PAD STYLE FOR STEEL AND WOOD DOORS ONLY. DEVICES LISTED MAY NOT BE APPROPRIATE FOR ALUMINUM DOORS. REVIEW MANUFACTURER CATALOGS PRIOR TO SELECTION. TUBULAR STYLE DEVICES ARE ALSO ACCEPTABLE (VONDUPRIN 55/88 SERIES).*

*FOR ACCESS CONTROL APPLICATIONS, TYPICALLY SPECIFY VON DUPRIN QEL TYPE DEVICES OR EQUIVALENT FROM SARGENT. QEL DEVICES OBTAIN POWER FROM POWER SUPPLIES AT THE ACCESS CONTROL PANEL ASSEMBLIES AND DO NOT NEED LOCAL POWER SUPPLIES.*

**2.13 EXIT DEVICE (PANIC SET)**

*EXIT DEVICES LISTED BELOW ARE APPROVED BY PLANT DEPARTMENT. USE RIM TYPE DEVICES EXCEPT AT MULLIONLESS DOUBLE DOOR OPENINGS.*

*APPLICATION: SINGLE DOOR OR DOUBLE DOOR WITH MULLION, WOOD OR STEEL, NON-FIRE-RATED.*

- A. Non-Fire-Rated Rim Type Exit Device: Rim type units activated by a partial-width touch-bar, complete with accessories, including strike and hex-key operated dogging device mounted on mechanism housing to hold the touch-bar depressed and the latch bolt in the open position.

*IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.*

*BELOW IS UNIT WITH OUTSIDE KEY CYLINDER RETRACTING LATCH BOLT, AND WITH OPTIONAL PULL HANDLE. POSSIBLE USE IN PUBLIC BUILDING ENTRANCE AND SECURE CORRIDOR-TO-ROOM ENTRANCE.*

- a. Manufacturer/Model of Exit Devices: Von Duprin model 98NL with 990NL-R trim; or equivalent products of Sargent only.

*BELOW IS UNIT WITH NO OUTSIDE CYLINDER, BUT WITH PULL HANDLE. POSSIBLE USE IN SERIES OF MULLIONED OPENINGS WHERE ANOTHER DOOR HAS CYLINDER FOR ENTRY.*

- b. Manufacturer/Model of Exit Devices: Von Duprin model 98DT with 990DT trim; or equivalent products of Sargent only.

*BELOW IS UNIT WITH NO OUTSIDE CYLINDER AND NO PULL HANDLE. POSSIBLE USE IN SECURED EXIT ONLY FOR BUILDING.*

- c. Manufacturer/Model of Exit Devices: Von Duprin model 98E0; or equivalent products of Sargent only.

*BELOW IS UNIT WITH OUTSIDE CYLINDER. PULL HANDLE MUST BE SPECIFIED SEPARATELY (OPTIONAL VON DUPRIN OR HEWI, FOR EXAMPLE). USE SIMILAR TO FIRST EXAMPLE ABOVE.*

- d. Manufacturer/Model of Exit Devices: Von Duprin model 98NL-OP with 110NL trim; or equivalent products of Sargent only.

*BELOW IS ELECTROMECHANICAL UNIT WITH OUTSIDE CYLINDER AND RIGID LEVER TRIM. OTHER OPTIONS ARE AVAILABLE.*

- 2. Electromechanical exit device
  - a. Manufacturer/Model of Exit Devices:
    - 1) Von Duprin model 35A series as follows:
      - a) QEL latch retraction
      - b) Less dogging
      - c) Request to exit switch
      - d) Dummy trim 03 lever trim.
    - 2) Equivalent products of Sargent only.

*APPLICATION: SINGLE DOOR OR DOUBLE DOOR WITH MULLION, WOOD OR STEEL, FIRE-RATED.*

- B. Fire-Rated Rim Type Exit Device: Fire-rated, UL listed, rim type units activated by a partial-width touch-bar, complete with accessories including strike.

*IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.*

*BELOW IS UNIT WITH OUTSIDE CYLINDER RETRACTING LATCH BOLT, AND WITH OPTIONAL (RIGID) LEVER HANDLE. POSSIBLE USE IN ELECTRICAL SUBSTATIONS.*

- a. Manufacturer/Model of Exit Devices: Von Duprin model 98NL-F, 992L-rigid trim, and optional no. 03 lever; or equivalent products of Sargent only.

*BELOW IS UNIT WITH DOUBLE CYLINDER. POSSIBLE USE IN RATED, SECURED, CORRIDOR-TO-ROOM ENTRANCE.*

- b. Manufacturer/Model of Exit Devices: Von Duprin model 98L-F, 992L-double cylinder function trim and standard no. 06 lever; or equivalent products of Sargent only.

*BELOW IS UNIT WITH NO OUTSIDE CYLINDER. POSSIBLE USE IN STAIR DOOR APPLICATIONS.*

- c. Manufacturer/Model of Exit Devices: Von Duprin model 98L-F-BE, 992L-R with optional no. 03 lever; or equivalent products of Sargent only.

*APPLICATION: DOUBLE DOORS WITHOUT MULLION, WOOD OR STEEL, NON-FIRE-RATED.*

- C. Non-Fire-Rated Surface Mounted Vertical Rod Type Exit Device: Surface mounted, vertical rod type units activated by a partial-width touch-bar, complete with accessories including strike. Equip units with hex-key operated dogging device mounted on mechanism housing to hold the touch-bar depressed and the latch bolt in the open position. Omit bottom rods unless otherwise indicated.

IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.

BELOW IS UNIT WITH OUTSIDE CYLINDER RETRACTING LATCH BOLT (NIGHT LATCH FUNCTION) AND STANDARD PULL HANDLE. LIMIT USE TO MECHANICAL, ELECTRICAL OR SIMILAR SERVICE ROOMS THAT CAN ACCEPT NIGHT-LATCH FUNCTION - OTHERWISE USE MORTISE TYPE DEVICE WITH DOUBLE CYLINDER (SEE SUBSEQUENT PARA BELOW). USE IN CONJUNCTION BLANK ESCUTCHEON FUNCTION DEVICE BELOW ON OTHER DOOR OF PAIR.

- a. Manufacturer/Model of Exit Devices: Von Duprin model 9827NL, 990NL-V trim; or equivalent products of Sargent only.

BELOW IS UNIT WITH BLANK ESCUTCHEON AND STANDARD PULL HANDLE. USE IN CONJUNCTION WITH NIGHT LATCH FUNCTION UNIT ABOVE.

- b. Manufacturer/Model of Exit Devices: Von Duprin model 9872NL-BE, 990NL-V trim; or equivalent products of Sargent only.

BELOW IS UNIT WITH BLANK ESCUTCHEON AND OPTIONAL LEVER HANDLE. USE IN CONJUNCTION WITH NON-FIRE-RATED MORTISE UNIT (SEE SUBSEQUENT PARA BELOW).

- c. Manufacturer/Model of Exit Devices: Von Duprin model 9827L-BE, 992L-rigid trim; or equivalent products of Sargent only.

APPLICATION: DOUBLE DOORS WITHOUT MULLION, WOOD OR STEEL, FIRE-RATED.

- D. Fire-Rated Surface Mounted Vertical Rod Type Exit Device: Fire-rated, UL listed, surface mounted, vertical rod type units activated by a partial-width touch-bar, complete with accessories including strike.

IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.

BELOW IS UNIT WITH OUTSIDE CYLINDER RETRACTING LATCH BOLT, AND WITH OPTIONAL (RIGID) LEVER HANDLE (PULL COULD ALSO BE USED - SPEC 9827NL-F). LIMIT USE TO MECHANICAL, ELECTRICAL OR SIMILAR SERVICE ROOMS THAT CAN ACCEPT NIGHT-LATCH FUNCTION - OTHERWISE USE MORTISE TYPE DEVICE WITH DOUBLE CYLINDER (SEE SUBSEQUENT PARA BELOW). USE IN CONJUNCTION WITH EXIT ONLY FUNCTION DEVICE (9827EO-F) ON OTHER DOOR OF PAIR.

- a. Manufacturer/Model of Exit Devices: Von Duprin model 9827L-F, 992L-rigid trim with optional no. 03 lever; or equivalent products of Sargent only.

BELOW IS UNIT WITH NO OUTSIDE TRIM FOR EXIT ONLY. USE THIS UNIT IN CONJUNCTION WITH EITHER VERTICAL SURFACE ROD DEVICE IMMEDIATELY ABOVE OR MORTISE UNIT WITH DOUBLE CYLINDER DESCRIBED IN SUBSEQUENT PARA BELOW.

- b. Manufacturer/Model of Exit Devices: Von Duprin model 9827EO-F; or equivalent products of Sargent only.

*APPLICATION: DOUBLE DOORS WITHOUT MULLION, WOOD OR STEEL, NON-FIRE-RATED. THE ONLY SANCTIONED USE OF THE MORTISE DEVICE BELOW IS IN A MULLIONLESS OPENING AS PART OF A PAIR, WITH THE OTHER DEVICE A VERTICAL SURFACE ROD TYPE.*

- E. Non-Fire-Rated Mortise Type Exit Device: Surface mounted, vertical rod type units activated by a partial-width touch-bar, complete with accessories including strike. Equip units with hex-key operated dogging device mounted on mechanism housing to hold the touch-bar depressed and the latch bolt in the open position. Omit bottom rods unless otherwise indicated.

*IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.*

*BELOW IS UNIT WITH OUTSIDE CYLINDER RETRACTING LATCH BOLT, AND WITH OPTIONAL DOUBLE CYLINDER INSTALLED INSIDE ON LATCH HEAD. THIS COMBINATION IMPROVES LOCKING FUNCTION FLEXIBIITY AND IS PREFERRED BY PLANT. USE AS ONE OF A PAIR IN A MULLIONLESS OPENING, WITH THE OTHER DOOR EQUIPPED WITH DEVICE HAVING VERTICAL SURFACE RODS AND BLANK ESCUTCHEON FUNCTION INDICATED IN NON-FIRE-RATED DEVICE PARA ABOVE (9827NL-BE OR 9872L-BE).*

- a. Manufacturer/Model of Exit Devices: Von Duprin model 9875L, 992L-M-double cylinder trim, and with optional no. 03 lever; or equivalent products of Sargent only.

*BELOW IS UNIT SAME AS ABOVE, EXCEPT FOR APPLICATIONS THAT DO NOT REQUIRE SECURED (LOCKABLE) DOORS. USE AS ONE OF A PAIR IN A MULLIONLESS OPENING, WITH THE OTHER DOOR EQUIPPED WITH DEVICE HAVING VERTICAL SURFACE RODS AND BLANK ESCUTCHEON FUNCTION INDICATED ABOVE (9827NL-BE OR 9872L-BE).*

- b. Manufacturer/Model of Exit Devices: Von Duprin model 9875L-F-BE, and with optional no. 03 lever; or equivalent products of Sargent only.

*APPLICATION: DOUBLE DOORS WITHOUT MULLION, WOOD OR STEEL, FIRE-RATED. THE ONLY SANCTIONED USE OF THE MORTISE DEVICE BELOW IS IN A MULLIONLESS OPENING AS PART OF A PAIR, WITH THE OTHER DEVICE A VERTICAL SURFACE ROD TYPE. WHERE THE SELECTIONS INDICATED WOULD INTERFERE WITH TWO-WAY CORRIDOR TRAFFIC, AND A MULLIONED OPENING CANNOT BE SUBSTITUTED, CONSIDER PROVIDING ELECTRIC HOLD-OPEN DEVICES.*

- F. Fire-Rated Mortise Type Exit Device: Fire-rated, UL listed, mortise type units activated by a partial-width touch-bar, complete with accessories including strike.

*IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.*

*BELOW IS UNIT WITH OUTSIDE CYLINDER RETRACTING LATCH BOLT, AND WITH OPTIONAL DOUBLE CYLINDER INSTALLED INSIDE ON LATCH HEAD. THIS COMBINATION IMPROVES LOCKING FUNCTION FLEXIBIITY AND IS PREFERRED BY PLANT. USE AS ONE OF A PAIR IN A MULLIONLESS*

*OPENING, WITH THE OTHER DOOR EQUIPPED WITH DEVICE HAVING VERTICAL SURFACE RODS AND EXIT-ONLY FUNCTION (9827EO-F).*

- a. Manufacturer/Model of Exit Devices: Von Duprin model 9875L-F, 992L-M-double cylinder trim, and with optional no. 03 lever; or equivalent products of Sargent only.

*BELOW IS UNIT SAME AS ABOVE, EXCEPT FOR APPLICATIONS THAT DO NOT REQUIRE SECURED (LOCKABLE) DOORS. USE AS ONE OF A PAIR IN A MULLIONLESS OPENING, WITH THE OTHER DOOR EQUIPPED WITH DEVICE HAVING VERTICAL SURFACE RODS AND EXIT-ONLY FUNCTION (9827EO-F).*

- b. Manufacturer/Model of Exit Devices: Von Duprin model 9875L-F-BE, 992L-M trim and with optional no. 03 lever; or equivalent products of Sargent only.

#### **2.14 ASTRAGALS**

- A. Manufacturer/Model of Astragals: EXAMPLE Pemko; No. 357SP, or equivalent products of National Guard, Reese, Zero.

#### **2.15 FLUSH BOLTS**

*DO NOT EDIT WITHOUT PRODUCT CATALOG.*

- A. Manual Flush Bolts: Mortise units, UL listed and rated for indicated application, with spring loaded snap action levers for manual operation.

*USE BELOW ON RATED DOORS WHERE INACTIVE LEAF NOT REQUIRED FOR EGRESS.*

1. Manufacturer/Model of Manual Flush Bolts: Provide Ives model numbers indicated or equivalent products of Rockwood or Door Controls International, as follows:

*DELETE INAPPROPRIATE TYPES BELOW.*

- a. Metal Doors: FB458, both top and bottom bolts.
- b. Wood Doors: FB358, both top and bottom bolts.

*SELECT ONE OF THE FOLLOWING.*

- c. Dust Proof Strike: DP1 (threshold mounting).
- d. Dust Proof Strike: DP2 (floor or threshold mounting).

*USE BELOW FOR EASIER OPERATION AND WHERE INACTIVE LEAF IS NOT REQUIRED FOR EGRESS.*

- B. Constant Latching Flush Bolts: Mortise units, UL listed and rated for indicated application, with automatically retracting bottom bolt, and manually released top bolt when active leaf is opened.

1. Manufacturer/Model of Constant Latching Flush Bolts: Provide Ives model numbers indicated or equivalent products of Rockwood or Door Controls International, as follows:

*DELETE INAPPROPRIATE TYPES BELOW.*

- a. Metal Doors: FB51P (includes both top and bottom bolts).

- b. Wood Doors: FB61P (includes both top and bottom bolts).

**SELECT ONE OF THE FOLLOWING**

- c. Dust Proof Strike: DP1 (threshold mounting).
- d. Dust Proof Strike: DP2 (floor or threshold mounting).

**USE BELOW WHERE INACTIVE LEAF IS REQUIRED FOR EGRESS.**

- C. Automatic Flush Bolts: Mortise units, UL listed and rated for indicated application, automatically retracting when active leaf is opened.
  - 1. Manufacturer/Model of Automatic Flush Bolts: Provide Ives model numbers indicated or equivalent products of Rockwood or Door Controls International, as follows:

**DELETE INAPPROPRIATE TYPES BELOW.**

- a. Metal Doors: FB31P, (includes both top and bottom bolts).
- b. Wood Doors: FB41P, (includes both top and bottom bolts).

**SELECT ONE OF THE FOLLOWING.**

- c. Dust Proof Strike: DP1 (threshold mounting).
- d. Dust Proof Strike: DP2 (floor or threshold mounting).

**2.16 COORDINATOR**

**DO NOT EDIT WITHOUT PRODUCT CATALOG.**

- A. Device coordinating pair of doors with astragals ensuring proper closing sequence. Provide coordinators complete with carry-bar and UL listed and rated for indicated application.
  - 1. Manufacturer/Model of Coordinator: Ives model numbers indicated, or equivalent products of Rockwood or Door Controls International, as follows:

**MODEL NUMBERS BELOW ARE FOR TYPICAL APPLICATIONS. CONSULT PRODUCT CATALOG FOR SIZES NOT LISTED BELOW.**

**USE BELOW FOR PAIR OF 2'-6" DOORS IN 5'-0" OPENING OR UNEQUAL PAIR OF DOORS IN 4'-0" OPENING (3'-0" ACTIVE LEAF WITH 1'-0" INACTIVE LEAF).**

- a. Model: COR-42.

**USE BELOW FOR PAIR OF 3'-0" DOORS IN 6'-0" OPENING.**

- b. Model: COR-52.

**USE BELOW FOR PAIR OF 3'-6" DOORS IN 7'-0" OPENING.**

- c. Model: COR-60.

**2.17 TRIM PROTECTOR BARS**

- A. Provide type 304 stainless steel bent bar shape fabricated of 3/8-inch thick, 1-1/2-inch wide stock. Fabricate units 12-inches long overall with 4-inch long straight section for under-lever mounting.

*MOST COMMON UNITS LISTED BELOW - OTHER SHAPES AND MOUNTING CONDITIONS ARE AVAILABLE.*

- 1. Manufacturer/Model of Trim Protector Bars: Subject to compliance with requirements provide the following:
  - a. Solid Core Wood Doors: R110LPB; Rockwood Products Incorporated.
  - b. Hollow Metal Doors: R111LPB; Rockwood Products Incorporated.
  - c. Hollow Core Wood Doors: R112LPB; Rockwood Products Incorporated.

**2.18 KICKPLATES**

- A. Provide solid metal units as follows:

*SELECT ONE MATERIAL BELOW.*

- 1. Material: Stainless steel.
- 2. Material: Brass satin.

*SELECT ONE FINISH BELOW.*

- 3. Finish: Polished.
- 4. Finish: Satin.
- 5. Size: 1 1/2 inches less than door width on push side, 1/2 inch less than door width on pull side, by 8 inches high, by 0.050-inch thick.
- 6. Manufacturer/Model of Kickplates: EXAMPLE Rockwood K1050 series, 8 inches high or equivalent by any BHMA member.

*THE FOLLOWING PRODUCT IS NOT UL LISTED FOR FIRE RATED DOORS.*

- B. Provide non-colored, transparent acrylic plastic units as follows:
  - 1. Size: 1 1/2 inches less than door width on push side, 1/2 inch less than door width on pull side, by 8 inches high, by 1/4 inch thickness.
  - 2. Manufacturer/Model of Kickplates: EXAMPLE Rockwood K4125, 8 inches high or equivalent products by any BHMA member.

**2.19 SWEEP SEALS**

- A. Provide manufacturer's standard weatherstripping of type, size and profile indicated, continuous at bottom edges of each indicated door. Provide non-corrosive fasteners.

*SUFFIX BELOW IS FOR CLEAR ANODIZED ALUMINUM FINISH. CHANGE SUFFIX TO "D" FOR DARK BRONZE ANODIZED ALUMINUM.*

- 1. Manufacturer/Model Sweep Seals: EXAMPLE Pemko; No. 18062CNB, or equivalent products by any BHMA member.

**2.20 JAMB SEALS**

*BELOW FOR STANDARD LIGHT-TIGHT DOORS - CONSIDER INCLUDING THRESHOLD FOR ADDITIONAL LIGHT-TIGHTNESS.*

- A. Provide manufacturer's standard weatherstripping of type, size and profile indicated, continuous at head and jamb edges of each indicated door opening. Provide non-corrosive fasteners.

*"CR" SUFFIX BELOW IS FOR CLEAR ANODIZED ALUMINUM FINISH. CHANGE TO "DR" SUFFIX FOR DARK BRONZE ANODIZED ALUMINUM.*

- 1. Manufacturer/Model Jamb Seals: EXAMPLE Pemko; No. 315CR, or equivalent products by any BHMA member.

*BELOW FOR SOUND-PROOFING - CONSIDER INCLUDING THRESHOLD TO ASSIST SOUND-PROOFING.*

- B. Provide manufacturer's standard sound attenuating jamb and head seals of type, size, and profile indicated, continuous at head and jamb edges of scheduled door openings. Provide units with noncorrosive fasteners.

- 1. Manufacturer/Model: Pemko No. 350 CSR, or equivalent products by any BHMA member.

**2.21 AUTOMATIC DOOR BOTTOM**

*NOTE THAT AUTOMATIC DOOR BOTTOMS CAN INCREASE DOOR OPENING FORCE REQUIREMENTS AND IMPEDE LATCHING IF NOT PROPERLY ADJUSTED. USE ONLY WHEN REQUIRED FOR SOUND ATTENUATION, RODENT ROOMS AND OTHER SPECIFIC APPLICATIONS. TYPICALLY, LIGHT SEALS CAN BE SATISFACTORILY ACCOMPLISHED USING A SWEEP SEAL/THRESHOLD COMBINATION. AVOID SPECIFYING FULLY MORTISED UNITS (DIFFICULT TO MAINTAIN) AND SURFACE MOUNTED UNITS (NOT ADA COMPLIANT)*

- A. Provide manufacturer's standard units of type, size and profile indicated, continuous at bottom of indicated door opening. Provide non-corrosive fasteners.

*BELOW IS NON-HANDED SEMI-MORTISED UNIT WITH SPONGE NEOPRENE SEAL. BE SURE TO INCLUDE LOW PROFILE THRESHOLD WHEN SPECIFYING A DOOR BOTTOM OVER CARPET.*

*"C" SUFFIX BELOW IS FOR CLEAR ANODIZED ALUMINUM FINISH. CHANGE TO "D" SUFFIX FOR DARK BRONZE ANODIZED ALUMINUM.*

- 1. Manufacturer/Model Automatic Door Bottoms: EXAMPLE Semi-mortised Pemko; No. 4301CRL, or equivalent products by any BHMA member.

**2.22 ELECTRICALLY ACTIVATED HOLD-OPEN DEVICE**

*COORDINATE THIS EQUIPMENT WITH ELECTRICAL ENGINEER. ELECTRICAL SHEETS SHOULD SHOW WIRING, CONDUIT AND BOXES REQUIRED FOR AUTOMATIC HOLD-OPEN DEVICES.*

- A. Provide units consisting of a silently-operating wall-mounted electromagnet in electrical box with cover plate and door-mounted contact plate. Provide contact plate with swivel adjustment that adjusts to door contact angle indicated on drawings. Provide units that UL and FM listed.
1. Minimum holding force: 25 lbs.
  2. Operating Voltage: 24 V. AC.
  3. Finish: Brushed zinc on all visible components.

**SELECT ONE OF THE FOLLOWING.**

4. Manufacturer/Model:
  - a. LCN model SEM7830 (surface-mounted). No substitutions.
  - b. LCN model SEM7840 (recessed). No substitutions.

**2.23 THRESHOLDS**

- A. Provide manufacturer's standard, extruded, anodized aluminum units of type, size, and profile indicated, and complying with applicable portions of the Americans with Disabilities Act (ADA). Provide units continuous across bottom of door openings. Provide noncorrosive fasteners.

**MODEL NUMBER BELOW IS FOR A LATCHING PANIC THRESHOLD. LATCHING PANIC THRESHOLDS ARE DESIGNED TO WORK IN CONJUNCTION WITH SURFACE APPLIED VERTICAL ROD EXIT DEVICES. THEY ARE ALSO USED TO PROVIDE A DOOR STOP AND SEAL AT THE BOTTOM OF THE DOOR FOR LIGHT AND SOUND ATTENUATION.**

**CONSULT MANUFACTURER'S CATALOG FOR OTHER APPLICATIONS: CHANGE IN FLOOR LEVEL, THERMAL BARRIER, ETC**

1. Manufacturer/Model: Pemko No. 2005AT, or equivalent products by any BHMA member.

**MODEL NUMBER BELOW IS A LOW PROFILE THRESHOLD FOR USE WITH AN AUTOMATIC DOOR BOTTOM OVER CARPET.**

2. Manufacturer/Model: Pemko No. 2364A, or equivalent products by any BHMA member.

**CONSIDER REMOVABLE MULLIONS BELOW WHERE FIXED MULLIONS CANNOT BE PROVIDED. COORDINATE WITH ALUMINUM ENTRANCES AND STOREFRONTS SECTION.**

**2.24 REMOVABLE MULLION**

**BELOW IS NON-KEYED REMOAVABLE MULLION FOR ALUMINUM ENTRANCES. MODEL LISTED IS NOT COMPATIBLE WITH ELECTRIC STRIKES.**

- A. Aluminum mullion: Provide removable mullion with weatherstripping, stabilizer set, and indicated door strikes.

**SELECT FINISH. DARK BRONZE ANODIZED IS TYPICALLY APPLICABLE TO ALUMINUM ENTRANCES.**

1. Finish: 313AN dark bronze anodized.

2. Manufacturer/Model:

*BELOW IS NON-RATED DEVICE*

- a. Von Duprin 5654, with weatherstripping and 154 stabilizer set or equivalent by Sargent.

*BELOW IS KEYED ROBUST MULLION FOR HIGH TRAFFIC OPENINGS. IT DOES NOT HAVE WEATHERSTRIPPING FOR INFILTRATION/NOISE REDUCTION.*

- B. Galvanized steel mullion: Provide units with keyed mechanism for quick removal of mullion; mortised cylinder equipped with space for building standard 7-pin SFIC. Unit shall self-lock upon reinstallation.

*SELECT FINISH. DARK BRONZE COLOR AND FLUOROPOLYMER IS APPLICABLE TO ALUMINUM ENTRANCES*

- 1. Finish: SP313 dark bronze painted finish.
- 2. Finish: Two-coat fluoropolymer finish as selected by Architect to match framing.
- 3. Manufacturer/Model:

*BELOW IS NON-RATED DEVICE*

- a. Von Duprin KR4954, with 154 stabilizer set or equivalent by Sargent.

*BELOW IS RATED DEVICE. NOTE THAT THIS MULLION IS NOT EASILY REMOVED.*

- b. Von Duprin KR9954, with 154 stabilizer set or equivalent by Sargent.

**2.25 CONCEALED POWER TRANSFER**

*INCLUDE BELOW TO TRANSFER POWER FROM FRAME TO DOOR FOR DOORS WITH ELECTRIFIED MORTISE LOCKSET OR EXIT DEVICE. ELECTRIFIED HINGES ARE TYPICALLY NOT USED. COORDINATE WITH ELECTRICAL ENGINEER.*

*NOTE THAT EPT WILL VOID RATING OF EXISTING RATED DOOR / FRAME ASSEMBLY. IF RATING IS REQUIRED, SHOULD BE SPECIFIED WITH NEW DOORS AND FRAMES ONLY.*

- A. Provide mortised electric power transfer device that is completely concealed when the door is in the closed position. Device shall be equipped with sufficient number and gage of conductors to accommodate function for hardware specified.

- 1. Manufacturer/Model:
  - Securitron EPT
  - Von Duprin EPT

- B. Armored door cords, electric hinges and other power transfer devices are not permitted.

**2.26 DOOR POSITION SWITCH**

*TYPICALLY DELETE BELOW - SPECIFIED IN DIV 28 ACCESS CONTROL SPEC. COORDINATE WITH ELECTRICAL.*

- A. Provide low voltage recessed position sensor with ABS plastic enclosure.
  - 1. Manufacturer/Model: UTC Interlogix 1078 Series only.

**2.27 FINISHES**

- A. Provide finishes complying with BHMA A156.18 as follows.

*SELECT FINISHES FROM LIST BELOW, OR REVISE TO SUIT PROJECT. GENERALLY MATCH HARDWARE FINISH OF ADJACENT WORK IN BUILDING. CONTACT A LOCKSMITH AT THE KEY OFFICE WITH QUESTIONS REGARDING SPECIFIC FINISH FOR EACH BUILDING.*

- 1. US 10 (satin bronze).
  - 2. US 10B (oil rubbed bronze)
  - 3. US 26D (dull chrome).
  - 4. US 32D (satin stainless).
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
  - C. Appearance of Finished Work: Noticeable variations in the same piece are not acceptable.
  - D. Standards: Where base material and quality of finish are not otherwise specified, comply with ANSI A 156 series standards applicable to each particular type of hardware.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. General: Install each hardware item to comply with manufacturer's printed installation instructions and recommendations for application indicated, unless otherwise indicated by referenced standard or by provisions of this Section.
- B. Hardware Mounting Heights: Door and Hardware Institute "Recommended Locations for Builder's Hardware for Custom Steel Doors and Frames".

*DELETE THE FOLLOWING IF NO NEW HARDWARE INSTALLED ON EXISTING DOORS OR ON NEW DOORS IN EXISTING FRAMES.*

- C. Hardware at Existing Doors and Frames:
  - 1. Match existing hardware preparation heights on door or frame to be reused.

*DELETE THE FOLLOWING PARA AND SUBPARAS IF NEW LOCKSETS OR LATCHSETS ARE NOT INSTALLED IN CONJUNCTION WITH EXISTING FRAMES.*

2. Where new locksets are indicated to be installed at openings with an existing door frame, verify the compatibility of the existing strike plate and cut-out locations with the new hardware.
  - a. Where no existing strike exists, or where the new lockset cannot be located at a height matching the existing strike, cut out metal frames and provide new insert tabs, or rout out wood frames, as required to fully mortise the new strike plate.

**DELETE SUBPARA ABOVE OR BELOW IF NOT APPLICABLE TO PROJECT.**

- b. Where an existing strike plate and cut-out is not of suitable size or configuration to ensure proper operation of the lockset, including protection of frame finish, modify or replace strike plate, as practicable. Where new strike plates are required, modify frame as required for a fully mortised installation and install custom-fabricated replacement strike plates to accurately fit within existing mortise cut-outs.
- D. Sound-Attenuating Seals and other Acoustic Barrier Components: Install complete length of door edges, with tight joints to components on adjacent door edges. No gaps at any point around the door perimeter are allowed. Coordinate closer selection and installation (if applicable) to ensure compatibility with seals.
- E. Silencers: Install silencers as follows:
  1. Single Door Frames: Install three, equally spaced silencers on the latch jamb of new hollow metal door frames.

**DELETE ABOVE AND BELOW TO SUIT PROJECT.**

2. Double Door Frames: Install two silencers on the head of each new hollow metal double door frame.

**DELETE BELOW IF NOT APPLICABLE, OR MODIFY TO SUIT PROJECT CONDITIONS.**

3. Existing Door Frames: Where new doors are scheduled to be installed in new frames, or where new hardware is scheduled to be installed on existing doors, inspect existing silencers and replace damaged and defective units.

**ALWAYS INCLUDE BELOW FOR PROJECTS WITH ACCESS CONTROL AND EXIT DEVICES.**

- F. Coordination with access control installation:
  1. Electrified exit devices:

**INCLUDE BELOW FOR RETROFIT APPLICATIONS ONLY**

- a. Coordinate installation of electrified exit devices / electrification kits with access control system installation such that system is immediately ready to support electrified locking / unlocking of the device.

**RETAIN BELOW IF ADDING ACCESS CONTROL TO EXISTING DOORS WITH EXIT DEVICES.**

2. Exit device dogging:

- a. Remove dogging capability and provide replacement cover plate on existing door hardware added to access control system.

*INCLUDE BELOW FOR PROJECTS WITH ACCESS CONTROL.*

### 3.2 COMMISSIONING

- A. Perform the commissioning activities as outlined in the Division 1 Section titled Commissioning and other requirements of the Contract Documents.

### 3.3 ADJUSTING

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended.

*EDIT BELOW TO SUIT PROJECT REQUIREMENTS.*

1. Electric Strikes: Adjust horizontal and vertical alignment of keeper to properly engage lock bolt.
2. Door Closers: Adjust sweep period and operating force to comply with accessibility requirements and ensure proper door function.

*NOT REQUIRED FOR MOST SMALL PROJECTS. REVIEW WITH KEY OFFICE, CLIENT AND CM IF RETAINED TO ENSURE ENFORCEMENT.*

- B. Post occupancy adjustment: Return to project one month after Owner's occupancy, and adjust hardware to proper operation and function. Instruct Owner's personnel in proper maintenance and adjustment.

### 3.4 HARDWARE SET SCHEDULE

*EXAMPLES FOLLOW, REVISE TO SUIT PROJECT.*

- A. Set No. 1:  
Office Lockset  
Butt Hinges (1-1/2 pr.)  
Closer  
Stop
- B. Set No. 2:  
Office Lockset with automatic unlocking  
Butt Hinges (1-1/2 pr.)  
Stop  
Kickplate
- C. Set No. 3:  
Active Leaf  
Classroom Lockset  
Butt Hinges (1-1/2 pr.)  
Closer  
Stop

Astragal  
Kickplate  
Inactive Leaf  
Automatic Flush Bolts (1 pr.)  
Butt Hinges (1 1/2 pr)  
Closer  
Stop  
Kickplate

**SPECIFICATION DIVISION 8**

NUMBER            SECTION DESCRIPTION

**DIVISION 08 OPENINGS**

SECTION 088000 - GLAZING

**END OF CONTENTS TABLE**

**DIVISION 08 OPENINGS**  
**SECTION 088000 - GLAZING**

*UPDATED TO INCORPORATE CURRENT MANUFACTURERS AND CURRENT CODES, INCLUDING ENERGY CODES.*

*USE THIS SECTION FOR EXTERIOR APPLICATIONS. INTERIOR GLAZING IS COVERED IN ANOTHER DIVISION 08 SECTION. THIS SECTION DOES NOT INCLUDE SLOPED GLAZING. ADD IF NEEDED FOR PROJECT.*

*THIS SECTION WILL ALMOST ALWAYS BE ACCOMPANIED BY SECTIONS 084113, 085113, AND/OR 084413. EDIT THIS SECTION AFTER THE OTHER SECTIONS ARE SUBSTANTIALLY COMPLETE. NOTE THAT THERMAL PERFORMANCE VALUES (U-VALUE AND SOLAR HEAT GAIN COEFFICIENT) ARE SPECIFIED IN THESE OTHER SECTIONS BECAUSE ASHRAE 90.1 REQUIRES THE VALUES TO BE FOR THE ENTIRE ASSEMBLY, NOT JUST FOR CENTER-OF-GLASS.*

*FOR PROJECTS LIMITED TO REPLACEMENT OF GLASS, SEE EDITOR'S NOTES IN PART 2.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including Standard General Conditions, Supplemental General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, apply to this Section.
- B. Related Sections:
  - 1. Division 07 Section "Joint Sealants".
  - 2. Division 08 Section "Aluminum-Framed Entrances & Storefronts"
  - 3. Division 08 Section "Aluminum Windows".
  - 4. Division 08 Section "Glazed Aluminum Curtain Walls".

**1.2 SUMMARY**

- A. Section Includes: Glass and glazing work for both field and pre-glazed units for the following types:

*MODIFY LISTING BELOW TO SUIT PROJECT.*

- 1. Window units.
- 2. Glazed curtain wall.
- 3. Storefront framing.
- 4. Entrances and other doors.
- 5. Skylight units.
- 6. Sloped glazing systems.
- 7. Replacement of glazing in existing aluminum framing.

**1.3 DEFINITIONS**

*DELETE DEFINITIONS BELOW IF NOT APPLICABLE TO PRODUCTS RETAINED FOR PROJECT.*

- A. Interspace: Space between lites of an insulating-glass unit that contains dehydrated air or a specified gas.
- B. Deterioration of Coated Glass: Defects developed from normal use which are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in metallic coating.
- C. Deterioration of Insulating Glass: Failure of hermetic seal under normal use that is attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.
- D. Deterioration of Laminated Glass: Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

**1.4 SUBMITTALS**

- A. Product data including manufacturer's technical data for each glazing material and fabricated glass product required; installation and maintenance instructions.
- B. Samples for initial selection, consisting 12-inch square samples of the full range of manufacturer's standard product line for the following types of glass units:

**USUALLY DELETE FIRST EXAMPLE BELOW. RETAIN ONLY IF PROJECT INCLUDES TINTED GLASS.**

- 1. Tinted glass.
- 2. Low-emissivity coated glass.
- C. Samples for verification purposes, of 1 set of 12-inch square samples of each type of glass indicated except for clear single pane units.

**USUALLY DELETE BELOW.**

- 1. Provide 1 set of 12-inch long samples of each color required (except black) for each gasket sample between two strips of material representative of adjoining framing system in color.
- D. Certificate: Submit certificates from respective manufacturers attesting that glass and glazing materials furnished for project comply with requirements.

**USUALLY RETAIN BELOW.**

- 1. Separate certification will not be required for glazing materials bearing manufacturer's permanent labels designating type and thickness of glass, provided labels represent a quality control program involving a recognized certification agency or independent testing laboratory acceptable to Owner.

**DELETE PARAGRAPH BELOW IF NO COMPATIBILITY TESTING IS REQUIRED UNDER "PERFORMANCE REQUIREMENTS" ARTICLE.**

- E. Compatibility and Adhesion Test Report: Submit statement from sealant manufacturer indicating that glass and glazing materials have been tested for compatibility and adhesion with glazing sealants and interpreting test results relative to material performance, including recommendations for primers and substrate preparation needed to obtain adhesion.

**USUALLY RETAIN PARAGRAPH BELOW.**

- F. Delegated-Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

### **1.5 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

**ALWAYS INCLUDE BELOW IF INSULATING GLASS IS TO BE PROVIDED ON PROJECT.**

- B. Insulating Glass Manufacturers: Provide insulating glass manufactured by firm with at least 5 years of experience with similar projects and possessing current IGCC membership.
  - 1. Insulating Glass Certification Program: Provide insulating glass units permanently marked either on spacers or at least one component pane of units with appropriate certification label of Insulating Glass Certification Council (IGCC).
- C. Single Source Responsibility for Glass: To ensure consistent quality of appearance and performance, provide materials produced by a single manufacturer or fabricator for each kind and condition of glass indicated and composed of primary glass obtained from a single source for each type and class required.
- D. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

**EDIT TO BE PROJECT SPECIFIC**

- 1. Glass Association of North America (GANA) Publications: GANA Glazing Manual [and GANA Laminated Glass Reference Manual].
- 2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

**RETAIN PARAGRAPH AND SUBPARAGRPHS BELOW ONLY FOR GLASS INSTALLED WITH GLAZING SEALANTS.**

E. Preconstruction Adhesion and Compatibility Testing: Submit to elastomeric glazing sealant manufacturers, for testing according to ASTM C 1087, samples of each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member that will contact or affect elastomeric glazing sealants:

1. Use test methods standard with sealant manufacturer to determine if priming and other specific preparation techniques are required for rapid, optimum glazing sealants adhesion to glass and glazing channel substrates.
  - a. Perform tests under normal environmental conditions during installation.
2. Submit not less than nine pieces of each type and finish of glass-framing members and each type, class, kind, condition, and form of glass (monolithic, insulating units) for adhesion testing, as well as one sample of each glazing accessory (gaskets, setting blocks and spacers) for compatibility testing.
3. Schedule sufficient time to test and analyze results to prevent delay in the Work.
4. Investigate materials failing compatibility or adhesion tests and get sealant manufacturer's written recommendations for corrective measures, including using special primers.
5. Testing is not required when glazing sealant manufacturer can submit required preparation data that is acceptable to Architect and is based on previous testing of current sealant products for adhesion to and compatibility with submitted glazing materials.

*DELETE BELOW IF NO SAFETY GLAZING IS REQUIRED. COORDINATE WITH PART 2 ARTICLES SPECIFYING MONOLITHIC, INSULATING AND LAMINATED GLASS PRODUCTS.*

F. Safety Glazing Standard: Comply with the following:

1. Provide safety glass where indicated and where otherwise required by the Michigan Building Code.

*REVISE PARAGRAPH BELOW FROM CATEGORY II MATERIALS TO CATEGORY I MATERIALS IF GLASS PANES ARE STATIONARY OR IN SWINGING DOORS AND ARE LESS THAN 9 SF IN AREA. REFER TO [HTTP://WWW.ACCESS.GPO.GOV/NARA/CFR/WAISIDX\\_03/16CFR1201\\_03.HTM](http://www.access.gpo.gov/nara/cfr/waisidx_03/16CFR1201_03.html) L FOR COMPLETE DESCRIPTION OF CATEGORY I AND CATEGORY II MATERIALS.*

2. Where safety glass is indicated, provide type of products indicated which comply with ANSI Z97.1 and testing requirements of 16 CFR Part 1201 for category II materials.
  - a. Subject to compliance with requirements, provide safety glass permanently marked with certification label of Safety Glazing Certification Council (SGCC) or other certification agency acceptable to Owner.

*PARAGRAPH BELOW IS USEFUL IN TRYING TO INSURE THAT COLOR OF LOW-E GLAZING DOESN'T VARY EXCESSIVELY FROM PANE TO PANE.*

- G. Sealed Insulating Glass Units: In addition to other requirements of this section, comply with ASTM D2244. Obtain written acceptance by the Architect and the Owner's representative of permissible color tolerance between test specimen and reference and the procedure for calculating the color tolerance. Each material and condition of use may require specific color tolerances.

**1.6 DELIVERY, STORAGE AND HANDLING**

- A. Protect glass and glazing materials during delivery, storage, and handling to comply with manufacturer's directions and as required to prevent edge damage to glass, and damage to glass and glazing materials from effects of moisture including condensation, of temperature changes, of direct exposure to sun, and from other causes.
  - 1. Glass shall be fully identified, and each pane shall be clearly labeled with manufacturer's name and product designation.

**1.7 PROJECT CONDITIONS**

- A. Environmental Conditions: Do not proceed with glazing when ambient and substrate temperature conditions are outside the limits permitted by glazing material manufacturer or when joint substrates are wet due to rain, frost, condensation or other causes.
  - 1. Install liquid sealants at ambient and substrate temperatures above 40 degrees F (4.4 deg. C).

**1.8 WARRANTY**

- A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form, made out to Owner and signed by coated-glass manufacturer agreeing to replace coated-glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
  - 1. Warranty Period: Manufacturer's standard but not less than 10 years after date of substantial completion.
- B. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form, made out to Owner and signed by insulating-glass manufacturer agreeing to replace insulating-glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
  - 1. Warranty Period: Manufacturer's standard but not less than 10 years after date of substantial completion.

**DELETE WARRANTY REQUIREMENT BELOW IF NO LAMINATED GLASS INCLUDED.**

C. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form, made out to Owner and signed by manufacturer agreeing to replace units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

1. Warranty Period: Five years from date of Substantial Completion.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

A. Subject to compliance with requirements, provide products by one of the following manufacturers:

*ALWAYS INCLUDE PRIMARY GLASS PARAGRAPH BELOW, SINCE PRIMARY GLASS IS A COMPONENT OF INSULATING GLASS AND LAMINATED GLASS.*

B. Primary Glass:

1. AGC Flat Glass North America, Inc.
2. Guardian Industries Corp.
3. Pilkington North America, Inc.
4. PPG Industries, Inc.

*DELETE PATTERNED GLASS IF NONE IN PROJECT.*

C. Patterned Glass:

1. AGC Flat Glass North America.
2. Guardian Industries Corp.

D. Laminated Glass:

1. AGC Flat Glass North America.
2. Guardian Industries Corp.
3. Oldcastle Glass Group.
4. Viracon, Inc.

E. Insulating Glass Units:

*EDIT LIST AFTER SELECTING DESIRED CHARACTERISTICS OF INSULATING GLASS UNITS.*

1. AGC Flat Glass North America.
2. Guardian Industries Corp.
3. Oldcastle Glass Group
4. Viracon, Inc.

F. Glazing sealants:

1. Dow Corning Corp.
2. GE
3. Pecora Corp.
4. Tremco, Inc.

*REFER TO DELEGATED DESIGN REQUIREMENTS IN THE "ALUMINUM WINDOWS" AND "GLAZED ALUMINUM CURTAIN WALL" SECTIONS.*

**2.2 PERFORMANCE REQUIREMENTS**

- A. General: Provide glazing systems capable of withstanding normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

*FIRST PARAGRAPH AND SUBPARAGRAPHS BELOW ASSUME GLASS THICKNESSES ARE INDICATED ON DRAWINGS OR IN ARTICLE 2.5. IF NOT, REVISE ACCORDINGLY. STRUCTURAL ENGINEER SHALL PERFORM A WIND PRESSURE ANALYSIS PER THE MICHIGAN BUILDING CODE.*

- B. Glass Design: Glass thickness designations indicated are minimums and are for detailing only. Confirm glass thicknesses and strengths (annealed or heat treated) by analyzing Project loads and in-service conditions as required to meet or exceed the following criteria:
  - 1. Glass Thicknesses: Comply with ASTM E 1300, according to the following requirements:
    - a. Design Wind Loads: As indicated on Drawings.
  - 2. Normal thermal movement is defined as that resulting from an ambient temperature range of 120 deg. F (67 deg. C) and from a consequent temperature range within glass and glass framing members of 180 deg. F (100 deg. C).

**2.3 PRIMARY GLASS PRODUCTS**

- A. General: Refer to ["Aluminum Entrances and Storefront"] ["Aluminum Windows"] ["Glazed Aluminum Curtain Wall"] section for performance requirements of assembled units composed of insulating units and aluminum framing.
- B. Clear Annealed Float Glass: ASTM C 1036 Type I (transparent glass, flat), Quality q3 (glazing select), of class indicated and with the following characteristics:

*ENTER VALUES FOR VISIBLE LIGHT TRANSMITTANCE AND REFLECTANCE BELOW AFTER REVIEWING PROJECT REQUIREMENTS. DELETE BELOW IF COVERED UNDER INSULATED GLASS SECTION IN PART 2.*

- 1. Visible Light Transmittance: [ ]
- 2. Reflectance: [ ]

*DELETE BELOW UNLESS PROJECT IS A RETROFIT MATCHING EXISTING TINTED GLAZING. TINTED GLASS IS NOT ACCEPTABLE ON NEW CONSTRUCTION.*

- C. Tinted Float Glass: Type I (transparent glass, flat), Class 2 (tinted heat absorbing and light reducing), Quality q3 (glazing select) and as follows:

*BELOW IS A GENERAL DESCRIPTION FOR TINTED BRONZE GLASS. OBTAIN SAMPLES AND MATCH TO EXISTING GLAZING AS CLOSELY AS POSSIBLE. CONSIDER LIMITING ACCEPTABLE PRODUCTS IF NOT ALL MANUFACTURERS HAVE A CLOSE MATCH.*

- 1. Bronze: Tint matching existing units.

D. Heat-Treated Float Glass

1. Manufacturing Process: Manufacture heat-treated glass by horizontal (roller hearth) process with roll-wave distortion parallel to bottom edge of glass as installed, unless otherwise indicated.

*BELOW SPECIFIES BOTH COATED AND UNCOATED CLEAR STRENGTHENED OR TEMPERED GLASS.*

*PROVIDE KIND HS (HEAT-STRENGTHENED) FLOAT GLASS IN PLACE OF ANNEALED FLOAT GLASS WHERE NEEDED TO RESIST THERMAL STRESSES INDUCED BY DIFFERENTIAL SHADING OF INDIVIDUAL GLASS LITES AND TO COMPLY WITH GLASS DESIGN REQUIREMENTS SPECIFIED IN PART 1 "PERFORMANCE REQUIREMENTS" ARTICLE.*

2. Clear Heat-Treated Float Glass: ASTM C 1048 Type I (transparent glass, flat), Class 1 (clear), Quality q3 (glazing select), and with the following characteristics:

*SELECT ONE OR BOTH BELOW*

- a. For uncoated glass, comply with requirements for Condition A.
- b. For coated vision glass, comply with requirements for Condition C (other coated glass).

*DELETE SUBPARAGRAPH BELOW IF LOCATIONS OF KIND FT FLOAT GLASS FOR SAFETY GLASS APPLICATIONS ARE SPECIFIED IN OTHER PART 2 ARTICLES OR ON DRAWINGS.*

- c. Provide Kind FT (fully tempered) float glass in place of annealed or Kind HS (heat-strengthened) where safety glass is indicated, required by Code or performance requirements listed elsewhere in this Section.

*BELOW SPECIFIES TINTED HEAT-STRENGTHENED OR TEMPERED GLASS. PROVIDE KIND HS (HEAT-STRENGTHENED) FLOAT GLASS WHERE NEEDED TO RESIST THERMAL STRESSES INDUCED BY DIFFERENTIAL SHADING OF INDIVIDUAL GLASS LITES AND TO COMPLY WITH GLASS DESIGN REQUIREMENTS SPECIFIED IN PART 1 "PERFORMANCE REQUIREMENTS" ARTICLE. USE OF TINTED GLASS IS RESTRICTED TO REPLACEMENT OR MATCHING OF EXISTING TINTED UNITS.*

3. Tinted Heat-Treated Float Glass: ASTM C 1048; Type I (transparent glass, flat); Class 2 (tinted heat absorbing and light reducing), Quality q3 (glazing select), with tint color and performance characteristics for 1/4 inch thick glass matching those indicated for non-heat-treated float glass; kind as indicated:

- a. For uncoated glass, comply with requirements for Condition A.
- b. For coated vision glass, comply with requirements for Condition C (other uncoated glass).

*DELETE SUBPARAGRAPH BELOW IF LOCATIONS OF KIND FT FLOAT GLASS FOR SAFETY GLASS APPLICATIONS ARE SPECIFIED IN OTHER PART 2 ARTICLES OR ON DRAWINGS.*

- c. Provide Kind FT (fully tempered) float glass in place of Kind HS (heat-strengthened) where safety glass is indicated.

*DELETE BELOW IF NO PATTERNED GLASS REQUIRED. IF USING IN NON-OPAQUE SPANDREL PANEL ALWAYS SPECIFY HEAT STRENGTHENED GLASS.*

- E. Patterned Glass: ASTM C 1048 Type II (patterned and wired glass, flat), Form 3 (patterned), Quality q8 (glazing), Finish f1 (patterned one side), of pattern and class indicated below:

*BELOW IS THE ONLY PATTERNED GLASS WITH AN OVERALL OBSCURING PATTERN AVAILABLE AS OF AUGUST, 2011, IN ONE QUARTER-INCH THICKNESS. OTHER PATTERNS ARE AVAILABLE IN 3/16" THICKNESS FROM AGC AND GUARDIAN.*

1. Pattern p3 (random), Class 1 (translucent).
  - a. Product: Subject to compliance with requirements, provide "Serenity" by AGC Flat Glass North America.

*RETAIN THICKNESS HERE OR ON DRAWINGS.*

2. Thickness: 1/4-inch.

*BELOW SPECIFIES STANDARD OPAQUE SPANDREL COATED GLASS WITH A CERAMIC FRIT APPLIED TO THE INBOARD SURFACE OF THE LITE. DELETE IF NONE IS INCLUDED IN PROJECT. COORDINATE WITH DESIGN MANAGER BEFORE USE.*

- F. Ceramic Coated Heat-Treated Spandrel Glass: ASTM C 1048 Condition B (spandrel coated glass, one surface ceramic coated), Type I (transparent glass, flat), Quality q3 (glazing select), and complying with the following requirements:

1. Kind HS (heat strengthened).

*ALTHOUGH IT IS POSSIBLE FOR UNBACKED HEAT-STRENGTHENED SPANDREL COATED GLASS TO PASS TEST IN SUBPARAGRAPH BELOW, APPLYING TAPE TO BACK OF SPANDREL COATED GLASS IS NORMALLY REQUIRED.*

2. Fallout Resistance: Provide spandrel coated units identical to those passing the fallout-resistance test for spandrel coated glass specified in ASTM C 1048.

- G. Low-E Glazing General: Performance characteristics designated for coated glass products are nominal values based on manufacturer's published test data for 1/4 inch thick glass products, unless otherwise indicated. Refer to primary and heat-treated glass product requirements relating to properties of glass products to which coatings are applied.

1. Provide heat-treated coated float glass of kind and where indicated or, if not otherwise indicated, provide heat-strengthened units where recommended by manufacturer for application indicated, and tempered where coated safety glass is designated or required.

- H. Sputter-Coated Float Glass: ASTM C 1376, (except for provisions regarding color tolerances, which are modified in this Section) float glass with metallic-oxide or -nitride coating deposited by vacuum deposition process after manufacture and heat treatment (if any), and complying with other requirements specified.

*DELETE THE FOLLOWING ARTICLE IF NO LAMINATED SAFETY GLASS REQUIRED.*

**2.4 LAMINATED GLASS PRODUCTS**

- A. General: Refer to float glass, heat-treated glass and coated glass requirements relating to properties of glasses making up laminated glass products.
- B. Laminated Glass: ASTM C 1172, and complying with other requirements specified and with the following:
  - 1. Interlayer: Polyvinyl butyral of thickness indicated with a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after laminating glass lites and installation.
  - 2. Products: Subject to compliance with requirements, provide one of the following:  
Saflex; Solutia, Inc.  
Butacite; E.I. DuPont De Nemours and Co., Inc.
- C. Laminating Process: Fabricate laminated glass using laminator's standard heat-plus-pressure process to produce glass free from foreign substances and air/glass pockets.
- D. Laminated Safety Glass: Two panes of glass of equal thickness, laminated together with not less than [0.030] [0.060] inch thick plastic interlayer and complying with requirements indicated below:
  - 1. Glass Characteristics: Float glass, complying with requirements for class, tint, kind and thickness of each pane (ply) indicated below:
    - a. Class 1 - clear for both panes.

**SELECT ONE OF TWO BELOW.**

- b. Kind HS (heat-strengthened).
- c. Kind FT (Fully tempered).
- d. Thickness: 1/4 inch.

- 2. Color of Plastic Interlayer: Clear.

**COORDINATE REQUIREMENTS SELECTED IN THIS ARTICLE WITH THOSE IN OTHER ARTICLES ON GLASS PRODUCTS WHICH RELATE TO PANES MAKING UP INSULATING UNITS.**

**2.5 SEALED INSULATING GLASS UNITS**

- A. General: Provide factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace filled with argon gas, and with other requirements specified for glass characteristics, air space, sealing system, sealant, spacer material, corner design and desiccant. Provide insulating glass units complying with and labeled with appropriate certification label of IGCC/IGMA Certification Program.
  - 1. For properties of individual glass panes making up units, refer to product requirements specified elsewhere in this Section applicable to types, classes, kinds and conditions of glass products indicated.

**INDICATE LOCATIONS OF HEAT-STRENGTHENED UNITS ON DRAWINGS OR SCHEDULES.**

2. Provide Kind HS (heat-strengthened) glass where indicated, or if not indicated, where needed to resist thermal stresses induced by differential shading of individual glass lites and to comply with glass design requirements specified elsewhere in Section.
3. Provide tempered panes where indicated or if not indicated, where safety glass is designated or required.
4. Performance characteristics designated for coated insulating glass are nominal values based on manufacturer's published test data for units with 1/4 inch thick panes of glass and 1/2 inch thick air space filled with argon gas.
5. Sealing System: Dual seal, using butyl primary seal and silicone secondary seal.

**BELOW IS SPECIFICATION FOR STANDARD ALUMINUM SPACER. BETTER THERMAL PERFORMANCE CAN BE OBTAINED BY USING "WARM EDGE" SPACERS OF STAINLESS STEEL OR OTHER MATERIALS.**

6. Spacer: Fabricated from anodized aluminum, incorporating either molecular sieve, silica gel or combination type dessicant as standard with manufacturer.

**SELECT ONE OF THE FOLLOWING.**

- a. Color: Clear.
- b. Color: Match finish color of aluminum framing system.
- c. Color: Dark bronze.

**SELECT SEALANT SYTEM WITH BEST PERFORMANCE AND WHICH IS ACCEPTABLE TO ALUMINUM FRAMING MANUFACTURERS.**

## **2.6 SEALANT SYSTEMS GENERAL**

### **A. Products:**

1. Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

**ALWAYS RETAIN BELOW. IF PROJECT IS LEED, VERIFY VALUE BELOW FOR LEED CREDIT.**

2. Sealants used inside the framing and glazing shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Cleaners, Primers and Sealers:** Type recommended by manufacturer of sealants.
- C. Setting Blocks:** Elastomeric material with 80 to 90 Shore, type A durometer hardness.
- D. Spacers:** Elastomeric blocks or continuous extrusions with a Shore, Type A durometer hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
- E. Edge Blocks:** Elastomeric material as required for compatibility with glazing sealant, of size and hardness required to limit lateral movement (side-walking) of glass.

**BuildingName**

**The Description of the Project**

**P0000000 0000 Issued for: BID 088000 - - 11**

WET-DRY SYSTEM USES A TOOLED SEALANT CAP BEAD OVER A GLAZING GASKET ON THE EXTERIOR AND A DRY GASKET ON THE INTERIOR. THIS SYSTEM PROVIDES BETTER WEATHER PROTECTION BUT REQUIRES THAT GLAZING BE DONE FROM THE EXTERIOR. ADDITIONALLY, NOT ALL ALUMINUM FRAMING MANUFACTURERS PRODUCE A FRAMING SYSTEM THAT ACCEPTS WET-DRY GLAZING.

**2.7 WET-DRY GLAZING SEALANT SYSTEM MATERIALS**

- A. Glazing Gaskets: Manufacturer's standard compression types; replaceable, molded or extruded, of profile and hardness required to maintain watertight seal on interior.

BOND-BREAKER TAPE IS TYPICALLY USED WITH WEATHERSEAL SEALANTS IF CONVENTIONAL SEALANT BACKING CANNOT BE USED BECAUSE OF DIMENSIONAL LIMITATIONS. IT IS ALSO USED TO AVOID THREE-SIDE ADHESION THAT MAY BE DETRIMENTAL TO PROPER SEALANT MOVEMENT.

- B. Bond-Breaker Tape: Manufacturer's standard TFE-fluorocarbon or polyethylene material to which sealants will not develop adhesion.

RETAIN PARAGRAPH BELOW IF USING TAPE INSTEAD OF GASKET.

- C. Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:
  - 1. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
- D. Glazing Sealants: As recommended by manufacturer for joint type, and as follows:

REVIEW WEATHERSEAL-SEALANT REQUIREMENTS WITH ALUMINUM-FRAMED-SYSTEM MANUFACTURERS. BELOW IS NEUTRAL CURE. CONFIRM WITH MANUFACTURER OF SPECIFIED FRAMING SYSTEM.

- 1. Silicone Weatherseal Sealant: ASTM C 920 for Type S, Grade NS, Class 50, Uses NT, G, A, and O; single-component neutral-curing formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant, weatherseal-sealant, and aluminum-framed-system manufacturers for this use.

**2.8 DRY GASKET SYSTEM MATERIALS**

- A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from one of the following:

RETAIN ONE OR BOTH OF SUBPARAGRAPHS BELOW. USE COMPONENTS COMPLYING WITH WINDOW, STOREFRONT, CURTAIN WALL AND DOOR MANUFACTURER'S REQUIREMENTS. NEOPRENE IS NOT COMPATIBLE WITH SILICONE GLAZING SEALANTS.

- 1. EPDM complying with ASTM C 864.

2. Silicone complying with ASTM C 1115.

*GASKETS IN FIRST PARAGRAPH BELOW ARE FOR USE BETWEEN GLASS AND FRAME (OR FIXED STOP) WHERE THEY WILL BE COMPRESSED BY INSERTING DENSE COMPRESSION GASKETS OR BY PRESSURE-GLAZING STOPS.*

- B. Soft Compression Gaskets: Extruded or molded, closed-cell, EPDM or silicone gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.
  1. Application: Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.

## 2.9 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

## 2.10 INSULATED-GLASS TYPES

*PARAGRAPH AND SUBPARAGRAPHS BELOW DESCRIBE TYPICAL U-M INSULATED GLAZING PANEL.*

- A. Clear Low-E Insulating Glass Units for Vertical Applications: Manufacturer's standard units complying with the following requirements:

1. Thickness of Each Pane: 1/4-inch.

*SELECT TYPE OF GLASS FOR EACH PANE.*

2. Exterior Pane: [Clear float glass] [Heat strengthened float glass] [Fully tempered float glass], low-emissivity coating applied to the second surface.
3. Interior Pane: [Clear float glass] [Heat strengthened float glass] [Fully tempered float glass], uncoated.
4. Air Space Thickness: 1/2-inch.
  - a. Fill air space with argon gas.
5. Composite Thickness: 1-inch.
6. Performance Characteristics: Provide insulating glass units complying with ASTM E 774 for Class A, and the following:

*MODIFY AS REQUIRED TO MEET PROJECT REQUIREMENTS.*

- a. Visible light transmittance: Not more than 70 percent.
- b. UV Transmittance: 15 percent.
- c. Outdoor reflectance: Not more than 12 percent.

*NORMALLY, SPECIFY U-VALUE AND SHGC IN THE ACCOMPANYING ALUMINUM FRAMING SECTION (STOREFRONT, WINDOWS OR CURTAIN WALL).*

- d. U-value and Solar Heat Gain Coefficient: As required to achieve specified performance in ["Aluminum Entrances and Storefront"] ["Aluminum Windows"] ["Glazed Aluminum Curtain Wall"] Section[s].

*USUALLY DELETE PARAGRAPH AND SUBPARAGRAPHS BELOW. RETAIN ONLY FOR PROJECTS MATCHING EXISTING TINTED GLASS.*

- B. Tinted Low-E Insulating Glass Units for Vertical Applications: Manufacturer's standard units complying with the following requirements:

*REVISE BELOW AS REQUIRED TO MATCH COLOR OF EXISTING GLAZING.*

- 1. Thickness of Each Pane: 1/4-inch.

*SELECT TYPE OF GLASS FOR EACH PANE. TYPICALLY USE HEAT STRENGTHENED GLASS WHEN GLASS IS TINTED, ESPECIALLY ON SOUTH AND WEST ELEVATIONS.*

- 2. Exterior Pane: [Clear float glass] [Heat strengthened float glass] [Fully tempered float glass], low-emissivity coating applied to the second surface.
  - a. Tint: Bronze.
- 3. Interior Pane: [Clear float glass] [Heat strengthened float glass] [Fully tempered float glass], uncoated.
- 4. Air Space Thickness: 1/2-inch.
  - a. Fill air space with argon gas.
- 5. Composite Thickness: 1-inch.
- 6. Performance Characteristics: Provide insulating glass units complying with ASTM E 774 for Class A, and the following:

*MODIFY AS REQUIRED TO MEET PROJECT REQUIREMENTS.*

- a. Visible light transmittance: []
- b. UV Transmittance: Not more than 5 percent.
- c. Outdoor reflectance: []

*NORMALLY, SPECIFY U-VALUE AND SHGC IN THE ACCOMPANYING ALUMINUM FRAMING SECTION (STOREFRONT, WINDOWS OR CURTAIN WALL).*

- d. U-value and Solar Heat Gain Coefficient: As required to achieve specified performance in ["Aluminum-Framed Entrances and Storefronts"] ["Aluminum Windows"] ["Glazed Aluminum Curtain Wall"] Section[s].

*BELOW DESCRIBES SEMI-OPAQUE "TRANSOM PANEL" USED TO CONCEAL CEILING SPACES. IT IS A REASONABLY CLOSE MATCH TO VISION PANELS. DELETE IF STANDARD OPAQUE SPANDREL COATED GLASS IS SELECTED, OR IF NO SPANDREL COATED GLASS IS REQUIRED.*

- C. Non-Vision Low-E Insulating Glass Units for Vertical Applications: Manufacturer's standard units complying with the following requirements:

- 1. Thickness of Each Pane: 1/4-inch.

*SELECT TINTED OR CLEAR GLAZING TO MATCH VISION UNITS. IF USING CLEAR GLASS DELETE THE FOLLOWING PARAGRAPH AND ASSOCIATED SUB-PARAGRAPHS.*

**TYPICALLY USE HEAT STRENGTHENED GLASS WHEN GLASS IS TINTED, ESPECIALLY ON SOUTH AND WEST ELEVATIONS.**

- a. Exterior Pane: [Tinted] [Clear] [float glass] [heat strengthened float glass] [fully tempered float glass], low-emissivity coating applied to the second surface.

**REVISE TO MATCH EXISTING TINT COLOR OR ELIMINATE FOR CLEAR GLASS.**

- 1) Tint: Bronze.
- b. Interior Pane: Spandrel coated glass.
  - 1) Kind HS (heat strengthened), unless otherwise indicated.
- c. Air Space Thickness: 1/2-inch.
  - 1) Fill air space with argon gas.
- d. Composite Thickness: 1-inch.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Inspection: Inspect work of glass framing erector in presence of Glazier for compliance with manufacturing and installation tolerances, including those for size, squareness, offsets at corners; for presence and functioning of weep system; for existence of minimum required face or edge clearances; and for effective sealing of joinery.
  - 1. Obtain Glazier's written report listing conditions detrimental to performance of glazing work. Do not allow glazing work to proceed until unsatisfactory conditions have been corrected.

#### **3.2 PREPARATION**

- A. Clean glazing channels and other framing members to receive glass, immediately before glazing. Remove coatings which are not firmly bonded to substrates. Remove lacquer from metal surface where elastomeric sealants are indicated for use.

#### **3.3 GLAZING GENERAL**

**IF IT IS ASSUMED THAT SHOP GLAZING WILL BE IMPOSSIBLE IN SOME LOCATIONS, INDICATE ACCEPTABLE FIELD GLAZED LOCATIONS ON DRAWING.**

- A. Unless indicated otherwise, shop glaze aluminum framing specified in "Aluminum-Framed Entrances and Storefronts", "Aluminum Windows" and "Glazed Aluminum Curtain Wall" Sections.
- B. Comply with combined written instructions of manufacturers of aluminum framing, glass, sealants, tapes, and other glazing materials, except where more stringent requirements are indicated, including those of referenced glazing publications.

- C. Protect glass from edge damage during handling and installation. Remove from Project and legally dispose of damaged glass. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- D. Glazing channel dimensions, as indicated on Drawings, provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust as required by Project conditions during installation.
- E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- F. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.
- G. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of sealant which is acceptable for heel bead use.
- H. Provide spacers for glass sizes larger than 50 united inches (length plus height).
  - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
  - 2. Provide 1/8-inch (3-mm) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- I. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass unit manufacturer and according to requirements in referenced glazing publications.
- J. Set units of glass in each series with uniformity of pattern, draw, bow and similar characteristics.
- K. Set glass lites with proper orientation so that coatings face exterior or interior as specified.
- L. Install sealants in compliance with ASTM C1193.

**COORDINATE GLAZING METHODS BELOW WITH SELECTIONS IN PART 2.**

**3.4 WET/DRY GLAZING**

- A. Follow manufacturer's recommendations and reference standards.
- B. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

- C. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

***RETAIN BELOW FOR WINDOWS AND STOREFRONT SYSTEMS.***

- D. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer. Apply cap bead of sealant on exterior per manufacturer's instructions.

***RETAIN BELOW FOR CURTAIN WALL***

- E. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer. Apply cap bead of sealant on exterior per manufacturer's instructions.

**3.5 TAPE GLAZING**

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until right before each glazing unit is installed.

***DELETE PARAGRAPH BELOW IF NOT REQUIRED, OR QUALIFY BY ADDING "WHERE INDICATED" AND SHOW LOCATIONS ON DRAWINGS.***

- F. Apply heel bead of elastomeric sealant.
- G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

***DELETE PARAGRAPH BELOW IF NOT APPLICABLE OR REVISE; IT ASSUMES FIXED STOP IS LOCATED ON EXTERIOR.***

- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

**RETAIN BELOW FOR DRY GLAZING WITH GASKETS.**

**3.6 GASKET GLAZING (DRY):**

- A. Fabricate compression gaskets in lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Miter cut wedge-shaped gaskets at corners, and install gaskets in manner recommended by gasket manufacturer to prevent pull away at corners. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- D. Install gaskets so they protrude past face of glazing stops.

**3.7 SEALANT GLAZING (WET)**

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
  - 1. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

**3.8 ADJUSTING, CLEANING, PROTECTION**

- A. Protect exterior glass from breakage immediately upon installation by use of crossed streamers attached to framing and held away from glass. Do not apply markers to surface of glass. Remove nonpermanent label and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, containment substances do come into contact with glass, remove immediately by method recommended by glass manufacturer.

- C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkali deposits or staining. When examination reveals presence of these forms of residue, remove by method recommended by glass manufacturer.
- D. Remove and replace glass which is broken, chipped, cracked, abraded or damaged in other ways during construction period, including natural causes, accidents and vandalism.
- E. Wash glass on both faces not more than 4 days prior to date scheduled for inspections intended to establish date of substantial completion in each are of project. Wash glass by method recommended by glass manufacturer.

**SPECIFICATION DIVISION 8**

NUMBER            SECTION DESCRIPTION

**DIVISION 08 OPENINGS**

SECTION 088010 - GLAZING (INTERIOR APPLICATIONS)

**END OF CONTENTS TABLE**

**DIVISION 08 OPENINGS**

**SECTION 088010 - GLAZING (INTERIOR APPLICATIONS)**

*UPDATED TO CORRELATE WITH LANGUAGE IN SECTION 088000 AND MANUFACTURERS UPDATED - 5/05.*

*UPDATED TO INCLUDE FIRE-RATED GLAZING PRODUCTS - 5/04.*

*THIS SECTION HAS BEEN PRE-EDITED TO APPLY ONLY TO SMALL INTERIOR PROJECTS. USE MASTER SPECIFICATION SECTION 088000 "GLAZING") FOR EXTERIOR GLASS.*

*RATHER THAN USING THIS SECTION, CONSIDER INCLUDING VERY SMALL, NON-COMPLEX GLASS ITEMS IN RELATED SECTIONS. EXAMPLE: GLASS LITES IN DOORS IN STEEL OR WOOD DOOR SECTIONS; GLASS LIGHTS IN SIDELITES IN STEEL FRAME OR FINISH CARPENTRY SECTION. HOWEVER, IF INCLUDING THIS SECTION FOR ANY APPLICATION, INCLUDE ALL GLAZING APPLICATIONS WITHIN IT.*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of glass and glazing work is indicated on drawings.

**1.2 SUBMITTALS**

- A. Product Data: Submit manufacturer's technical data for each glazing material and fabricated glass product required, including installation and maintenance instructions.
- B. Certificate: Submit certificates from respective manufacturers attesting that glass and glazing materials furnished for project comply with requirements.

**1.3 DEFINITIONS**

- A. Deterioration of Laminated Glass and Gel-Filled Dual-Glazed Units: Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning glass units contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

**1.4 QUALITY ASSURANCE**

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated.
  - 1. GANA Publications:
    - a. GANA's "Glazing Manual."

*DELETE OPTION IN SUBPARAGRAPH BELOW IF NO LAMINATED GLASS IS SPECIFIED FOR PROJECT.*

- b. GANA Laminated Division's "Laminated Glass Design Guide" and

*DELETE BELOW IF NO SAFETY GLAZING IS REQUIRED. COORDINATE WITH PART 2 ARTICLES SPECIFYING MONOLITHIC, INSULATING AND LAMINATED GLASS PRODUCTS.*

- B. Safety Glazing Standard: Comply with the following:
  - 1. Provide safety glass where indicated and where otherwise required by the Michigan Building Code.

*REVISE PARAGRAPH BELOW FROM CATEGORY II MATERIALS TO CATEGORY I MATERIALS IF GLASS PANES ARE STATIONARY OR IN SWINGING DOORS AND ARE LESS THAN 9 SF IN AREA. REFER TO [HTTP://WWW.ACCESS.GPO.GOV/NARA/CFR/WAISIDX\\_03/16CFR1201\\_03.HTML](http://www.access.gpo.gov/nara/cfr/waisidx_03/16cfr1201_03.html) FOR COMPLETE DESCRIPTION OF CATEGORY I AND CATEGORY II MATERIALS.*

- 2. Where safety glass is indicated, provide type of products indicated which comply with ANSI Z97.1 and testing requirements of 16 CFR Part 1201 for category II materials.
    - a. Subject to compliance with requirements, provide safety glass permanently marked with certification label of Safety Glazing Certification Council (SGCC) or other certification agency acceptable to Owner.
- C. Fire Resistance Rated Wire Glass: Provide wire glass products that are identical to those tested per ASTM E 163 (UL 9) and are labeled and listed by Underwriters Laboratories (UL) or other testing and inspecting agency acceptable to Authorities Having Jurisdiction.
- D. Glazing for Fire-Rated Door Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by UL or Intertek/Warnock Hersey, for fire-protection ratings indicated, based on testing according to NFPA 252.

*RETAIN PARAGRAPH ABOVE FOR DOORS AND PARAGRAPH BELOW FOR WINDOWS IF WIRED GLASS OR ANOTHER FIRE-RESISTIVE GLAZING PRODUCT IS SPECIFIED IN PART 2.*

- E. Glazing for Fire-Rated Window Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by UL or Intertek/Warnock Hersey, for fire ratings indicated, based on testing according to NFPA 257.

**1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Protect glass and glazing materials during delivery, storage, and handling to comply with manufacturer's directions. Prevent damage to glass and glazing materials.

*DELETE THE WARRANTY BELOW UNLESS MULTI-LITE LAMINATED OR GEL-FILLED UNITS IN PART TWO ARE INCLUDED.*

**1.6 WARRANTY**

- A. Manufacturer's Special Warranty on Fire-Rated Laminated Glass and Gel-Filled, Dual-Glazed Units: Manufacturer's standard form, made out to Owner and signed by manufacturer agreeing to replace units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
  - 1. Warranty Period: Five years from date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

**SELECT APPROPRIATE APPLICATIONS BELOW.**

- B. Primary Glass:
  - AFG Industries.
  - Guardian Industries Corp.
  - Pilkington Group
  - PPG Industries, Inc.
  - Visteon.
- C. Wire and Patterned Glass:
  - AFG Industries.
  - Guardian Industries.
  - Pilkington Group.
- D. Laminated Glass:
  - AFG Industries.
  - Guardian Industries Corp.
  - Interpane Glass Company.
  - PPG Industries, Inc.
  - Oldcastle Glass Group.
- E. Fire Rated Glazing:
  - EDIT LIST AFTER SELECTING TYPE OF FIRE-RATED GLAZING TO BE USED. NOT ALL TYPES OF PRODUCTS ARE MADE BY EACH OF THE MANUFACTURERS LISTED.**
  - 1. Glaverbel S.A.; distributed by Interedge Technologies.
  - 2. Interedge Technologies.
  - 3. R. Four Ltd.; distributed by Technical Glass Products.
  - 4. Nippon Electric Glass Co., Ltd.; distributed by Technical Glass Products.
  - 5. Pilkington Group; distributed by Technical Glass Products.
  - 6. SAFTI; a Division of O'Keeffe's, Inc.
  - 7. Vetrotech Saint Gobain North America.

2.2 GLASS PRODUCTS

*SELECT FROM UNITS BELOW. REFER TO AIA MASTERSPEC FOR ADDITIONAL GLASS TYPES.*

- A. Clear Float Glass: ASTM C 1036 Type I (transparent glass, flat), Class 1 (clear), Quality q3 (glazing select).
- B. Tinted Float Glass: ASTM C 1036 Type I (transparent glass, flat), Class 2 (tinted heat absorbing and light reducing), Quality q3 (glazing select) and as follows:
  - 1. Gray: Manufacturer's standard tint.

*WIRED GLASS IS NOT RECOGNIZED AS SAFETY GLAZING IN THE 2006 MBC, WHICH REQUIRES SAFETY GLAZING IN DOORS EXCEPT IN OPENINGS THROUGH WHICH A 3-INCH SPHERE IS UNABLE TO PASS.*

*USE OF WIRED GLASS IS ALSO LIMITED TO OPENINGS WITH A FIRE RATING OF 45 MIN. OR LESS.*

*THE USE OF WIRE GLASS IS NOT RECOMMENDED, PARTICULARLY IN ATHLETIC AND CHILD CARE FACILITIES.*

- C. Wired Glass: ASTM C 1036 Type II (patterned and wired glass, flat), Class 1 (clear), Quality q6; complying with ANSI Z97.1; 1/4 inch thick; of form and mesh pattern indicated below:

*SELECT ONE BELOW.*

- 1. Polished Wire Glass: Form 1 (wired, polished both sides), Mesh m1 (diamond).
  - 2. Polished Wired Glass: Form 1 (wire, polished both sides) Mesh m2 (square).
- D. Patterned Glass: ASTM C 1036 Type II (patterned and wired glass, flat), Form 3 (patterned), Quality q8 (glazing), Finish f1 (patterned one side), of thickness, pattern and class indicated below:

*BELOW ARE TWO EXAMPLES. OTHER PATTERNS ARE AVAILABLE FROM MANUFACTURERS LISTED IN 2.1.D.*

- 1. Pattern p2 (geometric): 1/4 inch thick; Class 1 (translucent).
  - a. Manufacturer/Product: Subject to compliance with requirements, one of the following:  
"Burlap"; Hordis Brothers.  
"Flax"; AFG.
- 2. Pattern p3 (random): 1/4 inch thick; Class 1 (translucent).
  - a. Manufacturer/Product: Subject to compliance with requirements, one of the following:  
"Industrex"; AFG.

*THE FOLLOWING ARE SAFETY GLAZING MATERIALS.*

- E. Clear Tempered Float Glass: ASTM C 1048 Condition A (uncoated surfaces), Type I (transparent glass, flat), Class I (clear), Quality q3 (glazing select), Kind FT (fully tempered).

- F. Laminated Safety Glass: ASTM C 1172, two panes of glass of equal thickness, laminated together with interlayer, and complying with requirements indicated below:
1. Thickness: Nominal 1/4 inch.
  2. Glass Characteristics: Float glass, Class 1 and clear for both panes; 1/8 inch thick for both panes.
  3. Interlayer: Clear PVB plastic, not less than 0.030 inches thick, unless specified otherwise in this Section.

### 2.3 FIRE-RATED GLAZING ASSEMBLIES

*IF RETAINING ONE OR MORE PRODUCTS IN THIS ARTICLE, ALSO RETAIN APPLICABLE "GLAZING FOR FIRE-RATED DOOR ASSEMBLIES" OR "GLAZING FOR FIRE-RATED WINDOW ASSEMBLIES" PARAGRAPHS IN PART 1 "QUALITY ASSURANCE" ARTICLE.*

*NOTE THAT ALL OF THE PRODUCTS LISTED BELOW ARE REQUIRED TO BE INSTALLED AS PART OF AN APPROVED ASSEMBLY, AND THAT THE ASSEMBLY IS TESTED AS A UNIT.*

- A. General: Products described in this article consist of tested assemblies containing both glazing material and manufacturer's approved framing systems.

*PRODUCTS DESCRIBED IN FIRST PARAGRAPH AND ASSOCIATED SUBPARAGRAPHS BELOW DO NOT QUALIFY AS SAFETY GLAZING.*

- B. Assemblies Containing Monolithic Ceramic Glazing Material: Proprietary product in the form of clear flat sheets of 3/16-inch nominal thickness weighing 2.5 lb/sq. ft., and as follows:

*MODIFY SPECIFIED FIRE RATING AS REQUIRED FOR PROJECT. PRODUCTS LISTED BELOW CAN HAVE UP TO A 90-MINUTE RATING.*

1. Fire-Protection Rating: 45 minutes, and permanently labeled by UL or Intertek/Warnock Hersey.
2. Product: Subject to compliance with requirements, provide one of the following:

*DO NOT SELECT "PREMIUM FIRELITE" UNLESS APPEARANCE IS VERY IMPORTANT. PREMIUM IS CONSIDERABLY MORE EXPENSIVE THAN STANDARD, BUT PROVIDES BETTER OPTICAL CLARITY AND CLEARER COLOR.*

- a. "Premium FireLite" (polished on both surfaces) by Nippon Electric Glass Co., Ltd., and distributed by Technical Glass Products.
- b. "Standard FireLite" (unpolished on both surfaces) by Nippon Electric Glass Co., Ltd., and distributed by Technical Glass Products.
- c. SGG Keralite FR-R (unpolished on both surfaces) by Vetrotech Saint Gobain North America.

*PRODUCTS DESCRIBED IN PARAGRAPH AND ASSOCIATED SUBPARAGRAPHS BELOW DO QUALIFY AS SAFETY GLAZING.*

*FOR APPLICATIONS WHERE OPTICAL CLARITY IS EXTREMELY IMPORTANT, CHANGE "UNPOLISHED" TO "POLISHED" IN PARAGRAPH BELOW AND*

*DELETE KERALITE, WHICH IS ONLY AVAILABLE UNPOLISHED. COST FOR POLISHED PRODUCT WILL BE CONSIDERABLY HIGHER.*

- C. Assemblies Containing Film-Faced Ceramic Glazing Material: Proprietary Category II safety glazing product in the form of a ~~3/16-inch~~-thick, ceramic glazing material unpolished on both surfaces, faced on one surface with a clear glazing film, and as follows:

*MODIFY SPECIFIED FIRE RATING AS REQUIRED FOR PROJECT.*

1. Fire-Protection Rating: 45 minutes, and permanently labeled by UL or Intertek/Warnock Hersey.
2. Product: Subject to compliance with requirements, provide one of the following:
  - a. "FireLite NT" by Nippon Electric Glass Co., Ltd., and distributed by Technical Glass Products.
  - b. SGG Keralite FR-F by Vetrotech Saint Gobain North America.

*PRODUCTS DESCRIBED IN PARAGRAPH AND ASSOCIATED SUBPARAGRAPHS BELOW ARE LAMINATED AND QUALIFY AS SAFETY GLAZING, WITH SIMILAR PERFORMANCE TO PRODUCTS ABOVE. THEY MAY BE MORE DURABLE BECAUSE THERE IS NO EXPOSED FILM WHICH COULD BE DAMAGED. HOWEVER, THEY ARE MORE EXPENSIVE THAN THE PRODUCTS ABOVE.*

- D. Assemblies Containing Laminated Ceramic Glazing Material: Proprietary Category II safety glazing product in the form of 2 lites of clear ceramic glazing material laminated together to produce a laminated lite of ~~5/16-inch~~ nominal thickness; polished on both surfaces; weighing ~~4 lb/sq. ft.~~; and as follows:

*MODIFY SPECIFIED FIRE RATING AS REQUIRED FOR PROJECT. BOTH ARE AVAILABLE WITH UP TO A 3-HOUR RATING IN DOORS (SIZE LIMITATIONS APPLY) AND UP TO 90 MINUTES IN OTHER LOCATIONS.*

1. Fire-Protection Rating: 45 minutes, and permanently labeled by UL or Intertek/Warnock Hersey.
2. Product: Subject to compliance with requirements, provide one of the following:
  - a. "FireLite Plus" (polished on both surfaces) by Nippon Electric Glass Co., Ltd., and distributed by Technical Glass Products.
  - b. SGG Keralite FR-L (unpolished on both surfaces) by Vetrotech Saint Gobain North America.

*PRODUCT IN FIRST PARAGRAPH AND SUBPARAGRAPHS BELOW DOES NOT PASS HOSE-STREAM TEST, BUT DOES QUALIFY AS SAFETY GLAZING. CONSIDER USING IN 20-MINUTE DOORS IN LIEU OF WIRED GLASS.*

- E. Assemblies Containing Specially Tempered Monolithic Glass: Proprietary Category II safety glazing product in the form of a specially tempered ~~1/4-inch~~-thick monolithic lite, and as follows:

1. Fire-Protection Rating: 20 minutes, and permanently labeled by UL or Intertek/Warnock Hersey.
2. Product: Subject to compliance with requirements, provide one of the following:
  - a. "SuperLite" by SAFTI; a Division of O'Keeffe's Inc.

- b. "PyroEdge-20" by Interedge Technologies.
- c. "Fireglass 20" by Technical Glass Products.
- d. "PyroSwiss Extra" by Vetrattech Saint-Gobain.

*THE FOLLOWING TWO CATEGORIES OF FIRE-RESISTANT GLAZING ARE CONSIDERABLY THICKER THAN 1/4" AND WILL REQUIRE SPECIAL FRAMING TO FIT IN A DOOR OR WINDOW. CONSIDER USE ONLY WHERE A BARRIER TO RADIANT HEAT PER ASTM E119 IS REQUIRED.*

F. Assemblies Containing Laminated Glass with Intumescent Interlayers: Proprietary Category II safety glazing product in the form of multiple lites of Condition A (uncoated surfaces), Type I (transparent glass, flat), Class 1 (clear), Kind FT (fully tempered) float glass laminated with intumescent interlayers; and as follows:

- 1. Fire-Protection Rating: 60 minutes, and permanently labeled by UL or Intertek/Warnock Hersey.

*MODIFY FIRE-PROTECTION RATING ABOVE AND PRODUCT NUMBER BELOW TO CORRESPOND WITH FIRE RATING REQUIRED FOR THE ASSEMBLY. THE THREE PRODUCTS BELOW MAY BE SEPDIIFIED WITH UP TO A 2-HOUR RATING, AND THEY QUALIFY AS A RADIANT AND CONDUCTIVE HEAT BARRIER.*

- 2. Product: Subject to compliance with requirements, provide one of the following:
  - a. "PyroStop" by Pilkington Building Products North America and distributed by Technical Glass Products.
  - b. "Pyrobel-60-25" by Glaverbel S.A. and distributed by Interedge Technologies.
  - c. SGG Swissflam 60-N2 by Saint Gobain North America.

G. Assemblies Containing Gel-Filled, Dual-Glazed Units: Proprietary Category II safety glazing product in the form of two lites of Condition A (uncoated surfaces), Type I (transparent flat glass), Class 1 (clear), Kind FT (fully tempered) float glass; with a perimeter metal spacer separating lites and dual-edge seal enclosing a cavity completely filled with clear, fully transparent, heat-absorbing gel.

- 1. Fire-Protection Rating: 60 minutes, and permanently labeled by a testing and inspecting agency acceptable to authorities having jurisdiction.

*THE FOLLOWING PRODUCT IS 1 1/8" THICK. MODIFY FIRE-PROTECTION RATING ABOVE AND PRODUCT NUMBER BELOW TO CORRESPOND WITH FIRE RATING REQUIRED FOR ASSEMBLY. ALSO AVAILABLE IN 45-MINUTE, 90-MINUTE AND 120-MINUTE RATINGS.*

- 2. Product: Subject to compliance with requirements, "SuperLite II-XL 60 minute" by SAFTI; a Division of O'Keeffe's Inc.

**2.4 MISCELLANEOUS GLAZING MATERIALS**

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Edge Blocks and Setting Blocks: Neoprene, EPDM or silicone as required for compatibility with glazing sealants; of size shape and hardness recommended by manufacturer.
- C. Perimeter Insulation for Fire-Resistive Glazing: Identical to product used in test assembly to obtain fire-resistance rating.

**2.5 FABRICATION OF GLAZING UNITS**

- A. Fabricate glazing units in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

**PART 3 - EXECUTION**

**3.1 EXAMINATION**

- A. Require Glazier to inspect work of framing erector for compliance with manufacturing and installation tolerances and for effective sealing of joinery. Do not allow glazing work to proceed until unsatisfactory conditions have been corrected.

**3.2 PREPARATION**

- A. Clean glazing channels and other framing members to receive glass, immediately before glazing.
- B. Comply with combined printed recommendations of glass manufacturers, of manufacturers of sealants, tapes, and other glazing materials, except where more stringent requirements are indicated, including those of referenced glazing standards.

**3.3 GLAZING**

- A. General: Comply with combined written instructions of manufacturers of glass, sealants, gaskets and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Provide edge and setting blocks to comply with requirements of referenced glazing standard, except where otherwise required by glass unit manufacturer.
- C. Set units of glass in each series with uniformity of pattern, draw, bow and similar characteristics.

- D. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could when installed, could weaken glass and impair performance and appearance.
- E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- F. Provide spacers for glass lites where length plus width is larger than 50 inches.
- G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

**3.4 PROTECTION AND CLEANING**

- A. Protect glass from contact with contaminating substances resulting from construction operations.
- B. Remove and replace glass which is broken, chipped, cracked, abraded or damaged in other ways during construction period, including natural causes, accidents and vandalism.
- C. Wash glass on both faces by method recommended by glass manufacturer immediately before date of Substantial Completion.

Fax: 734-936-3334

**SPECIFICATION DIVISION 8**

NUMBER            SECTION DESCRIPTION

**DIVISION 08 OPENINGS**

SECTION 089000 - LOUVERS AND VENTS

**END OF CONTENTS TABLE**

**DIVISION 08 OPENINGS**  
**SECTION 089000 - LOUVERS AND VENTS**

*COORDINATE WITH MECHANICAL FOR LOUVER REQUIREMENTS AND LOCATION IN SPECIFICATION. ON SOME PROJECTS, MECHANICAL INCLUDES LOUVERS IN SECTION 233100.*

*THIS SECTION SPECIFIES EXTERIOR LOUVERS. USUALLY SPECIFY DOOR LOUVERS IN APPROPRIATE WOOD OR METAL DOOR SECTIONS. IF DOOR LOUVERS SPECIFIED HERE, INCLUDE APPROPRIATE CROSS REFERENCES IN BOTH DOOR AND LOUVER SECTIONS.*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of louvers is indicated on drawings.
- B. Type of louver is exterior wall mounted, drainable blade louver.

**1.2 QUALITY ASSURANCE**

- A. Standards: Provide units whose ratings have been determined in compliance with AMCA Standard 500. Comply with "Architectural Sheet Metal Manual" recommendations for fabrication, construction and installation procedures.
- B. Field Measurements: Verify size of louver units prior to fabrication.

**1.3 SUBMITTALS**

- A. Product Data: Mfr's literature indicating compliance with requirements.
- B. Samples for Initial Selection: Submit manufacturer's brochure indicating full range of manufacturer's standard finishes.

**PART 2 - PRODUCTS**

*COORDINATE PRODUCT SELECTION WITH M/E.*

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturer/Model: Ruskin Manufacturing Co./ELF 375D, or (subject to compliance with requirements of this Section) products of one of the following:  
The Airolite Co.  
American Warming and Ventilating Co.  
Construction Specialties, Inc.  
Industrial Louvers, Inc.  
Tuttle and Bailey Co.

**2.2 STATIONARY, DRAINABLE BLADE LOUVER**

- A. Provide units with aluminum extrusions not less than 0.081" thick, and with the following characteristics:
  - 1. Free Area: Not less than 60 percent for 48 inch by 48 inch size.
  - 2. Maximum Static Pressure Loss: 0.08 inch w.g. at 2100 cfm.

**2.3 FABRICATION**

- A. Fabricate frames, including sills to suit adjacent construction and provide mullions at spacing no further apart than recommended by mfr.
- B. Louver Screens: Inside mounted, galvanized steel bird screens, 1/2 inch by 1/2 inch grid, mounted in removable anodized aluminum frame.
- C. Flanges: Provide flanged edges for duct connection.
- D. Metal Finishes: Comply with NAAMM "Metal Finishes Manual" to provide uniformly finished products:
  - 1. Inhibitive thermo-cured primer, 0.2 mil dry film thickness; thermo-cured fluorocarbon coating, 1.0 mil min. dry film thickness; "Kynar 500" based coatings. Color as selected by Architect from mfr's standard colors.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Install plumb, level, in proper alignment with adjoining work, and in accordance with mfr's instructions. Use non-ferrous metal or galvanized anchors and inserts. Coat surfaces of aluminum in contact with dissimilar metals, concrete, or masonry with zinc chromate primer or bituminous paint.
  - 1. Provide concealed gasket, flashings and joint fillers as indicated, and as required to make installation weather-tight.
- B. Repair damaged finishes leaving no evidence of corrective work.

**SPECIFICATION DIVISION 9**

NUMBER            SECTION DESCRIPTION

**DIVISION 09 FINISHES**

SECTION 092116 - GYPSUM BOARD ASSEMBLIES

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**  
**SECTION 092116 - GYPSUM BOARD ASSEMBLIES**

*THIS SECTION HAS BEEN PRE-EDITED TO APPLY ONLY TO SMALL RENOVATION PROJECTS. USE AIA MASTERSPEC SECTION OF SAME NAME AND NUMBER FOR SUCH ASSEMBLIES AS SUSPENDED GYP. CEILINGS HUNG BY MEANS OTHER THAN STUDS, CURVED WALLS, THERMALLY INSULATING WALLS AND WORK IN NEW STRUCTURES. USE SECTION 092913 "GYPSUM BOARD SHAFT-WALL ASSEMBLIES" FOR SHAFT-WALLS AROUND STAIRS AND ELEVATORS.*

**PART 1 - GENERAL**

**1.1 SUMMARY**

A. This Section includes the following:

1. Gypsum board assemblies, including nonload-bearing steel framing.

*DELETE BELOW IF NO WATER-RESISTANT GYPSUM DRYWALL BACKERS FOR TILE.*

2. Water-resistant gypsum drywall backer units installed with gypsum board assemblies.

*DELETE BELOW IF NO CEMENTITIOUS BACKERS FOR TILE.*

3. Cementitious backer units installed with gypsum board assemblies.

*DELETE BELOW IF NO SHAFT WALL ASSEMBLIES.*

4. Gypsum board shaft-wall assemblies.

**1.2 ASSEMBLY PERFORMANCE REQUIREMENTS**

*DELETE BELOW IF STC-RATED ASSEMBLIES ARE NOT REQUIRED. IF RETAINING PARA, INDICATE STC RATINGS ON DRAWINGS.*

- A. Sound Transmission Characteristics: Where STC ratings are indicated, provide assemblies with STC ratings determined and classified in accordance with ASTM E 90 and ASTM E 413, respectively.

*DELETE BELOW IF NO FIRE-RATED GYPSUM BOARD ASSEMBLIES.*

- B. Fire Resistance: Provide gypsum board assemblies with fire-resistance ratings indicated.

*DELETE BELOW IF NO SHAFT WALL IS INCLUDED IN PROJECT.*

- C. Shaft-Wall Performance Requirements: Provide gypsum board shaft-wall assemblies that are composed of proprietary gypsum board panels and metal components designed for erection from outside the shafts, and that comply with performance requirements specified as determined from testing manufacturers' standard assemblies representing those indicated for this Project.

**1.3 SUBMITTALS**

- A. Product data for each type of product specified.

**1.4 QUALITY ASSURANCE**

*DELETE BELOW IF NO FIRE-RATED ASSEMBLIES. INDICATE RATING, TESTING AGENCY, AND TESTING AGENCY'S DESIGN DESIGNATION ON DRAWINGS.*

- A. Fire-Test-Response Characteristics: Provide assemblies identical to those specified by indicated GA File Numbers in GA-600 "Fire Resistance Design Manual" or design designations in UL "Fire Resistance Directory," and that have been tested for fire resistance according to ASTM E 119 by an independent testing and inspecting agency.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1. Gypsum Board and Related Products:
  - a. CertainTeed Saint-Gobain
  - b. Georgia-Pacific Corp.
  - c. Lafarge North America.
  - d. National Gypsum Co.
  - e. United States Gypsum Co.
- 2. Steel Framing and Furring:
  - a. Clark Dietrich Building Systems.
  - b. Jaimes Industries. Inc.

*DELETE BELOW IF NO TILE BACKER PANELS.*

- 3. Gypsum Backer Units:
  - a. Georgia-Pacific.
- 4. Cementitious Backer Units:
  - a. FinPan, Inc.
  - b. Georgia-Pacific Corp.
  - c. National Gypsum Co.
  - d. United States Gypsum Co.

*DELETE BELOW IF NO SHAFT-WALL.*

- 5. Gypsum Board Shaft-Wall Assemblies:
  - a. Dietrich Industries, Inc.
  - b. Georgia-Pacific Corp.
  - c. National Gypsum Co.
  - d. United States Gypsum Co.

**2.2 STEEL FRAMING FOR SUSPENDED CEILINGS**

*DELETE ARTICLE IF NO SUSPENDED OR FURRED CEILINGS.*

- A. General: Provide components complying with ASTM C 754 for conditions indicated.

**DELETE BELOW IF NO STEEL STUDS USED FOR CEILING/SOFFIT FRAMING.**

- B. Steel Studs for Ceiling Furring Channels: ASTM C 645, complying with the following requirements:

**MODIFY BELOW TO 0.0329 INCH IF DESIRED.**

1. Minimum Base (Uncoated) Metal Thickness: 0.027 inch, unless otherwise indicated.
2. Depth: 2-1/2 inches, unless otherwise indicated.
3. Protective Coating: ASTM A 653, G 40 hot-dip galvanized coating.

### **2.3 STEEL FRAMING FOR WALLS AND PARTITIONS**

- A. General: Provide framing shapes as indicated, and with the following finish:

1. Protective Coating: Manufacturer's standard corrosion-resistant coating.

**USUALLY RETAIN ABOVE AND DELETE BELOW. RETAIN BELOW IF MOISTURE RESISTANCE IS IMPORTANT (WET LABS, TOILETS, ANIMAL ROOMS, EXTERIOR AREAS, ETC.).**

2. Protective Coating: ASTM A 653, G 40 hot-dip galvanized coating.

- B. Steel Studs and Runners: ASTM C 645, Manufacturer's standard profiles, and complying with the following requirements:

**MODIFY BELOW TO 0.0329 INCH IF DESIRED.**

1. Minimum Base (Uncoated) Metal Thickness: As indicated on drawings, or if not indicated, 0.0329 inch.

**REVISE BELOW IF REQUIRED. COMMON ALTERNATIVES INCLUDE 1-5/8", 2-1/2", 4", AND 6".**

2. Minimum Depth: 3-5/8 inches, unless otherwise indicated.

**BELOW IS PROPRIETARY DEFLECTION-TOLERANT TOP TRACK SYSTEM FOR FIRE-RATED PARTITIONS UP TO UNDERSIDE OF METAL ROOF DECKS, OR OTHER CONDITIONS WHERE DEFLECTION OF MORE THAN ABOUT 1/4-INCH IS EXPECTED. NOTE THAT TYPICAL PERIMETER RELIEF JOINT DETAILS ARE LIMITED TO 1/2-INCH MAXIMUM WIDTH.**

- C. Deflection and Firestop Track: Top runner designed to allow partition heads to expand and contract with movement of structure above while maintaining continuity of the assembly. Comply with requirements of ASTM C 645 except configuration, of thickness indicated for studs and width to accommodate depth of studs indicated with flanges offset at midpoint to accommodate gypsum board thickness.

1. Offset Configuration: Shadow-line design with offset projecting out from depth of stud.
2. Product: Subject to compliance with requirements, a product that may be incorporated in the Work includes, but is not limited to, "Fire Trak" manufactured by Fire Trak Corp.

**BELOW IS PROPRIETARY TOP TRACK SYSTEM FOR PARTITIONS UP TO UNDERSIDE OF SUSPENDED CEILINGS. DELETE IF WALLS PENETRATE CEILINGS.**

- D. Prefinished Top Track: Proprietary, pre-finished stud receptor track mounted to suspended ceiling grid. ASTM C 645, 25 gage galvanized steel; and as follows:
1. Accessories: Manufacturer's standard applied trim accessories for outside corners, wall ends and similar conditions requiring additional trim for a complete, finished appearance.
  2. Finish: Baked-on polyester paint in color to match suspended ceiling grid manufacturer's standard white.
  3. Product: Eliminator Track; Pro Products Mfg.
- E. Steel Rigid Furring Channels: ASTM C 645, hat shaped, depth and 0.0179 inch minimum thickness of base (uncoated) metal, unless otherwise indicated. Provide furring brackets if recommended by manufacturer for application indicated.

**INCH DEPTH FOR BELOW IS ALSO AVAILABLE.**

1. Depth: 7/8 inch.

**RETAIN BELOW IF STEEL SHEET BLOCKING OR BRACING IS REQUIRED. INDICATE LOCATIONS, LENGTHS, AND WIDTHS ON DRAWINGS OR ADD A DETAILED DESCRIPTION TO TEXT.**

- F. Steel Flat Strap and Backing Plate: Steel sheet for blocking and bracing, length and width as indicated, complying with ASTM A 653 or ASTM A 568, as follows:
1. Base (Uncoated) Metal Thickness: 0.0598 inch unless otherwise indicated.

#### **2.4 GYPSUM BOARD PRODUCTS**

- A. General: Provide gypsum board of types indicated in maximum lengths available that will minimize end-to-end butt joints.
- B. Gypsum Wallboard: ASTM C1396 and regular type for vertical surfaces, sag resistant for horizontal surfaces, Type X where required for fire-resistance-rated assemblies.
1. Thickness: Unless otherwise indicated, provide units that are 5/8 inch thick for all applications except 1/2 inch thick for ceilings and soffits.

**DELETE ARTICLE IF NO SHAFT-WALL REQUIRED FOR PROJECT.**

- C. Gypsum Liner Panels: Proprietary liner panels as required for the specific fire-resistant-rated gypsum board shaft-wall assemblies indicated, with moisture-resistant paper facings.

**DELETE BELOW IF CEMENTITIOUS BACKER UNITS ARE EXCLUSIVELY SPECIFIED AS BASE FOR TILE.**

- D. Glass-Mat, Water-Resistant Gypsum Backing Board: ASTM C 1178, of type and thickness indicated below:

1. Type and Thickness: Regular, 1/2 inch (12.7 mm) thick, unless otherwise indicated.
2. Type and Thickness: Type X, 5/8 inch (15.9 mm) thick, where required for fire-resistance-rated assemblies and where indicated.
3. Products: Subject to compliance with requirements, provide "Dens-Shield Tile Backer" manufactured by Georgia-Pacific Corp.

## 2.5 CEMENTITIOUS BACKER UNITS

*DELETE ARTICLE IF CEMENTITIOUS BACKER UNITS ARE NOT REQUIRED FOR PROJECT OR IF SPECIFIED IN ANOTHER SECTION.*

- A. Provide cementitious backer units complying with ANSI A118.9 and in maximum lengths available to minimize end-to-end butt joints.
  1. Thickness: Manufacturer's standard thickness, but not less than 7/16 inch, unless otherwise indicated.
  2. Width: Manufacturer's standard width, but not less than 32 inches.

## 2.6 TRIM ACCESSORIES

- A. Accessories: Formed steel sheet zinc coated by hot-dip process, or rolled zinc, complying with the requirements of ASTM C 1047 for cornerbead, L, LC, U shapes.
- B. One-piece control joint formed from rolled zinc with V-shaped slot and removable strip covering slot opening.

*ADD ACCESSORIES FOR CURVED EDGES HERE, IF ANY - SEE AIABAS.*

## 2.7 JOINT TREATMENT MATERIALS

- A. General: Provide joint treatment materials complying with ASTM C 475 and the recommendations of both the manufacturers of sheet products and of joint treatment materials.

*BELOW IS ONLY DRYING TYPE COMPOUND. SPECIFY SETTING-TYPE JOINT COMPOUNDS WHERE FAST ONE-DAY FINISHING IS REQUIRED, OR WHERE RAPID DRYING CONDITIONS WOULD CAUSE DRYING-TYPE JOINT COMPOUNDS TO SHRINK AND LOSE SURFACE STRENGTH. SEE AIABAS FOR LANGUAGE AND DETAILS.*

- B. Joint Treatment for Gypsum Board: Provide paper reinforcing tape; and factory-packaged, vinyl-based, jobsite- or factory-mixed products. At Contractor's option, provide either specifically formulated taping and topping compounds or all-purpose compounds.

*RETAIN BELOW IF CEMENTITIOUS BACKER UNITS ARE SPECIFIED IN THIS SECTION.*

- C. Joint Treatment Cementitious Backer Units: Tape and compound as recommended by cementitious backer unit manufacturer.

**2.8 MISCELLANEOUS MATERIALS**

*DELETE PRODUCTS NOT NEEDED. EDIT PART 3 FIRST AND RETAIN APPLICABLE PRODUCTS IN THIS ARTICLE.*

- A. Acoustical Sealant for Exposed and Concealed Joints: Latex sealant complying with ASTM C 834; and subject to compliance with requirements, one of the following products:
  - 1. PL Acoustical Sealant; ChemRex, Inc.; Contech Brands.
  - 2. AC-20 FTR Acoust. and Insul. Sealant; Pecora Corp.
  - 3. SHEETROCK Acoustical Sealant; USG Co.
- B. Laminating Adhesive: Special adhesive or joint compound recommended for laminating gypsum panels.
- C. Spot Grout: ASTM C 475, setting-type joint compound recommended for spot-grouting hollow metal door frames.
- D. Foam Gaskets: Closed-cell vinyl foam adhesive-backed strips, 1/8 inch thick, in width to suit metal stud size.
- E. Sound-Attenuation Blankets: Unfaced mineral-fiber blanket insulation produced by combining glass fibers with thermosetting resins to comply with ASTM C 665 for Type I (blankets without membrane facing).

*CHANGE BELOW TO ASTM C 954 IF GYPSUM WILL BE ATTACHED TO COLD-FORMED STEEL FRAMING SPECIFIED IN DIVISION 5.*

- F. Fasteners: Provide size and type of screws recommended by manufacturer for application indicated, and as follows:
  - 1. Metal and Gypsum Board: Steel drill screws complying with ASTM C 1002 and of size, corrosion resistance and holding power required to fasten steel framing and furring members securely to substrates involved.

*RETAIN BELOW IF CEMENTITIOUS BACKER UNITS ARE SPECIFIED IN THIS SECTION.*

- 2. Cementitious Backer Units: Corrosion-resistant screws recommended by panel manufacturer.

*BELOW IS FOR ATTACHING STEEL FRAMING INTO CONCRETE.*

- 3. Powder-Actuated Fasteners in Concrete: Corrosion-resistant materials suitable for application and capable of sustaining, without failure, a load equal to 5 times that imposed by ceiling construction, as determined by testing according to ASTM E 1190.

*DELETE ARTICLE BELOW IF NO SHAFT-WALL.*

**2.9 SHAFT-WALL BASIC ASSEMBLY DESCRIPTION**

- A. Cavity Shaft-Wall Assemblies: Provide assemblies constructed of proprietary gypsum liner panels inserted between steel tracks at each end of studs; with specially shaped steel studs engaged in tracks and fitted between gypsum liner panels; and with gypsum board on finished side or sides applied to studs in the number of layers, thicknesses and arrangement indicated.

1. Gypsum Liner Panel Thickness: As standard with manufacturer for gypsum board shaft-wall assemblies indicated.
2. Stud Shape and Depth and Thickness: As standard with manufacturer for gypsum board shaft-wall assemblies indicated; but not less than 0.0284-inch minimum base metal thickness.
3. Room-Side Finish: As indicated.

**PART 3 - EXECUTION**

**3.1 INSTALLING STEEL FRAMING, GENERAL**

- A. Steel Framing Installation Standard: Comply with ASTM C 754 and with ASTM C 840 requirements that apply to framing installation.

*DELETE BELOW IF NONE. WHERE ITEMS TO BE SUPPORTED ARE NOT SHOWN ON DRAWINGS (SUCH AS OWNER'S LAB EQUIPMENT AND BINDER BINS FOR MOVABLE FURNITURE), CONSIDER SCHEDULING LOCATIONS AND SIZES OF SUPPORT PANELS IN "SCHEDULING" ARTICLE AT END OF SECTION, OR ON DRAWINGS.*

- B. Install supplementary framing, blocking, and bracing at terminations to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction. Comply with details shown or, if not shown, with USG Co.'s "Gypsum Construction Handbook."
- C. Isolate steel framing from building structure at the following locations:

*BELOW ARE EXAMPLES ONLY. RETAIN OR REVISE TO SUIT PROJECT.*

1. In ceilings where building structure abuts ceiling perimeter or penetrates ceiling.
2. Where partition framing and wall furring abut structure, except at floor.

*INCLUDE DETAILS ON DRAWINGS SHOWING CONTROL- AND EXPANSION-JOINT CONSTRUCTION AND LOCATIONS FOR BOTH FIRE-RESISTANCE-RATED AND NONRATED ASSEMBLIES.*

- D. Independently frame both sides of joints at building control and expansion joints.

**3.2 INSTALLING STEEL FRAMING FOR SUSPENDED CEILING**

*DELETE THIS ARTICLE IF NO SUSPENDED CEILINGS/SOFFITS.*

- A. Install suspended steel framing components in sizes and at spacings indicated, but not less than that required by the referenced steel framing installation standard.

1. Do not connect or suspend steel framing from ducts, pipes, or conduit, or attach to steel roof deck.
2. Framing Channel Spacing: 16 inches o.c.

*USUALLY DELETE BELOW AND RETAIN ABOVE.*

3. Framing Channel Spacing: 24 inches o.c.

- B. Installation Tolerances: Install with cross-furring members level to within 1/8 inch in 12 feet as measured both lengthwise on each member and transversely between parallel members.

### 3.3 INSTALLING STEEL FRAMING FOR WALLS AND PARTITIONS

- A. Install runners (tracks) at floors and ceilings, and structural walls and columns where gypsum board stud assemblies abut other construction.

**RETAIN BELOW IF STUDS WILL ABUT MASONRY OR DISSIMILAR METALS AT EXTERIOR WALLS.**

- 1. Where studs are installed directly against exterior walls, install foam gaskets between studs and wall.
- B. Installation Tolerances: Install each steel framing and furring member so that fastening surfaces do not vary more than 1/8 inch from the plane formed by the faces of adjacent framing.
- C. Extend partition framing to height indicated. Continue framing over frames for doors and openings and frame around ducts penetrating partitions above ceiling to provide support for gypsum board.

**EDIT PARA BELOW TO SUIT PROJECT CONDITIONS. BE SURE TO SHOW PERIMETER RELIEF DETAIL ON DRAWINGS - ONE CAN BE FOUND IN THE "USE OF MANUAL" CHAPTER OF THE GYPSUM ASSOCIATION "FIRE RESISTANCE AND SOUND CONTROL MANUAL."**

- 1. Terminate partition framing as shown on Drawings; or if not shown, as follows:

**SELECT ONE BELOW.**

- a. At suspended ceilings.

**DELETE IF NOT REQUIRED. SEE DISCUSSION UNDER "PRODUCTS" PART IN THIS SECTION.**

- 1) Install proprietary prefinished top track.
- b. 6-inches above exposed face of suspended acoustic ceiling panels.
- c. Full height to structural supports or substrates above suspended ceilings, if any. Cut studs 1/2 inch short of full height to provide perimeter relief.

**EDIT BELOW TO SUIT PROJECT, OR DELETE IF NOT REQUIRED. SEE DISCUSSION UNDER "PRODUCTS" PART IN THIS SECTION.**

- 1) Install proprietary deflection and firestop track at fire-rated partitions, and as otherwise indicated.

**RETAIN, REVISE OR DELETE BELOW TO SUIT PROJECT.**

- 2. For STC-rated and fire-resistance-rated partitions that extend to the underside of floor/roof slabs and decks or other continuous solid structural surfaces to obtain ratings, install framing around structural and other members extending below floor/roof slabs and decks, as needed, to support gypsum board closures needed to make partitions continuous from floor to underside of solid structure.

D. Install steel studs and furring in sizes and at spacings as follows:

1. Maximum spacing between studs: 16-inches o.c., unless otherwise indicated.

*SELECT EITHER ABOVE OR BELOW. USE 16-INCH MINIMUM SPACING FOR CEMENTITIOUS BACKER UNITS.*

2. Maximum spacing between studs: 24-inches o.c., unless otherwise indicated.

E. Frame openings to comply with GA-219, and with applicable published recommendations of gypsum board manufacturer, unless otherwise indicated. Attach vertical studs at jams with screws either directly to frames or to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.

1. Install 2 studs at each jamb, unless otherwise indicated.

*ADD REQUIREMENTS FOR INSTALLATION OF THERMAL INSULATION AND VAPOR BARRIERS HERE. SEE AIABAS FOR DETAILS.*

### **3.4 APPLYING AND FINISHING GYPSUM BOARD, GENERAL**

A. Gypsum Board Application and Finishing Standards: Install and finish gypsum panels to comply with ASTM C 840 and GA-216.

B. Install gypsum panels with face side out.

C. Locate both edge or end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Avoid joints other than control joints at corners of framed openings where possible.

*DELETE BELOW IF HOLLOW METAL DOOR FRAMES ARE NOT USED IN STEEL-FRAMED PARTITIONS.*

D. Spot grout hollow metal door frames for solid-core wood doors, hollow metal doors, and doors over 32 inches wide. Apply spot grout at each jamb anchor clip and immediately insert gypsum panels into frames.

E. Form control and expansion joints at locations indicated and as detailed, with space between edges of adjoining gypsum panels, as well as supporting framing behind gypsum panels.

F. Isolate perimeter of gypsum board partitions at structural abutments, except floors, with 1/4- to 1/2-inch-wide spaces and trim edges with LC-bead edge trim where edges of gypsum panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

*DELETE BELOW IF NO SOUND-RATED PARTITIONS.*

- G. Where STC-rated gypsum board assemblies are indicated, seal construction at perimeters, behind control and expansion joints, openings, and penetrations with a continuous bead of acoustical sealant including a bead at both faces of the partitions. Comply with ASTM C 919 and manufacturer's recommendations for location of edge trim and closing off sound-flanking paths around or through gypsum board assemblies, including sealing partitions above acoustical ceilings.
- H. Space fasteners in gypsum panels according to referenced gypsum board application and finishing standard and manufacturer's recommendations.
  - 1. Space screws a maximum of 12 inches o.c. for vertical applications.

**DELETE BELOW IF NO TILE BACKER BOARD.**

- I. Space fasteners in tile substrate panels a maximum of 8 inches o.c.

### **3.5 GYPSUM BOARD APPLICATION METHODS**

- A. Install gypsum wallboard panels on ceilings prior to wall/partition board application and at right angles to framing.
- B. On partitions/walls, apply gypsum panels horizontally (perpendicular to framing), unless parallel application is required for fire-resistance-rated assemblies. Use maximum-length panels to minimize end joints. Stagger abutting end joints not less than one framing member in alternate courses of board.
  - 1. On Z-furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.

**DELETE PARA AND SUBPARAS BELOW IF NONE.**

- C. Wall Tile Substrates: For substrates indicated to receive thin-set ceramic tile and similar rigid applied wall finishes, comply with the following:

**DELETE BELOW IF WATER-RESISTANT GYPSUM BOARD IS RETAINED BELOW.**

- 1. Install cementitious backer units to comply with ANSI A108.11 at showers, and where indicated.

**DELETE BELOW IF CEMENTITIOUS BACKER UNITS ARE RETAINED ABOVE. DRAWINGS SHOULD SHOW SEALANT INSTALLED IN 1/4-INCH GAP.**

- 2. Install water-resistant gypsum backing board panels at showers, tubs, and where indicated. Install with 1/4-inch open space where panels abut other construction or penetrations.

**RETAIN BELOW IF REGULAR GYPSUM BOARD IS ACCEPTABLE AS WALL-TILE SUBSTRATE FOR DRY LOCATIONS.**

3. Install gypsum wallboard panels with tapered edges taped and finished to produce a flat surface except at showers, tubs, and other locations indicated to receive water-resistant panels.

D. Apply gypsum panels to supports with screws.

E. Direct-Bonding to Substrate: Where gypsum panels are indicated as directly adhered to a substrate (other than studs, joists, furring members, or base layer of gypsum board), comply with gypsum board manufacturer's recommendations, and temporarily brace or fasten gypsum panels until fastening adhesive has set.

### 3.6 INSTALLING TRIM ACCESSORIES

A. General: Fasten trim accessories according to accessory manufacturer's directions for type, length, and spacing of fasteners.

**BELOW ARE EXAMPLES OF UNIVERSAL SCOPE DEFINITIONS FOR USING TRIM. REVISE AS DESIRED OR SHOW ON DRAWINGS.**

B. Install cornerbead at external corners.

C. Install edge trim where edge of gypsum panels would otherwise be exposed. Provide edge trim type with face flange formed to receive joint compound, except where other types are indicated.

D. Install control joints according to ASTM C 840 and manufacturer's recommendations and in specific locations approved by Architect for visual effect.

**DELETE BELOW IF NO SHAFT-WALL INCLUDED IN PROJECT.**

### 3.7 INSTALLATION OF GYPSUM BOARD SHAFT-WALL ASSEMBLIES

A. General: Install gypsum board shaft-wall assemblies to comply with performance and other requirements indicated as well as with manufacturer's installation instructions and ASTM C 754 for installing steel framing.

B. Do not bridge building expansion joints with shaft-wall assemblies; frame both sides of joints with furring and other support as indicated.

C. At penetrations in shaft wall, maintain fire-resistance rating of entire shaft-wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices similar items.

### 3.8 FINISHING GYPSUM BOARD ASSEMBLIES

A. Levels of Gypsum Board Finish: Provide the following levels of gypsum board finish per GA-214.

**DELETE LEVELS BELOW THAT DO NOT APPLY TO PROJECT.**

1. Level 1 for ceiling plenum areas, concealed areas, and where indicated, unless a higher level of finish is required for fire-resistance-rated assemblies and sound-rated assemblies.

2. Level 4 for gypsum board surfaces, unless otherwise indicated.

*BELOW REQUIRES SKIM COAT OVER ENTIRE SURFACE. RETAIN IF RIGID TRIM IS INSTALLED ON SHORT WALL SEGMENTS TO AVOID GAPS BEHIND TRIM THAT OCCUR BETWEEN TWO CLOSELY SPACED, BUILT UP EDGES.*

3. Level 5 for gypsum board the following surfaces where wood, stone, or cast plastic trim or base are indicated:
  - a. At gypsum column enclosures.
  - b. Where wall segments are less than 48-inches wide.
  - c. Where indicated.

- B. Where Level 1 gypsum board finish is indicated, embed tape in joint compound.

*PARA BELOW ASSUMES LEVEL 4 FINISH IS DEFAULT REQUIREMENT. IF NOT, REVISE OR DELETE PARA TO SUIT PROJECT.*

- C. For Level 4 gypsum board finish, embed tape in joint compound and apply first, fill (second), and finish (third) coats of joint compound over joints, angles, fastener heads, and accessories. Touch up and sand between coats and after last coat as needed to produce a surface free of visual defects and ready for decoration.

*DELETE BELOW IF LEVEL 5 IS NOT REQUIRED FOR PROJECT.*

- D. Where Level 5 gypsum board finish is indicated, after application of embedding, fill and finish coats, apply a thin, uniform skim coat of joint compound over entire surface. Touch up and sand between coats and after last coat as needed to produce a surface free of visual defects, tool marks, and ridges and ready for decoration.

*DELETE BELOW IF NO CEMENTITIOUS BACKER UNITS OR IF SPECIFIED IN DIVISION 9 SECTION "TILE."*

- E. Finish cementitious backer units to comply with unit manufacturer's directions.

### 3.9 CLEANING AND PROTECTION

- A. Promptly remove any residual joint compound from adjacent surfaces.

**SPECIFICATION DIVISION 9**

NUMBER            SECTION DESCRIPTION

**DIVISION 09 FINISHES**

SECTION 092300 - GYPSUM PLASTERING

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**  
**SECTION 092300 - GYPSUM PLASTERING**

*EDIT THIS SECTION ON WET PLASTER WORK IN CONJUNCTION WITH USG  
GYPSUM CONSTRUCTION HANDBOOK OR OTHER REFERENCE WORK.*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of plaster work in indicated on Drawings and in schedules.
- B. Type of plaster work and accessories include:
  - 1. Gypsum plaster.
  - 2. Gypsum board plaster base.
  - 3. Metal lath.

**1.2 SUBMITTALS**

- A. Submit manufacturer's product literature for each product specified.

**1.3 DELIVERY, STORAGE AND HANDLING**

- A. Deliver materials in original packages bearing brand name and identification of manufacturer.

**PART 2 - PRODUCTS**

**2.1 PLASTER MATERIALS**

*SELECT ONE OF THE FOLLOWING OR DELETE IF GYPSUM BOARD LATH IS  
USED*

- A. Base Coat Plaster: Comply with ASTM C 28 and Federal Specification SS-P-00402B, Type II.
  - 1. Product: U.S. Gypsum Co.; "Regular Red Top Gypsum Plaster" or equivalent of other approved manufacturer.
- B. Base Coat Plaster: High strength gypsum neat plaster with a minimum average dry compressive strength of 2,800 psi per ASTM C 472 for a mix of 100 lbs. plaster and 2 cu. ft. of sand.
  - 1. Product: Structo-Base; United States Gypsum Co.

*SELECT ONE OF THE FOLLOWING*

- C. Gypsum Gauging Plaster: Comply with ASTM C28 and Federal Specification SS-P-00402B, Type V.
  - 1. Manufacturer: U.S. Gypsum Co. "Champion", "Star", "Red Top", or equal.
- D. Gypsum Gauging Plaster: High-strength gypsum gauging plaster, ASTM C 28, with a minimum average dry compressive strength of 5,000 psi per ASTM C 472 for a neat mix.

1. Product: Structo-Gauge; United States Gypsum Co.
- E. Finishing Hydrated Limes: ASTM C 206, type as indicated below:
  1. Type S: Special hydrated lime for finishing purposes.
  2. Manufacturer/Product: Provide one of the following:
    - a. "Ivory Finish Lime"; United States Gypsum Co.
    - b. "Snowdrift Finish Lime"; United States Gypsum Co.

**DELETE BELOW IF GYPSUM BOARD BASE IS USED**

- F. Aggregates for Base Coat Plasters: ASTM C 35, types as indicated below:
  1. Sand aggregate, clean and free of dirt, clay and other deleterious materials.
- G. Aggregates for Finish Coat Plaster with Floated Finish: ASTM C 35; graded per ASTM C 842, type as indicated below.
  1. Sand aggregate, clean and free of dirt, clay and other deleterious materials.

**2.2 LATH**

**SELECT ONE OF THE FOLLOWING LATH TYPES**

- A. Gypsum Lath: Gypsum board plaster base to comply with ASTM C37 and Federal Specification SS-L-30D, Type I.
  1. Manufacturer: U.S. Gypsum Co. "Rocklath" or equal.
- B. Metal Lath: Diamond metal mesh (approximately 11,000 meshes per sq yd) complying with Federal Specification QQ-L-101C. Mesh to be composed of expanded sheet steel that has been coated with asphaltum paint. Metal lath to have a weight of 3.4 lbs per sq yd or greater.
  1. Manufacturer: U.S. Gypsum Co. "Junior Diamond Mesh Lath" or equal.
- C. Water for Mixing and Finishing Plaster: Drinkable, free of substances capable of affecting plaster set or of damaging plaster, lath or accessories.

**2.3 ACCESSORIES**

- A. General: Comply with material provisions of ASTM C 841; coordinate depth of accessories with thicknesses and number of plaster coats required.
- B. Provide metal accessories including casing beads, corner beads, grounds screeds, cornerite and stripite as indicated and as recommended by manufacturer of plaster materials.
- C. Metal Corner Beads: Type as indicated below, fabricated from zinc coated (galvanized) steel.
  1. Type: Bull nose, radius 3/4 inch minimum, with expanded flanges, at locations indicated.

## 2.4 MIXING

- A. Mechanically mix cementitious and aggregate materials for plasters to comply with applicable referenced application standard and with recommendations of plaster manufacturer.

## PART 3 - EXECUTION

### 3.1 APPLICATION

- A. Prepare monolithic surfaces for bonded base coats and use bonding compound or agent to comply with requirements of referenced plaster application standards for conditioning of monolithic surfaces.
- B. Tolerances: Do not deviate more than 1/8 inch in 10 feet from a true plane unfinished plaster surfaces, as measured by a 10 feet straightedge placed at any location on surface.
- C. Sequence plaster application with the installation and protection of other work, so that neither will be damaged by the installation of the other.
- D. Plaster flush with metal frames and other built-in metal items or accessories which act as a plaster ground, unless otherwise indicated. Where plaster is not terminated at metal by casing beads, cut base coat free from metal before plaster sets and groove finish coat at the junctures with metal.
- E. Apply thicknesses and number of coats of plaster as indicated and to match existing adjacent applications; or as required by referenced standards.
- F. Interior Gypsum Plaster Application Standard: Apply gypsum plaster materials, composition, mixes, and finishes indicated to comply with ASTM C 842.
- G. Number of Coats: Apply gypsum plaster, of composition indicated, to comply with the following requirements.
  - 1. Use two-coat work over concrete masonry units.
- H. Finish Coats: Apply finish coats to comply with the following requirements:
  - 1. Floated finish for gypsum finish coats of type and where indicated; match existing adjacent materials for texture and color.

### 3.2 CLEANING AND PROTECTION

- A. Remove temporary protection and enclosure of other work. Promptly remove plaster from door frames, windows, and other surfaces which are not to be plastered. Repair floors, walls and other surfaces which have been stained, marred or otherwise damaged during the plastering work. When plastering work is completed, remove unused materials, containers and equipment and clean floors of plaster debris.

- B. Provide final protection and maintain conditions, in a manner suitable to Installer, which ensures plaster work being without damage or deterioration at time of substantial completion.

**SPECIFICATION DIVISION 9**

NUMBER            SECTION DESCRIPTION

**DIVISION 09 FINISHES**

SECTION 093000 - TILING

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**  
**SECTION 093000 - TILING**

*THIS SECTION HAS BEEN PRE-EDITED TO APPLY ONLY TO SMALL RENOVATION PROJECTS USING UNGLAZED CERAMIC TILE. EDIT THIS SECTION USING THE TCA HANDBOOK (OR WEBSITE). USE AIA MASTERSPEC SECTION OF SAME NAME AND NUMBER FOR COMPLEX PROJECTS.*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of ceramic tile is shown on Drawings.
- B. Types of ceramic tile include:
  - 1. Unglazed ceramic mosaic tile.

**1.2 SUBMITTALS**

- A. Product Data: Mfr's product data and installation instructions for tile work.
- B. Samples for Initial Selection: Submit 1 sample card for each type of ceramic tile, showing full range of manufacturer's standard colors, textures and patterns.

*DELETE BELOW IF NO COLORED GROUT.*

- 1. Provide color sample kit for tinted grout.

**1.3 QUALITY ASSURANCE**

- A. Standards: Comply with referenced ANSI and ASTM materials standards, and with referenced installation methods and materials of referenced Tile Council of America (TCA) Handbook numbers.

**PART 2 - PRODUCTS**

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturers: Subject to compliance with specified performance requirements, provide product of one of the following:

American Olean Tile.  
Dal-Tile.  
Mannington.  
Winburn Tile Mfg. Co.

*BELOW FOR UNGLAZED PORCELAIN CERAMIC TILE ONLY. CONSULT MANUFACTURER'S LITERATURE FOR OTHER TILE CHOICES.*

**2.2 UNGLAZED CERAMIC MOSAIC TILE**

- A. Factory-mounted flat tile and as follows:

1. Type: Porcelain.
2. Tile Grade: "Standard".
3. Wearing Surface: Without abrasive content.
4. Face: Plain with all purpose edges.
5. Size and Thickness: Modular 2 inch by 2 inch square; 1/4 inch thick.
6. Trim: Continuous cove base at floor perimeter; bullnose and cove trim where around projections.
  - a. Trim Shapes: Same material, size, color, and texture as field tile.
7. Colors, Textures, and Patterns: Selected by Architect from mfr's standard smooth texture, solid color range.

*DELETE FOLLOWING IF NOT REQUIRED. BRASS STRIP AVAILABLE FOR SAME PURPOSE IF DESIRED.*

### **2.3 THRESHOLDS**

- A. Marble Thresholds: Group "A"; ASTM C 503, for exterior use with minimum hardness of 10.0 per ASTM C 241; white with honed finish, unless otherwise indicated.

### **2.4 MORTAR AND GROUT MATERIALS**

*THE FOLLOWING MATERIALS ARE EXAMPLES ONLY - FIRST EDIT PART 3 TO DETERMINE TCA INSTALLATION METHODS AND THEN EDIT THIS PORTION TO INCLUDE APPROPRIATE MATERIALS.*

- A. Comply with the following requirements:
  1. Portland Cement: ASTM C 150 Type 1
  2. Sand: ASTM C 144
  3. Water: Potable

*ALSO CONSIDER USING PROPRIETARY PRODUCT SUCH AS MAPEI OR LATICRETE, AS APPLICABLE.*

  4. Mortar: As follows:
    - a. Floors: Latex-portland cement conforming to ANSI A118.4.
    - b. Walls, and single unit shower stall floors: Job mixed, material proportions as indicated.
  5. Bond Coat: Dryset mortar or latex-modified portland cement as determined by TCA recommendations.
  6. Grout: ANSI A118.6, Latex modified portland cement.
- B. For indicated application, provide the following additional materials:
  1. Walls:
    - a. Membrane: 4 mil polyethylene.
    - b. Lath: Galvanized or painted metal.
    - c. Lime: ASTM C 206, type S; or ASTM C 207, type S.
  2. Single unit Shower Stalls:
    - a. Reinforcing: ASTM A82 and A185, 2 inch by 2 inch by 16/16 gage welded wire mesh.

**PART 3 - EXECUTION**

*INCLUDE BELOW FOR THINSET TILE.*

**3.1 PREPARATION**

- A. In presence of Installer, inspect substrate conditions for compliance with ceramic tile manufacturer's requirements, and suitability for indicated TCA installation method. Report, in writing, deleterious conditions to Owner's Representative.

*USUALLY INCLUDE BELOW.*

- 1. Obtain Architect's written approval before beginning installation.

**3.2 INSTALLATION**

- A. In general, strictly comply with current Tile Council of America Handbook methods as follows:

*EDIT FOLLOWING WITH TCA BOOKLET.*

- 1. Over new and existing masonry walls: TCA Method W222.
  - 2. Over new and existing concrete floors: TCA method F113.
  - 3. In single shower stall floors: TCA method B414.
- B. Joint Pattern: Use grid pattern with 1/16" wide joints.
    - 1. Floor Installations: Align parallel and perpendicular to walls.
    - 2. Wall Installations: Align vertical and level.
  - C. Install marble thresholds where shown on Drawings, and whether or not shown on Drawings as follows:
    - 1. At edges of ceramic tile installation abutting dissimilar flooring materials (e.g. concrete, carpet, and quarry tile).

**3.3 CLEANING AND PROTECTION**

- A. Clean tile in accordance with applicable ANSI standard for type of tile and method of installation used and mfr's instructions.
- B. Apply heavy kraft paper or other heavy protective covering to prevent surface damage during construction operations.

**SPECIFICATION DIVISION 9**

NUMBER            SECTION DESCRIPTION

**DIVISION 09 FINISHES**

SECTION 093033 - STONE TILING

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**  
**SECTION 093033 - STONE TILING**

*THIS MASTER SPECIFICATION SECTION INCLUDES MANUFACTURED TILE FLOORING ONLY. REFER TO AIA MASTERSPEC FOR OTHER INTERIOR STONework.*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of interior stonework is indicated on Drawings.
- B. Interior stonework includes the following:
  - 1. Granite tile flooring.
  - 2. Cast marble tile flooring.

**1.2 SUBMITTALS**

- A. Product Data: Submit manufacturer's technical data for each type of stone, stonework accessory and other manufactured product required.
- B. Samples for Initial Selection: Furnish samples of portions of actual stone tile, showing manufacturer's full range of standard products, for Architect's selection. Submit 2 or more samples of each selection representing the full range of color and pattern to be expected in installed material.
- C. Samples for Verification: Provide a 6-inch by 6-inch sample of each selected color for verification purposes. Select samples to represent the full range of color and pattern to be expected in the finished installation.

**1.3 QUALITY ASSURANCE**

- A. Standards: Comply with referenced ANSI and ASTM materials standards, and with referenced installation methods and materials of referenced Tile Council of America (TCA) Handbook numbers.

**PART 2 - PRODUCTS**

*BELOW ARE EXAMPLES OF TWO TYPES OF FLOOR TILES. MODIFY TO SUIT PROJECT.*

**2.1 GRANITE FLOOR TILE**

- A. Granite Floor Tile: Furnish tiles that have a polished face, and that are sound, durable, and free from pronounced seams or objectionable mineral stains.
  - 1. Size: Nominal 12-inches by 12-inches by 3/8-inch thick.
  - 2. Edges: Slightly beveled.
- B. Product: Provide products of Cold Spring Granite.

1. Color/Pattern: "Charcoal Black".

## 2.2 CAST MARBLE TILE

- A. Factory cast marble floor tile consisting of not less than 90 percent marble aggregate with polymer binder.
  1. Wearing Surface: Polished, without abrasive content.
  2. Edges: Beveled.
  3. Size: Modular 12-inch by 12-inch by 3/8-inch thick.
  4. Colors, Textures, and Patterns: Selected by Architect from mfr's standard smooth texture, solid color range.
- B. Manufacturer: Provide the following product:
  1. "Armstar", Armstrong World Industries, Inc.

## 2.3 MORTAR AND GROUT MATERIALS

**MODIFY MATERIALS BELOW TO COORDINATE WITH TCA INSTALLATION METHOD SELECTED.**

- A. Portland Cement: ASTM C 150 Type 1
- B. Sand: ASTM C 144
- C. Water: Potable
- D. Mortar Bond Coat: Dryset mortar or latex-modified portland cement as determined by TCA recommendations.
- E. Grout: ANSI A118.6, Latex modified portland cement.

## 2.4 ACCESSORIES

- A. Provide manufacturer's standard carpet thresholds of type, size and profile indicated.
  1. Manufacturer/Model Thresholds: Pemko; No. 174C, or equivalent products of National Guard, Reese, Zero.

## PART 3 - EXECUTION

### 3.1 PREPARATION

- A. Clean adhesive and residue left from previous flooring off concrete floor surface that is to receive new granite floor tile. Before initiating floor tile installation, inspect floor to ensure that it is free of cracks and waxy or oily films. Correct if necessary.
  1. Where uneven floor levels or holes occur, fill, patch, and provide underlayment as required to level surface prior to installation of finished floor material. Underlayment may be latex cement as applicable.
  2. Comply with flooring manufacturer's recommendations for type(s) of materials, project conditions, and intended use.

### 3.2 INSTALLATION

- A. Installation: In general, strictly comply with Tile Council of America Handbook methods as follows:

*BELOW IS EXAMPLE ONLY - MODIFY TO SUIT PROJECT USING TCA HANDBOOK IN SWEET'S.*

1. Over existing vinyl composition tile on concrete slab base: TCA method F113-90.

- B. Joint Pattern: Use grid pattern with 1/16-inch wide joints; align parallel and perpendicular to walls.
- C. After floor tile is installed, clean grout off floor tiles to leave a shiny surface.

*RETAIN BELOW IF THRESHOLDS ARE INCLUDED.*

- D. Install thresholds where shown on Drawings, and whether or not shown on drawings as follows:

*MODIFY STATEMENT BELOW TO SUIT PROJECT.*

1. At edges of stone tile flooring installation abutting dissimilar flooring materials (e.g. concrete, carpet, and vinyl composition tile).

- E. Attic Stock: Provide 4 full tile for Owner's future use.

### 3.3 CLEANING AND PROTECTION

- A. Clean tile in accordance with applicable ANSI standard for type of tile and method of installation used and mfr's instructions.
- B. Apply heavy kraft paper or other heavy protective covering to prevent surface damage during construction operations.

### 3.4 TILE COLOR SCHEDULE

*BELOW IS EXAMPLE ONLY.*

1. Color No. T1: 8013 "Peppered White".
2. Color No. T2: 8018 "Blued Carnelian".

**SPECIFICATION DIVISION 9**

NUMBER            SECTION DESCRIPTION

**DIVISION 09 FINISHES**

SECTION 095100 - ACOUSTICAL CEILINGS

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**  
**SECTION 095100 - ACOUSTICAL CEILINGS**

*5/19/2014 -- UPDATED TO INCLUDE LATEST PRODUCT INFORMATION.*

*REMOVED DIRECT ADHERED TILES. CONSULT MANUFACTURER LITERATURE AND AIA MASTERSPEC FOR DIRECT ADHERED ACOUSTICAL TILE APPLICATIONS*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of acoustical ceilings is indicated on Drawings and schedules.

*FIRE-RATED CEILINGS ARE NOT INCLUDED IN THIS MASTER. CONSULT CATALOGS FOR PRODUCTS AND INSTALLATION REQUIREMENTS.*

- B. Types of acoustical ceiling products include the following:

*EDIT BELOW TO SUIT PROJECT REQUIREMENTS.*

1. Acoustical lay-in panels of the following types:
  - a. Standard acoustic panels.
  - b. Premium acoustic panels.
  - c. Router-cut patterned acoustic panels.
  - d. Gypsum core acoustic panels.
2. Suspended grid systems, specialty trim and accessories.

*INCLUDE ARTICLE BELOW IF DEMOLITION OPERATIONS WILL RECYCLE ACOUSTICAL PANELS. NOTE THAT NOT ALL ACOUSTICAL MATERIAL IS ABLE TO BE RECYCLED. ASBESTOS-CONTAINING PRODUCTS CANNOT BE RECYCLED, AND FOIL-BACKED AND FIBERGLASS PRODUCTS WILL NOT BE ACCEPTED BY MANUFACTURERS FOR RECYCLING.*

**1.2 RELATED SECTIONS**

- A. Refer to Division 02 Section "Selective Demolition" for requirements for recycling demolished acoustical ceiling products.

**1.3 SUBMITTALS**

- A. Product Data: Submit manufacturer's literature, including certification by a recognized independent testing laboratory, indicating compliance with requirements.

*INCLUDE BELOW FOR ALL PROJECTS.*

- B. Affidavits of Compliance to be included in final inspection manual: For each type of acoustical panel and tile, provide manufacturer's letter of certification showing compliance with requirements of 1997 NFPA 101 "Life Safety Code" Section 26-3.3 for Class A, B, or C as required by the Code. Letter shall include project number, project name, and building name.

**1.4 QUALITY ASSURANCE**

- A. Standards: Comply with the following:
  - 1. Acoustical Materials: ASTM E 1264.
  - 2. Suspension Systems: ASTM C 635 for materials; ASTM C 636 for installation.
  - 3. Surface Burning Characteristics: Flame spread: 25 or less; smoke developed: 50 or less; per ASTM E 84. UL listed and marked.
  - 4. Seismic Standard: Comply with Ceilings and Interior Systems Contractors Association (CISCA) "Recommendations for Direct-Hung Acoustical Tile and Lay-in Panel Ceilings--Seismic Zones 0-2."
- B. Source Limitations: Obtain each type of acoustic panel and related grid system from one source and by a single manufacturer.

**1.5 PROJECT CONDITIONS**

*DELETE PARAGRAPH BELOW IF ONLY HUMIDITY-TOLERANT ACOUSTICAL MATERIALS (I.E., "CLIMAPLUS" BY USG OR "HUMIGUARD" BY ARMSTRONG) ARE BEING SPECIFIED FOR THE PROJECT.*

- A. Do not install ceilings until ambient temperature and humidity conditions can be continuously maintained at values near those intended for final occupancy.
- B. Building areas to receive ceiling shall be free of construction dust and debris.

**PART 2 - PRODUCTS**

*THIS PART IS ORGANIZED BY PANEL AND SUSPENSION GRID TYPE. ALL POSSIBLE COMBINATIONS COULD NOT BE LISTED HERE, SO CONSULT CATALOGS FOR ADDITIONAL POSSIBILITIES WITH DIFFERENT PERFORMANCE, APPEARANCE OR COST.*

*FIRE-RATED CEILINGS ARE NOT INCLUDED IN THIS MASTER. CONSULT CATALOGS FOR PRODUCTS AND INSTALLATION REQUIREMENTS.*

*BELOW IS STANDARD PLAIN PANEL AND GRID SYSTEM.*

**2.1 STANDARD ACOUSTIC PANELS**

- A. Smooth surface, humidity-tolerant, mineral composition panels with washable surface; and as follows:
  - 1. Surface: Perforated.
  - 2. Edges: Rabbeted for 15/16-inch grid.

**SELECT EDGE TYPE ABOVE OR BELOW.**

3. Edges: Square.
4. Size: 24 inches by 24 inches by 5/8 inch thick.

**SELECT PANEL SIZE ABOVE OR BELOW.**

5. Size: 24 inches by 48 inches by 5/8 inch thick.
6. LR: Not less than .82.
7. NRC: Not less than .55.
8. CAC: Not less than 33.
9. Color: White.
10. Manufacturer/Style: Provide one of the following:
  - a. "Fine Fissured"; Armstrong World Industries, Inc.
  - b. "Fine Fissured"; CertainTeed Saint-Gobain.
  - c. "Radar ClimaPlus"; U.S. Gypsum.

**BELOW IS ROUTINE GRID FOR THIS PANEL TYPE - OTHERS ARE AVAILABLE - CONSULT CATALOGS.**

11. Related Suspension Grid: Standard 15/16-inch Panel Suspension System in compliance with requirements of "Suspension Systems" Article of this Section.

**2.2 PREMIUM ACOUSTIC PANELS**

**SELECTIONS BELOW HAVE APPEARANCE SIMILAR TO USG "FROST".**

- A. Smooth surface, humidity-tolerant, mineral composition panels with washable surface, and as follows:

1. Surface: Finely perforated.
2. Edges: Rabbeted and beveled for 9/16-inch grid.
3. Size: 24 inches by 24 inches by 3/4 inch thick.
4. Color: White.
5. LR: Not less than .85.
6. NRC: Not less than .70.
7. CAC: Not less than 35.
8. Manufacturer/Style: Provide one of the following:
  - a. "Cirrus"; Armstrong World Industries, Inc.
  - b. "Cashmere High NRC"; CertainTeed Saint-Gobain.
  - c. "Eclipse ClimaPlus"; U.S. Gypsum.

**THE ABOVE THREE PRODUCTS ARE WATER FELTED OR NODULAR. "FROST" IS SIMILAR IN APPEARANCE AND ACOUSTICAL PERFORMANCE, BUT IT IS A CAST/MOLDED PRODUCT (MORE DURABLE).**

- d. "Frost ClimaPlus"; U.S. Gypsum.

**BELOW IS ROUTINE GRID FOR THIS PANEL TYPE - OTHERS ARE AVAILABLE - CONSULT CATALOGS.**

9. Related Suspension Grid: Narrow Bolt-Slot 9/16-inch Panel Suspension System in compliance with requirements of "Suspension Systems" Article of this Section.

**SPECIALTY TRIM BELOW REFERS TO USG COMPASSO OR SIMILAR SYSTEMS. MODIFY TO SUIT PROJECT REQUIREMENTS OR DELETE IF NONE.**

- a. Provide specialty trim systems where indicated on Drawings.

**BELOW IS USG "MILLENA" PANEL AND ARMSTRONG COMPETITOR.**

- B. Smooth surface, humidity-tolerant, mineral composition panels with washable surface, and as follows:
1. Surface: Finely perforated.
  2. Edges: Rabbeted and beveled for 9/16-inch grid.
  3. Size: 24 inches by 24 inches by 3/4 inch thick.
  4. LR: Not less than .85.
  5. NRC: Not less than .70.
  6. CAC: Not less than 35.
  7. Color: White.
  8. Manufacturer/Style: Provide one of the following:
    - a. "Ultima"; Armstrong World Industries, Inc.
    - b. "Symphony m"; CertainTeed Saint-Gobain.
    - c. "Mars ClimaPlus"; U.S. Gypsum.

**BELOW IS ROUTINE GRID FOR THIS PANEL TYPE - OTHERS ARE AVAILABLE - CONSULT CATALOGS.**

9. Related Suspension Grid: Narrow Bolt-Slot 9/16-inch Panel Suspension System in compliance with requirements of "Suspension Systems" Article of this Section.

**SPECIALTY TRIM BELOW REFERS TO USG COMPASSO OR SIMILAR SYSTEMS. MODIFY TO SUIT PROJECT REQUIREMENTS OR DELETE IF NONE.**

- a. Provide specialty trim systems where indicated on Drawings.

**USE PRODUCT BELOW ONLY WHEN ATTEMPTING TO MATCH EXISTING ACOUSTICAL PANELS. ARMSTRONG IS THE ONLY MFR. WHO IS MAKING THIS PRODUCT.**

**2.3 ROUTER-CUT PATTERNED PANELS**

**SPECIFIC PRODUCT NOT LISTED. DOZENS OF PATTERN VARIATIONS ARE AVAILABLE - CONSULT CATALOGS.**

- A. Smooth surface, router-cut pattern, mineral composition panels with washable surface; and as follows:

**UPDATE BELOW BASED ON TILE SELECTED**

1. Surface: Finely perforated.
2. Pattern: Linear scored with border.
3. Edges: Rabbeted for 9/16-inch grid.
4. Size: 24 inches by 24 inches by 3/4 inch thick.
5. LR: Not less than .85.
6. NRC: Not less than .70.
7. CAC: Not less than 35.
8. Color: White.
9. Manufacturer/Style:

**INSERT SELECTED TILE MFR AND STYLE**

10. Related Suspension Grid: Standard 9/16-inch Panel Suspension System in compliance with requirements of "Suspension Systems" Article of this Section.

## 2.4 GYPSUM CORE PANELS

*BELOW IS USG GYPSUM CORE PANEL AND CELOTEX COMPETITOR (NO ARMSTRONG PRODUCT). THESE ARE SUITABLE FOR USE IN KITCHENS AND SIMILAR APPLICATIONS, BUT NOT CLEAN ROOMS. DUST-FREE CLEAN ROOM PANELS ARE AVAILABLE FROM ALL THREE MFRS., BUT THEY ARE MUCH MORE EXPENSIVE.*

A. Smooth surface, humidity resistant, gypsum core panels with vinyl facing, and as follows:

1. Composition: Gypsum board core with vinyl overlay.
2. Surface: Unperforated.
3. Edges: Square.
4. Size: 24 inches by 24 inches by 1/2 inch thick.

*SELECT PANEL SIZE ABOVE OR BELOW.*

5. Size: 24 inches by 48 inches by 1/2 inch thick.
6. LR: Not less than .77.
7. CAC: Not less than 35.
8. Color: White.
9. Manufacturer/Style: Provide one of the following vinyl-clad gypsum board panels:
  - a. "Aquarock"; CertainTeed Saint-Gobain.
  - b. "Gridstone"; National Gypsum Co.
  - c. "Sheetrock Lay-In ClimaPlus Ceiling Panels"; U.S. Gypsum.
10. Related Suspension Grid: Moisture-Resistant 15/16-inch Panel Suspension System in compliance with requirements of "Suspension Systems" Article of this Section.

*RETAIN OR DELETE BELOW TO SUIT PROJECT REQUIREMENTS SELECT PANEL SIZE ABOVE OR BELOW.*

11. Related Accessories: Manufacturer's standard hold-down clips designed to prevent air pressure uplift of acoustic panels.

## 2.5 SUSPENSION SYSTEMS

A. Suspension Systems, General: As required to support acoustical units, electrical and mechanical fixtures and other components as indicated, including anchorages, hangers, runners, cross runners, splines, clips, moldings, fasteners and other members, devices and accessories. Comply with requirements of ASTM C 635.

1. Hanger Wire: Not less than 12 gage (0.106 inch) galvanized steel.
2. Type: Exposed Direct-Hung Steel Suspension System
3. Structural Class: Medium-Duty System.

*BELOW IS STANDARD WIDE FACE, STEEL CAPPED PRODUCT.*

B. Standard 15/16-inch Panel Suspension System: Suspension system with exposed faces painted.

1. Face Width: 15/16-inch wide.
2. Product/Manufacturer: Provide the following:
  - a. "Prelude XL 15/16": Armstrong World Industries, Inc.
  - b. "Classic Stab System"; CertainTeed Saint-Gobain.
  - c. "Donn DX"; U.S. Gypsum.

**BELOW IS NARROW FACE, STEEL CAPPED PRODUCT. CONSIDER SPECIALLY SHAPED EDGE ANGLES - CONSULT CATALOGS FOR RANGE OF POSSIBILITIES.**

- C. Standard 9/16-inch Panel Suspension System: Suspension system with exposed faces painted.
1. Face Width: 9/16-inch wide.
  2. Product/Manufacturer: Provide the following:
    - a. "Suprafine 9/16"; Armstrong World Industries, Inc.
    - b. "Elite Narrow Stab"; CertainTeed Saint-Gobain.
    - c. "Centricitee DXT"; U.S. Gypsum

**BELOW IS STEEL SLOT-TYPE GRID. SLOT WIDTHS VARY AND COLOR INSERTS MAY BE ADDED. CONSULT CATALOGS FOR FULL EXTENT OF POSSIBILITIES.**

- D. Narrow Bolt-Slot 9/16-inch Panel Suspension System: Suspension system with exposed faces painted and slotted.
1. Face Width: 9/16-inch wide with 1/8-inch wide reveal.
  2. Product/Manufacturer: Provide the following:
    - a. "Silhouette XL-1/8 Reveal 9/16 Bolt Slot"; Armstrong World Industries, Inc.
    - b. "SmoothLine Bolt Slot System"; CertainTeed Saint-Gobain.
    - c. "Fine-Line 1/8"; U.S. Gypsum

**BELOW IS FOR GYPSUM CORE PANELS IN SEMI-WET LOCATIONS (SUCH AS ANIMAL FACILITIES). ALL-ALUMINUM SYSTEMS AND PVC SYSTEMS ARE ALSO AVAILABLE.**

- E. Moisture-Resistant 15/16-inch Panel Suspension System: Suspension system with G60 hot-dip galvanized exposed faces with rolled, painted, aluminum caps.
1. Face Width: 15/16-inch wide.
  2. Product/Manufacturer: Provide the following:
    - a. "Prelude Plus XL Fireguard"; Armstrong World Industries, Inc.
    - b. "Protectone Aluminum Fire-Rated Capped System"; CertainTeed Saint-Gobain.
    - c. "Donn ZXLA"; U.S. Gypsum

## **2.6 SPECIALTY TRIM SYSTEMS**

**BELOW IS CUSTOM "FLOATING" APPEARANCE TRIM SYSTEM.**

- A. Custom Exposed Edge and Perimeter Trim System: Manufacturer's custom designed, painted steel trim system for fully exposed edge conditions; integrated with manufacturer's suspension system to create a free-floating installed appearance. Provide units of depth with 9/16 inch horizontal legs and with hems for attachment to suspension system.
1. Depth: 4-inches unless otherwise indicated.
  2. Product/Manufacturer: Provide the following:
    - a. "Axiom"; Armstrong World Industries, Inc.
    - b. "Infinity"; Chicago Metallic Corp.
    - c. "COMPASSO"; U.S. Gypsum

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Comply with ASTM C636 and seismic design requirements indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
- B. Layout: Balance ceiling borders on opposite sides, using more-than-half width acoustical units, except where otherwise dimensioned or indicated.
  - 1. Tolerance: 1/8 inch in 12 feet level tolerance.
  - 2. Pattern Direction: One-way, align joints.
- C. Suspension System: Secure to building structure, free from contact with objects within the ceiling plenum, with hangers spaced 48 inches on center along supported members; provide hangers not more than 8 inches from ends of each member.
  - 1. Where interference with ducts or suspended equipment prevents direct connection of suspension elements to building structure, provide steel channel members (Unistrut or equivalent) hung from structural members with threaded rods with appropriate fasteners; and adequately sized for suspension system capacity. Secure suspension system to steel channels. Connection to ductwork or equipment is not permitted.
  - 2. Do not fasten ceiling suspension members to metal roof deck.

***INCLUDE BELOW FOR RABBETED PANELS.***

- D. Rabbeted Panels: Rabbet panel edges that have been field cut to fit non-modular suspension grid shapes at room perimeter, columns, and similar obstructions. Use router or other factory-approved rabbeting method.
- E. Edge Moldings: Secure to substrate with screw anchors spaced 16 inch on center. Set with concealed bead of acoustical sealant. Miter corner joints. Cope exposed flanges of intersecting suspension members for flush intersections.

***DELETE ARTICLE BELOW IF NO HOLD-DOWN CLIPS REQUIRED FOR FIRE-RESISTIVE CEILINGS OR AIR-PRESSURE-RESISTANT CEILINGS.***

- F. Provide hold-down clips at each acoustic panel in systems indicated for Animal Facility application. Install in accordance with manufacturer's recommendations for an air pressure uplift-resistant installation.

***DELETE ARTICLE BELOW IF NO SPECIALTY TRIM INCLUDED.***

**3.2 SPECIALTY TRIM INSTALLATION**

- A. Exposed Edge and Perimeter Trim System: Install units in accordance with manufacturer's printed instructions for specific Project application.

**3.3 CLEANING AND REPAIR**

- A. Clean suspension grid and panels. Remove and replace panels and grid that are defective, or that have been damaged.
- B. Touch-up paint field-cut edges of factory painted tile that are exposed to view in finished installation, including horizontal and vertical surfaces at perimeter of ceilings where panels are cut for rabbeted edge molding.

**DIVISION 09 FINISHES**

SECTION 096466 - WOOD ATHLETIC FLOORING

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**  
**SECTION 096466 - WOOD ATHLETIC FLOORING**

**PART 1 - GENERAL**

*PRODUCTS AND SYSTEMS DESCRIBED IN THIS SECTION ARE OBSOLETE. IT IS RETAINED ONLY AS A "MODEL" TO ASSIST IN WRITING AN APPROPRIATE SPECIFICATION. CONSIDER OBTAINING THE AIA MASTERSPEC SUPPLEMENTAL SECTION OF THE SAME SECTION NUMBER AND NAME.*

**1.1 SUMMARY**

- A. Extent of gymnasium floor is indicated on Drawings.
- B. Types of gymnasium floors include:
  - 1. Maple strip gym flooring.

**1.2 SUBMITTALS**

- A. Product Data: Submit mfr's specifications and installation instructions for each gymnasium flooring system. Include instructions for handling, moisture protection, anchorage finishing protection and maintenance. Indicate by copy of transmittal that Installer has received a copy of each instruction.

*INCLUDE BELOW FOR ALL PROJECTS.*

- B. Affidavits of Compliance to be included in final inspection manual: For each type of acoustical panel and tile, provide manufacturer's letter of certification showing compliance with requirements of 1997 NFPA 101 "Life Safety Code" Section 26-3.3 for Class A, B, or C as required by the Code. Letter shall include project number, project name, and building name.

**1.3 QUALITY ASSURANCE**

- A. Comply with Maple Flooring Manufacturer's Association (MFMA) standards and recommendations for maple flooring.

**1.4 DELIVERY, STORAGE AND HANDLING**

- A. Deliver and store wood materials after wet operations in building are complete, heating and ventilating equipment is operational, and temperature and humidity conditions have stabilized.

**1.5 WARRANTY**

- A. Provide 3 year warranty covering the following, in addition to mfr's standard 1 year warranty for finished wood flooring and associated work:
  - 1. Repair or replace flooring which shrinks, cracks, warps, or otherwise deteriorate excessively, or which buckles, delaminates, or breaks anchorage or bond with substrate.

**PART 2 - PRODUCTS**

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturers/Systems: Subject to compliance with requirements of this Section, provide products of one of the following:

AGA Inc.: Duracushion I.  
Connor Forest Industries: Rezill-Aire.  
Horner Flooring Co.: Thrust-A-Cushion Panel System.  
Robbins Inc.: Permacushion II Panel System.  
Superior Floor Co: Super-Aire System."

**2.2 MATERIALS AND ACCESSORIES**

- A. Vapor Barrier: 6 mil polyethylene.
- B. Subfloor: 1/2 inch by 4 feet by 8 feet C-D exterior grade plywood.
- C. Resilient Mounting Pads: Mfr's standard 3/8 inch by 2-1/4 inch by 3 inch PVC.
- D. Wood Flooring: Tongue and grooved and end matched; kiln dried; MFMA grade marked and stamped; and as follows:
  - 1. Species: Northern Hard Maple (acer saccharum).
  - 2. Size: 33/32 inches thick by 1-1/2 inch wide.
  - 3. Grade: Second and Better.
  - 4. Grain: Flat.
- E. Molding and Base: Manufacturer's standard ventilating, coved, rubber base with pre-molded outside and inside corners.
  - 1. Color: Black.
  - 2. Size: 3 inches by 4 inches.
- F. Expansion Joint Covers: One of the following recessed, serrated (fluted), aluminum expansion joint covers for 2" wide joints:  
Balco Inc.: Model AFWS-1-2m  
Metalines Inc.: Model 1425  
MM Systems Corp.: Model X-A2MV
- G. Finish: Polyurethane sealer and finish recommended by flooring mfr.
  - 1. Game Lines: Enamel paint recommended by flooring mfr, and compatible with floor finish. Colors to selected from paint mfr's standard color range.

**PART 3 - EXECUTION**

**3.1 EXAMINATION**

- A. Examine concrete slab substrate for compliance with mfr's tolerance, dryness and cleanliness requirements. Allow excess moisture to dry before proceeding with installation.

**3.2 PREPARATION**

- A. Clean slab of construction debris, oil, grease and other substances determined by mfr to have a deleterious effect on installation
  - 1. Do not begin installation operations before completion of adjacent masonry work, and overhead mechanical, electrical, and painting work have been completed.

**3.3 INSTALLATION**

- A. Vapor Barrier: Lap joints 4 inches and cement with cold asphalt.
- B. Flooring System: In general, install flooring system components in strict accordance with mfr's directions. Install self-storing volley ball post hatches and frames (under Alternate No. 6).
- C. Sanding: Machine sand with a progression of coarse, medium and fine papers to produce a smooth, even and uniform surface.
  - 1. After sanding operations are completed, remove dust from entire surface by vacuum or other method.
- D. Finishing: Apply 2 coats sealer and 2 finish coats at manufacturer's recommended rate, but no thinner than 500 square feet per gallon. Buff and clean floor between each coat.
  - 1. Game Lines: Paint basketball and volley ball game lines, and center-court and perimeter graphics. Comply with official NCAA game line rules, and as indicated on Drawings.
- E. Base Installation: Install vent cove base and expansion joint covers as indicated, and to comply with mfr's recommendations.

**3.4 CLEANING AND PROTECTION**

- A. Clean gym flooring surfaces at the completion of construction operations, in strict accordance with manufacturer's directions.
- B. Protect finished installation from damage caused by continuing building construction operations.
- C. Repair damaged or defective surfaces to the satisfaction of the Architect, or remove and replace damaged or defective surface as directed by the Architect.

**DIVISION 09 FINISHES**  
**SECTION 096500 - RESILIENT FLOORING**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of resilient flooring and accessories is indicated on Drawings and schedules.
- B. Types of resilient flooring and accessories include the following:

***EDIT BELOW TO SUIT PROJECT.***

- 1. Vinyl composition tile.
- 2. Sheet vinyl flooring.
- 3. Rubber stair treads.
- 4. Wall base.

**1.2 SUBMITTALS**

- A. Product Data: Manufacturer's literature and installation instructions.
- B. Samples for Initial Selection: Submit sample of each type, color and pattern of resilient flooring and accessories.

***INCLUDE BELOW FOR ALL PROJECTS.***

- C. Affidavits of Compliance to be included in final inspection manual: For each type of acoustical panel and tile, provide manufacturer's letter of certification showing compliance with requirements of 1997 NFPA 101 "Life Safety Code" Section 26-3.3 for Class A, B, or C as required by the Code. Letter shall include project number, project name, and building name.

**PART 2 - PRODUCTS**

***WARNING: CHECK SAMPLES FOR SUITABILITY BEFORE SELECTING ANY OF THE PRODUCTS LISTED BELOW.***

**2.1 VINYL COMPOSITION TILE**

***BELOW DESCRIBES STANDARD VCT - ADD AMTICO, AZROCK, OR KENTILE WHERE "THRU-CHIP" PERFORMANCE (DURABILITY) IS NOT REQUIRED.***

- A. Vinyl Composition Tile: ASTM F 1066 Composition 1, Class 2; 12-inch by 12-inch by 1/8-inch thick.
  - 1. Vinyl Composition Tile Manufacturer/Style: Subject to compliance with requirements provide one of the following:

***CONSULT SAMPLES FOR COLOR/PATTERN SUITABILITY FOR THE PROJECT. SELECTION BELOW IS MINIMAL AND DOES NOT REPRESENT FULL AVAILABLE RANGE OF TILE.***

- b. "Inspirations"; Mannington, Inc.

- c. "Expressions"; Tarkett, Inc..

*RETAIN BELOW UNLESS COLOR AND PATTERN HAS BEEN PRE-SELECTED AND INCLUDED WITH PRODUCT DESCRIPTION ABOVE.*

- 2. Color/Pattern: Selected from manufacturer's standard range for products indicated.

*BELOW DESCRIBES STANDARD SHEET VINYL WITH BACKING. ALL LISTED PRODUCTS BELOW ARE ACCEPTABLE TO THE UNIVERSITY'S MAINTENANCE DEPT. MULTI-LAYERED SOLID VINYL (SMARAGD AND ARMSTRONG TRANSLATIONS) AND LINOLEUM HAVE NOT BEEN APPROVED.*

## 2.2 VINYL SHEET FLOORING

*BACKED PRODUCTS ARE GENERALLY LESS EXPENSIVE AND MAY BE MORE SUITABLE FOR APPLICATION OVER SLABS-ON-GRADE.*

- A. Vinyl Sheet with Backing: Vinyl sheet with pattern and color extending through full thickness, complying with FS L-F-475A, Type II, Grade A. Manufacturer's standard width rolls.

- 1. Wear Layer Thickness: 0.050-inch.
- 2. Overall Thickness: Not less than 0.080-inch.
- 3. Vinyl Sheet Manufacturer/Style: Subject to compliance with requirements, provide one of the following:
  - a. "Classic Corlon"; Armstrong, Inc.

*ABOVE IS STANDARD VINYL SUITABLE FOR CHEMICALLY WELDED SEAMING - BELOW HAS CHEMICAL RESISTANCE PERFORMANCE SIMILAR TO REGULAR MEDINTECH BUT WITH BACKING AND CAN HAVE EITHER CHEMICAL- OR HEAT-WELDED SEAMS.*

- b. "Medintech Tandem"; Armstrong, Inc.

*THE PRODUCTS BELOW MAY HAVE EITHER CHEMICAL- OR HEAT-WELDED SEAMS, BUT DO NOT HAVE MEDINTECH'S CHEMICAL RESISTANCE. CHECK SUITABILITY FOR USE ON SLABS ON GRADE. CHECK SAMPLES TO ENSURE DESIRABILITY OF COLORS/PATTERNS.*

- c. "Possibilities"; Armstrong, Inc.
- d. "Fields"; Mannington, Inc.
- e. "Images"; Tarkett, Inc.

*RETAIN BELOW UNLESS COLOR AND PATTERN HAS BEEN PRE-SELECTED AND INCLUDED WITH PRODUCT DESCRIPTION ABOVE.*

- 4. Color/Pattern: Selected from manufacturer's standard range for products indicated.

*BELOW DESCRIBES HOMOGENOUS SHEET VINYL WITH HEAT WELDABLE SEAMS FOR "SEAMLESS" FLOOR. THESE FLOORS ARE MORE DURABLE THAN THE BACKED TYPE. IN ADDITION, MEDINTECH HAS PROVEN RELATIVELY STAIN AND CHEMICAL RESISTANT.*

- B. Vinyl Sheet Without Backing: Vinyl sheet with pattern and color extending through full thickness, complying with ASTM E 84 (75 or less), and ASTM E 662 (NBS Smoke 450 or less). Manufacturer's standard width rolls.

- 1. Thickness: 0.080-inch.

2. Vinyl Sheet Manufacturer/Style: Subject to compliance with requirements, provide one of the following:
  - a. "Medintech"; Armstrong, Inc.

*BELOW IS CLAIMED BY MANUFACTURER TO BE EQUIVALENT TO MEDINTECH FOR CHEMICAL RESISTANCE. SAMPLES HAVE NOT BEEN CHECKED BY UM. SELECT WITH CAUTION.*

- b. "Biospec"; Mannington Inc.
- c. "Expressions" "Eminent/Optima/Collage Optima"; Tarkett, Inc.

*RETAIN BELOW UNLESS COLOR AND PATTERN HAS BEEN PRE-SELECTED AND INCLUDED WITH PRODUCT DESCRIPTION ABOVE.*

3. Color/Pattern: Selected from manufacturer's standard range for products indicated.

### 2.3 RUBBER STAIR TREAD

*BELOW DESCRIBES STANDARD RUBBER STAIR TREAD UNITS.*

- A. Preformed Rubber Stair Treads: Homogenous vulcanized rubber composition units complying with Fed. Spec. RR-T-650D, Composition A, Type 2; with raised, slip-resistant pattern on tread surface, reinforced nose, of manufacturer's standard thickness for indicated pattern, and as follows:

*SELECT ONE OF THE FOLLOWING.*

1. Pattern: Raised disk.
2. Pattern: Straight ribs.
3. Pattern: Diagonal grid (diamond).

*BELOW ARE EXAMPLES ONLY. CHECK SAMPLES FOR WIDER SELECTION. AVOID BLACK STAIR TREAD (LIGHTING PROBLEMS UNDER EMERGENCY FIXTURE OPERATION). IT IS ALSO BEST TO AVOID WHITE AND BLACK TREAD DUE TO CLEANING PROBLEMS.*

4. Color: Gray.
5. Color: Tan.
6. Color: Selected from manufacturer's standard range.

*DELETE BELOW IF NOT DESIRED. ADDITIONAL COST MAY NOT BE JUSTIFIED IN TYPICAL SERVICE STAIRS.*

7. Provide 1/8-inch gage coved rubber risers matching tread composition and color.
8. Manufacturers: Subject to compliance with requirements, one of the following:
  - Armstrong.
  - Flexco.
  - Musson.
  - Johnsonite.
  - Nora
  - RCA.
  - Roppe.
  - VPI.

2.4 RESILIENT WALL BASE

BELOW DESCRIBES 100% VULCANIZED RUBBER COVE BASE - STANDARD FOR MOST UNIVERSITY PROJECTS AND ALL MED SCHOOL PROJECTS. COLOR IS HOMOGENOUS

- A. Rubber Base: ASTM F 1861, Type TS (rubber, vulcanized thermoset), Group I (solid, homogeneous).

SELECT STYLE FROM OPTIONS BELOW. TYPICALLY SELECT "COVE (BASE WITH TOE)"

- 1. Style: Cove (base with toe).
2. Style: Straight (flat or toeless).
3. Style: Butt to (fit-to-floor).
4. Minimum Thickness: 0.125 inch.

SELECT HEIGHT FROM OPTIONS BELOW. 4 INCHES IS TYPICAL. OTHER OPTIONS ARE AVAILABLE.

- 5. Height: 2-1/2 inches.
6. Height: 4 inches.
7. Height: 6 inches.

BELOW ARE EXAMPLES ONLY. CHECK SAMPLES FOR WIDER SELECTION.

- 8. Color: Black.
9. Color: Dark brown.
10. Color: Selected from manufacturer's standard range.
11. Furnish cove base in continuous length rolls.

USUALLY RETAIN ABOVE AND DELETE BELOW, UNLESS COST AND DELIVERY TIME IS PARAMOUNT.

- 12. Furnish cove base in standard 6-foot lengths.

DELETE BELOW IF NOT DESIRED.

- 13. Provide matching end stops and preformed corner units.
14. Manufacturers: Subject to compliance with requirements, one of the following:
Burke Mercer.
Flexco.
Roppe.

BELOW DESCRIBES THERMOPLASTIC RUBBER COVE BASE (RUBBER / VINYL BLEND). DISADVANTAGES INCLUDE DECREASED DURABILITY AND VISIBILITY OF SCRATCHES. ADVANTAGES INCLUDE MORE MRFS, SLIGHTLY LOWER COST AND WIDER COLOR SELECTION.

TYPICALLY CHOOSE GROUP II, GROUP I IS NOT AVAILABLE IN ALL LISTED MRFS.

- B. Rubber Base: ASTM F 1861, Type TP (rubber, thermoplastic), Group I (solid, homogeneous) or Group II (layered).

SELECT STYLE FROM OPTIONS BELOW. TYPICALLY SELECT "COVE (BASE WITH TOE)"

- 1. Style: Cove (base with toe).
2. Style: Straight (flat or toeless).
3. Style: Butt to (fit-to-floor).
4. Minimum Thickness: 0.125 inch.

**SELECT HEIGHT FROM OPTIONS BELOW. 4 INCHES IS TYPICAL. OTHER OPTIONS ARE AVAILABLE.**

5. Height: 2-1/2 inches.
6. Height: 4 inches.
7. Height: 6 inches.

**BELOW ARE EXAMPLES ONLY. CHECK SAMPLES FOR WIDER SELECTION.**

8. Color: Black.
9. Color: Dark brown.
10. Color: Selected from manufacturer's standard range.
11. Furnish cove base in continuous length rolls.

**USUALLY RETAIN ABOVE AND DELETE BELOW, UNLESS COST AND DELIVERY TIME IS PARAMOUNT.**

12. Furnish cove base in standard 6-foot lengths.

**DELETE BELOW IF NOT DESIRED.**

13. Provide matching end stops and preformed corner units.
14. Manufacturers: Subject to compliance with requirements, one of the following:
  - Armstrong.
  - Burke Mercer.
  - Flexco.
  - Johnsonine.
  - Nafco by Tarkett.
  - Roppe.
  - VPI.

**BELOW DESCRIBES STANDARD VINYL BASE. DRAWBACKS INCLUDE REDUCED DURABILITY. COLOR IS NOT HOMOGENOUS. DISADVANTAGES INCLUDE DECREASED DURABILITY AND VISIBILITY OF SCRATCHES. ADVANTAGES INCLUDE MORE MRFS, LOWER COST AND WIDER COLOR SELECTION.**

- C. Vinyl Wall Base: ASTM F 1861, Type TV (vinyl, thermosplastic), Group II (layered).

**SELECT STYLE FROM OPTIONS BELOW. TYPICALLY SELECT "COVE (BASE WITH TOE)"**

1. Style: Cove (base with toe).
2. Style: Straight (flat or toeless).
3. Style: Butt to (fit-to-floor).
4. Minimum Thickness: 0.125 inch.

**SELECT HEIGHT FROM OPTIONS BELOW. 4 INCHES IS TYPICAL. OTHER OPTIONS ARE AVAILABLE.**

5. Height: 2-1/2 inches.
6. Height: 4 inches.
7. Height: 6 inches.

**BELOW ARE EXAMPLES ONLY. CHECK SAMPLES FOR WIDER SELECTION.**

8. Color: Black.
9. Color: Dark brown.
10. Color: Selected from manufacturer's standard range.
11. Furnish cove base in continuous length rolls.

*USUALLY RETAIN ABOVE AND DELETE BELOW, UNLESS COST AND DELIVERY TIME IS PARAMOUNT.*

12. Furnish cove base in standard 6-foot lengths.

*DELETE BELOW IF NOT DESIRED.*

13. Provide matching end stops and preformed corner units.
14. Manufacturers: Subject to compliance with requirements, one of the following:
  - Armstrong.
  - Burke Mercer.
  - Flexco.
  - Johnsonine.
  - Nafco by Tarkett.
  - Roppe.
  - VPI.

*INCLUDE BELOW FOR INTEGRAL COVE BASE ON WELDABLE SHEET VINYL FLOORS.*

- D. Integral Cove Base Accessories: Provide the following accessory items for integral sheet vinyl cove base installations.
  1. Cap Trim: Provide aluminum or stainless steel flash-cove capping trim at top edge of integral base.

*BELOW OPTIONAL - USUALLY DELETE. CORNERS COMMONLY FORMED FROM FLOORING MATERIALS.*

2. Corner Trim: Provide aluminum or stainless steel corner trim at inside and outside corners of flash-coving.

*USUALLY RETAIN BELOW FOR INTEGRAL COVERED BASE APPLICATIONS.*

3. Cove Stick: At each wall/floor intersection, provide wood or plastic cove stick materials manufactured specifically for use as back-up for flash-coving.

## **2.5 ACCESSORIES**

- A. Transition (Reducer) Strips: Provide units fabricated of solid rubber or vinyl as required to match specified topset cove base materials.
- B. Adhesives: Provide Manufacturer's recommended non-asbestos-containing adhesive for each type of flooring, wall base and substrate indicated.

*DELETE THE FOLLOWING IF NO HEAT WELDED SEAMS.*

- C. Welding Rods: Provide manufacturer's welding rods for heat-welded seam installations.
  1. Color: Selected from manufacturer's standard range to coordinate with flooring.

*BELOW AVAILABLE FROM ARMSTRONG FOR MEDINTECH PRODUCTS.*

2. Color: Selected from manufacturer's patterned, premium grade rods designed to blend with color and pattern of flooring for a near-invisible joint.

**PART 3 - EXECUTION**

**3.1 EXAMINATION**

- A. In presence of Installer, inspect substrate conditions for compliance with resilient flooring manufacturer's installation recommendations. Report, in writing, deleterious conditions to Owner's Representative.

*USUALLY INCLUDE BELOW.*

- 1. Obtain Architect's written approval before beginning installation.

**3.2 PREPARATION**

- A. In general: Prepare substrates as required to receive new materials. Remove dirt and debris from substrate. Adhesive removal is included in Division 2 Section "Selective Demolition."
- B. Where uneven floor levels or holes occur, fill, patch, and provide underlayment as required to level surface prior to installation of finished floor material. Underlayment may be latex cement as applicable.

*REQUIREMENT BELOW IS INTENDED TO LIMIT CLAIMS FOR EXTRAS. INCREASE OR DECREASE AREA PERCENT BASED ON YOUR JUDGMENT, OR DELETE ENTIRELY FOR NEW CONCRETE FLOORS.*

- 1. Patching is required for approximately [not less than] 20 percent of the gross floor area of the Project.

*INCLUDE BELOW FOR LARGE AREAS OF PATCHING OR LEVELING. COORDINATE WITH "CONCRETE FLOOR UNDERLAYMENT" SECTION.*

- 2. Floor patching and leveling is included in Division 3 Section "Concrete Floor Leveling."

- C. Clean floors and apply substrate primer (if recommended by flooring manufacturer) in accordance with flooring manufacturer's instructions.

**3.3 INSTALLATION, GENERAL**

- A. Comply with flooring manufacturer's recommendations for type(s) of materials, project conditions, and intended use.
- B. Place resilient flooring continuously under locations of the following:

*MODIFY THE FOLLOWING TO SUIT PROJECT.*

- 1. Movable partition systems.
- 2. Laboratory casework.

*INCLUDE BELOW FOR ALL MEDICAL SCHOOL PROJECTS.*

- C. Apply continuous bead of sealant along perimeter edge of installation and around all floor penetrations prior to installing wall base.

### 3.4 SHEET VINYL INSTALLATION

*INCLUDE BELOW FOR STANDARD SHEET VINYL PRODUCTS - CHEMICAL WELDING IS NOT IMPLY SEAMLESS FLOORING.*

- A. Chemically Welded Vinyl Sheet: Manufacturer's standard chemical joint adhesive system.

*DELETE ABOVE AND INCLUDE BELOW FOR HEAT-WELDED "SEAMLESS" FLOORING ONLY.*

- B. Vinyl Sheet with Heat Welded Seams: Manufacturer's standard seam sealing system with seam edges heated and fused with specifically compounded vinyl welding rods, resulting in a seamless installation.

### 3.5 TILE INSTALLATION

- A. Lay out tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half of a tile at perimeter.

1. Lay tiles square with room axis, unless otherwise indicated.

*DELETE SUBPARA ABOVE OR BELOW, OR REVISE IF FLOOR GEOMETRY OR PATTERN DICTATES ANOTHER RELATIONSHIP OF TILES WITH ROOM AXIS.*

2. Lay tiles at a 45-degree angle with room axis, unless otherwise indicated.

- B. Match tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Cut tiles neatly around all fixtures. Discard broken, cracked, chipped, or deformed tiles.

*RETAIN ONE SUBPARA BELOW OR INSERT REQUIREMENTS TO SUIT PROJECT.*

1. Lay tiles with grain running in one direction.  
2. Lay tiles in basket-weave pattern with grain direction alternating in adjacent tiles.  
3. Lay tiles in pattern of colors and sizes indicated on Drawings.

*IF ANY BUILT-IN ITEMS ARE REQUIRED TO BE SET ON TOP OF TILE, INDICATE ON DRAWINGS AND REVISE PARA BELOW ACCORDINGLY.*

- C. Scribe, cut, and fit tiles to butt neatly and tightly to vertical surfaces and permanent fixtures, including built-in furniture, cabinets, pipes, outlets, edgings, door frames, thresholds, and nosings.

- D. Extend tiles into toe spaces, door reveals, closets, and similar openings.

- E. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use chalk or other nonpermanent, nonstaining marking device.

*DELETE PARA BELOW IF NO COVERS.*

- F. Install tiles on covers for telephone and electrical ducts, and similar items in finished floor areas. Maintain overall continuity of color and pattern with pieces of flooring installed on covers. Tightly adhere edges to perimeter of floor around covers and to covers.

*REVISE PARA BELOW IF OTHER THAN FULL-SPREAD ADHESIVE METHOD IS RECOMMENDED BY TILE MFR FOR SUBSTRATE AND TILE PRODUCTS SELECTED.*

- G. Adhere tiles to flooring substrates using a full spread of adhesive applied to substrate to comply with tile manufacturer's written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.
1. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

*DELETE BELOW IF ROLLING IS NOT REQUIRED FOR PRODUCTS SELECTED.*

- H. Hand roll tiles according to tile manufacturer's written instructions.

### 3.6 WALL BASE INSTALLATION

*COORDINATE THE FOLLOWING WITH LABORATORY CASEWORK SPECIFICATIONS, CONCERNING PROVISION OF BASE ON CASEWORK.*

- A. Apply wall base in lengths as long as practicable to walls, columns, and all permanent fixtures and where indicated. Mitered outside corners not acceptable.

*RETAIN BELOW WITH CASEWORK.*

- B. Apply base to fixed cabinetry as follows:
1. Base cabinet toe spaces.
  2. Exposed sides of base cabinets.
  3. Filler and closure panels extending to floor.

*DELETE ABOVE AND INCLUDE BELOW FOR SHEET VINYL FLOORS WITH INTEGRAL COVE BASE.*

- C. Form flooring material into continuous cove base at walls, columns, and permanent fixtures (including fixed casework) and where indicated. Heat weld all seams.
1. Provide metal cap trim at exposed edges of base, and where base is formed into outside corners. Mitered and welded outside corners without metal trim are not acceptable.
  2. Apply base to fixed laboratory cabinetry as follows:
    - a. Base cabinet toe spaces.
    - b. Exposed sides of base cabinets.
    - c. Filler and closure panels extending to floor.
- D. On masonry or other irregular surfaces, fill voids behind base and along top edge with manufacturer's recommended adhesive filler.

3.7 CLEANING

A. Clean floors and accessories after installation in accordance with flooring manufacturer's instructions.

1. Do not polish floors.

**SPECIFICATION DIVISION 9**

NUMBER            SECTION DESCRIPTION

**DIVISION 09 FINISHES**

SECTION 096723 - RESINOUS FLOORING

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**  
**SECTION 096723 - RESINOUS FLOORING**

*THIS SECTION IS LIMITED TO COMMERCIAL-TYPE HIGH-TEMPERATURE AND CHEMICALLY-RESISTANT SYSTEM. CONSIDER USING AIA MASTERSPEC SECTION OF THE SAME NAME AND NUMBER FOR DECORATIVE FLOORS, FACTORY FLOORS AND OTHER SIMILAR APPLICATIONS.*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of seamless, resinous flooring is shown and scheduled on Drawings.
- B. Type of seamless resinous flooring is high-build, temperature-resistant, chemically resistant, trowel-down epoxy mortar type with compatible finish coat.

**1.2 SUBMITTALS**

- A. Manufacturer's product literature indicating compliance with requirements.
- B. Installation instructions for each primary product and accessory.
- C. Samples for Initial Selection: Submit 4-inch square sample of actual flooring material in color proposed to match indicated color.
- D. Samples for Verification: Submit 4-inch square sample of actual flooring material with final approved color adjustments.
- E. Qualification Data for Individuals and Firms listed in Quality Assurance Article.

*INCLUDE BELOW FOR ALL PROJECTS.*

- F. Affidavits of Compliance to be included in final inspection manual: For each type of acoustical panel and tile, provide manufacturer's letter of certification showing compliance with requirements of 1997 NFPA 101 "Life Safety Code" Section 26-3.3 for Class A, B, or C as required by the Code. Letter shall include project number, project name, and building name.

**1.3 QUALITY ASSURANCE**

- A. Installer Qualifications: Installer having not less than 5 years of experience installing comparable flooring systems; and approved by resinous flooring manufacturer for application indicated.
- B. Design Criteria: The Project has been designed using Stonclad HT/Stonkote HT4 by Stonhard, Inc. Fully equivalent products of other listed, approved manufacturers will be considered, provided deviations in product qualities are minor and do not change the performance of the flooring system as judged by the Architect.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURER**

- A. Manufacturer: Subject to compliance with requirements, provide products of one of the following:

Dex-O-Tex; Crossfield Products Co.  
Epoxy-Tech, Inc.  
Mastertop; Master Builders Technologies Ltd.  
Stonclad; Stonhard Inc. USA

**2.2 SEAMLESS RESINOUS FLOORING**

- A. Mortar: Seamless, built-up, troweled-down, thermally- and chemically-resistant three-component epoxy resin-based flooring system. Provide mortar materials with performance equal or better than the following values for each indicated test method:

1. Compressive Strength: 11,500 psi at 7 days; ASTM C 579.
2. Tensile Strength: 2,200 psi; ASTM C 307.
3. Flexural Strength: 5,000 psi; ASTM D 580.
4. Flexural Modulus of Elasticity: 17,000,000 psi; ASTM D 790..
5. Hardness: 87-90; ASTM D2240/Shore D Durometer.
6. Bond Strength: Greater than 400 psi (100 percent concrete failure); ACI Committee 503/PP.1139-1141.
7. Indentation: None; MIL-D-3134F.
8. Abrasion Resistance: 0.18 gm max. weight loss; ASTM D 4060, CS-17 wheel.
9. Flammability: Self-extinguishing, extent of burning not more than 0.25 inches; ASTM D 635,
10. Thermal Coefficient of Linear Expansion: 0.00002-in/in deg C; ASTM E 831.
11. Water Absorption: 0.2 percent; ASTM C 413.
12. Heat Resistance Limitation: 200 deg F for continuous exposure; 250 deg F for intermittent exposures.

- B. Finish Coating: Thermally- and chemically-resistant 100 percent solids, two-component epoxy resin coating compounded to compliment the performance of the mortar material.

1. Temperature Limitations: Not less than that specified for mortar material.
2. Chemical-resistance: Not less than that specified for mortar material.
3. Color: Equivalent to Stonhard, Inc. "Brick Red."

**2.3 ACCESSORIES**

- A. Primer: Two-component epoxy resin primer compounded for the application indicated.
- B. Cove Cap: Manufacturer's standard cove top cap to provide a neat, level, and durable finished cove installation.

**PART 3 - EXECUTION**

**3.1 PREPARATION**

- A. Prepare substrates to condition recommended by seamless resinous flooring manufacturer for application indicated. Remove adhesives, sealer, wax, and dirt; and scarify substrate as follows:
  - 1. At minimum, shot-blast all existing floor surfaces using power-driven, metal-shot-recycling equipment. Shot-blast or otherwise etch or scarify new concrete floor surfaces if required to bring surface into compliance with manufacturer's recommendations.
  - 2. Sand-blasting is not permitted. Rotating-blade type scarifiers are not permitted.
- B. Upon completion of floor preparation work, obtain and submit to the Architect, written approval of existing substrate conditions by an authorized representative of the resinous flooring manufacturer.
- C. Obtain Architect's written approval prior to beginning subsequent application work.

**3.2 APPLICATION**

- A. Application, General: Provide final installation with no seams, joints, or cracks. Provide seamless transition between adjoining rooms. Extend base up walls and up base of walls to provide an uninterrupted cove base around room perimeter. Apply resinous flooring in pit, covering sides and bottom.
- B. Prime surfaces using manufacturer's recommended penetrating primer for indicated application. Apply primer in strict adherence to manufacturer's printed instructions.
- C. Mortar Installation: Blend materials in accordance with manufacturer's recommendations. Screed-apply 5/16-inch layer of mortar and trowel finish with steel-blade power trowels. Routinely clean and dry trowel blades in accordance with manufacturer's instructions. Trowel mortar a dense, hard surface with minimal porosity.
  - 1. Install surface as level as practicable using laser lines or other method acceptable to Architect.
  - 2. Cove Bases: Install cove bases at each wall. Use manufacturer's cove material compounded for the purpose. Cap cove base with manufacturer's standard cove cap strip.
    - a. Cove Height: 6-inches.
  - 3. Pitch 1/8-inch to drains within a 24-inch radius of each floor drain, except where concrete substrate is sloped to drain.
- D. Mortar Leveling: Allow mortar to cure thoroughly. Flood surface lightly to reveal local low points ("birdbaths") and similar imperfections. Mark low points and dry and prepare surface to receive additional mortar in accordance with manufacturer's directions. Apply additional mortar materials as required to level surface.

E. Coating Application: Apply coating material with a rubber squeegee. Immediately after application, use a short-nap roller to remove squeegee lines and smooth out the coat. Apply in 4- to 6-mil thick layers and allow to thoroughly dry before subsequent applications.

1. Apply material to a total built-up thickness of not less than 12-mils.
2. Finish flooring surface with non-slip roughened texture.

### 3.3 CLEANING AND PROTECTION

A. Clean floors after installation in accordance with flooring manufacturer's written instructions. Do not polish floors.

**SPECIFICATION DIVISION 9**

NUMBER            SECTION DESCRIPTION

**DIVISION 09 FINISHES**

SECTION 096813 - TILE CARPETING

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**  
**SECTION 096813 - TILE CARPETING**

*SECTION WRITTEN FOR PROJECTS WITH SELECTED CARPET PRODUCTS /  
COMPETITIVELY BID INSTALLATION.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 035416 - Hydraulic Cement Underlayment
  - 2. Section 096500 - Resilient Flooring
  - 3. Section 096816 - Sheet Carpeting

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Modular carpet tile.
  - 2. Resilient base.
- B. Work Provided under this section but specified under other sections:
  - 1. Resilient wall base.
  - 2. Resilient transitions strips.

**1.3 SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
  - 2. Include installation recommendations for each type of substrate.
  - 3. For installation adhesive, documentation including printed statement of VOC content.

*INCLUDE BELOW FOR LEED PROJECTS. NOTE THAT REQUIREMENTS ARE  
BASED ON LEED 2009*

- B. LEED Submittals:
  - 1. Product Data for Credit EQ 4.3:
    - a. For carpet tile, documentation indicating compliance with testing and product requirements of CRI's "Green Label Plus" program.
    - b. For installation adhesive, documentation including printed statement of VOC content.
- C. Shop Drawings: Show the following:

1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
  2. Carpet tile type, color, and dye lot.
  3. Type of subfloor.
  4. Type of installation.
  5. Pattern of installation.
  6. Pattern type, location, and direction.
  7. Pile direction.
  8. Type, color, and location of insets and borders.
  9. Type, color, and location of edge, transition, and other accessory strips.
  10. Transition details to other flooring materials.
- D. Samples: For each of the following products and for each color and texture required.
1. Carpet Tile: Full-size Sample.
  2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch-long Samples.

**INCLUDE BELOW FOR ALL PROJECTS**

- E. Affidavits of Compliance to be included in final inspection manual: For each type of carpet, provide manufacturer's letter of certification showing compliance with requirements of 1997 NFPA 101 "Life Safety Code" Section 26-3.3 for Class A, B, or C as required by the Code. Letter shall include project number, project name, and building name.

**1.4 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:
1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
  2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

**COORDINATE WITH OCCUPANT PRIOR TO INCLUDING BELOW.**

**1.5 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd.

**1.6 QUALITY ASSURANCE**

- A. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.

1. Reference Standards:

*REFER TO MICHIGAN BUILDING CODE FOR FURTHER REQUIREMENTS CONCERNING CLASS, FLAME SPREAD AND SMOKE DEVELOPED RATINGS.*

- a. Carpet Flammability: Pass pill test, ASTM D 2859 (DOC FF-1-70).

*MODIFY TO CLASS II IF ALLOWABLE BY CODE AND REQUIRED BY CARPET SELECTION*

- b. Radiant Panel Test: Meet NFPA 253 Class I.

*EDIT AND INCLUDE IF REQUIRED BY PROJECT*

- c. Static Electricity: 3.0 KV max. at 70 deg. F and 20% RH, AATCC 134.

**1.7 FIELD CONDITIONS**

- A. Comply with CRI 104 for temperature, humidity, and ventilation limitations.

*DELETE BELOW FOR TYPICAL INTERIOR RENOVATION WORK.*

- B. Environmental Limitations: Do not deliver or install carpet tiles until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at occupancy levels during the remainder of the construction period.

*RETAIN BELOW FOR PROJECTS WITH NEW CONCRETE.*

- C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.

*RETAIN BELOW FOR PROJECTS WITH DEMOUNTABLE PARTITIONS.*

- D. Where demountable partitions or other items are indicated for installation on top of carpet tiles, install carpet tiles before installing these items.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

*EDIT AFTER CARPET IS SELECTED. MATERIALS AND CONSTRUCTION NOT INCLUDED. ASSUMES A SINGLE SELECTION IS MADE FOR EACH TYPE BASED ON MANUFACTURER AND PATTERN AND THAT ALTERNATIVE CARPETS ARE NOT BID.*

- A. Acceptable Manufacturers:
  - 1. Carpet type no. 1: [Manufacturer Name]
    - a. Style:
    - b. Color:

*INCLUDE MATERIALS, CONTRUCTIONS IF COMPEDITIVELY BIDDING MATERIALS AND INSTALLATION. NOT REUIQRED IF ONLY BIDDING INSTALLATION.*

## 2.2 INSTALLATION ACCESSORIES

*DELETE BELOW IF SECTION 035416 - HYDRAULIC CEMENT UNDERLAYMENT IS INCLUDED.*

- A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.

*BELOW IS TYPICAL. COORDINATE WITH INTERIOR DESIGN.*

- B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and is recommended by carpet tile manufacturer for releasable installation.

*RETAIN FOR ALL PROJECTS*

1. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

*RETAIN "METAL EDGE/TRANSITION STRIPS" PARAGRAPH BELOW UNLESS RESILIENT EDGE STRIPS FOR CARPET TILE ARE SPECIFIED IN SECTION 096513 "RESILIENT BASE AND ACCESSORIES." IF RETAINING, REVISE FINISH OR DESCRIPTION TO SUIT PROJECT AND SHOW WIDTH REQUIREMENTS ON DRAWINGS.*

- C. Metal Edge/Transition Strips: Extruded aluminum with mill finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.

## 2.3 WALL BASE

- A. Provide wall base for each area scheduled to receive carpet. Comply with the requirements for wall base specified in Division 9 Section "Resilient Flooring".

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, adhesive and floor coating removal, installation tolerances, and other conditions affecting carpet tile performance. Examine carpet tile for type, color, pattern, and potential defects.

*RETAIN "CONCRETE SUBFLOORS" PARAGRAPH BELOW IF PRODUCTS ARE ADHESIVELY ATTACHED TO CONCRETE SUBFLOORS.*

- B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:

*REVISE FIRST SUBPARAGRAPH BELOW TO INCLUDE SPECIFIC TESTS IF APPLICABLE TO PROJECT.*

1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet tile manufacturer.

*INCLUDE BELOW NEW SLABS*

2. Subfloor finishes comply with requirements specified in Section 033000 "Cast-in-Place Concrete" for slabs receiving carpet tile.
3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.

*COORDINATE REQUIREMENTS BELOW WITH ACCESS FLOORING.*

- C. Raised access flooring systems: Verify the following:

1. Access floor substrate is compatible with carpet tile and adhesive if any.
2. Underlayment surface is flat, smooth, evenly planed, tightly jointed, and free of irregularities, gaps greater than 1/8 inch, protrusions more than 1/32 inch, and substances that may interfere with adhesive bond or show through surface.

- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. General: Comply with CRI 104, Section 6.2, "Site Conditions; Floor Preparation," and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile installation.

*RETAIN OR REVISE FIRST PARAGRAPH BELOW TO SUIT PRODUCT AND PROJECT; DIMENSIONS ARE RECOMMENDED BY CRI.*

- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider and protrusions more than 1/32 inch unless more stringent requirements are required by manufacturer's written instructions.

*REQUIREMENT BELOW IS INTENDED TO LIMIT CLAIMS FOR EXTRAS. INCREASE OR DECREASE AREA PERCENT BASED ON YOUR JUDGMENT, OR DELETE ENTIRELY FOR NEW CONCRETE FLOORS.*

1. Patching is required for approximately [not less than] 20 percent of the gross floor area of the Project.

*INCLUDE BELOW FOR LARGE AREAS OF PATCHING OR LEVELING. COORDINATE WITH "HYDRAULIC CEMENT UNDERLAYMENT" SECTION.*

2. Floor patching and leveling is included in Division 03 Section "Hydraulic Cement Underlayment."

**RETAIN BELOW FOR NEW CONCRETE SURFACES**

- C. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet tile manufacturer.

**RETAIN BELOW FOR EXISTING CONCRETE SURFACES**

- D. Remove existing adhesives per Division 02 Section "Selective Demolition." Remove other coatings as recommended in writing by carpet tile manufacturer.
- E. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

**3.3 INSTALLATION**

- A. General: Comply with CRI 104, Section 14, "Carpet Modules," and with carpet tile manufacturer's written installation instructions.

**SELECT ITEM B OR C BELOW.**

- B. Installation Method: As recommended in writing by carpet tile manufacturer.

**COORDINATE SPECIFIC "INSTALLATION METHOD" REQUIREMENTS WITH INTERIOR DESIGN AND EDIT BELOW. NOTE THE FOLLOWING GENERAL GUIDELINES**

**FULL-SPREAD, GLUE-DOWN INSTALLATION IS APPROPRIATE FOR WHEEL TRAFFIC.**

**PARTIAL GLUE-DOWN INSTALLATION IS APPROPRIATE FOR CARPET TILES OF MODERATE DIMENSIONAL STABILITY, WEIGHT, AND MASS.**

**FREE-LAY INSTALLATION IS APPROPRIATE FOR DIMENSIONALLY STABLE CARPET TILES WITH HEAVY BACKINGS. REVISE SECOND OPTION BELOW IF SPOT-GLUED INSTALLATION IS RECOMMENDED BY MANUFACTURER AND SUITS PRODUCT AND PROJECT.**

- C. Installation Method: [Glue down; install every tile with full-spread, releasable, pressure-sensitive adhesive] [Partial glue down; install periodic tiles with releasable, pressure-sensitive adhesive] [Free lay; install carpet tiles without adhesive].
- D. Maintain dye lot integrity. Do not mix dye lots in same area.
- E. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.
- F. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.

H. Pattern:

1. General: Install pattern parallel to walls and borders.

*SELECT OPTION FROM BELOW OR CONSIDERING SHOWING ON DRAWING FOR COMPLICATED PATTERNS OR MULTIPLE CARPETS WITH DIFFERENT REQUIREMENTS.*

2. Monolithic.
3. Quarter-turn.
4. Ashlar.

*DELETE BELOW IF NO RAISED ACCESS FLOORING SYSTEMS. ADHESIVE IN SEAMS MAY IMPEDE PANEL REMOVAL AND REPLACEMENT.*

I. Stagger joints of carpet tiles so carpet tile grid is offset from access flooring panel grid. Do not fill seams of access flooring panels with carpet adhesive; keep seams free of adhesive.

*DELETE ARTICLE BELOW IF NO WALL BASE INCLUDED OR IF SPECIFIED IN OTHER SECTION.*

#### **3.4 WALL BASE INSTALLATION**

A. Apply wall base in lengths as long as practicable to walls, columns, and all permanent fixtures and where indicated. Mitered outside corners not acceptable. Apply base to fixed laboratory cabinetry as follows:

1. Base cabinet toe spaces.
2. Exposed sides of base cabinets.
3. Filler and closure panels extending to floor.

#### **3.5 CLEANING AND PROTECTION**

A. Perform the following operations immediately after installing carpet tile:

1. Remove excess adhesive and other surface blemishes using cleaner recommended by carpet tile manufacturer.
2. Remove yarns that protrude from carpet tile surface.
3. Vacuum carpet tile using commercial machine with face-beater element.

B. Protect installed carpet to comply with CRI 104, Section 16, "Protecting Indoor Installations."

C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

**END OF SECTION 096813**

BuildingName  
The Description of the Project  
P00000000 0000

**SPECIFICATION DIVISION 9**

NUMBER            SECTION DESCRIPTION

**DIVISION 09 FINISHES**

SECTION 096816 - SHEET CARPETING

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**  
**SECTION 096816 - SHEET CARPETING**

*SECTION WRITTEN FOR PROJECTS WITH SELECTED CARPET PRODUCTS /  
COMPETTIVELY BID INSTALLATION.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 035416 - Hydraulic Cement Underlayment
  - 2. Section 096500 - Resilient Flooring
  - 3. Section 096813 - Tile Carpeting

**1.2 SUMMARY**

*MODIFY TO SUIT PRODUCT SELECTIONS.*

- A. Section Includes:
  - 1. Tufted carpet.
  - 2. Woven carpet.
  - 3. Carpet cushion.
- B. Work Provided under this section but specified under other Sections:
  - 1. Resilient wall base.
  - 2. Resilient transition strips.

**1.3 SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
  - 2. Include installation recommendations for each type of substrate.
  - 3. For installation adhesive, documentation including printed statement of VOC content.

*INCLUDE BELOW FOR LEED PROJECTS. NOTE THAT REQUIREMENTS ARE  
BASED ON LEED 2009*

- B. LEED Submittals:
  - 1. Product Data for Credit EQ 4.3:
    - a. For carpet, documentation indicating compliance with testing and product requirements of CRI's "Green Label Plus" program.

b. For installation adhesive, documentation including printed statement of VOC content.

C. Shop Drawings: Show the following:

1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet.
2. Carpet type, color, and dye lot.
3. Layout and seaming diagrams.
4. Type of subfloor.
5. Type of installation.
6. Pattern of installation.
7. Pattern type, location, and direction.
8. Pile direction.
9. Type, color, and location of insets and borders.
10. Type, color, and location of edge, transition, and other accessory strips.
11. Transition details to other flooring materials.

D. Samples: For each of the following products and for each color and texture required.

1. Submit 18 inch by 27 inch samples of each type, color, pattern and texture of carpet.
2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch long samples.

**INCLUDE BELOW FOR ALL PROJECTS.**

E. Affidavits of Compliance to be included in final inspection manual: For each type of carpet, provide manufacturer's letter of certification showing compliance with requirements of 1997 NFPA 101 "Life Safety Code" Section 26-3.3 for Class A, B, or C as required by the Code. Letter shall include project number, project name, and building name.

**1.4 CLOSEOUT SUBMITTALS**

A. Maintenance Data: For each type of carpet to include in maintenance manuals. Include the following:

1. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
2. Precautions for cleaning materials and methods that could be detrimental to carpet.

**COORDINATE WITH OCCUPANT PRIOR TO INCLUDING BELOW.**

**1.5 MAINTENANCE MATERIAL SUBMITTALS**

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Carpet: Full-width rolls equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd.

**1.6 QUALITY ASSURANCE**

A. Reference Standards: Products in this Section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.

1. Reference Standards:

*REFER TO MICHIGAN BUILDING CODE FOR FURTHER REQUIREMENTS CONCERNING CLASS, FLAME SPREAD AND SMOKE DEVELOPED RATINGS.*

a. Carpet Flammability: Pass pill test, ASTM D 2859 (DOC FF-1-70).

*MODIFY TO CLASS II IF ALLOWABLE BY CODE AND REQUIRED BY CARPET SELECTION*

2. Radiant Panel Test: Meet NFPA Class I.

*EDIT AND INCLUDE IF REQUIRED BY PROJECT*

3. Static Electricity: 3.0 KV max. at 70 deg. F and 20% RH, AATCC 134.

**1.7 FIELD CONDITIONS**

A. Comply with CRI 104 for temperature, humidity, and ventilation limitations.

*DELETE BELOW FOR TYPICAL INTERIOR RENOVATION WORK.*

B. Environmental Limitations: Do not deliver or install carpet until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at occupancy levels during the remainder of the construction period.

*RETAIN BELOW FOR PROJECTS WITH NEW CONCRETE.*

C. Do not install carpet over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive, and concrete slabs have pH range recommended by carpet manufacturer.

*RETAIN BELOW FOR PROJECTS WITH DEMOUNTABLE PARTITIONS.*

D. Where demountable partitions or other items are indicated for installation on top of carpet, install carpet before installing these items.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

*EDIT AFTER CARPET IS SELECTED. MATERIALS AND CONSTRUCTION NOT INCLUDED. ASSUMES A SINGLE SELECTION IS MADE FOR EACH TYPE OF CARPET BASED ON MANUFACTURER AND PATTERN AND THAT ALTERNATIVE CARPETS ARE NOT BID.*

A. Acceptable Manufacturers:

1. Carpet type no. 1: [Manufacturer Name]

- a. Style:
- b. Color:

**2.2 INSTALLATION ACCESSORIES**

*DELETE BELOW IF SECTION 035416 - HYDRAULIC CEMENT UNDERLAYMENT IS INCLUDED.*

- A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet manufacturer.

*BELOW IS TYPICAL. COORDINATE WITH INTERIOR DESIGN.*

- B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet and is recommended by carpet manufacturer for installation.

*RETAIN FOR ALL PROJECTS*

- 1. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

*RETAIN "METAL EDGE/TRANSITION STRIPS" PARAGRAPH BELOW UNLESS RESILIENT EDGE STRIPS FOR CARPET ARE SPECIFIED IN SECTION 096513 "RESILIENT BASE AND ACCESSORIES." IF RETAINING, REVISE FINISH OR DESCRIPTION TO SUIT PROJECT AND SHOW WIDTH REQUIREMENTS ON DRAWINGS.*

- C. Metal Edge/Transition Strips: Extruded aluminum with mill finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.
- D. Seam Adhesive: Hot-melt adhesive tape or similar product recommended by carpet manufacturer for sealing and taping seams and butting cut edges at backing to form secure seams and to prevent pile loss at seams.

**2.3 WALL BASE**

- A. Provide wall base for each area scheduled to receive carpet. Comply with the requirements for wall base specified in Division 9 Section "Resilient Flooring".

**PART 3 - EXECUTION**

**3.1 EXAMINATION**

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, adhesive and floor coating removal, installation tolerances, and other conditions affecting carpet performance. Examine carpet for type, color, pattern, and potential defects.

*RETAIN "CONCRETE SUBFLOORS" PARAGRAPH BELOW IF PRODUCTS ARE ADHESIVELY ATTACHED TO CONCRETE SUBFLOORS.*

- B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:

*REVISE FIRST SUBPARAGRAPH BELOW TO INCLUDE SPECIFIC TESTS IF APPLICABLE TO PROJECT.*

1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet manufacturer.

*INCLUDE BELOW FOR NEW SLABS*

2. Subfloor finishes comply with requirements specified in Section 033000 "Cast-in-Place Concrete" for slabs receiving carpet.
3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.

- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. General: Comply with CRI 104, Section 7.3, "Site Conditions; Floor Preparation," and with carpet manufacturer's written installation instructions for preparing substrates.

*RETAIN OR REVISE FIRST PARAGRAPH BELOW TO SUIT PRODUCT AND PROJECT; DIMENSIONS ARE RECOMMENDED BY CRI.*

- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider and protrusions more than 1/32 inch unless more stringent requirements are required by manufacturer's written instructions.

*REQUIREMENT BELOW IS INTENDED TO LIMIT CLAIMS FOR EXTRAS. INCREASE OR DECREASE AREA PERCENT BASED ON YOUR JUDGMENT, OR DELETE ENTIRELY FOR NEW CONCRETE FLOORS.*

1. Patching is required for approximately [not less than] 20 percent of the gross floor area of the Project.

*INCLUDE BELOW FOR LARGE AREAS OF PATCHING OR LEVELING. COORDINATE WITH "HYDRAULIC CEMENT UNDERLAYMENT" SECTION.*

2. Floor patching and leveling is included in Division 03 Section "Hydraulic Cement Underlayment."

*RETAIN BELOW FOR NEW CONCRETE SURFACES*

- C. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet manufacturer.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID

096816 - 5

**RETAIN BELOW FOR EXISTING CONCRETE SURFACES**

- D. Remove existing adhesives per Division 02 Section "Selective Demolition." Remove other coatings as recommended in writing by carpet manufacturer.
- E. Broom and vacuum clean substrates to be covered immediately before installing carpet.

**3.3 CARPET INSTALLATION**

- A. General: Comply with CRI 104 and with carpet manufacturer's written installation instructions for the following:

**COORDINATE SPECIFIC "INSTALLATION METHOD" REQUIREMENTS WITH INTERIOR DESIGN AND EDIT BELOW. BELOW ARE COMMONLY USED EXAMPLES. OTHER EXAMPLES ARE LISTED IN AIA MASTERSPEC 096816.**

- 1. Direct-Glue-Down Installation: Comply with CRI 104, Section 9, "Direct Glue-Down Installation."
  - 2. Stair Installation: Comply with CRI 104, Section 13, "Carpet on Stairs" for [~~stretch-in~~] [~~glue-down~~] installation.
- B. Comply with carpet manufacturer's written recommendations and Shop Drawings for seam locations and direction of carpet; maintain uniformity of carpet direction and lay of pile. At doorways, center seams under the door in closed position.
  - C. Pre-plan installation for proper sequencing with other work.
  - D. Do not bridge building expansion joints with carpet.
  - E. Cut and fit carpet to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet manufacturer.
  - F. Extend carpet into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
  - G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.

**RETAIN FIRST PARAGRAPH BELOW IF CARPET HAS A PATTERN OR MODIFY TO SUIT PROJECT.**

- H. Install pattern parallel to walls and borders to comply with CRI 104, Section 15, "Patterned Carpet Installations" and with carpet manufacturer's written recommendations.
- I. Save carpet scraps, defined as mill ends less than 9 feet long and pieces larger than 3 sq. ft. in area and wider than 8 inches, and deliver to Owner's storage space as directed. Dispose of smaller pieces.

**DELETE ARTICLE BELOW IF NO WALL BASE INCLUDED OR IF SPECIFIED IN ANOTHER SECTION.**

**3.4 WALL BASE INSTALLATION**

- A. Apply wall base in lengths as long as practicable to walls, columns, and all permanent fixtures and where indicated. Mitered outside corners not acceptable. Apply base to fixed laboratory cabinetry as follows:
  - 1. Base cabinet toe spaces.
  - 2. Exposed sides of base cabinets.
  - 3. Filler and closure panels extending to floor.

**3.5 CLEANING AND PROTECTING**

- A. Perform the following operations immediately after installing carpet:
  - 1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet manufacturer.
  - 2. Remove yarns that protrude from carpet surface.
  - 3. Vacuum carpet using commercial machine with face-beater element.
- B. Protect installed carpet to comply with CRI 104, Section 16, "Protecting Indoor Installations."
- C. Protect carpet against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet manufacturer and carpet adhesive manufacturer.

SECTION 098433 - SOUND ABSORBING WALL UNITS

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**

**SECTION 098433 - SOUND ABSORBING WALL UNITS**

*JUNE 2005 - UPDATED TO CHANGE TO 1997 NFPA "LIFE SAFETY CODE".*

*THIS SECTION SPECIFIES STANDARD WALL MOUNTED ACOUSTIC TILE AND AUDIOCUSTIC "SONEX" UNITS.*

*OTHER OPTIONS ARE AVAILABLE. CONSULT MANUFACTURER'S LITERATURE*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of acoustic wall panels is indicated on Drawings.

**1.2 SUBMITTALS**

- A. Product Data: Submit mfr's product literature, color samples and installation instructions.

*INCLUDE BELOW FOR ALL PROJECTS.*

- B. Affidavits of Compliance to be included in final inspection manual: For each type of acoustical panel and tile, provide manufacturer's letter of certification showing compliance with requirements of 1997 NFPA 101 "Life Safety Code" Section 26-3.3 for Class A, B, or C as required by the Code. Letter shall include project number, project name, and building name.

**PART 2 - PRODUCTS**

**2.1 ACOUSTIC BAFFLE PANELS**

- A. Open cell polyester urethane, wall mounted acoustical panels.
  - 1. Manufacturer: "Sonex Co."
    - a. Model: "Sonex Classic".
    - b. Size: 24 inches by 48 inches by 2 inches thick.

**2.2 ACOUSTIC TILE**

- A. Acoustic tile, water felted units.
  - 1. Manufacturer: "Armstrong World Industries"
    - a. Model: "Optima" textured scrim wall panels.
    - b. Size: 48 inches by 96 inches by 1 inch thick.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Installation: Comply with mfr's recommended procedures for indicated application. Use mfr's recommended adhesives for each substrate.

*JULY 2011 - UPDATED TO ADD LOW VOC PRODUCTS TO INTERIOR PAINT SCHEDULE AND TO REMOVE MOST NON-COMPLIANT VOC PRODUCTS AS OPTIONS FOR INTERIOR PAINTS. REFER TO DESIGN GUIDELINE 099110 FOR INFORMATION ON PERMISSIBLE EXCEPTIONS TO LOW VOC PRODUCTS.*

*SECTION ALSO REFORMATTED TO MEET CURRENT UM STANDARDS.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including Standard General Conditions, Supplemental General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, apply to this Section.
- B. Related Sections:

*LIST BELOW CONTAINS ITEMS THAT ARE USUALLY SHOP PRIMED AND MATERIALS THAT MIGHT BE SPECIFIED IN THIS SECTION. REVISE TO SUIT THE PROJECT. VERIFY THAT SECTION TITLES LISTED BELOW ARE CORRECT FOR THIS PROJECT'S SPECIFICATIONS. IF ROOM FINISH SCHEDULE IS TO BE INCLUDED AS A SEPARATE SPECIFICATION SECTION ADD THAT SECTION TO THE LIST BELOW. INCLUDE SECTION BELOW FOR ALL TYPES OF EPOXY PAINT.*

- 1. Division 01 Section "Work Restrictions" for special protections for epoxy painting work.
- 2. Division 05 "Structural Steel Framing" for shop priming structural steel.
- 3. Division 05 Section "Metal Fabrications" for shop priming ferrous metal.
- 4. Division 06 Section "Interior Architectural Woodwork" for shop finishing interior architectural woodwork.
- 5. Division 08 "Hollow Metal Doors and Frames" for shop priming steel doors and frames.
- 6. Division 08 Section "Flush Wood Doors" for pre-finished wood doors.
- 7. Division 09 Section "Gypsum Board Assemblies" for surface preparation for gypsum board.
- 8. Division 09 Section "Electrostatically Applied Coating" for electrically charged, spray-applied coatings.
- 9. Divisions 21, 22 and 23: Mechanical.
- 10. Division 26: Electrical.
- 11. Division 27: Communications.
- 12. Division 28: Electronic Safety and Security.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Surface preparation and field painting of the following:

*ADJUST LIST BELOW TO SUIT THE PROJECT.*

- a. Exposed exterior items and surfaces.
- b. Exposed interior items and surfaces.
- c. Surface preparation, priming, and finish coats specified in this Section are in addition to shop priming and surface treatment specified in other Sections.

### 1.3 DEFINITIONS

*STANDARD TERMS USED BY THE COATINGS INDUSTRY ARE DEFINED IN ASTM D 16.*

- A. General: Standard coating terms defined in ASTM D 16 apply to this Section.

*DELETE GLOSS RANGES BELOW NOT REQUIRED FOR THE PROJECT. STANDARD GLOSS RANGES WERE DEVELOPED BY THE NATIONAL PAINT AND COATINGS ASSOCIATION (NPCA).*

1. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85-degree meter.
  2. Eggshell refers to low-sheen finish with a gloss range between 5 and 20 when measured at a 60-degree meter.
  3. Satin refers to low-sheen finish with a gloss range between 15 and 35 when measured at a 60-degree meter.
  4. Semigloss refers to medium-sheen finish with a gloss range between 30 and 65 when measured at a 60-degree meter.
  5. Full gloss refers to high-sheen finish with a gloss range more than 65 when measured at a 60-degree meter.
- B. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, covers for finned-tube radiation, grilles, and similar components are in place. Extend coatings in these areas, as required, to maintain the system integrity and provide desired protection.

### 1.4 SUBMITTALS

*EXPAND PARA AND SUBPARAS BELOW TO SUIT THE PROJECT AND PRODUCTS REQUIRED.*

- A. Product Data: For each paint system specified. Include block fillers and primers.
1. Material List: Provide an inclusive list of required coating materials. Indicate each material and cross-reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
  2. Manufacturer's Information: Provide manufacturer's technical information, including label analysis, statement of VOC content and instructions for handling, storing, and applying each coating material proposed for use.

*RETAIN PARAGRAPH BELOW FOR LEED PROJECTS.*

- B. LEED Submittals:
1. Product Data for Credit EQ 4.2: For paints and coatings, including printed statement of VOC content.

**REVISE PARA BELOW IF COLORS ARE PRESELECTED AND SPECIFIED OR SCHEDULED.**

- C. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available for each type of finish-coat material indicated.

**RETAIN BELOW WITH OR WITHOUT ABOVE.**

- D. Samples for Verification: Of each color and material to be applied, with texture to simulate actual conditions.

**1.5 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials, **from the same product run**, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

**REVISE BELOW TO SUIT PROJECT.**

- 1. Paint: **5** percent, but not less than **1 gallon** of each material and color applied.

**1.6 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  - 1. ASTM D16 Standard Terminology for Paint, Related Coatings, Materials, and Applications.
- C. Source Limitations: Obtain block fillers, primers, and undercoat materials for each coating system from the same manufacturer as the finish coats.

**1.7 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver materials to the Project Site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label.
- B. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 deg F. Maintain containers used in storage in a clean condition, free of foreign materials and residue.
  - 1. Protect from freezing. Keep storage area neat and orderly. Remove oily rags and waste daily. Take necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling, mixing, and application.

*ADD SPECIAL REQUIREMENTS FOR FIRE PROTECTION, HEATING, VENTILATION, AND OTHER SPECIAL CONDITIONS FOR STORAGE AREAS ON-SITE, IF NECESSARY.*

**1.8 SITE CONDITIONS**

*REVISE 2 PARAS BELOW TO SUIT THE PROJECT REQUIREMENTS AND MATERIALS TO BE USED.*

- A. Apply water-based paints only when the temperature of surfaces to be painted and surrounding air temperatures are between 50 and 90 deg F.
- B. Apply solvent-thinned paints only when the temperature of surfaces to be painted and surrounding air temperatures are between 45 and 95 deg F.

*DELETE BELOW IF NO EXTERIOR PAINTING WORK INCLUDED.*

- C. Do not apply paint in snow, rain, fog, or mist; or when the relative humidity exceeds 85 percent; or at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.
  - 1. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

*REVISE WARRANTY PER PROJECT. LONGER WARRANTY PERIOD MAY BE APPROPRIATE FOR CERTAIN TYPES OF WORK. INCLUDE THIS ARTICLE IN EVERY SPECIFICATION SECTION.*

**1.9 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Products: Subject to compliance with requirements, provide one of the products in the paint schedules.
- B. Manufacturers:
  - 1. Benjamin Moore & Co.
  - 2. ICI Paints (Devoe Coatings and Dulux Paints).
  - 3. International Protective Coatings.
  - 4. O'Leary Paint Co.
  - 5. PPG Industries, Inc.
  - 6. Pratt & Lambert Paints.
  - 7. Sherwin-Williams Co.
  - 8. Tnemec.

**2.2 PAINT MATERIALS, GENERAL**

*ALWAYS RETAIN PARA BELOW. SYSTEMS COULD FAIL IF COATINGS ARE INCOMPATIBLE.*

A. Material Compatibility:

1. Provide materials for use that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.

*RETAIN VALUES BELOW UNLESS AREA BEING PAINTED MEETS EXCEPTIONS LISTED IN DESIGN GUIDELINE 099110. VALUES LISTED COMPLY WITH LEED-NC, LEED-CI, OR LEED-CS CREDIT EQ 4.2 (AS OF 7/2011); COORDINATE WITH PRODUCTS.*

B. VOC Content for Interior Paints: For interior paints and coatings applied at Project site, the following VOC limits, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24)].

1. Flat Paints and Coatings: 50 g/L.
2. Nonflat Paints and Coatings: 150 g/L.
3. Dry-Fog Coatings: 400 g/L.
4. Primers, Sealers, and Undercoaters: 200 g/L.
5. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
6. Zinc-Rich Industrial Maintenance Primers: 340 g/L.
7. Pretreatment Wash Primers: 420 g/L.
8. Floor Coatings: 100 g/L.
9. Shellacs, Clear: 730 g/L.
10. Shellacs, Pigmented: 550 g/L.

C. Material Quality: Provide manufacturer's best-quality paint material of the various coating types specified. Paint-material containers not displaying manufacturer's product identification will not be acceptable.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

A. Examine substrates, areas, and conditions, with the Applicator present, under which painting will be performed for compliance with paint application requirements.

1. Do not begin to apply paint until unsatisfactory conditions have been corrected and surfaces receiving paint are thoroughly dry.
2. Start of painting will be construed as the Applicator's acceptance of surfaces and conditions within a particular area.

*IF EPOXY PAINTING WORK IS PART OF THE PROJECT INCLUDE THE FOLLOWING PARAGRAPH.*

B. Provide seven days' notice to the Owner's Representative prior to the application of epoxy paints.

*COORDINATE PRIMERS SPECIFIED IN OTHER SECTIONS WITH UNDERCOATS AND FINISH MATERIALS SPECIFIED IN THIS SECTION TO ENSURE COMPATIBILITY OF MATERIALS. SOME FINISH-COAT MATERIALS, SUCH AS LACQUERS AND EPOXIES, LIFT OIL AND OLEORESINOUS AIR-DRY PRIMERS. A LONG-OIL FINISH COAT MAY CRAWL AND HAVE POOR ADHESION WHEN USED OVER ZINC-DUST PHENOLIC OR BAKED PRIMERS.*

- C. Coordination of Work: Review other Sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.
1. Notify the Architect about anticipated problems using the materials specified over substrates primed by others.

*EXPAND PARA AND SUBPARA BELOW IF ADDITIONAL REQUIREMENTS ARE NECESSARY TO SATISFY UNUSUAL PROJECT CIRCUMSTANCES.*

- D. General: Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of the size or weight of the item, provide surface-applied protection before surface preparation and painting.
1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.

*USUALLY DELETE BELOW AND NOTE PATCHING WORK ON THE DRAWING. IF BELOW IS RETAINED, USE ONLY FOR EXISTING SURFACES WHEN PLASTER/DRYWALL TRADES ARE NOT ENGAGED ON THE PROJECT. THE INTENT OF THE REQUIREMENT BELOW IS TO REPAIR A FEW ANCHOR HOLES, DIMPLES AND SIMILAR PROBLEMS. DO NOT EXPECT PAINTERS TO BE RESPONSIBLE FOR LARGE AREA REPAIR, DRYWALL BOARD INSTALLATION, OR TAPING.*

- E. Repair Of Existing Plaster And Drywall Surfaces: Spackle and sand smooth minor surface imperfections in existing drywall and plaster surfaces. Repair is limited to imperfections of not more than 2 sq. inches in area and 3/8 inch in depth.
- F. Cleaning, General: Before applying paint or other surface treatments, clean the substrates of substances that could impair the bond of the various coatings. Remove oil and grease before cleaning.
1. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

*DELETE BELOW IF EXISTING PAINT WILL NOT BE COVERED BY NEW PAINT.*

2. Clean previously painted surfaces to remove dirt, masking tape, labels, adhesives, and other materials that would either be deleterious to adhesion of, or show through, new paint.

*ALWAYS RETAIN PARA AND SUBPARAS BELOW THAT SPECIFY SURFACE PREPARATION. PROPER SURFACE PREPARATION IS ESSENTIAL FOR*

*SATISFACTORY COATING PERFORMANCE. EXPAND REQUIREMENTS, IF NECESSARY, TO INCLUDE SPECIAL PROCEDURES REQUESTED BY MFRS OR TO SATISFY SPECIAL PROJECT CONDITIONS.*

- G. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition and as specified.

*COORDINATION OF SHOP-APPLIED PRIMERS WITH FINISH COATS IS CRITICAL. SEE THE "COORDINATION OF WORK" PARA IN THE "EXAMINATION" ARTICLE. IF COMPATIBILITY PROBLEMS DEVELOP, IT MAY BE NECESSARY TO PROVIDE BARRIER COATS OVER SHOP-APPLIED PRIMERS OR REMOVE THE PRIMER AND REPRIME THE SUBSTRATE.*

1. Provide barrier coats over incompatible primers or remove and reprime.
2. For coatings applied over previously painted surfaces, test application to check for lifting and other adhesion problems. Perform test in an isolated area where practicable.

*DELETE SUBPARAS BELOW IF CEMENTITIOUS SURFACES ARE NOT TO BE PAINTED, OR REVISE TO SUIT THE PROJECT.*

3. Cementitious Materials: Prepare concrete, concrete masonry block, cement plaster, and mineral-fiber-reinforced cement panel surfaces to be painted. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
  - a. Use abrasive blast-cleaning methods if recommended by paint manufacturer.
  - b. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not paint surfaces where moisture content exceeds that permitted in manufacturer's written instructions.

*DELETE SUBPARA BELOW IF PROCEDURE IS NOT REQUIRED.*

- c. Clean concrete floors to be painted with a 5 percent solution of muriatic acid or other etching cleaner. Flush the floor with clean water to remove acid, neutralize with ammonia, rinse, allow to dry, and vacuum before painting.

*DELETE SUBPARAS BELOW IF WOOD SURFACES ARE NOT TO BE PAINTED, OR REVISE TO SUIT THE PROJECT.*

4. Wood: Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sand smooth and dust off surfaces exposed to view.
  - a. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer before applying primer. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.

**DELETE SUBPARAS BELOW IF THESE REQUIREMENTS ARE SPECIFIED IN OTHER SECTIONS.**

- b. Prime, stain, or seal wood to be painted immediately on delivery. Prime edges, ends, faces, undersides, and backsides of wood, including cabinets, counters, cases, and paneling.
- c. When transparent finish is required, backprime with finish product.
- d. Backprime paneling on interior partitions where masonry, plaster, or other wet wall construction occurs on backside.
- e. Seal tops, bottoms, and cutouts of unprimed wood doors with a heavy coat of varnish or sealer immediately on delivery.

**REVISE SUBPARAS BELOW TO SUIT THE PROJECT.**

- 5. Ferrous Metals: Clean ungalvanized ferrous-metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with the Steel Structures Painting Council's (SSPC) recommendations.

**DELETE SUBPARA BELOW IF TREATMENT IS NOT REQUIRED.**

- a. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.

**DELETE SUBPARA BELOW IF TOUCHUP PAINTING OF SHOP-APPLIED PRIMERS WILL BE DONE BY THE MATERIAL ERECTOR OR INSTALLER.**

- b. Touch up bare areas and shop-applied prime coats that have been damaged. Wire-brush, clean with solvents recommended by paint manufacturer, and touch up with the same primer as the shop coat.
- 6. Galvanized Surfaces: Clean galvanized surfaces with nonpetroleum-based solvents so surface is free of oil and surface contaminants. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.
- H. Materials Preparation: Mix and prepare paint materials according to manufacturer's written instructions.
- 1. Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
  - 2. Stir material before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
  - 3. Use only thinners approved by paint manufacturer and only within recommended limits.

**THE FOLLOWING PARA CAN STAND ALONE FOR NEW CONSTRUCTION, BUT NEEDS EXPANSION FOR RENOVATION WORK. INCLUDE APPROPRIATE SUBPARAGRAPHS BELOW FOR REVOVATION.**

3.2 APPLICATION, GENERAL

*THE FOLLOWING PARA CAN STAND ALONE FOR NEW CONSTRUCTION, BUT NEEDS EXPANSION FOR RENOVATION WORK. INCLUDE APPROPRIATE SUBPARAS BELOW FOR RENOVATION.*

- A. Paint exposed surfaces of all new work, except where the paint schedules or provisions of this Section indicate that a surface or material is not to be painted or is to remain natural. If the schedules do not indicate color or finish, the Architect will select from standard colors and finishes available.

1. Walls: Where walls are scheduled, include the following surfaces in addition, unless otherwise indicated:

*EDIT THE LIST BELOW TO SUIT THE PROJECT. REMINDER: SCHEDULE WALLS OF NEW MECHANICAL ROOMS AND ELEVATOR SHAFTS FOR PAINTING (ON DRAWING).*

- a. Surfaces of wall mounted items previously painted in existing construction.
- b. Exposed portions of pipes, ducts, conduit, outlet and junction boxes and convector covers (regardless of factory finish).
- c. Columns, both engaged and free-standing within the scheduled area.
- d. Access panels.
- e. Doors and door frames.

*DELETE FASCIA/SOFFIT BELOW IF INCLUDED WITH CEILING PAINT.*

- f. Gypsum fascia and soffits.
- g. Woodwork and trim.
- h. Handrails, including brackets and escutcheons.

*DELETE BELOW IF NO CEILINGS SCHEDULED TO RECEIVE PAINT. NOTE: IF NEW CLGS ARE ACOUSTIC PANELS (NOT SCHEDULED TO BE PAINTED), AND SOFFITS ARE TO BE PAINTED, INCLUDE UNDER "WALLS" ABOVE OR PROVIDE SPECIAL NOTE BELOW.*

2. Ceilings: Where ceilings are scheduled, include the following in addition to ceilings, unless otherwise indicated:

*EDIT THE LIST BELOW TO SUIT THE PROJECT.*

- a. Surfaces of ceiling mounted items previously painted in existing construction.
- b. Access panels.
- c. Gypsum ceilings, soffits, fascia and trim.
- d. Exposed portions of structural slabs.
- e. Exposed interior steel and iron work.
- f. Exposed portions of pipes, ducts, conduit, junction boxes.

*USUALLY RETAIN BELOW.*

3. Where floors are scheduled, include the following in addition to floors, unless otherwise indicated:

*EDIT LIST BELOW TO SUIT PROJECT.*

- Base band 4-inches above finished floor.

- a. Base band 6-inches above finished floor.

**DELETE BELOW IF NO STAIRS.**

- 4. Where stairwell walls are scheduled, include the following in addition to walls, unless otherwise indicated:
  - a. Exposed portions of stringers, risers, support brackets, tread and landing pan edges.
  - b. Underside of stairs, including tread and landing pans.
  - c. Handrails, guards and infill panels.
  - d. Exposed anchors and fasteners.

**PARAS BELOW ARE TYPICAL PAINTING REQUIREMENTS FOR MECHANICAL. REVISE IN CONSULTATION WITH MECHANICAL ENGINEER.**

- B. Mechanical Work: Painting of mechanical work is limited to the following:

**DELETE PARA BELOW IF NO EXTERIOR MECHANICAL ITEMS TO BE PAINTED.**

- 1. Exterior: Unless otherwise indicated, paint the following:

**LIST BELOW CONTAINS MECHANICAL ITEMS THAT MAY BE FIELD PAINTED. ADD OR DELETE ITEMS TO SUIT THE PROJECT.**

- a. Structural supports for mechanical equipment.
- b. Mechanical equipment (except pre-finished equipment).
- c. Piping (except insulated piping), pipe hangers, and supports.
- d. Ductwork.
- e. Accessory items.

**DELETE PARA BELOW IF NO INTERIOR MECHANICAL ITEMS TO BE PAINTED.**

- 2. Interior Occupied Areas and Stairways: Unless otherwise indicated, paint the following when exposed to view in finished construction:

**LIST BELOW CONTAINS MECHANICAL ITEMS THAT MAY BE FIELD PAINTED. ADD OR DELETE ITEMS TO SUIT THE PROJECT.**

- a. Structural supports for mechanical equipment.
- b. Mechanical equipment (except pre-finished equipment).
- c. Piping (except insulated piping), pipe hangers, and supports.
- d. Convactor covers.
- e. Ductwork.

**TYPICALLY DELETE BELOW. INSULATION IS RARELY PAINTED.**

- f. Insulation on pipe and ductwork.
- g. Accessory items.
- h. Fire suppression system piping.
- 3. Interior Service Areas (Equipment Rooms, Mechanical Rooms, and Utility Spaces): Unless otherwise indicated, paint the following items when exposed to view in finished construction:

**LIST BELOW CONTAINS MECHANICAL ITEMS THAT MAY BE FIELD PAINTED. ADD OR DELETE ITEMS TO SUIT THE PROJECT.**

- a. Structural supports for mechanical equipment.

- b. Mechanical equipment (except pre-finished equipment).
- c. Piping (except insulated piping), pipe hangers, and supports.
- d. Accessory items.
- e. Fire suppression system piping.

*RETAIN BELOW IF FIRE SUPPRESSION (SPRINKLERS) ARE INCLUDED IN THE PROJECT.*

- 4. Interior Spaces, Concealed Above Acoustic Ceilings: Unless otherwise indicated, paint the following:
  - a. Fire suppression piping, 3-inch diameter and larger.

*PARA BELOW IS AN EXAMPLE OF PAINTING REQUIREMENTS FOR ELECTRICAL. DELETE IF NO PAINTING OF ELECTRICAL WORK IS INCLUDED IN PROJECT, OR REVISE TO SUIT THE PROJECT.*

- C. Electrical Work: Painting of electrical work is limited to the following:

- 1. Exterior: Unless otherwise indicated, paint the following:

*REVISE THREE PARAGRAPHS BELOW AFTER CONSULTATION WITH ELECTRICAL ENGINEER. NOTE THAT INSTRUCTIONS FOR PAINTING JUNCTION BOXES FOR IDENTIFICATION PURPOSES ARE COVERED IN 16050.*

- a. Structural supports for electrical equipment, including unpainted cut ends of Unistrut.
- 2. Interior Occupied Areas: Unless otherwise indicated, paint the following when items exposed to view in finished construction:

*LIST BELOW CONTAINS ELECTRICAL ITEMS THAT ARE USUALLY FIELD PAINTED. ADD OTHER ITEMS TO SUIT THE PROJECT.*

- a. Structural supports for electrical equipment.
- 3. Interior Service Areas (Equipment Rooms, Stairs and Utility Spaces): Unless otherwise indicated, paint the following items exposed to when view in finished construction:

*LIST BELOW CONTAINS ELECTRICAL ITEMS THAT ARE USUALLY FIELD PAINTED. ADD OTHER ITEMS TO SUIT THE PROJECT.*

- a. Structural supports for electrical equipment.

### 3.3 APPLICATION

*REVISE THIS ARTICLE TO SUIT THE PROJECT. ADD SPECIAL RESTRICTIONS ON APPLICATION METHODS, IF REQUIRED.*

- A. General: Apply paint according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied.

- 1. Paint colors, surface treatments, and finishes are indicated in the schedules.
- 2. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film.
- 3. Provide finish coats that are compatible with primers used.

4. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, covers for finned-tube radiation, grilles, and similar components are in place. Extend coatings in these areas, as required, to maintain the system integrity and provide desired protection.
5. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before the final installation of equipment, paint surfaces behind permanently fixed equipment or furniture with prime coat only.

**BELOW IS OPTIONAL. CONSIDER DELETING.**

6. Paint interior surfaces of ducts with a flat, nonspecular black paint where visible through registers or grilles.
7. Paint back sides of access panels and removable or hinged covers to match exposed surfaces.
8. Finish exterior doors on tops, bottoms, and side edges the same as exterior faces.

**DELETE SUBPARA BELOW IF CASEWORK IS PREFINISHED.**

9. Finish interior of wall and base cabinets and similar field-finished casework to match exterior.
  10. Brackets and Standards: Paint standards before installation of brackets, and allow to dry thoroughly. Paint brackets before installation on standards.
  11. Sand lightly between each succeeding enamel or varnish coat.
- B. Scheduling Painting: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.

**INSERT RESTRICTIONS OR LIMITS ON USE OF SPRAY EQUIPMENT IF NECESSARY TO SUIT SPECIAL PROJECT CONDITIONS.**

1. The number of coats and the film thickness required are the same regardless of application method. Do not apply succeeding coats until the previous coat has cured as recommended by the manufacturer. If sanding is required to produce a smooth, even surface according to manufacturer's written instructions, sand between applications.
2. Omit primer on metal surfaces that have been shop primed and touchup painted.
3. If undercoats, stains, or other conditions show through final coat of paint, apply additional coats until paint film is of uniform finish, color, and appearance. Give special attention to ensure edges, corners, crevices, welds, and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.
4. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until paint has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and where application of another coat of paint does not cause the undercoat to lift or lose adhesion.

**REVISE PARA BELOW IF THE OWNER'S REQUIREMENTS OR OTHER SPECIAL PROJECT CONDITIONS RESTRICT OR LIMIT USE OF SPRAY EQUIPMENT FOR PAINT APPLICATION. SOME OWNERS PROHIBIT OR RESTRICT THE**

**USE OF SPRAY ON THEIR PROJECTS. SPRAY APPLICATION OF PAINTS CAN DAMAGE SENSITIVE ELECTRONIC OPERATING EQUIPMENT AND MIGHT CAUSE PROBLEMS FOR PERSONNEL IN OCCUPIED BUILDINGS.**

- C. Application Procedures: Apply paints and coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.
  - 1. Brushes: Use brushes best suited for the type of material applied. Use brush of appropriate size for the surface or item being painted.
  - 2. Rollers: Use rollers of carpet, velvet back, or high-pile sheep's wool as recommended by the manufacturer for the material and texture required.
  - 3. Spray Equipment: Use airless spray equipment with orifice size as recommended by the manufacturer for the material and texture required. Spray apply coating to the following items:
    - a. Shelf standards and brackets.
    - b. Laboratory bench reagent shelving supports and brackets.
- D. Minimum Coating Thickness: Apply paint materials no thinner than manufacturer's recommended spreading rate. Provide the total dry film thickness of the entire system as recommended by the manufacturer.
- E. Block Fillers: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.

**USUALLY DELETE BELOW - THIS IS INTENDED FOR ANIMAL ROOMS, BIO- HAZARD ROOMS, OR FOOD-PREPARATION AREAS WHERE PINHOLES IN CONCRETE BLOCK MUST BE ELIMINATED. INDICATE LOCATIONS ON DRAWINGS.**

- F. Block Filler for Special High-Build, Tile-Like Application: In indicated rooms and areas, apply block filler in accordance with manufacturer's written instructions, and the following special requirements:
  - 1. Below-Ceiling Application: Apply multiple coats of block filler, sufficient in number to fill all voids in concrete masonry walls, in preparation for specified topcoat applications resulting in a finished surface coating that is without voids and tile-like. Apply coating using airless spray followed by back-rolling to force material into voids. Remove excess material by squeegeeing the surface. Remove excess material from masonry joints with a paint brush.
- G. Prime Coats: Before applying finish coats, apply a prime coat of material, as recommended by the manufacturer, to material that is required to be painted or finished and that has not been prime coated by others. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to ensure a finish coat with no burn through or other defects due to insufficient sealing.

- H. Pigmented (Opaque) Finishes: Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections will not be acceptable.

**DELETE FINISHES BELOW IF NONE IS IN THE PROJECT. INDICATE LOCATIONS IN THE FINISH SCHEDULES.**

- I. Transparent (Clear) Finishes: Use multiple coats to produce a glass-smooth surface film of even luster. Provide a finish free of laps, runs, cloudiness, color irregularity, brush marks, orange peel, nail holes, or other surface imperfections.
  - 1. Provide satin finish for final coats.
- J. Stipple Enamel Finish: Roll and redistribute paint to an even and fine texture. Leave no evidence of rolling, such as laps, irregularity in texture, skid marks, or other surface imperfections.
- K. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.

#### **3.4 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section titled "Full Project Commissioning" or "Project Commissioning for Small Projects" and other requirements of the Contract Documents.

#### **3.5 ADJUSTING, CLEANING, PROTECTION**

- A. Cleanup: At the end of each workday, remove empty cans, rags, rubbish, and other discarded paint materials from the site.

**DELETE SUBPARA BELOW IF FINAL CLEANING IS NOT DONE BY THE PAINTER.**

- 1. After completing painting, clean glass and paint-spattered surfaces. Remove spattered paint by washing and scraping. Be careful not to scratch or damage adjacent finished surfaces.
  - 2. Dispose wash water from latex paint to the sanitary sewer. Excess latex paint shall be salvaged for reuse or solidified for disposal with other construction materials. Dry empty latex paint cans and dispose with other construction materials. Contact UM OSEH Hazardous Materials (734-763-4568) to arrange for disposal of alkyd paints and solvents.
- B. Protect work of other trades, whether being painted or not, against damage by painting. Correct damage by cleaning, repairing or replacing, and repainting, as approved by Architect.
  - C. Provide "Wet Paint" signs to protect newly painted finishes. Remove temporary protective wrappings provided by others to protect their work after completing painting operations.

1. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces. Comply with procedures specified in PDCA P1.

*USE THE SCHEDULES BELOW AS A GUIDE ONLY. SEE MANUFACTURER'S CATALOGS OR AIABAS SECTIONS 099113 "EXTERIOR PAINTING" AND 099123 "INTERIOR PAINTING" FOR ADDITIONAL INFORMATION AND SELECTIONS, INCLUDING ODOR-FREE AND "GREEN" COATINGS.*

### **3.6 INTERIOR PAINT SCHEDULE**

- A. Interior Paint Systems, General: Products of Benjamin Moore are listed below, unless otherwise indicated. Provide indicated products or, subject to compliance with requirements, equivalent products of other approved manufacturers. Apply coatings at manufacturer's recommended spreading rate to achieve indicated dry film thicknesses.
  1. Where "Industrial" coating is indicated, provide Moore's "Industrial and Maintenance Coatings" products; or equivalent of other, listed approved manufacturers.
  2. Where "Professional" coating is indicated, provide Moore's "Professional Coatings" products; or equivalent of other, listed approved manufacturers.

*ADD COLOR INFORMATION TO EACH PRODUCT IF SCHEDULED HERE.*

*RETAIN ONE OF THE FOLLOWING 3 OPTIONS*

- B. Colors: Match colors indicated in "Schedule" articles of this Section, and as follows:
- C. Colors: Match colors indicated in "Finish Schedule" on Drawings, and as follows:

*IF COLORS ARE INCLUDED IN A SEPARATE DIVISION 09 ROOM FINISH SCHEDULE SECTION USE OPTION BELOW.*

- D. Colors: Match colors indicated in Finish Schedule Section and as follow:.

*ALWAYS RETAIN BELOW*

1. Fire suppression system piping: High-gloss "OSHA" red.

*GENERALLY INCLUDE BELOW. NOTE THAT COLOR CODING OF PLUMBING PIPE IS NOT REQUIRED.*

2. Paint uninsulated piping, ductwork and conduit to match wall or ceiling color to which it is mounted.

- E. Concrete (non-wear surfaces): Provide indicated "Professional" or "Industrial" coating systems over interior concrete and brick masonry surfaces:

*BELOW IS A LOW-LUSTER (EGGSHELL OR SATIN), ACRYLIC-ENAMEL FINISH OVER INTERIOR CONCRETE AND OTHER CEMENTITIOUS SURFACES.*

1. Low-Luster, Acrylic Blended Latex Finish: Two finish coats over a primer.
  - a. Primer Coat: Acrylic; total dry thickness 7 mils.
    - 1) Insl-X AquaPruf Masonry Waterproofer XA12-01.

**BuildingName**

**The Description of the Project**

**P00000000 0000 Issued for: BID 099100 - - 15**

**SELECT PRIMER ABOVE OR ONE OF TWO LISTED BELOW. ABOVE FOR SEVERE MOISTURE CONDITIONS (WALLS ONLY); IT IS FROM A COMPANY OWNED BY BENJAMIN MOORE AND IS COMPATIBLE WITH BENJAMIN MOORE PRODUCTS.**

- b. Primer Coat: 100% acrylic, interior primer; total dry film thickness of not less than 0.95 mils.
  - 1) Super Spec Masonry Sealer N066.

**USE PRIMER ABOVE ON UNPAINTED CONCRETE. CONSIDER USE OF PRIMER BELOW ON PREVIOUSLY PAINTED SURFACES.**

- c. Primer: Latex-based, interior primer; total dry film thickness of not less than 1.2 mils.
  - 1) Super Spec Latex Enamel Undercoater & Primer Sealer 253.
- d. Finish Coats: Eggshell, acrylic-latex, interior enamel; total dry film thickness of not less than 2.6 mils.
  - 1) Super Spec Latex Eggshell Enamel 274.
  - 2) Color: SELECT.

**BELOW IS A SEMI-GLOSS, ACRYLIC-ENAMEL FINISH OVER INTERIOR CONCRETE AND OTHER CEMENTITIOUS SURFACES.**

- 2. Semi-Gloss, Vinyl Acrylic Latex Finish: Two finish coats over a primer.
  - a. Primer Coat: Acrylic; total dry thickness 7 mils.
    - 1) Insl-X AquaPruf Masonry Waterproofofer XA12-01.

**SELECT PRIMER ABOVE OR ONE OF TWO LISTED BELOW. ABOVE FOR SEVERE MOSITURE CONDITIONS; IT IS FROM A COMPANY OWNED BY BENJAMIN MOORE AND IS COMPATIBLE WITH BENJAMIN MOORE PRODUCTS.**

- b. Primer Coat: 100% acrylic, interior primer; total dry film thickness of not less than 0.95 mils.
  - 1) Super Spec Masonry Sealer N066.

**USE PRIMER ABOVE ON UNPAINTED CONCRETE. CONSIDER USE OF PRIMER BELOW ON PREVIOUSLY PAINTED SURFACES**

- c. Primer: Latex-based, interior primer; total dry film thickness of not less than 1.2 mils.
  - 1) Super Spec Latex Enamel Undercoater & Primer Sealer 253.
- d. Finish Coats: Semi-gloss, acrylic-latex, interior enamel; total dry film thickness of not less than 2.2 mils.
  - 1) Super Hide Latex Semi-Gloss Enamel 283.
  - 2) Color: SELECT.

**BELOW IS A VOC-COMPLIANT SEMI-GLOSS WATERBORNE EPOXY FINISH FOR CONCRETE AND OTHER CEMENTITIOUS SURFACES. IT PROVIDES GOOD CHEMICAL AND ABRASION RESISTANCE, GOOD CLEANABILITY AND WIDE COLOR RANGE.**

- 3. Semi-Gloss, Acrylic Epoxy Finish: Two finish coats over a primer.
  - a. Primer Coat: Acrylic; total dry thickness 7 mils.
    - 1) Insl-X AquaPruf Masonry Waterproofofer XA12-01.

**SELECT PRIMER ABOVE OR BELOW. ABOVE FOR SEVERE MOISTURE CONDITIONS; IT IS FROM A COMPANY OWNED BY BENJAMIN MOORE AND IS COMPATIBLE WITH BENJAMIN MOORE PRODUCTS.**

- b. Primer Coat: 100% acrylic, interior primer; total dry film thickness of not less than 0.95 mils.
  - 1) Super Spec Masonry Sealer N066.
- c. Finish Coats: Semi-gloss, two-component lacrylic epoxy coating; total dry film thickness of not less than 3.0 mils.
  - 1) Super Spec HP Acrylic Epoxy Coating P43-86.
  - 2) Color: SELECT.

**BELOW IS A NON-VOC-COMPLIANT TILE-LIKE EPOXY FINISH OVER INTERIOR CONCRETE. COLOR CHOICES MAY BE LIMITED. DO NOT USE FOR MOST APPLICATIONS (SEE DESIGN GUIDELINE 099110 FOR PERMISSIBLE EXCEPTIONS). IF USING IN OCCUPIED BUILDINGS REVIEW CAREFULLY THE IMPACT ON BUILDING OCCUPANTS AND SPECIAL WORK RESTRICTIONS, DUE TO THE PRODUCTION OF TOXIC FUMES. CONSIDER OFF-HOUR APPLICATION.**

- 4. Polyamide Epoxy High Gloss Coating: Two finish coats; no primer required
  - 1) Finish Coats: High gloss two-component polyamide epoxy; total dry thickness 4.0 mils.
  - 2) Super Spec HP Polyamide Epoxy Coating P36.
  - 3) Color: SELECT.

- F. Concrete (wear surfaces): Provide the indicated "Industrial" coating systems over interior concrete floor surfaces:

**BELOW IS A 100% SOLIDS LOW-VOC FULL-GLOSS TWO-COMPONENT WATERBORNE AMINE CURED EPOXY ENAMEL FINISH OVER INTERIOR CONCRETE FLOORS SUBJECT TO MODERATE WEAR AND CHEMICAL ATTACK. IF USING IN OCCUPIED BUILDINGS REVIEW CAREFULLY THE IMPACT ON BUILDING OCCUPANTS AND SPECIAL WORK RESTRICTIONS, DUE TO THE PRODUCTION OF TOXIC FUMES. CONSIDER OFF-HOUR APPLICATION. DELETE SAND IN TOP COAT IF SMOOTH FINISH IS DESIRED.**

- 1. High Gloss 100% Solids Epoxy Finish: Two finish coats over an undercoat.

**SELECT PRIMER BELOW FOR NEW OR UNCOATED CONCRETE AND MODIFY SENTENCE ABOVE TO DELETE REFERENCE TO AN UNDERCOAT. PREVIOUSLY PAINTED CONCRETE DOES NOT NEED A PRIMER.**

- a. Undercoat: Semi gloss, moisture-tolerant, waterborne polyamide epoxy sealer; total dry thickness 1.5 mils.
  - 1) Super Spec HP Fast Dry Epoxy Floor Sealer/Finish P41.
- b. Finish Coats: Semi-gloss polyamide epoxy with sand admixture to produce light non-slip texture; total dry thickness 2.5 mils.
  - 1) Super Spec HP Anti-Slip Aggregate P67.
  - 2) Super Spec HP 100% Solids Floor Epoxy P40.
  - 3) Color: SELECT.

- G. Concrete Masonry Units: Provide the indicated "Professional" or "Industrial" coating systems over interior concrete masonry block units:

**BELOW IS A LOW-LUSTER (EGGSHELL OR SATIN), ACRYLIC-ENAMEL FINISH OVER INTERIOR CONCRETE MASONRY BLOCK UNITS.**

1. Low-Luster, Acrylic-Enamel Finish: Two finish coats over a block filler for new work.

**A SECOND COAT OF BLOCK FILLER MAY BE NEEDED OVER VERY COARSE CONCRETE MASONRY SUBSTRATES. MOST MFRS RECOMMEND TEST PAINTING AN INCONSPICUOUS AREA BEFORE APPLYING PAINT.**

- a. Block Filler (new work only): High build latex block filler; dry film thickness of not less than 8.5 mils.
  - 1) Super Spec Masonry Hi-Build Block Filler 206.

**ABOVE PRODUCT FOR NEW OR UNCOATED MASONRY, BELOW PRIMER FOR PREVIOUSLY PAINTED SURFACES.**

- b. Primer (over existing painted surfaces): Acrylic-latex primer; dry film thickness of not less than 1.2 mils.
    - 1) Fresh Start Interior/Exterior Latex Primer 023-00.
  - c. Finish Coats: Low-luster (eggshell), acrylic-latex, interior enamel; total dry film thickness of not less than 2.6 mils.
    - 1) Super Spec Latex Eggshell Enamel 274.
    - 2) Color: SELECT.
2. Semi-Gloss, Vinyl Acrylic Latex Finish: Two finish coats (over a block filler for new work).

**A SECOND COAT OF BLOCK FILLER MAY BE NEEDED OVER VERY COARSE CONCRETE MASONRY SUBSTRATES. MOST MFRS RECOMMEND TEST PAINTING AN INCONSPICUOUS AREA BEFORE APPLYING PAINT.**

- a. Block Filler (new work only): High build latex block filler; total dry film thickness of not less than 8.5 mil.
  - 1) SuperSpec Masonry Hi-Build Block Filler 206.

**ABOVE PRODUCT FOR NEW OR UNCOATED MASONRY, BELOW PRIMER FOR PREVIOUSLY PAINTED SURFACES.**

- b. Primer (over existing painted surfaces): Acrylic-latex primer; dry film thickness of not less than 1.2 mils.
  - 1) Fresh Start Interior/Exterior Latex Primer 023-00.
- c. Finish Coats: Semi-gloss, acrylic-latex, interior enamel; total dry film thickness of not less than 2.0 mils.
  - 1) Super Hide Latex Semi-Gloss Enamel 283.
  - 2) Color: SELECT.

**BELOW IS A VOC-COMPLIANT WATERBORNE EPOXY FINISH OVER INTERIOR CONCRETE.**

3. Semi-Gloss, Acrylic Epoxy Finish: Two finish coats over a primer.

**TWO FINISH COATS OVER A BLOCK FILLER FOR NEW WORK.**

- a. Block Filler (new work only): Waterborne high solids epoxy block filler; dry film thickness of not less than 9.8 mils.
  - 1) Waterborne Epoxy Block filler P31.

**ABOVE PRODUCT FOR NEW OR UNCOATED MASONRY, BELOW PRIMER FOR PREVIOUSLY PAINTED SURFACES.**

- b. Primer (over existing painted surfaces): Acrylic-latex primer; dry film thickness of not less than 1.2 mils.
  - 1) Fresh Start Interior/Exterior Latex Primer 023-00.
- c. Finish Coats: Semi-gloss, two-component acrylic epoxy coating; total dry film thickness of not less than 3.0 mils.
  - 1) Super Spec HP Acrylic Epoxy Coating P43-86.

**BELOW IS A HIGH-BUILD NON-VOC COMPLIANT SYSTEM FOR ELIMINATING CMU PINHOLES AND CREATING A TILE-LIKE SURFACE. THIS SYSTEM IS ONLY APPROPRIATE FOR ANIMAL ROOMS AND BIO-HAZARD ROOMS WHERE PINHOLES ARE NOT ACCEPTABLE. IF USING IN OCCUPIED BUILDINGS REVIEW CAREFULLY THE IMPACT ON BUILDING OCCUPANTS AND SPECIAL WORK RESTRICTIONS, DUE TO THE PRODUCTION OF TOXIC FUMES. CONSIDER OFF-HOUR APPLICATION.**

- 4. High Gloss, High-Build, Polyamide Epoxy Enamel Finish: Two finish coats over multiple coats of block filler.

**CONSIDER ADDING THE "FRESH START" PRIMER IN 3B ABOVE AS A BARRIER COAT BETWEEN NEW FILLER AND PREVIOUSLY PAINTED SURFACES WHERE APPLICABLE.**

- a. Block Filler: Waterborne high solids epoxy block filler; dry film thickness of not less than 9.8 mils per coat.
  - 1) Waterborne Epoxy Block Filler P31.
- b. Second and Third Coats: High gloss two component polyamide epoxy enamel; total dry film thickness of not less than 4 mils.
  - 1) Super Spec HP Polyamide Epoxy P36.
  - 2) Color: SELECT.

- H. Gypsum Board and Plaster: Provide the indicated "Professional" or "Industrial" coating systems over interior gypsum board and plaster surfaces:

**BELOW IS A LOW-LUSTER (EGGSHELL OR SATIN), ACRYLIC-ENAMEL FINISH OVER INTERIOR GYPSUM BOARD WALL AND CEILING SURFACES.**

- 1. Low-Luster, Acrylic-Enamel Finish: Two finish coats over a primer.
  - a. Primer: Latex-based, interior primer; total dry film thickness of not less than 1.2 mils.
    - 1) Super Spec Latex Enamel Undercoater & Primer Sealer 253.
  - b. Finish Coats: Low-luster (eggshell), acrylic-latex, interior enamel; total dry film thickness of not less than 2.6 mils.
    - 1) Super Spec Latex Eggshell Enamel 274.
    - 2) Color: SELECT.

**BELOW IS A SEMIGLOSS, ACRYLIC-ENAMEL FINISH OVER INTERIOR GYPSUM BOARD WALL AND CEILING SURFACES.**

- 2. Semigloss, Acrylic-Enamel Finish: Two finish coats over a primer.
  - a. Primer: Latex-based, interior primer; total dry film thickness of not less than 1.2 mils.

- 1) Super Spec Latex Enamel Undercoater & Primer Sealer 253.
- b. Finish Coats: Semigloss, acrylic-latex, interior enamel; total dry film thickness of not less than 2.4 mils.
  - 1) Super Spec Latex Semigloss Enamel 276.
  - 2) Color: SELECT.

**BELOW IS A VOC-COMPLIANT WATERBORNE EPOXY FINISH WITH GOOD WATER RESISTANCE FOR APPLICATION ON INTERIOR GYPSUM BOARD WALL AND CEILING SURFACES. DO NOT USE FOR MOST APPLICATIONS (SEE DESIGN GUIDELINE 099110 FOR PERMISSIBLE EXCEPTIONS).**

- 3. Waterborne Acrylic Epoxy Finish: Two finish coats over a primer.
  - a. Primer: Acrylic-latex primer; dry film thickness of not less than 1.2 mils.
    - 1) Fresh Start Interior/Exterior Latex Primer 023-00.
  - b. Finish Coats: Semi-gloss, two-component acrylic epoxy coating; total dry film thickness of not less than 3.0 mils.
    - 1) Super Spec HP Acrylic Epoxy Coating P43-86.

**BELOW IS A HIGH-BUILD SYSTEM FOR ELIMINATING CMU PINHOLES AND CREATING A TILE-LIKE SURFACE. THIS SYSTEM IS ONLY APPROPRIATE FOR ANIMAL ROOMS AND BIO-HAZARD ROOMS WHERE PINHOLES ARE NOT ACCEPTABLE. IF USING IN OCCUPIED BUILDINGS REVIEW CAREFULLY THE IMPACT ON BUILDING OCCUPANTS AND SPECIAL WORK RESTRICTIONS, DUE TO THE PRODUCTION OF TOXIC FUMES. CONSIDER OFF-HOUR APPLICATION.**

- 4. High Gloss, High-Build, Polyamide Epoxy Enamel Finish: Two finish coats over primer.
  - a. Finish Coats: Full-gloss polyamide epoxy enamel; total dry film thickness of not less than 4 mils.
    - 1) Super Spec HP Polyamide Epoxy P36.
    - 2) Color: SELECT.

- I. Woodwork - Opaque Finish: Provide the indicated "Professional" paint coating systems over interior wood surfaces:

**BELOW IS A LOW-LUSTER (EGGSHELL), ACRYLIC-ENAMEL FINISH OVER INTERIOR GYPSUM BOARD WALL AND CEILING SURFACES.**

- 1. Low-Luster (Eggshell), Acrylic-Enamel Finish: Two finish coats over a wood undercoater.
  - a. Undercoat: Acrylic blended latex interior wood undercoater; total dry film thickness of not less than 0.8 mils.
    - 1) Super Hide Interior Latex Primer/Undercoater 284.
  - b. Finish Coats: Low-luster (eggshell), acrylic-latex, interior enamel; total dry film thickness of not less than 2.0 mils.
    - 1) Super Hide Latex Eggshell Enamel C286.
    - 2) Color: SELECT.

**BELOW IS A SEMIGLOSS, ACRYLIC-ENAMEL FINISH OVER INTERIOR GYPSUM BOARD WALL AND CEILING SURFACES.**

- 2. Semigloss, Acrylic-Enamel Finish: Two finish coats over a wood undercoater.

- a. Undercoat: Acrylic blended latex interior wood undercoater; total dry film thickness of not less than 0.8 mils.
  - 1) Super Hide Interior latex Primer/Undercoater 284.
- b. Finish Coats: Semi-gloss, acrylic-latex, interior enamel; total dry film thickness of not less than 2.0 mils.
  - 1) Super Hide Latex Semi-Gloss Enamel 283.
  - 2) Color: SELECT.

*TYPICALLY, DELETE BELOW AND SPECIFY SHOP FINISHES IN WOODWORK OR WOOD DOOR SECTION. USE BELOW ONLY IF THERE ARE NO OTHER OPTIONS.*

- J. Stained Woodwork: Provide the indicated stained finishes over new, interior woodwork:

*PRODUCTS BELOW ARE WATERBORNE VOC COMPLIANT FINISHES.*

- 1. Waterborne, Low-Luster, Polyurethane: Two finish coats of solvent based, clear polyurethane over an alkyd, interior wood stain. Wipe wood filler before applying stain.

*DELETE PASTE-WOOD FILLER COAT BELOW ON TIGHT-GRAINED WOOD SUCH AS BIRCH. RETAIN FILLER COAT ON OAK AND WALNUT AND SIMILAR OPEN-GRAIN WOODS.*

- a. Filler Coat: Paste-wood filler.
  - 1) Benwood Interior Wood Finishes Wood Grain Filler 238.
- b. Stain Coat: Waterborne, interior wood stain.
  - 1) Benwood Interior Wood Finishes Waterborne Stain 205.
  - 2) Color: SELECT.
- c. First and Second Finish Coats: Waterborne, acrylic polyurethane finish.
  - 1) Benwood Stays Clear Low Luster N423.

*BELOW IS A WATERBORNE CLEAR HIGH-GLOSS POLYURETHANE FINISH OVER INTERIOR WOODWORK STAINED WITH A WATERBORNE STAIN.*

- 2. Waterborne, High Gloss, Polyurethane: Two finish coats of solvent based, clear polyurethane over an alkyd, interior wood stain. Wipe wood filler before applying stain.

*DELETE PASTE-WOOD FILLER COAT BELOW ON TIGHT-GRAINED WOOD SUCH AS BIRCH. RETAIN FILLER COAT ON OAK AND WALNUT AND SIMILAR OPEN-GRAIN WOODS.*

- a. Filler Coat: Paste-wood filler.
  - 1) Benwood Interior Wood Finishes Wood Grain Filler 238.
- b. Stain Coat: Water base interior wood stain.
  - 1) Benwood Interior Wood Finishes Waterborne Stain 205.
  - 2) Color: SELECT.
- c. First and Second Finish Coats: Waterborne, acrylic polyurethane finish.
  - 1) Benwood Stays Clear Gloss N422.

*TYPICALLY, DELETE BELOW AND SPECIFY SHOP FINISHES IN WOODWORK OR WOOD DOOR SECTION. USE BELOW ONLY IF THERE ARE NO OTHER OPTIONS.*

- K. Natural-Finish Woodwork: Provide the indicated clear finishes over new, interior woodwork:

*BELOW IS A WATERBORNE CLEAR LOW-LUSTER POLYURETHANE FINISH OVER INTERIOR WOODWORK.*

1. Waterborne, Low-Luster Polyurethane Finish: 2 finish coats of solvent based, clear-satin polyurethane.

*DELETE PASTE-WOOD FILLER COAT BELOW ON TIGHT-GRAINED WOOD SUCH AS BIRCH. RETAIN FILLER COAT ON OAK AND WALNUT AND SIMILAR OPEN-GRAIN WOODS.*

- a. Filler Coat: Paste-wood filler.
  - 1) Benwood Interior Wood Finishes Wood Grain Filler 238.
- b. First and Second Finish Coats: Waterborne, acrylic polyurethane finish.
  - 1) Benwood Stays Clear Low Luster N423.

*BELOW IS A WATERBORNE CLEAR HIGH-GLOSS POLYURETHANE FINISH OVER INTERIOR WOODWORK.*

2. Waterborne, High-Gloss Polyurethane Finish: 2 finish coats of waterborne, clear, high-gloss polyurethane.

*DELETE PASTE-WOOD FILLER COAT BELOW ON TIGHT-GRAINED WOOD SUCH AS BIRCH. RETAIN FILLER COAT ON OAK AND WALNUT AND SIMILAR OPEN-GRAIN WOODS.*

- a. Filler Coat: Paste-wood filler.
  - 1) Benwood Interior Wood Finishes Wood Grain Filler 238.
- b. First and Second Finish Coats: Waterborne, acrylic polyurethane finish.
  - 1) Benwood Stays Clear Gloss N422.

- L. Ferrous Metal: Provide the indicated "Professional" or "Industrial" coating systems over factory-primed ferrous metal:

*BELOW FOR A LOW-LUSTER (EGGSHELL OR SATIN), ACRYLIC-ENAMEL FINISH OVER INTERIOR FERROUS METAL.*

1. Low-Luster, Acrylic-Enamel Finish: Two finish coats over a factory-applied primer, or indicated primer as applicable.
  - a. Primer (for factory-unprimed work): Waterborne, rust-inhibitive, acrylic primer; total dry film thickness of not less than 2.0 mils.
    - 1) SuperSpec HP Acrylic Metal Primer P04.
  - b. Finish Coats: Low-luster (eggshell), acrylic-latex, interior enamel; total dry film thickness of not less than 2.6 mils.
    - 1) Super Spec Latex Eggshell Enamel 274.
    - 2) Color: SELECT.

*BELOW IS AN ACRYLIC-LATEX-BASED, SEMIGLOSS ENAMEL FINISH OVER INTERIOR FERROUS METAL. THIS FINISH IS AN ALTERNATIVE TO SOLVENT-BASED, SEMIGLOSS ENAMELS.*

2. Semigloss, Acrylic-Enamel Finish: Two finish coats over a factory-applied primer, or indicated primer as applicable.

- a. Primer (for factory-unprimed work): Waterborne, rust-inhibitive, acrylic primer; total dry film thickness of not less than 2.0 mils.
  - 1) SuperSpec HP Acrylic Metal Primer P04.
- b. Finish Coats: Semi-gloss, acrylic-latex, interior enamel; total dry film thickness of not less than 2.0 mils.
  - 1) Super Hide Latex Semi-Gloss Enamel 283.
  - 2) Color: SELECT.

**BELOW IS A VOC COMPLIANT HIGH GLOSS WATERBORNE EPOXY FINISH OVER INTERIOR FERROUS METAL.**

- 3. Epoxy Finish: Two finish coats over a factory-applied primer coat, or indicated primer as applicable.
  - a. Primer for Factory-Unprimed Metals: Waterborne acrylic epoxy primer; total dry film thickness of not less than 2 mils.
    - 1) Waterborne Polyamide Epoxy Primer P42-70.
  - b. Finish Coats: Full-gloss acrylic epoxy; total dry film thickness of not less than 2.0 mils.
    - 1) Super Spec HP Waterborne Polyamide Epoxy High Gloss Enamel P42.
    - 2) Color: SELECT.

- M. Zinc-Coated Metal: Provide the indicated "Professional" or "Industrial" coating systems over zinc-coated metal:

**WATER-BASED PRODUCTS ARE LISTED BELOW. BELOW IS A LOW-LUSTER (EGGSHELL OR SATIN), ACRYLIC-ENAMEL FINISH OVER INTERIOR GALVANIZED METAL.**

- 1. Low-Luster, Acrylic-Enamel Finish: Two finish coats over a factory-applied primer, or indicated primer as applicable.
  - a. Primer (for factory-unprimed work): Quick-drying, rust-inhibitive, acrylic-enamel primer; total dry film thickness of not less than 1.8 mils.
    - 1) IronClad Alkyd Low Lustre Metal and Wood Enamel 363.
  - b. Second and Third Coats: Low-luster (eggshell), acrylic-latex, interior enamel; total dry film thickness of not less than 2.6 mils.
    - 1) Super Spec Latex Eggshell Enamel 274.
    - 2) Color: SELECT.

**BELOW IS AN ACRYLIC-LATEX-BASED, SEMIGLOSS ENAMEL FINISH OVER INTERIOR GALVANIZED METAL. THIS FINISH IS AN ALTERNATE TO SOLVENT-BASED, SEMIGLOSS ENAMELS.**

- 2. Semigloss, Acrylic-Enamel Finish: Two finish coats over a factory-applied primer, or indicated primer as applicable.
  - a. Primer (for factory-unprimed work): Quick-drying, rust-inhibitive, alkyd-based primer; total dry film thickness of not less than 1.8 mils.
    - 1) IronClad Alkyd Low Lustre Metal and Wood Enamel 363.
  - b. Second and Third Coats: Semi-gloss, acrylic-latex, interior enamel; total dry film thickness of not less than 2.0 mils.
    - 1) Super Hide Latex Semi-Gloss Enamel 283.
    - 2) Color: SELECT.

**BELOW IS A HIGH GLOSS WATERBORNE EPOXY FINISH OVER INTERIOR GALVANIZED METAL.**

3. Epoxy Finish: Two finish coats over a factory-applied primer coat, or indicated primer as applicable.
  - a. Primer (for factory-unprimed zinc-coated metal): Waterborne acrylic epoxy primer; total dry film thickness of not less than 4 mils.
    - 1) Waterborne Polyamide Epoxy Primer P42-70.
  - b. Finish Coats: Full-gloss acrylic epoxy; total dry film thickness of not less than 3.0 mils.
    - 1) Super Spec HP Waterborne Polyamide Epoxy High Gloss Enamel P42.
    - 2) Color: SELECT.

**3.7 EXTERIOR PAINT SCHEDULE**

- A. Exterior Paint Systems, General: Products of Benjamin Moore are listed below, unless otherwise indicated. Provide indicated products or, subject to compliance with requirements, equivalent products of other approved manufacturers. Apply coatings at manufacturer's recommended spreading rate to achieve indicated dry film thicknesses.
  1. Where "Industrial" coating is indicated, provide Moore's "Industrial and Maintenance Coatings" products; or equivalent of other, listed approved manufacturers.
  2. Where "Professional" coating is indicated, provide Moore's "Professional Coatings" products; or equivalent of other, listed approved manufacturers.

**ADD COLOR INFORMATION TO EACH PRODUCT IF SCHEDULED HERE.**

**BELOW IS A FLAT VINYL ACRYLIC FINISH OVER EXTERIOR CONCRETE AND STUCCO. NOT ALL MFRS REQUIRE USE OF A PRIMER OVER THIS SUBSTRATE.**

- B. Concrete and Cement Plaster (for Non-Wear Surfaces): Provide the indicated "Professional" coating systems over exterior concrete, cement plaster surfaces:
  1. Flat Alkyd-Modified Vinyl Acrylic Latex Finish: Two finish coats over a primer.
    - a. Primer: Alkali-resistant, exterior, acrylic-latex sealer; total dry film thickness of not less than 0.7 mils.
      - 1) Acrylic Masonry Sealer 066.
    - b. Finish Coats: Flat, exterior, alkyd modified vinyl acrylic latex paint; total dry film thickness of not less than 2.4 mils.
      - 1) Super Spec Flat Latex House Paint 171.
      - 2) Color: SELECT.
- C. Concrete Masonry Units: Provide the indicated "Professional" coating systems over exterior concrete masonry units:

**BELOW IS A FLAT ACRYLIC FINISH OVER EXTERIOR CONCRETE MASONRY BLOCK.**

1. Flat Latex Based Finish: Two finish coats over a block filler.
  - a. Block Filler: High-performance, latex block filler; total dry mill thickness of not less than 8.1 mils.
    - 1) Super Craft Latex Block Filler 285.
  - b. Finish Coats: Flat, exterior, acrylic-latex paint; total dry film thickness of not less than 2.4 mils.
    - 1) Super Spec Flat Latex House Paint 171.
    - 2) Color: SELECT.

D. Exterior Gypsum Soffit Board: Provide the indicated "Professional" coating systems over exterior gypsum soffit board:

**BELOW IS A FLAT ACRYLIC FINISH OVER EXTERIOR GYPSUM SOFFIT BOARDS.**

1. Flat Alkyd Modified Vinyl Acrylic Latex Finish: Two system finish coats over a primer.
  - a. Primer: Exterior, alkyd primer; total dry film thickness of not less than 1.8 mils.
    - 1) Super Spec Alkyd Exterior Primer 176.
  - b. Finish Coats: Flat, exterior, alkyd modified vinyl acrylic latex paint; total dry film thickness of not less than 2.4 mils.
    - 1) Super Spec Flat Latex House Paint 171.
    - 2) Color: SELECT.

**BELOW IS A LOW-LUSTER (EGGSHELL OR SATIN) ACRYLIC FINISH OVER EXTERIOR GYPSUM SOFFIT BOARDS.**

2. Low Luster Acrylic Blended Latex Finish: Two system finish coats over a primer.
  - a. Primer: Exterior, alkyd primer; total dry film thickness of not less than 1.8 mils.
    - 1) Super Spec Alkyd Exterior Primer 176.
  - b. Finish Coats: Flat, exterior, alkyd modified vinyl acrylic latex paint; total dry film thickness of not less than 2.0 mils.
    - 1) Super Spec Low Luster Latex House Paint 185.
    - 2) Color: SELECT.

E. Wood Trim: Provide the indicated "Professional" coating systems over exterior wood trim:

**BELOW IS A WATER-BASED, FLAT, ACRYLIC-ENAMEL FINISH OVER EXTERIOR WOOD TRIM, INCLUDING BLEEDING WOODS SUCH AS CEDAR AND REDWOOD.**

1. Flat Alkyd Modified Vinyl Acrylic Latex Finish: Two finish coats over a solvent-thinned primer.
  - a. Primer: Exterior, solvent-thinned latex primer; total dry film thickness of not less than 1.4 mils.
    - 1) Moorwhite Primer 100.
  - b. Finish Coats: Flat, exterior, alkyd modified vinyl acrylic latex paint; total dry film thickness of not less than 2.4 mils.
    - 1) Super Spec Flat Latex House Paint 171.
    - 2) Color: SELECT.

F. Ferrous Metal: Provide the indicated "Professional" or "Industrial" coating systems over exterior ferrous metal.

**BELOW IS A LOW LUSTER, ALKYD-ENAMEL FINISH OVER EXTERIOR NON-RUSTED FERROUS METAL.**

1. Low Luster, Alkyd-Enamel Finish: Two finish coats over a factory-applied primer, or an alkyd primer as applicable.
  - a. Primer (unprimed work only) : Quick-drying, rust-inhibitive, alkyd-based primer, as recommended by the manufacturer for this substrate; total dry film thickness of not less than 1.3 mils.
    - 1) IronClad Alkyd Low Luster Metal and Wood Enamel 163.
  - b. Finish Coats: Semigloss, alkyd, exterior enamel; total dry film thickness of not less than 2.6 mils.
    - 1) IronClad Alkyd Low Luster Metal and Wood Enamel 163.
    - 2) Color: SELECT.

**BELOW IS A HIGH GLOSS, ALKYD-ENAMEL FINISH OVER EXTERIOR NON-RUSTED FERROUS METAL.**

2. High Gloss, Alkyd-Enamel Finish: Two finish coats over a factory-applied primer, or an alkyd primer as applicable.
  - a. Primer (unprimed work only) : Quick-drying, rust-inhibitive, alkyd-based primer, as recommended by the manufacturer for this substrate; total dry film thickness of not less than 1.3 mils.
    - 1) IronClad Alkyd Low Luster Metal and Wood Enamel 163.
  - b. Finish Coats: High gloss, alkyd, exterior enamel; total dry film thickness of not less than 3.4 mils.
    - 1) Impervo High Gloss Enamel 133.
    - 2) Color: SELECT.

**BELOW IS A POLYURETHANE BASED, FULL GLOSS FINISH OVER EXTERIOR FERROUS METAL. THIS IS A DURABLE, FADE-PROOF EXTERIOR COATING SYSTEM SUITABLE FOR HANDRAILS AND OTHER EXPOSED-TO-ABUSE WORK.**

3. Polyurethane Finish: Two finish coats over an alkyd primer.
    - a. Primer: Alkyd primer formulated with a rust-inhibiting agent; total dry film thickness of not less than 2.0 mils.
      - 1) Alkyd Metal Primer M06.
    - b. First and Second Coats: High gloss urethane alkyd enamel; total dry film thickness of not less than 4.0 mils.
      - 1) Urethane Alkyd Enamel M22.
      - 2) Color: SELECT.
- G. Zinc-Coated Metal: Provide the indicated "Professional" or "Industrial" coating systems over exterior zinc-coated (galvanized) metal surfaces:

**BELOW IS A LOW-LUSTER, ALKYD-ENAMEL FINISH OVER EXTERIOR GALVANIZED METAL.**

1. Low Luster, Alkyd-Enamel Finish: Two finish coats over a factory-applied primer, or a galvanized metal primer as applicable.
  - a. Primer (unprimed work only) : Quick-drying, rust-inhibitive, alkyd-based primer, as recommended by the manufacturer for this substrate; total dry film thickness of not less than 1.3 mils.
    - 1) IronClad Alkyd Low Luster Metal and Wood Enamel 163.

- b. Finish Coats: Low luster, alkyd, exterior enamel; total dry film thickness of not less than 2.6 mils.
  - 1) IronClad Alkyd Low Luster Metal and Wood Enamel 163.
  - 2) Color: SELECT.

**BELOW IS A HIGH GLOSS, ALKYD-ENAMEL FINISH OVER EXTERIOR GALVANIZED METAL.**

- 2. High Gloss, Alkyd-Enamel Finish: Two finish coats over a factory-applied primer, or a galvanized metal primer as applicable.
  - a. Primer (for factory-unprimed work): Quick-drying, rust-inhibitive, alkyd-based primer; total dry film thickness of not less than 1.6 mils.
    - 1) IronClad Alkyd Low Lustre Metal and Wood Enamel 163.
  - b. Second and Third Coats: High gloss, exterior, alkyd enamel; total dry film thickness of not less than 3.4 mils.
    - 1) Impervo Alkyd High Gloss Metal & Wood Enamel 133.

**BELOW IS A POLYURETHANE BASED, HIGH GLOSS FINISH OVER EXTERIOR FERROUS METAL. THIS IS A DURABLE, FADE-PROOF EXTERIOR COATING SYSTEM SUITABLE FOR HANDRAILS AND OTHER EXPOSED-TO-ABUSE WORK.**

- 3. Polyurethane Finish: Two finish coats over a acrylate primer.
  - a. Primer: Elastomeric acrylate primer formulated with a rust-inhibiting agent; total dry film thickness of not less than 0.1 mils.
    - 1) Bonding Primer M15.
  - b. First and Second Finish Coats: High gloss urethane alkyd enamel; total dry film thickness of not less than 4.0 mils.
    - 1) Urethane Alkyd Enamel M22.
    - 2) Color: SELECT.

- H. Aluminum: Provide the indicated "Industrial" coating system over exterior aluminum surfaces:

**BELOW IS A POLYURETHANE BASED, HIGH GLOSS FINISH OVER EXTERIOR FERROUS METAL. THIS IS A DURABLE, FADE-PROOF EXTERIOR COATING SYSTEM SUITABLE FOR HANDRAILS AND OTHER EXPOSED-TO-ABUSE WORK.**

- 1. Polyurethane Finish: Two finish coats over a acrylate primer.
  - a. Primer: Elastomeric acrylate primer formulated with a rust-inhibiting agent; total dry film thickness of not less than 0.1 mils.
    - 1) Bonding Primer M15.
  - b. Finish Coats: High gloss urethane alkyd enamel; total dry film thickness of not less than 4.0 mils.
    - 1) Urethane Alkyd Enamel M22.
    - 2) Color: SELECT.

END OF SECTION 099100

**SPECIFICATION DIVISION 9**

NUMBER            SECTION DESCRIPTION

**DIVISION 09 FINISHES**

SECTION 099110 - ELECTROSTATICALLY APPLIED COATING

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**

**SECTION 099110 - ELECTROSTATICALLY APPLIED COATING**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of electrostatically applied coating is indicated on Drawings, schedules and by provisions of this Section.
- B. Type of electrostatically applied coating includes field application of electrostatically charged, sprayed paint coating, over existing metal casework.
- C. Colors: Color selection process is as follows:
  - 1. Colors will be selected by Architect from manufacturer's standard range of colors.

*DELETE EITHER ABOVE OR BELOW.*

- 2. Color selections are included in "Schedule" article of this Section.

**1.2 SUBMITTALS**

- A. Product Data: Submit manufacturer's literature including descriptive data and recommendations for mixing, application, and curing.

*INCLUDE BELOW IF SELECTION WILL BE MADE AFTER BIDDING.*

- B. Samples for Initial Selection: Manufacturer's color sample booklet showing full range of standard colors, with not less than 25 colors.

*CONSIDER INCLUDING BELOW IF EXACT COLOR MATCHING IS REQUIRED.*

- C. Samples for Verification: Two cards, not less than 3-inches by 5-inches, of actual paint sample of selected color. Provide additional card sets for each separate color.

**1.3 QUALITY ASSURANCE**

- A. Provide written certification attesting that applicators have been factory trained, and that application equipment used complies with manufacturer's requirements.

**1.4 DELIVERY AND STORAGE**

- A. Deliver materials to job site in new, original, and unopened containers bearing mfr's name, trade name, and label analysis. Store materials in protected area at a temperature not less than 50 F and in accordance with other mfr's instructions.

**1.5 JOB CONDITIONS**

- A. Apply coatings only when environmental temperature can be maintained above 50 deg. F. during application and drying period.
- B. Provide work areas free of excessive dust. and with illumination adequate to apply special coatings.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURER**

- A. Manufacturer: Provide products of Cascoat Electrostatic, Inc. (Telephone 313/771-9040) or, subject to compliance with requirements, equivalent products of other manufacturers.

**2.2 MATERIALS**

- A. General: Provide coatings specifically compounded by manufacturer for electrostatic spray application. Where primers are indicated or required, provide only primers that are approved by manufacturer for use with finish coating materials.
- B. Material Quality: Materials which do not display Manufacturer's identification will not be acceptable.
- C. Mix, prepare, and store materials according to Manufacturer's latest printed instructions. Manually mix coating materials; power mixing devices are not permitted. Do not add thinner or other agents to coating materials.

*IF COLOR WILL BE SPECIFIED IN SCHEDULE AT END OF SECTION, DELETE PARAGRAPHS BELOW.*

- D. Color: Provide color as follows:
  - 1. Selected by Architect from manufacturer's standard range of colors.

*RETAIN ABOVE FOR ARCHITECT SELECTION. RETAIN BELOW FOR ARCHITECT-SELECTED CUSTOM COLOR*

- 2. Custom color to match Architect's sample.

*RETAIN BELOW FOR COLOR SELECTED DURING DESIGN.*

- 3. Match selection.

**PART 3 - EXECUTION**

**3.1 INSPECTION**

- A. Examine surfaces to be coated and report any conditions that would adversely affect the appearance or performance of the coating systems and which cannot be put into an acceptable condition by specified preparation.

- B. Do not proceed with surface preparation and application until the surface is acceptable or authorization to proceed is given by the Owner.

**3.2 PREPARATION**

- A. Protect work of other trades and adjacent surfaces not scheduled to be coated. Prepare and clean in strict accordance with coating mfr's instructions.
- B. Sand, or chemically clean as appropriate, all abraded surfaces, corroded areas and other imperfections in surfaces to be coated. Fill or feather edges of sanded areas to produce for a smooth transition to bare metal.

**3.3 APPLICATION**

- A. Apply prime and finish materials in accordance with mfr's directions. Apply each material at not less than the mfr's recommended spreading rate. Use special equipment, applicators, and techniques recommended by mfr as best suited for the particular applications.
- B. Apply additional coats beyond scheduled requirements when undercoating, stains or other conditions show through final paint coat until the special coating is of uniform finish, color and appearance.

**3.4 CLEANING**

- A. Remove paint spatters from any adjoining surfaces. Repair any damage to coatings or surfaces caused by cleaning operations. Remove debris from job site and leave area clean.

**3.5 SCHEDULE OF SURFACES TO BE COATED**

- A. Base Cabinets: Prepare and coat each of the following surfaces:
  - 1. Surfaces exposed to view in existing construction, including all edges of doors and drawer fronts, regardless of exposure condition.

*SELECT ONE OF THE FOLLOWING OR DELETE ALL.*

- a. Color: selection.
- b. Match existing color.
- c. Match color of new laboratory casework.

*INCLUDE BELOW IF PAINTED INTERIORS ARE DESIRED.*

- 2. Interior surfaces of cabinet drawers and doors, and sides, back and bottom of cabinet shell.

*SELECT ONE OF THE FOLLOWING OR DELETE ALL.*

- a. Color: selection.
- b. Match existing color.
- c. Match color of new laboratory casework.

- B. Wall Mounted Cabinets: Prepare and coat each of the following surfaces:

1. Surfaces exposed to view in existing construction, including all edges of doors, regardless of exposure condition.

*SELECT ONE OF THE FOLLOWING OR DELETE ALL.*

- a. Color: selection.
- b. Match existing color.
- c. Match color of new laboratory casework.

*MODIFY BELOW TO SUIT DESIRED LIMIT OF PAINTING. USUALLY RETAIN BELOW IF NO CABINET DOORS OR IF DOORS HAVE WINDOWS.*

2. Shelves, including edges and underside.
  - a. Color: Match cabinet interior surfaces.
3. Interior surfaces of cabinet doors, and sides, back and bottom of cabinet shell.

*SELECT ONE OF THE FOLLOWING OR DELETE ALL.*

- a. Color: selection.
- b. Match existing color.
- c. Match color of new laboratory casework.

C. File Cabinets: Prepare and coat each of the following surfaces:

1. Surfaces exposed to view in existing location, including all edges of drawer fronts, regardless of exposure condition.

*SELECT EITHER ABOVE OR BELOW.*

*MODIFY REQUIREMENT BELOW TO COVER ONLY THOSE SURFACES DESIRED.*

2. Move file cabinets as required to expose sides and back. Coat exterior surfaces of front, sides and back of units, including all edges of drawer fronts, regardless of exposure condition.
3. Color: Provide coatings of the following color:

*SELECT ONE OF THE FOLLOWING OR DELETE ALL.*

- a. Color: selection.
- b. Match existing color.

**SPECIFICATION DIVISION 9**

NUMBER            SECTION DESCRIPTION

**DIVISION 09 FINISHES**

SECTION 099310 - WOOD FLOOR FINISH

**END OF CONTENTS TABLE**

**DIVISION 09 FINISHES**  
**SECTION 099310 - WOOD FLOOR FINISH**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. This Section specifies latex polyurethane coating system for sanded wood floors, including surface preparation, prime coats and topcoats.
- B. Other field painting is specified in Division 09 Section "Painting".

**1.2 SUBMITTALS**

- A. Product data for proprietary materials including basic materials analysis and application instructions for each material specified.
- B. Samples for Initial Selection: Submit three 24-inch square samples for each type of finish and color on material matching actual substrate to be coated. Carefully select substrate materials to provide samples representative of results expected to be achieved in field.
  - 1. Match Architect's sample for color, texture, and sheen.
  - 2. Resubmit samples as requested until desired color and sheen are achieved.

***INCLUDE BELOW FOR ALL PROJECTS.***

- C. Affidavits of Compliance to be included in final inspection manual: For each type of acoustical panel and tile, provide manufacturer's letter of certification showing compliance with requirements of 1997 NFPA 101 "Life Safety Code" Section 26-3.3 for Class A, B, or C as required by the Code. Letter shall include project number, project name, and building name.

**1.3 QUALITY ASSURANCE**

- A. Single Source Responsibility: Provide primers and undercoat materials produced by the same manufacturer as the finish coats. Use only thinners recommended by the manufacturer, and only within recommended limits.
- B. Coordination of Work: Review sections in which other coatings are provided to ensure compatibility of the total systems for various substrates. Upon request, furnish information on characteristics of specified finish materials, to ensure that compatible prime coats are used.
- C. Field Samples: On actual floor surface to be coated, duplicate coating finishes of approved samples. Provide full-coat finish samples on at least 100 square feet of surface, until required sheen and color are obtained; simulate finished lighting conditions for review of in-place work.
  - 1. Final acceptance will be from job-applied samples.

2. Architect will select one room, area or surface to represent surfaces and conditions for each type of coating and substrate to be coated. Apply coatings in this room, area or surface in accordance with schedule, or as specified. After finishes are accepted, this room, area or surface will be used for evaluation of coating systems of a similar nature.

#### **1.4 DELIVERY, STORAGE AND HANDLING**

- A. Packaged Materials: Deliver packaged materials in manufacturer's original, new, unopened, containers showing weight, analysis, and name of manufacturer. Protect materials from deterioration during delivery, and while stored at site.
- B. Store materials not in actual use in tightly covered containers at a minimum ambient temperature of 45 deg F (7 deg C) in a well-ventilated area. Maintain containers used in storage of coatings in clean condition, free of foreign materials and residue.
  1. Protect from freezing. Keep storage neat and orderly. Remove oily rags and waste daily. Take necessary precautionary measures to ensure that workmen and work areas are adequately protected from fire hazards and health hazards resulting from handling, mixing, and application of coatings.

#### **1.5 PROJECT CONDITIONS**

- A. Environmental Requirements: Apply special coating materials in enclosed, conditioned spaces. Comply with manufacturer's recommendations for application temperature and humidity conditions.

### **PART 2 - PRODUCTS**

#### **2.1 LATEX POLYURETHANE COATING**

- A. Manufacturer/Product: Subject to compliance with requirements, provide the following product:
  1. Pacific Plus Strong; Bunakeim.
- B. Provide manufacturer's recommended catalyst hardener and stain products.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine the substrates upon which, and conditions under which, coating will be applied for compliance with requirements of this Section. Do not proceed until unsatisfactory conditions are corrected.
  1. Start of application will be construed as the Applicator's acceptance of surfaces within each area.

### **3.2 PREPARATION**

- A. General: Remove items that are not to be coated, or provide surface-applied protection prior to surface preparation and coating. Remove these items if necessary for complete coating of the items and adjacent surfaces.
  - 1. Clean surfaces before applying coatings or surface treatments. Schedule cleaning and coating application so dust and other contaminants will not fall on wet, newly coated surfaces.
- B. Surface Preparation: Perform surface preparation and cleaning in compliance with the manufacturer's instructions for the particular substrate conditions, and as specified.
  - 1. Wood Surfaces: Clean wood surfaces of dirt, oil, or other foreign substances. Sand surfaces smooth, and dust off.
  - 2. Sand floors 3 time using power equipment and course medium and fine grit abrasive material. Butt-end sand edges by hand to match the field and to ensure even application of finish and stain. Abrade or burnish with steel wool between coats.
- C. Material Preparation: Carefully mix and prepare materials in compliance with the coating manufacturer's directions.

### **3.3 APPLICATION**

- A. Apply special coating by applicators in accordance with manufacturer's directions.
- B. Apply stain in three finish coats. Do not apply succeeding coats until the previous coat has cured as recommended by manufacturer. Sand or rub with steel wool between applications where required to produce an even, smooth surface in accordance with the manufacturer's directions.
- C. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish or recoat work not in compliance with specified requirements.

### **3.4 CLEANING**

- A. Clean-Up: At the end of each work day, remove rubbish, empty cans, rags and other discarded materials from the site.
- B. Upon completion of work, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other proper methods, using care not to scratch or damage adjacent finished surfaces. Remove temporary protective wrappings provided for protection of adjacent items not to be coated.
  - 1. Dispose wash water from latex coatings to the sanitary sewer. Excess latex material shall be salvaged for reuse or solidified for disposal with other construction materials. Dry empty latex coating cans and dispose with other construction materials. Contact UM OSEH Hazardous Materials (734-763-4568) to arrange for disposal of alkyd paints and solvents.

**3.5 PROTECTION**

- A. Provide "WET PAINT" signs and temporary warning tape barriers to protect newly coated finishes. Provide heavy craft paper covering to protect fully cured finishes.

**3.6 TOUCH-UP AND REPAIR**

- A. Correct damage to caused to adjacent surfaces not to be coated by cleaning, repairing, or replacing items as acceptable to Owner.
- B. Upon completion of construction activities of other trades, return to the job site and restore damaged or defaced coated surfaces.

**DIVISION 10 SPECIALTIES**

SECTION 101100 - VISUAL DISPLAY UNITS

**END OF CONTENTS TABLE**

**DIVISION 10 SPECIALTIES**  
**SECTION 101100 - VISUAL DISPLAY UNITS**

*JUNE, 2005 - UPDATED TO CHANGE TO 1997 NFPA "LIFE SAFETY CODE".*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of visual display boards is indicated on drawings.

*EDIT THE FOLLOWING TO SUIT PROJECT.*

- B. Types of visual display boards include the following:
1. Chalkboards.
  2. Markerboards.
  3. Multi-purpose visual display units.

**1.2 SUBMITTALS**

- A. Product Data: Submit mfr's product literature, indicating compliance with requirements.
- B. Shop Drawings: Indicate elevation, sections of trim members, and installation details.
- C. Samples for Initial Selection: Manufacturer's sample booklet of not less than 7 colors for porcelain enamel surfaces, and not less than 10 fabrics.

*INCLUDE BELOW FOR ALL PROJECTS.*

- D. Affidavits of Compliance to be included in final inspection manual: For each type of acoustical panel and tile, provide manufacturer's letter of certification showing compliance with requirements of 1997 NFPA 101 "Life Safety Code" Section 26-3.3 for Class A, B, or C as required by the Code. Letter shall include project number, project name, and building name.

**PART 2 - PRODUCTS**

*THE FOLLOWING IS MULTI-PURPOSE DISPLAY UNIT.*

**2.1 GRAPHIC PRESENTATION BOARD**

- A. Plastic laminate board and screen housing, and board cover doors. Self-edged plastic laminate construction, with concealed hinges, and as follows:
1. Size: 4 feet by 4 feet.
  2. Accessories:
    - a. Glass-beaded projection screen.
    - b. Markerboard and marker tray.
    - c. door mounted drawing paper pads with min. 50 sheets each.

3. Manufacturer: Subject to compliance with requirements, products of one of the following:  
Cig-Jan Products, Ltd.  
Da-Lite.  
Egan Visual.  
Marsh Chalkboard Co.; Div. Marsh Lumber Co.  
Polyvision Corp.

*BELOW IS STANDARD MARKERBOARD UNIT FOR SPECIAL FELT TIP MARKERS.*

## **2.2 MARKERBOARDS, PORCELAIN ENAMEL**

- A. Markerboards: Provide markerboard units with concealed mechanical fastening devices for wall mounting to indicated substrates, and complete with the following:

*SELECT ONE OF THE FOLLOWING - "C" CHANNEL TYPE (MOST COMMON) IS USED WITH PARTICLEBOARD BACKING (MOUNTING CLIPS ATTACH TO PARTICLEBOARD). MOUNTING CLIPS WITH SNAP-ON TRIM ARE USED WITH GYPSUM BOARD BACKING.*

1. Frames: Aluminum "C" channel type with concealed fasteners.
2. Frames: Mounting clip type with extruded aluminum snap-on trim.

*SELECT SOLID EXTRUSION BELOW WITH "C" CHANNEL TRIM - HOLLOW TYPE IS MORE SUBSTANTIAL AND MORE EXPENSIVE.*

3. Markertray: Solid aluminum extrusion type.
4. Markertray: Hollow extruded aluminum box type.

*INCLUDE BELOW IF DESIRED.*

5. Map Rail: Aluminum extrusion with tackable cork insert.

- B. Balanced, high pressure laminated porcelain enamel markerboards of 3 ply construction consisting of facing sheet, core material, and backing.

1. Facing Sheet: Enameling steel or iron sheet with low metaloid and copper content, able to withstand temperature of over 1,400 degrees as used in coating porcelain on steel for architectural purposes, and as follows:
  - a. Minimum Thickness: 0.299-inch (22 gage).
  - b. Chemically bathe steel sheets in potassium hydroxide and sodium metal silicate solution and rinse prior to enameling.
  - c. Apply minimum 0.0025-inch thick spray coat of nickel cobalt primer and silica to face opposite writing surface for adhesion of laminate.
  - d. Aluminum and aluminized cold-rolled steel are not acceptable.
2. Markerboard Cover Coat: Mfr's special writing surface with gloss finish intended for use with erasable liquid felt tipped markers, and as follows:

- a. Apply minimum 0.0025-inch thick spray coat of nickel cobalt primer to facing sheet. Writing surface to be minimum 0.003-inch thick fired porcelain frits. Panel edges at butt joints to be porcelain same as fronts. Low fired organic (paint) coated writing surfaces are not acceptable.
- b. Provide final writing surface with uniform texture, with reflectance factor between 15 and 20 percent, and with not less than 6.0 hardness on Moh's Scale. Writing surface shall not become slick and shiny through normal use.

*CONSULT CATALOG FOR ADDITIONAL AVAILABLE COLORS - USUAL SELECTION IS WHITE.*

- c. Color: White.
  - d. Color: Silver.
  - e. Color: Selected by Architect from Manufacturer's standard range.
3. Core: 1/2-inch thick gypsum board.
  4. Backing Sheet: Mfr's standard aluminum foil.
  5. Laminating Adhesive: Moisture-resistant, thermoplastic type.

- C. Manufacturers: Subject to compliance with requirements, provide products of one of the following:

Cig-Jan Products, Ltd.  
 Claridge Products and Equipment, Inc.  
 Marsh Chalkboard Co.; Div. Marsh Lumber Co.  
 Polyvision Corp.

*BELOW IS STANDARD CHALKBOARD.*

### 2.3 PORCELAIN ENAMEL CHALKBOARDS

- A. Chalkboards: Provide chalkboard units with concealed mechanical fastening devices for wall mounting to indicated substrates, and complete with the following:

*SELECT ONE OF THE FOLLOWING - "C" CHANNEL TYPE (MOST COMMON) IS USED WITH PARTICLEBOARD BACKING (MOUNTING CLIPS ATTACH TO PARTICLEBOARD). MOUNTING CLIPS WITH SNAP-ON TRIM ARE USED WITH GYPSUM BOARD BACKING.*

1. Frames: Aluminum "C" channel type with concealed fasteners.
2. Frames: Mounting clip type with extruded aluminum snap-on trim.

*SELECT SOLID EXTRUSION BELOW WITH "C" CHANNEL TRIM - HOLLOW TYPE IS MORE SUBSTANTIAL AND MORE EXPENSIVE.*

3. Chalktray: Solid aluminum extrusion type.
4. Chalktray: Hollow extruded aluminum box type.

*INCLUDE BELOW IF DESIRED.*

5. Map Rail: Aluminum extrusion with tackable cork insert.
- B. Balanced, high pressure laminated porcelain enamel chalkboards of 3 ply construction consisting of facing sheet, core material, and backing.

1. Facing Sheet: 24 gage enameling steel sheet especially processed for temperatures used in coating porcelain on steel Fuse cover and ground coats to the steel at the manufacturer's standard firing temperature.
2. Exposed Face: 3 coat process (primer, ground coat and color cover coat).
3. Concealed Face: 2 coat process (primer and ground coat).
4. Proprietary Facing Sheet: At the Contractor's option, provide 24 gage, "Vitracite" porcelain enamel clad aluminized steel facing sheet, as manufactured by Claridge Products and Equipment, Inc.
5. Chalkboard Cover Coat: Mfr's standard matte finish cover coat.

**SELECT FROM CHOICES BELOW OR CONSULT MANUFACTURER'S CATALOG.**

- a. Color: Dark Green.
  - b. Color: Black.
  - c. Color: Dark Brown.
  - d. Color: Selected by Architect from Manufacturer's standard range.
6. Core: Mfr's standard 3/8 inch thick particleboard core material complying with ANSI A208.1, Grade 1-M-1.
  7. Backing Sheet: Mfr's standard 0.015 inch thick aluminum backing sheet.
  8. Laminating Adhesive: Mfr's standard moisture-resistant, thermoplastic type adhesive.
- C. Manufacturers: Subject to compliance with requirements, provide products of one of the following:
- Cig-Jan Products, Ltd.  
 Claridge Products and Equipment, Inc.  
 Marsh Chalkboard Co.; Div. Marsh Lumber Co.  
 Polyvision Corp.

**2.4 BULLETIN BOARDS**

- A. Bulletin Boards: Provide bulletin board units with concealed mechanical fastening devices for wall mounting to indicated substrates, and complete with the following:

**SELECT ONE OF FOLLOWING.**

1. Frames: Aluminum "C" channel type with concealed fasteners.
2. Frames: Incorporate bulletin boards in chalk/markerboard frames.

**SELECT ONE OF THE BOARD TYPES BELOW.**

- B. Tackable, nominal 1/4-inch thick, resilient linoleum homogenous with integral color through board.
1. Product: Bulletin Board Cork; Forbo North America.
    - a. Color: SELECT COLOR .
- C. Vinyl fabric on fire retardant resilient tackable backing board; ASTM E-84, Class A.
1. Fabric: Tackboard manufacturer's standard.
    - a. Fabric Pattern: Burlap.

- b. Color: insert selection .
- D. Polyester cloth fabric, plain weave with edges wrapped on fire retardant resilient tackable backing board; ASTM E-84, Class A.
  - 1. Fabric Manufacturer: Guilford of Maine Div. Interface Co.
    - a. Color: insert selection .
- E. Manufacturers: Subject to compliance with requirements, provide products of one of the following:
  - Cig-Jan Products, Ltd.
  - Claridge Products and Equipment, Inc.
  - Marsh Chalkboard Co.; Div. Marsh Lumber Co.
  - Polyvision Corp.

*INCLUDE BELOW WITH EITHER CHALKBOARD OR MARKERBOARD SURFACES -  
MODIFY OR DELETE ALL FOR PROJECTS WITH BULLETIN BOARDS ONLY*

**2.5 ACCESSORIES**

- A. Metal Trim: 0.062 inch thick aluminum, manufacturer's standard channel size and shape; minimize number of joints. Miter corners to a neat, hairline closure.

*DELETE PARAGRAPH ABOVE OR BELOW*

- B. Field-Applied Trim: Mfr's standard snap-on trim, with no visible screws or exposed joints.
- C. Clear Anodized Finish: Mfr's standard color anodized satin finish with hardcoat anodic coating AA Class I integral Color Coating (AA-442), color as selected.
- D. Chalk/Markertray: Mfr's standard continuous, box type aluminum with slanted front and cast aluminum end closures.

*INCLUDE THE FOLLOWING IF MARKERBOARDS HAVE BEEN SELECTED*

- E. Erasable Liquid Markers: Provide a carton containing not less than 5 markers, each a different color, of type recommended by markerboard manufacturer.

**2.6 FABRICATION**

- A. Factory assemble units with a minimum number of joints balanced about the center of units, as acceptable to the Architect.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Comply with mfr's print instructions. Include grounds, clips, backing materials, brackets and anchors, trim and accessories required for a complete installation.
- B. Clean units and repair or replace defective and damaged components to the satisfaction of the Architect.

**DIVISION 10 SPECIALTIES**

SECTION 101400 - SIGNAGE

**END OF CONTENTS TABLE**

**DIVISION 10 SPECIALTIES**  
**SECTION 101400 - SIGNAGE**

**PART 1 - GENERAL**

*AN ALTERNATIVE TO THIS SECTION IS TO INCLUDE A LINE ITEM IN THE BUDGET FOR PLANT TO PROVIDE SIGNAGE FOR THE PROJECT. USING PLANT MAY RESULT IN FEWER PROBLEMS AND COST-OVERRUNS.*

*MAY 2007 "STANDARD" MEDICAL SCHOOL SIGN SECTION REMOVED. FOR MEDICAL SCHOOL PROJECTS, CONSULT WITH MEDICAL SCHOOL FACILITIES OFFICE. FOR RENOVATION PROJECTS, SIGNAGE IS TYPICALLY PROVIDED BY OWNER.*

*COORDINATE EVACUATION PLAN REQUIREMENTS WITH USER AND AEC UPO GUIDELINES (CONTACT JULIE TRUETTNER.*

**1.1 SUMMARY**

*SELECT ONE OF THE FOLLOWING.*

- A. Extent of signage is indicated on drawings and in schedule.
- B. Extent of signage is indicated by provisions of this Section.
- C. Types of signage include the following:

*EDIT BELOW TO SUIT PROJECT.*

- 1. Room number signs.
- 2. Room identification signs.
- 3. General identification signs.

**1.2 SUBMITTALS**

- A. Shop Drawings: Indicate unit dimensions and configuration. Include schedule indicating proposed room numbers and labels.

**1.3 QUALITY ASSURANCE**

- A. Standards: Unless otherwise indicated, comply with current edition of State of Michigan Department of Labor Building Code Rules pertaining to barrier-free signage.

**PART 2 - PRODUCTS**

*SELECT FROM TWO TYPES INDICATED BELOW.*

**2.1 STAMPED METAL SIGNAGE**

- A. Stamped Metal Signs: Manufacturer's standard aluminum units with smooth, polished raised areas and textured black background areas and with design matching existing adjacent units.
  - 1. Size: Match existing adjacent units.

2. Lettering: Match existing adjacent units.

**SELECT ONE MOUNTING TYPE BELOW.**

3. Mounting Type: Mechanically fastened.

4. Mounting Type: Adhered to substrate.

B. Manufacturer: The Supersine Company.

**BELOW IS STANDARD U OF M PLASTIC SIGN.**

**2.2 ACRYLIC-PLASTIC SIGNAGE**

A. Acrylic-Plastic Signs with Raised Copy: Supersine style "SS", as modified for University of Michigan use and as follows:

1. Faceplate: Acrylic plastic, as follows:

**SELECT SIZE - USE 7-1/2 INCH SIGNS TO COORDINATE WITH 8 BY 8 SCORED CONCRETE MASONRY UNITS.**

a. Size: 6 inch by 6 inch by 1/8 inch thick.

b. Size: 7-1/2 inch by 7-1/2 inch by 1/8 inch thick.

**SELECT CORNER TYPE.**

c. Corners: Radiused, 3/4 inch.

d. Corners: Square cut, without radius.

2. Card Slot: 2 inch by 4-3/4 inch. Omit card slot on toilet room and stair signs.

3. Back-up Plate: Clear acrylic plastic; 1/16 inch thick.

4. Letters and Numerals: 1-1/2 inch raised Helvetica face.

5. Colors: Provide units of the following colors:

**REFER TO SAMPLES FOR FULL SELECTION OF COLORS AND GLOSS.**

a. Faceplate: "Plexiglas P-95" or equivalent, opaque and as follows:

**SELECT GLOSS BELOW.**

1) Gloss: X-Gloss (flat).

2) Gloss: Gloss (polished).

**SELECT COLOR BELOW.**

3) Color: Black No. 2025.

4) Color: Dark Brown No. 2518.

5) Color: Blue No. 2114.

b. Letters and numerals: Opaque white.

**EDIT THE FOLLOWING TO SUIT PROJECT.**

**2.3 FABRICATION**

A. Numerals and Letters: Fabricate signs to indicate room number and suffix letter, if any, in raised numerals and letters on signs.

1. At toilet rooms indicate "MEN" or "WOMEN" and at stairway doors indicate "STAIR", all without room numbers.

2. Braille: Provide each sign with a braille message strip indicating room number or "Toilet" or "Stair" message.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

*SELECT ONE OF THE FOLLOWING.*

- A. Mechanically mount signs with manufacturer's standard anchoring system for indicated substrate.
- B. Mount with adhesive tape system adequate to hold signs of indicated size on indicated substrate material.

*INCLUDE ADHESIVE BELOW IF DESIRED.*

- 1. Apply silicone adhesive to sign back for permanent mounting.
- 2. Unless otherwise indicated, mount signs in corridors on latch side of doors, 5 feet above finished floor height.

**3.2 SIGNAGE SCHEDULE**

- A. Provide one room sign at the following locations:

*EDIT LIST BELOW TO BE PROJECT SPECIFIC (ROOM SIGNS, AREA OF REFUGE SIGNS, EMERGENCY EVACUATION PLANS, ETC). NOTE THAT FOR ALL NEW CONSTRUCTION AND MAJOR RENOVATION PROJECTS, EMERGENCY EVACUATION PLANS SHOULD BE INCLUDED AS PART OF INTERIOR SIGNAGE PACKAGE.*

*COORDINATE EVACUATION PLAN REQUIREMENTS WITH USER AND AEC UPO GUIDELINES.*

- 1. Each new door.
- 2. As shown on drawings.

SECTION 102113 - TOILET COMPARTMENTS

**END OF CONTENTS TABLE**

**DIVISION 10 SPECIALTIES**  
**SECTION 102113 - TOILET COMPARTMENTS**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of toilet compartments is indicated on drawings.
- B. Types of toilet compartments include the following:

*EDIT THE FOLLOWING TO SUIT PROJECT.*

- 1. Floor supported.
  - 2. Wall supported.
  - 3. Ceiling-hung.
- C. Support steel for ceiling-hung units is specified in Division 05 Section "Metal Fabrications".

**1.2 SUBMITTALS**

- A. Product Data: Mfr's product literature indicating compliance with requirements, and installation instructions.

*INCLUDE BELOW IF STATE FIRE MARSHAL WILL REVIEW PROJECT.*

- B. Affidavits of Compliance: For each type of partition material not bearing the label of a testing agency approved by the State of Michigan Fire Marshal, provide manufacturer's letter of certification showing compliance with requirements of 1997 NFPA 101 "Life Safety Code" Section 26-3.3 for Class I or II as required by the Code.

**PART 2 - PRODUCTS**

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturer: Subject to compliance with requirements, provide metal toilet partitions manufactured by one of the following:

All American Metal Corp.  
Flush-Metal Partition Corp.  
Hadrian Manufacturing Inc.  
Mills-Metal Co.

**2.2 MATERIALS**

- A. Sheet Steel: ASTM A 591, Class C, galvanized-bonderized, of following minimum thicknesses:

*EDIT BELOW TO SUIT PROJECT.*

- 1. Pilasters: 18 gage.
- 2. Panels and Screens: 22 gage.
- 3. Doors: 22 gage.
- 4. Concealed Reinforcement for Anchorages: 12 gage.
- 5. Concealed Reinforcement for Tapping: 14 gage.

- B. Core Materials: Mfr's standard sound-deadening, honeycomb, impregnated Kraft paper core.
- C. Stirrup Brackets: Mfr's standard, non-ferrous alloy with satin chrome finish.

**2.3 HARDWARE AND ACCESSORIES**

- A. Provide Mfr's standard, ADA compliant, heavy-duty operating hardware and accessories, non-ferrous cast alloy with satin chrome finish.
- B. Anchorages and Fasteners: Mfr's standard theft-proof exposed fasteners, finish to match hardware.

**2.4 FABRICATION**

- A. Pressure laminate face sheets to core, edges sealed with continuous locking strip or lapped and formed edges. Miter and weld corners with welds ground smooth.
  - 1. Furnish units with cut-outs, drilled holes, and internal reinforcement to receive partition mounted hardware, accessories, and grab bars, as indicated.
- B. Doors and Panels: Not less than 1 inch thick units, size shown.
  - 1. For wall-supported units, fabricate panels of two sheets of steel with internal reinforcing to form a "V" shaped unit approximately 6 inch wide at wall edge and tapered to approximately 1 inch wide at pilaster edge.
- C. Ceiling-Hung Pilasters: 1-1/4 inch thick units with galvanized steel anchorage devices for securing to overhead support. Provide 3 inch stainless steel top trim piece, finished to match hardware.

**SELECT ABOVE OR BELOW.**

- D. Floor Mounted Pilasters: 1-1/4 inch thick units with stainless steel anchorage devices for securing to floor. Provide 3 inch stainless steel bottom trim piece, finished to match hardware.
- E. Hardware and Accessories: Chromium-plated finish, unless otherwise indicated. Apply the following accessories to panels and doors, one each compartment unless otherwise indicated:
  - 1. Hinges: Either surface-mounted or cutout inset type, Adjustable to hold door open at any angle up to 90 degrees.
  - 2. Latch and Keeper: Recessed latch unit, with combination rubber-faced door strike and keeper.
  - 3. Barrier-Free Latch and Keeper: At each outswinging partition door, in addition to standard hinges, coat hook and other specified hardware, provide manufacturer's standard ADA-compliant latch and keeper. In addition, provide the following:
    - a. Handles: Provide manufacturer's standard ADA-compliant pull handles on both the interior and exterior sides of partition doors.
  - 4. Coat Hook and Bumper: Mfr's standard unit, rubber tipped.
  - 5. Door Pulls: Mfr's standard, exterior of standard stall doors; and both sides of barrier-free stall doors.

F. Baked Enamel Finish: As selected from mfr's standard colors.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Install partitions rigid, straight, plumb and level in accordance with mfr's printed instructions. Set units with not more than 1/2 inch between pilasters and panels, and not more than 1 inch clearances between panels and walls.
- B. Hardware Adjustments: Adjust and lubricate hardware for proper operation after installation.
  - 1. Set hinges on in-swing doors to hold doors open approximately 30 degrees from the closed position when unlatched.
  - 2. Set hinges on out-swing doors to return to fully closed position.
- C. Cleaning and Final Adjustments: Perform final adjustments to leveling devices, door hardware, and other operating parts. Clean exposed surfaces and touch up minor finish imperfections using materials and methods recommended by partition mfr.
  - 1. Replace damaged units which cannot be satisfactorily field repaired, as directed by Architect.

**DIVISION 10 SPECIALTIES**

SECTION 102213 - WIRE MESH PARTITIONS

**END OF CONTENTS TABLE**

**DIVISION 10 SPECIALTIES**  
**SECTION 102213 - WIRE MESH PARTITIONS**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of wire mesh partitions is shown on drawings.

*DELETE BELOW AND SPECIFY CYLINDERS IN THIS SECTION IF NO  
HARDWARE SECTION IS INCLUDED IN SPECIFICATION.*

- B. Lock Cylinders are included in Division 08 Section "Door Hardware".

**1.2 QUALITY ASSURANCE**

- A. Manufacturer: Provide wire mesh partitions as complete units produced by a single manufacturer, including necessary mounting accessories and fasteners.
- B. Field Measurements: Where possible, field measure prior to preparation of shop drawings. Where field measurements cannot be obtained without delay of the work, fabricate units to allow for field adjustments and fitting.

**1.3 SUBMITTALS**

- A. Product Data: Submit manufacturer's technical data indicating compliance with requirements and manufacturer's installation instructions.
- B. Shop Drawings: Submit shop drawings for fabrication and erection of wire mesh partitions. Include plans, elevations, and large scale details showing anchorage and accessory items.

**PART 2 - PRODUCTS**

*SYSTEM SPECIFIED BELOW IS FOR STANDARD MESH PARTITIONS - TO  
SPECIFY SPECIAL TYPES, OR ECONOMY OR HEAVY DUTY GRADES,  
CONSULT MFR'S LITERATURE.*

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturer: Subject to compliance with requirements, products of one of the following:
- Acme.
  - Kentucky Metal Products Co.
  - Logan, Div. Spaceguard Co.
  - Phoenix Co.
  - Miller Wire Works.
  - Wipco, Div. Jesco Industries, Inc.
  - Wirecrafters Co.

## 2.2 MATERIALS AND FABRICATION

- A. General: do not use components less than sizes indicated; use larger size components as recommended by partition manufacturer for indicated application.

### *SELECT COMPONENTS TO SUIT PROJECT REQUIREMENTS.*

- B. Mesh: 10-gage (0.135 inch) crimped steel wire woven into 1-1/2 inch mesh securely clinched to frame members.
- C. Frames: Provide cutouts for pipes, ducts, beams, and other items shown or necessary for partition installation. Finish edges of cutouts to provide a neat, protective edge.
1. Vertical Members: 1-1/4 inch by 5/8 inch cold-rolled steel C-section channels with 1/4 inch bolt holes approximately 15 inches o.c.
  2. Horizontal Members: 1 inch by 1/2 inch by 1/8 inch cold-rolled steel channels, mortised and tenoned to vertical members.
  3. Horizontal Reinforcing Members: 1 inch by 1/2 inch by 1/8 inch cold-rolled steel channel with wire woven through, or two 1 inch by 3/8 inch channels bolted or riveted to each side of mesh, and secured to vertical members. Provide number of horizontal reinforcing members to suit panel height as recommended by partition manufacturer.

### *DELETE BELOW IF PARTITION HEIGHT DOES NOT EXCEED 8 FEET.*

- D. Stiffening Bars: For free-standing partitions over 8 feet in height, provide flat bar stiffener posts between abutting panel frames. Size as recommended by partition manufacturer for partition height required. Increase size of stiffening bars if required to maintain partition rigidity.

### *DELETE BELOW IF TOP TIED TO OVERHEAD CONSTRUCTION.*

- E. Top Capping Bars: 2-1/4 inch by 1 inch cold-rolled steel channels, secured to top framing channel with 1/4 inch U-bolts spaced not more than 28 inches o.c.
- F. Corner Posts: 1-1/4 inch by 1-1/4 inch by 1/8 inch angles with 1/4 inch bolt holes to align with bolt holes in vertical frame members, and floor plate.

### *DELETE BELOW IF ALL CORNERS 90 DEG.*

1. For other than 90 deg. intersections use manufacturer's recommended tubular corner posts and installation accessories.
- G. Floor Shoes: Cast iron, sized to suit vertical framing and to provide approximately 3 inches clear space between finished floor and bottom horizontal frame members. Furnish units with set screw for leveling adjustment.
- H. Sheet Metal Base: Panels formed of 16-gage steel sheet, welded or bolted to frames.

- I. Hinged Door: Door frame of 1-1/2 inches by 1/2 inches by 1/8 inch channel with 1-1/4 inch by 1/8 inch flat bar cover plate on 3 sides, and matching 1/8 inch angle strike bar and cover on lock side. Provide 1-1/2 pair butt hinges welded to door and frame, and bronze mortise type cylinder lock operated by key outside and recessed knob inside. Align bottom of door with bottom of adjacent panels.

**DELETE BELOW IF CYLINDERS ARE SPECIFIED IN SECTION 087100 "DOOR HARDWARE".**

1. Manufacturer/Model of Cylinders: Best Co., only. Contact University of Michigan Key Office for cylinder information.
- J. Sliding Door: Door frame of 1-1/2 inches by 3/4 inches by 1/8 inch channel with 1-1/2 inch by 1/8 inch flat bar cover plate on all 4 sides. Provide door with two 4-wheel roller bearing carriers, box track, bottom guide channel and bronze mortise type cylinder lock operated by key outside and recessed knob inside. Align bottom of door with bottom of adjacent panels.

**DELETE BELOW IF CYLINDERS ARE SPECIFIED IN SECTION 087100 "DOOR HARDWARE".**

1. Manufacturer/Model of Cylinders: Best Co., only. Contact University of Michigan Key Office for cylinder information.
- K. Service Window: size as shown or, if not shown, 24 inches wide by manufacturer's standard height. Fabricate of same mesh and frames as panel units, arranged to lock in open and closed positions with spring catches.
- L. Service Window Shelf: Size as shown or, if not shown, approximately 12 inches deep and 24 inches wide. Fabricate of 12-gage steel, flanged front and back, edges finished smooth, with side brackets for support.

**DELETE BELOW IF NOT REQUIRED.**

- M. Line Posts: Where partition run exceeds 20 feet without intersection or connection to overhead framing, furnish manufacturer's standard line posts and base plates located at recommended intervals to ensure partition rigidity and stability.

**MOST MANUFACTURERS LIMITED TO GRAY - SOME HAVE GREEN AND BLACK AVAILABLE. CHECK WITH MANUFACTURERS.**

- N. Finish: Provide manufacturer's standard shop-applied enamel finish.
1. Provide finish colors of materials for wire mesh partitions and accessories as indicated or, if not indicated, as selected by Architect from manufacturer's standard color range.
- O. Provide bolts, hardware, and accessories recommended by manufacturer's printed installation instructions and as required for a complete, secure installation.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Erect partitions plumb, rigid, properly aligned, and securely fastened in place, complying with drawings and manufacturer's recommendations.
- B. Provide additional field bracing as shown or necessary for rigid, secure installation.

**3.2 ADJUST AND CLEAN**

- A. Adjust moving components for smooth operation without binding.
- B. Touch-up damaged finish after completion of installation using field-applied paint to match color of shop applied finish.

**SPECIFICATION DIVISION 10**

NUMBER            SECTION DESCRIPTION

**DIVISION 10 SPECIALTIES**

SECTION 102239 - FOLDING PANEL PARTITIONS

**END OF CONTENTS TABLE**

**DIVISION 10 SPECIALTIES**  
**SECTION 102239 - FOLDING PANEL PARTITIONS**

**1.1 SUMMARY**

- A. This Section includes manually operated, acoustically rated assemblies, consisting of the following:

*SELECT APPROPRIATE TYPE BELOW, USUALLY CONTINUOUS SEQUENCE.*

1. Individual, unlinked panels.
  2. Panels hinged in pairs.
  3. Panels hinged in continuous sequence.
- B. Related Sections: The following sections contain requirements that relate to this Section:
1. Division 05 Section "Metal Fabrications" for miscellaneous framing and supports.
  2. Plenum barriers are specified in Division 09 Section "Gypsum Board Assemblies"

**1.2 SUBMITTALS**

- A. Product data on physical characteristics, durability, resistance to fading, and flame spread characteristics for each type of folding fabric partition and accessory specified.
- B. Shop drawings showing location and extent of folding panel partitions. Include plans, elevations, large-scale details of anchorages, and accessory items. Indicate unit conditions at openings, typical and special details, and location and installation requirements for hardware. Indicate direction of travel and static and dynamic loading on the building structure.
- C. Template drawings prepared by manufacturer showing location of items supported or anchored by permanent construction.
- D. Samples for verification purposes of each type of material exposed to view. Include samples of each panel facing material selected.
- E. Acoustical Certification from an independent testing agency stating that product and materials furnished comply with specified requirements. Include certified laboratory testing data indicating that panels and materials meet specified test requirements. Include STC and NRC ratings and square foot weight of panel.

**1.3 SYSTEM PERFORMANCE REQUIREMENTS**

- A. Acoustical Performance: Provide folding panel partitions tested by independent testing laboratory acceptable to Owner, for the following acoustical properties, according to the test methods indicated:
1. Sound Transmission Requirements: Folding panel partition assembly tested in a full-scale opening (14 feet by 9 feet) for laboratory sound transmission loss performance in accordance with ASTM E 90, determined by ASTM E 413 and rated for a STC plus or minus 1 as indicated:

**INSERT APPLICABLE RATING.**

2. Sound Transmission Class (STC): 49.
3. Noise Reduction Requirements: Folding panel partition assembly tested by a qualified independent laboratory for compliance with ASTM C 423 and rated for a NRC as indicated:

**INSERT APPLICABLE RATING.**

- a. Noise Reduction Coefficient (NRC): INSERT .

**1.4 QUALITY ASSURANCE**

- A. Single-Source Responsibility: Provide units and accessories of a single manufacturer.

**1.5 DELIVERY, STORAGE AND HANDLING**

- A. Deliver materials to project site in original factory wrappings and containers, clearly labeled with identification of manufacturer, brand name, quality or grade, and lot number.
- B. Store panels only on edge, blocked off ground to prevent sagging and warping in original undamaged packages and containers, inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.
- C. Comply with instructions and recommendations of manufacturer for special delivery, storage, and handling requirements.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:  
Foldoor/Holcomb and Hoke Mfg. Co.  
Hufcor, Inc. (Hough Mfg. Corp.)  
Modernfold, Inc.  
Panelfold, Inc.

**2.2 PANEL CONSTRUCTION**

- A. Face Sheets: Top reinforcing as required to support suspension components. Internal insulation as required to achieve specified acoustical rating.

**THE FOLLOWING VARY WITH MANUFACTURER - CONSULT AIA MASTERSPEC FOR GENERIC MINIMUM VALUES.**

1. Face Sheets for Steel Frames: Minimum 0.838 inch (21 gage) cold-rolled steel welded to minimum 1.390 inch (16 gage) steel channel frame, factory-fabricated panels, free of joints in faces.
2. Panel Thicknesses: 3 inches.
3. Panel Weight: 12 psf maximum as determined by panel construction, surface covering, and accessories.

4. Hardware: Manufacturers standard, finished to match exposed hardware on partition.

### 2.3 SUSPENSION SYSTEMS

- A. Carriers: Four wheel at lead post and two wheel at intermediate spacing as required for size and weight of partition for ease of operation.
- B. Suspension Tracks: Heavy-duty steel or aluminum, with overhead supports of adjustable steel hanger rods; heavy-duty, ball-bearing, trolley system supports specifically designed for use with size and type folding panel partition assembly indicated. Track deflection independent of structural support system no more than 1/360th of opening width.

### 2.4 FINISH SURFACE

- A. Finish Face: Manufacturer's standard primed steel.
- B. Materials: Manufacturer's standard mildew resistant vinyl, complying with FS CCC-W-408A for Type 1 material.

### 2.5 POSTS AND SEALS

- A. Lead posts and jamb posts formed to provide rigidity for partition and light seal at adjacent construction.
  1. Post Type: Floating or attached multiple meeting post with 2-way meeting arrangements.
- B. Sound Seals: Perimeter sweep strips for each side, top, and bottom; providing continuous contact with head and sill surfaces for positive light and sound seal. Include manufacturer's standard male and female sound and light seal at lead posts and jambs.
- C. Vertical Seals: Deep nesting, interlocking astragals with continuous vinyl acoustical seal.
- D. Horizontal Top Seals: continuous contact extruded vinyl or mechanical retractable vinyl-faced seal exerting positive pressure on track when extended.
- E. Horizontal Bottom Seals: Retractable seal exerting positive pressure downward assuring horizontal and vertical sealing and resisting panel movement. Minimum clearance between retractable seal and floor finish shall be 1 inch.
  1. Extension/retraction of bottom seal by operating handle or built-in operating mechanism. Holes in panel faces not permitted. Include 2 handles per partition.
- F. Final Closure: Positive mechanical closure expanding from panel edge to create positive acoustical seal.
  1. Type: Jamb hinged closure.

**PART 3 - EXECUTION**

**3.1 EXAMINATION**

- A. Examine flooring for compliance with requirements for installation tolerances and other conditions affecting performance of folding partitions. Do not proceed with installation until unsatisfactory conditions have been corrected.

**3.2 INSTALLATION**

- A. Install folding panel partitions and accessories in compliance with ASTM E 557 after other finishing operations including painting, have been completed.
- B. Install folding panel partitions in conformance with drawings and approved shop drawings and in strict compliance with manufacturer's written installation instructions.
- C. Match folding panel partitions for color and pattern by installing partitions from cartons in same sequence as manufactured and packaged, if so numbered. Broken, cracked, chipped or deformed partitions are not acceptable.
- D. Repair or replace folding panel partitions within areas where test results indicate partitions do not comply with requirements and retest partitions.

**3.3 ADJUSTING**

- A. Lubricate bearings and sliding parts; adjust to ensure smooth, easy operation.

**3.4 CLEANING**

- A. Clean all folding partition surfaces and clean adjacent surfaces soiled by work of this section. Avoid use of abrasive cleaners or solutions containing corrosive solvents. Use cleaning materials recommended by manufacturer.

SECTION 102800 - TOILET AND BATH ACCESSORIES

**END OF CONTENTS TABLE**

**DIVISION 10 SPECIALTIES**  
**SECTION 102800 - TOILET AND BATH ACCESSORIES**

**REVISION HISTORY:**

**SEPT. 04 - UPDATED MANUFACTURERS AND CHANGED TOILET PAPER AND PAPER TOWEL DISPENSERS PRODUCT INFO. TO REFLECT THAT THESE ARE PROVIDED BY OWNER.**

**APRIL 05 - ADDED DIAPER CHANGING STATIONS.**

**MAY 07 - CHANGED SOAP DISPENSER PRODUCT INFO. TO REFLECT THAT THESE ARE PROVIDED BY OWNER.**

**PART 1 - GENERAL**

**GENERAL EDITING / COORDINATION NOTES:**

**TOILET PAPER, PAPER TOWEL, AND SOAP DISPENSERS ARE TYPICALLY PROVIDED BY BUILDING SERVICES FOR CONTRACTOR INSTALLATION. THIS ASSURES THAT UNIT SUPPLIED IS COMPADIBLE WITH PAPER / SOAP PRODUCTS PURCHASED FOR MAINTENANCE. IF OTHER UNITS ARE SELECTED, COORDINATE WITH DESIGN MANAGER TO COMMUNICATE MAINTENANCE REQUIREMENTS TO USER.**

**USING OWNER SUPPLIED UNITS DOES NOT ALLEVIATE ARCHITECT OF THE RESPONSIBILITY TO COORDINATE WALL MOUNTED ITEMS WITH ALL ADA REQUIREMENTS AND COMMUNICATING THOSE INSTALLATION REQUIREMENTS TO THE CONTRACTOR.**

**CATALOG NUMBERS USED IN THIS SECTION DO NOT REPRESENT AN EXHAUSTIVE LISTING OF ALL POSSIBLE UNITS. CONSULT MANUFACTURERS CATALOG WHEN EDITING THIS SECTION.**

**1.1 SUMMARY**

- A. Extent of toilet accessories is shown on drawings.
- B. Types of toilet accessories include the following:

**EDIT BELOW TO SUIT PROJECT.**

Grab bars.  
Soap dispensers.  
Toilet paper dispenser.  
Paper roll towel dispenser.  
Electric hand dryers  
Fold-down shower seats.  
Shower curtain rods.  
Sanitary napkin/tampon dispensers.  
Folding purse shelf.  
Sanitary napkin/tampon disposal units.  
Stainless steel shelves.  
Janitorial utility shelves.  
Mirror units.

- C. Waste paper baskets are included in Division 12 Section "Furnishing Accessories."
- D. For accessories noted in Products section as provided by Owner, coordinate with Owner's Representative to obtain from UM Plant Building Services.

**1.2 SUBMITTALS**

- A. Product Data: Submit mfr's literature indicating compliance with requirements, and installation instructions.

**PART 2 - PRODUCTS**

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturer: Subject to compliance with requirements, provide products of one of the following:
  - 1. Toilet Accessories:
    - American Specialties, Inc.
    - Bobrick Washroom Equip., Inc.
    - Bradley Corp.
    - Elcoma Metal Fabricating (grab bars and shower seats only).
    - Gamco (except for shower seats and counter soap dispensers)
    - Koala Kare Products, a division of Bobrick

**2.2 TOILET ACCESSORIES**

- A. General: Provide toilet accessories as indicated or scheduled. Install units at locations and heights as indicated, plumb and level, firmly anchored, in accordance with mfr's instructions.

**2.3 MATERIALS**

- A. Stainless Steel: AISI Type 3-2/304, with polished No. 4 finish, 22 gage minimum, unless otherwise indicated.
- B. Fasteners: Screws, bolts, and other devices of same material as accessory unit or of galvanized steel where concealed.

**2.4 FABRICATION**

- A. General: Stamped names or labels on exposed faces of toilet accessory units are not permitted. Wherever locks are required for particular type of accessory, provide same keying throughout project. Furnish two keys for each lock, properly identified.
- B. Surface-Mounted Accessories: Fabricate units with tight seams and joints, exposed edges rolled. Hang doors or access panels with continuous piano hinge or minimum of two 1-1/2 inch long pin hinges of same metal as unit cabinet.

**DELETE ABOVE OR BELOW OR RETAIN BOTH TO SUIT PROJECT.**

- C. Recessed Accessories: Fabricate units of all welded construction, without mitered corners. Hang doors or access panels with full-length stainless steel piano hinge. Provide anchorage which is fully concealed when unit is closed.

## 2.5 GRAB BARS

*NOTE: ICC/ANSI A117.1 2003 REQUIRES BOTH VERTICAL AND HORIZONTAL BARS.*

*PART NUMBER LISTED BELOW IS A SERIES NUMBER AND IS AVAILABLE IN MULTIPLE CONFIGURATIONS AND LENGTHS. PROVIDE ELEVATIONS ON DRAWINGS SHOWING CONFIGURATION, TYPES OF BARS, LOCATIONS, AND MOUNTING HEIGHTS. COORDINATE WITH TOILET PAPER DISPENSER AND OTHER WALL MOUNTED ITEMS IN ROOM / STALL.*

- A. Provide stainless steel grab bars with wall thickness not less than 18 gage and as follows:
1. Mounting: Concealed.
  2. Gripping Surface: Manufacturer's standard non-slip texture.
  3. Size: Outside diameter 1-1/2 inch by dimensions indicated.
  4. Product: Bobrick B-6806 series of configuration and dimensions shown; or, subject to compliance with requirements, equivalent products of other approved mfrs.

## 2.6 WALL MOUNTED SOAP DISPENSERS

*WALL MOUNTED SOAP DISPENSERS ARE PROVIDED BY BLDG. SERVICES FOR INSTALLATION BY THE CONTRACTOR. ARCHITECT IS RESPONSIBLE TO VERIFY COMPLIANCE WITH PROJECT REQUIREMENTS AND PROVIDE INSTALLATION INFORMATION, INCLUDING MOUNTING HEIGHTS AND LOCATIONS. PM ORDERS DURING CONSTRUCTION. THE FOLLOWING IS STANDARD MODEL FROM SPARTAN:*

*FOAM DISPENSER (ADA COMPLIANT IF PROPERLY LOCATED): 9756*

- A. Wall mounted liquid soap dispensers are provided by Owner for installation by Contractor.

## 2.7 COUNTER-MOUNTED SOAP DISPENSERS

*OPTIONS FOR UNIT BELOW INCLUDE POLISHED BRASS COVER AND SPOUT, 4-INCH LONG SPOUT, AND 20-OZ. RESEVOIR. SEE CATALOG FOR APPROPRIATE MODEL NUMBER.*

*NOTE THAT BUILDING SERVICES DOES NOT FILL UNITS THAT THEY DO NOT SUPPLY.*

- A. Liquid soap dispenser for counter mounting, complete with 4-inch long shank, and optional 6-inch spout. Capable of filling from top. Stainless steel spout/cover and 34 oz. capacity polyethylene reservoir. Provide units with matching stainless above-counter shank extension if required to suit application.
1. Product: Bobrick B-8226; or, subject to compliance with requirements, equivalent products of other approved mfrs.

2.8 TOILET PAPER DISPENSERS

TOILET PAPER DISPENSERS ARE PROVIDED BY BLDG. SERVICES FOR INSTALLATION BY THE CONTRACTOR. ARCHITECT IS RESPONSIBLE FOR SELECTING UNITS FROM BELOW THAT MEET PROJECT AND ADA REQUIREMENTS AND COMMUNICATING SELECTIONS TO DM / PM. ARCHITECT IS ALSO RESPONSIBLE FOR PROVIDING INSTALLATION INFORMATION, INCLUDING MOUNTING HEIGHTS AND LOCATIONS. PM ORDERS DURING CONSTRUCTION. THE FOLLOWING ARE STANDARD MODELS FROM KIMBERLY-CLARK:

JUMBO JRT CORED DISPENSER (TYPICAL PREFERRED TYPE, 2 ROLLS SIDE BY SIDE): 09551 -- 1 OF THE 2 ROLLS CAN BE ADA COMPLIANT IF PROPERLY LOCATED

CORELESS JRT (2 ROLLS SIDE BY SIDE - USE ONLY IF STANDARD PAPER IN BUILDING IS CORELESS, NOT TYPICAL): 09608 -- 1 OF THE 2 ROLLS CAN BE ADA COMPLIANT IF PROPERLY LOCATED

STACKED DOUBLE ROLL DISPENSER (NOT RECOMMENDED IN PUBLIC RESTROOMS, ADA COMPLIANT IF PROPERLY LOCATED): 09021

- A. Toilet paper roll dispensers are provided by Owner for installation by Contractor.

2.9 PAPER ROLL TOWEL DISPENSER

PAPER TOWEL DISPENSERS ARE PROVIDED BY BLDG. SERVICES FOR INSTALLATION BY THE CONTRACTOR. ARCHITECT IS RESPONSIBLE FOR SELECTING UNITS FROM BELOW THAT MEET PROJECT AND ADA REQUIREMENTS AND COMMUNICATING SELECTIONS TO DM / PM. ARCHITECT IS ALSO RESPONSIBLE FOR PROVIDING INSTALLATION INFORMATION, INCLUDING MOUNTING HEIGHTS AND LOCATIONS. PM ORDERS DURING CONSTRUCTION. THE FOLLOWING ARE STANDARD MODELS FROM KIMBERLY-CLARK:

ROLL TOWEL DISPENSER (LEVER HANDLE OPERATED, ADA COMPLIANT IF PROPERLY LOCATED): 09736

TOUCH FREE DISPENSER (MECHANICAL UNIT, NOT ADA COMPLIANT): 09990

NOTE 10-1/2" DEPTH AND COORDINATE WITH ADA REQUIREMENTS.

- A. Paper roll towel dispensers are provided by Owner for installation by Contractor.

2.10 ELECTRIC HAND DRYERS

USUALLY DELETE THIS ARTICLE. UNIVERSITY POLICY IS TO PROVIDE ROLL TOWEL DISPENSERS IN MOST APPLICATIONS. OPTIONS INCLUDE COLORS FOR HOUSING.

- A. Surface mounted, dedicated electric operated hand-drying unit with one-piece, white vitreous enamel coated, grey-iron casting cover. Provide units with solid state electronic timer. Power characteristics: 115V, 20 amp, single phase, 2300 watts.
  - 1. Product: Bobrick B-701; or subject to compliance with requirements, equivalent products of other approved mfrs.

**2.11 SHOWER SEAT**

- A. Padded, fold-down seat constructed with Type 304 stainless steel framing and with self-locking mechanism. For units on wood stud framing, provide concealed backing at screw points.
  - 1. Product: Bobrick B-517 (right hand) or B-518 (left hand) as indicated; or subject to compliance with requirements, equivalent products of other approved mfrs.

**2.12 SHOWER CURTAIN ROD**

- A. Extra-heavy-duty; 18-gauge type 302 stainless steel tubing with satin finish; 1-1/4 inch outside diameter; 1/8 inch thick die-cast, single piece flange; length as shown on drawings, or if not shown, 36 inches.
  - 1. Product: Bobrick B-6047; or subject to compliance with requirements, equivalent products of other approved mfrs.

**2.13 SANITARY NAPKIN/TAMPON DISPENSERS**

- A. General: Type 304 stainless steel construction; minimum 22 gage cabinet and 18 gage door. Return door edges and equip with tumbler lockset. Provide graphic identification indicating "Napkins" and "Tampons" at coin slots; brand name advertising is not allowed. Capacity not less than 30 napkins and 20 tampons.
  - 1. Coin mechanism: 25-cent coin operation, with locked coin box keyed separately. Wrong coins by-pass mechanisms and drop into product tray. Provide graphic showing indicated coin denomination.
    - a. Cost: 25-cents
  - 2. Operation: ADA compliant push button dispensing. All operations shall be mechanical.

*BELOW FOR RECESSED UNITS (REQUIRES FULL 4 TO 5-1/2 INCH DEEP CAVITY). UNIT BELOW IS ADA COMPLIANT IF LOCATED PROPERLY.*

- 3. Product: Bobrick B-3706 series (recessed or semi-recessed); or, subject to compliance with requirements, equivalent products of other approved mfrs.

*BELOW FOR SURFACE MOUNTED UNITS. UNIT BELOW PROTRUDES FROM WALL 8" AND IS NOT ADA COMPLIANT IF LOCATED ALONG A PATH OF TRAVEL.*

- 4. Product: Bobrick B-2706 (surface mounted); or, subject to compliance with requirements, equivalent products of other approved mfrs.

**2.14 FOLDING PURSE SHELF**

- A. Shelf and bracket fabricated of heavy cast Zamak with bright chrome plated finish, for partition mounting.
  - 1. Product: Bobrick B-287; or, subject to compliance with requirements, equivalent products of other approved manufacturers.

**2.15 SANITARY NAPKIN/TAMPON DISPOSAL UNITS**

*COORDINATE WITH OTHER WALL MOUNTED ITEMS, PARTICULARLY IN ACCESSIBLE STALLS / ROOMS.*

- A. Type 304 stainless steel construction, with piano-hinged door.
  - BELOW FOR PARTITION MOUNTED UNITS*
    - 1. Product: Bobrick B-354 (double sided, for through-partition mounting); or, subject to compliance with requirements, equivalent products of other approved mfrs.
  - BELOW FOR WALL MOUNTED UNITS. SELECT RECESSED OR SURFACE MOUNTED UNITS AS APPLICABLE. MAINTENANCE PREFERS RECESSED WHENEVER POSSIBLE.*
    - 2. Product: Bobrick B-353 (recessed); or, subject to compliance with requirements, equivalent products of other approved mfrs.
    - 3. Bobrick B-254 (surface mounted); or, subject to compliance with requirements, equivalent products of other approved mfrs.

**2.16 STAINLESS STEEL SHELVES**

- A. Type 304 stainless steel construction, 18 gauge thickness with polished satin finish. Pan type construction with edges turned down not less than 3/4 inches on all sides; and complete with integrally welded stainless steel brackets at manufacturer's standard spacing.
  - 1. Depth: 6 inches.
    - LENGTHS FROM 16 INCHES TO 96 INCHES AVAILABLE IN 2-INCH INCREMENTS - CONSULT CATALOG.*
  - 2. Length: 24 [SPECIFY OTHER] inches.
  - 3. Product: Bobrick B-296 series; or, subject to compliance with requirements, equivalent products of other approved mfrs.

**2.17 JANITORIAL UTILITY SHELVES**

- A. Type 304 stainless steel construction, 18 gauge thickness with polished satin finish; 8-inch depth. Pan type construction with edges turned down not less than 1-1/2 inches on all sides, and complete with rag bar, rag hooks, mop hooks, and integrally welded stainless steel brackets.

1. Length: 30 inches; not less than 3 mop holders and 2 rag hooks.
2. Length: 36 inches; not less than 4 mop holders and 3 rag hooks.
3. Length: 48 inches; not less than 6 mop holders and 5 rag hooks.
4. Product: Bobrick B-224 series; or, subject to compliance with requirements, equivalent products of other approved mfrs.

**2.18 MIRRORS**

A. Provide framed glass mirror units of standard or custom sizes as indicated, and as follows:

1. Frames: Provide glass mirror units with UNS 30302/30304 stainless steel channel frames, 1/2-inch by 1/2-inch, no. 4 finish, and with mitered corners.

*BELOW IS TEMPERED GLASS. ANNEALED AND LAMINATED ARE ALSO AVAILABLE. CONSIDER LESS EXPENSIVE ANNEALED GLASS ALTERNATIVE FOR NON-STUDENT, NON-PUBLIC AREAS.*

2. Mirror: Provide units with 1/4 inch thick tempered glass, Type I, Class 1, Quality q2, conforming to FS DD-G-451, with silvering, copper coating, and protective organic coating complying with FS DD-M-411.

*DELETE BELOW IF NO STAINLESS STEEL MIRRORS. USE WHERE SECURITY OR IMPACT DAMAGE ARE CONSIDERATIONS.*

3. Mirror: Bright polished, 22 gage, UNS 51430 stainless steel sheet.

*DELETE BELOW IF NO SHELF. SHELF TYPICALLY CONFLICTS WITH FAUCETS WHEN MIRRORS ARE SET AT ADA HEIGHT.*

4. Mirror Shelf: Where indicated on drawings, provide 4 inch deep, satin finished stainless steel units, full length of mirror.

B. Product: Provide the following product, or equivalent products of other approved manufacturers:

1. Bobrick B-165 series.

*DELETE BELOW IF NO SHELF.*

2. Bobrick B-166 series (with shelf.)

*VERTICAL WALL MOUNTED BABY CHANGING STATION ALSO AVAILABLE FOR TIGHT SPACES. SEE MANUFACTURER'S CATALOG. HORIZONTAL MODEL PREFERRED.*

**2.19 DIAPER-CHANGING STATION:**

A. Description: Horizontal unit that opens by folding down from stored position and with replaceable child-protection strap.

1. Engineered to support a minimum of 250-lb static load when opened.

- 2. Comply with ASTM F2285 Standard Consumer Safety Performance Specification for Commercial Use.
- B. Mounting: Surface mounted, with unit projecting not more than 4 inches from wall when closed.
- C. Operation: By pneumatic shock-absorbing mechanism.

**SELECT ONE OF THE FOLLOWING MATERIALS. STAINLESS IS MORE EXPENSIVE BUT MORE DURABLE - CONSIDER IN HIGH USE AREAS.**

- D. Material and Finish: Stainless steel, No. 4 finish (satin), with replaceable insulated polystyrene tray liner and rounded plastic corners.
- E. Material and Finish: Blow-molded high-density polyethylene, cream color, with antimicrobial additive, with reinforce full length steel-on-steel hinge and 11 gauge steel mounting plates.
- F. Liner Dispenser: Built in.
- G. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Brocar Products, Inc.
  - 2. Koala Care Products, a division of Bobrick.
  - 3. Synergy Management.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. General: Install toilet accessory units in accordance with mfr's instructions, using fasteners appropriate to substrate and recommended by mfr of unit. Install units plumb and level, firmly anchored in locations indicated. Secure mirrors to walls in tamperproof manner with special hangers, toggle bolts, or screws.
- B. Adjust toilet accessories for proper operation and verify that mechanisms function smoothly.
- C. Clean and polish all exposed surfaces after removing protective coatings. Clean exposed surfaces of mirror units in compliance with mfr's recommendations.

**CONSIDER INCLUDING THE SCHEDULE BELOW IF HELPFUL.**

#### **3.2 SCHEDULE**

- A. In each toilet room marked "Men's Toilet" on plans, provide the following toilet accessory units:
  - 1. Grab Bars: Configuration as shown in toilet marked "Handicap".
  - 2. Soap Dispenser: 1 at each sink.
  - 3. Toilet Paper Dispenser: 1 in each toilet stall.
  - 4. Paper Roll Towel Dispenser: 1 within room.
  - 5. Stainless Steel Shelf: 1 within room.
  - 6. Mirror Units: 1 over each sink.

*IF DESIRED BY CLIENT, ADD DIAPER CHANGING STATION.*

7. Diaper Changing Station: 1 within room.

B. In each toilet room marked "Women's Toilet" on plans, provide the following toilet accessory units:

1. Grab Bars: Configuration as shown in toilet marked "Handicap".
2. Soap Dispenser: 1 at each sink.
3. Toilet Paper Dispenser: 1 in each toilet stall.
4. Paper Roll Towel Dispenser: 1 within room.
5. Sanitary Napkin/Tampon Dispenser: 1 within room.
6. Folding Purse Shelf: 1 in each toilet stall.
7. Sanitary Napkin Receptacles: As indicated on drawings, but with access to one in each toilet stall.
8. Stainless Steel Shelf: 1 within room.
9. Mirror Units: 1 over each sink.

*IF DESIRED BY CLIENT, ADD DIAPER CHANGING STATION.*

10. Diaper Changing Station: 1 within room.

C. In each room marked "Janitor's Closet" on plans, provide the following toilet accessory units:

1. Janitorial utility shelves: 1 unit within room.

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Types of fire extinguishers include the following:
  - 1. ABC multipurpose dry chemical.
  - 2. BC carbon dioxide.
  - 3. Water under pressure.
- B. Locations of fire extinguishers are shown on drawings.

**1.2 SUBMITTALS**

- A. Product Data: Manufacturers literature indicating compliance with requirements, and installation instructions.

**1.3 QUALITY ASSURANCE**

- A. Provide new UL-listed fire extinguishers bearing UL "Listing Mark" for type, rating, and classification of extinguishers indicated.

**PART 2 - PRODUCTS**

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:

Badger Fire Protection.  
Buckeye Fire Equipment Co.  
General Fire Extinguisher Corp.  
Kidde Co.  
Larsen's Manufacturing Co.  
Potter-Roemer Inc.

***SELECT APPROPRIATE TYPES OF FIRE EXTINGUISHER UNITS. SELECT BELOW FOR STANDARD LABORATORY AND OTHER TYPICAL APPLICATIONS. INCLUDING ELEVATOR MACHINE ROOMS.***

**2.2 MULTI-PURPOSE DRY CHEMICAL TYPE**

- A. Provide UL-rated 4-A; 60-BC, 10-lb. nominal capacity, in enameled steel container.

***SELECT BELOW ONLY AFTER VERIFYING THAT IT MEETS CODE FOR CONTEMPLATED USAGE.***

**2.3 CARBON DIOXIDE TYPE**

- A. Provide UL-rated 10-BC, 10-lb. nominal capacity, enameled metal container.

**SELECT BELOW FOR CLASSROOM BUILDING CORRIDORS.**

**2.4 WATER UNDER PRESSURE TYPE**

- A. Provide UL-rated 2A, 2.5 gal. nominal capacity, in type 304-L stainless steel cylinder.

**2.5 MATERIALS**

- A. Provide units with metal valve assemblies, discharge levers and carrying handles and with rubber hoses. Plastic is not permitted. Provide metal brackets for wall mounting units where cabinets are not indicated.

**INCLUDE THE FOLLOWING WHERE DESIRED - USUALLY NOT IN LABS OR EQUIPMENT ROOMS.**

**2.6 FIRE EXTINGUISHER CABINETS**

- A. Provide fire extinguisher cabinets at locations indicated on drawings.

**BELOW IS EXAMPLE ONLY - SEMI-RECESSED AND SURFACE MOUNTED TYPES ARE AVAILABLE. CONSULT CATALOGS FOR MFR AND MODEL DESIRED. FULLY RECESSED REQUIRED 6" STUD DEPTH**

1. Type: Fully recessed with trim.
2. Size: To suit type of unit being housed, but not less than 12 inches by 27 inches by 8 inches tub interior.
3. Door and Frame Finish: Satin stainless steel.
4. Window: Approx. 2 inches by 24 inches, 1/4 inch clear acrylic.
5. Manufacturer/Model: Potter-Roemer Inc.; No. 1704, or equivalent products of Samson Metal Products, Larsen's Mfg Co.
6. Signage: Identify extinguisher cabinets with manufacturer's standard red lettering applied to cabinet door, spelling "FIRE EXTINGUISHER". Letter size, style and location selected by Architect.

**DELETE BELOW IF NO BRACKET-MOUNTED EXTINGUISHERS.**

**2.7 ACCESSORIES FOR BRACKET MOUNTED EXTINGUISHERS**

- A. Mounting Brackets: Provide units designed to hold specified extinguishers. Mount brackets with expansion anchors to withstand a 200 pound load applied in any direction.
- B. Signage: Identify bracket-mounted extinguishers with red letter decals with clear backgrounds, spelling "FIRE EXTINGUISHER" applied to wall surface. Letter size, style and location selected by Architect and indicating "FIRE EXTINGUISHER".

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Install in accordance with manufacturer's directions for type of mounting required at height and locations indicated, or if not indicated, to comply with applicable regulations of governing authorities.
  - 1. Coordinate installation of fire extinguisher cabinets with wall system installers.

**SPECIFICATION DIVISION 10**

NUMBER            SECTION DESCRIPTION

**DIVISION 10 SPECIALTIES**

SECTION 105113 - METAL LOCKERS

**END OF CONTENTS TABLE**

**DIVISION 10 SPECIALTIES**  
**SECTION 105113 - METAL LOCKERS**

*UPDATED 4-22-04 TO REMOVE LYON FROM MFRS. LIST DUE TO POOR PERFORMANCE*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Work of this Section: Extent of steel lockers as shown on drawings.

**1.2 SUBMITTALS**

- A. Shop Drawings: Indicate overall dimensions for installation, details for installation, trim and vertical sections.
- B. Samples for Initial Selection: Provide manufacturer's standard card containing samples of paint in full range of standard colors. Photographic reproductions of colors are not acceptable.

**PART 2 - PRODUCTS**

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:  
Interior Steel Products Co.  
List Industries Inc.  
Penco  
Republic Storage System Co.

*BELOW DESCRIBES ONE TYPE OF LOCKER UNIT. EDIT WITH MANUFACTURER'S CATALOGS FOR SIZES, MATERIALS AND CONFIGURATIONS TO SUIT PROJECT.*

**2.2 METAL LOCKER UNITS**

- A. Single tier lockers with expanded metal mesh (or punched steel) doors, sides and tops, and solid backs. Provide units within 1 inch of following dimensions, subject to manufacturer's standards:
- B. Size: 18 inches wide by 72 inches high by 18 inches deep.

**2.3 ACCESSORIES**

- A. Hat Shelf: Mfr's standard shelf 12 inches down from top of unit.
- B. Latch: Chrome plated or stainless steel door latch to accept standard padlock.
- C. Clothes Hook: Both sides of interior.
- D. Metal Base: 4 inches high.

**2.4 MATERIALS**

A. Fabricate parts of mild, cold-rolled, furniture grade steel, minimum gages as follows:

1. Door Frames: 16 ga.

*SELECT DOOR TYPE BELOW.*

2. Doors: 14 ga. expanded metal mesh.

3. Doors: 14 ga. perforated metal.

*DELETE SIDE/END AND BACK TYPES BELOW IF SOLID PANEL TYPE LOCKERS SELECTED.*

4. Sides and Ends: 16 ga. expanded metal mesh.

5. Backs: 18 ga.

*DELETE BELOW IF EXP. MESH TYPE LOCKERS SELECTED.*

6. Body: 24 ga. min.

7. Row Ends: 16 ga. min.

*BELOW FOR BOTH EXP. MESH AND PANEL TYPES.*

8. Tops and Bottoms and Shelves: 16 ga. steel.

**2.5 FABRICATION**

A. Fabricate units with mfr's standard diamond pattern expanded metal mesh, or square punched steel panels. Fabricate units with mfr's standard methods; both knock-down and welded construction are permitted. Provide lockers as separate, independent units, [except adjoining locker units are permitted to share common partition (s).

1. Deliver knock-down type units to site fully assembled and ready for installation in field.

2. Provide mfr's standard hold-down clips, fasteners, and accessories required to secure units to base and wall.

3. Where necessary, provide finished end covers at row ends exposed to view in finished construction. Units that are perforated to receive standard accessories are not acceptable; knock-out plugs are not acceptable.

4. Finish: Mfr's standard baked enamel finish over prime coat.

a. Colors: Selected by Architect from mfr's standard color range.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

A. Assemble and install units in strict accordance with mfr's recommendation and published installation literature. Fasten units to floor and wall with recommended attachment methods.

NUMBER            SECTION DESCRIPTION

**DIVISION 11 EQUIPMENT**

SECTION 115213 - PROJECTION SCREENS

**END OF CONTENTS TABLE**

**DIVISION 11 EQUIPMENT**  
**SECTION 115213 - PROJECTION SCREENS**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of projection screens is shown on drawings.
- B. Type of projection screen required:

*SELECT ONE OF THE FOLLOWING]*

- 1. Front projection screen, electrically operated, surface mounted unit.
- 2. Front projection screen, manually operated.

**1.2 RELATED SECTIONS**

*OMIT BELOW IF NO WOOD BACKING REQUIRED. MANUFACTURERS GENERALLY PROVIDE A BRACKET THAT POSITIONS THE SCREEN AWAY FROM THE WALL TO AVOID CONFLICT WITH CHALK TROUGH OF CHALKBOARDS.*

- A. Wood backing is included in Division 06 Section "Rough Carpentry".

*DELETE BELOW IF NO ELECTRICALLY OPERATED UNITS.*

- B. Electrical wiring, connections, and installation of remote control switches for electrically operated projection screens are specified in Division 26 sections.

**1.3 SUBMITTALS**

- A. Product Data: Submit copies of Manufacturer's specifications and installation instructions for projection screen unit.

*DELETE BELOW IF NO ELECTRICALLY OPERATED UNITS.*

- B. Wiring Diagrams: Submit manufacturer's wiring diagram for electrically operated units.

**1.4 QUALITY ASSURANCE**

- A. Quality Assurance: Obtain projection screen from a single manufacturer as a complete unit, including mounting hardware and accessories.

- B. Fire Performance Characteristics: Provide projection screen fabrics identical to those materials which have undergone testing and passed requirements for flame resistance of one of the following:

- 1. NFPA 701 per small scale test.
- 2. Federal Standard 191A/5903 for test method. FS GG-S-00172D(1) for flame resistance.

**PART 2 - PRODUCTS**

**DELETE BELOW UP TO "MANUALLY OPERATED FRONT PROJECTION SCREENS" IF NO ELECTRICALLY OPERATED UNITS**

**2.1 FRONT PROJECTION, ELECTRICALLY OPERATED SCREENS**

- A. General: Provide mfr's standard UL-listed and -marked units consisting of case, screen motor, controls, mounting accessories and other components as required for a complete installation and complying with requirements indicated.
- B. Viewing Surface of Screen: Comply with the following requirements for type of viewing surface:
  - 1. Matte white viewing surface with minimum gain characteristics complying with FS GG-S-00172D(1) for Type A screen surface; without black masking borders.
    - a. Edge Treatment: Without black masking borders.
    - b. Edge Treatment: With black masking borders.

**RETAIN EITHER ABOVE OR BELOW**

- 2. Glass beaded viewing surface with minimum gain characteristics complying with FS GG-S-00172D(1) for Type C screen surface.
    - a. Edge Treatment: Without black masking borders.
    - b. Edge Treatment: With black masking borders.
- C. Screen Controls: Remotely control operation of each screen as follows:

**MODIFY BELOW FOR MULTI-STATION UNITS**

- 1. Single station Control: Three-position, UL-listed control switch for each screen with metal device box and cover plate for flush mounting and for connection to 120VAC electric power supply.

**OTHER POSSIBILITIES FOR BELOW INCLUDE ROLLER-MOUNTED MOTORS (NOT USUALLY SELECTED FOR UNIVERSITY WORK) AND AUTOMATIC CEILING CLOSURES**

- D. End-Mounted-Motor-Operated Screens Without Ceiling Closure: Units designed and fabricated for recessed, surface, or suspended installation, with bottom of case entirely or partially open under screen compartment, as standard with manufacturer, under screen compartment to allow raising and lowering of screen, closed with access door under motor compartment; and complying with the following requirements:
  - 1. Screen Case: Wood sides and top, with metal-lined motor compartment, factory primed and constructed as follows:
    - a. Provide single or double top as standard with manufacturer.

2. Motor: Instant reversing, gear drive motor of size and capacity recommended by screen manufacturer, with permanently lubricated ball bearings, automatic thermal overload protection, preset limit switches to automatically stop screen in "up" and "down" position, and positive stop action to prevent coating: mounted in motor compartment on right end of screen, unless otherwise indicated, and remotely controlled as indicated.
3. Screen: Mildew- and flame-resistant glass fiber fabric with vinyl-coated viewing surface complying with requirements indicated, with top edge mounted on, and securely fastened to, rigid metal roller supported by self-aligning bearings in brackets.

**INCLUDE DIMENSIONS BELOW IF NOT SHOWN ON DRAWING**

- a. Size of Viewing Surface: As indicated.

**MODIFY BELOW TO SUIT APPLICATION**

- E. Acceptable Manufacturers: Subject to compliance with requirements, provide products of one of the following:

"Series 800"; Bretford/Knox Mfg. Co.  
 "Series 900"; Bretford/Knox Mfg. Co.  
 "Senior Electrol"; Da-Lite Screen Co.  
 "Rollermatic"; Draper Shade & Screen Co.

**DELETE BELOW IF NO MANUALLY OPERATED UNITS**

**2.2 MANUALLY-OPERATED FRONT PROJECTION SCREENS**

- A. General: Provide manufacturer's standard units consisting of case, screen, mounting accessories and other components as required for a complete installation and complying with descriptive requirements indicated below:
- B. Spring-Roller-Operated Projection Screens: Units designed and fabricated for wall or ceiling installation and complying with the following requirements:
  1. Screen Case: Fabricated in one piece from not less than 22 gage steel with flat back design, vinyl-covered or baked-enamel finish, and end caps with integral roller brackets and furnished with universal mounting brackets in finish matching end caps to enable attachment to wall or ceiling.
  2. Screen: Mildew- and flame-resistant glass fiber fabric with vinyl coated viewing surface complying with requirements indicated below, with top edge mounted on, and securely anchored to, a 3 inch diameter rigid steel spring roller and bottom edge formed into a pocket holding a tubular metal slat, with ends of rod protected by plastic caps containing a screw-attachment saddle and pull.

**INCLUDE DIMENSIONS BELOW IF NOT SHOWN ON DRAWING**

3. Size of Viewing Surface: As indicated.
4. Type of Viewing Surface: Matte white with minimum gain characteristics complying with FS GG-S-00172D(1) for Type A screen surface; without black masking borders.

- a. Edge Treatment: Without black masking borders.
- b. Edge Treatment: With black masking borders.

***DELETE ABOVE OR BELOW TO SUIT PROJECT***

- 5. Type of Viewing Surface: Glass beaded viewing surface with minimum gain characteristics complying with FS GG-S-00172D(1) for Type C screen surface.
  - a. Edge Treatment: Without black masking borders.
  - b. Edge Treatment: With black masking borders.
- 6. Products: Subject to compliance with requirements, select one of the following:
  - a. "Series 500 Auditorium"; Bretford/Knox Manufacturing Co.
  - b. "Model C"; Da-Lite Screen co., Inc.
  - c. "Luma 2"; Draper Shade and Screen Co.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Install projection screen units and accessories at locations shown in accordance with Manufacturer's instructions. Install level, plumb, secure, and at proper height. Cooperate with other trades for securing projection screen units to finished surfaces. Repair or replace damaged units as directed.

**3.2 CLEANING, ADJUSTMENT AND PROTECTION**

***DELETE PARAGRAPH BELOW IF NO ELECTRICALLY OPERATED UNITS***

- A. Adjust electrically operated projection screens for proper operation. Adjust screen speed to comply with manufacturer's recommendations. Adjust screen extension for maximum exposure in unrolled condition.
- B. Protect installed units so that they will be in satisfactory operating condition, without damage, at completion of project.

NUMBER            SECTION DESCRIPTION

**DIVISION 11 EQUIPMENT**

SECTION 115300 - LABORATORY EQUIPMENT

**END OF CONTENTS TABLE**

**DIVISION 11 EQUIPMENT**  
**SECTION 115300 - LABORATORY EQUIPMENT**

**PART 1 - GENERAL**

**1.1 SUMMARY**

*USE THIS SECTION TO SPECIFY EQUIPMENT RELATED TO LABORATORIES*

- A. Extent of laboratory equipment is indicated on drawings and in schedules.
- B. Type of laboratory equipment includes:
  - 1. Undercounter dishwashers.
  - 2. Undercounter freezers.
  - 3. Undercounter refrigerators.
  - 4. Undercounter icemakers.

**1.2 SUBMITTALS**

- A. Product Literature: Submit manufacturer's product literature indicating compliance with requirements for each specific type of laboratory equipment.
  - 1. Submit manufacturer's printed installation instructions, maintenance manual and warranty certificate.

**1.3 QUALITY ASSURANCE**

- A. Provide only UL listed and labeled equipment and components.
- B. Provide the following equipment with NSF (National Sanitation Foundation) approval:

*EDIT THE FOLLOWING TO SUIT PROJECT. USUALLY REQUIRE NSF SEAL FOR DISHWASHER, ICEMAKER, AND REFRIGERATORS*

- 1. Dishwasher.
- 2. Ice maker.

**1.4 DELIVERY, STORAGE AND HANDLING**

- A. Coordinate delivery with supplier of laboratory casework specified in Division 12 Section "Laboratory Casework". Time equipment delivery to prevent delay in laboratory casework installation.

**PART 2 - PRODUCTS**

**2.1 UNDERCOUNTER DISHWASHERS**

- A. Glassware Washer: Provide front loading glassware washer for undercounter installation, with not less than 4 independent wash/dry cycles, automatic safety switch to interrupt operation when door is open, low water cut-off device, and as follows:

1. Exterior Dimensions: 24-inches wide by 34-3/4-inches high by 25-1/2-inches deep.
  2. Interior Dimensions: 22-inches wide by 24-inches high by 21-inches deep.
  3. Cabinet Construction: AISI Type 308 18-8 stainless steel interior and exterior.
  4. Controls: Solid state electronic timers and push button controls for individual programming and automatic operation of cycles. Wash water temperature selectable to 99 deg. C. and displayed by manufacturer's standard LED indicator or gage.
  5. Available Power: 110V, 20A, 1 phase.
- B. Accessories: Provide units with roll-out baskets sized and arranged to accommodate both beakers, test tubes and other small items, and larger items with minimum 10-inch clearance height.
- C. Manufacturer/Model: Hotpack Corp.; Model UC2B, or equivalent products of Labconco, or Forma Scientific.

**2.2 UNDERCOUNTER FREEZER**

*NOT PREPARED*

**2.3 UNDERCOUNTER FREEZER (EXPLOSION PROOF)**

*NOT PREPARED*

**2.4 UNDERCOUNTER REFRIGERATOR**

*NOT PREPARED*

**2.5 UNDERCOUNTER REFRIGERATOR (EXPLOSION PROOF)**

*NOT PREPARED*

**2.6 UNDERCOUNTER FLAKE ICE MAKER**

*THE FOLLOWING UNIT HAS THE ADVANTAGE OF BEING AN UNDERCOUNTER TYPE UNIT - NO CURRENTLY KNOWN EQUIVALENTS EXIST*

- A. Undercounter Icemaker: Provide ice maker unit for undercounter installation complete with built-in 40-lb. capacity storage bin.
1. Exterior Dimensions: 24-inches wide by 24-inches deep by 34-inches high.
  2. Cabinet Construction: Provide units with face panels constructed of manufacturer's standard grade of satin finish stainless steel. Coat concealed portions of units with thermosetting epoxy.
- B. Accessories: Include four, 6-inch adjustable legs.
- C. Manufacturer/Model: Crystal Tips Ice Systems, model as follows:

**SELECT ONE OF THE FOLLOWING. IN GENERAL PROVIDE UNITS WITH AIR COOLED CONDENSER AND 115 V. POWER REQUIREMENT - COORDINATE WITH MECHANICAL AND ELECTRICAL**

1. 350-FAV-161 (air cooled condenser).
  - a. Power requirement: 115 V., 8.8 A., 1 P.
2. 350-FAV-251 (air cooled condenser).
  - a. Power Requirement: 220 V., 5.3 A., 1 P.
3. 350-FWVS-251 (water cooled condenser).
  - a. Power Requirement: 220V., 4.4 A., 1 P.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

**INCLUDE PARAGRAPH BELOW WHERE APPLICABLE**

- A. Coordinate installation activities with installer of laboratory casework specified in Division 12 Section "Laboratory Casework".
- B. Install units in accordance with manufacturer's recommendations and printed instructions.

**3.2 TESTING AND ADJUSTMENT**

- A. Test installed equipment for proper operation. Demonstrate operation and features to Owner's Representative and Owner's personnel.
- B. Repair malfunctioning equipment to comply with manufacturer's specifications.

**3.3 CLEANING AND PROTECTION**

- A. Protect installed units from dirt, dust, and damage caused by subsequent construction operations.
- B. Clean units within 7 calendar days prior to Owner's inspection for Substantial Completion.

**END OF SECTION 115300**

SECTION 115313 - LABORATORY FUME HOODS

**END OF CONTENTS TABLE**

*SUBSTANTIAL REVISIONS INCORPORATED INTO THIS SECTION - MAY 9, 2011, BY LAB SUSTAINABILITY TEAM AND A&E ARCHITECTURAL DEPARTMENT.*

*REVISED NOV. 8, 2013 TO REFLECT NEW ANSI Z9.5 2012 VERSION AND TO SPECIFY THE MINIMUM HOOD AIR FLOW RATE TO BE 375 ACH. D. KARLE, PER LAB SUSTAINABILITY TEAM.*

**DIVISION 11 EQUIPMENT**  
**SECTION 115313 - LABORATORY FUME HOODS**

*CONSULT WITH MECHANICAL ENGINEER TO DETERMINE APPROPRIATE TYPE OF FUME HOOD AND VENTILATION REQUIREMENTS. SECTION 115313 "LABORATORY FUME HOODS" AND SECTION 230920 LABORATORY TERMINAL AIRFLOW UNITS AND CONTROLS MUST BE COORDINATED WITH EACH OTHER. SEE U-M DESIGN GUIDELINE 230920 FOR ADDITIONAL INFORMATION REGARDING HOODS AND LAB DESIGN. INVOLVE OSEH EARLY IN THE PLANNING OF PROJECTS WHICH WILL UTILIZE FUME HOODS.*

*THIS SPECIFICATION COVERS BENCH TOP STYLE HOODS. FLOOR MOUNTED (SOMETIMES REFERRED TO AS "WALK-IN" HOODS) REQUIRE SPECIAL CONSIDERATIONS AND ARE NOT SPECIFIED BELOW. SEE THE U-M LAB VENTILATION DESIGN GUIDELINE FOR REQUIREMENTS FOR FLOOR MOUNTED WALK IN HOODS.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including Standard General Conditions, Supplemental General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, apply to this Section.
- B. Related Sections:
  - 1. Division 01 Sections "Project Commissioning for Small Projects" and "Full Project Commissioning".
  - 2. Division 12 Section: "Laboratory Casework".
  - 3. Division 22 Section: Basic Piping Materials and Methods
  - 4. Division 22 Section: Mechanical Identification
  - 5. Division 23 Section: Laboratory Terminal Airflow Units and Controls
  - 6. Division 23 Section: Laboratory Airflow Controls-DDC
  - 7. Division 26 Section: Electrical

**1.2 SUMMARY**

- A. Section Includes

*ADD FULL BYPASS CONSTANT VOLUME TYPE IF INCLUDED ON YOUR PROJECT. FULL BYPASS CONSTANT VOLUME HOODS ARE NOT TYPICALLY USED AT U-M AND ARE THUS NOT SPECIFIED IN THIS SPECIFICATION (ALTHOUGH THEY ARE DEFINED IN THE "DEFINITIONS" SECTION, FURTHER BELOW).*

- 1. Chemical Fume Hoods of the following types:
  - a. Partial Bypass Constant Volume
  - b. Restricted Bypass Variable Volume
  - c. Reduced Face Velocity (RFV)
- 2. Fume Hood Understructures (base units, flammable and acid storage cabinets)
- 3. Fume Hood Plumbing Accessories
- 4. Fume Hood Electrical Accessories

**1.3 SUBMITTALS**

- A. Samples: Submit samples of exterior finish colors and interior liner material for Architect's initial selection.
- B. Shop Drawings: Submit shop drawings for fume hoods showing plans, elevations, ends, cross-sections, service run spaces, location and type of service fixtures; details and location of anchorages and fitting to floors, walls, and base; layout of units with relation to surrounding walls, doors, windows, and other building components; connection to hood exhaust system; location of access doors.
  - 1. Coordinate shop drawings with other work involved.
  - 2. Provide roughing-in drawings for mechanical and electrical services, including location of cut-off valves and junction boxes, where pre-plumbed or pre-wired units are required.
  - 3. Quantify net free area of fume hood opening with Sash Height in fully open position and at sash stop height.
  - 4. Provide static pressure drop at 100 fpm face velocity with fume hood sash in full open position.
- C. Certification of Performance As Manufactured: Provide for each hood type and size indicating hood meets or exceeds the ASHRAE 110 As Manufactured (AM) requirements specified in Part 2.
- D. Certification of Performance, Field: Provide certification of performance signed by Installer, verifying that each unit has been field tested in accordance with the provisions of Part 3 "Field Quality Control" article, and is operating in compliance with specified requirements.
- E. Shipping, handling, and storage instructions.
- F. Installation and start-up instructions.
- G. Project specific maintenance and operating data, and recommended spare parts list.

**1.4 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

**USUALLY RETAIN BELOW - DELETE/REVISE ONLY IF FUME HOOD BASE CABINETS DO NOT NEED TO MATCH ADJACENT LAB BENCH BASE CABINETS, OR FOR OTHER CIRCUMSTANCES.**

- B. Laboratory fume hoods, casework, tops, sinks, service fixtures, and related furniture shall be provided by the same distributor who shall be fully responsible for coordinating all such components. All fume hoods shall be supplied from the same hood manufacturer.
  - 1. For projects using both RFV and standard fume hoods, fume hoods from a maximum of two manufacturers may be provided.
- C. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise:

1. Comply with provisions of Michigan Building Code .
2. Scientific Equipment and Furniture Association, SEFA 1 Laboratory Fume Hoods.
3. Scientific Equipment and Furniture Association, SEFA 8 Laboratory Furniture, Casework, Shelving and Tables.
4. Scientific Equipment and Furniture Association, SEFA 2.3 Installation of Scientific Laboratory Furniture and Equipment.
5. Underwriters Laboratories, UL 1805 Laboratory Hoods and Cabinets.
6. American Society of Heating, Refrigeration and Air-conditioning Engineers, ANSI/ASHRAE 110-1995 Method of Testing Performance of Laboratory Fume Hoods.
7. ANSI/AIHA Z9.5-2012 Laboratory Ventilation.
8. National Fire Protection Association NFPA 45 Flammable and Combustible Liquids Code 2004.

## 1.5 DEFINITIONS

### A. Hood- Full Bypass Constant Volume Type

1. With the sash at sash stop height, the air flowing through the bypass and the air flowing through the Working Area are essentially equal in volume (the free area of the bypass and the free area of the Working Area are essentially the same).
2. With the sash at any other position, including fully opened or fully closed, the total air volume (bypass + Working Area) entering the hood remains essentially unchanged. The face velocity through the Working Area remains constant, regardless of sash position.

### B. Hood-Partial Bypass Constant Volume Hood

1. With the sash at sash stop height, the air flowing through the bypass is essentially zero.
2. With the sash at any position between sash stop height and fully closed, the bypass opens in proportion to the sash closing, such that the face velocity through the Working Area remains essentially constant.
3. With the sash at any position between sash stop height and fully open, the air volume exiting the hood remains unchanged, therefore as the sash is opened the face velocity through the Working Area decreases proportionally with the sash position. When the sash is fully open, the face velocity through the Working Area is approximately half what it was when the sash was at sash stop height (assuming a typical maximum Sash Height of approximately 28").

### C. Hood- Restricted Bypass Variable Volume Hood

1. Regardless of sash position, the face velocity through the Working Area remains constant. The air flowing through the bypass is only enough such that the hood maintains the minimum air change rate when the sash is fully closed. Thus "restricted bypass" means there is nearly zero bypass.

- D. **Sash Height:** The distance from the bottom of the sash to the working surface of the hood. Not from the bottom of the sash to the top of the airfoil vane(unless the top of the air foil vane and the top of the working surface are at the same height).
- E. **Working Area:** The area bounded by the Sash Height and the net width of the hood opening.

**1.6 DELIVERY, STORAGE, AND HANDLING**

***ADD BELOW IF LABORATORY CASEWORK SECTION INCLUDED***

- A. Coordinate delivery of fume hood with delivery of other laboratory casework components.
- B. Protect finished surfaces from soiling and damage during handling and installation. Keep covered with polyethylene film or other protective covering.

**1.7 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of 1 year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Chemical fume hoods, all types except Reduced Face Velocity type:
  - 1. Air Master; Air mmaster Systems Corp.
  - 2. BMC

***BELOW MFR. FORMERLY NAMED FISHER HAMILTON***

- 3. Hamilton Scientific
  - 4. Kewaunee Scientific Corp.
  - 5. Mott Manufacturing, Ltd.
  - 6. Labconco Corp.
  - 7. Lab Crafters, Inc
- B. Reduced Face Velocity type chemical fume hoods (bench top models only):
  - 1. Lab Crafters Air Sentry
  - 2. Labconco Protector Xstream
  - 3. Kewaunee Supreme Air LV

**2.2 FUME HOODS, GENERAL**

- A. Provide UL 1805 labeled fume hoods that provide proper exhaust volume and operate in a safe, efficient manner, within the tolerances for face velocities specified. Dead air pockets and reverse air currents shall not occur along the surface of hood interiors.
- B. Static Pressure Drop: Maximum of 0.35" (WG) at 100 FPM face velocity with fume hood sash in full open position.

*THE MINIMUM 375 AIR CHANGE RATE PER HOUR SPECIFIED BELOW MAY NOT BE ADEQUATE TO PREVENT A HAZARD IF FLAMMABLE LIQUIDS, VAPORS, OR GASES WILL EXIST ALONG WITH AN IGNITION SOURCE, OR BECAUSE OF OTHER CONCERNS OUTLINED IN Z9.5. WHEN IN DOUBT EVALUATE THE HAZARD WITH U-M OSEH, AND ADJUST ACCORDINGLY.*

- C. Hood minimum air flow rate (any sash position): Sufficient to prevent hazardous concentrations of contaminants within the hood and in compliance with ANSI Z9.5-2012, no less than 375 hood air changes per hour.
- D. Splay or radius the top and sides of the face opening with configuration proven to provide an aerodynamic section to ensure smooth, even flow of air into hood.
- E. Provide air foil vane at work surface. Air foil vane shall not be mounted more than 3" above the hood working surface. Air foil vane shall prevent backflow of air and shall direct positive flow of air across work surface.
- F. Control System Components: Coordinate with Related Section "Laboratory Terminal Airflow Units and Controls" and "Laboratory Airflow Controls-DDC". Provide cutout in side of sash opening for the fume hood monitor to allow it to be flush or surface mounted, as required for the project. Also make provisions to allow mounting of sash sensors, sash alarm, and other devices provided by Related Section.

*ALWAYS INCLUDE THE REQUIRED HOOD PERFORMANCE CRITERIA. THE PERFORMANCE CRITERIA BELOW IS TYPICALLY ADEQUATE FOR U-M LABS. HOODS INVOLVING HIGHLY TOXIC CHEMICALS, HIGH PRODUCTION VOLUMES, HIGH-HAZARD RADIOACTIVE MATERIALS, OR OTHER UNIQUE CIRCUMSTANCES MAY REQUIRE MORE STRINGENT CRITERIA. U-M OSEH SHOULD BE CONSULTED IN SUCH CASES.*

*FIELD "AS INSTALLED" (AI) TESTING MAY BE APPROPRIATE IN SOME CASES. IF REQUIRED, REVISE BELOW IF NECESSARY AND CORRESPONDING PART 3 PARAGRAPH.*

### **2.3 HOOD PERFORMANCE CRITERIA**

- A. Chemical fume hoods shall meet or exceed the following ASHRAE 110 As Manufactured (AM) performance criteria. Performance criteria shall be met with the sash raised to the height of the sash stop (unless noted otherwise), and at any face velocity within +/- 10 FPM of the average face velocity indicated.
  - 1. All Hood Types shall pass the Local Flow Visualization and Large Volume Visualization challenges.
  - 2. Chemical fume hoods except Reduced Face Velocity (RFV) type shall be tested at 100 FPM average face velocity. Tracer gas concentrations, including Sash Movement Effect, shall not exceed 0.01 PPM at 4 LPM tracer gas release rate (4AM0.01 and 4SME-AM0.01). VAV Hoods shall also achieve this performance at the full open sash position.

3. Chemical fume hoods RFV type shall be tested at 60 FPM average face velocity. Tracer gas concentrations, including Sash Movement Effect, shall not exceed 0.01 PPM at 6 LPM tracer gas release rate (6AM0.01 and 6SME-AM0.01). The vertical position of the detector port shall be located 12" above the hood working surface during testing. All other detector positions (horizontal positions, distance from sash) shall match ASHRAE 110 requirements.
- B. The above performance criteria shall also be met when field ASHRAE 110 testing is specified.

*SELECT ONE OR MORE OF THE FOLLOWING STANDARD HOOD TYPES, OR REVISE TO SUIT PROJECT. IF YOU HAVE A VARIETY OF LINING OR TOP TYPES IN YOUR PROJECT, BE SURE TO CAREFULLY INDICATE ON DRAWINGS WHAT MATERIALS BELONG IN WHICH HOODS*

*ALWAYS CONSULT WITH THE MECHANICAL ENGINEER AND U-M OSEH REGARDING THE APPROPRIATE HOOD TYPE TO SPECIFY. CLEARLY DELINEATE THE HOOD TYPES REQUIRED FOR THE PROJECT EITHER IN THIS SPECIFICATION OR ON THE DRAWINGS (PREFERRED).*

*CONSTANT VOLUME HOODS OF ANY TYPE ARE NOT SAFE WITH COMBINATION SASH ARRANGEMENTS BECAUSE CORRECT FACE VELOCITY CAN'T BE ASSURED AS THE HORIZONTAL SASH IS ADJUSTED. IF COMBINATION SASHES ARE REQUIRED, SPECIFY RESTRICTED BYPASS VAV HOODS, AND ASSURE THE MECHANICAL ENGINEER SPECIFIES A CORRESPONDING VAV TYPE LAB TERMINAL AIR FLOW UNIT.*

*FULL BYPASS CONSTANT VOLUME HOODS ARE NOT SPECIFIED BELOW AS THEY ARE NOT TYPICALLY USED AT U-M. IF YOUR PROJECT REQUIRES A HOOD OF THIS TYPE, ADD BELOW.*

#### 2.4 PARTIAL BY-PASS CONSTANT VOLUME CHEMICAL FUME HOOD

- A. Equip units with compensating by-pass above the sash which functions automatically as the vertical sash is operated, to provide air flow control as described in the Definitions article.
1. Provide vertical rising sashes only.

*DEPENDING ON ROOM MINIMUM AIR CHANGE RATES, VAV HOODS MAY SAVE ENERGY. THEY SHOULD NOT BE INDISCRIMINATELY SPECIFIED UNLESS THE MECHANICAL ENGINEER HAS DONE AN ANALYSIS DETERMINING ENERGY SAVINGS WILL ACTUALLY OCCUR. AN EXCEPTION IS COMBINATION SASHES; IF THESE ARE REQUIRED, ALWAYS SPECIFY A VAV HOOD AND ASSURE THE MECHANICAL ENGINEER SPECIFIES A CORRESPONDING VAV TYPE LAB TERMINAL AIR FLOW UNIT.*

*IF YOUR PROJECT REQUIRES VAV HOODS, EDIT BELOW OR INDICATE ON A DRAWING SCHEDULE (PREFERRED) WHICH TYPE SASH IS REQUIRED: VERTICAL RISING OR COMBINATION.*

**2.5 RESTRICTED BYPASS, VARIABLE AIR VOLUME (VAV) CHEMICAL FUME HOOD**

- A. Provide hoods specifically designed for VAV application which provide air flow control as described in the Definitions article.
  - 1. Provide vertical rising or combination sashes, as indicated.

*RFV HOODS ARE RESTRICTED TO ONLY THE MODEL AND MFR. LISTED UNDER THE ARTICLE "APPROVED MANUFACTURERS". BY U-M OSEH RULING, RFV HOODS:*

*ARE LIMITED TO 6' MAXIMUM WIDTH.*

*ARE TO BE BALANCED TO PROVIDE 70 +/- 5 FPM AVERAGE FACE VELOCITY AND SHALL ALARM AT 60 FPM FACE VELOCITY. THIS AIR BALANCE INFORMATION MUST APPEAR IN THE MECHANICAL DOCUMENTS-COORDINATE WITH MECHANICAL ENGINEER.*

*IF YOUR PROJECT REQUIRES RFV HOODS, EDIT BELOW OR INDICATE ON A DRAWING SCHEDULE (PREFERRED):*

*WHICH TYPE SASH IS REQUIRED: VERTICAL RISING OR COMBINATION.*

*IF THE RFV HOODS ARE PARTIAL BYPASS CONSTANT VOLUME OR VAV TYPE.*

**2.6 REDUCED FACE VELOCITY CHEMICAL FUME HOOD**

- A. Provide bench top type hoods specifically designed for reduced face velocity (RFV) operation of model and manufacturer listed under Acceptable Manufacturers, and which provide air flow control as described in the Definitions article.
  - 1. RFV hoods shall be partial bypass constant volume or VAV type, as indicated.
    - a. Provide vertical rising sash on constant volume type.
    - b. Provide vertical rising or combination sashes, as indicated, on VAV type.
  - 2. Maximum over-all hood depth: 36".

**2.7 HOOD SUPERSTRUCTURE CONSTRUCTION**

*USUALLY RETAIN ALL FOLLOWING REQUIREMENTS*

- A. General: Design hoods to be chemical and flame resistant, for collection, retention and disposal of hazardous fumes with complete safety, minimum expenditure of purging air from room supply, and minimum turbulence within chamber.
- B. Framework: Heavy-gage steel members, reinforced, braced and assembled to insure strength and rigidity.

- C. Body Construction: Superstructure shall have double wall construction. Exterior shall be of minimum 18 gage cold-rolled steel with component parts screwed together to allow removal of end panels, front end fascia pieces, top fascia and air foil strips, and to allow access to plumbing lines and service fixtures. Apply manufacturer's standard acid and alkali resistant baked-on or powder-coated finish to interior and exterior surface of component parts prior to final assembly.

**SELECT COLOR**

1. Color: Selected by Architect from manufacturer's standard range.
- D. Ends: Double-wall end panels (enclosing sash counter-balance weights and all utilities) without projecting corner posts or other obstructions to interfere with smooth, even flow of air.
- E. Rear Baffle: Provide non-adjustable baffle at rear of hood with openings located to purge the upper and lower area of the hood. Baffle is to be fabricated of the same material as the hood liner.

**USUALLY SELECT ABOVE AND DELETE BELOW FOR TEACHING LABS (WHERE USERS ARE LESS LIKELY TO BE KNOWLEDGEABLE ABOUT FUME HOODS AND TO HAVE NEED FOR THE FLEXIBILITY OF ADJUSTABLE BAFFLES). FOR RESEARCH LABS AND LABS USED FOR CHEMICAL DISPENSING, SELECT BELOW AND DELETE ABOVE IN CONSULTATION WITH MECHANICAL ENGINEER AND OSEH.**

- F. Rear Baffle: Provide baffle at rear of hood with manually adjustable openings at top and bottom to allow adjusted flow of air through hood to compensate for type of gas, apparatus, or heat source used. Fabricate unit to be easily removable for cleaning behind baffle, and of same material as hood lining.
- G. Plenum Chamber: Adequate volume for hood dimensions, extending full width of hoods to equalize incoming air flow, of same material as hood lining. Provide corrosion resistant duct stub of proper dimension for connection to exhaust duct assembly.
- H. By-Pass Grilles: When air is required to be taken from room other than through hood sash opening, provide suitable by-pass grilles having required free opening but concealing plenum behind.
- I. Sash: Provide an operable sash fabricated with minimum 18 gage steel four-sided frame with corners welded and ground smooth. Glaze with laminated safety glass set into chemical resistant rubber glazing channels, held in place with removable stops. Sash lifting system (cable or chain) shall hold sash at any position without creep and prevent sash drop in the event of a cable failure. Sash and counter balance mechanism design shall be life cycle tested to withstand a minimum of 100,000 full travel cycles without signs of fatigue.

**14" IS THE STANDARD SASH HEIGHT AT U-M AND RARELY IF EVER SHOULD BE CHANGED. SEE U-M DESIGN GUIDELINE 230920 FOR ADDITIONAL INFORMATION. THE DESCRIPTION BELOW FOR SASH STOP LOCATION WHEN VANES ARE LOCATED MORE THAN 2" ABOVE THE HOOD WORKING SURFACE IS NECESSARY TO ACCOMMODATE CERTAIN HOOD MFR.S.**

1. Sash Stops: Install integral sash stops on fume hoods 14 inches above the hood working surface. For hoods with air foil vanes located more than 2" above the hood working surface, locate sash stop 12" above top of vane.
  - a. Example- The vane is located 3" above the working surface: sash stop to be 12" above vane, 15" above working surface.
  - b. The stops shall be of the type that can be temporarily bypassed to allow the sash to be raised to the full open position for equipment/experiment set-up and removal.
2. Vertical Rising Sash: Provide sliding single-hung, full-view sash.

*SELECT ABOVE OR BELOW OR BOTH IF BOTH TYPES OF SASH ARE REQUIRED. IF BOTH, INDICATE THE SASH TYPE REQUIRED AT EACH SPECIFIC HOOD LOCATION. CAREFULLY REVIEW ADDITIONAL SPEC EDITORS NOTES AT ARTICLES 2.3, 2.4 AND 2.5 BEFORE SELECTING SASH TYPES. VERTICAL SASH HAS LESS EXPENSIVE FIRST COST AND ARE PREFERRED BY U-M OSEH AND PLANT. COMBINATION SASH PROVIDES ADDITIONAL FLEXIBILITY FOR USERS BUT REQUIRES THAT MORE EXPENSIVE VAV FUME HOODS AND VAV CONTROLS BE SPECIFIED AS WELL.*

3. Combination Sash: Provide sliding single-hung sash with dual-track system at top and bottom of glazing opening for individual, horizontally sliding safety glass panes.

*MODIFY PARAGRAPH BELOW IF DIFFERENT CONFIGURATION IS DESIRED.*

- a. Panel Arrangement: Provide sash with 4 individual sliding glass panes.
4. Counterbalance vertical sliding sash with sash weight and cable/chain system. Provide stainless steel or monel metal cable/chain, ball-bearing sheaves/sprockets, plastic glides in stainless steel guides, and stainless steel lift handles. Provide rubber bumpers at top and bottom of each sash unit.
5. Safety Glazing: Two sheets of double strength "B" quality, clear sheet glass permanently laminated with a sheet of clear, plasticized polyvinyl butyl.

- J. Closure Strips: Wood or metal, as required to matching adjoining materials and finishes. Provide where required to close openings between fume hood base cabinet and superstructure and adjacent building wall construction.

*INCLUDE BELOW FOR IMPROVED APPEARANCE WITH SUSPENDED CEILINGS. USUALLY NOT APPROPRIATE FOR USE IN ROOMS WITHOUT SUSPENDED CEILINGS*

- K. Enclosure Panels: Provide removable metal panels matching hood superstructure. Enclose area from top of hood to underside of suspended ceiling unless indicated otherwise.
- L. Holes: Provide holes for passage of piping and conduit and for fixtures furnished in this Section or under Related Sections.
- M. Fasteners: Provide stainless steel fasteners wherever exposed to fumes in hood.

2.8 INTERIOR LINER PANELS AND WORKING SURFACE

*USUALLY RETAIN BELOW LINER PANEL PARAGRAPH; MODIFY IN THE RARE CASE WHERE ONLY STAINLESS STEEL INTERIORS ARE REQUIRED, OR IF EPOXY RESIN LINER IS REQUIRED. AT THIS TIME ONLY KEWAUNEE AND MOTT OFFER EPOXY RESIN LINER AS AN OPTION.*

- A. Liner Panels: Interior lining shall be flush, cut to fit size of hood interior and securely held in place with fasteners. Provide back baffles of the same material as liner panels. Fabricate liner panels with cut-outs in hood side panels to provide access to plumbing lines and to receive service fixtures at side of hood, as indicated. Furnish removable plug buttons for holes not used for indicated fixtures. Liner material shall be as follows:

*EPOXY RESIN ALSO AVAILABLE FROM SOME MANUFACTURERS. PROVIDES INCREASED HEAT AND CHEMICAL RESISTANCE. USE CAUTION WHEN SPECIFYING. TYPICAL THICKNESS IS 1/4" - EPOXY RESIN AT THIS THICKNESS IS SUSCEPTIBLE TO DAMAGE DURING SHIPPING.*

*GLASS FIBER REINFORCED EPOXY RESIN AND CELLULOSE FIBER REINFORCED PHENOLIC RESIN IS ALSO AVAILABLE FROM SOME MANUFACTURERS WHICH ALSO PROVIDES INCREASED CHEMICAL RESISTANCE WITHOUT THE ISSUES OF BREAKAGE FOR EPOXY RESIN. VERIFY AVAILABILITY PRIOR TO SPECIFYING.*

- 1. Glass Reinforced Polyester: 1/4-inch thick, press-molded, heat-converted, catalyzed glass reinforced polyester sheet. Color: Manufacturer's standard white.

*ALWAYS INCLUDE BELOW.*

- 2. Liner shall have a flame spread rating of 25 or less when tested in accordance with ASTM E-84.

*INCLUDE BELOW FOR STANDARD BLACK EPOXY RESIN WORKING SURFACE IN HOOD.*

- B. Epoxy Resin Working Surface: 1-1/4-inch thick, dished to retain spillage.

- 1. Conform to specifications for epoxy resin top material properties outlined in Division 12 Section "Laboratory Casework".

*IF RESIN TOPS ARE NOT SPECIFIED IN LAB CASEWORK SECTION: DELETE PARAGRAPH ABOVE AND RETAIN TWO PARAGRAPHS BELOW*

- 2. Color: Black.

*IF RESIN TOPS ARE SPECIFIED IN LAB CASEWORK SECTION: RETAIN TWO PARAGRAPHS ABOVE AND DELETE PARAGRAPH BELOW.*

- 3. Physical Properties: Flexural strength - 4000 psi; compressive strength - 14,000 psi; hardness, Rockwell M-197; water absorption in 24 hours - 0.05%; heat distortion point - 400 deg. F; resistant to thermal shock.
  - a. Workmanship: Cast surfaces very smooth, with factory cut-outs for sinks, drip grooves, and service fixtures. Plain butt type joints assembled with epoxy adhesive.

RETAIN BELOW FOR ISOTOPE-TYPE STAINLESS STEEL INTERIORS AND PERCHLORIC ACID HOODS. NOTE THAT MOST LOW-LEVEL RADIOISOTOPE WORK CAN BE CARRIED OUT IN REGULAR FUME HOODS. THEREFORE, IF RADIOISOTOPES ARE TO BE USED, CONSULT WITH OSEH TO DETERMINE WHICH TYPE OF HOOD TO SPECIFY.

PERCHLORIC ACID HOODS ALSO REQUIRE A WASH-DOWN SYSTEM FOR THE HOOD, EXHAUST DUCTWORK, AND EXHAUST FAN.

MODIFY LANGUAGE IN PARAGRAPH BELOW (I.E., CHANGE "RADIOISOTOPE" TO "PERCHLORIC" OR DELETE REFERENCE TO RADIOISOTOPE FOR NON-ISOTOPE HOODS).

- C. Radioisotope (RI) Type Stainless Steel Liner and Work Surface: For applications where highly radioactive materials will be used with lead brick shielding, furnish seamless welded construction of the work surface with intersecting rear and interior end panels, and as follows:
1. Stainless Steel Lining: Radius corners, weld, grind smooth and polish to eliminate cracks and crevices.
    - a. Punch hood side panels to receive remote controls and service fixtures at side of hood, as indicated. Furnish removable plug buttons for holes not used for indicated fixtures.
    - b. Interior corners: 1/2 inch radius, seamless, coved.
    - c. Stainless steel: 16 gage, AISI Type 302/304, with no. 4 finish.
  2. Stainless Steel Working Surface: 14 gage, AISI Type 302/304, with no. 4 finish and 1/2 inch high raised "marine edge" around perimeter to retain spillage.

RETAIN THE FOLLOWING IF CUPSINK WILL BE INCLUDED IN STAINLESS STEEL TOP.

- a. Integrally weld stainless steel cupsinks to stainless steel work surfaces. Also see Plumbing Accessories article, below.

FOLLOWING REQUIREMENT PROVIDES SUFFICIENT LOAD CAPACITY FOR MOST LEAD BRICK SHIELDING ARRANGEMENTS - USUALLY RETAIN

- b. Reinforce to provide min. 200 lbs. per sq. ft. load capacity.

SELECT EITHER METAL OR WOOD UNDERSTRUCTURES FROM BELOW

## 2.9 FUME HOOD UNDERSTRUCTURES

- A. Products: Subject to compliance with indicated requirements, provide products manufactured by one of the following:
1. Metal Units:
    - a. Airmaster; Airmaster Systems Corp.
    - b. BMC
    - c. Kewaunee Scientific Equipment Corp.
    - d. Mott Manufacturing
    - e. Thermo Scientific: Hamilton Laboratory Furniture and Fume Hoods
  2. Wood Units:

- a. Kewaunee Scientific Equipment Corp.
- b. Mott Manufacturing
- c. Thermo Scientific Hamilton Laboratory

- B. In general, provide metal base units complying with the following:
- 1. Toe Space: Approximately 4 inches high by 3 inches deep, closed metal with no open pockets. Open channel formations are not permitted.

**DELETE BELOW IF NO METAL CABINETS**

- 2. Exterior Metal: Mfr's standard with acid and alkali resistant baked-on finish. Match fume hood color.

**DELETE BELOW IF NO WOOD CABINETS**

- C. In general, provide wood base units complying with the following:

- 1. Finish: Mfr's standard with acid and alkali resistant finish. Color to be selected by Architect from mfr's standard range of finishes.

**DELETE THE FOLLOWING TWO REQUIREMENTS FOR FLAMMABLE STORAGE UNITS**

- 2. Provide base cabinets with removable backs in cupboard areas to provide openings for access to plumbing lines and shut-off valves.
- 3. Provide space, cut-outs, and holes for pipes, conduits and fittings and cabinet bodies to accommodate services and their support-strut assemblies.

**TYPICALLY PROVIDE BOTH FLAMMABLE STORAGE CABINET AND ACID STORAGE CABINET BELOW FUME HOOD.**

**NOTE THAT FLAMMABLE STORAGE CABINETS ARE NOT REQUIRED TO BE VENTED. IF THEY ARE VENTED, DO NOT VENT THROUGH HOOD, BUT USE A SEPARATE NON-FLAMMABLE VENT PIPE FROM THE CABINET DIRECTLY CONNECTED TO THE EXHAUST DUCT. INCLUDE A DETAIL ON THE DRAWINGS TO SHOW THE VENTING.**

- D. Flammable Liquid Storage Cabinets: Provide flammable liquid storage type constructed in compliance with NFPA 30 and UL or FM labeled. Requirements of NFPA 30 supersede other indicated requirements.

- 1. Label door exterior: "FLAMMABLE - KEEP FIRE AWAY".

**ACID STORAGE CABINETS ARE REQUIRED TO BE VENTED. COORDINATE WITH MECHANICAL ENGINEER TO ENSURE THAT VENTING DETAIL IS INCLUDED ON DRAWINGS. DELETE REFERENCE TO METAL OR WOOD AS APPROPRIATE.**

- E. Vented Metal and Wood Acid Storage Cabinets: Provide vented acid storage cabinets as indicated. Do not vent acid storage cabinets through hood. Provide all required vent piping and connections for direct connection to fume hood exhaust duct.

- 1. Minimum cabinet ventilation: 10 air changes per hour.

2. Line interior of acid storage cabinets with manufacturer's standard chemical-resistant polyethylene lining.
3. Label door exterior: "ACIDS"

## 2.10 PLUMBING ACCESSORIES

*EDIT THIS ARTICLE BASED ON WHETHER RELATED SECTION "LABORATORY CASEWORK AND ACCESSORIES" IS INCLUDED.*

*ALWAYS RETAIN PARAGRAPH BELOW. IN THE UNUSUAL CIRCUMSTANCE THAT THERE IS MEDICAL GAS PIPING IN THE HOOD IT WILL REQUIRE A SPECIAL PIPING SPECIFICATION.*

A. Plumbing, General: Refer to Related Sections and as follows:

1. Provide complete factory plumbing for hoods. Use materials as specified in Related Section. All natural gas piping shall be threaded black steel, Schedule 40.
2. Plumbing Fixtures: Remote controlled from face of hood.

*IF CUPSINKS ARE REQUIRED, SELECT EPOXY RESIN TYPE UNLESS A RADIOISOTOPE HOOD WITH WELDED STAINLESS STEEL INTERIOR IS REQUIRED.*

3. Cup Sinks: Cast epoxy resin, 3 inch by 6 inch with raised rim. Rim height to match the fume hood's working surface indented (dished edge) height. Coordinate cup sink location to avoid interference with dished edge of work surface.
4. Cup Sinks: Integrally welded 3 inch by 9 inch, Type 304 stainless steel, raised rim. Rim height to match the fume hood's working surface indented (dished edge) height. Coordinate cup sink location to avoid interference with dished edge of work surface.

*INFORMATION BELOW MAY BE REDUNDANT WITH INFORMATION IN THE U-M LAB CASEWORK SECTION. EDIT PARAGRAPHS BELOW UP TO "ELECTRICAL ACCESSORIES" IF A LAB CASEWORK SECTION WILL BE INCLUDED IN THE PROJECT'S SPECIFICATIONS AND THAT SECTION COVERS HOOD PLUMBING FIXTURES.*

B. Plumbing Service Fixtures: Provide pre-piped units complete with washers, locknuts, unions, nipples and other accessories for positive mounting to hood superstructures. Include wall flanges, escutcheons, handle extension rods, remote valves, and similar items required. Fabricate units to withstand test pressure of 100 psig.

1. Service fixtures are indicated on drawings by symbols, with design type of each fixture indicated by letter and number reference marks.
2. Material and Finish: Cast or forged red brass containing a minimum of 81 percent copper.
3. Exposed surfaces (including fittings and escutcheons): Acid and solvent resistant baked-on plastic coating of mfr's standard color. Fixtures fabricated of plastic are not acceptable except for use as high purity water faucets.

4. Service Outlets Identification: Provide colored plastic index disks with embossed identification letters at each service fixture handle or knob. Secure disks to fixture handles to be tamperproof.
5. Handles: Provide 3 arm or 4 arm forged brass handles for remote controls.
6. Valves and Faucets: Provide indicated fixtures with renewable barrel locked in valve body. Barrel shall contain all wearing parts, with renewable disks.
  - a. Remote Control Valves: Provide valves controlled from face of hood. Use angle valves where required.

**SELECT ONE OF THE OPTIONS BELOW**

- b. Faucets: Wall-mounted, gooseneck style faucets.
- c. Faucets: Wall-mounted, hose cock water outlets.

**ALWAYS INCLUDE BELOW**

- d. Vacuum breaker: Provide in-line vacuum breaker complying with codes, installed on front face of hood.

**2.11 ELECTRICAL ACCESSORIES**

**COORDINATE THIS ARTICLE WITH RELATED SECTION "LABORATORY CASEWORK AND ACCESSORIES". INFORMATION BELOW MAY BE REDUNDANT WITH INFORMATION IN THE U-M LAB CASEWORK SECTION. EDIT PARAGRAPHS BELOW IF A LAB CASEWORK SECTION WILL BE INCLUDED IN THE PROJECT'S SPECIFICATIONS AND THAT SECTION COVERS HOOD ELECTRICAL FIXTURES.**

- A. Electrical Fixtures, General: Refer to Related Sections and as follows:
  1. Electrical Receptacles: Provide each hood with two duplex receptacles.
  2. Lights: Provide each hood with a two-lamp light fixture of longest practicable length. Equip each fixture with two T-8, 32 watt, straight tube, rapid-start, multi-phosphor fluorescent lamps with a medium bi-pin base, color temperature of 3500 deg K, and a CRI of not less than 82.
    - a. Shield light from hood interior by 1/4 inch thick safety glass or 1/8 inch thick tempered glass panel, sealed air tight into hood body with chemical resistant rubber channels. Set units so that lamps are easily replaceable from outside hood.
    - b. Provide switch marked "Fume Hood Light" on face of hood.
    - c. Provide only fixtures which carry the Underwriter's Laboratory (UL) label.
- B. Internal Electrical Wiring: Provide complete factory wiring for hoods. Comply with requirements of the National Electrical Code.
  1. Wire duplex receptacles and light to a single gang junction box for connection to Owner's 120V, single phase, 20 amp, AC supply.
  2. Where fume hood is supplied with an air flow monitor or similar controls, wire monitor components together and to a second single gang junction box for connection to Owner's second 120V, single phase, 20 amp AC supply.

3. Provide wiring with a green ground conductor. Conduit shall not be used for ground.
4. Install all wiring in metallic conduit.

**INFORMATION BELOW MAY BE REDUNDANT WITH INFORMATION IN THE U-M LAB CASEWORK SECTION. EDIT PARAGRAPHS BELOW IF A LAB CASEWORK SECTION WILL BE INCLUDED IN THE PROJECT'S SPECIFICATIONS AND THAT SECTION COVERS HOOD ELECTRICAL FIXTURES.**

- C. Electrical Service Fixtures: Provide units complete with box; necessary receptacles, terminals, switches, device plates, and fittings and gaskets required for mounting on casework. Provide only fixtures with UL label.
1. Service fixtures are indicated on drawings by symbols, with design type of each fixture indicated by letter and number reference marks.
  2. Cover Plates: Provide stainless steel cover plates for AC receptacles and devices.
    - a. Cover Plate Material: Stainless steel, Type 302, satin finish, with formed beveled edges.
  3. Mark the following devices whether shown on drawings or not.
    - a. AC receptacles, other than standard 120 volt duplex, grounding type. Indicate voltage and phase.
    - b. Switches: Indicate equipment being controlled (e.g., "Fume Hood Light").
  4. Finishes for Service Fixture Components: Furnish boxes with mfr's standard finish. Provide galvanized finish on ferrous fittings.

**MODIFY BELOW IF USER REQUIRES 208 V. RECEPTACLES OR SPECIAL TYPE OF OUTLETS.**

5. Receptacles: 125 volt, 20 amp, 2 pole, 3 wire, NEMA Type 5-20R, ground fault circuit interrupter type (at all locations), UL extra heavy duty grounding type with nylon or Lexan bodies.
  - a. Ground fault circuit interrupter receptacles shall be rated for 2000 amps interrupting capacity and trip in 25 milliseconds or less when ground currents exceed 5 milliamps.

**SELECT ONE OF THE FOLLOWING**

- b. Color: Dark brown.
- c. Color: Ivory.
- d. Products: Subject to compliance with requirements, provide products of one of the following:  
Arrow Hart.  
Bryant.  
Hubbell.  
Leviton.  
Pass and Seymour.

**USUALLY RETAIN BELOW FOR LIGHT SWITCH**

6. Switches: Rated 120-277 volts AC and 20 amps, unless otherwise indicated, UL extra heavy duty.
  - a. Furnish pilot light adjacent to toggle switch, where noted as "PL" adjacent to switch identification.

**SELECT ONE OF THE FOLLOWING**

- b. Color: Dark brown.
- c. Color: Ivory.
- d. Products: Subject to compliance with requirements, provide products of one of the following:  
Arrow Hart.  
Bryant.  
Hubbell.  
Leviton.  
Pass and Seymour.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. General: Install fume hoods plumb level, rigid, securely anchored to building and adjacent furniture in proper location, in accordance with manufacturer's instructions. Install closures neatly. Securely attach access panels, but provide for easy removal and secure re-attachment.
  - 1. Coordinate sequence of work with Mechanical and Electrical trades and with laboratory casework and fixtures specified in Related Sections.

**ALWAYS INCLUDE THE COMMISSIONING ARTICLE BELOW.**

**3.2 COMMISSIONING**

- A. Perform the commissioning activities as outlined in Division 01 Section "Full Project Commissioning" or "Project Commissioning for Small Projects" and other requirements of the Contract Documents.

**3.3 FIELD QUALITY CONTROL**

- A. Field test each fume hood after completion of installation to verify proper operation of hoods in accordance with SEFA 1 Guidelines

**USUALLY DELETE BELOW. CONSIDER AS INSTALLED TESTING ONLY FOR LARGE PROJECTS, AND AFTER CONSULTATION WITH U-M OSEH AND MECHANICAL ENGINEER. ADJUST PERCENTAGE OF FUME HOODS TO BE TESTED IF APPROPRIATE, AND INDICATE TYPES TO BE TESTED IF MULTIPLE TYPES ARE USED ON THE PROJECT.**

- B. Perform As Installed Containment Testing per ASHRAE 110 on 10% of installed fume hoods. Hoods shall be selected by the Commissioning Agent in consultation with U-M OSEH.
  - 1. Demonstrate that hoods meet the performance criteria specified in Part 2. Remedy failing hoods and retest until hoods meet the performance criteria.
  - 2. Provide a complete test report to the Commissioner immediately after each test.

**3.4 ADJUST AND CLEAN**

- A. Moving Parts: Carefully check to insure: smooth, near-silent, and accurate operation; sash operation with one hand with uniform contact of rubber bumpers; counterbalance operation without interference.
- B. Clean surfaces, including both sides of glass.
- C. Damaged Work: Repair equal to new undamaged work, or replace with new units, as directed by Architect.

**SECTION 115314 - FUME HOOD REFURBISHMENT**

**USE THIS SECTION FOR ROUTINE CHECK AND REPAIR OF EXISTING FUME HOODS**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Work includes cleaning, painting, and routine maintenance as follows:

**NOTE: OSEH REQUIRES REFURBISHED AND UPGRADED HOODS TO BE PROVIDED WITH FLOW ALARMS (ALARMS ARE WORK OF DIV. 23 AND 26). REMEMBER TO TELL ENGINEERS OF ALARM REQUIREMENT.**

1. Provide electrostatic painting of Owner's existing fume hood superstructure exterior and existing fume hood base cabinet interior and exterior.
  2. Remove existing hood work surface materials. Install new 1-1/4-inch thick epoxy resin work surface with raised "marine" edge. Color: Black.
  3. Coat hood lining with epoxy paint.
  4. Provide routine maintenance as follows:
    - a. Lubricate moving parts.
    - b. Check and adjust sash alignment; replace pulleys and cable.
    - c. Check and adjust baffle operation.
- B. Mechanical and Electrical work are specified in Division 22, 23 and 26 sections respectively.
- C. Fume hood vent connections (from hood collar to hood exhaust system) is the work of Division 23 Sections.
- D. Clean Surfaces, including both sides of glass.

SECTION 122000 - WINDOW TREATMENT

**END OF CONTENTS TABLE**

**DIVISION 12 FURNISHINGS**  
**SECTION 122000 - WINDOW TREATMENT**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of window treatment is indicated on drawings.

*EDIT THE FOLLOWING TO INCLUDE VERTICAL BLINDS OR OTHER WINDOW TREATMENT REQUIRED*

- B. Types of window treatment include:

1. Venetian blinds.
2. Room darkening roller shades.

*MODIFY THE FOLLOWING FOR BLIND POCKETS FABRICATED OF WOOD, OR DELETE IF NO BLIND POCKETS*

- C. Sheet metal blind pockets are included in Division 05 Section "Metal Fabrications".

**1.2 SUBMITTALS**

- A. Product Data: Manufacturer's literature indicating compliance with requirements.
- B. Samples: Submit samples of materials and finishes.
- C. Shop Drawings: Submit shop drawings for installations not fully detailed in product data.

**1.3 QUALITY ASSURANCE**

- A. Provide complete assemblies produced by one mfr for each type required including hardware, accessory items, mounting brackets, and fastenings.
- B. Provide units which comply with NFPA 701 flammability test requirements.

**PART 2 - PRODUCTS**

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturer: Subject to compliance with requirements, provide products of one of the following:
1. Venetian Blinds:  
Levolor Window Fashions  
Hunter Douglas  
Springs Window Fashions; Bali
  1. Roller Shades:  
Springs Window Fashions; Bali  
Draper Inc.; Flexshade  
OpenLight

MechoShade Systems, Inc.  
Roll Ease, Skyline Series  
SRF Enterprises, Inc.

## 2.2 HORIZONTAL BLINDS

**BELOW DESCRIBES "RIVIERA" QUALITY BLINDS. BOTH LOWER AND HIGHER QUALITY BLINDS ARE AVAILABLE - REFER TO MANUFACTURER'S CATALOGS**

- A. Mfr's standard vertical lifting and horizontal tilting units complete with headrail, bottom rail, slats, and accessories as follows:
1. Headrail formed from sheet steel, min. 0.025 inch thick, into channel shaped section housing tilting mechanism; with top and end braces, top cradles, cord lock and required accessories; finished to match slats.
  2. Bottom rail formed from sheet steel into tubular shape, with end caps, finished to match slats.
  3. Aluminum slats formed from 0.0075-inch thick, spring-tempered aluminum; coated with manufacturer's standard baked enamel finish, resulting in nominal 0.0085-inch finished thickness; and as follows:
    - a. Slat Width: 1 inch narrow slats.
    - b. Ladders: Braided polyester cord with braided ladder rungs.
    - c. Coverage: Not less than 15.7 slats per vertical foot.
    - d. Color: As shown or as selected by Architect from mfr's standards.
- B. Provide lifting mechanism consisting of crash-proof cord locks with cord separators, braided polyester or nylon lift cords, and cord equalizers.
- C. Provide installation brackets including mounting hardware as recommended by mfr for installation indicated. In general, provide required fasteners, tracks, accessories required for a complete installation.
- D. Operation: Provide full-tilting slats rotating approximately 180 degrees with operating controls on the left side; full height raising with lifting cord locks and cords on right hand side of units unless otherwise indicated.

## 2.3 ROOM DARKENING ROLLER SHADES

- A. Fabric: Close-woven fiberglass; completely opaque. Provide horizontally seamless shades.
1. Color: White.
- B. Support Hardware and Trim: Painted steel or aluminum fascia panel and end caps. Provide units with side and sill channels.
1. Color: White.
- C. Roller Tube: Manufacturer's standard steel or aluminum units.
- D. Operation: Manual, spring roller operation.

- E. Bottom Weight: Manufacturer's standard aluminum unit.
- F. Provide installation brackets including mounting hardware as recommended by manufacturer for installation indicated. In general, provide required fasteners tracks, accessories required for a complete installation.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Comply with manufacturer's recommended installation procedures for indicated installation conditions.
- B. Provide adequate clearance between sash and blinds to permit unencumbered operation of sash hardware.
- C. Isolate metal parts from concrete and mortar to prevent galvanic action. Use tape or thick coating or other means recommended by manufacturer to effect separation.

**SPECIFICATION DIVISION 12**

NUMBER            SECTION DESCRIPTION

**DIVISION 12 FURNISHINGS**

SECTION 122200 - CURTAINS AND DRAPES

**END OF CONTENTS TABLE**

**DIVISION 12 FURNISHINGS**  
**SECTION 122200 - CURTAINS AND DRAPES**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Types of curtains include:
  - 1. Manually operated, room dividing, lightproof curtains.
  - 2. Manually operated, lightproof curtains over wall openings.

**1.2 RELATED WORK OF OTHER SECTIONS**

- A. Division 05 Section "Metal Fabrications" for sheet metal valences and trim.
- B. Division 06 Section "Interior Architectural Woodwork" for wood trim.

**1.3 SUBMITTALS**

- A. Product Data: Manufacturer's literature indicating compliance with requirements.
- B. Samples: Submit samples of materials and finishes.
- C. Shop Drawings: Submit shop drawings for installations not fully detailed in product data.

**1.4 QUALITY ASSURANCE**

- A. Provide complete assemblies produced by one mfr for each type required including hardware, accessory items, mounting brackets, and fastenings.
- B. Provide units that are fire retardant treated to comply with NFPA 701 flammability test requirements.

**PART 2 - PRODUCTS**

**2.1 CURTAIN FABRIC**

- A. Fabric, General: Fire-retardant treated rayon-acetate blend with vinyl backing. For all applications, provide double faced curtains with fabric material on both sides.
- B. Room Dividing Curtains: Provide 2 curtains, both fabricated to cover half the room width plus 1-1/2 feet, resulting in 3-foot total overlap. Fabricate curtains without pleats.
  - 1. Accessories: Provide Velcro male and female fastening strips for wall ends of curtain units, Apply continuous Velcro fasteners to wall ends of curtain units and on walls as shown, to provide positive, lightproof seal.

- C. Curtains at Wall Openings: Fabricate curtains to cover opening widths plus 4 feet, resulting in 2-foot overlap at both sides of opening. Fabricate curtains without pleats.

*BELOW EXAMPLE DESCRIBES A LIGHTPROOF CURTAIN FABRIC. MODIFY TO SUIT PROJECT.*

- D. Manufacturer/Product: Coral Co; "Stoplight II".
  - 1. Color: "Flax".

## **2.2 TRACKS AND CARRIERS**

- A. Provide Manufacturer's standard anodized aluminum or painted steel units without splices.
  - 1. Provide ball bearinged carrier and hook assemblies.

*BELOW EXAMPLE DESCRIBES A CURTAIN TRACK. MODIFY TO SUIT PROJECT.*

- B. Manufacturer/Model: Provide products as follows:
  - 1. Tracks: Graber; model 9-8191.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Examine support work for tracks in presence of Installer. Correct conditions that would result in improper operation of curtain units.
- B. Comply with manufacturer's recommended installation procedures for indicated installation conditions, and as indicated on drawings.

**END OF SECTION 122200**

SECTION 123553 - LABORATORY CASEWORK

**END OF CONTENTS TABLE**

**DIVISION 12 FURNISHINGS**  
**SECTION 123553 - LABORATORY CASEWORK**

*11/03 CHANGED SPECIFICATIONS FOR EYE WASHES.*

*9/11: ADDED SOLID PHENOLIC (TRESPA) SHELVES, TACK STRIPS AND CUSTOM DRYING RACK ASSEMBLY.*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of laboratory casework and fixtures is shown on drawings and schedules, and indicated by the provisions of this Section.

*EDIT BELOW TO SUIT PROJECT.*

- B. Types of laboratory casework include:

Base cabinets.  
Wall cabinets.  
Storage cabinets.  
Tables.  
Shelf units.  
Tops and curbs.  
Sinks.  
Mechanical and electrical service fixtures shown on drawings.  
Other units as indicated.

*DELETE BELOW IF NO P.LAM. CASEWORK.*

- C. Plastic laminate casework is included in Division 06 Section "Interior Architectural Woodwork".

*DELETE BELOW IF NO FUME HOODS.*

- D. Fume hoods are included in Division 11 Section "Laboratory Fume Hoods".

*DELETE BELOW IF NO ENVIRONMENTAL ROOMS.*

- E. Shelving in environmental room is specified in Division 13, "Controlled Environmental Rooms".

*DELETE ONE OR BOTH BELOW IF NO MECHANICAL OR ELECTRICAL FITTINGS ARE INCLUDED.*

- F. Installation of plumbing fixtures supplied under this Section are included in Division 22 sections.

- G. Installation of electrical fixtures supplied under this Section are included in Division 26 sections.

**1.2 SUBMITTALS**

- A. Product Data: Submit mfr's product data indicating compliance with requirements.

B. Samples for Initial Selection: Submit sample cards of actual finishes to be used showing manufacturer's standard range of colors/finishes for the following:

1. Paint coating for metal furniture.

*DELETE ABOVE IF NO METAL CASEWORK. DELETE BELOW IF NO WOOD CASEWORK.*

2. Stains for wood furniture.

*DELETE BELOW IF NO P.LAM TOPS, SHELVES, PRIVACY SCREENS, ETC.*

3. Plastic laminate for accessory items.

*USUALLY DELETE BELOW EXCEPT FOR CUSTOM FINISHES TO MATCH ARCHITECT'S SAMPLE.*

C. Samples for Verification: Samples of each specified color/finish applied to each applicable type of substrate material. Provide samples sized not less than 4-inches by 4-inches and consisting of the actual materials specified for the final product.

D. Shop Drawings: Submit shop drawings for laboratory furniture showing plans, elevations, ends, cross-sections, service run spaces, location and type of service fixtures and as follows:

1. Layout of units with relation to surrounding walls, doors, windows, and other building components.

2. Details and location of anchorages and fitting to floors, walls, and base.

3. Details of shelf standard and bracket attachments, fittings, and fasteners, including relationship to laboratory tops, walls, ceilings, and other attachment points.

4. Coordinate shop drawings with other work involved.

E. Material Certificate: Provide manufacturer's certificate indicating compliance with specified requirements for stainless steel Type and Grade.

F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating compliance of laboratory casework finishes and countertops with requirements specified for chemical and physical resistance.

### **1.3 QUALITY ASSURANCE**

A. Source Limitations: Obtain laboratory casework, including countertops, sinks, service fittings, and accessories, through one source from a single manufacturer.

B. Product Standard: Comply with SEFA 8, "Laboratory Furniture--Casework, Shelving and Tables--Recommended Practices."

C. Catalog Standards: Mfr's catalog numbers are shown on drawings for convenience in identifying certain equipment. Unless modified by notation on drawings or otherwise specified, mfr's current catalog description for indicated number constitutes requirements for each such unit.

1. Provide cabinet door swings as indicated on drawings.

2. Use of catalog numbers and specific requirements set forth in drawings and specifications, does not preclude the use of equivalent products by other listed approved mfrs, but are given for the purpose of establishing a standard of design, quality of materials, product content, construction, and workmanship.
3. Numbers on drawings refer to products of the following:

***SELECT ONE OF THE FOLLOWING, OR EDIT TO SUIT SELECTED PRODUCT CATALOG.***

Thermo Scientific: Hamilton Laboratory Furniture  
Kewaunee Scientific Equipment Corporation.

- D. Flammable Liquid Storage Cabinets: Provide flammable liquid storage type constructed in compliance with NFPA 30 and UL or FM labeled.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

**1.4 DELIVERY, STORAGE AND HANDLING**

***DELETE TWO REQUIREMENTS BELOW FOR MOST RENOVATION WORK.***

- A. Deliver wood laboratory furniture only after wet operations in building are completed.
- B. Store completed wood laboratory furniture in a ventilated place, protected from the weather, with relative humidity therein of 50% or less, at 70 degrees F (22 degrees C).
- C. Protect finished surfaces from soiling and damage during handling and installation. Keep covered with polyethylene film or other protective covering.

**1.5 PROJECT CONDITIONS**

- A. Field Measurements: Check actual space available by accurate field measurement before fabrication. In addition to dimensions for clearance, check for obstructions, including columns, piping, ducts and conduits. Show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of work.
  1. Where construction of new structures and systems is not complete, proceed with fabrication without field measurements, and coordinate fabrication tolerances to ensure proper fit of laboratory casework items without field modification.

**PART 2 - PRODUCTS**

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturers: Subject to compliance with requirements, provide the products of one of the following:

*DELETE BELOW IF NO METAL CASEWORK. USUALLY RETAIN ALL MANUFACTURERS/SUPPLIERS LISTED BELOW*

- B. Metal Casework; associated suppliers:

1. Air Master Systems Cor., Millenia Series.
2. BMC Laboratory Cabinets; R.D. Landstra Associates.
3. Kewaunee Scientific Equipment Corp.; Farnell Equipment Co.
4. Laboratory Design & Supply; mfr. direct.
5. Mott Manufacturing Ltd.; Sigma Systems; Detroit Technical Equipment Company.

*DELETE BELOW IF NO WOOD CASEWORK. USUALLY RETAIN ALL SUPPLIERS LISTED BELOW.*

- C. Wood Casework; associated suppliers:

1. Kewaunee Scientific Equipment Corp.; Farnell Equipment Co.
2. Mid Canada Millwork.
3. Mott Manufacturing Ltd.; Detroit Technical Equipment Company.

*MANUFACTURER BELOW HAS ONLY FLUSH OVERLAY TYPE PRODUCTS. DO NOT INCLUDE IF PROJECT MUST INCLUDE ONLY LIPPED OVERLAY CASEWORK.*

4. Laboratory Design & Supply; mfr. direct.

*BELOW ARE NEW TO PML. INCLUDE FOR PROJECTS WITH ESTIMATED CASEWORK VALUE LESS THAN \$100,000*

5. CIFLab L-Line (lipped overlay) and E-line (full overlay); Stonecreek Interior Systems, LLC
6. Diversified Casework; R.D. Landstra Associates.
7. Wood-Metal Industries; Division of Wood-Mode, Inc.; Farnell Contracting.

*USUALLY RETAIN ALL BELOW.*

- D. Resin Tops and Sinks:

Kewaunee Scientific; "Kemresin"  
Durcon Co.; Durcon-IIA"  
Epoxy Products "Epoxy"

- E. Stainless Steel Sinks and Tops:

Elkay Co.  
Just Manufacturing

- F. Fiberglass Sinks:

Kreolab, Inc.

- G. Solid Phenolic Shelves:

Kewaunee Scientific  
Resistop

Trespa Athelon

H. Shelf Standards and Brackets:

Cooper B-Line, Inc.

Flex-Strut, Inc.

Kewaunee Scientific Equipment Corporation

Nu-Strut framing channel system, Kumar Industries, Inc.

Unistrut Corp.

I. Service Fittings:

Chicago Faucet

SPS (distilled water faucets)

T & S Brass

Watersaver

Wolverine Brass

**DELETE THE ARTICLE BELOW IF NO METAL LABORATORY CASEWORK IN PROJECT.**

**2.2 METAL LABORATORY CASEWORK**

A. Metal: Prime furniture steel, stretcher or roller leveled, free of scales, buckles, or other defects; ASTM A 366, Class 1 (matte) finish. Provide steel laboratory furniture components of following minimum U.S. Standard gages:

1. Back panels, inner door panels, drawer outer pan, inner pan and body, and shelves: 20 gage. Add reinforcement or use 18 gage material for shelves over 36" long.
2. Sides, ends, fixed backs, bottoms, tops, soffits, outer door pans, and other items not otherwise specifically noted: 18 gage. Bottoms may be 20 gage if reinforced.
3. Intermediate horizontal rails, table frame aprons and cross rails, center posts, top gussets: 16 gage.
4. Drawer runners, sink supports: 14 gage.
5. Leveling and corner gussets: 12 gage.

B. Casework Fabrication: Provide units which are square, fully reinforced with angles, gussets, and channels, integrally framed and welded to form a dirt and vermin retardant enclosure; and as follows:

1. Flange metal upward on three sides of cabinet bottoms.
2. Where applicable, reinforce base cabinets for heavy sink support.
3. Maintain uniform clearance around door and drawer fronts, not exceeding 3/32-inch.
4. Fabricate laboratory furniture to dimensions, profiles, and details shown.
5. Assemble units in shop in as large components as practicable to minimize field jointing.
6. Provide base cabinets with removable backs in cupboard areas to provide openings for access to plumbing lines and shut-off valves.
7. Fabricate units on precision dies to provide field interchangeability of drawers, hinged doors, and similar pieces.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 123553 - - 5

C. Cabinet Components: Provide cabinets with the following, as applicable to selected units:

1. Flush Doors: Outer pan and inner pan formed and telescoped into box formation, with channel reinforcements full height on center of each pan. Fill doors solid with fire-resistant, sound-deadening material.
2. Glazed Doors: Hollow metal stiles and rails of similar construction as flush doors, with glass held in resilient channel or gasket material.
3. Hinged Doors: Mortise at flanges for hinges and reinforce with minimum 16 gage angle, welded inside inner pan at hinge edge. Provide nylon roller catches and stainless steel strike welded to door assembly.
4. Drawers: Assemble fronts from telescoping inner and outer pans, designed to eliminate raw edge of steel at top. Fabricate sides, back, and bottom of one piece, with rolled or formed top of sides for stiffening and comfortable grasp or drawer removal. Weld drawer front to sides, back, and bottom to form a single, integral unit. Provide drawers and rubber bumpers, runners and positive stops to prevent metal-to-metal contact or accidental removal.
5. Adjustable Shelves: Sides and ends formed down, and returned to front and back.
6. Glass for Glazed Doors: Double strength "B" quality.
7. Drawer Guides: Provide nylon rollers with metal guide channels, with integral stops to eliminate accidental removal of drawer. Include provisions to prevent rebounding action when doors are closed.
8. Filler Strips: Provide where required for closing space between cabinets and walls and ceilings, of same material and finish as cabinets. Hem exposed edges. Job fabricated fillers not acceptable.
9. Utility Space: Provide space, cut-outs, and holes for pipes, conduits and fittings and cabinet bodies to accommodate services and their support-strut assemblies.
10. Toe Space: Approximately 4" high by 3" deep, closed metal with no open pockets. Open channel formations are not permitted.
  - a. Provide base cabinets with individual, integral toe kick bases. Separate toe kick bases independent of base cabinets are not permitted.

D. Steel Cabinet Finish: Coat metal casework as follows:

1. Pretreatment: After assembly, thoroughly clean surfaces of grease, dirt, oil, flux and other foreign matter by physical and chemical means. Treat entire unit with metallic phosphate process leaving surfaces with uniform, fine-grained, crystalline phosphate coating providing bond for subsequent finish.
2. Prime and Finish Coats: One coat high-bake primer followed by one or more coats of high-bake chemical-resistant enamel, to provide a hard and smooth, satin luster finish, applied to treated surfaces.

- a. In concealed areas, including inside of doors and drawers, behind cross rails and mullions, inside of sub-base members, inside front and rear posts, and behind adjustable shelf front and back edges, provide rust inhibiting coating.

*MODIFY BELOW FOR CUSTOM COLOR TO MATCH ARCHITECT'S SAMPLE, IF REQUIRED.*

- 3. Colors: Unless otherwise indicated, color to be selected by Architect from mfr's standard palette of at least 5 colors.

*DELETE THE ARTICLE BELOW IF NO WOOD CASEWORK IN PROJECT.*

### 2.3 WOOD LABORATORY CASEWORK

- A. Definitions: The following definitions apply to wood laboratory casework units:

- 1. Exposed portions of casework include surfaces visible when doors and drawers are closed. Bottoms of cases more than 4 feet above floor shall be considered as exposed. Visible members in open cases or behind glass doors shall be considered as exposed portions.

*COORDINATE THE FOLLOWING REQUIREMENT WITH OWNER.*

- a. Sides to be concealed in final installation shall be considered exposed for purpose of determining material and finish requirements.
- 2. Semi-exposed portions of casework include those members behind opaque doors, such as shelves, divisions, interior faces and ends, case back, drawer sides, backs and bottoms, and back face of doors.
  - a. Tops of cases 6 feet, 6-inches or more above floor, and drawer sides and back, shall be considered semi-exposed for purpose of material selection; concealed for purpose of finish selection.
- 3. Concealed portions of casework include sleepers, web frames, dust panels, interior faces and ends of cabinets with drawers only, and other surfaces not usually visible after installation, except as otherwise indicated.

- B. Materials: Provide units fabricated of the following:

- 1. Exposed Materials: Do not use exposed faces of lighter-than-average color joined with exposed faces of darker-than-average color. Do not use two adjacent faces which are noticeably dissimilar in grain, figure and natural character markings.
  - a. Solid Lumber: Clear, dry, sound, selected from compatible grain and color, no defects, and of same species as plywood panel exposed face veneer.

- b. Plywood: Provide panels of 7-ply construction, with face veneer clear, selected for grain and color compatible with exposed solid lumber, and with no defects. Provide solid crossbandings without voids. Except for doors and drawer faces, edgeband exposed edges with solid wood of same species as face veneer. Provide panels with the following veneer for exposed faces:

**SELECT RED OAK BELOW UNLESS MATCHING EXISTING CABINETS.**

- 1) Species: Plain sliced red oak.
  - 2) Species: Plain sliced white oak.
  - 3) Species: Rotary cut birch.
- 2. Semi-Exposed Materials:
    - a. Solid Lumber: Dry, sound, selected to eliminate appearance defects. Any species of hardwood, or softwood of similar color and grain to exposed portions.
    - b. Plywood: Hardwood, PS-51, Good Grade (1), or softwood PS-1/ANSI A199.1, Group 1, A-A, INT, of species to resemble color and grain of exposed members.
  - 3. Concealed Members:
    - a. Solid Lumber or Plywood: Any species, with no defects affecting strength or utility.
    - b. Hardboard: ANSI A135.4, Class 1, tempered; for use as drawer bottom, base cabinet interior bottom, and cabinet backs.
  - 4. Unacceptable Materials: The following veneered materials are not permitted in cabinetry construction, regardless of exposure condition:
    - a. Particleboard (pressboard or flakeboard).
    - b. Oriented strand board (OSB).
    - c. Laminated solid lumber panels.
    - d. Tempered hardboard, except as otherwise indicated.
- C. Wood Casework Fabrication: Fabricate laboratory furniture with manufacturer's standard dimensions, profiles, and details shown, unless otherwise indicated. Assemble units in the shop in as large components as practicable to minimize field jointing.
- 1. Provide units with manufacturer's standard door and drawer configuration, and as follows:

**USUALLY SELECT LIPPED OVERLAY TYPE BELOW. NOT ALL MANUFACTURERS HAVE FLUSH OVERLAY OPTION.**

- a. Lipped overlay type with rounded edges.
- b. Flush overlay type with square edges.

**USUALLY SELECT GRAINING BELOW.**

- c. Grain Pattern: Horizontal on drawers, vertical on doors.

**BELOW IS OFFERED BY FISHER HAMILTON - USUALLY DELETE.**

- d. Grain Pattern: Vertical, unmatched doors and drawer fronts.

**FISHER-HAMILTON OFFERS ALL-VERTICAL OPTIONS ABOVE AND BELOW. BELOW REQUIRES FLUSH OVERLAY DOORS/DRAWERS.**

- e. Grain Pattern: Vertical, matched doors and drawer fronts.
- 2. Cabinet Bodies: Fabricate units with full (4-sided) top frame, and with horizontal intermediate rails between each door and drawer. Fabricate wood-framed glass doors (if included) with solid lumber frames.
- 3. Shelves Within Cabinets: Fabricate units of 3/4-inch thick plywood, with the following configurations for the indicated cabinet types included in Project:
  - a. Full depth in wall and counter-mounted units; half depth in base units.

*COMMON PRACTICE IS TO SELECT ABOVE AND DELETE TWO OPTIONS BELOW. IF SPLIT-DEPTH SHELF OPTION IS SELECTED, SHOW ON DRAWINGS OR REVISE PARAGRAPH TO DESCRIBE DESIRED COMBINATION.*

- b. Full depth in base, wall and counter-mounted units.
- c. Full depth in wall and counter-mounted units; split depth in base units as indicated on drawings.

D. Clear Wood Finish:

- 1. General: Apply laboratory casework manufacturer's standard two or three-coat, chemical-resistant, transparent finish consisting of sealer and catalyzed topcoat(s). After installation, touch up to refinish damaged portions equal to original factory finish.
- 2. Chemical and Physical Resistance of Finish System: Finish complies with acceptance levels of cabinet surface finish tests in SEFA 8 for Laboratory Grade Casework. Acceptance level for chemical spot test shall be no more than four Level 3 conditions.
- 3. Preparation: Sand exposed and semi-exposed components, using machine and hand methods. Machine marks, cross sanding, tool marks or other surface blemishes are not acceptable.
- 4. Exposed Portions: Carefully sand finishes after each surface treatment. Apply finishes as follows:
  - a. Sealer coat, if required.

*SELECT 1 OF THE 3 STAINS FOLLOWING*

- b. Stain: None.
- c. Stain: Selected from mfr's standard range of tones.
- d. Stain: Non-standard, custom tone selected by Architect.
- e. Mineral filler: for open grained wood, if required.
- f. Multiple coats of highly chemical resistant finish, heat dried and sanded between each coat to produce a smooth, satin luster free of imperfections.
- 5. Semi-Exposed Portions: Apply sealer coat, stained to resemble exposed portions, and follow with heavy application of clear, water repellent finish coat to provide a smooth, washable surface.
- 6. Concealed Portions: One heavy coat of water repellent finish.

*REMAINING PORTION OF THIS SECTION IS APPLICABLE TO BOTH WOOD AND METAL CASEWORK.*

## 2.4 CASEWORK ACCESSORIES

- A. Leg Shoes: Extruded vinyl or rubber, black, open bottom type.

*DELETE BELOW IF BASE INCLUDED IN FLOORING SECTION.*

- B. Base Cabinet Molding: Extruded vinyl or rubber, black, 4-inches high. Provide as indicated on drawings, on casework items in contact with floor, and in the following locations:

1. Base and floor standing cabinet toe spaces.
2. Exposed sides of base and floor standing cabinets.
3. Filler and closure panels extending to floor.

- C. Grilles: Provide clear anodized aluminum grilles and frames in sizes and at locations shown on drawings, and as follows:

1. CT-16; Titus, or equivalent.

- D. Glass: ASTM C 1036 Type I (transparent glass, flat), Class 1 (clear), Quality q3 (glazing select); double strength.

*USUALLY RETAIN ABOVE AND DELETE BELOW.*

- E. Tempered Glass: ASTM C 1048 Condition A (uncoated surfaces), Type I (transparent glass, flat), Class I (clear), Quality q3 (glazing select), Kind FT (fully tempered); 1/8-inch thick.

## 2.5 CASEWORK HARDWARE

- A. Install hardware uniformly and precisely after final finishing is complete. Set hinges snug and flat in mortises unless otherwise indicated. Turn screws to flat seat. Adjust and align hardware so that moving parts operate freely and contact points meet accurately. Allow for final field adjustment after installation.

*USUALLY SELECT BELOW AND DELETE OTHER HINGE OPTIONS.*

1. Hinges: Manufacturer's standard 5-knuckle hinge with US26D satin chrome finish.
2. Hinges: Manufacturer's standard 5-knuckle, US32D stainless steel hinge with satin finish.

*HINGE BELOW IS AVAILABLE WITH FLUSH OVERLAY STYLE ONLY.*

3. Hinges: Manufacturer's standard concealed hinge for 170 deg. minimum swing.

*USUALLY SELECT BELOW AND DELETE OTHER PULL OPTIONS.*

4. Pulls: Manufacturer's standard surface mounted units of brushed aluminum.
5. Pulls: Manufacturer's standard surface mounted units of wire stock satin stainless steel.
6. Pulls: Manufacturer's standard flush recessed units of brushed aluminum.

*BELOW NOT AVAILABLE FROM ALL MANUFACTURERS AND IN ALL STYLES - VERIFY BEFORE SELECTION.*

7. Pulls: Manufacturer's standard flush recessed units of hardwood matching door/drawer face veneer species.
8. Catches: Manufacturer's standard mechanical roller type units. Magnetic catches are not acceptable.

9. Adjustable Shelf Supports (within cabinets): BHMA B84072, wrought steel, mortise mounted; or drilled holes with metal or plastic plug-type shelf supports.
10. Drawer Slides: Manufacturer's standard wood keel or metal ball bearing drawer slides. Where metal drawer metal slides are provided, comply with the following requirements:

*INCLUDE ALL BELOW. ADJUST CAPACITY AS DESIRED. VOLUMES ROUGHLY CORRESPOND TO 18"W. BY 4"H. FOR 2100 CU. IN. AND 36"W. BY 8"H. FOR 4,600 CU. IN. INTENT IS TO ESTABLISH 100 LBF CAPACITY FOR ALL BUT VERY SMALL OR VERY LARGE AS DRAWERS.*

- a. Minimum Rated Capacity: 75 lbs. for drawers with interior volumes of 2,100 cu. inches or less.
- b. Minimum Rated Capacity: 100 lbs. for drawers with a volume of more than 2,100 cu. inches, but less than or equal to 4,600 cu. inches.
- c. Minimum Rated Capacity: 150 lbs. for drawers with a volume of more than 4,600 cu. inches.

*DELETE BELOW IF NO LOCKS REQUIRED. MEDICAL SCHOOL REQUIRES ONE LOCKED DRAWER OR CUPBOARD PER BENCH RUN AND 1 EACH SIDE OF ISLAND UNITS. MODIFY BELOW TO ADD "BEST" UNITS FOR RE-KEYABLE CORE, GREATER SECURITY, OR KEYING WITH BUILDING. MODIFY KEYING REQUIREMENT TO SUIT PROJECT.*

11. Drawer/Door Locks: Manufacturer's standard factory keyed, 5-pin lock. Provide 2 keys for each lock. Key each drawer separately, unless otherwise indicated.

*DELETE BELOW IF NO LABEL HOLDERS.*

12. Label Holders: Manufacturer's standard, surface applied [brass] [chrome] units, approximately 2-1/2-inches by 1-inch with exposed fasteners in matching finish.

## 2.6 TOPS

- A. Tops, and Curbs: Provide smooth, clean, exposed tops and edges, in uniform plane, free of defects. Make exposed edges and corners uniformly rounded.

1. Top Sizes: Furnish tops in maximum practicable lengths.
2. Top Thicknesses: As indicated, with tolerance not exceeding plus or minus 1/32". Provide front and end overhang of 1" over base cabinets, formed with continuous drip groove on under surface 1/2" from edge.

- B. Top Materials:

*SELECT THE FOLLOWING TOP MATERIAL TYPES APPLICABLE TO PROJECT.*

1. Cast Epoxy Resin: Factory molded tops of modified epoxy resin formulation, uniform mixture throughout full thickness. Provide indented, "Marine" edge tops as indicated.
  - a. Finish: Non-glare black.
  - b. Thickness: 1-inch.
  - c. Physical Properties:
    - 1) Flexural strength - 4000 psi
    - 2) Compressive strength - 14,000 psi
    - 3) Hardness, Rockwell M-197

- 4) Water absorption in 24 hours - 0.05%
- 5) Heat distortion point - 400 deg. F (204 deg, C)
- 6) Resistant to thermal shock.
- d. Workmanship: Cast surfaces very smooth, with factory cut-outs for sinks, drip grooves, and service fixtures.
- 2. Resin Impregnated Sandstone: Natural quarried hard sandstone with uniform grain and texture, free of seams and veins. Using manufacturer's standard vacuum process, impregnate stone throughout with multiple coats of thermo-setting resin. Bake coating at high temperature to ensure complete polymerization of resin and permanent bond with substrate. Apply additional coats to tops and edges to ensure required chemical resistance. Configure units with top and corner edges rounded to a 1/4 inch radius, and with bottom and abutting side edges broken.
  - a. Finish: Non-specular smooth jet-black.

**SELECT ONE BELOW**

- b. Thickness: 1-1/4 inch.
- c. Thickness: 1 inch.
- d. Physical Properties: Density - 140 pcf; modulus of rupture - 3,200 psi; compressive strength - 15,900 psi; Brinnel hardness - 84.
- e. Workmanship: Complete machining, cutouts, drilling, grooving, sizing, and similar operations before impregnation.
- 3. Stainless Steel: 16 gage, ANSI type 304 with No. 4 satin finish, unless otherwise indicated.
  - a. Weld shop joints, grind smooth and polish to become practically invisible. Provide hair-line butt jointed field joints, mechanically bolted through continuous channels welded to underside at edges. Keep field jointing to a minimum. Apply reinforcing channels to underside of top where necessary to insure rigidity without deflection.
  - b. Extend top down to provide 1-1/4 inch thickness and 1/2 inch return flange under frame. Sound deaden entire under-surface with heavy build mastic coating.
  - c. Form backsplash with 1/4 inch cove, integral with top surface.
  - d. Provide 1/4 inch indented "marine edge" around perimeter of countertops throughout, except provide 1 inch high raised tops where indicated. In tops with sinks, pitch top surface two ways to bowl to provide adequate drainage without channeling or grooving.
- 4. Plastic Laminate (P. Lam.): Provide plastic laminate sheet, black color through entire thickness with satin finish, complying with NEMA LD-3, and as follows:
  - a. Flat Tops: General purpose grade; 0.050 inches thick.
  - b. Formed Tops: Post-forming grade; 0.042 inches thick.
  - c. Sub-top: 3/4 inch thick sub-top of hardwood faced plywood, medium density overlaid plywood, or 45 pound phenolic resin bonded particleboard.
  - d. Shop-bond laminate to sub-top with fully waterproof bond glue. Smooth sand surfaces to which plastic laminate is to be bonded. Apply standard phenolic backing sheet to back of panels.

- e. Build up exposed edges of tops to 1-1/2 inch thickness. Self-edge exposed edges of top, splash, and openings with same plastic laminate used for tops.
- f. Unless otherwise indicated, construct top and back splash of one piece with intersection coved. Intersections of end splash with top and back splash need not be coved.

**2.7 SHELVES, STANDARDS AND BRACKETS**

A. Acid Resistant Plastic Laminate Shelves:

*CHANGE TO 1-1/4 IF DESIRED. 1" IS STANDARD FROM KEWAUNEE.*

- 1. Core material: 1 inch thick particleboard, 40-50 pound density particleboard according to ANSI A208.1-2009, grade M-2 specifications.
- 2. Finish: Chemical Resistant high-pressure decorative laminate on both faces and all edges.
  - a. Manufacturers:
    - 1) Wilsonart; Chemsurf
    - 2) Formica Group; Chemtop2
- 3. Color: Black.

B. Solid phenolic shelves:

- 1. Material: Solid phenolic core chemical and stain resistant panels. Material shall be a natural kraft paper based, saturated / impregnated with phenolic resin and processed under high heat and pressure to form a composite panel, to provide a work surface with high chemical resistant and abrasion resistant properties. Finished material shall be extremely hard and resistant to scratches and abrasion.
  - a. Finish: Non-glare black.
  - b. Thickness 1-inch.
  - c. Edge: Standard edge with 3/16" Radius or Bevel Finish
  - d. Physical Properties:
    - 1) Flexural strength: MD 23,000 psi / CD 15,000 psi
    - 2) Compressive strength: MD 31,000 psi / CD 25,000 psi
    - 3) Hardness, Rockwell M-95 to 115
    - 4) Water absorption in 24 hours - 0.35%

C. Cast Epoxy Resin Shelves: Provide epoxy resin shelving units conforming to epoxy resin top and curb specifications.

- 1. Thickness: 1 inch.

D. Shelf Support Structures: Fabricate wall-mounted, bench top mounted, ceiling-suspended, and other shelf support structures, including standards, brackets and other elements as shown on drawings. Provide manufacturer's standard pre-fabricated steel structural system, complete with connections, braces, fasteners, and anchorage devices as shown, or if not shown, as required to construct complete fabricated units that are tight, secure and capable of resisting expected loads without damage or permanent deformation.

*BELOW IS EXAMPLE ONLY. MODIFY FOR VERY LIGHT OR HEAVY LOADING.*

1. Expected Shelf Loads: Self-weight of shelf section plus live-loads as follows for size indicated:
  - a. Less than 10-inches deep: 25 lbf per lineal foot.
  - b. 10-inches deep to 14-inches deep: 50 lbf per lineal foot.
  - c. Over 14-inches deep to 18-inches deep: 75 lbf per lineal foot.
  - d. Over 18-inches deep: 100 lbf per lineal foot.

*BELOW IS UNISTRUT'S PERMAGREEN FINISH. DELETE IF ANOTHER FINISH IS REQUIRED.*

2. Finish: Factory applied standard paint coating.

*DELETE BELOW IF PRIMED-ONLY FINISH ABOVE IS RETAINED.*

3. Finish: Factory applied primer and alkyd paint finish coats.
  - a. Finish Color: Match casework finish.
  - b. Finish Color: Match fume hood exterior finish.
  - c. Finish Color: Custom color selected by Architect.
  - d. Finish Color: Selected by Architect from mfr's standard casework colors.

## 2.8 MISCELLANEOUS FABRICATIONS

*DELETE BELOW IF NO WOOD PIPE CHASE COVER. REVISE TO SUIT PROJECT DETAILS. MODIFY FOR P.LAM. UNITS*

- A. Wood Pipe Enclosure Covers: Fabricate units of red oak veneer plywood matching casework. Construct with chrome plated screw fasteners and grommets to allow removal of a single panel, providing access to pipes and conduit concealed by the enclosure.
  1. Provide indicated base trim as follows:
    - a. "Fry Reglet"; Shape No. 1680; 6063-T5, .050" thick aluminum with black, "Duranar" finish. Install with mitered joints, neatly cut and butted tight.

*DELETE BELOW IF NO METAL PIPE CHASE COVER. REVISE TO SUIT PROJECT DETAILS.*

- B. Metal Pipe Enclosure Covers: Fabricate units of metal materials matching casework. Provide chrome plated screw fasteners and grommets to allow removal of a single panel, providing access to pipes and conduit concealed by enclosure.

*DELETE BELOW IF NO WOOD PRIVACY PANELS AT DESKS. MODIFY FOR P.LAM. UNITS*

- C. Wood Privacy Panels: Fabricate units of red oak veneer plywood matching casework; and of dimensions and configuration shown. Use concealed fasteners where practicable.

*THE FOLLOWING IS A UNISTRUT-AND-NYLON BELT SYSTEM SIMILAR TO UNITS IN DOW CHEMISTRY BUILDING*

- D. Tank Restraints: Provide units as shown on drawings, complete with necessary fasteners and anchors, as required for a complete installation:

1. Nylon Strap: Provide 1 inch wide by 54 inch long nylon strap with brass buckle; equal to AGM Container Controls, Inc., Tuscon, Arizona <http://www.agmcontainer.com> (1-800-995-5590).

*USUALLY MODIFY THE FOLLOWING TO ELIMINATE SPECIFIC MODEL NUMBERS. NUMBERS SHOULD BE INDICATED ON DRAWINGS.*

2. Restraint Bracket: Provide continuous cold-rolled steel channel section equal to Unistrut P-3300. Provide P-1713 attachment brackets at both ends of nylon strap.
- E. Tack strips: Provide 2" aluminum rail with tackable tan cork insert and flat end stops. Mount per manufacturer's recommendation using concealed fasteners.
1. Manufacturers:
    - a. Cig-Jan Products, Ltd.
    - b. Claridge Products and Equipment, Inc.
    - c. Marsh Chalkboard Co.; Div. Marsh Lumber Co.
    - d. Polyvision Corp.
- F. Custom drying rack assembly: Refer to details on Drawings.

*ADD DESCRIPTION HERE OF SPECIAL UNISTRUT FABRICATIONS.*

## 2.9 SINKS

- A. Tub Sinks, General: Fabricate tub sinks of monolithic construction without seams, with bottoms pitched to drain outlets, and as follows:

*THE FOLLOWING REQUIREMENTS ARE APPLICABLE TO MOST TUB SINKS. SELECT MATERIAL TYPES APPLICABLE TO PROJECT.*

1. Sizes: as indicated or mfr's closest stock size of equal or greater volume, as acceptable to Architect.
2. Outlets: 1-1/2 inch diameter, 2 3/4" inch minimum length, fabricated of cast epoxy resin, or stainless steel; of same material as sink.

*DELETE BELOW IF NO RESIN TUB SINKS.*

- B. Cast Epoxy Resin Tub Sinks: Nonglare black, molded in one piece with surfaces smooth, corners coved and bottom sloped to outlet. Minimum physical properties and chemical resistance as specified for cast epoxy resin tops; 1/2-inch minimum thickness.

*DELETE BELOW IF NO STAINLESS STEEL TUB SINKS.*

- C. Stainless Steel Tub Sinks: 18 gage, Type 316, with No. 4 satin finish.
1. Fabricate with horizontal and vertical corners rounded to at least 5/8 inch radius. Slope sink bottoms to pitch to outlet.
  2. Provide double wall construction for sink partitions with top edge rounded to at least 1/2 inch diameter.
  3. Continuous butt weld joints and provide factory punching for fixtures.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 123553 - - 15

4. Apply approximately 1/8 inch thick heat resistant underseal to undersink surfaces for condensation prevention and sound deadening.
5. Where stainless steel sinks occur in stainless steel tops, factory assemble sinks and tops into one integral unit with welds ground smooth and polished to near invisibility.

**DELETE BELOW IF NO CUP SINKS.**

- D. Cup Sinks: Fabricate cup sinks of cast epoxy resin or stainless steel as indicated on drawings. Conform to requirements specified for materials as specified for tops or sinks.

**DELETE BELOW IF NO STAINLESS STEEL SCULLERY SINKS.**

- E. Stainless Steel Scullery Sinks: 18 gage, Type 316, with No. 4 satin finish.
1. Fabricate with horizontal and vertical corners rounded to at least 5/8 inch radius. Slope sink bottoms to pitch to outlet.
  2. Provide double wall construction for sink partitions with top edge rounded to at least 1/2 inch diameter.
  3. Continuous butt weld joints and provide factory punching for fixtures.
  4. Apply approximately 1/8 inch thick heat resistant underseal to undersink surfaces for condensation prevention and sound deadening.
  5. Where stainless steel sinks occur in stainless steel tops, factory assemble sinks and tops into one integral unit with welds ground smooth and polished to near invisibility.

**REVIEW WITH MECHANICAL ENGINEER TO ENSURE THAT ALL LABORATORY SERVICE ITEMS ARE SPECIFIED AND COORDINATED. SPECIFICALLY, EMERGENCY SHOWERS AND EYEWASHES ARE SOMETIMES MISSED ON PROJECTS.**

**2.10 MECHANICAL SERVICE FIXTURES**

- A. Service Fixtures, General: Provide units complete with washers, locknuts, unions, nipples and other accessories for positive mounting to supporting laboratory units. Include wall and deck flanges, escutcheons, handle extension rods, remote valves, and similar items required. Fabricate units to withstand test pressure of 100 psig, unless otherwise indicated.
1. Service fixtures are indicated on drawings by symbols, with design type of each fixture indicated by letter and number reference marks.
  2. Handles: Provide 3-arm or 4-arm forged brass handles for valves, stops, faucets, remote controls, and cocks, except for ground key cocks, and micro-adjustable needle cocks.
  3. Hand of Fixtures: Provide right hand fixtures.
  4. Service Outlets Identification: Provide colored plastic index disks with embossed identification letters at each service fixture handle or knob. Secure disks to fixture handles to be tamperproof.

- B. Material and Finish: Fabricate service fixtures from cast or forged red brass containing a minimum of 81 percent copper. Exposed surfaces including fittings and escutcheons: polished chrome plated finish. Fixtures fabricated of plastic are not acceptable in any application, except as follows:
1. Distilled Water Fixtures: As indicated.
  2. Fixtures Inside Fume Hoods: Solvent resistant plastic coated brass as indicated.

*EDIT THE FOLLOWING TO SUIT PROJECT.*

*USE BELOW FOR ECONOMY GRADE UNITS. THESE CANNOT BE FINELY CONTROLLED AND ARE INTENDED FOR "ALL-ON" OR "ALL-OFF" USE.*

- C. Ground Key Type Hose Cocks: Tapered core and handle of one piece forged brass, ground and lapped, held in place under constant spring pressure.

*USE BELOW WHERE RESEARCHERS REQUIRE UNITS THAT CAN BE FINELY CONTROLLED.*

- D. Needle Valve Type Hose Cocks: Provide units with renewable, self-centering floating cones and renewable seats of stainless steel or monel metal. Provide units designed for 100 psig operating pressure.

- E. Water Valves and Faucets: Provide units with renewable barrel locked in valve body. Barrel shall contain all wearing parts, with renewable disks.

1. Furnish all water faucets with integral vacuum breakers in goose neck, regardless of model number indicated on drawings.

*INCLUDE ABOVE EXCEPT IN CHEMISTRY BUILDING.*

2. Provide bench-top mounted gooseneck water faucets with fittings required to allow gooseneck to swivel 360 degrees.
3. Provide each fixture with an integral vacuum breaker, regardless of model number indicated on drawings or in schedules.

*BELOW IS STANDARD DI UNIT. NOTE THAT THIS PARAGRAPH SPECIFIES MODEL NUMBERS, WHICH IS ATYPICAL. USUALLY DELETE MODEL NUMBERS HERE AND INCLUDE THEM ON DRAWINGS.*

- F. Brass Distilled (Purified) Water Fixtures: Provide units fabricated of forged brass, with polypropylene internal construction, and with no metal parts in contact with water. Provide each fixture with self-closing valves (unless otherwise indicated), and with a polypropylene vacuum breaker:

1. Deck Mounted Fixtures: Model 7833SC-7110; Watersaver.

*DELETE ABOVE OR BELOW, OR RETAIN BOTH TO SUIT PROJECT.*

2. Panel Mounted Fixtures: Model 7834SC-7110; Watersaver.

*DELETE TWO FIXTURES LISTED ABOVE AND SUBSTITUTE NON-SELF-CLOSING MODELS BELOW IF CLIENT WILL NOT ACCEPT THE SELF-CLOSING MODEL. FIRST FIXTURE LISTED IS DECK-MOUNTED AND SECOND FIXTURE IS PANEL-MOUNTED.*

3. Deck Mounted Fixtures: Model 7833-7110; Watersaver.
4. Panel Mounted Fixtures: Model 7834-7110; Watersaver.

*DELETE DI UNITS ABOVE AND INCLUDE ALL-PLASTIC CONSTRUCTION UNIT BELOW FOR ECONOMY AT REQUEST OR CLIENT.*

- G. PVC Distilled (Purified) Water Fixtures: Provide units fabricated of PVC, with no metal parts in contact with water. Provide each fixture with self-closing lever valve (unless otherwise indicated), and with a PVC vacuum breaker:
1. Product: Subject to compliance with requirements, provide Filterchem SVG-50"; Special Plastics Systems, Alhambra, Ca.

*DELETE BELOW IF NONE.*

- H. Fixtures in Fume Hoods: Provide valves controlled from face of hood. Use angle valves where required.

*SELECT ONE OF THE FOLLOWING FAUCET TYPES*

1. Faucets: Provide wall-mounted gooseneck style faucets in hoods.
2. Faucets: Provide wall-mounted, hose cock water outlets in hoods.
  - a. Backflow Preventer: Provide manufacturer's standard in-line backflow preventer (vacuum breaker) installed outside hood interior between valve body and outlet for each water faucet.
3. Hose Cocks: Provide units with acid and solvent resistant baked-on plastic coating in mfr's standard color.

*DELETE BELOW IF NONE. NOTE THAT THIS PARAGRAPH SPECIFIES MODEL NUMBERS, WHICH IS ATYPICAL. USUALLY DELETE MODEL NUMBERS HERE AND INCLUDE THEM ON DRAWINGS.*

- I. Deck Mounted Emergency Eyewash: Provide swinging dual-head units activated by pulling the arm into position for use. Unit to have plastic heads and polished chrome arm:
1. Deck Mounted Unit: Model 7610; Haws.

*SELECT ABOVE OR BELOW OR BOTH TO SUIT PROJECT. ABOVE IS MOUNTED AT THE REAR OF THE SINK ADJACENT TO THE FAUCET AND PULLS DOWN AND FORWARD FOR USE. BELOW IS MOUNTED ON THE SIDE OF THE SINK AND PULLS FORWARD HORIZONTALLY FOR USE. IF HANDICAP ACCESSIBILITY IS REQUIRED, A DIFFERENT TYPE OF FIXTURE MAY BE REQUIRED.*

2. Deck Mounted Unit: Model 7611; Haws.

## **2.11 ELECTRICAL SERVICE FIXTURES**

- A. Service Fixtures: Provide units complete with metal housing or box; necessary receptacles, terminals, switches, pilot lights, device plates, and fittings and gaskets required for mounting on casework. Provide only fixtures with Underwriter's Laboratories label.

1. Service fixtures are indicated on drawings by symbols, with design type of each fixture indicated by letter and number reference marks.
- B. Pedestal Type Fixtures: Cast aluminum housing complete with cover plates, neoprene gasket under base, and with specification grade receptacles or other devices indicated. Fabricate units with sloped single face or double face, as indicated, and concealed mounting holes in base for attaching to casework. Provide holes tapped for conduits.
- C. Recessed Type Fixtures: Galvanized steel outlet box, size as required complete with cover plate and receptacles or other devices as indicated.
- D. Cover Plates: Provide stainless steel cover plates for AC outlets and devices.
  1. Stainless Steel, Type 302, satin finish, with formed beveled edges.
- E. Mark the following devices whether shown on drawings or not.
  1. AC receptacles, other than standard 120 volt duplex, grounding type. Indicate voltage and phase.

**BELOW USUALLY NOT REQUIRED FUME HOOD LIGHT SWITCHES ARE INCLUDED IN FUME HOOD SECTION.**

2. Switches: Indicate equipment being controlled (e.g., "PUMP OUTLET"). Provide units with pilot lights when located remotely from associated equipment or switch, where function is not obvious. Indicate equipment or circuit being energized.
- F. Finishes for Electric Service Fixture Components: Mfr's standard finish. Provide galvanized finish on ferrous fittings.
- G. Receptacles: Furnish AC receptacles for AC circuits, 125 volt, 20 amp, 2 pole, 3 wire, NEMA Type 5-20R, specification grade, extra heavy duty grounding type with nylon or Lexan bodies.
  1. Provide GFCI (ground fault circuit interrupter) receptacles within fume hoods and within 6 feet of sink units. GFCI receptacles shall be rated for 2000 amps interrupting capacity and trip in 25 milliseconds or less when ground currents exceed 5 milliamps.

**SELECT ONE OF THE FOLLOWING.**

2. Color: Dark brown.
3. Color: Ivory.
4. Products: Subject to compliance with requirements, provide products of one of the following:
  - Arrow Hart.
  - Bryant.
  - Hubbell.
  - Leviton.
  - Pass and Seymour.

**RETAIN BELOW FOR FUME HOOD SWITCHES, AND OTHER AUXILLIARY EQUIPMENT SWITCHES (SUCH AS OUTLETS ON THE FACE OF, OR INSIDE, CABINETS).**

H. Switches: Furnish single pole, double pole, or 3-way switches, as required, rated 120-277 volts AC and 20 amps, unless otherwise indicated.

1. Furnish pilot light adjacent to toggle switch, where noted as "PL" adjacent to switch identification.

**SELECT ONE OF THE FOLLOWING.**

2. Color: Dark brown.
3. Color: Ivory.
4. Products: Subject to compliance with requirements, provide products of one of the following:  
Arrow Hart.  
Bryant.  
Hubbell.  
Leviton.  
Pass and Seymour.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. General: Install plumb, level, true, and straight with no distortions. Shim as required, using concealed shims. Where laboratory furniture abuts other finished work, scribe and apply filler strips for accurate fit with fasteners concealed where practicable.
- B. Base Cabinets: Set cabinets straight, plumb, and level. Adjust sub-tops within 1/16" of a single plane. Bolt continuous cabinets together. Unless otherwise noted, secure individual cabinets with not less than 2 fasteners into floor, where they do not adjoin other cabinets.
  1. Where required, assemble units into one integral unit with joints flush, tight, and uniform. Align similar adjoining doors and drawers to a tolerance of 1/16.
- C. Legs and Aprons: Install with exposed surfaces of legs approximately 1/8 in front of apron faces. Legs set flush or behind apron faces at conditions exposed-to-view are not permitted.
- D. Fillers and Closure Panels: Provide matching filler panels at openings between cabinets and adjacent walls, whether or not indicated on drawings. Provide closure panels at openings into service chases below aprons, whether or not indicated on drawings. Fasten fillers at ends of island benches and all closure panels with Phillips-head screws set in matching grommets, for easy removal.
- E. Wall Cabinets: Securely fasten to solid supporting material. Anchor, adjust, and align wall cabinets as specified for base cabinets.

**RETAIN OR DELETE BELOW AS APPLICABLE TO PROJECT.**

1. Where reinforcing of metal stud wall system is required, reinforcement is the work of other trades, but responsibility for accurate location and sizing of reinforcement is part of this work.
2. Adjust casework and hardware so that doors and drawers operate smoothly without warp and bind. Lubricate operating hardware as recommended by mfr.

### **3.2 INSTALLATION OF TOPS**

- A. Field Jointing: Where practicable, make in same manner as factory jointing using dowels, splines, adhesives, and fasteners recommended by mfr. Locate field joints as shown, factory prepared so there is no job site processing of top and edge surfaces.
- B. Solid Hardwood, Stainless Steel and Plastic Laminate Tops: Use concealed clamping devices for field joints, locate within 6 inches of front, at back edges and at intervals not exceeding 24 inches. Tighten in accordance with mfr's instructions to exert a constant, heavy clamping pressure at joints.
- C. Natural Stone and Epoxy Tops: Secure to cabinets with epoxy cement applied at each corner and along perimeter edges at not more than 48 inches on center.
- D. Workmanship: Abut top and edge surfaces in one true plane, with internal supports placed to prevent deflection, and as follows:
  1. Solid Hardwood, Stainless Steel and Plastic Laminate: Provide flush hairline joints in top units using clamping devices.
  2. Natural Stone and Epoxy Resin: Use mfr's recommended adhesives and holding devices to provide joint widths not more than 1/16 inch wide at any location, completely filled and flush with abutting edges.
- E. Where necessary to penetrate tops with fasteners, countersink heads approximately 1/8 inch and plug hole flush with material equal in chemical resistance, color, hardness, and texture to top surface.
- F. After installation, carefully dress joints smooth, remove any surface scratches, clean and polish entire surface.
- G. Provide holes and cutouts as required for mechanical and electrical service fixtures.
- H. Provide scribe moldings for closures at junctures of top, curb and splash with walls as recommended by mfr for materials involved. Use chemical resistant, permanently elastic sealing compound where recommended by mfr.

### **3.3 INSTALLATION OF SHELVING UNITS**

- A. Erect steel channel support system using manufacturer-recommended connectors, fasteners and anchors. Where not otherwise indicated, anchor into concrete structure using expansion bolts designed for the condition encountered. Lay shelves into support structure and fasten each shelf from underside with wood screws.

**3.4 INSTALLATION OF SINKS**

- A. Coordinate installation of sinks with work of Division 22.
  - 1. Underside Installation: Use mfr's recommended adjustable support system for table-type and cabinet-type installations. Set top edge of sink unit firmly pressed to counter top, set in mfr's recommended chemical resistant sealing compound to produce a tight and fully leakproof joint. Adjust sink and securely support to prevent movement.
  - 2. Semi-flush Installation: Use stainless steel sink frame, complete with clamping lugs and pads. Before setting, apply a full coat of mfr's recommended sealant under rim lip and along top. Omit sink frame in sinks fabricated with integral rim seal.

**3.5 INSTALLATION OF ACCESSORIES**

- A. Install in a precise manner in accordance with manufacturer's directions. Turn screws to a flat seat; do not drive into place. Adjust moving parts to operate freely without excessive bind.

**3.6 CLEANING, ADJUSTING AND REPAIR**

- A. Cleaning: Perform the following cleaning operations not more than 7 days prior to substantial completion:
  - 1. Clean shop-finished surfaces, and touch-up as required by Architect, and remove or refinish damaged or soiled areas.
  - 2. Clean glass surfaces installed under this section.
  - 3. Remove construction debris from drawers and cabinet interiors. Clean drawer and cabinet interiors as required to remove dirt, grease, dust and film.
  - 4. Dust exposed surfaces of casework and equipment; polish tops and curbs.
- B. Adjust drawer and door operation of each unit to provide smooth operation, positive latching, and close fit within specified tolerances.
- C. Repair, or remove and replace defective work as directed upon completion of installation.

NUMBER            SECTION DESCRIPTION

**DIVISION 12 FURNISHINGS**

SECTION 124600 - FURNISHING ACCESSORIES

**END OF CONTENTS TABLE**

**DIVISION 12 FURNISHINGS**  
**SECTION 124600 - FURNISHING ACCESSORIES**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. This Section includes the following furniture accessories:
  - 1. Waste receptacles.
  - 2. Wall mounted nylon plastic coat hooks.
- B. Extent of furniture accessories is indicated by provisions of this Section.

**1.2 SUBMITTALS**

- A. Product data indicating compliance with requirements.
- B. Installation instructions for installation on indicated surfaces.
- C. Schedule showing locations by room number, and number of units required.

**PART 2 - PRODUCTS**

**2.1 WASTE RECEPTACLES**

- A. Provide painted steel waste receptacle with vinyl bumper edge, and as follows:
  - SELECT ONE OF THE FOLLOWING COLORS**
  - 1. Color: Black.
  - 2. Color: Beige.
  - 3. Color: Grey.
  - 4. Color: Putty.
  - 5. Size: Approximately 21-inches by 11-inches by 30 inches.
- B. Product: Model 96R; United Receptacle Co., or equivalent products of Steelcase Corp.

**2.2 COAT HOOKS**

- A. Nylon Coat Hooks: Cast plastic two-piece units with L-shaped hook and round mounting rose. Provide units with concealed fasteners, designed for wall mounting, and as follows:
  - 1. Size: 3-15/16-inch overall length; 2-3/4-inch rose.
  - 2. Color: Selected by Architect from manufacturer's standard colors.
- B. Manufacturer/Model: Subject to compliance with requirements, provide the following:
  - 1. HEWI.

**PART 3 - EXECUTION**

*DELETE ARTICLE BELOW IF NO COAT HOOKS INCLUDED.*

**3.1 INSTALLATION**

- A. Install coat hooks in compliance with manufacturer's printed instructions. Fasten units indicated to be mounted on drywall walls through reinforcing materials, or if no reinforcing exists, fasten through drywall with cadmium plated steel expansion type anchors.

**3.2 WASTE RECEPTACLE SCHEDULE**

- A. Provide 1 waste receptacle in each toilet room.

NUMBER            SECTION DESCRIPTION

**DIVISION 12 FURNISHINGS**

SECTION 124813 - ENTRANCE FLOOR MATS AND FRAMES

**END OF CONTENTS TABLE**

**DIVISION 12 FURNISHINGS**  
**SECTION 124813 - ENTRANCE FLOOR MATS AND FRAMES**

*THE FOLLOWING UNIT HAS BEEN USED SUCCESSFULLY BY DOUG - OTHER  
TYPES AVAILABLE, REFER TO MANUFACTURER'S CATALOGS*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of floor mats and frames is indicated on drawings.
- B. Type of floor mat and frame includes:
  - 1. Recessed units for retrofit application.

**1.2 SUBMITTALS**

- A. Submit manufacturer's product literature indicating compliance with requirements.
- B. Samples: Submit samples of carpet tread colors for initial selection.

**PART 2 - PRODUCTS**

**2.1 RECESSED MAT**

- A. Fabrication: Fabricate tread rails of black co-extruded vinyl and acrylic with soft support legs to accommodate moderate imperfections in floor finish. Continuously connect tread rails in ball and socket arrangement. Fabricate assembly so that mat can be rolled up and removed for cleaning.
  - 1. Spacing Between Rails: Less than 3/16".
  - 2. Tread Surfaces: Colorfast, nylon carpet.
    - a. Tread Color: Selected by Architect from manufacturer's full range of standard colors, of not less than 15 colors.
  - 3. Mat Frame: Block-out design aluminum (for retrofit application) in clear anodized finish. Match frame fillers to treads. Furnish with corner locks and necessary anchors.
- B. Manufacturer/Model: Provide products of Construction Specialties Inc.; "Treadline" model T1HCLB, or subject to compliance with requirements, equivalent products of Arden Architectural Specialties Inc., Balco Inc., J.L. Industries., MM Systems Corp., Pawling Corp., or Reese Enterprises Inc.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Examine condition of floor prior to installing mat frame. If unacceptable for proper mat installation, correct deficiencies before installing frame.
- B. Securely anchor frame to floor, in accordance with manufacturer instructions. Isolate metal parts from concrete and grout to prevent galvanic action. Use tape, thick coating or other means recommended by manufacturer to effect separation.
- C. Install mat in frame. Ensure maximum 3/16-inch clearance between mat and frame. Repair or replace improperly fitting mat.

NUMBER            SECTION DESCRIPTION

**DIVISION 13 SPECIAL CONSTRUCTION**

SECTION 132100 - CONTROLLED ENVIRONMENT ROOMS

**END OF CONTENTS TABLE**

**DIVISION 13 SPECIAL CONSTRUCTION**  
**SECTION 132100 - CONTROLLED ENVIRONMENT ROOMS**

*SPECIAL ATTENTION SHOULD BE GIVEN TO COORDINATING WORK OF THIS SECTION WITH SECTION 123553 LABORATORY CASEWORK AND MECHANICAL AND ELECTRICAL WORK. SECTION 055000 "METAL FABRICATIONS" MAY BE REQUIRED TO SUPPORT EXTERIOR MOUNTED CONDENSER UNITS.*

**PART 1 - GENERAL**

**1.1 SUMMARY**

A. Extent and type of controlled environment room are indicated on Drawings and by provisions of this Section.

B. Work included in this Section:

1. Plumbing and wiring related to lighting, alarm, control and refrigeration systems, ready for hook-up to building services are included in this Section.

*DELETE BELOW IF HUMIDITY CONTROL SYSTEM NOT INCLUDED.*

2. Plumbing and wiring related to humidity control system, complete and ready for hook-up to building services, are included in this Section.

*USUALLY RETAIN BELOW. REVISE IN COORDINATION WITH ELECTRICAL ENGINEER IF THIS WORK WILL BE PERFORMED UNDER DIVISION 26.*

3. An electrical panel, receptacles and related conduit, surface raceways, wiring, boxes, and connections are included in this Section.
4. Cutting and patching of penetrations in insulated sandwich panels for connection of plumbing and electrical services work of Divisions 22 and 26, is included in this Section.

*DELETE BELOW IF SHELVING NOT INCLUDED IN THIS SECTION*

5. Floor and wall mounted wire shelving are included in this Section.

C. Related Sections: The following Sections contain requirements that relate to this Section:

*INCLUDE BELOW IF ROOM WILL BE INCLUDED AS AN ALTERNATE.*

1. Division 01 Section "Alternates" for additional requirements related to this Section.

*DELETE BELOW IF NONE. IF PARA RETAINED, MODIFY TO SUIT PROJECT.*

2. Division 12 Section "Laboratory Casework" for laboratory furniture, tops, sinks, faucets and service fittings.

*COORD. BELOW WITH ARTICLE "MECHANICAL AND ELECTRICAL SYSTEMS AND ACCESSORIES."*

3. Division 22 for plumbing services and connections to sink and service fittings within controlled environment room.

**COORDINATE BELOW WITH ELECTRICAL ENGINEER. REVISE BELOW AND COORDINATE WITH PLUMBING AND WIRING ARTICLE ABOVE IF OUTLETS ARE REQUIRED TO BE RECESSED IN WALLS.**

4. Division 26 for connection of equipment to building electrical service.

## **1.2 QUALITY ASSURANCE**

- A. Fire-Rating: Panel construction shall meet UL flame spread rating of 25.
- B. Sanitary Construction: Provide unit with National Sanitation Foundation (NSF) seal on door.
- C. Personnel Safety: Comply with Occupational safety and Health Administration regulations regarding personnel alarms and equipment location.
- D. Plumbing Systems: Comply with the requirements of the "Michigan Plumbing Code 20033.
- E. Ventilation Systems: Comply with the requirements of the Michigan Building Code 2003 and Michigan Mechanical Code 2003 with respect to minimum ventilation requirements.
- F. Electrical Equipment and Wiring:
  1. Comply with requirements of the "National Electrical Code" of the National Fire Protection Association (NFPA).
  2. Provide electrical components, including, but not limited to refrigeration equipment, lighting, receptacles, and heated door section listed and labeled by Underwriter's Laboratories, Inc. (UL) for electrical safety.
  3. Provide control panels and electrical panels listed and labeled by UL, ETL, MET, or CSA.

## **1.3 SUBMITTALS**

- A. Product Data: Submit Manufacturer's literature indicating compliance with requirements, and the following:
  1. Installation instructions.
  2. Operating and maintenance instructions for each item of equipment.
- B. Shop Drawings: Showing construction of box and ancillary equipment, including component data sheets, control diagrams, and operating sequence information.
  1. Provide a detailed power riser diagram specific to the controlled environmental room to be supplied.
- C. Pre-Training Submittals: Submit start-up, functional test, and performance test reports not less than 2 weeks prior to conducting training session.
- D. Product Warranties: Submit manufacturer's standard written warranty for each environmental room covering, at minimum, one year, parts and labor.

1.4 DESIGN REQUIREMENTS

*DELETE BELOW IF UNIT WILL NOT BE USED FOR CRYSTALLIZATION  
(WHICH REQUIRE VIBRATION RESTRICTIONS).*

- A. Crystallization Room: In environmental rooms designated "crystallization room", provide units with the following special features:
1. Provide quiet switches in lieu of standard mechanical relays and solenoids.
  2. Provide self-closing, self-sealing doors.
  3. Provide remote mounted compressor and condenser units.
  4. Provide refrigeration system piping mounted on vibration isolators and not mounted along walls.

*DELETE BELOW IF UNIT WILL NOT BE USED FOR ANIMAL HOLDING  
(WHICH REQUIRE NOISE RESTICTIONS).*

- B. Animal Room: In environmental rooms designated "animal room", provide the following special feature:
1. Provide quiet switches and relays in lieu of standard mechanical relays and solenoids.

1.5 PROJECT CONDITIONS

- A. Existing Clearances: Clear headroom above the unit is restricted by piping and ductwork. Maximum clear dimension from the finished floor to underside of the lowest obstruction is as follows:

*MODIFY EXMPLE BELOW TO SUIT ACTUAL PROJECT CONDITIONS.*

1. feet, 9 inches.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide products of one of the following:

Bahnson Environmental Specialties  
Environmental Growth Chambers  
Harris Environmental Systems, Inc.  
Insulated-Structure, Ltd.  
Nor-Lake, Inc.

2.2 ENVIRONMENTAL ROOM ENCLOSURE

- A. Size: Environmental room dimensions are indicated on Drawings. Provide rooms of manufacturer's standard sizes, but within 12-inches of dimensions indicated on drawings.

*IF HEIGHT NOT INDICATED ON DRAWINGS, INCLUDE ONE OF THE  
FOLLOWING. NOTE THAT IT WILL BE DIFFICULT OR IMPOSSIBLE TO  
INSTALL A GRID CEILING IN ROOMS LOWER THAN 8'-7".*

1. Room Height: 7 feet, 7 inches outside dimension.

2. Room Height: 8 feet, 1 inch outside dimension.
3. Room Height: 8 feet, 7 inches outside dimension.
4. Room Height: 9 feet, 7 inches outside dimension.

B. Wall and Ceiling Panels: Manufacturer's standard rigid, foamed-in-place urethane insulation core with metal panel skins adhered to exterior and interior sides. Provide all mechanical latching devices, gasketing and trim required for positive seal between panels and neat finished appearance.

1. Panel Thickness: 4-inches
2. Thermal Performance: U-value of assembled panels not less than 0.29.
3. Panel Skins: Provide metal panel skins of indicated materials. Paint metal panels in areas exposed to view in finished construction.
  - a. Exterior Floor and Ceiling: 14 gage galvanized steel.

*BELOW IS TYPICAL, BUT OPTIONS INCLUDE STAINLESS STEEL AND GALVANIZED STEEL - CONSULT MFR'S LITERATURE.*

- b. Exterior Wall Panels: 0.040-inch thick, stucco embossed, aluminum.
- c. Interior Wall Panels: 0.040-inch thick, stucco embossed, aluminum.
- d. Colors: Provide white interior and white exterior.

*DELETE BELOW IF WALL-MOUNTED SHELVING, OR IF FLOOR-TO-CEILING UNISTRUT SUPPORTS WILL BE PROVIDED. COORDINATE BELOW WITH DRAWINGS.*

4. Reinforcing: Provide reinforcing in the form of wood blocking or heavy-gage steel stripping, concealed within walls at locations indicated to receive wall mounted casework, shelving or equipment.

*DELETE BELOW IF NO ELEVATED CO2 ROOMS*

5. Panel Sealants for Elevated CO2 Room: In addition to requirement of mechanical latching device (cam-lock panels), provide silicone sealant at all panel joints for redundantly sealed, air-tight construction.

C. Doors: Provide units with the following characteristics:

1. Size: 36-inches by 78-inches.

*USUALLY SELECT SWINGING TYPE BELOW.*

2. Type: Flush mounted, swinging type.
3. Type: Sliding type.

*SELECT SELF-SEALING FOR CRYSTALLIZATION ROOMS.*

4. Operation: Self-closing hinges.
5. Operation: Self-closing, self-sealing.

*MODIFY BELOW TO SUIT PROJECT REQUIREMENTS.*

6. Observation Window: 12-inches by 12-inches (approximate dimension) triple pane observation window.

*MODIFY BELOW TO SUIT PROJECT REQUIREMENTS.*

- a. Electrically heat windows in freezer doors.

**MODIFY BELOW TO SUIT PROJECT REQUIREMENTS.**

7. Latching Hardware: Positive latching hardware with door handle and inside safety release. Provide cylinder locks in door handles, except in freezer unit (if applicable).

**LIMIT KEYING INFORMATION TO BELOW. DO NOT INCLUDE SPECIFIC DEPARTMENTAL KEYING INFORMATION IN THIS SECTION.**

- a. Manufacturer/Model of Cylinders: Best Co., only. Contact University of Michigan Key Office at (734) 764-3481 for cylinder and keying requirements.

**RETAIN ALL BELOW.**

8. Gaskets and Seals: Replaceable magnetic gaskets on sides and top, and adjustable sweep seals on bottom. Provide openings with stainless steel threshold.
9. Heat opening perimeter as required to prevent condensation.

**INSULATED FLOORS BELOW MAY BE OMITTED IN WARM ROOMS AND COLD ROOMS WHERE NECESSARY FOR BARRIER-FREE APPLICATION OR HEIGHT RESTRICTIONS. IN COLD ROOMS, THIS CAN RESULT IN CONDENSATION ON UNDERSIDE OF THE SLAB, SO IT IS BEST TO CONSIDER ELIMINATING INSULATED FLOORS ONLY IN SLAB-ON-GRADE CONSTRUCTION.**

- D. Floors: Insulated panels of construction similar to wall panels, except able to withstand floor loads of 600 psf.
  1. Panel Thickness: 3-1/2 inches, minimum.
  2. Floor Finish: 14 gage galvanized steel.
  3. Floor Covering: 1/8-inch thick diamond tread PVC mat in manufacturer's standard color.

**INSULATED FLOORS REQUIRE RAMPS (UNLESS A DEPRESSED SLAB CAN BE PROVIDED). RAMPS CREATE BARRIERS TO ACCESS THAT MUST BE DEALT WITH - SEE NOTES BELOW.**

- E. Ramps: Provide ramp of type indicated, fabricated of minimum 1/8-inch thick Type 6061-T6 aluminum tread plate with diamond-check pattern, or flat aluminum plate with durable, non-skid coating. Provide fire-retardant-treated wood substructure designed to support structural loads equal to, or greater than, those specified for the insulated floor structure. Provide ramp of width indicated on Drawings, or if not indicated, 48 inches wide; and of indicated length or slope.
  1. Fixed Exterior Ramp: Provide where indicated on Drawings, or if not indicated, one unit at each door where a transition from insulated floor to building floor occurs.

**SELECT ABOVE OR BELOW.**

2. Portable Exterior Ramp: Provide where indicated on Drawings, or if not indicated, one unit at each door where a transition from insulated floor to building floor occurs.

**INCLUDE ONE LENGTH OPTION BELOW FOR EITHER OF THE ABOVE TYPES. ALL DISCUSSIONS ASSUME A 4-INCH TOTAL RISE.**

OPTION BELOW WILL NOT COMPLY WITH STATE ACCESSIBIITY CODES OR ADA. 36 INCHES IS MFR STANDARD, BUT UM HAS HAD SUCCESS OBTIANING VARIANCES WITH THE 42-INCH EXTERIOR RAMP OPTION BELOW. THE STATE PREFERS THE 42-INCH LENGTH, WHICH GIVES THE CODE-REQUIRED 1:10 SLOPE FOR MAX. 6-INCH RISE (EXCEPTION MUST BE REQUESTED FOR THE MISSING LANDING AT DOOR).

- a. Length: 42 inches.

OPTION BELOW DOES NOT NEED LANDING, ACCORDING TO MICHIGAN BUILDING CODE (LESS THAN 1:12), AND DOES NOT REQUIRE VARIANCE. USE THIS IF SPACE IS AVAILABLE.

- b. Length: 50 inches.

USUALLY DELETE BELOW AND RETAIN ABOVE - MOST USERS DO NOT WANT AN INTERIOR RAMP SINCE IT CREATES A TRIPPING HAZARD. USE ONLY WHERE EXTERIOR RAMP CANNOT BE PROVIDED BECAUSE OF SPACE CONSIDERATIONS. AN EXCEPTION FOR RAMP LENGTH AND MISSING LANDING IS REQUIRED.

- 3. Fixed Interior Ramp: Maximum 20-inches long, provided at door. Include non-skid PVC mat.

F. Trim Strips and Closure Panels: Provide closure and trim pieces as indicated. Use materials and finishes matching exterior panel skins.

G. Ceiling Plenum: No plenum within room.

SELECT EITHER ABOVE OR BELOW. NOTE THAT GRID CEILING MATERIAL WILL REDUCE AVAILABLE HEADROOM TO BELOW THE BOTTOM OF THE LOWEST MECHANICAL ELEMENT (USUALLY THE CONDENSATE DRAIN LINE OUT OF THE FAN COIL UNIT IN ROOM). DO NOT SELECT PLENUM OPTION WITH ROOMS SHORTER THAN 8'-7" UNDER ANY CIRCUMSTANCES.

GRID IS PREFERRED BY MED. SCHOOL WHICH MAY REQUIRE VERY HIGH AIR VELOCITIES DUE TO ELECTRICAL LOAD REQUIREMENTS. BE SURE TO INVESTIGATE AND RESOLVE POTENTIAL CONFLICTS BETWEEN AVAILABLE HEADROOM AND GRID.

H. Ceiling Plenum: Provide white acrylic plastic, 1/2-inch square, "open cell" grid type ceiling supported by medium duty, painted steel suspension system to form plenum for distribution of air and light. Secure grid to T-bar supports to prevent rattling.

FOR PROJECTS WITH MULTIPLE ENVIRONMENTAL ROOMS, CREATE SEPARATE "OPERATING REQUIREMENT" ARTICLES FOR EACH TYPE OF ROOM AND RE-TITLE ACCORDINGLY. EXAMPLE: "COLD ROOM OPERATING REQUIREMENTS" AND "WARM ROOM OPERATING REQUIREMENTS"; OR "ROOM TYPE NO. 1"/"ROOM TYPE NO. 2". ENSURE CONSISTANT NOMENCLATURE ON DRAWINGS.

### 2.3 ENVIRONMENTAL ROOM OPERATING REQUIREMENTS

- A. System Operation, General: Provide units that are capable of maintaining selected set point(s), within indicated temperature and humidity control and uniformity ranges, when operated under the indicated maximum and minimum thermal loading conditions. Provide units with compressor running continuously, and with evaporator unit fan operating on demand. Size compressor and related components to operate under both minimum and maximum loading conditions without "short cycling," excessive wear on the compressor, or throttling of the hot gas bypass valve. Design units to operate without excessive compressor noise, and without high air velocities within the occupiable space of the room.

*REVIEW THE FOLLOWING VALUE WITH ELECTRICAL ENGINEER.*

1. Available Building Power Supply: 208V, 3 phase, 4 wire plus ground.

- B. Environmental Control: Provide environmental rooms complying with the following temperature and humidity control requirements:

*TEMPERATURE SET POINT OR RANGE MUST BE DETERMINED BY CLIENT.*

*BELOW DESCRIBES STANDARD COLDROOM WITH A FIXED SET POINT.*

1. Temperature Set Point: 4 degrees C., constant.

*BELOW DESCRIBES A ROOM CAPABLE OF A RANGE OF TEMPERATURES FROM WARM TO COLD.*

2. Temperature Range: 0 to 60 degrees C., constant.

*BELOW IS NOT RECOMMENDED PRACTICE. ELEVATED CO2 POSES HEALTH RISK.*

3. to 60 degree C., elevated CO2 environment.
4. Temperature Control Range: Provide units capable of maintaining temperature within the following range, when measured at a single point within the room over time:

*RETAIN ONE OF THE FOLLOWING VALUES IN CONSULTATION WITH CLIENT - USUALLY +/- 0.5 DEG C. IS ACCEPTABLE. NOISE ASSOCIATED WITH THE OPERATION OF THE VALVE TYPE REQUIRED FOR +/- 0.2 DEG. C. ABOVE HAS PROVED ANNOYING TO OCCUPANTS.*

- a. +/- 0.2 deg. C.
  - b. +/- 0.5 deg. C.
5. Uniformity Range: +/- 0.5 degree C, or better, when measured between a variety of points anywhere within the room, excluding areas of the room within 12 inches of walls, floor, and ceiling.
  6. Humidity Range: As follows:

*BELOW IS MOST COMMON. HUMIDITY CONTROL SYSTEMS ADD CONSIDERABLE COST AND COMPLICATIONS TO UNITS.*

- a. Uncontrolled, except that room supplier is responsible for providing system which ensures that condensation will not form on horizontal or vertical surfaces within the room.

*BELOW WILL KEEP CONDENSATION FROM FORMING ON COLD SURFACES OF TYPICAL 4 DEG. C. ROOM.*

- b. Less than 20 grains/lb.

*RETAIN BELOW OR MODIFY FOR SPECIFIC REQUIREMENT OF RESEARCH BEING CONDUCTED.*

- c. Ambient to 90 percent RH.

*USUALLY DELETE BELOW - ELEVATED CO2 ROOMS ARE RARE.*

- 7. CO2 Range: 0 to 10 percent.

- C. Thermal Loads: Provide environmental rooms capable of maintaining indicated controlled temperature and humidity conditions when operating under the following thermal loads:

*CLIENT MUST DETERMINE DOOR OPENINGS BELOW. 8 PER HOUR IS A FAIRLY HIGH FREQUENCY OF USE.*

- 1. Door Openings: Maximum of 8 per hour, for 8 working hours per day.
  - a. Temperature and humidity range recovery time for a 5-second door open condition: Not more than 5 minutes.

*CLIENT MUST DETERMINE OCCUPANTS BELOW. 2 IS USUALLY THE MAXIMUM.*

- 2. Number of Occupants: Maximum of 2, for 8 working hours per day.
- 3. Lighting: As indicated in "Electrical Systems and Accessories" Article of this Section.

*CONSULT WITH CLIENT TO DETERMINE APPROPRIATE HEAT LOAD FROM EQUIPMENT EXPECTED TO OPERATE WITHIN THE ROOM, AND DURATION.*

- 4. Owner's Equipment: Minimum thermal load from Owner's movable equipment within the room is a continuous zero-load condition. Maximum thermal load from Owner's movable equipment within the room is as follows:

*SELECT VALUES BELOW IN COORDINATION WITH OWNER. NOTE THAT 1 KW IS FREQUENTLY ACCEPTABLE. NOTE THAT POSSIBLE THERMAL LOAD CANNOT EXCEED AVAILABLE ELECTRICAL POWER, AND IS FREQUENTLY MUCH LESS THAN THAT VALUE. CONSULT WITH MECHANICAL ENGINEER IF IN DOUBT.*

- a. kilowatts, operating for 24 hours per day.
- b. kilowatts, operating for 8 hours per day.
- c. kilowatts, operating for 8 hours per day.

*IF HUMIDITY CONTROL IS REQUIRED, ADD HUMIDITY-AFFECTING EQUIPMENT SUCH AS WATER BATHS HERE.*

- 5. Ambient Conditions Exterior to Room: 60 to 80 deg. F.

*DELETE BELOW IF NO FREEZER UNIT*

#### 2.4 FREEZER ROOM OPERATING REQUIREMENTS

- A. System Operation, General: Provide units that are capable of maintaining selected set point, within the indicated temperature control and uniformity ranges, when operated under the indicated maximum and minimum thermal loading conditions.

- B. Environmental Control: Provide freezer rooms complying with the following temperature control requirements:
1. Temperature Set Point: Minus 20 degrees C., constant.
  2. Temperature Control Range: +/- 0.5 deg. C., when measured at a single point within the room over time.
    - a. +/- 0.5 deg. C.
  3. Uniformity Range: +/- 0.5 deg. C, or better, when measured between a variety of points anywhere within the room, excluding areas of the room within 12 inches of walls, floor, and ceiling.
  4. Humidity: Uncontrolled.
- C. Thermal Loads: Provide freezer rooms capable of maintaining indicated controlled temperature when operating under the following thermal loads:
1. Door Openings: 4 per hour, during 8 working hours per day.
  2. Number of People: Maximum of 1, for a duration of 5 minutes or less.
  3. Lighting: As indicated in "Electrical Systems and Accessories" Article of this Section.

*BELOW IS AN EXAMPLE ONLY. VERIFY WITH CLIENT AND EDIT TO SUIT ACTUAL CONDITIONS.*

4. Product Load: Approximately 1 gallon of room temperature liquid introduced at 24 hour intervals.
5. Ambient Conditions Exterior to Room: 60 to 80 deg. F.

## **2.5 PLUMBING AND REFRIGERATION SYSTEMS AND ACCESSORIES**

- A. Refrigeration, General: Provide units with factory installed refrigeration systems, complying with indicated requirements of "Operating Requirements" Article of this Section, and as follows:
1. Plumbing: Provide factory-and-field installed equipment, including piping, fittings and connections required to provide a complete, ready-to-operate refrigeration system.
    - a. Use pre-charged coolant lines where possible.
  2. Electrical: Provide factory-and-field installed conduit, wiring, fittings and connections (including compressor disconnect switch) required to provide a complete, ready-to-operate refrigeration system. Terminate wiring in power panel as indicated in "Electrical Systems and Accessories" Article of this Section.
- B. Condensing Unit: Factory assemble compressor/condenser units using UL listed or recognized components. Compressor shall be of semi-hermetic type. Use manufacturer's standard non-CFC refrigerant for condition of use. Pre-wire and factory pipe units.

*CONSULT WITH MECHANICAL ENGINEER WHEN SELECTING SYSTEM TYPE. CURRENT PREFERENCE IS FOR WATER-COOLED SYSTEMS.*

*RETAIN BELOW FOR WATER-COOLED SYSTEMS. THESE SYSTEMS REQUIRE EITHER A BUILDING DOMESTIC WATER OR CHILLED WATER SUPPLY. BELOW IS FOR CHILLED WATER SUPPLY WITH DOMESTIC WATER BACK-UP.*

1. System Type: Provide controlled environment room with water-cooled refrigeration system, for connection to building chilled water supply with domestic water back-up system. Include a control valve to throttle chilled water based on demand, and designed for a 10 deg. F. temperature rise.

**MODIFY BELOW IN CONSULTATION WITH MECHANICAL ENGINEER.**

- a. Chilled Water Temperature: Approximately 45 deg. F.
- b. Domestic Water Temperature: Approximately 65 deg. F.

**SELECT ONE MOUNTING LOCATION FROM THREE CHOICES BELOW - CRYSTALLIZATION ROOMS MUST HAVE REMOTE MOUNTED EQUIPMENT. INSTALLATIONS ON COLDROOM ROOF MAY BE NOISY. A CLEAR, WRITTEN DESCRIPTION OF THE LOCATION MAY BE SUBSTITUTED HERE FOR A LOCATION DRAWING.**

- c. Mounting Location: Mount unit on roof of cold room.
- d. Mounting Location: Building interior, as indicated on Drawings.
- e. Mounting Location: Building exterior, as indicated on Drawings.

**USUALLY INCLUDE BELOW, EXCEPT FOR REMOTE INSTALLATIONS WHERE NOISE AND VIBRATION TRANSMISSION ARE NOT CRITICAL.**

- f. Mounting Type: Mount system components on a single steel frame. Mount compressor on spring isolators sized for specific equipment provided.

**RETAIN BELOW FOR AIR-COOLED SYSTEMS. THESE SYSTEMS REQUIRE MOUNTING THE CONDENSER UNIT OUTSIDE THE BUILDING AND SHOULD NOT BE RUN MORE THAN 50-75 FEET FROM THE ROOM.**

2. System Type: Provide controlled environment room with an air-cooled refrigeration system.

**SELECT ABOVE OR BELOW MOUNTING LOCATION - NOTE THAT CRYSTALLIZATION ROOMS SHOULD HAVE REMOTE MOUNTED REFRIGERATION EQUIPMENT**

- a. Mount refrigeration system on building exterior as shown. Provide exterior mounted refrigeration units with all-weather hood and low-ambient controls, suitable for local climate.

**USUALLY DELETE BELOW FOR EXTERIOR INSTALLATIONS, UNLESS NOISE AND VIBRATION CONTROL ARE IMPORTANT.**

- b. Mounting Type: Mount system components on a single steel frame. Mount compressor on spring isolators sized for specific equipment provided.

**BELOW MAKES DRAIN PIPE FROM CONDENSATION PAN A RESPONSIBILITY OF THE ROOM MANUFACTURER. SHOW OR NOTE ROUTE OF DRAIN PIPE (USUALLY TO A SINK OR OTHER WASTE WITHIN THE ROOM) ON DRAWINGS. IF NO SINKS ARE INCLUDED IN THE ROOM, CONSULT WITH MECHANICAL ENGINEER AND POSSIBLY INCLUDE SUBPARA BELOW TO LIMIT ROOM MANUFACTURER'S RESPONSIBILITY TO STUB-OUT ONLY.**

C. Evaporator Unit: Provide forced-air type, designed for ceiling installation, complete with condensation collection pan, drain pipe, and, where necessary, condensate pump; and terminated with an air gap at location shown on Drawings, unless otherwise indicated. Provide evaporator units which are UL listed or recognized.

1. Provide units with defroster with automatic, programmable, timed operation.

*USUALLY DELETE BELOW, UNLESS COORD. WITH MECHANICAL ENGINEER RESULTS IN DIVISION 15 BEING RESPONSIBLE FOR THE PLUMBING.*

2. Stub out drain pipe from condensation collection pan for connection under Division 22.

*PRIOR TO EDITING THE PARAGRAPH BELOW, DETERMINE WHETHER ROOM WILL BE OCCUPIED (DEFINED AS ONE OR MORE PERSONS SPENDING ONE HOUR OR MORE CONTINUOUSLY IN THE ROOM AT ANY GIVEN TIME). IF ROOM IS OCCUPIED, INCLUDE THE STANDARD BELOW. IF THE ROOM IS DETERMINED TO BE UNOCCUPIED, ELIMINATE PARAGRAPH BELOW.*

D. Ventilation: Built-in fresh-air ventilation system. Comply with the standards below:

*BELOW DESCRIBES A SYSTEM IN WHICH VENTILATION AIR IS SUPPLIED FROM THE ROOM IN WHICH THE ENVIRONMENTAL ROOM IS LOCATED. IT ASSUMES THAT THE AIR HANDLING UNIT IS PROVIDING 100% OUTSIDE AIR. IF THE AHU IS PROVIDING LESS THAN 100% O.A., THE MECHANICAL ENGINEER SHOULD MODIFY THE SPECIFICATIONS ACCORDINGLY.*

1. Ventilation air supplied from the room within which the package environmental room is located and routed directly to the evaporator inlet. Return air shall be vented through a relief damper in the roof. System shall have an electrically driven centrifugal type ceiling fan. Blade type fans are not acceptable: Minimum 20 cfm per person.

*SELECT OPTION BELOW IF ROOM WILL BE UNOCCUPIED OR WILL BE A FREEZER ROOM. IF THIS OPTION IS RETAINED BE SURE TO DESIGNATE ON DRAWINGS WHICH ROOMS MEET THE CRITERIA BELOW. IF NO VENTILATION IS TO BE PROVIDED, BE SURE TO NOTIFY THE CLIENTS THAT THE FOLLOWING SIGN MUST BE POSTED ON THE OUTSIDE OF THE ENVIRONMENTAL ROOM: "NOT FOR USE WITH FLAMMABLE SOLVENTS IN QUANTITIES GREATER THAN 1 L."*

E. Omit ventilation in freezer rooms and in unoccupied storage rooms which are designated thus on the Drawings.

F. Humidification System: Manufacturer's standard, electrically powered steam generator, for direct injection of steam into room supply air stream ahead of cooling coils. Provide unit ready for connection to building purified water system, and capable of meeting humidity set point and control range indicated under "Operating Requirements" Article of this Section, and as follows:

*A CLEAR, WRITTEN DESCRIPTION COULD BE SUBSTITUTED HERE FOR A LOCATION DRAWING.*

1. Location: As shown on Drawing.

2. Duct the humidifier output through the evaporator unit mounted to the environmental room ceiling.
3. Interlock humidifier and cooling controls as required to provide stable interior temperature and humidity ranges.

**DELETE BELOW IF NO DEHUMIDIFICATION SYSTEM REQUIRED. MODIFY TO INDICATE TITLE OF DIVISION 15 SECTION REFERENCED IN PARA.**

- G. Dehumidification System: Manufacturer's standard desiccant-type air dryer system complete with required sheet metal ductwork between controlled environment room and dehumidifier unit. Connect unit to exhaust duct, specified in Division 23 Section ". Provide unit capable of meeting humidity range control indicated under "Operating Requirements" Article of this Section, and the following:

**A CLEAR, WRITTEN DESCRIPTION COULD BE SUBSTITUTED HERE FOR A LOCATION DRAWING.**

1. Location: As shown on Drawing.
2. Duct the dehumidifier output through evaporator unit mounted to the environmental room ceiling.
3. Interlock dehumidifier and cooling controls as required to provide stable interior temperature and humidity ranges.
4. Acceptable Models: Subject to compliance with requirements, provide units manufactured by one of the following:
  - a. Munters Cargocaire.
  - b. Brye-Aire.
  - c. Low-Humidity Systems.

**USUALLY DELETE BELOW - MAY BE INCLUDED FOR FREEZER ROOMS TO PERMIT DEFROSTING.**

- H. Floor Drain: Provide indicated floor drain and cover in environmental room.

**DELETE BELOW IF NO ELEVATED CO2 ROOM.**

- I. CO2 Sensor and Injection System: Provide CO2 Injection System with digital CO2 Controller with Thermistor Thermal Conductivity Cell and as follows:

1. Operation: Device measuring electrical conductivity of CO2, with factory installed sensors located for optimum performance. Interlock with control mechanism for release of CO2 into air supply of room. Release of CO2 shall be intermittent and only as required to maintain desired CO2 levels. Continuous flow devices are not permitted.
2. Controller Range: 0 to 20 percent.
3. Controller Sensitivity: +/- 0.1 percent.
4. Display: Digital readout of CO2 concentration in environmental room control panel.
5. Fabrication: Factory pre-assemble and test unit in presence of Owner's representative. Notify Owner at least 15 days before test.

2.6 ELECTRICAL SYSTEMS AND ACCESSORIES

- A. General: Provide factory installed conduit, wiring, switches, fittings and connections for each electrically powered accessory and item of equipment required by provisions of this Section. Terminate wiring in an electrical panel as indicated in this Article.

*CONTROLLER BELOW IS ALWAYS REQUIRED.*

- B. Controllers: Manufacturer's standard digital electronic control unit with lighted digital display and controls and as follows:

*DELETE BELOW IF NO ANIMAL OR CRYSTALLIZATION ROOMS.*

- 1. Mechanical relays are not permitted.

*SELECT ONE OF THE FOLLOWING TO SUIT PROJECT.*

- 2. Type: Temperature controller.
- 3. Type: Temperature and humidity controller.

*RECORDER BELOW MAY BE OMITTED FOR SMALL SAVINGS IF APPROVED BY THE CLIENT.*

- C. Recorders: Manufacturer's standard chart recorder with seven day movement and 10-inch diameter chart for recording conditions within the environmental room. Provide 100 additional papers for future use.

- 1. Type: Temperature recorder with single pen.

*ABOVE IS FOR ENVIRONMENTAL ROOM WITHOUT HUMIDITY CONTROL. BELOW IS FOR HUMIDITY-CONTROLLED ROOMS.*

- 2. Type: Temperature and humidity recorder with dry and wet bulb sensing for recording temperature and humidity, respectively. Provide a dual-pen unit for independent record of temperature and relative humidity conditions.

- D. Lighting: Fluorescent lighting with vapor proof fixtures and electrical components and cold weather ballasts capable of operation for indicated room condition without perceivable light flickering.

*USUALLY RETAIN BELOW.*

- 1. Cold Rooms and Combination Warm-and-Cold Rooms: Design lighting to provide light level of 70 foot-candles at 40 inches above finished floor at 4 deg. C.

*DELETE BELOW IF NO FREEZER ROOMS.*

- 2. Freezer: Design lighting to provide light level of 40 foot-candles at 40 inches above finished floor at minus 20 deg. C.

*DELETE BELOW IF NO WARM-ONLY ROOMS.*

- 3. Warm Rooms: Design lighting to provide light level of 70 foot-candles at 40 inches above finished floor at 30 deg. C.

- E. Switches for Light Fixtures and Outlets: Furnish single pole, double pole, or 3-way switches, as required, rated 120-277 volts AC and 20 amps, unless otherwise indicated. Locate light fixture switches as indicated on Drawings, or if not otherwise indicated, within room next to the latch side of the door.

**DELETE BELOW IF NO SWITCHED OUTLETS. COORD. "PL" DESIGNATION ON DRAWINGS.**

1. Furnish pilot light adjacent to toggle switch, where noted as "PL" adjacent to switch identification.

**SELECT ONE OF THE FOLLOWING.**

2. Color:
  - a. Brown.
  - b. Ivory.
  - c. White.
3. Products: Subject to compliance with requirements, provide products of one of the following:  
Arrow Hart.  
Bryant.  
Eagle (industrial spec grade only).  
Hubbell.  
Leviton.  
Pass and Seymour.

**RETAIN OR DELETE BELOW IN CONJUNCTION WITH ELECTRICAL ENGINEER. THIS MASTER SPECIFICATION SECTION HAS BEEN PREPARED ASSUMING THAT BELOW WILL BE RETAINED.**

- F. Electrical Power Wiring and Accessories: Factory install conduit, wiring, fittings, and connections for electrical receptacles indicated on Drawings and by provisions of this Section. Provide a sufficient number of 20 amp circuits to accommodate the maximum power requirements of Owner's movable equipment within the room indicated in the "Operating Requirements" Article of this Section. Recess conduit and wiring devices within environmental room walls. Provide a junction box to serve each surface-mounted raceway indicated on Drawings.

**RETAIN OR DELETE BELOW IN CONJUNCTION WITH ELECTRICAL ENGINEER. THIS MASTER SPECIFICATION SECTION HAS BEEN PREPARED ASSUMING THAT BELOW WILL BE RETAINED.**

- G. Surface Raceways: Provide 2-7/8-inch wide, 1-7/8-inch deep, single-channel, surface mounted, wire raceways complete with base, cover, and duplex receptacle covers.
1. Products: Provide 0.60-inch thick, 6063-T5 alloy aluminum extrusions with a clear satin anodized finish, and including base, cover, fittings, duplex receptacle cover, and other fittings as required for a complete installation.
    - a. ALA 3800 Series; The Wiremold Company.
    - b. SWA3200 Series ; Mono-Systems.

**RETAIN OR DELETE BELOW IN CONJUNCTION WITH ELECTRICAL ENGINEER. THIS MASTER SPECIFICATION SECTION HAS BEEN PREPARED ASSUMING THAT BELOW WILL BE RETAINED.**

H. Power Receptacles: Duplex receptacles shall be rated 125 volt, 20 amp, 2-pole, 3-wire, NEMA Type 5-20R, specification grade, extra-heavy duty, grounding type, with nylon or Lexan bodies and faces of indicated color.

1. Receptacle Spacing: 24-inches on center, unless otherwise indicated.
2. Circuiting: Feed receptacles from 2 dedicated 20 amp circuits, with adjacent receptacles wired to alternate circuits, unless otherwise indicated.
3. Provide GFCI (ground fault circuit interrupter) receptacles within 6 feet of sink units. GFCI receptacles shall be rated for 2000 amps interrupting capacity and trip in 25 milliseconds or less when ground currents exceed 5 milliamps.
4. Receptacle Face Color:

**SELECT DESIRED COLOR BELOW.**

- a. Brown.
  - b. Ivory.
  - c. White.
5. Products: Subject to compliance with requirements, provide products of one of the following:  
Arrow Hart  
Bryant.  
Eagle (industrial spec grade only).  
Hubbell.  
Leviton.  
Pass and Seymour.

I. Data Outlets: Where data outlets are indicated on the Drawings furnish and install "standard faceplate bracket" (similar to Panduit #T70DB-X) only. Jacks and final faceplate shall be provided by Owner (ITcom). "Hanging Boxes" are not acceptable.

1. Furnish and install one 1" conduit for data wiring from the surface raceway to a 4"x4" box outside the cold room. Furnish and install nylon pull cord. Box shall be accessible so the Owner (ITcom) so the 1" conduit can be extended to the existing cable tray. All conduits shall have plastic bushings.

**PANEL BELOW IS ALWAYS REQUIRED**

J. Control Panel: Provide a factory-installed control panel housing temperature and humidity controllers and recorders, as applicable; alarm controls; and other devices requiring periodic adjustment or access by the user. Multiple control panels may be provided where a single control panel is not large enough to accommodate all required devices. Control panel may be standard unit of the Manufacturer of the environmental room, but shall be provided with the following characteristics:

1. Panel Door: Secure, metal-framed unit, with clear, laminated safety-glass window permitting an unobstructed view of all displays, settings, charts, and condition lights when the door is in the closed position.

**BELOW IS STANDARD WITH MEDICAL SCHOOL, BUT MAY NOT BE REQUIRED IN ALL CASES. DISCUSS WITH CLIENT.**

2. Door Lock: The same keyable, 7-pin tumbler, Best Co. cylinder lock specified for the environmental room door in "Environmental Room Enclosure" Article of this Section.

**DISCUSS BELOW WITH ELECTRICAL ENGINEER. THIS APPROACH WILL RESULT IN A CLEAN ELECTRICAL INSTALLATION.**

- K. Electrical Panel: Provide a factory-installed electrical panel of single power drop design, rated 208/120V, 3-phase, 4-wire. The ampere ratings shall be suitably sized to meet the power requirements of the controlled environment room, but not less than 60A. Panel shall be of "load center" construction with main lugs only (MLO) and shall include all necessary circuit breakers of the appropriate size and pole number. Branch circuit breakers shall feed all loads including, but not necessarily limited to, receptacles, lighting, evaporator unit, compressor unit, and control panels.

1. Locate the electrical panel as indicated on the Drawings, or if not otherwise indicated, next to the control panel. Roof- or remote-mounted panels are not acceptable. The electrical panel may be incorporated into the control panel, as standard with the Manufacturer.
2. Products: Subject to compliance with requirements, provide products of one of the following:  
Cutler-Hammer/Westinghouse.  
General Electric.  
Siemens.  
Square D.

- L. Alarm Systems: Provide the following alarm systems:

**BELOW IS STANDARD ALARM APPLICABLE TO BOTH WARM AND COLD ROOMS.**

1. Temperature Set point Deviation Alarm: Audible and visible warning device mounted on exterior of environmental room indicating temperature rise or fall outside of design parameters.

**DELETE BELOW IF NO COMBINATION COLD ROOM/FREEZER ROOMS.**

- a. Provide a separate, distinctly marked alarm for the freezer.

**BELOW IS ALARM APPLICABLE COLD ROOMS ONLY. SO FAR, IT HAS BEEN REQUESTED BY MED. SCHOOL ONLY. REVIEW WITH CLIENT FOR INCLUSION IN PROJECT.**

2. High-Pressure Refrigeration System Failure Alarm: Audible and visible warning device mounted on exterior of environmental room, and actuating upon failure of the high-pressure refrigeration system. System failure is defined as a 25 percent or greater increase in refrigerant pressure beyond normal operating parameters.

**BELOW IS ALARM APPLICABLE COLD ROOMS ONLY. REVIEW WITH CLIENT FOR INCLUSION IN PROJECT. BELOW COULD ALSO BE RE-WRITTEN FOR ELECTRICAL RESISTANCE HEAT IN WARM ROOMS.**

3. Compressor Power Failure Alarm: Audible and visible warning device mounted on exterior of environmental room, and actuating upon failure of power supply to the compressor.

*DELETE BELOW IF NO FREEZER ROOMS.*

4. Manually Activated Personnel Alarm: Provide personnel alarm system in freezer, activated by "mushroom" type emergency push button on interior door jamb (latch side of door). Provide separate audible alarm with distinct tone mounted on exterior of environmental room.

*DELETE 2 PARAGRAPHS BELOW IF NO ELEVATED CO2 ROOMS.*

5. CO2 Set point Deviation Alarm: Provide audible and visible warning device mounted on exterior of environmental room indicating CO2 set point deviation outside of selected parameters.
6. Automatic CO2 Safety Alarm: Provide personnel safety alarm system in environmental room with time-delay feature. Alarm shall be activated by delay switch connected to pre-set timer. Include both audible and visual alarm indications on exterior of environmental room.

*THE FOLLOWING IS AN OPTION. DISCUSS WITH THE OWNER BEFORE INCLUDING IN PROJECT.*

7. Trouble Alarm Contact: Provide a general trouble alarm SPDT dry relay contact rated 125 VAC, 5 amps minimum, that actuates upon any of the above alarms for use with Owner's remote alarm system.

*DELETE BELOW IF NO FURNISHINGS, OR MODIFY TO SUIT PROJECT.*

**2.7 FURNISHINGS AND EQUIPMENT**

- A. Wall Mounted Shelving: Provide min. 18 gage, AISI Type 302/304 stainless steel wire shelves mounted on manufacturer's standard-and-bracket system with height adjustable in 1-inch increments. Manufacturer's standard units in configurations indicated on drawings.
  1. Size: 14 inches wide by lengths shown on drawings.
  2. Load Capacity: Not less than 50 pounds per lineal foot.
  3. Product: Super Erecta; Metro.
- B. Free-Standing Shelving: Provide free-standing, adjustable-height, wire post-and-shelf system of dimensions and in configuration indicated Drawings. Provide units with components fabricated of AISI Type 302/304 stainless steel. Include necessary fasteners and foot plates for each unit.
  1. Shelves: 14 inches wide by lengths shown on Drawings; position adjustable in 1-inch increments.
  2. Posts: 74-5/8 inches tall.
  3. Product: Super Erecta; Metro.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Field assemble environmental room components following manufacturer's printed instructions.
- B. Provide all required cutting and patching of openings required for mechanical and electrical penetrations of room.
- C. Field plumb and wire the various system components that cannot be factory plumbed and wired. Comply with referenced building codes and requirements of authorities having jurisdiction.

**3.2 FIELD TESTING**

- A. Perform start-up, functional test, and performance tests not less than 2 weeks prior to conducting training session. Perform tests in the presence, and to the satisfaction, of the Project Representative.
- B. Prepare a written report documenting satisfactory completion of start-up activities, and not less than 2 weeks of recorded data indicating compliance with requirements for maintaining temperature range, including tests of temperature recovery time.

**3.3 TRAINING**

- A. Provide not less than 8 hours of training, by a qualified manufacturer's technician, for Owner's personnel in the proper operation and maintenance of the controlled environmental room. Training shall include a general operation and maintenance course for the end users, and a detailed operation and maintenance course for the Owner's Plant Department Maintenance and Services group.

**SPECIFICATION DIVISION 14**

NUMBER            SECTION DESCRIPTION

**DIVISION 14 CONVEYING SYSTEMS**

SECTION 142123 - ELECTRIC TRACTION ELEVATOR

**END OF CONTENTS TABLE**

**EDITOR NOTE:**

*THIS ELEVATOR SPECIFICATION IS WRITTEN BASED ON PERMANENT  
MAGNET AC MACHINE, WHICH REPLACED PREVIOUS GEAR STYLE MACHINES.  
THIS SPECIFICATION CAN BE USED FOR MRL OR MACHINE ROOM  
(OVERHEAD OR BASEMENT) TYPE TRACTION ELEVATORS, AND FOR  
PASSENGER OR SERVICE ELEVATORS. USE REQUIRES CAREFUL EDITTING  
TO MEET PROJECT REQUIREMENTS.*

*1-9-15: SUBSTANTIALLY REVISED NEW MASTER SPECIFICATION*

**DIVISION 14 CONVEYING SYSTEMS**  
**SECTION 142123 - ELECTRIC TRACTION ELEVATOR**

**PART 1 - GENERAL**

**1.1 GENERAL CONDITIONS**

- A. The Contractor under this Division of Work (elevator contractor) is referred to the Contract Forms and General Conditions of these specifications, all of which apply to this Division of the Work.

**1.2 SCOPE OF WORK**

**EDITOR:**  
**EDIT THE FOLLOWING TO SUIT THE PROJECT.**

- A. The work of this division shall consist of the complete removal and replacement (except items specifically noted to be reused) of --- traction passenger elevator(s) in the **BUILDING NAME** building. Bidders shall include all labor, materials, permits, and services required for the complete installation of the elevator and hoistway equipment as herein specified.
1. In all cases where a device or part of the equipment is herein referred to in the singular, it is intended that such reference shall apply to as many of such devices or parts as are required to make a complete installation.
  2. Elevator installer to obtain all approvals for any required code variances to accommodate this renovation/installation from Michigan Elevator Safety Division at no additional cost to Owner prior to starting construction.
  3. Refer to architectural, mechanical and electrical drawings, and coordinate accordingly
- B. Two weeks prior to removal of any equipment, elevator contractor must notify U-M elevator department at 734-647-2059. U-M elevator department will tag any parts to be salvaged. Contractor to remove tagged parts, transport parts to building's loading dock, and notify U-M elevator department which in turn shall remove salvaged parts from site. All other equipment will become property of contractor who will remove from site in accordance with all codes and regulations.
- C. Related sections and work of other divisions:
1. The elevator contractor shall include all work and materials, except that listed under "Related work by other contractors", for a complete and operational system.
  2. Following is a brief description of work by other divisions included in this contract. This work must be done in accordance with the codes having jurisdiction and the approved drawings of the elevator contractor.
    - a. Architectural work: See architectural drawings and specifications.
    - b. Mechanical Work: See mechanical drawings and specifications.
    - c. Electrical work: See electrical drawings and specifications.

3. Elevator Contractor shall coordinate with all other trades working in hoistway, machine rooms and be available to operate the elevator in a running "Platform" manner to allow other trades to complete there work.
4. All telephone cable and conduit between machine room terminals, controller and car shall be provided by elevator contractor.
5. Final Cleaning: Refer to architectural specifications, division 1, and also refer to Part 3, item 3.8 of this division.

### 1.3 CODE AND STANDARD OF REGULATORY AGENCIES

- A. Applicable elevators codes that are in effect based on the time the permit is drawn shall govern the installation process.
- B. Provide a copy of testing documents to the elevator shop at the time of testing.
- C. Perform work in accordance with applicable codes, the State of Michigan Elevator Code, the National Electrical Code, and the American Society Mechanical Engineering Safety Code for Elevators, and Escalators ASME A17.1 as adopted by the State of Michigan as referenced therein and all of the provisions in the University of Michigan's Standard General Conditions.
- D. Give all necessary notices, obtain State and Municipal permits, pay fees in connection with the installation, including sales and use taxes as applicable, and make tests as are called for by the regulations of such authorities. These test(s) or inspection(s) shall be made in the presence of the authorized representative of such authorities and the owner's representative. It is the responsibility of the elevator contractor to provide any variances from the Governing Authority that could be necessary for a complete acceptable elevator installation. Also refer to Part 3, Item 3.7 of division 14.
- E. Elevator Guidelines to Ensure Accessibility by People with Disabilities.
  1. Elevators shall meet the guidelines of the Americans with Disabilities Act using the Uniform Federal Accessibility Standards (UFAS) relevant to elevator (section 4.10 Elevators) as the technical requirements.
  2. Elevators shall meet the requirements of the State of Michigan Department of Labor Building Code relevant to barrier free design and elevators. Section 512.10.

### 1.4 SAFETY AND SECURITY REQUIREMENTS:

**EDITOR:  
TO BE MODIFYING FROM DIVISION 1.**

- A. The building may be occupied and used by occupants throughout the construction period.
- B. Comply with the following safety and security requirements for work conducted in occupied buildings and related areas:
  1. Schedule Work with owner through construction Engineer.

2. Building Access: During regular business hours (6:30 AM through 5:30 PM; Monday through Friday, except University-recognized holidays), notify Owner's Representative for access to Project site.
- C. Individual areas can be opened as often as once each day by the Owner's building facilities manager. When more frequent daily access is required, or when access is required for more than 5 working days, obtain keys from the University Key Office. When working in more than one area, check with the building facilities manager to ensure no scheduling conflicts exist.
1. Building access outside of regular business hours and on weekends is available only with the written approval of the Owner's Representative. Coordinate access with the Owner's Representative and the Owner's Public Safety Department.
  2. Security: Purchase University-provided photographic identity badges for each person engaged in on-site work, and ensure that workers wear badges at all times on University property. Coordinate through Owner's Representative.
    - a. Badges are required in occupied buildings when the Contract Time is longer than 1 week.
  3. Work activities shall not result in excessive noise, vibration, odors, smoke fumes, etc. in occupied areas. Offending work must be stopped, and rescheduled after off-hours completion: 5:30PM to 6:30AM.
- D. Personnel Restriction:
1. Personnel Conduct Restrictions: Employees of the Contractor and subcontractors shall comply with the following restrictions regarding personal conduct while on University of Michigan property.
  2. Smoking: Smoking is strictly prohibited except in specially designated areas. In effective of July 1<sup>st</sup>, 2011 the all campus will be smoke free.
  3. Harassment: Conduct considered by the Owner as harassing is strictly prohibited, including the use of profanity; or the use of derogatory or demeaning gender or race-related comments or actions. The Owner reserves the right to require the Contractor, at no additional cost to the Owner, to remove from the Project all personnel who violate this policy.

#### 1.5 **GUARANTEE**

- A. The elevator contractor shall guarantee that the materials and workmanship of the apparatus installed by him meet the specification, and that he will repair any defects not due to ordinary wear and tear or improper use or care, which may develop within warranty from date of final payment or extended new product service period.

## 1.6 SCHEDULING OF OPERATIONS

A. Contractor must note that the building may be occupied at all times. Construction scheduling is of utmost importance. Refer to bid documents for special conditions and additional information. During the progress of the work, job meetings will be subject to call between the Owner's representatives, and the Contractor's representatives. The Contractor shall provide a representative to attend meetings held from time to time for the purposes of schedule coordination and consideration of technical and construction matters. The Contractor's representative shall be the job superintendent or other person who is authorized to act as the agent of the Contractor.

B. Dates:

**EDITOR:**

**EDIT THE FOLLOWING TO SUIT THE PROJECT IF THERE IS MORE THAN ONE ELEVATOR.**

1. Start and completion on project, refer to bid documents.
2. Any elevator shall not be out of service continuously for more than 4 months.

C. Sequence of work:

1. Work on one elevator at a time.
2. Therefore one elevator system will always be working while the other one is being worked on.

D. Work restriction shall be verified with building documents.

**EDITOR:**

**EDIT THE FOLLOWING TO SUIT THE PROJECT IF THERE IS MORE THAN ONE CAR.**

E. The elevator contractor shall be responsible for all elevator equipment maintenance and repair when the elevator contractor has been on site.

## 1.7 NEW PRODUCT WARRANTY SERVICES

A. After completion of the installation, warranty and 24-hour callback service for the equipment furnished under this specification shall be provided for a period of twelve (12) months as part of this Contract. This service shall also include regular biweekly examination. Provide minimum of (26) inspections in the one-year period. In the event the 26 site visitation are not completed the elevator contractor will extend his warranty covering all callbacks, repairs, parts, testing, labor and any other item necessary to keep the elevator in like new condition until the twenty-six warranty site visitation have been completed. Advise U-M elevator department each time before and after completion of service (of the installation during regular working hours by trained employees of this Contractor, and shall include all necessary adjustments, greasing, oiling, cleaning, supplies and parts to keep the equipment in proper operation, except parts made necessary by misuse, accidents or neglect caused by others). Contractor shall provide written record of work performed signed by the elevator shop after each visit.

- B. All warranty service must be performed by the installers and not by any other services agency. Also, the installer must have an established maintenance and service organization available for performance in the City of Ann Arbor that can provide regular and emergency service, 24 hours a day, every day of the year.
- C. It is the responsibility of the U-M elevator department to respond to any emergency regarding elevators. In the event that someone is trapped in an elevator that is under contracted warranty, the University Elevator Department will respond to free the passengers as soon as possible to minimize the inconvenience to users. It is within the right of the University to remove covers, open doors, install monitoring equipment, etc. However, all of this work shall be performed by elevator journey person licensed by the State of Michigan.
- D. A detailed record of work performed by University Elevator Mechanics is maintained in the Elevator Shop. Contractors shall contact U-M Elevator Shop for work performed by University Elevator journey person.
- E. The elevator contractor shall be responsible to service and maintain all elevator emergency circuits (including the fire service circuit, related equipment and sensors) as part of the regular elevator warranty services contract.
- F. The warranty services start after the completion of the 2<sup>nd</sup> car.

**1.8 SUBMITTALS**

- A. Before beginning fabrication and work, the elevator contractor shall prepare drawings that show the arrangement of the elevator equipment. Approval of drawings and other data (submit minimum of eight sets), which are to be submitted by the elevator contractor to the owner representative, must be approved by U-M engineer/architect. Before proceeding with fabrication and installation of the equipment. Field verify existing conditions and sizes prior to preparation of drawings.
- B. Samples:
  - 1. Submit one samples of car wall construction, car floor tile and enamel colors.
  - 2. Do not proceed with the orders until samples are approved by U-M engineer/architect.
- C. Shop Drawings:
  - 1. Submit eight (8) copies of Shop Drawings as required showing the general and detailed arrangement of all elevator equipment. Show ceiling, lighting, signal fixtures, and smoke detectors including routing of exposed conduit and all material.
  - 2. Show dimensions, weights, and indicate who will perform the work of each item.
  - 3. Statements to the effects of work by other shall not be accepted; you must identify who is responsible for the work.

- D. Product Data: Submit the manufacturer's specification and data sheets, and standard details. Include pictures, catalog cuts, or other suitable illustrations of all elevator equipment that will be exposed in the finish work, including car, hoistway entrance, and signal and control apparatus. Also include these items in bound set.
- E. Certificates:
1. Furnish without cost to the Owner all certificates necessary as evidence that the elevator conforms to the applicable laws, ordinances, and requirements.
  2. Provide a copy of certificate and State permit to the elevator shop.
- F. Operation & Maintenance Manuals:
1. At completion of work provide four complete project and specification sets (bound and properly arranged) of the parts lists and operator's manuals, copies of approved shop drawings, prior to receiving final payment. Following is a brief summary of items:
    - a. Legible schematic wiring diagrams including all changes made during installation.
    - b. Description of operation of elevator system installed.
    - c. Hoisting machine: Including Motor, Brake, Geared Machine and associated devices such as Tach Motors or Monitors.
    - d. Deflector Sheaves, Governor and Governor Tail Sheaves, Safeties, Buffers.
    - e. Counterweight Assembly, Guide Rollers on Counterweight and Car, Cable Shackles. Safeties and rope brake or other approved emergency stopping device.
    - f. Controller and Selector: Including parts information on Relays, Printed Circuit Boards, Reverse Phase Relays, Switches, Lamps, Electrical Cables, Monitors, Modems, Diagnostic Hardware, Diagnostic Software, and Overload Protection Devices.
    - g. Door Assemblies: Including Hangers, Rollers, Door Motor, Door Operator, Door Clutch Assembly, Door Closers, Door Drive Arms, Related Hardware, Sheaves, Door Guides, Interlocks, Safety Door Edge.
    - h. Signal Equipment: Including Car Station, Hall Stations, Position Indicators, Direction Indicators, Fire Service Panel, Smoke Detectors, Key switches, And Pushbutton Assemblies.
    - i. SCR Drive Units, Transformers, Chokes.
    - j. Car Top Inspection Station, Limit Switches, Solid State Leveling Control Units, Leveling Switches, Cabs, Door Sling, Platform, and Alarm Bell.
    - k. Provide a Laptop computer and demonstrate the elevator system operation to owner personnel as part of training.
  2. Maintenance records shall document compliance with ASME A17.1 section 8.6 including maintenance control diagram.
  3. Additional O&M manuals will be required per each machine room.

### 1.9 ACCEPTABLE PRODUCTS

- A. Fixtures (Car Operating Panel, Hall Push Button): PTL Performer or Innovation Industries. All shall be Vandal Resistant.

- B. Controller: Motion Control Engineering I Format or Model VVV for flux vector and remote diagnostics or Galaxy Controls by GAL, or SmartRise controllers or Virginia control or Elevator Controller Pixel Controllers. All diagnostics shall be compatible with the laptop PC that will be provided and shall be equipped with Campus view.
- C. Door Operator & Equipment: GAL Manufacturing Corp. MOVFR Operator, car and hall door tracks, car and door hangers with roller assemblies. All interlocks, pickup rollers and operating linkage manufactured by GAL.
- D. Hoist Machine: Manufacturer's standard that complies with all duty requirements of this Section and manufactured by Hollister Whitney or Imperial Electric.
- E. Variable Speed Drives: With all applicable options, or as approved by controller manufacturer.
- F. Door Protective Device: ICU/Gatekeeper 3D from Adams Elevator Equipment Company or Janus 3D.
- G. Telephone: RATH Microtech 2100-957-CC telephone integral of cabinet with Rath 2100-Alarm as part of the phone and elevator communications failure. See Item 2.6.D.
- H. Roller Guides: ElSCO Model "A" on car and Model "B" on counterweights.
- I. Car Top Inspection Station: Adams Model A-912CG.
- J. Floor Announcement System: Shall be through chime and voice announcements, by Adams or approved elevator controller manufacturer and shall be approved by University of Michigan engineer.
- K. Cab Manufacturers:
  - 1. G & R Elevator Mfg.
  - 2. Haunstein Burmeister
  - 3. Tyler
  - 4. Columbia
  - 5. Eklund

**PART 2 - PRODUCTS**

**2.1 SCHEDULE OF NEW EQUIPMENT**

**EDITOR:  
EDIT THE FOLLOWING TO SUIT PROJECT.**

- A. Elevator Number: Existing State Number \_\_\_\_\_
- B. Type of Service: Passenger/ Freight (Dormitory)
- C. Elevator Type: Overhead, traction, geared, machine located on \_\_\_\_\_ floor (Room number \_\_\_\_\_)

- D. Quantity: ----
- E. Capacity: ----- pounds
- F. Speed: Minimum ---- FPM
- G. Travel: ----- + or - (Field verify)
- H. Number of Stops: ----
- I. Number of Door Openings: -----
- J. Floors Served: -,-,-,-
- K. Main Floor Egress: -----; Alternate Floor Egress: -----.
- L. Hoistway Size: ----- long x ----- wide (to edge of sill) - Approx. Existing; Field Verify
- M. Pit Dimensions: ----- long x ----- wide x ----- deep (Field Verify)
- N. Platform Size: ----- long x ----- wide
- O. Car Interior Dimensions: ----- long x ----- wide x ----- high (dimensions to match existing). Field verify
- P. Car Door Size/Operation: ----- wide x ----- high
- Q. Door Opening Type: Single Speed, Center Opening (match landing size)
- R. Machine Type/Location: Gearless PMAC/Overhead

**COORDINATE POWER SUPPLY WITH THE ELECTRICAL TRADE.**

- S. Power Supply: --- Volts/ 3 Phase/ 60 Cycle; Motor Horsepower: ---
- T. Fire Fighter Service: Yes
- U. Independent Service Operation: Yes
- V. Load Bypass Operation: Yes
- W. Anti-nuisance Feature: Yes
- X. Special key Switches: Yes, (two key switches per floor, one for security on & off, one for momentary override).

**2.2 GEARELESS HOISTING MACHINE**

- A. Gearless Machine "PMAC":
  1. The machine shall be a Permanent Magnet, Synchronous Design, and AC Gearless Traction Elevator Machine.
  2. The traction driving sheave and brake drum shall be mounted to the motor shaft. Motor will be mounted to a structural bed plate of sufficient design for compliance with ASME A17.1.

3. Machine should be totally enclosed, self-cooling without the use of auxiliary fan(s) for cooling.
  4. Gearless machine demountable drive sheave shall be cast from the best grade of hard cast iron, semi steel or cast steel of approved composition and shall be machined with grooves, providing maximum traction with a minimum of cable and sheave wear. The surface of sheaves shall be tested individually for hardness and the actual hardness to be plainly stamped next to the grooves on the sheave rim. The hardness must measure between 220 and 240 Brinell.
  5. The diameters of the Gearless machine driving sheave shall be not less than forty (40) times the diameter of the hoisting rope.
- B. Motor: The motor shall be designed for elevator service. Motor shall be one hour rated, class F insulation. As specified by elevator controller manufacturer.
  - C. Brake: Provide machine with a spring applied and electrically released electromechanical brake so designed as to be effective to the extent of stopping the car during emergency stop and holding the car under all conditions of loading or operation. Design brake electromagnet for quick release to provide smooth and gradual application of the brake shoes. Brake shall be individually controlled and able to hold 125% of rated capacity. The brake drum must have the wearing surface and edge of flange turned smooth, and the wearing surface must run true within a minimum variation of .005 inch. Brake shoes are to be lined with non-asbestos bonded type linings. Brake plunger rod shall be polished steel with surface free of machine marks. An emergency brake or rope brake shall be provided as per ASME A17.1.
  - D. Machine Location and Foundation/Bedplate: The elevator machine shall be placed directly over the hoistway upon structural steel beams. The bedplate shall consist of structural steel members fabricated into a rigid unit designed to minimize deflection.
  - E. Isolation: The machine bedplate shall rest on isolation pads of proper density to effectively isolate the machine from the building structure.
  - F. All exposed surfaces of machine, motors and governor shall be painted with rust-resisting gloss, gray color enamel after installation.
  - G. Machine shall not have any name or logo printed or other than University of Michigan made a part of any device supplied under these specifications.
  - H. Hoisting Machine Acceptable Manufacturers:
    1. Hollister Whitney or Imperial Electric.

### **2.3 PROGRAMMABLE CONTROLLERS FOR AC TRACTION ELEVATORS:**

- A. Controller Description:
  1. The controller shall use a variable voltage variable frequency drive or flux vector for the control of three phase AC induction motors.

2. The drive shall use a three-phase, full-wave bridge rectifier and capacitor bank to provide a bus for the solid-state inverter.
3. The drive shall use power semiconductor devices and pulse width modulation, with a carrier frequency of not less than 2kHz, to synthesize the three-phase, variable voltage variable frequency output to operate the hoist motor in an essentially synchronous mode.
4. The drive shall have the capability of being adjusted or programmed to achieve the required motor voltage, current and frequency, in order to properly match the characteristics of the AC elevator hoist motor.
5. The drive shall not create excessive audible noise in the elevator machine motor.
6. The drive shall limit the total harmonic distortion (THD) reflected back into the power system to the following values at any motor speed from 50 to 100 percent.
  - a. Drive input voltage waveform: Less than 3 percent THD.
  - b. Drive input current waveform: Less than 100 percent THD.
7. The elevator contractor shall provide at no additional cost any additional devices required to meet the above THD limits.
8. The drive shall be a heavy-duty type, capable of delivering sufficient current required to accelerate the elevator to contract speed with rated load. The drive shall provide speed regulation appropriate to the motor type.
9. 9. The regenerated power from the elevator shall be of benefit to the building. The regenerative power shall not be dissipated in a resistor bank but will be returned to the building electrical system. Steps shall be taken to provide equipment so the regenerated power does not adversely affect other equipment in the facility, steps such as the use of the filter network and or isolation transformer shall be used.
10. A contactor shall be used to disconnect the hoist motor from the output of the drive each time the elevator stops. This contactor shall be monitored and the elevator shall not start again if the contactor has not returned to the de-energized position when the elevator stops.
11. All power feed lines to the brake shall be opened by an electro-mechanical switch. A single ground, short circuit or solid-state control failure shall not prevent the application of the brake.
12. The controller shall provide stepless acceleration and deceleration and provide smooth operation at all speeds.
13. The power control shall be arranged to continuously monitor the performance of the elevator in such a way that if the car speed exceeds 150fpm during access, inspection or leveling, the car shall shut down immediately, requiring a reset operation.

**EDITOR NOTE: THE FOLLOWING PARAGRAPH HAS BEEN USED FOR SELECT PROJECTS WHERE PIT HEIGHT WAS LOWER THAN 48". EDIT CAREFULLY OR DELETE.**

14. The controller shall be arranged to continuously monitor the performance of the elevator in such a way that the car speed shall not exceed 150fpm during travel down from the -- floor to the Basement floor for elevators ----.

15. The automatic leveling zone shall not extend more than 12" (304.8mm) above or below the landing level nor shall the doors begin to open until the car is level with the landing. In addition, the inner leveling zone shall not extend more than 3" (76.2mm) above or below the landing. The car shall not move if it stops outside the inner leveling zone unless the doors are fully closed and locked.
16. The system shall use an automatic two-way leveling device to control the leveling of the car to within 1/4" (6.35mm) or better above or below the landing sill. Overtravel or undertravel shall be compensated for and the car brought level to the landing sill.
17. The appropriate landing system shall be used with this controller and shall be of steel tape type. Or approved type from controller manufacturer.
18. Automatic Operation of the Car Lighting shall be provided meeting the requirements of ASME A17.1. The Feature shall allow the car lights to be turned off when the following conditions exist for not less than five minutes: the car is at a floor, the doors are closed, there is no demand for service and the car is on automatic operation. Momentary interruption of any of these conditions will cause the car lights to be turned on. The Automatic Operation Feature shall be able to be turned on or off as desired by the owner from the Elevator Controller.

B. Specifics For Closed Loop System:

1. Provide a closed loop tachometer feedback control. The control system shall continuously monitor the elevator speed signal from a velocity transducer and compare it with the intended speed signal to verify proper and safe operation of the elevator and to correct the actual speed to match the intended speed.

**EDITOR:**

**DELETE THE FOLLOWING TO SUIT PROJECT IF THE SPEED 150FPM OR ABOVE.**

C. Specifics For VVVF Drives (For speeds of 150fpm or below):

1. NOTE: For VVVF applications, the AC motor shall have slip specifications between 8 percent and 12 percent, or a NEMA rating of "D".
2. The VVVF drive shall be capable of providing a braking pulse to use in the stopping sequence of the elevator. The braking pulse shall take the form of an adjustable DC current pulse applied to the AC motor for an adjustable period of time (0 to .75 second).
3. The VVVF drive shall be able to be programmed with different volts per hertz patterns, which shall be used to adjust the drive control characteristics.

**EDITOR:**

**DELETE THE FOLLOWING TO SUIT PROJECT IF THE SPEED 150FPM OR BELOW**

- D. Specifics For Flux Vector Drive (For speeds over 150fpm) NOTE: For flux vector applications, the AC motor shall have slip specifications of 5 percent or less, or a NEMA rating of "A" or "B".

1. The flux vector drive shall be capable of producing full torque at zero speed.
  2. The flux vector drive shall not require DC injection braking in order to control the stopping of the car.
  3. The flux vector drive shall utilize encoder feedback to regulate hoist motor speed. The encoder shall be mounted to the motor shaft.
- E. The controller shall be UL, ETL or CSA listed, and shall meet FCC part 15 subpart J limits for radio frequency interference.
- F. Provide fluorescent lighting at the front and back inside the controller cabinet. Ventilation fans shall be part of the controller cabinet.
- G. Controller: Motion Control Engineering I Format or Model VVV for flux vector and remote diagnostics or Galaxy Controls by GAL, or SmartRise controllers or Virginia control or Elevator Controller Pixel Controllers. All diagnostics shall be compatible with the laptop PC that will be provided and shall be equipped with Campus view.
- H. Drives: Provide as recommended and approved by controller manufacture.
- I. Elevator controller is to be factory equipped with provisions for emergency power connections and be able to prevent regenerative power back into line.
- J. Phase protection: Provide 3-phase power monitor for elevator power which monitors phase loss, low and high voltage, phase reversal, phase unbalance, and has both manual and automatic reset. Leave in manual position.

**EDITOR: DELETE THE FOLLOWING IF YOU DO NOT HAVE EMERGENCY POWER.**

- K. Emergency Power: When emergency power is detected, cars shall sequentially return to the main lobby one elevator at a time, and remain there with doors open. While each car is being returned, all other cars shall be shut down so as not to overload the emergency power generator. Once all cars have been returned to the lobby, one car may be selected to run under emergency power. Selection of the car that runs under emergency power shall be done automatically by the group system. This automatic selection may be overridden through manual selection. Refer to Mechanical drawings and detail sheets M --.
- L. Elevator contractor shall obtain necessary variances to address the reaction toe guard and provide safety switches in the safety loop that will prevent the elevator from running should the toe guard not extend or retract as applicable when leaving or approaching the lowest landing, if contractor has the ability to provide another guaranteed method to address safety concerns with a shorter toe guard and will approved by the State of Michigan Elevator Safety Division then the university will consider this option
- M. Auxiliary Operations:

**EDITOR:**

**FILL OUT THE EGRESS FLOOR AND THE ALTERNATE FLOOR.**

1. Firefighter's Service:
  - a. The following operation is for the use of firemen and other authorized personnel per ASME A17.1.
  - b. Automatic passenger elevators shall conform to the following:
    - 1) Provide a three position (on, off, and re-set) key-operated switch at the main floor for each single elevator or each group of elevators. The key shall be removable only in the "on" and "off" positions. When the switch is in the "on" position, the elevators controlled by this switch and which are on automatic service shall return non-stop to the main floor, and the doors shall open and remain open.
    - 2) An elevator traveling away from the main floor shall reverse at the next available floor without opening its doors.
    - 3) Elevators equipped with automatic power-operated doors and standing at a floor other than the main floor, with doors open, shall close the doors without delay and proceed to the main floor.
    - 4) Door reopening devices for power-operated doors, which are sensitive to smoke, heat or flame shall be rendered inoperative.
    - 5) All car and corridor call buttons shall be rendered inoperative and all call register lights and direction lanterns shall be extinguished and remain inoperative.
    - 6) The University Elevator Shop will supply to the installing contractor a "Security Box" (key box) for installation at the egress floor.
    - 7) A car stopped at a landing shall have its "Emergency Stop Switch" rendered inoperative as soon as the doors are closed and it starts toward the main floor. A moving car, traveling to or away from the main floor, shall have its "Emergency Stop Switch" rendered inoperative immediately.
    - 8) A sensor in each elevator lobby, which when activated prevents cars from stopping at that floor, shall not be substituted for the above requirements.
  - c. Sensing Devices: In addition to the key-operated switch required in "b" above, heat and smoke or products of combustion sensing devices shall be furnished and installed by fire alarm contractor in each elevator lobby at each floor, and the main floor (Note - Egress floor is --- floor) alternate floor for the elevator is --- floor. The activation of a sensing device in any elevator lobby shall cause all cars in all groups that serve that lobby to return non-stop to the main floor. The key operated switch when moved to the "Re-set" position, shall restore normal service independent of the sensing devices. Sensors at each floor shall be connected separately from sensors at main floor. Smoke detectors shall be photoelectric type, supplied by fire alarm contractor. Submit drawings showing locations of smoke heads and exposed conduit for owner's approval prior to installation.

- d. Provide a three position (off-hold-on) key-operated switch in each car fire service compartment per ASME A17.1 and shall be effective only when the main floor key-operated switch is in the "on" position or a sensor has been activated and the car has returned to the egress floor or other approved level. The key shall be removable in all positions, and shall not change the operation until the car is at a floor with doors fully opened.
  - e. The operation of elevators on Fire service shall be as follows:
    - 1) An elevator shall be operable only by a person in the car.
    - 2) Elevators shall not respond to elevator corridor calls.
    - 3) The opening of power-operated doors shall be controlled only by continuous pressure "open" buttons or switches. If the switch or button is released prior to the doors reaching the fully open position, the doors shall automatically re-close. Open doors shall be closed by continuous pressure on "Door Close" switch or button.
    - 4) Means shall be provided to cancel registered car calls.
    - 5) When the switch is in the 'hold' position, the car shall remain at the floor with its doors open.
    - 6) Elevators can be removed from individual car fire service by moving the key-operated switch to the "off" position and the car is at the main floor or other approved level.
  - f. The switches required above shall be operated by the same key but are not a part of a building master key system. There shall be a key for the main floor switch and for each elevator in the group and these keys shall be kept on the premises by persons responsible for maintenance and operation of the elevators, in a location readily accessible to authorized persons, but not where they are available to the public. TURN OVER ALL KEYS TO PROJECT ENGINEER.
  - g. Instructions of operation shall be provided as required by code.
2. Elevators arranged for dual operation shall:
- a. Conform to the automatic operation described above when on automatic operation.
  - b. When firefighter's emergency operation is activated and the elevator is on independent or inspection operation the elevator shall be provided with a signal system consisting of both visual and audible types to alert the attendant to close the door and return non-stop to the main floor or other approved level. Provisions shall be made to alert the attendant in the same manner when a heat and smoke or products of combustion sensing device is activated.
    - 1) Floor Fire Service:
    - 2) Alternate Floor Fire Service:
    - 3) The activation of a sensing device at the lobby (item 2. above) shall cause all elevators to return non-stop to the alternate floor and the doors shall open and remain open. (The alternate fire service floor shall be defined as any building floor other than the main fire service floor) which will be ---- floor.

- 4) Operation of the elevators shall conform to "Firefighters Service". When sensing devices are activated, the elevators shall return non-stop to the designated main floor and the doors shall open and remain open. When building sensors activate at the main fire service floor, elevators shall automatically be dispatched to that building's --- floor, which has been designated "alternate" fire service floor where the elevator doors shall open and remain open.

N. Independent Service Operation:

1. Independent service operation shall permit one or more elevators to be removed from the group control and used without interfering with the normal operation of the remainder of the group.
2. Provide a two-position switch in the car-operating panel for each elevator.
3. When the switch is placed in the independent service position, the mode of operation shall be amended as follows:
  - a. The car is disconnected from the group supervisory system.
  - b. Existing car calls shall be canceled.
  - c. The cars shall bypass landing calls.
  - d. Continuous pressure on the car button of the selected floor shall close the doors and start the car toward the selected floor. Pressure shall be required on the button until the car starts. Releasing the car button before the car starts shall cause the doors to automatically reopen.
  - e. After the car has arrived at the floor and the doors have automatically opened, the cars shall remain at the floor until another car button is pressed or until the key switch is returned to the normal position.
  - f. Should all cars be put on independent service, all hall calls registered shall be canceled. Further registration of hall calls shall be inhibited.

O. Load Bypass Operation:

1. Shall automatically delete hallway call buttons when car is loaded to its limit. Load bypass operation shall be adjustable from the controller to adjust the load at which to bypass hall calls not delete them.

**EDITOR:**

**DELETE THE FOLLOWING IF YOU DO NOT HAVE EMERGENCY POWER.**

P. Emergency Power Panel For Fire Service:

1. Emergency switch and annunciation panel shall be a 24"x24" brushed stainless steel, with lockable cover, fully recessed panel to be located on the egress floor where indicated on drawings. The panel shall have indicating red lights showing locations of cars during emergency power condition.
2. A key switch shall have auto, manual, 1, 2 & **-NO. OF ELEVATORS.**
3. The panel shall be labeled as "Elevator Emergency Panel".
4. See details on sheet ---.

Q. Anti-Nuisance Feature:

1. Provide an anti-nuisance operation to prevent the elevator control system from responding to a faster than normal rate or registration of car calls. The "normal" rate of registration of car calls shall be programmable on an individual elevator basis within the group.
  2. If the anti-nuisance monitor determines that the rate of registration of car calls is excessive as compared to the pre-programmed rate of car calls, all car calls shall be canceled and shall be required to be reregistered.
- R. Automatic Two-Way Car Leveling:
1. Each elevator car shall have two-way leveling to automatically bring the car to a stop approximately level with any floor for which a stop has been initiated, regardless of load, rope stretch, or direction of travel.
  2. Automatic leveling control shall permit the synchronization of door opening with the stopping of the car at a floor.
- S. Machine Finish and Painting: All exposed surface of machines, motors and controllers shall be repainted after field installation and before acceptance by owner with rust resisting gloss enamel light gray paint.
- T. Computer For Elevator Controller Diagnostics:
1. Provide a Dell Laptop, Model "Dell Latitude E6420" with Intel vPro Advanced Systems Management loaded with Diagnostics software for the installed elevator controller.
  2. Laptop Requirements:
    1. Provide a Dell Laptop, Model "Dell Latitude E6420" with Intel vPro Advanced Systems Management loaded with Diagnostics software for the installed elevator controller.
    2. Liftnet monitoring system shall be installed and operational by elevator contractor.
    3. Laptop Requirements:
      - a. Dell Latitude E6420
      - b. Operating system Genuine Windows 7 professional, no media, 32-bit, English.
      - c. Primary Storage: 250GB 5400rpm Hard Drive
      - d. Processor Branding: Intel Core i5 vPro Label.
      - e. Processor: Intel Core i5-2520M (2.50GHz, 3M cache) with turbo Boost Technology 2.0.
      - f. LCDs: 14.0" HD Anti-Glare LED backlit.
      - g. Memory: 4.0GB, DDR3-1333MHz SDRAM, 2, DIMMS
      - h. Internal Keyboard: Inertial English keyboard Dual Pointing Keyboard
      - i. Primary Optical Device: 8X DVD+/-RW w/Roxio and Cyberlink Power DVD, no media.
      - j. Wireless LAN: Intel® Centrino® Advanced-N 6205 802.11a/b/g/n Half Mini Card
      - k. Energy Star & EPEAT: Energy star 5.0 Enabled / EPEAT Gold
      - l. USB Optical Mouse
      - m. Primary Battery: 6-cell (60WH) Primary Lithium Ion Battery
      - n. AC Adapter: 90W /C ADAPTER (3-PIN)
      - o. carrying case: Slim Nylon Case (2 Pocket)
      - p. Support Services: 4 Year Basic Hardware Service with 4 Year NBD Limited Onsite Service After Remote Diagnosis
      - q. 4 year complete care accidental damage protection.
  4. Laptop shall be compatible with all new elevator controllers.

**EDITOR: DELETE THE FOLLOWING IF LCD SCREEN IS NOT REQUIRED ON CAR OPERATING PANEL.**

U. Elite Computer Specs:

1. The display shall utilize a (SIZE). Active matrix TFT screen and be powered by a computer with enough memory to support customer specific text and graphics. The display must interface with the elevator controls to support position, direction and status of the car and or bank. In addition the display must be able to support customer programmable scheduled messages in text or graphic format. The system must have software that allows the customer to change the design and transfer to each display individually.
2. Specification for a computer when interfacing to C.E. Electronics, Inc. ELITE DISPLAY:
  - a. Windows XP or better.
  - b. Pentium/Celeron 2 GHZ or better.
  - c. 512 MB of ram
  - d. 100 MB free drive space
  - e. Network connection
  - f. USB ports-2
  - g. CD drive
  - h. Keyboard & Mouse
3. Monitor:
  - a. 800x600 resolution or better.
  - b. 16 bit color or better.
  - c. 15 inch or larger
4. Specs on the Elite's:
  - a. Processor: Intel Celeron M processor 800 MHz.
  - b. Ram: 256 MB Ram DDR-SO-DIMM.
  - c. Chipset: Intel 82852GM, 400MHz FSB, integrated graphics
  - d. Video Controller: Intel Extreme Graphics2 controller,
  - e. Storage: 40 GB notebooks hard drive.
  - f. OS: XP Embedded services pack 2.

V. Acceptable manufacturer:

1. Motion Controller Engineering (MCE) I Controller or Virginia Controls or Galaxy Controls by GAL or SmartRise controllers or Virginia control or Pixel Controllers.

**2.4 HOISTWAY EQUIPMENT & HOISTWAY ENTRANCES**

A. Provisions for Hoistway Access:

1. Elevator door safety plug-lock- Keyway - Furnish and install hoistway door unlocking devices at all landings with Tri-lock MFG. & MAINT. CORP. key NO. 6950 in accordance with requirements of the latest Edition of the American Standard Safety Code for Elevators, Dumbwaiters, and Escalators, and as permitted by the Local Code.
2. The hoistway door-unlocking device shall unlock and permit the opening of the hoistway door from any floor irrespective of the position of the car. The design of the device shall be such as to prevent unlocking the door with common tools. The means for unlocking the door shall be available and used only by inspectors, maintenance, and repair personnel.
3. Access Switches - Furnish and install hoistway access switches and associated devices (at the top and bottom landings in accordance with requirements of the latest Edition of the American Standard Safety Code for Elevators, and Escalators, and as permitted by the Local Code.

B. Top of Car Operating Device:

1. An operating device shall be provided on the top of the car located in the front between the car crosshead and hoistway door, complete with an Emergency Stop Switch, GFCI plug, fire service lamp and buzzer, lamp and guard, a Selections Switch, UP, DOWN and safety operating Buttons. This device shall comply with ASME A17.1 and local codes. Using Adams model A-912CG with Light guard.
2. Operation from the top of the car shall not be permissible unless all electric door contacts are closed.
3. Elevator(s) shall be provided with at least two electric light fixtures and a convenience outlet fixture on the car top. The two light fixtures combined shall provide an illumination level of not less than 10fc measured at the point of any elevator part or equipment, where maintenance or inspection is to be performed from the car top. The light fixtures shall be permanent and be of the fixed or portable type and shall be equipped with guards. The light switch shall be accessible from the landing when accessing the car top.

C. Pit Stop Switch:

1. A switch or switches shall be located in each elevator pit, in accordance with ASME A17.1 and local codes, which when turned to the "OFF" position will cause the electric power to be removed from the elevator motor and brake. This switch shall be lockable in the "OFF" position.

D. Emergency Alarm Bell:

1. Provide an alarm bell with it's own battery source and recharging unit for emergency power unit, mounted on the car. When the emergency alarm bell button in the car is pressed, it shall illuminate and the alarm bell shall sound. Operation shall be in accordance with ASME A17.1 and the State of Michigan Elevator Code.
2. DBA level of the alarm bell (80-85 DBA).

E. Hoisting And Governor Ropes:

1. Provide hoisting suspension means & ropes, specifically designed for elevator service, of sizes and numbers sufficient to comply with the requirements of the Code. The number and sizes of ropes proposed to be used shall be indicated on the shop drawings.
2. Governor ropes shall comply with the requirements of the Code, shall be at least 3/8 inch in diameter, and specifically designed for elevator service.
3. Use only wedge type sockets to fasten the ropes.

F. Counterweights:

1. Elevator shall be suitably counter-balanced for smooth and economical operation by adjusting the quantity of weights. Weights shall be contained in a structural steel frame properly guided with suitable roller guides. The counterweights shall be equal to the weight of the complete elevator car and approximately 40% of the rated load.
2. The counterweight frame shall be equipped with roller guides. Each roller guide shall consist of three wheels, each a minimum of 6" inches in diameter, tired with a durable resilient material. The guides shall be designed as to maintain continuous contact with the guide rails.

3. Manufacturer of roller guide: ElSCO model B.
4. If contractor desires to reuse existing counterweights and frame, he/she shall submit a certified letter by a professional structural engineer that they will meet the loads and reactions of the new elevator system and without any defect.

G. Guide Rails:

**EDITOR:**

**REUSE ON REPLACEMENT PROJECTS WHERE POSSIBLE FOR CAR AND COUNTERWEIGHT.**

1. Provide steel tee guide rails to meet ASME A17.1 requirements, including suitable brackets and clamps for attachment to the building structure. The guide rails and car frame shall be located such that the car is in balance with guides. The machined tongue and groove joints shall be fitted with machined fishplates fastened to each rail with at least 4 through bolts.
2. All joints shall be located free of interference with supporting clamps and brackets. Shims used to obtain rail alignment shall be designed to remain in position, even through the fastening bolts may be loosened.
3. The guide rails shall be installed and aligned with their machined faces plumb within one-eighth of an inch from the top to the bottom of the hoistway.
4. Minimum Rail size shall be 15 pounds per foot for both car and counterweight guides. Upgrade rails based on application.

**EDITOR:**

**DELETE THE NEW GUIDE RAIL IF THE GUIDE RAILS ARE TO BE REUSED FOR CAR AND COUNTERWEIGHT.**

5. The car and counterweight guide rails shall be realigned, refinished and cleaned so that the faces of the rails are plumb within one-sixteenth (1/16) of an inch in 100 feet of travel. Refinish rails for smooth operation and paint back plains with black paint.

H. Buffers:

**EDITOR:**

**DELETE IF THE ELEVATOR SPEED IS LESS THAN 200FPM.**

1. Provide oil type buffer for speed over 200 fpm, buffers shall be in accordance with ASME A17.1 code. The buffers shall be fastened to steel channels provided and installed by the elevator contractor.

**EDITOR:**

**DELETE IF THE ELEVATOR SPPEED IS OVER 200 FPM.**

2. Provide spring type buffer for under 200 fpm, buffers shall be in accordance with ASME A17.1 code. The buffers shall be fastened to steel channels provided and installed by the elevator contractor

I. Normal Stopping Devices:

1. Slow-down and normal stopping devices shall be furnished and installed for each car. These devices shall be so arranged that, as the car approaches either terminal landing, a series of activation devices mounted in the hoistway shall activate bi-stable magnetic reed switches mounted on the car and automatically bring the elevator to a smooth stop at the terminal floor.

J. Final Limit Switches:

1. In addition to the normal limit stops, a hoistway final limit switch shall be installed at the top and at the bottom of each hoistway. These final limit switches shall be operated by a fixed cam securely attached to the car. The switches shall be so located that they are operated should the car travel a predetermined distance above or below the upper or lower terminal floor. These limit switches shall be independent of any other stopping devices, shall be positively opened without the use of springs and shall cut off all power from the motors and brakes and prevent the operation of the car in either direction.
2. Final limit switches shall be so located that they open at or about the time the buffer is engaged by the car or counterweight.

K. Deflector Sheaves:

1. Deflector sheave: Provide new deflector sheaves to properly lead the hoisting ropes from the machine to the car and/or counterweight. Sheaves shall be cast iron, accurately machined and grooved for the diameter of ropes used and supported by steel beams furnished in place by the elevator contractor. The bearings shall be permanently lubricated type commonly referred to as (sealed) bearings (non-grease-able type).
2. Existing steel channels at top of hoistway may be reused if engineering data supplied by Elevator Contractor supports their reuse. Guards and beams if reused shall be stripped and repaint.
3. Deflector sheave guard: When deflector sheave extends below the bottom of machine beams, a substantial metal guard shall be provided below the sheave and attached to the sheave supports.

L. Landing System:

1. This landing system shall provide high speed stepping signals, one-floor-run stepping signals, leveling, and door zone signals. Each output signal shall be electrically isolated and shall be capable of reliably operating at 120 VAC.
2. Landing system shall be provided by the elevator controller manufacturer.
3. The system shall consist of a steel tape with mounting hardware to accommodate the complete travel of the elevator, a car top assembly with tape guides and sensors, and magnetic strips for stepping and leveling.
4. The leveling and stopping accuracy of the system shall be within 1/4 inch of the floor level and shall correct for over travel or under travel to within the same accuracy, regardless of load variations or direction of travel.

M. Hoistway Doors:

**EDITOR:**

**FOR NEW HOISTWAY DOOR SERVICES**

1. New doors shall be flush hollow metal panels fabricated of No. 16 U.S. gauge steel, minimum. The doors shall be 1-1/4" thick and reinforced with continuous members. Panels shall have sound deadening insulation. Doors shall have removable non-metallic gibs to run in the sill guideway with minimum clearance. Door panels shall conform to the National Elevator Code ASME A17.1 and the Underwriter's Laboratories 1-1/2 hour fire test requirement. Door unlocking devices shall be provided at all floors and as required by local codes. Sight guards shall be provided for all entrances. Provide new hoistway doors at all landings. The doors shall be equipped with nylube door guides.
2. Hoistway landing interior finish shall be painted black.
3. Hoistway landing Doors exterior finish shall be stainless steel.
4. Hoistway door unlocking devices at all landing shall be provided with TRI-Lock removable plugs with key number 6950

**EDITOR:**

**TO BE USED WHEN BI-PARTING FREIGHT DOORS ARE REQUIRED. THIS SECTION IS INFREQUENTLY USED. EDIT CAREFULLY.**

N. Hoistway Doors (Freight):

1. The doors shall bear a 1 1/2 hr. UL Label.
2. Doors shall meet ASME A17.1 code requirements.
3. Doors shall be solid panels with resilient edges.
4. Doors construction to be "316" stainless steel.
5. Doors operation shall be power type. Each door shall be electrically operated with two motorized 2-speed door operators mounted on either side of the assembly. An automatic stay-open, feature shall assure that the door stays fully open. All operating mechanisms shall be entirely within the elevator shaft. The controls shall permit immediate emergency manual operation.
6. Rails for the doors shall be steel construction and have adjustable trucking sill stops.
7. Door sections shall be connected to each other with suitable roller chain running over grooved ball bearing sheaves.
8. Door shall be interlocked with the elevator controls to prevent normal operation of the elevator unless all doors are closed and locked, and to prevent door opening when elevator is in motion.
9. Door electrical characteristic is 208v, 3phase, 60cycle, with 30AMP. Circuit
10. Manufacturer: Peelle F10S. Refer to detail on drawings **sheet M--**.
11. Observation window is to be provided per ASME-A17.1.
12. Door shall be with automatic closing feature, with horn while it is closing. Operation shall be of the sequenced type.

O. Entrances:

1. New entrances shall consist of flush hollow metal door panels, bolted unit type frames, sill's integral hanger(s), hanger covers, fascia plates, headers, struts, sight guards and hardware.

P. Frames:

**EDITOR:**  
**FOR NEW FRAMES**

1. New unit frame shall be fabricated of No. 14 U.S. gage steel comprising the head and side jamb sections, which shall be securely bolted to from one piece unit construction and shall be securely fastened to the sill and hanger support. They shall be returned on the hoistway side to present a neat appearance.

**EDITOR:**  
**FOR REUSE PROJECTS**

2. To be reused, sand, fill-in dents and paint matching existing color. Enamel paint to be used. Provide prime coat prior the finish coat for each floor.

Q. Sills:

**EDITOR:**  
**FOR NEW SILLS**

1. Sills shall be of extruded aluminum construction with a non-slip wearing surface. They shall be supported on steel brackets and securely fastened to the floor. Grooves for the door guides shall have minimum clearance for the guides. The sills must be suitable for "class C3" loading.

**EDITOR:**  
**FOR REUSE SILLS**

2. To be reused, clean and polish each sill.

R. Struts:

**EDITOR:**  
**FOR NEW STRUTS**

1. A 3"x3"x ¼" steel angle struts shall extend from the sill to the building beam above and shall be securely fastened to ensure rigidity and adequate support for the header.

**EDITOR:**  
**FOR REUSE STRUTS**

2. To be reused sand, prime and paint black.

S. Headers:

**EDITOR:**  
**FOR NEW HEADERS**

1. Header shall be constructed of 3/16" formed steel to provide support for the frame and hangers.

**EDITOR:**  
**FOR REUSE HEADERS**

2. To be reused sand, prime and paint black.

T. Fascia, covers, and Toe guards:

**EDITOR:**  
**FOR NEW FACIA COVERS AND TOE GUARDS**

1. Fascia, including hanger covers, toe guards and dust covers shall be fabricated of No. 16 U.S. gauge steel. Fascia shall span the width of the opening plus 6 inches. Dust cover extends a minimum of 8 inches above the header and the toe guard shall extend a minimum 8' below the sill. Both shall return to the wall at 60 deg. Angle.
2. Finish:
  - a. Struts, headers, hanger cover, fascia, dust covers, and toe guards shall have matte black finish. New entrance frames (existing) shall be finished in stainless steel of color selected by owner. All landing doors shall be new and finished in enamel of color selected by owner.
  - b. All existing heads and jambs shall be stripped to bare metal, prepared with primer and finished with two coats of enamel paint.

**EDITOR:**

**FOR REUSE FACIA COVERS AND TOE GUARDS**

3. To be reused sand, prime and paint black or provide new.
4. finish:
  - a. All existing headers and jambs shall be stripped to bare metal, prepared with primer and finished with two coats of enamel paint.

**2.5 CAR EQUIPMENT & CAR ENCLOSURES:**

A. Power door operation:

1. The car and hoistway doors shall be operated quietly and smoothly by an electric operator, which shall open and close the car door and respective hoistway door simultaneously. The doors shall open automatically when the car is leveling at the respective floor and, when operating without an attendant, shall close after a predetermined time has elapsed. Momentary pressure on the "Open Door" button in the car shall cause the doors to remain open or, if closing, to reopen and reset the time interval.
2. The doors shall be opened at rated speed and the closing speed shall be per Code. Door closing force shall be as allowed by code.
3. An electric contact for the car doors shall be provided which shall prevent elevator movement away from the floor unless the door is in the closed position as defined by code.
4. Each hoistway door shall be equipped with an auxiliary door closing device and a positive electro-mechanical interlock to prevent the operation of the elevator until the interlock circuit is established and the doors are locked and closed.
5. Car doors shall be provided with zone looking.
6. Manufacturer: GAL, MOVFR operator.

B. Landing Door Hangers:

1. Each hoistway door shall be suspended by two (2) sheave type hangers. Each hanger shall consist of a polyurethane tread on a metal hub equipped with precision ball bearings mounted onto a steel bracket. The hanger sheaves shall not be less than 3-1/4 inches in diameter. The track shall be so shaped as to permit free movement of sheaves without regard to vertical adjustment of the sheave brackets. An up-thrust roller shall be provided beneath the track and each sheave wheel, capable of withstanding a vertical thrust equal to the carrying capacity of the upper sheave. The up-thrust roller shall be adjustable for fine vertical adjustment and the face of the roller shall be so shaped as to conform to the bottom face of the hanger track. Doors closers shall be sill mounted.
  2. Manufacturer: GAL MOVFR operator.
- C. Door protection and reopening device:
1. Acceptable products are limited to: ICU/Gatekeeper 2000 from Adams or Janus 3D.
- D. Adaptive door timing:
1. Door open times will be varied subject to the call situation causing the stop:
    - a. Shortest timing, when car call only causes stop.
    - b. Longer timing, when hall call only causes stop.
    - c. Longest timing, when coincident hall and car calls exist.
    - d. All timing shall meet ADA guidelines as a minimum.
  2. The door opening time, measured from the instant the doors start to open until within 1" of fully open position, shall not exceed code standard.
  3. Long door and short door "hold open" times shall be set at 4.0 and 2.5 second respectively and shall be ADA complaint.
- E. Car sling, safeties and governors:
1. Provide new car sling and safeties.
  2. The new safety, of type required by Code, shall be mounted on the bottom members of the car frame and shall be operated by a speed governor located over the hoistway. The safety shall be arranged to stop the car whenever excessive descending speed is attained and means shall be provided to cut off power from the motor and apply the brake prior to application of the safety.
  3. Acceptable Manufacturer: Hollister-Whitney or Titan.
- F. Car platforms and flooring:
1. Each passenger type car platform shall consist of a structural steel frame with a wood and metal composite floor (i.e. one layer of 3/4" marine grade plywood plus 14 gauge steel plate plus 3/4" thick marine grade plywood plus finish flooring). Top finish flooring on cars shall be furnished and installed by elevator contractor and shall be as described in Item 2.5.J.
  2. Each passenger type platform shall be equipped with an extruded aluminum threshold and a steel toe guard at the loading edge. The under side of the platform shall be fireproofed to comply with local codes.
  3. The car platform shall be capable for handling the capacity of the car being loaded in one-piece across the entrance of the car and landing.
- G. Platform isolation:

1. Each passenger type platform shall be mounted on rubber pads supported on an auxiliary steel frame fastened to the car frame. This arrangement shall form an isolating cushion between the car and the steel car frame.

H. Car and counterweight roller guides:

1. The car and counterweight system shall be provided with roller guides. The guides shall be designed so as to maintain continuous contact with the guide rails.
2. The elevator frame shall be provided with roller guides. Each roller guide wheel shall be 6" in diameter, tired with a durable resilient material. The guides shall be designed so as to maintain continuous contact with the guide rails.
3. Acceptable Manufacturer: Elasco model "A" for car and model "B" for counterweight.

I. car doors:

1. Provide car Doors flush hollow stainless steel panels. Panels shall have sound deadening insulation. Doors shall have removable non-metallic gibs to run in the sill guideway with minimum clearance. Door panels shall conform to the National Elevator Code ASME A17.1 and the Underwriter's Laboratories 1-1/2 hour fire test requirement. Door unlocking devices shall be provided as required by local codes. The doors shall be equipped with nylube door guides.
2. Car door hangers and tracks shall be provided similar to hoistway doors.
3. Doors finish shall be #4, brushed stainless steel.

J. Car Enclosures:

1. All cab material; design, lighting, ventilation and exits shall comply with "American National Standard Safety Code for Elevators, ASME A17.1 and/or local codes. Where codes conflict the more stringent shall apply.
2. Wall panels and reveals shall be of rigidized 316 stainless steel constructions and applied to a steel shell.
3. Returns shall be of stainless steel construction and have a #4 brushed finish. Cutouts shall be provided for operating elements and fixtures. Minimize thickness of return to maximize clear floor area.
4. Canopy shall be constructed from formed and reinforced 16 gauge steel finished in white enamel and shall have an overall height of 8'0" from the finished floor. An emergency exit shall be provided which is locked from the top of the car.
5. Provide LED lighting in 45 degree beveled coves at ceiling and wall corner that will apply 10 foot-candles in the cab at floor level. Total of six or eight lights, four on each side. Coves shall be made of stainless steel with #4 finish and located at ceiling level of cab. Also comply with UFAS lighting level requirements.
  - a. LED Model SB-1 Manufacturer by Man-D-Tec.
6. Entrance columns shall be #4 brushed stainless steel finish. Columns shall run from floor to canopy, be finished in a vertical grain, and shall be integral to the returns.
7. Entrance transom shall be #4 brushed stainless steel finish. Columns shall run from floor to canopy. Transom shall run the full width of the car and be finished in a horizontal grain.

8. A single speed fan shall be provided that matches the ceiling and is mounted to the canopy. Air intake to the fan shall be through the 3/8" diameter holes (adequate in number to allow free passage of required air quantity) drilled in canopy. Submit shop drawing of canopy for approval prior to fabrication. CFM as required per ASME A17.1. Sound power is to be 45 DBA max.
9. A 3/8" x 2" bar handrail with radius ends of #4 brushed stainless steel finish shall be provided to meet code requirements, on side and back walls but shall not interfere with car operating panel.
10. Car sills shall be extruded aluminum. Car sills for elevator in parking structures shall be nickel silver.
11. Finished floor covering shall be furnished and installed by the elevator contractor.
  - a. Flooring shall be "Endura" style rubber tile by Burke Flooring. Texture and color to be selected by owner.
12. Provide removable protective wall pads with padlocks inside elevator car to protect the wall panels. Pads shall meet all codes for elevator car enclosures, and be equal to Palmer "PalmTuff Vinyl Pads". Color to be selected by owner from mfg standards.
13. Acceptable Cab Manufacturers:
  - a. G&R Elevator Co.
  - b. Haunstein Burmeister
  - c. Tyler
  - d. Columbia
  - e. Eklund

## 2.6 OPERATING FIXTURES

### A. Car operating panel:

1. The operating panel in the car shall consist of vandal resistant stainless steel control panel. (Taper all projected sides of car panel back to return panel for a neat appearance. Submit drawings for approval prior to fabrication.) The main control panel shall contain a series of push buttons with illuminated call registration devices, numbered to correspond to the various landings serviced. In Car Stop Switch, Fire Service Compartment, Alarm Button (connected to a bell located on the car) and a Door Close, Door Open button for each entrance. Alarm bell shall be operated from its own independent battery pack power supply and recharging system. The control panel shall also contain separate key operated switches for Access, independent service, car lights, car fan, emergency light and test switch. Emergency phone shall be hands free type. Panel shall also accommodate certificate frame, hands free phone and digital car position indicator. All key switch cylinders shall be standard Adams fixtures.
2. Buttons shall be made of brushed stainless steel with LED for illumination, with translucent floor designations, with Braille.
3. Provide emergency light in car-operating panel with rechargeable nickel cadmium batteries and recharging system.
4. Provide engraved fire services instruction per ASME A17.1.
5. Acceptable Manufacturers: PTL-Performer series or Innovation Industries. All shall be vandal resistant and brailled.
6. Refer to detail on drawings.

B. Hall push button:

1. ADA compliant vandal resistant illuminating LED type Hall push buttons shall be installed at each floor to permit waiting passengers to call the elevator to the floor.
2. Shall include hall position indicator, LED, Digital.
3. Fixtures shall have up and down buttons with Braille adjacent to the button on the left at intermediate floors and single buttons at top and bottom floors.
4. Buttons shall be made of vandal resistant stainless steel and shall illuminate to indicate a call has been registered. Button shall remain illuminated until the call has been answered. Provide oversized vandal resistant brushed stainless steel cover plates at all push button stations to cover all openings (including the openings that result from removal of existing hall push button stations or any other devices). The Braille signage adjacent to the directional button requires at least half inch lettering denoting the direction of the button
5. Provide engraved graphic (Appendix "O") per ASME A17.1 emergency sign and illustration on all hall push button station plates: "IN CASE OF FIRE USE STAIRWAY FOR EXIT". "DO NOT USE ELEVATOR"
6. Acceptable Manufacturers: PTL Performer Series or Innovation Industries.
7. Refer to details on drawing.
8. Hall push button panel shall accommodate the hall position indicator (HPI).
9. Hallway push button shall be flush wall mounted fixture type.

C. Floor passing chime:

1. Provide a floor-passing chime and voice annunciation to meet ADA requirements. Mount in main car operating panel.
2. Acceptable Manufacturer: Adams Voice or approved Elevator Controller Manufacturer.

D. Communication system (telephone):

1. Provide hands-free vandal resistant emergency telephone in the car, with wiring (shielded pairs) to terminals on control panel in machine room. Engraved with ASME A17.1.
2. Phone shall keep working during power failure. Coordinate work with U-M ITCOM. Phone shall be one push button to talk type and flash when call is answered. Telephone shall be an integral part of the car panel.
3. Annunciator Interface, Auxiliary Relay and 24V LED Board: The board shall be mounted behind the phone in the elevator car operating panel which contains an auxiliary relay that can be tied to DDC panel. The connection from the elevator controller to the DDC panel shall be provided by electrical contractor. When the board is programmed correctly, DDC will receive an alarm whenever the RATH phone detects the phone line has failed. Note that the car traveling cable containing the phone line must be expanded to contain a pair of wires for connection to the nearest DDC panel.

4. Provide a RATH 2100-ALARM unit. Unit shall be mounted in the designated floor elevator lobby per elevator code ASME A17.1 as part of the egress floor hallway push button and shall be wired to the RATH phone in the car operating panel. The alarm unit will contain the code required local alarm light, sounder and a momentary key switch on a label back plate. The traveling cable containing the phone line and pair of wires for the DDC circuit must be expanded to contain a pair of wires from the RATH phone RATH alarm unit.
  5. Manufacturer:
    - a. RATH Microtech 2100-957-cc telephone (call track), with hand free operation or equivalent.
    - b. RATH 2100 Alarm Unit or equivalent..
- E. Car traveling lantern:
1. Provide on both sides of car doorjamb and shall be ADA compliant.
  2. Manufacturer: PTL Performer series or Innovation Industries Vandal Resistant Series.
  3. Refer to detail on drawings.
- F. Car fire alarm horn: (omitted)
- G. Car position indicator:
1. A LED (Light Emitting Diode) vandal resistant digital type position indicator shall be provided inside car, as part of main car operating panel (COP). It shall indicate the floor at which the car is stopped or passing and the direction the car is traveling. The cover plates shall be #4, brushed Stainless Steel.
  2. Manufacturer: PTL Performer Series or Innovation Industries Vandal Resistant Series.
  3. Refer to detail on drawings.
- H. Special Key Feature:
1. Provide (2) key switches per floor. One shall be for security on & off and one shall be for momentary override. Keys shall be keyed to U of M's KEY SYSTEM and shall be coordinated with KEY OFFICE through Owner Representative.
- I. Hall position indicator:
1. Provide at each floor in elevator lobby **OR HALLWAY, ABOVE HOISTWAY DOOR**. Description shall be as in item 2.6.G as part of the hallway push buttons and shall be LED digital type in red color.

## 2.7 ELECTRIC WIRING:

- A. Complete insulated wiring shall be furnished and installed to connect all parts of the equipment furnished by the elevator contractor. Wiring shall conform to the requirements of the latest edition of the National Electrical Code. Include rigid conduit or EMT, at least 1/2" diameter, and short lengths of flexible conduit. Conduit or EMT shall terminate in junction boxes. Conduit, EMT, wiring duct, conduit fittings, enclosures and junction boxes shall be galvanized steel or aluminum.
- B. All wiring shall have a flame retarding moisture resisting outer cover and shall be run in metal conduit, flexible metallic tubing, or wire ducts.

- C. Traveling cables shall have flame retarding and moisture resisting outer cover. They shall be flexible and suitably suspended to relieve strains in the individual conductors. Provide the required quantity plus at least 10 percent spares. All wiring between telephone cabinet in car and a junction box in elevator machine room shall be provided by the elevator contractor. Conductors shall be numbered to correspond to numbered terminals at the car and machine room.
- D. Terminal blocks shall be coded to identify the circuits. Multi-conductor cables shall have the conductor color coded and numbered.
- E. The elevator car top shall be provided with a suitable GFCI duplex plug receptacle. Car top lighting shall comply with State of Michigan elevator code requirements.
- F. Unless otherwise specified, control wiring shall be a minimum size of #18 AWG. Wire size shall be large enough so that the voltage drop under inrush conditions will not adversely affect operation of the controls.
- G. Electrical Receptacle in Car: Provide GFCI duplex electrical receptacle in car. Locate receptacle approximately 2" above finished floor below car operating panel. Provide matching face plate on receptacle.
- H. Execution:
  - 1. Install all power wiring in raceway systems. No exposed wiring or conduit shall be run in finished areas without prior written approval of owner.
  - 2. Splice cables and wires only in outlet boxes, junction boxes or pull boxes. (Note - No wire splicing allowed in raceway or wire ducts).
  - 3. Install cable supports for all vertical feeders in accordance with the NEC. Provide Kellum GRIP type supports, which firmly clamp each individual cable and tighten due to cable weight.
  - 4. All terminal strip connections shall be identified with corresponding reference numbers from cable termination chart and electrical straight-line diagrams.

### **PART 3 - EXECUTION**

#### **3.1 ACCEPTABLE ELEVATOR INSTALLERS**

- A. Acceptable installers: Subject to compliance with the requirements specified herein, installers offering product approved by the Owner are limited to the following listed companies. Elevator installer for project must provide the equipments as specified.
  - 1. Detroit Elevator Co.
  - 2. Kone Elevator Co.
  - 3. Otis Elevator Co.
  - 4. Schindler Elevator Inc.
  - 5. Thyssen Kruup Elevator Co.

\* Note: Above is not a list of elevator manufacturers; it is a list of INSTALLERS only. Elevator installer must provide the equipment specified.

### **3.2 EXAMINATION**

- A. Inspect all surfaces, and required embedded anchorage devices, and verify that they are in proper condition to receive the work of this Section. Verify that field measurements are as indicated on approved shop drawings.
  - 1. Prior to preparation of drawings, the contractor shall examine the hoistway and machine room areas and verify that no discrepancies or irregularities exist which would adversely effect the execution of the work.
  - 2. No exposed wiring or conduit shall be run in finished areas without prior written approval of owner.
- B. Beginning of installation means acceptance of existing conditions.

### **3.3 PERFORMANCE**

- A. Contact speed: Actual speed shall vary no more than 5 FPM from speed specified under any loading condition or direction of travel.
- B. Leveling Accuracy: Consistently level within +/- 1/4" under loading conditions.

### **3.4 ACCESSORIES**

- A. Provide storage cabinet for the protective pads.

### **3.5 PERFORMANCE GUARANTEE**

- A. The elevator contractor shall assume full responsibility to furnish and provide a complete and functional elevator and to obtain and furnish the University final State Elevator Inspection approval. All costs necessary to correct code deficiencies cited by the State Elevator Inspector will be paid by the elevator contractor as part of this Contract at no additional cost to the Owner.

### **3.6 TECHNICAL TRAINING**

- A. On site technical training shall be held for the purpose of familiarizing Elevator Support Mechanics with operations and troubleshooting procedures. The session shall accommodate up to ten personnel in each session and consist of forty hours of Training (This to include two 2-day sessions and the fifth day reserved for any additional diagnostic training). Training on equipment controller shall be provided by trained factory service engineers of controller manufacturers through the elevator installers.

**3.7 ACCEPTANCE DEMONSTRATION AND PERFORMANCE TEST (COMMISSIONING):**

- A. Demonstrate to Owner, or Owner's designated representative, the operation of the elevator system. Demonstration shall include:
  - 1. Installation compliance with specifications.
  - 2. Contract speed, capacity, and floor-to-floor performance compliance with specifications.
  - 3. Stopping accuracy and car ride compliance with specifications.
  - 4. Operation of signal fixtures and operation of supervisory or dispatching system.
  - 5. Promptly remove all work rejected by the Engineer for failure to meet specifications and replace the rejected work to comply with requirements, at no additional cost to the Owner. All expenses of repairing work of other Trades damaged by this replacement shall be borne by Contractor.
  - 6. Rejected work which is not made good within a reasonable time, determined by the Engineer, may be corrected by the Owner at Contractor's expense.
  - 7. Upon completion of installation and before final acceptance, conduct a running speed test with full design load to verify compliance with performance requirements. Also refer to Article 1.3 of this division
- B. Operating Instructions: Provide instructions to the Owner's personnel, including safety procedures, proper operation of the equipment, and routine maintenance procedures.
- C. The laptop computer shall be provided to commissioner prior to start of commissioning process by minimum of (2) weeks. See item 2.3.S.

**3.8 CLEANUP**

- A. Keep work areas orderly and free of debris on a daily basis.
- B. Remove filings and loose materials resulting from this work from hoistways.
- C. Clean all dirt, oil and grease from machine room and pit equipment and floors.
- D. Clean car, car enclosures, entrances, hoistways, operating and signal fixtures and trim of dirt, oil, grease, and finger marks.
- E. Polish and shine all stainless steel components.
- F. Clean, re-align guide rails for car and counterweight and paint the back of guide rails with black paint.

**SPECIFICATION DIVISION 14**

**NUMBER            SECTION DESCRIPTION**

**DIVISION 14 CONVEYING SYSTEMS**

SECTION 142423 - HYDRAULIC ELEVATOR

**END OF CONTENTS TABLE**

***EDITOR NOTE:***

***1-9-15: SUBSTANTIALLY REVISED NEW MASTER SPECIFICATION***

**DIVISION 14 CONVEYING SYSTEMS**  
**SECTION 14240 - HYDRAULIC PASSENGER ELEVATOR**

**PART 1 - GENERAL**

**1.1 GENERAL CONDITIONS**

- A. The Contractor under this Division (elevator contractor) is referred to the Contract Forms and General Conditions of these specifications, all of which apply to this Division.

**1.2 SCOPE OF WORK**

**EDITOR:**  
**EDIT THE FOLLOWING TO SUIT PROJECT.**

- A. The work of this division shall consist of the complete replacement of --- hydraulic elevator(s) with a new hydraulic elevator in the **BUILDING NAME** Building. Bidders shall include labor, materials, permits, and services required for the complete installation of the elevator system and hoistway equipment as herein specified.
1. In all cases where a device or part of the equipment is herein referred to in the singular, it is intended that such reference shall apply to as many of such devices or parts as are required to make a complete installation.
  2. Elevator installer shall obtain all approvals for any required code variances to accommodate this renovation/installation from the Michigan Elevator Safety Division at no additional cost to owner prior to starting construction.
  3. Refer to Architectural and Electrical drawings, and coordinate accordingly.
- B. Two weeks prior to removal of any equipment, elevator contractor must notify U-M elevator shop dept. at 734-647-2059. U-M. Elevator Department will tag any parts to be salvaged. Contractor shall remove tagged parts, transport parts to building loading dock, and notify U-M elevator department which in turn shall remove salvaged parts from site. All other equipment will become property of contractor who will remove from site in accordance with all codes and regulations.
- C. Cost of drilling for hydraulic cylinders into the existing ground shall include any anticipated rocks or other obstructions in the ground, and shall not include any requests for additional cost to owner.
- D. Related sections and work of other divisions:
1. Outline of work by University of Michigan's OSEH Department:
    - a. Analysis and testing for any soil contamination.
    - b. Transportation removed contaminated soil if any, to a dumping site with MDEQ permit which shall be at contractor cost.
    - c. Contact number at OSEH is obtainable from construction manager.

2. The elevator contractor shall include all work and materials, except that listed under "Related work by other contractors", for a complete new state certified hydraulic system.
3. Following is a brief description of work by other divisions included in the contract. This must be done in accordance with the codes having Jurisdiction and approval drawings of the elevator contractor.
  - a. Architectural work, refer to architectural drawings and specifications.
  - b. Electrical work, refer to electrical drawings and specifications.
  - c. Mechanical work, refer to mechanical drawings and specifications.
4. Elevator contractor shall coordinate work of other trades in the hoistway and elevator machine room and be available to operate the elevator in a running "Platform" to allow other trades to complete their work.
5. All telephone cable and conduit between machine room controller terminals and car shall be provided by elevator contractor.
6. Final cleaning: Refer to Architectural specifications, Division 1 and Part 3, Item 3.8 of Division 14.

### 1.3 CODE AND STANDARD OF REGULATORY AGENCIES

- A. Applicable elevators codes shall be in effect based on the time the permit is drawn and shall govern the installation process.
- B. Perform work in accordance with applicable codes, the State of Michigan Elevator Code, the National Electrical Code, and the American Society Mechanical Engineering Safety Code for Elevators and Escalators, ASME A17.1 as adopted by the State of Michigan, as referenced therein and all of the provisions in the University of Michigan's Standard General Conditions.
- C. Give necessary notices, obtain State and Municipal permits, pay fees in connection with the installation, including sales and use taxes as applicable, and make tests as are called for by the regulations of such authorities. These test(s) or inspection(s) shall be made in the presence of the authorized representative of such authorities and the owner's representative. It is the responsibility of the elevator contractor to provide any variances from the Governing Authority that could be necessary for a complete acceptable elevator installation. Also refer to part 3, item 3.7 of division 14.
- D. "Elevator Guidelines to Ensure Accessibility by People with Disabilities".
  1. Elevators shall meet the guidelines of the Americans with Disabilities Act using the Uniform Federal Accessibility Standards (UFAS) relevant to elevators (Section 4.10 Elevators) as the technical requirements.
  2. Elevators shall meet the requirements of the State of Michigan Department of Labor Building Code relevant to barrier free design and elevators. Section 512.10.

**1.4 SAFETY AND SECURITY REQUIREMENTS:**

- A. The building may be occupied and used by occupants throughout the construction period.
- B. Comply with the following safety and security requirements for work conducted in occupied buildings and related areas:
  - 1. Schedule Work with owner.
  - 2. Building Access: During regular business hours (7:30 AM through 5:30 PM; Monday through Friday, except University-recognized holidays), notify Owner's Representative for access to Project site.
- C. Individual areas can be opened as often as once each day by the Owner's building facilities manager. When more frequent daily access is required, or when access is required for more than 5 working days, obtain keys from the University Key Office. When working in more than one area, check with the building facilities manager to ensure no scheduling conflicts exist.
  - 1. Building access outside of regular business hours and on weekends is available only with the written approval of the Owner's Representative. Coordinate access with the Owner's Representative and the Owner's Public Safety Department.
  - 2. Security: Purchase University-provided photographic identity badges for each person engaged in on-site work, and ensure that workers wear badges at all times on University property. Coordinate through Owner's Representative.
    - a. Badges are required in occupied buildings when the Contract Time is longer than 1 week.
  - 3. For off-hours work time, see general notes on sheet M1.1
    - a. Work activities shall not result in excessive noise, vibration, odors, smoke, fumes, etc. in occupied areas. Offending work must be stopped, and rescheduled for off-hours completion: 5:30PM to 6:30AM.
- D. Personal Restrictions:
  - 1. Personal Conduct Restrictions: Employees of the Contractor and subcontractors shall comply with the following restrictions regarding personal conduct while on University of Michigan property:
  - 2. Smoking: Smoking is strictly prohibited except in specially designated areas.
  - 3. Harassment: Conduct considered by the Owner as harassing is strictly prohibited, including the use of profanity; or the use of derogatory or demeaning gender or race-related comments or actions. The Owner reserves the right to require the Contractor, at no additional cost to the Owner, to remove from the Project all personnel who violate this policy.

**1.5 GUARANTEE**

- A. The elevator contractor shall guarantee the materials and workmanship of the apparatus installed by him under this specification, and that he will make good any defects not due to ordinary wear and tear or improper use or care, which may develop within warranty from date of final payment or extended new product warranty service period.

1.6 SCHEDULING OF OPERATIONS

A. Contractor must note that building may be occupied at all times. Construction scheduling is of utmost importance. Refer to bid documents for special conditions for additional information. During the progress of the work, job meetings will be subject to call between the Owner's representatives, and the Contractor's representatives. The Contractor shall provide a representative to attend meetings held from time to time for the purposes of schedule coordination and consideration of technical and construction matters. The Contractor's representative shall be the job superintendent or other person who is authorized to act as the agent of the Contractor.

B. Dates:

*EDITOR: EDIT RHE FOLLOWING TO SUIT THE PROJECT IF THERE IS MORE THAN ONE ELEVATOR*

- 1. Start and completion of constructions, Refer to bid documents.
- 2. Any elevator shall not be continuously out of services for more than 4 months.

C. Sequence of work:

- 1. Work on one elevator at a time.
- 2. When the project involve more than one elevator in the group. All cars shall be in operation expect the one being worked on.
- 3. When performing elevator group tie-ins work shall be scheduled to be preformed during off hours through construction manager.

D. Work restriction shall be verified with building manager.

*EDITOR:  
EDIT THE FOLLOWING TO SUIT THE PROJECT IF THERE IS MORE THAN ONE CAR*

E. The elevator contractor shall be responsible to service and to maintain in service car(s) while working on any car in the group.

**1.7 NEW PRODUCT WARRANTY SERVICES**

- A. After completion of the installation, warranty and 24-hour callback service for the equipment furnished under this specification shall be provided for a period of twelve (12) months as part of this Contract. This service shall also include regular biweekly examination. Provide minimum of (26) inspections in the one-year period. In the event the 26 site visitations are not completed the elevator contractor will extend his warranty covering all callbacks, repairs, parts, testing, labor and any other item necessary to keep the elevator in like new condition until the twenty-six warranty site visitations have been completed. Advise U-M elevator department each time before and after service call completion of service (of the installation during regular working hours by trained employees of this Contractor, and shall include all necessary adjustments, greasing, oiling, cleaning, supplies and parts to keep the equipment in proper operation, except parts made necessary by misuse, accidents or neglect caused by). Contractor shall provide written record of work preformed signed by the elevator shop after each visit.
- B. All warranty service must be performed by the installers and not by any other services agency. The installer must have an established maintenance and service organization available for performance in the City of Ann Arbor that can provide regular and emergency service, 24 hours a day, every day of the year.
- C. It is the responsibility of the U-M elevator department to respond to any emergency regarding elevators. In the event that someone is trapped in an elevator that is under contracted warranty, the University Elevator Department will respond to free the passengers as soon as possible to minimize the inconvenience to users. It is within the right of the University to remove covers, open doors, install monitoring equipment, etc. However, this work will be performed by elevator journey person licensed by the State of Michigan.
- D. A detailed record of work performed by University Elevator Mechanics is maintained in the Elevator Shop. Contractors shall contact U-M Elevator Shop to review work performed by University Elevator journey person.
- E. The elevator contractor shall be responsible to service record and maintain all elevator emergency circuits (including the fire service circuit, related equipment and sensors) as part of the regular elevator warranty service contract.
- F. Include and maintain an oil log in the elevator machine room.

**1.8 SUBMITTALS**

- A. Before beginning fabrications and work, the elevator contractor shall prepare drawings that show the arrangement of the elevator system. Approval of drawings and other data (submit minimum of eight sets), which are to be submitted by the elevator contractor to the owner representative, must be approved U-M before proceeding with fabrication and installation of the equipment. Field verify existing conditions and hoistway sizes prior to preparation of drawings.

- B. Submit provisions for delivery of drilling machine into building and setting it in place to provide the drilling process.
- C. Samples:
  - 1. Submit samples of car wall, car floor tile and enamel colors.
  - 2. Do not proceed with orders until samples are approved by U-M Engineer/Architect.
- D. Shop drawings:
  - 1. Submit eight (8) copies of shop drawings showing the general and detailed arrangement of all elevator equipment. Show ceiling, lighting, signal fixtures, and smoke detectors including routing of exposed conduit and all materials.
  - 2. Show dimensions, weights, and indicate who will perform the work of each item.
  - 3. Statements to the effects of work "by other" shall not be accepted; you must identify who is responsible for the work.
- E. Product Data: Submit the manufacturers' specification and data sheets, and standard details. Include pictures, catalog cuts, or other suitable illustrations of all elevator equipment that will be exposed in the finish work, including car, hoistway entrance, and signal and control apparatus. Also include these items in bound set.
- F. Certificates:
  - 1. Furnish without cost to the Owner all certificates necessary as evidence that the elevator conforms to the applicable laws, ordinances, and requirements.
  - 2. Certificate shall be mounted in car operating panel.
- G. Operation & Maintenance Manuals:
  - 1. At completion of work provide four complete project and specification sets (bound and properly arranged) of the parts lists and operators manuals, copies of approved shop drawings, prior to receiving final payment. Following is a brief summary of items:
    - a. Legible schematic wiring diagrams including all changes made during installation.
    - b. Description of operation of elevator system installed.
    - c. Pump Package: Including motor, jack unit, PVC line, shut-off valve, isolation coupling, pump and accessories.
    - d. Buffers.
    - e. Guide Rollers on Car.
    - f. Controller and Selector: Including parts information on Relays, Printed Circuit Boards, Reverse Phase Relays, Switches, Lamps, Electrical Cables, Monitors, Modems, Diagnostic Hardware, Diagnostic Software, and Overload Protection Devices.
    - g. Door Assemblies: Including Hangers, Rollers, Door Motor, Door Operator, Door Clutch Assembly, Door Closers, Door Drive Arms, Related Hardware, Sheaves, Door Guides, Interlocks, Safety Door Edge.
    - h. Signal Equipment: Including Car Station, Hall Stations, Position Indicators, Direction Indicators, Fire Service Panel, Smoke Detectors, Key switches, and Pushbutton Assemblies.
    - i. Car Top Inspection Station, Limit Switches, Solid State Leveling Control Units, Leveling Switches, Cabs, Doors Sling, Platform, and Alarm Bell.

- j. Provide a laptop computer and demonstrate the elevator system operation to owner personal as part of training.
- k. Provide a copy of certificate and State permit.
- l. Provide emergency phone number.
- 2. Additional O&M manuals will be required per each machine room.
- 3. Maintenance records shall document compliance with ASME A17.1 section 8.6.

**1.9 ACCEPTABLE PRODUCTS:**

- A. Fixtures (Car Operating Panel, Hall Push Button): Vandal Resistant, PTL Performer Series or Innovation Industries.
- B. MICRO-PROCESSOR BASED CONTROLLER (For Hydraulic Elevators): Motion Control Engineering Model or Elevator Control Corp or SmartRise controllers or Virginia control. with soft start features to limit inrush current and remote diagnostics. All diagnostics shall be compatible with the laptop PC that will be provided and shall be compatible with University existing IBM system.
- C. DOOR OPERATOR & EQUIPMENT: GAL Manufacturing Corp. MOVFR operator car and hall door tracks, car and door hangers with roller assemblies. All interlocks, pickup rollers and operating linkage manufactured by GAL.
- D. PUMP PACKAGE: Standard dry type pump unit that complies with all duty requirements of this Section consisting of Delaval Imo pump with Maxton Valve and all required accessories.
- E. DOOR PROTECTIVE DEVICE: ICU/Gatekeeper 2000 from Adams Elevator Equipment Company, Juans Model 3D.
- F. TELEPHONE: RATH Microtech 2100-957-CC telephone integral of cabinet with Rath 2100-Alarm as part of the phone and elevator communications failure. See Item 2.6.D.
- G. Roller Guides: ElSCO Model "B" on car.
- H. Car Top Inspection Station: Adams Model A-910A with A-910X5 guards.
- I. Floor Announcement System: Shall be through chime and voice announcement, by Adams or the controller manufacturer and shall be approved by University of Michigan engineer.
- J. Cab Manufacturers:
  - 1. G & R Elevator Mfg.
  - 2. Havenstein Burmeister
  - 3. Tyler
  - 4. Columbia
  - 5. Eklund
  - 6. Eklund
- K. DOOR GUIDES: NYLUBE
- L. Limit Switch: EECO

- M. Buffers: Shall be supplied by jack manufacturer. Meeting ASME A17.1 code requirements.

**PART 2 - PRODUCTS**

**2.1 SCHEDULE OF NEW ELEVATOR EQUIPMENT**

**EDITOR:  
EDIT THE FOLLOWING TO SUIT PROJECT.**

- A. Elevator Number: Existing State Number -----
- B. Type of Service: Passenger / Freight
- C. Elevator Type: Hydraulic elevator machine room, Located on --- Floor (Room number ---)
- D. Quantity: ---
- E. Capacity: --- pounds
- F. Speed: --- FPM
- G. Travel Distance: 0'-0", + or - (Field verify)
- H. Number of Stops: ---.

**VERIFY IF THERE A REAR DOOR OPENING IF NO DELETE THE REAR DOOR OPENING**

- I. Number of Door Openings: front door opening ----, and rear door opening ----
- J. Floors Served: -, -, -, -
- K. Main Floor Egress: ---; Alternate Floor Egress: ---
- L. Hoistway Size: ---" Long x ---" Wide Approx.; (Field Verify)
- M. Pit Dimension: ---- long x ---- wide x ---- deep (Field Verify)
- N. Platform Size (Width x Depth): ---- long x ---- wide or size to be maximum allowable but at minimum match the existing.
- O. Car Interior Dimensions: ---- Long x ---- Wide x ---- High (dimensions to match existing). (Field Verify)
- P. Car Door Size: ---" Wide x ---" High.

**EDITTOR: VERIFY THE DOOR OPENING TYPE SPPED**

- Q. Door opening Type: ---- speed, ---- Opening (match landing size).
- R. Machine Type: Hydraulic

**COORDINATE POWER SUPPLY WITH THE ELECTRICAL TRADE.**

- S. Power Supply: --- Volts/ 3 Phase/ 60 Cycle; motor horsepower --- HP.
- T. Fire Fighter Service: Yes
- U. Independent Service Operation: Yes

**EDITOR: SEE IF WE NEED THIS OPTION FOR THE SPECIAL KEY SWITCHES IN THE PROJECTS**

- V. Special key switches: Yes, (two key switches per floor, one for security on & off, one for momentary override).

**2.2 HYDRAULIC ELEVATOR**

- A. Oil Hydraulic Machine: The power unit shall be of a compact, self-contained design including pump, drive motor, oil control unit assembly, oil storage tank, removable drip pan a rigid structural steel frame with storage tank and neoprene vibration isolators. Refer to detail on drawings.
- B. Pump: The pump shall be a positive displacement screw type, for maximum smoothness and quietness and shall be belt drive by the motor. Do not use pumps mounted in the oil and shall be belt driven to the motor.
- C. Motor: The drive motor shall be of premium efficiency meeting NEMA 12.6C table and have a duty rating use with hydraulic elevator systems.
- D. Oil Control Unit: The oil control unit shall consist of electrically actuated and hydraulically operated valves with adjustments accessible without removing the assembly from the oil lines. An automatic bypass valve shall provide smooth starting and stopping in the up direction and shall give regulated up leveling speed under varying load conditions in the car. The lowering and down leveling valve shall be fully adjustable for smoothness and speed of operation and shall be designed to close automatically if the power fails. Operation of a manual valve shall permit the car to be lowered at slow speed in the event of power failure. A safety check valve shall hold the car when the pump is at rest and a relief valve shall be provided which is capable of bypassing the entire output of the pump without increasing the system pressure more than 25% above the normal working pressure. Permanently install a liquid filled pressure gage on oil control unit.
- E. Oil Storage Tank: The oil storage tank shall be of sufficient capacity for the full travel of the car with a reserve of not less than 10 gallons and shall have a drain connection, means of isolating oil in the tank for servicing of pump and valves, an effective pump suction strainer and a removable cover. The cover shall be designed for low velocity breathing with a protected vent opening to prevent entry of liquids or debris into the tank. Tanks with single small vent openings shall be guarded against accidental blockage, which may cause collapse of the tank during operation of the elevator in the up direction. Tank to be located in elevator equipment room.

- F. Oil: Sufficient specially prepared hydraulic oil with greater than 400 degrees F. flashpoint and of proper viscosity and lubricating qualities shall be provided.
- G. Sound Reduction With Isolating Panels And Muffler: In addition to selection of individual components to minimize noise generation, a blow-out proof muffler for absorption of hydraulic pulsations shall be installed in the oil line between the pump and the cylinder, and the hydraulic machine shall be provided with rubber isolation pads to prevent transmission of noise and vibration to the building structure. Sheet steel panels lined with sound-deadening material shall enclose the motor and pump location area of the hydraulic machine for reduction of air-borne noise.
- H. All Hydraulic Supply Piping: Shall be at least schedule 80 black steel pipe. Threaded pipe only. No grooved fittings are allowed. The system must be free from seepage at joints.
- I. Shut-Off Valve: Manually operated valves shall be provided and installed in the oil supply line to isolate the cylinder and plunger unit from the hydraulic machine. Provide two valves-one in pit near jack assembly and another one in the Machine Room near machine.
- J. Oil Strainer: A self-cleaning strainer shall be provided and installed in the oil line between the hydraulic machine and the cylinder plunger unit to protect the oil control valves during downward travel of the elevator. The strainer shall have a 40-mesh screen for removal of solid particles and a magnetic drain plug for removal of ferrous materials. The strainer assembly shall be constructed for at least 600 psig. working pressure.
- K. Isolation Coupling(s): Isolation coupling(s) shall be provided to abate the transmission of noise produced by the vibration of the pumping unit. Proper location of the isolation coupling(s), in the oil delivery line, shall be determined by the elevator subcontractor.
- L. Cylinder and Plunger Unit:
1. The cylinder shall be fabricated of steel pipe, closed at the bottom and provided with a removable cylinder head and packing gland at the top. The cylinder head shall have a bronze, babbitt or phenolic-lined bearing and an integral drip ring. Packing shall be of the self-adjusting type not requiring external adjustment and shall allow operation of the plunger with minimum friction. The packing gland shall be arranged to return automatically to the reservoir any oil, which may escape the packing ring. Structural steel shapes shall be provided to support the cylinder and to transmit vertical loads to the pit floor.
  2. The exterior of the cylinder shall be treated with a corrosion resistant compound and double-lap wrapped with a commercial grade wrapping, such as Scotchwrap or Tapecoat, before installation.
  3. The plunger shall be constructed of seamless steel pipe or tubing turned true and smooth and polished to a fine finish. A stop plate to prevent the plunger from leaving the cylinder shall be welded to the bottom of the plunger.

4. Grey cast iron or other brittle materials shall not be used and the cylinder and plunger unit shall be factory tested at not less than 600 psi, or as per ASME A17.1 and State of Michigan Elevator Code, for strength and freedom from leakage. Units of multiple section construction shall be securely joined by couplings. Cylinder couplings shall have all joints welded before installation to prevent leakage.
5. The well hole for the cylinder shall be provided by the Elevator Contractor, including drilling and dirt removal at no additional cost to the owner.
6. Provide outer cylinder casing and related schedule 40 PVC protective covering. Casing shall be schedule as per Michigan Elevator Code requirements, with welded joints and welded steel bottom.
7. Provide a stainless steel drip pan (at pit floor) or drip ring around cylinder with scavenger pump, oil piping between pump and oil storage tank and all related power wiring.

### 2.3 PROGRAMMABLE CONTROLLERS FOR HYDRAULIC ELEVATOR

#### A. Controller Description:

1. The elevator controller shall utilize a microprocessor based logic system and shall comply with ASME 17.1 safety code for elevators and escalator. The system shall provide comprehensive means to access the computer memory for elevator diagnostic purposes without need for any external devices, and shall have permanent indicators to indicate important elevator status as an integral part of the controller. Systems that require hookup of external devices for troubleshooting are not acceptable. The elevator control equipment shall be provided such that at least three (3) elevator service companies can maintain the equipment. Immediate availability of replacement parts shall be guaranteed and no special proprietary diagnostic devices will be utilized. An O.E.M. control, serviceable only by the O.E.M. will not be accepted. Controller shall be provided with the capability of in-the field changes for certain variables such as door time. These changes should be stored permanently using non-volatile memory. Thus if the power to the unit is disconnected, the system will maintain the programmed variables. The Car Diagnostic Display shall have the capability of selecting either the operational or programming modes and/or displaying the status of all inputs and outputs and capability of remote diagnostics to be interfaced with U-M's elevator shops existing IBM compatible computer system.
2. Failure of any single magnetically operated switch, conductors, or relay to release in the intended manner; or the occurrence of a single accidental ground or short circuit shall not permit the car to start or run if any hoistway door or gate interlock is UNLOCKED or if any hoistway door or car door or gate contact is not in the made position. Furthermore, while on car top inspection or hoistway access operation, failure of any single magnetically operated switch, conductors or relay to release in the intended manner; or the occurrence of a single accidental ground shall not permit the car to move even with the hoistway door locks and car door contacts in the closed or made position.

3. Provide a dedicated permanent status indicators on the controller to indicate when the safety string is open, when the door locks are open, when the elevator is running at high speed, when the elevator is on independent service, when the elevator is on fireman's service, when the elevator out of service timer has elapsed or when the motor limit timer or valve limit timer has elapsed. When duplex operation is provided a switch, shall select which of the two cars statuses is to be displayed on the indicators, in addition, provide means of displaying other special or error conditions that are detected by the microprocessor.
4. The elevator shall not require the functioning or presence of the microprocessor to operate normally during car top inspection operation or hoistway access operation in order to provide a reliable means to move the car if the microprocessor fails.
5. Provide a motor limit timer function which in the event of the pump motor being energized longer than a predetermined time, shall cause the car to descend to the lowest landing, open the doors automatically and then re-close them and the elevator shall then be rendered unresponsive to any automatic operation car door open pushbutton shall remain operational. Operation may be restored by cycling the power disconnect switch or putting the car on access or inspection operation.
6. Provide a valve limit timer function which in the event of the pump motor being energized longer than a predetermined time, shall cause the car to descend to the lowest landing, open the doors automatically and then re-close them and the elevator shall then be rendered unresponsive to any automatic operation car door open pushbutton shall remain operational. Operation may be restored by cycling to power disconnect switch or putting the car on access or inspection operation.
7. Low Oil Control:
  - a. A low oil control feature shall protect the hydraulic components if the elevator fails to complete its upward travel in the normal time.
  - b. Actuation of the low oil control circuit shall stop the pump and lower the car to the lowest landing. Power-operated doors shall open to permit passengers to depart and shall then close. Car door open pushbutton shall remain operational. The car shall remain parked at that landing completely removed from demands for service.
  - c. To return the car to normal service, the malfunction shall be corrected and the elevator controls reset in the machine room.
8. Provide an out of service timer (T.O.S.) which will automatically take the car out of service if the car is delayed in leaving the landing while there are calls existing in the building. The car shall not respond to hall calls while in this mode of operation.
9. Provide door protection timers for both the open and close directions which will help protect the door motor and which will help prevent the car from getting stuck at a landing. The door open protection timer shall cease attempting to open the door after a predetermined time in the event that the door is prevented from reaching the open position. The door close protection timer will reopen the doors for a short time in the event that the door-closing attempt fails to close the door locks after predetermined time.

10. Provide a minimum of three different door standing open times. A car call time value shall predominate when a car call only is cancelled. A hall call time value shall predominate whenever a hall call is cancelled. In the event of a door reopen from the safety edge, photo eye, a separate short door time value shall predominate.
11. Provide a Door Timing - Separate adjustable timing means to establish independent minimum passenger transfer time for car stops, hall stops, main lobby stops, and door reversal operations (short door time).
12. Hall call or car call registration and lamp acknowledgment shall be by means of a single wire per call besides the power busses. Systems that register the call with one wire and light the call acknowledgment lamp with a separate wire are not acceptable. Phase I emergency recall operation, and Phase II emergency in-car operation shall be provided within the controller according to ASME A17.1 and applicable local codes.
13. Independent service operation shall be provided such that actuation of a key switch in the car-operating panel will cancel any existing car calls, and hold the doors open at the landing. The car will then respond only to car calls and will ignore hall calls. Car and hoistway doors will only close by constant pressure on car call buttons or a door close button until the car starts to move. While on independent service any hall arrival lanterns or jamb mounted arrival lanterns and gongs shall be inoperative.
14. The car shall be equipped with two-way leveling to automatically bring the car within plus or minus 1/4 inch of exact level at any landing regardless of load up to maximum capacity.
15. A selector switch shall be provided on the controller to select high or low speed during access or inspection operation as long as speed does not exceed 150 feet per minute.
16. A test switch shall be provided. In the "test" position, this switch shall allow independent operation of the elevator without any door open functioning for purposes of adjustment or testing the elevator. The elevator shall not respond to hall calls and shall not interfere with the other car in a duplex installation.
17. A timer shall be provided to limit the amount of time a car is held at a floor due to a defective hall call or car call including stuck pushbuttons. Call demand at another floor shall cause the car to eventually ignore the defective call and continue to provide service in the building.
18. Door Timing: Separate adjustable timing means shall be provided to establish independent minimum passenger transfer time for car stops, hall stops, main lobby stops, and door reversal operations (short door time).
19. Automatic Operation of the Car Lighting shall be provided meeting the requirements of ASME A17.1. The Feature shall allow the car lights to be turned off when the following conditions exist for not less than five minutes: the car is at a floor, the doors are closed, there is no demand for service and the car is on automatic operation. Momentary interruption of any of these conditions will cause the car lights to be turned on. The Automatic Operation Feature shall be able to be turned on or off as desired by the owner from the Elevator Controller.

20. Simplex selective collective automatic operation shall be provided for the single car installations. Operation of one or more car call or hall call buttons shall cause the car to start and run automatically provided the hoistway door interlocks and car door contacts are closed. The car shall stop at the first car call or hall call set for the direction of travel of car. Stops shall be made in the order in which the car calls or hall calls set for the direction of operation of the elevator are reached, irrespective of the order in which they were registered. If only hall calls set for the opposite direction of travel of the elevator exist ahead of the car, the car shall proceed to the most distant hall call, reverse direction, and start collecting the calls.
21. Collective Operation:
  - a. Operation shall be automatic by means of the car and landing buttons. Stops registered by the momentary actuation of the car or landing buttons shall be made in the order in which the landings are reached in each direction of travel after the buttons have been actuated. All stops shall be subject to the respective car or landing button being actuated sufficiently in advance of the arrival of the car at that landing to enable the stop to be made.
  - b. If all calls in the system have been answered, the car shall park at the last landing served or the pre-determined home landing.
22. Home landing operation shall be provided and, if no calls are registered shall cause the car to travel to a predetermined home landing floor and stop without providing a door operation. The ability to change home landing feature shall be provided.
23. If the car is en-route to the home landing and a call appears from the direction opposite to which the car is traveling, the car shall slow down, stop, and then accelerate in the opposite direction, toward the call. The home landing function shall cease instantly upon the appearance of a normal call and the car shall proceed non-stop in response to any normal call.
24. Florescent lighting shall be at the front and back inside the controller cabinet. Ventilation fans are part of controller cabinet.
25. Elevator controller shall be Motion Control Engineering (MCE) or Elevator Controls Inc. Elevator controller shall be modified to include all features noted above including soft start features to limit inrush current and remote diagnostics and shall be compatible with the existing U-M system. All systems shall have remote diagnostics.
26. Phase Protection: Provide 3-phase power monitor for elevator power supply, which monitors phase loss, low voltage, phase reversal, phase unbalance, and has manual and automatic reset. Level in manual position.
27. Elevator controller is to be factory equipped with provisions for emergency power connections.

B. Auxiliary Operations:

**EDITOR:**

**EDIT THE FOLLOWING TO SUIT PROJECT.**

1. Firefighter's Service:

- a. The following operation is for the use of firemen and other authorized personnel. Per ASME A17.1.
- b. Automatic passenger elevators shall conform to the following:
  - 1) Provide a three position (on, off, and by-pass) key-operated switch at the main floor for each single elevator or each group of elevators. The key shall be removable only in the "on" and "off" positions. When the switch is in the "on" position, the elevators controlled by this switch and which are on automatic service shall return non-stop to the main floor, and the doors shall open and remain open.
  - 2) An elevator traveling away from the main floor shall reverse at the next available floor without opening its doors.
  - 3) Elevators equipped with automatic power-operated doors and standing at a floor other than the main floor, with doors open, shall close the doors without delay and proceed to the main floor.
  - 4) Door reopening devices for power-operated doors, which are sensitive to smoke, heat or flame shall be rendered inoperative.
  - 5) All car and corridor call buttons shall be rendered inoperative and all call registered lights and direction lanterns shall be extinguished and remain inoperative.
  - 6) A car stopped at a landing shall have its "Emergency Stop Switch" rendered inoperative as soon as the doors are closed and it starts toward the main floor. A moving car, traveling to or away from the main floor, shall have its "Emergency Stop Switch" rendered inoperative immediately.
  - 7) A sensor in each elevator lobby, which when activated prevents car from stopping at that floor, shall not be substituted for the above requirements.
  - 8) The university elevator shop will supply to the installing contractor a "Security Box" (key box) for installation at the egress floor.
- c. Sensing Devices: In addition to the key-operated switch required in "b" above, heat and smoke or products of combustion sensing devices shall be furnished and installed by fire alarm contractor in each elevator lobby at each floor and the main floor (Note - Egress floor is --- floor) alternate floor is for the elevator --- floor. The activation of a sensing device in any elevator lobby shall cause all cars in all groups that serve that lobby to return non-stop to the main floor. The key operated switch when moved to the "by-pass" position, shall restore normal service independent of the sensing devices. Sensors at each floor shall be connected separately from sensors at main floor.
- d. Provide a three position (off-hold-on) key-operated switch in each car operating panel per ASME A17.1 Fire Service Key Switch and shall be effective only when the egress floor key-operated switch is in the "on" position or a sensor has been activated and the car has returned to the egress floor or other approved level. The key shall be removable in all positions, and shall not change the operation until the car is at a floor with doors fully opened.

- e. The operation of elevators on Fire service shall be as follows:
    - 1) An elevator shall be operable only by a person in the car.
    - 2) Elevators shall not respond to elevator corridor calls.
    - 3) The opening of power-operated doors shall be controlled only by continuous pressure "open" buttons or switches. If the switch or button is released prior to the doors reaching the fully open position, the doors shall automatically re-close. Open doors shall be closed by continuous pressure on "Door Close" switch or button.
    - 4) Means shall be provided to cancel registered car calls.
    - 5) When the switch is in the 'hold' position, the car shall remain at the floor with its doors open.
    - 6) Elevators can be removed from individual car fire service by moving the key-operated switch to the "off" position and the car is at the main floor or other approved level.
  - f. The switches required above shall be operated by the same key but are not a part of a building master key system. There shall be a key for the main floor switch and for each elevator in the group and these keys shall be kept on the premises by persons responsible for maintenance and operation of the elevators, in a location readily accessible to authorized persons, but not where they are available to the public. TURN OVER ALL KEYS TO PROJECT ENGINEER. These keys shall be Adams Fire Service Keying System.
  - g. Instructions of operation shall be provided as required by code.
2. Elevators arranged for dual operation shall:
- a. Conform to the automatic operation described above when on automatic operation.
  - b. When firefighter's emergency operation is activated and the elevator is on independent or inspection operation the elevator shall be provided with a signal system consisting of both visual and audible types to alert the attendant to close the door and return non-stop to the main floor or other approved level. Provisions shall be made to alert the attendant in the same manner when a heat and smoke or products of combustion sensing device is activated.

**EDITOR:**

**EDIT THE FOLLOWING TO SUIT PROJECT.**

- 1) Floor Fire Service: ---- floor.
- 2) Alternate floor fire service: ---- floor.
- 3) The activation of a sensing device at the lobby (item 2 above) shall cause all elevators to return non-stop to the alternate floor and the doors shall open and remain open. (The alternate fire service floor shall be defined as any building floor other than the main fire service floor) which will be --- floor.

- 4) Operation to the elevator shall conform to "Firefighters' Service". When sensing devices are activated, the elevators shall return non-stop to the designated main floor and the doors shall open and remain open. When building sensors activate at the main fire service floor, elevator shall automatically be dispatched to that building's --- floor, which has been designated "Alternate" fire service floor where the elevator doors shall open and remain open.

**THESE ARE OPTIONS. DELETE THEM IF THEY ARE NOT REQUIRED BY THE PROJECT.**

C. Load Bypass Operation:

1. To automatically delete hallway calls when car is loaded to its limit. Load bypass operation shall be adjustable from the controller to adjust the load at which to bypass hall calls and not delete them.

D. Special Key Switches:

1. Provide (2) key switches per floor. One shall be for security on & off and one shall be for momentary override. Keys shall be keyed to U of M's KEY SYSTEM and shall be coordinated with KEY OFFICE through Owner representative.

E. Anti-nuisance Feature:

1. Provide an anti-nuisance operation to prevent the elevator control system from responding to a faster than normal rate or registration of car calls. The "normal" rate of registration of car calls shall be programmable on an individual elevator basis within the group.
2. If the anti-nuisance monitor determines that the rate of registration of car calls is excessive as compared to the pre-programmed rate of car calls, all car calls shall be canceled and shall be required to be reregistered.

F. Independent Service Operation:

1. Independent service operation shall permit one or more elevators to be removed from the group control and used without interfering with the normal operation of the remainder of the group.
2. Provide a two-position switch in the car-operating panel for each elevator.
3. When the switch is placed in the independent service position, the mode of operation shall be amended as follows:
  - a. The car is disconnected from the group supervisory system.
  - b. Existing car calls shall be canceled.
  - c. The cars shall bypass landing calls.
  - d. Continuous pressure on the car button of the selected floor shall close the doors and start the car toward the selected floor. Pressure shall be required on the button until the car starts. Releasing the car button before the car starts shall cause the doors to automatically reopen.
  - e. After the car has arrived at the floor and the doors have automatically opened, the cars shall remain until another car button is pressed or until the key switch is returned to the normal position.

- f. Should all cars be put on independent service, all hall calls registered shall be canceled. Further registration of hall calls shall be limited.

**EDITOR:**

**DELETE THE FOLLOWING IF YOU DO NOT HAVE EMERGENCY POWER.**

- G. Emergency Power Panel:
  1. Emergency switch and annunciation panel shall be a 12"x12" brushed stainless steel, with lockable cover, fully recessed panel to be located on the egress floor where indicated on drawings. The panel shall have indicating red lights showing locations of cars during emergency power condition.
  2. A key switch shall have auto, manual ----. **NO. OF ELEVATORS**
  3. The panel shall be labeled as "Elevator Emergency Panel".
  4. See details on sheet ---.
- H. Computer For Elevator Controller Diagnostics:
  1. Provide a Dell Laptop, Model "Dell Latitude E6420" with Intel vPro Advanced Systems Management loaded with Diagnostics software for the installed elevator controller.
  2. Liftnet monitoring system shall be installed and operational by elevator contractor.
  3. Laptop Requirements:
    - a. Dell Latitude E6420
    - b. Operating system Genuine Windows 7 professional, no media, 32-bit, English.
    - c. Primary Storage: 250GB 5400rpm Hard Drive
    - d. Processor Branding: Intel Core i5 vPro Label.
    - e. Processor: Intel Core i5-2520M (2.50GHz, 3M cache) with turbo Boost Technology 2.0.
    - f. LCDs: 14.0" HD Anti-Glare LED backlit.
    - g. Memory: 4.0GB, DDR3-1333MHz SDRAM, 2, DIMMS
    - h. Internal Keyboard: Inertial English keyboard Dual Pointing Keyboard
    - i. Primary Optical Device: 8X DVD+/-RW w/Roxio and Cyberlink Power DVD, no media.
    - j. Wireless LAN: Intel® Centrino® Advanced-N 6205 802.11a/b/g/n Half Mini Card
    - k. Energy Star & EPEAT: Energy star 5.0 Enabled / EPEAT Gold
    - l. USB Optical Mouse
    - m. Primary Battery: 6-cell (60WH) Primary Lithium Ion Battery
    - n. AC Adapter: 90W /C ADAPTER (3-PIN)
    - o. carrying case: Slim Nylon Case (2 Pocket)
    - p. Support Services: 4 Year Basic Hardware Service with 4 Year NBD Limited Onsite Service After Remote Diagnosis
    - q. 4 year complete care accidental damage protection.
  4. Laptop shall be compatible with all new elevator controllers.
- I. Acceptable Manufacturers:
  1. Motion Controller Engineering (MCE) model HMC-100.
  2. Elevator Controls Inc.
- J. Machine Finish and Painting:
  1. All exposed surfaces of machines and motors, and controllers, shall be repainted after field installation and before acceptance by owner with rust resisting gloss enamel paint of light gray color.

## 2.4 HOISTWAY EQUIPMENT & HOISTWAY ENTRANCES

### A. Provisions for Hoistway Access:

1. Elevator door safety plug-lock- Keyway - Furnish and install hoistway door unlocking devices at all landings with Tri-lock MFG. & MAINT. CORP. key NO. 6950 in accordance with requirements of the latest Edition of the American Standard Safety Code for Elevators, Dumbwaiters, and Escalators, and as permitted by the Local Code.
2. The hoistway door-unlocking device shall unlock and permit the opening of the hoistway door from any floor irrespective of the position of the car. The design of the device shall be such as to prevent unlocking the door with common tools. The means for unlocking the door shall be available and used only by inspectors, maintenance, and repair personnel.
3. Access Switches - Furnish and install hoistway access switches and associated devices (at the top and bottom landings in accordance with requirements of the latest Edition of the American Standard Safety Code for Elevators, and Escalators, and as permitted by the Local Code.

### B. Hoistway Doors:

1. New doors shall be flush hollow metal panels fabricated of No. 16 U.S. gauge steel, minimum. The doors shall be 1-1/4" thick and reinforced with continuous members. Panels shall have sound deadening insulation. Doors shall have removable non-metallic gibs to run in the sill guideway with minimum clearance. Door panels shall conform to the National Elevator Code ASME A17.1 and the Underwriter's Laboratories 1-1/2 hour fire test requirement. Door unlocking devices shall be provided at all floors and as required by local codes. Sight guards shall be provided for all entrances. Provide new hoistway doors at all landing. The doors shall be equipped with nylube door guides.
2. Hoistway landing interior finish shall be painted black.
3. Hoistway landing Doors exterior finish shall be stainless steel.
4. Hoistway door unlocking devices at all landing shall be provided with TRI-LOCK removable plugs with key number 6950.

### C. Top of Car Operating Device:

1. An operating device shall be provided on the top of the car located in the front between the car crosshead and hoistway door, complete with an Emergency Stop Switch, GFCI plug, fire service lamp and buzzer, lamp and guard, a Selections Switch, UP, DOWN and safety operating Buttons. This device shall comply with ASME A17.1 and local codes. Using Adams model A-912CG with Light guard.
2. Operation from the top of the car shall not be permissible unless all electric door contacts are closed.
3. Elevator shall be provided with at least two electric light fixtures and convenience outlet fixture on the car top. The two light fixtures combined shall provide an illumination level of not less than 10fc at the car top. The light fixture shall be permanent and be of the fixed or portable type and shall be equipped with guards. The light switch shall be accessible from the landing when accessing the car top.

### D. Pit Stop Switch:

1. A switch or switches shall be located in each elevator pit, in accordance with ASME A17.1 and local codes, which when turned to the "off" position will cause the electric power to remove from the elevator pump motor. This switch shall be lockable in the "off" position.

E. Emergency Alarm Bell:

1. Provide an alarm bell with its own battery source and recharging unit for emergency power unit, mounted on the car. When the emergency alarm bell button in the car is pressed, it shall illuminate and the alarm bell shall sound. Operation shall be in accordance with ASME A17.1 and the State of Michigan Elevator Code.
2. Indicate DBA level of the alarm bell (80-85 DBA).

F. Guide Rails

1. Provide steel tee guide rails to meet ASME A17.1 requirements, including suitable brackets and clamps for attachment to the building structure. The guide rails and car frame shall be so located that the car is in balance with the guides. The machined tongue and groove joints shall be fitted with machined fishplates fastened to each rail with at least 4 through bolts. Rails are to be cleaned of any shipping or protective coatings at time of installation.
2. All joints shall be located free of interference with supporting clamps and brackets. Shims used to obtain rail alignment shall be designed to remain in position, even though the fastening bolts may be loosened.
3. The guide rails shall be installed and aligned with their machined faces plumb within one-eighth of an inch from top to bottom of the hoistway.
4. Minimum Rail Size shall be 16 pounds per foot. Upgrade rails based on application.

**EDITOR:**

**DELETE THE NEW GUIDE RAIL IF THE GUIDE RAILS ARE TO BE REUSED FOR CAR AND COUNTERWEIGHT.**

5. The car and counterweight guide rails shall be realigned, refinished and cleaned so that the faces of the rails are plumb within one-sixteenth (1/16) of an inch in 100 feet of travel. Refinish rails for smooth operation and paint back plains with black paint.

G. Buffers:

1. Buffers shall be installed in the pit to meet ASME A17.1 requirements. These buffers shall be fastened to steel channels furnished and installed by the Elevator Contractor.

H. Normal Stopping Devices:

1. Slow-down and normal stopping devices shall be furnished and installed for each car. These devices shall be so arranged that, as the car approaches either terminal landing, a roller with noiseless tread, mounted on a movable arm, shall come into contact with cams located in the car. Through the operation of the stopping device, bring the car automatically to a smooth stop at the terminal landing. The full width of the roller tread shall engage the cam surface. The emergency car stopping system shall comply with the ASME A17.1 requirements.

I. Landing System:

1. This landing system shall provide high speed stepping signals, one-floor-run stepping signals, leveling, and door zone signals. Each output signal shall be electrically isolated and shall be capable of reliably operating at 120 VAC.
2. The system shall consist of a steel tape with mounting hardware to accommodate the complete travel of the elevator, a car top assembly with tape guides and sensors, and magnetic strips for stepping and leveling.
3. The leveling and stopping accuracy of the system shall be within 1/4 inch of the floor level and shall correct for over travel or under travel to within the same accuracy, regardless of load variations or direction of travel.
4. Landing system shall be as provided by the elevator controller manufacturer.

J. Entrance:

1. New entrance shall consist of flush hollow metal door panels, bolted unit type frames, sill's hanger(s), hanger covers, fascia plates, headers, struts, site guards and hardware.

K. Frames:

1. New unit frame shall be fabricated of No. 14 U.S. gage steel comprising the head and side jamb sections, which shall be securely bolted to form one piece unit construction and shall be securely fastened to the sills and hanger supports. They shall be returned on the hoistway side to present a neat appearance.

**EDITOR:**

**REUSE ON REPLACEMENT PROJECTS WHERE POSSIBLE FOR CAR AND COUNTERWEIGHT**

2. To be reused, sand, fill in dents and paint matching existing color. Enamel paint to be used. Provide coat prior to the finish for each floor.

L. Sills:

1. Sills shall be extruded aluminum construction with a non slip wearing surface. They shall be supported on steel brackets and securely fastened to the floor. Grooves for the door guides shall have minimum clearance for the guides. The sills must suitable for "class C3" loading.

**EDITOR:**

**REUSE ON REPLACEMENT PROJECTS WHERE POSSIBLE FOR CAR AND COUNTERWEIGHT**

2. To be reused, clean and polish sills.

M. Struts:

1. A 3"x 3" x 1/4" steel angle struts shall extend from the sill to the building beam above and shall be securely fastened to ensure rigidity and adequate support for the header.

**EDITOR:**

**FOR REUSE STRUTS**

2. To be reused sand, prime and paint black.

N. Headers:

1. Headers shall be constructed of 3/16" formed steel to provide support for the frame and hangers.

**EDITOR:**

**REUSE ON REPLACEMENT PROJECTS WHERE POSSIBLE FOR CAR AND COUNTERWEIGHT**

2. To be reused, sand, prime and paint black, or provide new.

O. Hanger Covers:

1. Hanger covers shall be fabricated of No. 14 gauge steel extending the full width of the hanger pocket. A section shall be easily removable from inside the car for servicing the hanger.

**EDITOR:**

**REUSE ON REPLACEMENT PROJECTS WHERE POSSIBLE FOR CAR AND COUNTERWEIGHT**

2. To be reused, sand, prime and paint black, or provide new.

P. Fascia, Covers, and Toe Guards:

**EDITOR:**

**FOR NEW FACIA COVERS AND TOE GUARDS**

1. Fascia, including hanger covers, toe guards and dust covers shall be fabricated of No. 16 U.S. gauge steel. Fascia shall span the width of the opening plus 6 inches. Dust cover extends a minimum of 8 inches above the header and the toe guard shall extend a minimum 8' below the sill. Both shall return to the wall at 60 deg. Angle.
2. Finish:
  - a. Struts, headers, hanger cover, fascia, dust covers, and toe guards shall have matte black finish. New entrance frames (existing) shall be finished in stainless steel of color selected by owner. All landing doors shall be new and finished in enamel of color selected by owner.
  - b. All existing heads and jambs shall be stripped to bare metal, prepared with primer and finished with two coats of enamel paint.

**EDITOR:**

**FOR REUSE FACIA COVERS AND TOE GUARDS**

3. To be reused sand, prime and paint black or provide new.
4. Finish:
  - a. All existing heads and jambs shall be stripped to bare metal, prepared with primer and finished with two coats of enamel paint.

**2.5 CAR EQUIPMENT & CAR ENCLOSURE**

A. Power Door Operation:

1. The car and hoistway doors shall be operated quietly and smoothly by an electric operator, which shall open and close the car door and respective hoistway door simultaneously. The doors shall open automatically when the car is leveling at the respective floor and, when operating without an attendant, shall close after a predetermined time has elapsed. Momentary pressure on the "Open Door" button in the car shall cause the doors to remain open or, if closing, to reopen and reset the time interval.
2. The doors shall be opened at rated speed and the closing speed shall be per Code. Door closing force shall be as allowed by code.
3. An electric contact for the car doors shall be provided which shall prevent elevator movement away from the floor unless the door is in the closed position as defined by code.
4. Each hoistway door shall be equipped with a sill mounted auxiliary door closing device and a positive electro-mechanical interlock to prevent the operation of the elevator until the interlock circuit is established and the doors are locked and closed.
5. Car doors shall be provided with zone locking.
6. Acceptable Manufacturer: Gal, MOVFR operator.

B. Landing Door Hangers

1. Each hoistway door shall be suspended by two (2) sheave type hangers. Each hanger shall consist of a polyurethane tread on a metal hub equipped with precision ball bearings mounted onto a steel bracket. The hanger sheaves shall not be less than 3-1/4 inches in diameter. The track shall be so shaped as to permit free movement of sheaves without regard to vertical adjustment of the sheave brackets. An up-thrust roller shall be provided beneath the track and each sheave wheel, capable of withstanding a vertical thrust equal to the carrying capacity of the upper sheave. The up-thrust roller shall be adjustable for fine vertical adjustment and the face of the roller shall be so shaped as to conform to the bottom face of the hanger track. Doors closers shall be sill mounted.
2. Manufacturer: GAL.

C. Door Protection and Reopening Device:

1. ICU/Gatekeeper 2000 from Adams or Janus 3D.

D. Adaptive Door Timing:

1. Door open times will be varied subject to the call situation causing the stop:
  - a. Shortest timing, when car call only causes stop.
  - b. Longer timing, when hall call only causes stop.
  - c. Longest timing, when coincident hall and car calls exist.
  - d. All timing shall meet ADA guidelines as a minimum.
2. The door opening time, measured from the instant the doors start to open until within 1" of fully open position, shall not exceed code standard.
3. Long door and short door "hold open" times shall be set at 4.0 and 2.5 second respectively and shall be ADA complainant.

E. Car Frames:

1. Car frame shall consist of structural steel members that are securely welded or bolted together and the frame shall be so reinforced and braced as to relieve the car enclosure of undue strains. Steel bumper plates shall be provided to engage the buffers.

F. Car Platforms and Flooring:

1. Each passenger type car platform shall consist of a structural steel frame with a wood and metal composite floor (i.e. one layer of 3/4" marine grade plywood plus 14 gauge steel plate plus 3/4" thick marine grade plywood plus finish flooring). Top finish flooring on car shall be furnished and installed by Elevator Contractor, shall be as described in item 2.4.J.
2. Each passenger type platform shall be equipped with an extruded aluminum threshold and a steel toe guard at the loading edge. The under side of the platform shall be fireproofed to comply with local codes.
3. The platform shall be capable of the capacity of the car being loaded in one-piece across the entrance of the car and loading.

G. Car Isolation:

1. The steel platen plate used to secure the car frame to the plunger shall be provided with rubber pads to effectively prevent transmission of vibration from the plunger to the complete car frame, platform and car enclosure.

H. Roller Guides for Car:

1. Each roller guide shall consist of three wheels (minimum roller diameter - 6") tired with a durable resilient material; each rotating on ball bearings having sealed-in lubrication; all assembled on a substantial metal base and so mounted as to provide continuous contact of all wheels with the corresponding rail surface under all conditions of loading and operations. The wheels shall run on three finished rail surfaces. The roller guides shall be properly secured at top and bottom on each side of car frame. Provide roller guides at top and bottom of car.
2. The roller guides shall run on dry guide rails.
3. Manufacturer: ELSCO Type B.

I. Car Doors:

1. Provide car doors with flush hollow stainless steel panels. Panels shall have sound deadening insulation. Doors shall have removable non-metallic gibs to run in the sill guide way with minimum clearance. Door panels shall conform to the National Elevator Code ASME A17.1 and the Underwriter's Laboratories 1-1/2 hour fire test requirements. Door unlocking devices shall be provided as required by local codes. The door shall be equipped with nylube door guides.
2. Car door hangers and tracks shall be provided similar to hoistway doors.
3. Door finish shall be #4, brushed stainless steel.

J. Car Enclosures:

1. All cab material, design, lighting, ventilation and exits shall comply with "American National Standard Safety Code for Elevators, ASME A17.1 and/or local codes. Where codes conflict the more stringent shall apply.

2. Wall panels and reveals shall be of rigidized 316 stainless steel construction and applied to a steel shell.
3. Returns shall be of stainless steel construction and have a #4 brushed finish. Cutouts shall be provided for operating elements and fixtures. Minimize thickness of return to maximize clear floor area.
4. Canopy shall be constructed from formed and reinforced 16 gauge steel finished in white enamel and shall have an overall height of 8'0" from the finished floor. An emergency exit shall be provided which is locked from the top of the car.
5. Provide in vertical beveled through lighting per LED that will apply 10 foot-candles in cab at floor level. Coves shall be made of stainless steel with #4 finishes and located at ceiling level with to meet the requirements LED lights on both sides of cab. Also comply with UFAS lighting level requirements. Provide stainless steel protective guards consisting of two mesh, 14 gauge, wire cloth encased in a U-channel frame and of adequate size for maintenance. These guards shall be secured in place with tamper proof screws. Submit shop drawings prior to fabrication for Owner's approval.
  - a. LED Model SB-1 Manufacturer by Man-D-Tec.
6. Entrance columns shall be #4 brushed stainless steel finish. Columns shall run from floor to canopy, be finished in a vertical grain, and shall be integral to the returns.
7. Entrance transom shall be #4 brushed stainless steel finish. Columns shall run from floor to canopy. Transom shall run the full width of the car and be finished in a horizontal grain.
8. Doors shall be of hollow stainless steel construction with #4 brushed finish, suitably reinforced and sound deadened. Equipped with NYLUBE door guides.
9. A single speed fan shall be provided that matches the ceiling and is mounted to the canopy. Air intake to the fan shall be through the 3/8" diameter holes (adequate in number to allow free passage of required air quantity) drilled in canopy. Submit shop drawing of canopy for approval prior to fabrication. CFM as required per ASME A17.1. Sound power is to be 45 DBA max.
10. A 3/8" x 2" bar handrail with radiused ends of #4 brushed stainless steel finish shall be provided to meet code requirements on side and back walls but shall not interfere with car operating panel.

**EDITOR: IN CASE THE ELEVATOR REPLACEMENT IN PARKING STRUCTIOR USE NICKEL SILVER**

11. Car sills shall be extruded aluminum. Car sills for elevator in parking structures shall be nickel silver.
12. Finished floor covering shall be furnished and installed by the elevator contractor.
  - a. Flooring shall be "Endura" style rubber tile by Burke Flooring. Texture and color to be selected by owner.
13. Provide removable protective wall pads with padlocks inside elevator car to protect the wall panels. Pads shall meet all codes for elevator car enclosures, and be equal to Palmer "PalmTuff Vinyl Pads". Color to be selected by owner from mfg standards.
14. Acceptable Cab Manufacturers:
  - a. G&R Elevator Co.
  - b. Haunstein Burmeister
  - c. Tyler

- d. Columbia
- e. Eklund

## 2.6 OPERATING FIXTURES

### A. Car Operating Panel:

1. The operating panel in the car shall consist of a vandal resistant stainless steel control panel. (Taper all projected sides of car panel back to return panel for a neat appearance. Submit drawings for approval prior to fabrication.) The main control panel shall contain a series of push buttons with illuminated call registration devices, numbered to correspond to the various landings serviced. In Car Stop Switch, Fire Service Compartment, Alarm Button (connected to a bell located on the car) and a Door Close, Door Open button for each entrance. Alarm bell shall be operated from its own independent battery pack power supply and recharging system. The control panel shall also contain separate key operated switches for Access, Independent Service, Car Lights, Car Fan, Emergency Light and Test Switch. Emergency phone shall be hand free type. Panel shall also accommodate certificate frame, hand free phone and digital car position indicator. All key switch cylinders shall be standard Adams keying system.
2. Buttons shall be made of brushed stainless steel with LED for illumination, with translucent floor designations, with Braille.
3. Provide emergency light in car-operating panel with rechargeable nickel cadmium batteries and recharging system.
4. Provide engraved fire services instruction and security keys per ASME A17.1.
5. Acceptable Manufacturers: PTL-Performer series or Innovation Industries. All shall be vandal resistant and brailled
6. Floor Passing Chime:
  - a. Provide a floor-passing chime and voice annunciation to meet ADA requirements. Mount in main car operating panel.
  - b. Acceptable Manufacturer: Adams Voice or approved Elevator Controller Manufacturer
7. Refer to detail on drawings.

### B. Hall push button:

1. ADA compliant vandal resistant illuminating LED type Hall push buttons shall be installed at each floor to permit waiting passengers to call the elevator to the floor.
2. Fixtures shall have up and down buttons with Braille adjacent to the button on the left at intermediate floors and single buttons at top and bottom floors.
3. Buttons shall be made of vandal resistant stainless steel and shall illuminate to indicate a call has been registered. Button shall remain illuminated until the call has been answered. Provide oversized vandal resistant brushed stainless steel cover plates at all push button stations to cover all openings (including the openings that result from removal of existing hall push button stations or any other devices). The Braille signage adjacent to the directional button requires at least half inch lettering denoting the direction of the button
4. Provide engraved graphic per

5. ASME A17.1 emergency sign and illustration on all hall push button station plates: "IN CASE OF FIRE USE STAIRWAY FOR EXIT". "DO NOT USE ELEVATOR"
6. Acceptable Manufacturers: PTL Performer Series or Innovation Industries.
7. Refer to details on drawing.
8. Hall push button panel may accommodate the hall position indicator (HPI).

C. Communication System (Telephone):

1. Provide hands-free vandal resistant emergency telephone in the car, with wiring (shielded pairs) to terminals on control panel in machine room. Engraved with ASME A17.1.
2. Phone shall keep working during power failure. Coordinate work with U-M ITCOM. Phone shall be one push button to talk type and flash when call is answered. Telephone shall be an integral part of the car panel.
3. Annunciator Interface, Auxiliary Relay and 24V LED Board: The board shall be mounted behind the phone in the elevator car operating panel which contains an auxiliary relay that can be tied to DDC panel. The connection from the elevator controller to the DDC panel shall be provided by electrical contractor. When the board is programmed correctly, DDC will receive an alarm whenever the RATH phone detects the phone line has failed. Note that the car traveling cable containing the phone line must be expanded to contain a pair of wires for connection to the nearest DDC panel.
4. Provide a RATH 2100-ALARM unit. Unit shall be mounted in the designated floor elevator lobby per elevator code ASME A17.1 as part of the egress floor hallway push button and shall be wired to the RATH phone in the car operating panel. The alarm unit will contain the code required local alarm light, sounder and a momentary key switch on a label back plate. The traveling cable containing the phone line and pair of wires for the DDC circuit must be expanded to contain a pair of wires from the RATH phone RATH alarm unit.
5. Manufacturer:
  - a. RATH Microtech 2100-957-cc telephone (call track), with hand free operation or equivalent.
  - b. RATH 2100 Alarm Unit or equivalent.

D. Car Traveling Lantern:

1. Provide on both sides of car doorjams and shall be ADA compliant.
2. Manufacturer: PTL Performer series or Innovation Industries Vandal Resistant Series.
3. Refer to detail on drawings.

E. Car Fire Alarm Horn: (omitted)

F. Car Position Indicator:

1. A LED (Light Emitting Diode) vandal resistant digital type position indicator shall be provided inside car, as part of main car operating panel (COP). It shall indicate the floor at which the car is stopped or passing and the direction the car is traveling. The cover plates shall be #4, brushed Stainless Steel.
2. Manufacturer: PTL Performer Series or Innovation Industries Vandal Resistant Series.
3. Refer to detail on drawings.

**USE SPECIAL KEY AS AN OPTION**

- G. Special Key Feature:
  - 1. Provide (2) key switches per floor. One shall be for security on & off and one shall be for momentary override. Keys shall be keyed to U of M's KEY SYSTEM and shall be coordinated with KEY OFFICE through Owner Representative.
- H. Hall Position Indicator:
  - 1. Provide at each floor in elevator lobby or hallway, above hoistway door. Description shall be as in item 2.6.G or as part of the hallway push buttons and shall be LED digital type in red color.

**2.7 ELECTRIC WIRING**

- A. Complete insulated wiring shall be furnished and installed to connect all parts of the equipment furnished by the elevator contractor. Wiring shall conform to the requirements of the latest edition of the National Electrical Code. Include rigid conduit or EMT, at least 1/2" diameter, and short lengths of flexible conduit. Conduit or EMT shall terminate in junction boxes. Conduit, EMT, wiring duct, conduit fittings, enclosures and junction boxes shall be galvanized steel or aluminum.
- B. All wiring shall have a flame retarding moisture resisting outer cover and shall be run in metal conduit, flexible metallic tubing, or wire ducts.
- C. Traveling cables shall have flame retarding and moisture resisting outer cover. They shall be flexible and suitably suspended to relieve strains in the individual conductors. Provide the required quantity plus at least 10 percent spares. All wiring between telephone in car and a junction box in elevator machine room shall be provided by the elevator contractor. Conductors shall be numbered to correspond to numbered terminals at the car and machine room.
- D. Terminal blocks shall be coded to identify the circuits. Multi-conductor cables shall have the conductor color coded and numbered.
- E. The elevator car shall be provided with a suitable GFCI duplex receptacle fitted with a wire lamp guard on top of the car and a suitable duplex plug receptacle.
- F. Unless otherwise specified, control wiring shall be minimum size #18 AWG. Wire size shall be large enough so that the voltage drop under inrush conditions will not adversely affect operation of the controls.
- G. Electrical Receptacle in Car: Provide GFCI duplex electrical receptacle in car. Locate receptacle approximately 2" above finished floor below car station. Provide matching face plate on receptacle
- H. Execution:

1. Install all power wiring in raceway systems. No exposed wiring or conduit shall be run in finished areas without prior written approval of owner.
  2. Splice cables and wires only in outlet boxes, junction boxes or pull boxes. (Note - No wire splicing allowed in raceway or wire ducts).
  3. Install cable supports for all vertical feeders in accordance with the NEC. Provide Kellum GRIP type supports, which firmly clamp each individual cable and tighten due to cable weight.
- I. All terminal strip connections shall be identified with corresponding reference numbers from cable termination chart and electrical straight-line diagrams.

**PART 3 - EXECUTION**

**3.1 ACCEPTABLE ELEVATOR INSTALLERS**

- A. Acceptable installers: Subject to compliance with the requirements specified herein, installers offering product approved by the owner are limited to the following listed companies. Elevator installer for project must provide the equipments as specified.
1. Detroit Elevator Co.
  2. Kone Elevator Co.
  3. Otis Elevator Co.
  4. Schindler Elevator Inc.
  5. Thyssen Krupp Elevator.

**3.2 EXAMINATION**

- A. Inspect all surfaces, and required embedded anchorage devices, and verify that they are in proper condition to receive the work of this section. Verify that field measurements are as indicated on approved shop drawings.
1. Prior to preparation of drawings, the contractor shall examine the hoistway and machine room areas and verify that nothing will adversely effect the execution of the work.
  2. No exposed wiring or conduit shall be run in finished areas without prior written approval of owner.
- B. Beginning of installation means acceptance of existing conditions.

**3.3 PERFORMANCE**

- A. Contract speed: Actual speed shall vary no more than +/- 5% from speed specified under any loading condition or direction of travel.
- B. Leveling accuracy: Consistently level within +/- 1/4" under all loading conditions.

**3.4 PERFORMANCE GUARANTEE**

- A. The elevator contractor shall assume full responsibility to furnish and provide a complete and functional elevator and to obtain and furnish the University final State Elevator Inspection approval. All costs necessary to correct code deficiencies cited by the State Elevator Inspector will be paid by the elevator contractor as part of this Contract at no additional cost to the Owner.

**AS AN OPTION**

**3.5 ACCESSORIES**

- A. Car and/or hall operating key switches: Provide ground fault circuit-interrupter protection for car-top inspection station and in car electrical receptacle.

**3.6 TECHNICAL TRAINING**

- A. On site technical training shall be held for the purpose of familiarizing Elevator Support Mechanics with operations and troubleshooting procedures. The session shall accommodate up to ten personnel in each session and consist of forty hours of Training (This to include two 2-day sessions and the fifth day reserved for any additional diagnostic training). Training on equipment controller shall be provided by trained factory service engineers of controller manufacturer through the elevator installers.

**3.7 ELEVATOR ACCEPTANCE DEMONSTRATION AND PERFORMANCE TEST (COMMISSIONING BY U OF M ELEVATOR SHOP)**

- A. Demonstrate to Owner, or Owner's designated representative, the operation of the elevator system. Demonstration shall include:
  - 1. Installation compliance with specifications.
  - 2. Contract speed, capacity, and floor-to-floor performance compliance with specifications.
  - 3. Stopping accuracy and car ride compliance with specifications.
  - 4. Operation of signal fixtures and operation of supervisory or dispatching system.
  - 5. Promptly remove all work rejected by the Engineer for failure to meet specifications and replace to comply with requirements, at no additional cost to the Owner. All expenses of repairing work of other Trades damaged by this replacement shall be borne by Contractor.
  - 6. Rejected work which is not made good within a reasonable time, determined by the Engineer, may be corrected by the Owner at Contractor's expense.
  - 7. Upon completion of installation and before final acceptance, conduct a running speed test with full design load to verify compliance with performance requirements. Also refer to Article 1.3 of this division
- B. Operating Instructions: Provide instructions to the Owner's personnel, including safety procedures, proper operation of the equipment, and routine maintenance procedures.

- C. The lap top computer shall be provided to commissioner prior to start of commissioning process by minimum of (2) weeks. See item 2.3.J.

**3.8 CLEANUP**

- A. Keep work areas orderly and free of debris on a daily basis.
- B. Remove filings and loose materials resulting from this work from hoistways.
- C. Clean all dirt, oil and grease from machine room and pit equipment and floors.
- D. Clean car, car enclosures, entrances, hoistways, operating and signal fixtures and trim of dirt, oil, grease, and finger marks.
- E. Polish shine all stainless steel components.
- F. Clean, re-align guide rails for car and paint the back guide rails.

**END OF SECTION 14240**

BuildingName  
The Description of the Project  
P00000000 0000

**SPECIFICATION DIVISION 14**

NUMBER            SECTION DESCRIPTION

**DIVISION 14 CONVEYING SYSTEMS**

SECTION 144200 - WHEELCHAIR LIFT

**END OF CONTENTS TABLE**

**DIVISION 14 CONVEYING SYSTEMS**  
**SECTION 144200 - WHEELCHAIR LIFT**

*SPEC EDITOR: THIS SECTION INCLUDES WHEELCHAIR LIFTS, WHICH ARE DISTINGUISHED FROM BFLD'S, IN PART, BY RESTRICTED LIFT HEIGHT AND MINIMAL SHAFT ENCLOSURE REQUIREMENTS. CONSULT UNIVERSITY OF MICHIGAN DESIGN GUIDELINES FOR SELECTION ASSISTANCE TO DETERMINE WHETHER A WHEELCHAIR LIFT IS AN APPROPRIATE DESIGN SOLUTION, OR WHETHER ANOTHER LIFT TYPE SPECIFIED IN SECTION 14 ("BARRIER-FREE LIFTING DEVICE") IS REQUIRED.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SUMMARY**

- A. This Section specifies a vertical-travel wheelchair lift.
  - 1. Include manufactured hoistway and platform doors.

*SPEC EDITOR: SELECT PARAGRAPH ABOVE OR BELOW.*
  - 2. Install lift within site-built custom enclosure.
- B. Electrical service and final electrical connections are specified in Division 26 sections.

*SPEC EDITOR: INCLUDE THE FOLLOWING WHERE APPROPRIATE.*

- C. Alternates: The work of this Section affected by an alternate. Refer to Division 01 Section "Alternates" for additional information.

**1.3 SUBMITTALS**

- A. Submit each indicated item in compliance with Division 1 Section "Submittals."
- B. Product manufacturer's literature indicating compliance with applicable requirements.
- C. Shop Drawings: Provide shop drawings showing layout, including critical dimensions for installation, details, and anchorages for wheelchair lift. Include internal wiring diagram and requirements for connection to building electrical service.
- D. Samples: Submit finish paint color samples of manufacturer's full standard range of surface coating colors and textures in the form of actual coating material samples applied to metal sample cards of approximately 3 inches wide by 5 inches long.

- E. Permits and Certificates: Submit four copies of each of the following:
  - 1. Installation permit required under Quality Assurance Article.
  - 2. Inspection and acceptance certificates required under Quality Assurance Article.
- F. Manufacturer's Instructions: Submit operation and maintenance manuals and parts list.

#### 1.4 QUALITY ASSURANCE

*SPEC EDITOR: SPEC SHOULD USUALLY RETAIN ALL BELOW.*

- A. Installer Qualifications: Engage an experienced Installer who has completed installation of products similar in design and extent to those required for the project and whose work has resulted in construction with a record of successful in-service performance.
  - 1. Installer shall hold a valid Class C license issued by the State of Michigan.
- B. Single-Source Responsibility: Provide products and units from one source and produced by a single manufacturer.
- C. Regulatory Requirements: As follows:
  - 1. Comply with applicable provisions of the most recent edition (unless otherwise indicated) of each of following codes and standards:
    - a. Americans with Disabilities Act, Uniform Federal Accessibility Standards (ADA/UFAS).
    - b. ANSI 17.1 - 1993; with ANSI 17.1a - 1994 Addenda.
    - c. Michigan Department of Labor Building Code Rules, Chapter 11 - Accessibility.
    - d. Michigan Department of Labor "Elevator Laws and Rules" (Public Acts 227 of 1967 & 333 of 1976).
  - 2. Factory-installed wiring shall comply with applicable requirements of the National Electrical Code.
  - 3. Obtain installation permit from the State of Michigan Elevator Safety Board.
  - 4. Obtain necessary inspection and acceptance certificates from authorities having jurisdiction.

#### 1.5 PROJECT CONDITIONS

- A. Field Measurements: Check actual space available by accurate field measurement before fabrication. Show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of work.
  - 1. Where necessary, proceed with fabrication without field measurements, and coordinate fabrication tolerances to ensure proper fit of window units.

**PART 2 - PRODUCTS**

**2.1 WHEELCHAIR LIFT**

*SPEC EDITOR: THE PARAGRAPH BELOW INCLUDES PROVISION OF A MAUNUFACTURED HOISTWAY ENCLOSURE. OMIT THE REFERENCES TO A "MANUFACTURED HOISTWAY ENCLOSURE" IN PARAGRAPHS A AND C IF THE UNIT WILL BE INSTALLED IN A SITE-BUILT CUSTOM ENCLOSURE.*

- A. Wheelchair Lift, General: Provide vertical-travel wheelchair lift with roped- (cable-) hydraulic-type lift mechanism, with single-chair capacity, and with manufactured hoistway enclosure. Wheelchair lift, hoistway, components, hardware, and operational features shall comply with requirements of this Section and requirements of authorities having jurisdiction.
- B. Provide wheelchair lifts with the following characteristics:
  - 1. Capacity: 750 lbs.
  - 2. Rated Speed: 15 feet per minute max.
  - 3. Vertical travel distance: As indicated on Drawing.
  - 4. Platform size: 13 sq. ft. minimum area; meet minimum length and width requirements of authorities having jurisdiction.
  - 5. Power Supply: 115V, single phase, or as required by manufacturer.
  - 6. Emergency Operation: Rechargeable battery operated system, capable of completing a full up and down cycle.
- C. Product: Subject to compliance with requirements, provide the following product:

*SPEC EDITOR: SELECT ONE OF THE FOLLOWING PARAGRAPHS BASED ON THE SPECIFIC PROJECT.*

- 1. Wheelchair lift with manufactured enclosure:  
P.A.L-SE; Concord, Div. Ricon Corporation.
- 2. Wheelchair lift for use with architectural enclosure:  
Concord, Div. Ricon Corporation.

**2.2 COMPONENTS**

- A. Doors: In addition to complying with regulatory requirements, provide doors that are self-closing, swinging type fabricated with internal noise deadening materials and with rubber bumper stops to prevent metal-to-metal contact with jambs. Provide doors with hydraulic door closers (spring hinges not permitted).
  - 1. Provide doors with manufacturer's standard safety glazed lights (windows). Provide lights of not less than 625 sq. inches in each door.
- B. Seat: Side-mounted, spring loaded seat that in retracted position does not impinge on the required clear width of the platform.
- C. Controls: Constant pressure paddle type.
- D. Platform entrance safety device: Photo-electric eye.
- E. Handrails: Provide guards on both sides of platform with handrails.

- F. Fused Safety-Disconnect: Provide unit in accordance with requirements of authorities having jurisdiction. Locate unit as indicated in Installation article of this Section.

### 2.3 FINISH

- A. Paint Coating: Manufacturer's standard powder-coated enamel finish. Color to be selected by Architect from manufacture's standard range.

## PART 3 - EXECUTION

### 3.1 INSPECTION

- A. Inspect surrounding wall and floor surfaces before beginning installation. Verify that rough opening tolerances are correct and the landing construction is level. Do not proceed with installation until deficiencies have been corrected.

**SPEC EDITOR: DELETE BELOW IF NO DEPRESSED SLABS.**

1. Verify that depressed slab area dimensions are correct.

### 3.2 INSTALLATION

- A. Comply with manufacturer's printed installation instructions for products and applications indicated, except where more stringent requirements apply. Comply with applicable requirements of authorities having jurisdiction, and the following:
  1. Securely fasten lifting structures to the structural floor using expansion anchors or similar devices.
  2. Field alteration of factory-fabricated structural elements, including platform and doors is not permitted.
  3. Locate fused safety-disconnect as indicated on Drawings, or if not indicated, in a location near the lift mechanism, but not in the hoistway and not in location accessible to the public.

### 3.3 ADJUSTING

- A. Test and adjust operation of wheelchair lift. Verify, and adjust as required, indicated dimensional tolerances related to enclosure and platform, and landing and platform. Ensure smooth, non-binding operation of platform, doors and other moving parts and assemblies. Ensure proper operation of safety devices and related interlocks. Adjust limit switches to ensure proper alignment with landings.

### 3.4 CLEANING

- A. Clean surface finishes promptly after installation of unit. Lubricate hardware and other moving parts.

**3.5 TRAINING**

- A. Training: Demonstrate proper operation to Owner's personnel. Provide not less than 4 hours of training, by a qualified manufacturer's technician, for Owner's personnel in the proper operation and maintenance of the wheelchair lift.

**END OF SECTION 144200**

BuildingName  
The Description of the Project  
P00000000 0000

**SPECIFICATION DIVISION 14**

NUMBER            SECTION DESCRIPTION

**DIVISION 14 CONVEYING SYSTEMS**

SECTION 146000 - HOISTS AND CRANES

**END OF CONTENTS TABLE**

**DIVISION 14 CONVEYING SYSTEMS**  
**SECTION 146000 - HOISTS AND CRANES**

*SPEC EDITOR: THIS MASTER SPECIFICATION IS OLD. RECHECK AND VERIFY MANUFACTURERS, PRODUCTS & MODEL NUMBERS BEFORE USE.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SUMMARY**

- A. Extent of hoist and crane equipment is indicated on drawings.
- B. Types of hoist and crane equipment includes the following:
  - 1. Trolley hoist.
  - 2. Bridge crane end trucks.
- C. Hoist rails and bridge crane end tracks are included in Division 5 Section "Structural Steel".

**1.3 SUBMITTALS**

- A. Product Literature: Submit manufacturer's product literature indicating compliance with specified requirements for each unit.
- B. Shop Drawings: Submit shop drawings indicating assembly requirements and dimensions for coordination.

**1.4 QUALITY ASSURANCE**

- A. Standards: Comply with ANSI B30.16 fabrication requirements.

**1.5 DELIVERY STORAGE AND HANDLING**

- A. Coordinate delivery and installation of bridge crane end trucks and hoists with supporting steel to prevent delays.

**PART 2 - PRODUCTS**

**2.1 TROLLEY HOISTS**

- A. Provide army-type trolley hoists, manually operated with hand hoist and geared trolley. Equip units with chain and hook, cushioned stop fittings for end of travel at both ends of rail, and as follows:

1. Capacity: 1000 pounds.

B. Manufacturer/Model: Acco Industries, model no. 1510090, or equivalent products of Chester Hoist, Inc.; Duff-Norton (Coffing); or Columbus Mckinnon Corp.

## **2.2 BRIDGE CRANE END TRUCKS**

A. Provide kits for underhung girder bridge crane, including manually operated (push-pull) end trucks and accessories. Equip units with cushioned stop fittings for end of travel at both ends of runway beams, and as follows:

1. Capacity: 1000 pounds.

B. Manufacturer/Model: Acco Industries, model no. 521, or equivalent products of Chester Hoist, Inc.; Duff-Norton (Coffing); or Columbus Mckinnon Corp.

## **PART 3 - EXECUTION**

### **3.1 INSPECTION**

A. Examine structural steel supports in presence of Installer before installation of end truck and hoist units. Correct conditions deleterious to operation of units prior to installation.

### **3.2 INSTALLATION**

A. Install end trucks and hoists in accordance with manufacturer's recommendations.

### **3.3 CLEANING AND ADJUSTMENT**

A. Test units for proper operation. Repair malfunctioning equipment.

B. Clean and protect units from dust, dirt, and damage caused by subsequent construction operations. Replace damaged units that cannot be repaired to original condition.

C. Use of hoisting equipment of this Section for construction operations is not permitted.

**SPECIFICATION DIVISION 21**

NUMBER            SECTION DESCRIPTION

**DIVISION 21 FIRE SUPPRESSION**

SECTION 211313 - WET AND DRY PIPE SPRINKLER SYSTEMS

**END OF CONTENTS TABLE**

**DIVISION 21 FIRE SUPPRESSION**  
**SECTION 211313 - WET AND DRY PIPE SPRINKLER SYSTEMS**

**REVISIONS:**

**APRIL 2015: REVISED TO SPECIFY FOR DRY PIPE SYSTEMS: MATERIAL TO BE SCH. 40 GALV. STEEL PIPE AND FITTINGS, INSTALL PIPE WITH WELD SEAM ABOVE HORIZONTAL CENTERLINE OF PIPE, DRAIN VALVES TO BE INSTALLED AT ALL LOW POINTS, ALL DRY PIPE PIPING TO BE PITCHED. ADDED SPEC FOR DRY PIPE VALVE. KARLE FOR FP/PLMG MTT.**

**SPEC EDITOR: IN ORDER FOR THE CONTRACTOR TO HYDRAULICALLY DESIGN SPRINKLER PIPING, BID DOCUMENTS MUST INCLUDE TEST DATA INCORPORATING THE LATEST FLOW TEST CONDUCTED BY FACTORY MUTUAL, FIRE PUMP LOCATION, LATEST FIRE PUMP TEST DATA, HYDRAULIC CALCULATIONS (IF AVAILABLE), AND AS-BUILT INFORMATION.**

**SPEC EDITOR: PRIOR TO ISSUING FIRE PROTECTION DRAWINGS FOR BID, THEY SHOULD BE SENT TO, REVIEWED AND APPROVED BY FACTORY MUTUAL.**

**SPEC EDITOR: FOR CLASSROOM BUILDINGS, PROJECT LEAD SHOULD SEND DRAWINGS TO STATE FIRE MARSHAL DURING SR. REVIEW, VIA DOUG KOEPSSELL.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections
  - 1. Section 220500 - Common Work Results for Mechanical
  - 2. Section 221113 - Piping Materials and Methods

**1.2 SCOPE OF WORK:**

- A. Provide piping, fittings, valves and specialties for automatic wet and dry sprinkler systems.

**SPEC EDITOR: STANDPIPE SYSTEMS ARE TYPICALLY ONLY INCLUDED FOR BUILDINGS OF FIVE OR MORE STORIES.**

- B. Provide piping, fittings, valves and specialties for standpipe systems.
- C. All wiring related to 211313 is covered under Division 26.

**1.3 DRAWINGS:**

- A. Deviations from the drawings, with the exception of minor changes in routing and other such incidental changes that do not affect the functioning or serviceability of the system, shall not be made without the written approval of the architect-engineer, and re-submitted to FM and the authority having jurisdiction for approval.

**1.4 QUALITY ASSURANCE:**

- A. Materials, installation and testing shall comply with the following:
  - 1. NFPA 13 - Installation of Sprinkler Systems.
  - 2. FM - Factory Mutual Approval Guide.
  - 3. NFPA 14 - Installation of Standpipe and Hose Systems.
  - 4. UL - Fire protection Equipment Directory.
  - 5. FM - Data Sheets.
  - 6. City of Ann Arbor requirements.
- B. Equipment and Components shall bear UL and FM label or marking and shall be FM approved for fire service.

**1.5 SUBMITTALS:**

- A. Submit data, drawings, and hydraulic calculations, as specified in Division 01.

**SPEC EDITOR: SELECT ONE OF THE FOLLOWING:**

- B. For Buildings Containing Classroom: Submit shop drawings to Factory Mutual for approval first. Then, submit FM approved shop drawings to State Office of Fire Safety for approval. Submit shop drawings bearing stamp of FM and OFS form 12A from State Office Of Fire Safety to the architect/ engineer for approval.
- C. For Non Classroom Buildings: Submit shop drawings to Factory Mutual for approval prior to submitting to the architect/ engineer. Submit shop drawings bearing stamp of FM to the architect/ engineer for approval.

**1.6 HYDRAULIC DESIGN CRITERIA:**

- A. Locate mains and risers as indicated. Size piping per drawings, where indicated.
- B. Hydraulic calculations shall be per NFPA and FM requirements.
- C. Use latest FM water test to ascertain water supply parameters.
- D. Density shall be as indicated (gallons/minute /square foot, gpm/sf). Size all piping to suit densities indicated below:
  - 1. Offices: Density of 0.15 gpm/sf over the most remote 2000 sq. ft. area, 168 sq. ft. per head maximum.
  - 2. Laboratories: Density of 0.18 gpm/sf over the most remote 2500 sq. ft., 130 sq. ft. per head maximum.
  - 3. Mechanical rooms: Density of 0.18 gpm/sf over the most remote 2500 sq. ft., 130 sq. ft. per head maximum.

**SPEC EDITOR: REVIEW STORAGE ROOMS WITH FM, AND CUSTOMIZE CRITERIA ACCORDINGLY. GENERALLY CRITERIA IS THE SAME AS FOR MECHANICAL ROOMS.**

- 4. Storage Rooms:
- 5. Other rooms: Same as offices.
- E. Include 250 gpm hose stream allowance at the floor of calculation.
- F. Provide inspector's test connections per NFPA 13 and FM Data Sheets. Locate as indicated on the drawings.
- G. Provide fire protection for soffit areas, void spaces, obstructions, top and bottom of ductwork above 4' wide, closets, and other spaces required by authority having jurisdiction, and at no additional cost to owner.

**1.7 EXTRA MATERIALS:**

- A. For projects requiring more than 30 sprinkler heads, provide extra sprinkler heads with metal cabinet and head wrench, per NFPA 13 and FM Data Sheets.

**1.8 IMPAIRING FIRE PROTECTION SYSTEM:**

- A. The University of Michigan Fire Alarm Shop shall impair existing fire protection system. Notify Fire Alarm Shop a minimum of 48 hours prior to required shutdown.
- B. Plan and coordinate work to minimize period of time which the system is impaired.
- C. In general, reactivate system at the end of each workday, under the supervision of the Fire Alarm Shop. System may be left impaired overnight only if explicitly authorized by the University and if contractor provides continuous fire watch in impaired areas.

**PART 2 - PRODUCTS**

**2.1 GENERAL:**

**SPEC EDITOR: TOM TO CHECK ON FOLLOWING:**

- A. All hose threads shall be National Standard.
- B. Pressure gauges: Liquid filled 6" dial, 0 to 150 psig range, 5 psig division, with gauge cock.  
Manufacturers: Trerice Series 600, Weiss or Marsh
- C. All piping materials of a given type shall be manufactured by a single source, and supplied by a single supplier.

**2.2 ABOVE GROUND PIPING MATERIAL:**

**SPEC EDITOR: THIS SPEC IS FOR SYSTEMS WITH MAXIMUM REQUIRED OPERATING PRESSURE OF 175 PSIG. REVISE TO SUIT NEEDS FOR HIGH-RISE BUILDINGS.**

- A. Wet Pipe Systems: Schedule 40, ASTM A53, black steel pipe with screwed cast iron or malleable iron fittings (or match existing fittings in building) for sizes through 2", and schedule 10, ASTM A135, black steel pipe with grooved couplings for sizes 2-1/2" and larger.
- B. Dry Pipe Systems: Schedule 40, ASTM A53, galvanized steel pipe for all pipe sizes, with galvanized screwed cast or malleable iron fittings for sizes through 2", and grooved couplings for sizes 2-1/2" and larger.
- C. All piping, fittings and accessories shall be rated for a minimum working pressure of 175 psig.
- D. Manufacturers: Victaulic Style 005 Rigid Firelock couplings with type "E" EPDM gasket, Tyco Grinnell.
- E. Pipe Hangers: Pipe hangers shall comply with requirements of related sections, be FM approved, and be spaced in accordance with NFPA 13 and FM.

**SPEC EDITOR: FOR SYSTEMS OVER 175 PSIG, RESOLVE SYSTEM APPROACH WITH FM AND CUSTOMIZE SPECIFICATION ACCORDINGLY.**

- F. For systems rated over 175 psig:

**2.3 ABOVEGROUND ISOLATION VALVES:**

- A. General: Provide where shown on drawings, and as required, with valve monitor switch, and means of padlocking open.
- B. Isolation valves 2-1/2" and larger: butterfly valve.  
Manufacturers: Victaulic Series 708, Tyco Grinnell.
- C. Isolation valves 2" and smaller: gate or ball valve, brass body.  
Manufacturers: Victaulic Series 727, Tyco Grinnell
- D. OS&Y type: Where specifically indicated on drawings, provide OS&Y type valves.  
Manufacturers: Kennedy Figure 4068 (AWWA) or any other approved by the City of Ann Arbor Utilities Department Requirements, pages WM-1 & 2.
- E. Valve monitor switch: Isolation valves shall be supervised open. Provide 115 volt, single pole, double throw roller type monitor switch to signal valve closing.  
Manufacturers: Tyco Grinnell, Anvil, Notifier

**2.4 SPRINKLER HEADS:**

**SPEC EDITOR: INDICATE TYPE OF HEAD ON PLANS. 286F LINKAGE MAY BE REQUIRED IN CERTAIN AREAS.**

- A. General: Provide brass sprinkler heads with wide angle spray, thermosensitive glass bulb with temperature rating of 155F to 165F, rated for 175 psig, standard response and orifice, except as otherwise specified, FM and UL approved. Install sprinkler head type as indicated on drawings.

- B. Sprinkler head guards: Provide red, wire mesh guards where damage to sprinkler heads may occur, such as stairways, loading docks or aisles. Manufacturers: same as sprinkler manufacturer.
- C. Semi-recessed pendant type: chrome plated brass, with chrome plated brass semi-recessed escutcheon.  
Manufacturers: Reliable model G, Anvil, Viking model M.
- D. Concealed pendant type: brass finish with cover to match ceiling.  
Manufacturers: Reliable model G4FR, Anvil, Viking
- E. Upright type: brass finish.  
Manufacturers: Reliable model G, Anvil, Viking
- F. Sidewall type: chrome plated brass, with deflector and chrome plated brass escutcheon.  
Manufacturers: Reliable HSW1, Anvil, Viking
- G. Dry type (freezeproof): recessed with center strut, lever and solder capsule, unobstructed waterway.  
Manufacturers: Anvil Corp., Reliable Model G3, Viking

**2.5 TEST CONNECTIONS:**

- A. Inspector's Test Connection: Provide per NFPA 13 4-7.4.2, and where indicated on drawings: minimum 1 inch piping and test valve, orifice equivalent to one sprinkler head, with chain and cap. Drain to sanitary waste or as indicated on drawings.  
Manufacturers: Elkhart, Victaulic, Test Master

*DESIGNER: DRAIN MUST BE ABLE TO HANDLE FULL FLOW OF INSPECTOR'S TEST. USE A 3" DRAIN OR EQUAL FOR 1" LINE. ROUTE TO A JANITORS CLOSET IF POSSIBLE.*

- B. Zone Test and Drain Connection: Provide per detail on drawings and NFPA 13 4-7.4.2. Integrated test and drain valve assembly is acceptable.  
Manufacturer: AGF Model 1000

**2.6 FIRE PUMP TEST CONNECTIONS (HEADER):**

*SPEC EDITOR: CUSTOMIZE DETAIL TO HAVE APPROPRIATE NUMBER OF CONNECTIONS SHOWN, DEPENDING ON FIRE PUMP CAPACITY.*

- A. Provide test connection per detail and NFPA 13 4-7.4.2. Cast brass body with end inlet, brass plate lettered PUMP TEST CONNECTION, with loose bonnets, 3-inch female NPT inlet x 2-1/2 inch male hose thread outlets to match local fire department connections. Provide cap and chain for each bonnet. Nipple connection between flush inlet body connection and snoot (exterior connections) shall be chrome-plated steel.  
Manufacturers: Potter-Roemer Inc., 5800 series, Elkhart Brass Mfg. Co., W.D. Allen Mfg. Co.

**2.7 FIRE DEPARTMENT CONNECTION (SIAMESE):**

- A. Cast brass or bronze, flush wall mounted escutcheon plate type with polished brass finish, two 2-1/2 inch fire department inlets to match local fire department connections, double clapper check valves, lug caps and chains and cast-in function lettering.  
Manufacturers: Elkhart Brass Mfg. Co., No. 166, Potter-Roemer Inc., No. 5020 Series, Seco Mfg. Inc., No. 261, W.D. Allen Mfg. Co., No. 276

**2.8 ROOF FIRE DEPARTMENT CONNECTION:**

**SPEC EDITOR: DELETE IN SHORT SPEC; TOM WILL RESEARCH FURTHER**

- A. Cast brass body with 4 inch NPT inlet and two (2), 2-1/2 inch NPT outlets to match local fire department connections. Provide 2-1/2 inch cast brass straight globe valve with red hand wheel. Valve shall have female NPT inlet x male hose thread outlet, rated for 300 psig. Provide cast-in function lettering.  
Manufacturers: Elkhart Brass Mfg. Co., Potter-Roemer Inc., Model No. 5875 outlet with model 4115 valve, W.D. Allen Mfg. Co.

**2.9 DETECTOR CHECK VALVE:**

**INCLUDE U-M STANDARD DETAIL "15300 001 - Fire Service System Detail", REVISED AS REQUIRED TO MAKE PROJECT SPECIFIC.**

**THIS IS USED TO MECHANICALLY DETECT SMALL VOLUMES OF WATER THAT PASS THROUGH THE FIRE PROTECTION MAIN. IT DOES NOT PROVIDE PROTECTION OF THE POTABLE WATER FROM POSSIBLE CONTAMINANTS IN THE FIRE PROTECTION SYSTEM. ASSEMBLY DOES NOT CONNECT TO THE FIRE ALARM SYSTEM.**

- A. Provide valve assembly, including flanged detector check valve and bypass line. Detector check valve shall have galvanized or epoxy coated cast iron body, bronze clapper with resilient seal. Bypass line shall include City of Ann Arbor meter, isolation valves and check valve.
- B. Manufacturer: Ames 1000DCV or model 3000, Victaulic.

**2.10 FIRE DEPARTMENT HYDRANT VALVE:**

**SPEC EDITOR: DELETE IN SHORT SPEC**

- A. Cast brass back outlet body with 4 inch NPT inlet and two (2) 2-1/2 inch male NPT outlets to match local fire department connection. Provide caps and chains and cast brass round wall plate lettered HYDRANT.
- B. Provide NRS gate valve with polished brass 7 inch plate lettered HYDRANT VALVE CONTROL with threaded 1-1/2 inch NPT lock nut, 30 inch long x 7/8 inch square steel extension rod with coupling for attachment to stem of gate valve.
- C. Manufacturers: Potter-Roemer Inc., Model No. 5840, Elkhart Brass Mfg. Co., W.D. Allen Mfg. Co.

**2.11 DRAIN VALVE:**

- A. Provide a brass ball valve, with hose thread outlet, and cap. Riser drains shall be 3/4" ball valve with hose thread outlet, and cap, unless otherwise noted on drawings.

Manufacturers: Victaulic Series 727, Tyco Grinnell, Anvil

**DESIGNER: PIPE TO DRAIN CAPABLE OF TAKING FULL FLOW.**

**2.12 FIRE DEPARTMENT VALVE:**

**SPEC EDITOR: TYPICALLY USED IN STANDPIPE SYSTEMS**

- A. Provide 2-1/2" cast brass straight globe valve with red hand wheel, female NPT inlet and 2 1/2" male hose thread outlet with cap, rated for 300 psig. Fire department valve shall meet local fire department standards. Provide with pressure restricting valve as required. Identify with words "FIRE DEPARTMENT VALVE" per NFPA requirements and the authorities having jurisdiction.

Manufacturers: Potter-Roemer Inc., Model 4115, Elkhart Brass Mfg. Co., W.D. Allen Mfg. Co.

**2.13 ISOLATION, DRAIN AND TEST VALVES SIGNS:**

- A. Provide permanent plastic or metal 6" x 6" signs for all isolation, drain and test valves describing purpose and location.

Manufacturer: Seton, Bramer

**2.14 FLOW ALARM SWITCH:**

- A. Provide flow alarm switches where indicated and as detailed on the drawings.

**SPEC EDITOR: CHECK CATALOG ON PSI RATING 300?**

- B. Each water flow switch shall be equipped with an adjustable recycling type retarding device designed to prevent false alarms due to pressure surges within the piping. The flow switch piping shall be suitable for 175 psig working pressures.

- C. Each flow alarm shall be provided with a set of contacts rated for 115V for connection by Electrical Trades.

- D. Manufacturer: Viking VSR-D, Reliable, Notifier, Victaulic, Anvil,

**2.15 JOCKEY PUMP AND CONTROLLER:**

- A. Provide jockey pump and controller package as detailed on drawings, including 1/3 HP, 115V motor, 1.6 gpm, 100 psig pump.

**SPEC TEAM: NEED TO CHECK FOR MANUFACTURER**

- B. Manufacturer/Supplier: Grundfos/Underwood Fire Equipment

**2.16 PRESSURE RESTRICTING VALVE:**

**SPEC EDITOR: FIRE HOSES ARE NOT GENERALLY USED. BUT IF HOSES ARE USED, PRESSURE MUST BE LESS THAN 100 PSIG.**

- A. Provide pressure-restricting valve on bottom of rack nipple or on male side of fire department valve to restrict water pressure at hose line. Valve shall be 1 1/2" swivel inlet with pin lugs X male outlet, cast brass. A removable breakable link shall permit adjustment of restriction.  
Manufacturer: Crocker Model 5370-5375, Powhattan 16-255.

**2.17 FIRE PUMP PRESSURE RELIEF VALVE:**

***SPEC EDITOR: THIS PRESSURE RELIEF VALVE IS REQUIRED WHEN FIRE PUMP CAN DEVELOP SHUT-OFF HEAD MORE THAN SYSTEM IS RATED FOR - TYPICALLY 175 PSIG.***

***DESIGNER: PIPE TO DRAIN.***

- A. Provide UL and FM approved fire pump pressure relief valve: cast iron globe or angle valve body, bronze seat, Teflon coated stainless steel trim, hydraulically operated, cast bronze direct acting pilot control with stainless steel trim, adjustable spring loaded diaphragm. Relief pressure range factory set at 175 psig, adjustable 20 to 200 psig. Manufacturer: Claval 50B-4KG-1, size 6"

***CAUTION: THE BELOW DRY PIPE SPECIFICATION WAS EXTRACTED FROM AIA MASTER SPEC, REQUIRES REVIEW AND EDIT AS REQUIRED TO MAKE PROJECT SPECIFIC. MAY NOT BE COMPLETE.***

**2.18 DRY PIPE VALVE AND ACCESSORIES:**

- A. Provide dry pipe valve and all required trim and accessories including air maintenance device, air compressor, and accelerator device. Provide all UL listed and FM approved components with a rated minimum pressure of 175 or 300 PSIG to match system pressure rating.
- B. Valve: UL 260 differential-pressure type, cast or ductile iron, with flanged or grooved end connections. Include UL 1486, quick-opening device/accelerator, galvanized trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
- C. Automatic device to maintain minimum air pressure in piping: shall include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, with adjustable range.
- D. Air compressor: 120-V ac, 60 Hz, single phase.
- E. Approved Manufacturers: Viking, Reliable, Tyco, Victaulic

**PART 3 - EXECUTION**

**3.1 GENERAL PIPING INSTALLATION REQUIREMENTS:**

- A. Install piping in compliance with Section 221113, Article 3.1, with hanger spacing as dictated by NFPA and FM.
- B. Flush per NFPA 13 and FM requirements.

- C. Sleeve all piping passing through walls, floors and partitions per details and Section 220500.

### **3.2 DRY PIPE SYSTEMS**

- A. Install all piping with the longitudinal weld seam located above the horizontal centerline of the pipe.
- B. Provide auxiliary drain valves terminated with a nipple and cap in all trapped sections of pipe, regardless of volume trapped. Drain valve size shall be per NFPA 13. Provide signage required by NFPA 13 at dry pipe or preaction valve indicating the number of low point drains and the location of each individual drain.
- C. Mains and branch lines shall be pitched to drain at least 1/2 in. per 10 ft in all locations, including non-refrigerated areas and areas not subject to freezing.

### **3.3 VALVE AND SPECIALTY INSTALLATION REQUIREMENTS:**

- A. Inspector's Test Connections: Install where indicated, and if not indicated, at end of most hydraulically remote point for each zone.
- B. Isolation/ Control valves: Locate where readily accessible in emergency situations - in stairwells max 7' a.f.f.
- C. Drain Valves: Provide downstream of each flow alarm to facilitate testing, at low points trapping more than 5 gallons of water, at base of each riser. Provide metal air gap fittings for connection to the underground drainage system. Drain must be capable of taking full flow.
- D. Fire Department Connections: Locate with sufficient clearance from obstructions to allow full swing of fire department wrench handle.
- E. Pressure Gauges: Provide, with petcock valve, at the top of each standpipe, in readily visible location.

### **3.4 SPRINKLER HEAD INSTALLATION REQUIRMENTS:**

- A. Locate heads per drawings, FM and NFPA 13, coordinated with lighting, building equipment layout, and other interferences. Aesthetically locate heads with respect to ceiling patterns, tile patterns, masonry bonds and similar constructions lines. Center heads in two directions in ceiling tile, with piping offsets as required.
- B. Protect heads, covers and escutcheons prior to painting. Remove protection after painting.

### **3.5 FIELD QUALITY CONTROL AND TESTING:**

- A. Test equipment per the manufacturer's instructions, NFPA, and FM.
- B. Test piping systems per NFPA 13 and the requirements of Factory Mutual.

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. Provide a complete UL listed, FM approved, fire pump, jockey pump, and pump controllers as specified, detailed, and scheduled, meeting all of the applicable NFPA requirements.

**1.3 QUALITY ASSURANCE:**

- A. Provide listing/approval stamp, label, or other marking on equipment made to specified standards.
- B. Comply with local fire department/marshal standards pertaining to material, hose threads, and installation.
- C. Comply with the requirements of NFPA 20 "Centrifugal Fire Pumps" for fire pumps, drivers, controllers, accessories, materials, and installation.
- D. Comply with the requirements of NFPA 70-2005 "National Electrical Code" for electrical materials and installation.
- E. Fire pumps and controllers shall be UL listed.
- F. Comply with the requirements of FM "Approval Guide" as applicable to fire pumps, drivers, controllers, and accessories, and provide system capable of FM acceptance.
- G. Manufacturer's Factory Tests: Perform factory test of each fire pump.

**1.4 MANUFACTURERS:**

- A. The following fire pump manufacturers are acceptable:
1. Allis-Chalmers
  2. Aurora
  3. Peerless
- B. The following controller manufacturers are acceptable:
1. Joslyn Clark

- 2. Metron
  - 3. Hubbell
  - 4. Firetrol
- C. The drawings show the layout of equipment based on XXXXXXXXX units. Equipment by other approved manufacturers is acceptable provided it fits within the space allocated with adequate maintenance access space and meets all other requirements in the specifications and plans.

**PART 2 - PRODUCTS**

**2.1 FIRE PUMP SYSTEMS - GENERAL REQUIREMENTS**

- A. Horizontal fire pumps, except in line type, and drivers shall be factory assembled, mounted on same base, and connected with a flexible coupling having a guard.
- B. Fire Pumps: UL 448, base-mounted, factory-assembled, and factory-tested, of types, capacities, and characteristics indicated.
- C. Preparation for Shipping: After assembly and testing, clean flanges and exposed machined metal surfaces and treat with an anticorrosion compound. Protect flanges, pipe openings, and nozzles.
- D. Nameplates
  - 1. Fire Pump and Motor, Pressure Maintenance (Jockey) Pump and Motor: Provide nameplates, complete with motor horsepower, capacity, characteristics, and other pertinent data.
  - 2. Fire Pump and Pressure Maintenance (Jockey) Pump Controllers: Provide nameplate complete with capacity, electrical characteristics, approvals and listings, and other pertinent data, on enclosure door
- E. Factory Finish
  - 1. Fire Pump, Motor and Controllers: Red, enamel paint applied to assembled, tested units prior to shipping.
  - 2. Jockey Pump, Motor and Controllers: Manufacturer's standard color enamel paint applied to assembled, tested units prior to shipping.

**2.2 AXIALLY-SPLIT-CASE FIRE PUMPS**

- A. Fire pumps shall furnish not less than 150 percent of rated capacity at not less than 65 percent of total rated head. The shutoff head shall not exceed 120 percent of total rated head.
- B. Fire pumps shall be base-mounted, centrifugal, separately coupled, bronze-fitted, axially-split-case design, specifically labeled for fire service.
  - 1. Type: Horizontally mounted, single stage - double suction.

***SPEC EDITOR: THE TYPE ABOVE COVERS MOST SITUATIONS. IF NECESSARY, CHOOSE ONE OF THE OTHER TYPES LISTED BELOW. DELETE OPTIONS NOT REQUIRED.***

- 2. Type: Horizontally mounted, multistage - single suction.

3. Type: Vertically mounted, single stage - double suction.

- C. Casing: Axially-split-case centrifugal design; cast-iron pump casing with suction and discharge flanges machined to ANSI B16.1 dimensions, and 125-psi pressure rating, except where 250-psi rated flanges are indicated.
- D. Impeller: Statically and dynamically balanced, of construction to match type fire pump, fabricated from cast bronze, keyed to shaft.
- E. Wear Rings: Replaceable, bronze.
- F. Pump Shaft and Sleeve: Steel shaft, with bronze sleeve.
- G. Pump Shaft Bearings: Grease-lubricated double row ball thrust bearings contained in a cast-iron housing.
- H. Seals: Stuffing box consisting of a minimum of 4 rings of graphite-impregnated braided yarn with a bronze lantern ring between center 2 graphite rings, and a bronze packing gland.
- I. Pump Couplings: Flexible, capable of absorbing torsional vibration; complete with metal coupling guard.
- J. Fire Pump Electric Motor: NEMA MG 1, open drip proof, squirrel cage, induction motor, complying with NFPA 20 and NFPA 70, and wiring compatible with type controller used. Motor shall meet requirements of Section 220513 - Motors.

### **2.3 FIRE PUMP CONTROLLERS AND ALARM PANELS**

- A. Combined automatic and non-automatic operation, UL listed and FM approved, factory-assembled and wired, and factory-tested, of types, capacities, electrical characteristics, and with features indicated.
- B. Enclosure: NEMA Type 12 (IEC IP55), drip proof, indoor, except where special-purpose enclosure is indicated.
- C. Provide controls, devices, alarms, functions, and operations listed in NFPA 20, as required for the type driver and controller used, and the specific items listed for each type controller.
- D. Provide mounting for enclosures as indicated:
  - 1. Full-Service Fire Pump Controller Mounting: Wall or floor stand type, as indicated, for field electrical connections.
  - 2. Alarm Panel Mounting: Wall type.
- E. Controller Sensing Pipes: Provide nonferrous metal sensing piping, 1/2-inch size, with 1/2-inch globe valves for testing mechanism of controller, from system to pump controller, as indicated. Provide bronze check valve with 3/32-inch orifice in clapper or ground-face union with non-corrosive diaphragm having 3/32-inch orifice.
  - 1. Fabricate pipe and fittings in accordance with NFPA 20.
- F. The controllers shall not require rear access for installation or maintenance. For ease of installation in tight corners and basement equipment rooms, the controllers shall be capable of being hand trucked through a standard three-foot door opening without being disassembled.

- G. All controllers' components, including circuit breakers and contactors, shall be front mounted, front wired and front accessible for maintenance. The circuit breaker interrupting capacity shall in no case be less than 18,000 AIC SYM. at 480 volts.
- H. The controller manufacturer, prior to shipment, shall hook up and test the entire controller as a complete assembly. This test shall include, but not be restricted to, each function the controller may be required to perform including remote alarms, remote start, auto start with manual shut down, remote deluge valve start, pressure drop, manual start-stop, etc. Additionally, the controller manufacturer shall set the instantaneous and longtime trips in the circuit breaker at these settings to see that the breaker trips within the current time requirements stated above. Advise Owner to enable witness of testing at Owner's option

**2.4 ELECTRIC-MOTOR-DRIVE FIRE PUMP CONTROLLERS**

- A. Motor Controllers: Controller specifically listed for electric motor drive fire pump service and service entrance.

**SPEC EDITOR: SELECT CONTROLLERS FROM 6 OPTIONS BELOW. SEE EVALUATIONS FOR INFORMATION ON TYPES, APPLICATIONS, AND COSTS OF CONTROLLERS. EDIT TO SUIT PROJECT REQUIREMENTS WHERE MORE THAN ONE TYPE OF CONTROLLER IS REQUIRED. DELETE OPTIONS NOT REQUIRED.**

**SPEC EDITOR: ITEMS BELOW USUALLY USED FOR SMALL HP MOTORS AND WHERE HIGH INRUSH CURRENT IS ACCEPTABLE.**

- 1. Type: Across the line.
  - 2. Type: Primary resistance.
  - 3. Type: Part winding.
  - 4. Type: Wye-delta (closed transition).
  - 5. Type: Autotransformer.
- B. Size controller for scheduled horsepower. Provide controller with short circuit withstand rating at least equal to short circuit current available at controller location, taking into account cable size and distance from substation or supply transformers.
    - 1. Standard: UL218, Standard for Fire Pump Controllers.
  - C. Provide controller capable of performing or containing the following features:
    - 1. Isolating means and circuit breaker.
    - 2. "Power On" pilot lamp.
    - 3. Fire alarm system connections for indicating motor running condition, loss of line power, and line power phase reversal.
    - 4. Automatic and manual operation, and minimum run time relay to prevent short cycling.
    - 5. Water pressure actuated switch having independent high and low calibrated adjustments responsive to water pressure in fire protection system.
    - 6. Manual and automatic shutdown.

**SPEC EDITOR: CHOOSE ONE FOR THE FOLLOWING PARAGRAPHS (POWER TRANSFER SWITCH FOR GENERATOR SET EMERGENCY POWER SOURCE OR**

**POWER TRANSFER SWITCH FOR SECOND UTILITY EMERGENCY POWER SOURCE) DEPENDING ON TYPE OF EMERGENCY POWER SOURCE.**

**2.5 POWER TRANSFER SWITCH FOR GENERATOR SET EMERGENCY POWER SOURCE:**

- A. The power transfer switch shall be housed within the fire pump controller enclosure or in a NEMA Type 12 (IEC IP55) drip-proof enclosure attached directly to the fire pump controller. Where the power transfer switch is provided in an attached enclosure, the enclosures shall be fitted so that the assembly constitutes a single unit. The fire pump controller/power transfer switch shall be factory assembled, wired and tested as a unit prior to shipment.
- B. The power transfer switch shall include a motor rated disconnect/isolating switch capable of interrupting the motor locked rotor current. The disconnect/isolating switch shall be mechanically interlocked so that the enclosure door cannot be opened with the handle in the ON position except by a hidden tool operated defeater mechanism. The disconnect/isolating switch shall be capable of being padlocked in the OFF position with up to three padlocks for installation and maintenance safety, and shall also be capable of being locked in the ON position. The enclosure door shall have a locking type handle and three-point cam and roller type vault hardware.
- C. Provide an auxiliary contact on the transfer switch to prevent starting of the emergency generator set when the transfer switch or the main fire pump controller are being serviced.
- D. The transfer switch circuitry shall be capable of sensing both the normal power source and the emergency power source. The normal power source pickup shall be set at 95 nominal voltage. The emergency power source shall be set to pick up at 90 nominal voltage and 95 nominal frequency. All voltage sensing, frequency sensing, and time delays shall be field adjustable to accommodate individual installation requirements. The transfer signal shall be delayed for one second, delaying the transfer and engine start signals so as to compensate for momentary, normal power outages. An automatic delay of three seconds shall be provided upon transfer to or from the emergency power source to allow the motor to slow sufficiently, preventing line disturbances that could trip either the generator set or fire pump circuit breakers.
- E. The transfer switch shall have TRANSFER SWITCH NORMAL, TRANSFER SWITCH EMERGENCY and EMERGENCY ISOLATING SWITCH OFF LED's, TEST and TRANSFER BYPASS switches, an audible alarm device and SILENCE ALARM pushbutton mounted on the flange of the enclosure. The power transfer switch shall be furnished with both normally open and normally closed auxiliary contacts for an engine start signal when normal power failure occurs. Auxiliary contacts shall also be provided and wired to terminals to indicate the transfer switch position. The transfer switch shall be electrically operated and mechanically held, and shall be capable of being operated by a manual transfer mechanism located on the switch.

**2.6 POWER TRANSFER SWITCH FOR SECOND UTILITY EMERGENCY POWER SOURCE:**

- A. The power transfer switch shall be housed within the fire pump controller enclosure or in a NEMA Type 12 (IEC IP55) drip-proof enclosure attached directly to the fire pump controller. Where the power transfer switch is provided in an attached enclosure, the enclosures shall be fitted so that the assembly constitutes a single unit. The fire pump controller/power transfer switch shall be factory assembled, wired and tested as a unit prior to shipment.
- B. The power transfer switch shall include a motor rated combination isolating disconnect switch/circuit breaker, mechanically interlocked and operated with a single, externally mounted handle. When moving the handle from OFF to ON, the interlocking mechanism shall sequence the isolating disconnect switch closed first, and then the circuit breaker. When the handle is moved from ON to OFF, the interlocking mechanism shall sequence the circuit breaker open first, and then the isolating disconnect switch.
- C. The isolating disconnect switch/circuit breaker shall be mechanically interlocked so that the enclosure door cannot be opened with the handle in the ON position except by a hidden tool operated defeater mechanism. The isolating disconnect switch/circuit breaker shall be capable of being padlocked in the OFF position for installation and maintenance safety, and shall also be capable of being locked in the ON position without affecting the tripping characteristics of the circuit breaker. The enclosure door shall have a locking type handle and three-point cam and roller type vault hardware.
- D. The circuit breaker trip curve adjustment shall be factory set, tested and sealed for the connected full load amps of the motor.
- E. The fire pump controller/power transfer switch shall have data logging capability for historical operation recording and to aid in annual test, service and trouble shooting. The data logging shall be accessible by front mounted interface panel and also by saving to file. The file shall be in text (.txt) format and easily readable by most common text editing or word processing software. The circuit breaker shall be capable of being field tested to verify actual pick up, locked rotor, and instantaneous trip points after field installation without disturbing incoming line and load conductors.
- F. The transfer switch circuitry shall be capable of sensing both the normal power source and the emergency power source. The normal power source pickup shall be set at 95 nominal voltage. The emergency power source shall be set to pick up at 90 nominal voltage and 95 nominal frequency. All voltage sensing, frequency sensing, and time delays shall be field adjustable to accommodate individual installation requirements. The transfer signal shall be delayed for one second, delaying the transfer signal so as to compensate for momentary, normal power outages. An automatic delay of three seconds shall be provided upon transfer to or from the emergency power source to allow the motor to slow sufficiently, preventing line disturbances that could trip either the transfer switch or fire pump circuit breakers.

- G. The transfer switch shall have TRANSFER SWITCH NORMAL, TRANSFER SWITCH EMERGENCY and EMERGENCY ISOLATING SWITCH OFF LED's, TEST and TRANSFER BYPASS switches, an audible alarm device and SILENCE ALARM pushbutton mounted on the flange of the enclosure. To aid servicing, no indicating lights or switch devices shall be mounted on the enclosure door. Auxiliary contacts shall be provided and wired to terminals to indicate the transfer switch position. The transfer switch shall be electrically operated and mechanically held, and shall be capable of being operated by a manual transfer mechanism located on the switch.

**2.7 ALARM PANEL:**

**SPEC EDITOR: RETAIN THIS PARAGRAPH ONLY WHEN A REMOTE ALARM PANEL IS REQUIRED.**

- A. NEMA ICS 6, Type 1 wall-mounting-type panel (or integral with main controller) with audible and visible alarms matching type controller used. Provide following features and manufacturer's standard features:
  - 1. Motor operating condition.
  - 2. Loss of line power.
  - 3. Phase reversal.
  - 4. Low water pressure alarm.

**2.8 HORIZONTAL FIRE PUMP ACCESSORY FITTINGS**

- A. Provide the following accessory fittings, matching fire pump suction and discharge ratings, as required for fire pump capacity rating:
  - 1. Automatic air release valve.
  - 2. Casing relief valve.
  - 3. Suction and discharge pressure gages.
  - 4. Eccentric tapered reducer at suction inlet.
  - 5. Concentric tapered reducer (increaser) at discharge outlet.

**2.9 PRESSURE MAINTENANCE (JOCKEY) PUMPS**

- A. Base-mounted, factory-assembled, and factory-tested, of pump types, capacities, and electrical characteristics indicated. Close-coupled pressure maintenance pumps are exempt from base-mounted requirement.
- B. Pressure maintenance pumps shall furnish not less than rated capacity at not less than total rated head indicated.
- C. Cast-iron pump casing with suction and discharge connections of size indicated, threaded, or flanged and machined to ANSI B16.1 dimensions, and 125-psi minimum pressure rating, except where 250-psi rated flanges are indicated.
  - 1. Impeller: Bronze or stainless steel.
  - 2. Shaft: Stainless steel.
  - 3. Seals: Mechanical.
- D. Multi-Stage Pressure Maintenance Pumps:

1. Multi-stage, centrifugal, vertical construction, base mounting.
- E. Electric Motor: NEMA MG 1, open drip proof, squirrel cage, induction motor, complying with NFPA 20 fire pump motor requirements and NFPA 70, and wiring compatible with controller. Motor shall meet requirements of Section 220513 - Motors.

## 2.10 PRESSURE MAINTENANCE (JOCKEY) PUMP CONTROLLERS

- A. Combined automatic and non-automatic operation, UL listed, factory-assembled and wired, and factory-tested, of types, capacities, electrical characteristics, and with features indicated, for electric motor drive pressure maintenance pump service.

1. Type: Across the line.

*SPEC EDITOR: MODIFY PARAGRAPH BELOW AS REQUIRED. DELETE IF SYSTEM IS NOT UL.*

2. Standard: UL 508.

*SPEC EDITOR: MODIFY PARAGRAPH BELOW WHERE NEMA TYPE 1 ENCLOSURE TO BE ALLOWED.*

- B. Enclosure: NEMA ICS 6, Type 2, wall mounted, for field electrical wiring.
- C. Provide controls, devices, alarms, functions, and operations listed in NFPA 20, and the specific items listed.
- D. Size controller for scheduled horsepower and provide the following items:

*SPEC EDITOR: DELETE FEATURES BELOW NOT WANTED AND ADD OTHER OPTIONS WANTED. SEE MANUFACTURERS' CATALOG LITERATURE FOR VARIOUS OPTIONS.*

1. Fusible disconnect switch.
2. Pressure switch.
3. "HAND-OFF-AUTO" selector switch.
4. Pilot light.
5. Running period timer.

- E. Mounting: Wall type for field electrical connections.
- F. Controller Sensing Pipes: Provide nonferrous metal sensing piping, 1/2-inch size, with 1/2-inch globe valves for testing mechanism of controller, from system to pump controller, as indicated. Provide bronze check valve with 3/32-inch orifice in clapper or ground-face union with non-corrosive diaphragm having 3/32-inch orifice.
1. Fabricate pipe and fittings in accordance with NFPA 20.

## 2.11 PRESSURE MAINTENANCE PUMP ACCESSORIES

- A. Provide following accessory fittings, matching pressure maintenance pump suction and discharge ratings, as required for pump capacity rating:
1. Casing relief valve.
  2. Suction and discharge pressure gages.

**SPEC EDITOR: COORDINATE CONCRETE WORK WITH DIVISION 3. DELETE ARTICLE BELOW IF EQUIPMENT PADS ARE INCLUDED IN DIVISION 3. COORDINATE SIZE AND LOCATION OF CONCRETE PADS ON THE DRAWINGS. VERIFY STRUCTURAL REQUIREMENTS WITH A STRUCTURAL ENGINEER. VERIFY STRENGTH REQUIREMENTS FOR CONCRETE AND REINFORCING MATERIALS, SPACING, AND PLACEMENT.**

**2.12 EQUIPMENT BASES**

- A. Construct concrete equipment pads of dimensions per manufacturers requirements, minimum 6" on all sides. Form concrete pads by using framing lumber with form release compounds. Chamfer top edge and corners of pad.
- B. Concrete: Portland cement mix, 4,000 psi:
  - 1. Cement: ASTM C 150, Type I.
  - 2. Fine Aggregate: ASTM C 33, sand.
  - 3. Course Aggregate: ASTM C 33, crushed gravel.
  - 4. Allow concrete to cure before installation of equipment.
- C. Reinforcement: Steel conforming to the following:
  - 1. Fabric: ASTM A 185, welded wire fabric, plain.
  - 2. Reinforcement Bars: ASTM A 615, Grade 60, deformed.
  - 3. Install reinforcing, tied to frame, and place anchor bolts and sleeves using manufacturer's installation template.

**2.13 FLOW MEASURING SYSTEMS**

**SPEC EDITOR: DELETE BELOW WHERE FLOW MEASURING SYSTEMS ARE NOT ACCEPTABLE TO LOCAL AUTHORITIES FOR FLOW TESTS. U OF M PREFERENCE IS FOR 'ANNUAL' PITOT TESTS. USE IN APPROPRIATE AREAS.**

- A. Fire pump flow measuring systems shall be FM approved, indicate flow in gpm to not less than 175 percent of fire pump rated capacity, and consist of a sensing element of size to match pipe, tubing, flow meter, and fittings.
- B. Pressure Rating: 175 psi minimum.
- C. Sensing Element: Venturi, annular probe, or orifice plate flow sensor.
- D. Flow Meter: Compatible with flow sensing element and direct reading in gpm; dial not less than 4-1/2 inches in diameter or equivalent.

**SPEC EDITOR: SELECT FROM 2 OPTIONS BELOW.**

- 1. Permanently Mounted: Flow meter suitable for wall mounting with copper tubing for connecting to flow sensing element.
  - 2. Portable: Flow meter, with two 12-foot hoses, in carrying case with handle.
- E. Provide flow-measuring systems complete with operating instructions.

**2.14 SOURCE QUALITY CONTROL**

- A. Factory Shop Tests: Hydrostatically test and test run each pump prior to shipment. Test at 150 percent of shut-off head plus suction head, but not less than 250 psig. Produce certified test curves showing head capacity and brake horsepower of each pump. Advise Owner to enable witnessing of the shop tests at Owner's option.

**PART 3 - EXECUTION**

**3.1 EXAMINATION**

- A. Examine areas, equipment foundations, and conditions with Installer present, for compliance with requirements for installation and other conditions affecting performance of fire pumps. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Examine fire protection piping systems to verify actual locations of piping connections prior to installation.

**3.2 INSTALLATION OF FIRE PUMPS**

- A. Comply with the manufacturer's written installation and alignment instructions and with NFPA 20 and FM standards.
- B. Install pumps in locations indicated and arrange to provide access for periodic maintenance, including removal of motors, impellers, couplings, and accessories.
- C. Support pumps and piping independently so that the weight of the piping system does not rest on pumps.
- D. Set base-mounted pumps on concrete foundations. Disconnect coupling halves before setting. Do not reconnect couplings until alignment operations have been completed.
  - 1. Support pump base plate on rectangular metal blocks and shims, or on metal wedges having a small taper, at points near the foundation bolts to provide a gap of 3/4 to 1-1/2 inches between the pump base and the foundation for grouting.
  - 2. Adjust the metal supports or wedges until the shafts of the pump and driver are level. Check the coupling faces and suction and discharge flanges of the pump to verify that they are level and plumb.
- E. Provide piping accessories, hangers, supports and anchors, valves, meters and gages, and equipment supports as required for complete installation.
- F. Provide housekeeping pad for all floor mounted controllers.
- G. Electrical Wiring: Install electrical devices furnished by manufacturer but not specified to be factory-mounted. Furnish copy of manufacturer's wiring diagram submittal to Electrical Installer.

1. Verify that electrical wiring installation is in accordance with manufacturer's submittal and installation requirements of Division 26 sections. Do not proceed with equipment start-up until wiring installation is acceptable.

### **3.3 ALIGNMENT**

- A. Align pump and driver shafts after complete unit has been leveled on foundation and after grout has set and foundation bolts have been tightened.
- B. After alignment is correct, tighten the foundation bolts evenly but not too firmly. Fill the base plate completely with non-shrink, nonmetallic grout, with metal blocks and shims or wedges in place. After grout has hardened, fully tighten foundation bolts. Check alignment and take corrective measures required.
- C. Make piping connections, check alignment, and take corrective measures required.
  1. Adjust alignment of pump and driver shafts for angular and parallel alignment by one of the two methods specified in the Hydraulic Institute "Centrifugal Pumps - Instructions for Installation, Operation and Maintenance."
  2. Alignment tolerances shall meet manufacturer's recommendations.

### **3.4 CONNECTIONS**

- A. General: Install valves of types and at locations indicated, that are same size as the piping connecting the fire pump, bypass, test header, and other piping systems.
- B. Install suction and discharge pipe sizes equal to or greater than the diameter of fire pump nozzles.
- C. Install pressure gages on the suction and discharge of each pump at the integral pressure gage tappings provided.

**SPEC EDITOR: OMIT PARAGRAPH BELOW IF FLOW MEASURING SYSTEMS ARE NOT USED.**

- D. Install flow meters and sensing elements where indicated. Install connections, tubing, and fittings between flow sensing elements and meters as prescribed by manufacturer's installation instructions.
- E. Electrical wiring and connections are specified in Division 26 sections.

### **3.5 FIELD QUALITY CONTROL**

- A. Manufacturer's Field Service: Provide the services of a factory-authorized service representative to supervise field assembly of components, installation of fire pump units and pressure maintenance pump units, including piping and electrical connections, field acceptance tests, and to report test results in writing.
- B. Check suction lines connections for tightness to avoid drawing air into the pump.

**SPEC EDITOR:      MODIFY PARAGRAPH BELOW TO SUIT PROJECT REQUIREMENTS.      HOWEVER; RETAIN COMPLIANCE WITH NFPA 20. NORMALLY FIELD ACCPTANCE TESTS ARE PERFORMED FOR OWNER, INSURANCE UNDERWRITER, LOCAL FIRE OFFICALS, AND REPRESENTATIVES OF THE AUTHORITY HAVING JURISDICTION, AND PUMP AND CONTROLLER REPRESENTATIVES.**

- C. Perform field acceptance tests of each fire pump unit (fire pump, driver, and controller) and system piping, when installation of fire pump units is complete. Comply with operating instructions and procedures of NFPA 20 to demonstrate compliance with requirements. Where possible, field correct malfunctioning equipment, then retest to demonstrate compliance. Replace equipment that cannot be satisfactorily corrected or that does not perform as specified and as indicated, then retest to demonstrate compliance. Verify that each fire pump unit performs as specified and as indicated.

### **3.6 COMMISSIONING**

- A. Start-Up Services, General: Provide the services of a factory-authorized service representative to provide start-up service and to demonstrate and train Owner's maintenance personnel as specified below. Training will not occur at time of start-up.

- 1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.
- 2. Train Owner's maintenance personnel on procedures and schedules related to start-up and shutdown, troubleshooting, servicing, and preventative maintenance.
- 3. Review data in Operating and Maintenance Manuals. Refer to Division 01 Section "Project Closeout."
- 4. Schedule training with at least 7 days' advance notice after factory-authorized service representative has performed start-up and forwarded a copy of the start-up report to the Owner.

**SPEC EDITOR:      WHERE FIRE PUMPS MUST BE TESTED AND WATER WASTED, A PLACE FOR DISPOSAL OF LARGE QUANTITIES OF TEST WATER MUST BE ARRANGED. IF SPECIFIED FLOW MEASURING SYSTEM WILL BE ADEQUATE FOR TESTS, THEN DELETE PARAGRAPH BELOW. DELETE TEST HEADER, MANIFOLD, AND FIRE HOSE VALVES IN PART 2 OF THIS SECTION, ONLY IF APPROVED BY LOCAL FIRE AUTHORITY. MODIFY BELOW TO SUIT PROJECT CONDITIONS. OWNER MAY WANT TO RETAIN FIRE HOSES. THEN FIRE HOSES SHOULD BE NEW, PARAGRAPH BELOW MUST BE EDITED, AND FIRE HOSES ADDED TO PART 2 OF THIS SECTION.**

- 5. Provide fire hoses in number, size, and of length as required to reach a storm drain or other acceptable locations for the disposal of fire pump test water. These fire hoses are for use during field acceptance tests only and are not to become property of the Owner.
- B. Final Checks Before Start-Up: Perform the following preventative maintenance operations and checks before start-up:
    - 1. Lubricate oil-lubricated bearings.

2. Remove grease-lubricated bearing covers and flush the bearings with kerosene and thoroughly clean. Fill with new lubricant in accordance with the manufacturer's recommendations.
3. Disconnect coupling and check electric motor for proper rotation. Rotation shall match direction of rotation marked on pump casing.
4. Check that pump is free to rotate by hand. If the pump is bound or even drags slightly, do not operate the pump until the cause of the trouble is determined and corrected.

C. Starting procedure for pumps:

1. Prime the pump, opening the suction valve, closing the drains, and prepare the pump for operation.
2. Open the sealing liquid supply valve if the pump is so fitted.
3. Start motor.
4. Open the discharge valve slowly.
5. Observe the leakage from the stuffing boxes and adjust the sealing liquid valve for proper flow to ensure the lubrication of the packing. Do not tighten the gland immediately, but let the packing run in before reducing the leakage through the stuffing boxes.
6. Check the general mechanical operation of the pump and motor.

**SECTION 220500 - COMMON WORK RESULTS FOR MECHANICAL**

**REVISIONS:**

**2012-07-24: UPDATED CODE REFERENCES AND ADDED REFERENCES TO SID-F AND DG SECTION 220500. ADDED REFERENCE TO SECTION 078413 UNDER FIRESTOPPING. REVISED 'GRINNELL' TO 'ANVIL' IN PARA'S 2.3.A.3, 2.3.B.1.AAND 2.3.C.1, REMOVED POWDER ACTUATED FASTENERS, MOVED BELT DRIVES TO SECTION 233400 FANS. B. BEGG FOR PLMG MTT.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. All materials of a given type shall be manufactured by a single source, and supplied by a single supplier.

**1.2 SCOPE OF WORK:**

- A. Refer to mechanical scope in Section 011000, Summary of Work

**1.3 INTERPRETATION OF DRAWINGS:**

- A. The Drawings show the location and general arrangement of equipment, piping, ductwork and related items. They shall be followed as closely as elements of the construction will permit. Examine the drawings of other trades and verify the conditions governing the work on the job site. Drawings are schematic in nature, and installation may require additional offsets and modifications, including fittings, traps, valves and accessories.
- B. The architectural and structural drawings take precedence in all matters pertaining to the building structure, mechanical drawings in all matters pertaining to mechanical trades and electrical drawings in all matters pertaining to electrical trades. Report conflicts or differences to the architect/ engineer for resolution.

**1.4 PROJECT RECORD DOCUMENTS:**

- A. For underground piping, record dimensions and invert elevations of all piping, including all offsets, fittings, cathodic protection and accessories. Locate dimensions from benchmarks that will be preserved after construction is complete.

- B. For fire protection systems, record actual locations of sprinkler heads, and valves and deviations of piping from drawings. Indicate drain and test locations.

**1.5 DELIVERY, STORAGE AND HANDLING:**

- A. Deliver, store and handle all materials to keep clean and protected from damage.
- B. Store products in shipping containers and maintain in place until installation. Provide temporary inlet and outlet caps. Maintain caps in place until installation.
- C. Protect equipment and other materials from damage after installed from construction debris and other damage.

**1.6 QUALITY ASSURANCE:**

- A. Regulatory Requirements: Comply with the following:

**CHECK POSTED DESIGN GUIDELINE SID-F AND DESIGN GUIDELINE SECTION 220500 FOR MOST CURRENT GOVERNING CODES**

- 1. Michigan Mechanical Code 2009.
  - 2. Michigan Plumbing Code 2009.
  - 3. Applicable City of Ann Arbor rules and regulations.
- B. Labeling requirement for packaged equipment:
    - 1. Electrical panels on packaged mechanical equipment shall bear UL label or label of other approved testing agency (ETL, CSA).
  - C. Other referenced standards:
    - 1. Comply with codes and regulatory agency requirements as detailed in Special Instructions to Designers - F (SID-F: Codes and Regulatory Agencies). ([http://www.umaec.umich.edu/desguide/sid/sid\\_f.pdf](http://www.umaec.umich.edu/desguide/sid/sid_f.pdf).)
    - 2. Comply with Standards as detailed in Design Guideline 220500 Common Work Results for Mechanical - Codes and Standards. (<http://www.umaec.umich.edu/desguide/tech.html>)

**PART 2 - PRODUCTS**

**2.1 FIRE STOPPING:**

- A. Provide UL classified firestopping system for mechanical penetrations through fire rated construction to maintain the fire rating. See Section 078413 - Through Penetration Firestop Systems for additional details.
  - 1. Manufacturers: TREMCO, Johns Manville, 3M, Rectorseal

**2.2 ACCESS PANELS:**

**SPEC EDITOR: COORDINATE USE OF ACCESS DOORS WITH ARCHITECT**

- A. Furnish access panels to access valves, traps, control valves or devices, dampers, damper motors, etc. Access panels shall be sized as necessary for ample access, or as indicated on drawings, but no smaller than 12" x 12" where devices are within easy reach of operator, and at least 24"x24" when operator must pass through opening in order to reach the devices. Architectural Trades shall install access panels coordinated with Mechanical Trades.
- B. Access panels in fire rated walls or ceiling must be U.L. labeled for intended use. Unless otherwise indicated on plans, access doors shall be hinged flush type steel framed panel, 14 gauge minimum for frame, and with anchor straps. Only narrow border shall be exposed. Hinges shall be concealed type. Locking device shall be flush type and screw driver operated. Metal surfaces shall be prime coated with rust-inhibitive paint. Panels shall be compatible with architectural adjacent materials Manufacturer: Milcor, Bilco

**2.3 BUILDING ATTACHMENTS FOR MECHANICAL WORK SUPPORTS:**

*SPEC EDITOR: PROJECT SPECIFIC DETAILS MUST ACCOMPANY SPECIFICATIONS.*

*SPEC EDITOR: SPEC TEAM IS CONTINUING TO RESEARCH BUILDING ATTACHMENTS. EDIT CAREFULLY*

- A. General Requirements:
  - 1. Provide building attachments required for supporting mechanical work, suitably selected and installed for the loads applied with a minimum additional safety factor of 3.
  - 2. Where specified attachments are not suitable for conditions, submit to Engineer for approval, proposal for alternate building attachments.
  - 3. Approved Manufacturers: Anvil, or equivalent products by Michigan Hanger and B-Line.
  - 4. Provide supplemental trapeze supports where necessary. Design trapeze to support all trades. Coordinate loads, and supports with all trades. Size trapeze for maximum deflection of 1/64 of the span.
- B. Attachments to Structural Steel:
  - 1. Support mechanical work from building structural steel where possible and approved. No welding or bolting to structural steel is permitted unless authorized by Architect. C-clamps are not permitted.
    - a. Center beam clamp - for loads over 120 lb.: Malleable center hung Anvil Fig. 228.
    - b. Side beam clamp with retaining clips - for loads up to 120 lb.
- C. Cast in Place Concrete Inserts:

*SPEC EDITOR: APPLICABLE FOR SUPPORTING FROM NEW CONCRETE ONLY.*

1. Provide inserts selected for applied load of present load plus 100% for future, and coordinated with concrete work. Except as detailed on drawings, inserts shall be Unistrut or Grinnell. Plan, lay out and coordinate setting of inserts prior to concrete pour. Use Anvil Fig. 285 lightweight concrete insert for loads up to 400# or Anvil Fig. 281 Wedge Type concrete insert for loads up to 1200#

D. Drilled Insert Anchors:

*SPEC EDITOR: APPLICABLE FOR SUPPORTING FROM NEW AND EXISTING CONCRETE. COORDINATE LOADING WITH STRUCTURAL ENGINEER. DEVELOP AND EDIT CRITERIA FOR PROJECT SPECIFIC REQUIREMENTS*

1. Where mechanical work cannot be supported from structural steel, or cast in place concrete inserts, provide drilled concrete insert anchors. Submit for approval, project specific installation drawings for all loads over 100 lbs. Install inserts in web of beam if possible and approved. Insert depth shall not exceed two thirds the thickness of the concrete. Where existing concrete appears to be deteriorating, or where applied load at insert exceeds 1000 lbs., conduct test of concrete to determine derated capacity of insert. Anchors may be adhesive or expansion type up to 1000 lbs., and shall be adhesive type for loads over 1000 lbs.  
Manufacturers: Hilti, Powers Fasteners

*SPEC EDITOR: POWDER ACTUATED FASTENERS HAVE BEEN REMOVED FROM THIS SPECIFICATION. IF A DESIGN REQUIRES POWDER ACTUATED FASTENERS, DESIGNER TO DEVELOP AND ADD SPECIFICATION.*

### PART 3 - EXECUTION

#### 3.1 GENERAL REQUIREMENTS

- A. Install equipment and materials in accordance with manufacturer's written and illustrated instructions, as detailed on drawings and as described in these specifications. Bring discrepancies in installation methods to the attention of the owner and A/E.
- B. Install hanger rod straight, without bending.

#### 3.2 REFRIGERANT HANDLING

- A. Refrigerant Installation and Disposal: Perform all work related to refrigerant contained in chillers, cooling coils, air conditioners, and similar equipment, including related piping, in strict accordance with the following requirements:
  1. ASHRAE Standard 15 and Related Revisions: Safety Code for Mechanical Refrigeration.
  2. ASHRAE Standard 34 and Related Revisions: Number Designation and Safety Classification of Refrigerants.
  3. United States Environmental Protection Agency (US EPA) requirements of Section 808 (Prohibition of Venting and Regulation of CFC) and applicable State and local regulations of authorities having jurisdiction.

- B. To assure the proper handling of refrigerant materials, the Owner has implemented a tracking procedure for all CFC and HCFC refrigerants. When new refrigeration equipment is installed, or when refrigerant is disposed of, the "Refrigerant Disposal Form" must be completed. A copy of the form has been included with the Project Bidding Requirements and General Conditions package. Alternatively, copies may be obtained from Owner's Plant Operations Air Conditioning Shop. Contact Air Conditioning Shop Foreman at (734) 647-2041. Submit completed forms to the Owner's Representative and Air Conditioning Shop Foreman.
- C. Recovered refrigerant is the property of the Contractor. Dispose of refrigerant legally, in accordance with applicable rules and regulations of authorities

**END OF CONTENTS TABLE**

**DIVISION 22**  
**SECTION 220513 - MOTORS**

**REVISIONS:**

**3-1-09: REVISED BEARING REQUIREMENTS AND MOTOR FRAME REQUIREMENTS BY D. KARLE PER MECH TECH TEAM.**

**10-21-10: REVISED TO ADD GROUNDING RINGS FOR HOSPITAL MOTORS OPERATED ON VFDS BY L. RICHARDSON FOR MECH TECH TEAM.**

**12-09-2010 - REVISED PERFORMANCE REQUIREMENTS AND REVISED FORMAT.**

**08-30-2012: REVISED TO DROP REQUIREMENT FOR MOTORS TO COMPLY WITH ALL PARTS MG-1 PART 31 AND TO DROP REQUIREMENT THAT MOTOR LABELS STATE "INVERTER DUTY". UPDATED MG-1 REFERENCES FROM MG-1 2009 TO MG-1 2011. D. KARLE FOR HVAC MTT.**

**07-29-13: REVISED TO DELETE "CLASS B TEMPERATURE RISE" REQUIREMENT FOR A MOTOR USED WITH A VFD PER K. BIRINGER. D.KARLE.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Division 26: Electrical.

**1.2 SUMMARY**

- A. Section includes:
  - 1. Motors and requirements for factory or field installed motors, including but not limited to, air handling units, fans, pumps, and air compressors.

**SPEC EDITOR: A/E MUST PROVIDE THE MOTOR SPECIFICATIONS FOR THE SPECIALIZED EQUIPMENT INDICATED BELOW. VERIFY IF THESE MOTORS ARE AVAILABLE IN EFFICIENCIES THAT COMPLY WITH NEMA MG-1 (2011) TABLE 12-12 AND SPECIFY AS SUCH, WHENEVER POSSIBLE.**

- B. This section does not include motors for fire pumps, elevators, centrifugal chillers, sealed refrigeration equipment and vertical hollow or vertical solid shaft motors used with vertical turbine pumps.

### 1.3 SUBMITTALS

- A. Submit the following product data for approval:
  - 1. Manufacturer information.
  - 2. Dimensions and elevations.
  - 3. Complete NEMA nameplate electrical data including design type, insulation, service factor, and efficiency.
  - 4. Materials of construction.
  - 5. Bearing type, L10 life, and seal construction (open, single, or double shielded).
  - 6. Certification that VFD driven motors comply with NEMA MG-1 Part 31.

### 1.4 QUALITY ASSURANCE

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
- C. NFPA 70: National Electrical Code.
- D. NEMA Standards Publication MG 1 (2011): Motors and Generators.
- E. ABMA 9: American Bearings Manufacturers Association, Load Ratings and Fatigue Life for Ball Bearings.
- F. UL 1004: Motors, Electric.

### 1.5 WARRANTY

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Acceptable manufacturers of motors 1/2 HP and larger.
  - 1. Reliance Electric.
  - 2. Baldor Electric Company.
  - 3. Dayton.
  - 4. General Electric.
  - 5. Toshiba Corporation.
  - 6. U. S. Electrical Motors.
  - 7. Leeson Electric.
  - 8. Marathon Electric.

### 2.2 MOTORS - GENERAL REQUIREMENTS

**SPEC EDITOR: THE FOLLOWING IS GENERALLY APPLICABLE. REVIEW AND EDIT TO SUIT PROJECT.**

- A. Motors 1/2 HP and larger shall be three-phase, squirrel cage, induction type.
- B. Motors smaller than 1/2 HP shall be single-phase, permanent split capacitor type, with built-in overload protection.
- C. Frequency Rating: 60 Hz, alternating current.
- D. Voltage rating of motor shall be determined by voltage of circuit to which motor is connected.
  - 1. 120 V Circuit: 115 V motor rating.
  - 2. 208 V Circuit: 200 V motor rating.
  - 3. 240 V Circuit: 230 V motor rating.
  - 4. 480 V Circuit: 460 V motor rating.
- E. Motors shall be NEMA Design B.
- F. Provide Class B insulation, unless noted otherwise.
- G. Service Factor: 1.15, unless noted otherwise.
- H. Motors shall be nominal 1,800 rpm, unless noted otherwise.
- I. All disconnects and other electrical accessories shall comply with Division 26 requirements.

**2.3 SINGLE PHASE MOTORS**

- A. Use shaded pole motors only for motors smaller than 1/20 HP.
- B. Provide automatic reset type thermal over-load protection.
- C. Bearings: Sealed or regreasable ball or sleeve bearings, suitable for the radial and thrust loading of the application.
- D. Furnish with sliding base/slotted mounting holes adequate for proper belt tensioning and alignment of motor or motor/load.
- E. Nameplates may be printed-type glued to the motor.

**2.4 THREE PHASE MOTORS**

- A. Enclosure: Open Drip Proof (ODP) unless noted otherwise in equipment specifications or schedules, and as suitable for service and application.

***SPEC EDITOR: ODP IS THE U-M STANDARD FOR MOST APPLICATIONS. TOTALLY ENCLOSED FAN COOLED (TEFC) MOTORS ARE SPECIFIED FOR COOLING TOWERS AND SOME OTHER APPLICATIONS. WHERE TEFC OR OTHER NON-ODP ENCLOSURES ARE REQUIRED, INCLUDE SPECIFIC REQUIREMENT IN EQUIPMENT SPECIFICATION SECTION AND/OR ON EQUIPMENT SCHEDULE.***

- B. Motor Efficiency: Nominal (nameplate) full load efficiency and corresponding minimum efficiency shall be equal to or greater than that stated in NEMA MG-1 (2011) Table 12-12 - Full Load Efficiencies of 60hz NEMA Premium Efficient Electric Motors - 600 volts or Less

- C. Motors less than 3 HP: Steel or cast iron motor frames, cast aluminum, cast iron, or steel end plates, steel or cast iron terminal box, copper windings. Motor nameplates shall be steel, engraved-type, riveted to motor.
  - 1. Bearings: Regreasable with relief plugs, pre-lubricated ball bearings suitable for radial and thrust loading of the application, with grease fittings, selected for a minimum L-10 bearing life of 26,280 hours, for belted and direct drive.
- D. Motors 3 HP and above: cast iron motor frame and mounting feet, cast iron end plates (bells), steel or cast iron terminal box, copper windings. Motor nameplates shall be stainless steel engraved type, riveted to the motor.
  - 1. Bearings shall be regreasable with relief plugs, pre-lubricated ball bearings suitable for radial and thrust loading of the application, with grease fittings. Rated for an L-10 life of 40,000 hours (belted) or 130,000 hours (direct connected).
- E. Bearing life calculations shall be per ABMA 9, and for belted applications shall be based on the maximum external side load limits for belted applications per NEMA MG-1 Table 14-1A. L-10 life calculations for vertical motors and horizontal motors mounted in the vertical position shall consider the application's thrust loading.
- F. TEFC motors shall also include an external shaft slinger on drive end.
- G. Motors shall not exceed dBA levels listed in NEMA MG-1 54 PART 9 Tables 9-1 and 9-3, at all speeds.
- H. Motors shall be suitable for continuous duty at rated horsepower, with a maximum hot spot temperature that does not exceed the temperature limit of the insulation, when operated in an ambient temperature of 40 degrees C, except as otherwise indicated.
- I. Direct connected motors shall be furnished with adjustable base. Motors connected to driven equipment by belt or shaft shall be furnished with adjustable NEMA foundation sliding bases.
- J. Multi-Speed Motors: Separate windings shall be provided for each speed.
- K. For motors used with variable frequency drives, motors shall be rated inverter duty and comply with NEMA MG-1 Part 31, with minimum insulation of Class F.

**SPEC EDITOR: INCLUDE THE FOLLOWING FOR ALL HOSPITAL FUNDED PROJECTS. (NOT FOR CENTRAL CAMPUS PROJECTS). THE FOLLOWING TEXT IS HIDDEN; TURN ON THIS HIDDEN TEXT FOR HOSPITAL FUNDED PROJECTS.**

- 1. For all PWM VFD driven motors up to 100 HP:
  - a. Provide a maintenance free, circumferential conductive micro fiber grounding ring installed on the AC motor to discharge shaft currents to ground. Grounding ring shall be AEGIS SGR (Shaft Grounding Ring).

- b. Motors protected by the AEGIS SGR shall be warranted for the term of the manufacturer's motor warranty from induced bearing current damage.
  - 2. For all PWM VFD driven motors 100 HP & greater:
    - a. Provide a maintenance free, circumferential conductive micro fiber grounding ring installed on the drive end of the AC motor to discharge shaft currents to ground. Grounding ring shall be AEGIS SGR (Shaft Grounding Ring). In addition, all VFD driven motors 100 HP and larger shall utilize an insulated ceramic bearing assembly on the non-drive end of the motor, in conformance with the Aegis installation requirements.
- L. Explosion Proof motors:
  - 1. UL listed for application or duty.
  - 2. Motors shall conform to requirements defined in Article 500, 501, 502, and 503 of the National Electric Code.
  - 3. Motor nameplate shall be specifically marked "explosion proof."
  - 4. Sound power levels shall not exceed recommendations of NEMA MG-1 PART 9 Tables 9-1 and 9-3, at all speeds.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Install and align motors in accordance with equipment manufacturer's recommendations.

SPEC EDITOR: INCLUDE THE FOLLOWING FOR ALL HOSPITAL FUNDED PROJECTS. (NOT FOR CENTRAL CAMPUS PROJECTS) THE FOLLOWING TEXT IS HIDDEN; TURN ON THIS HIDDEN TEXT FOR HOSPITAL FUNDED PROJECTS.

- B. For VFD driven motors using a shaft grounding ring: Install grounding ring in accordance with the manufacturer's recommendations, including the application of a colloidal silver shaft coating on the motor shaft.

**3.2 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

**3.3 ADJUSTING, CLEANING, PROTECTION**

- A. Assure motor nameplate is legible and properly affixed.
- B. Verify that bearings are factory lubricated before starting motors. Lubricate per manufacturer's instructions. Do not over-lubricate bearings.
- C. Check motors for unusual heating, noise, or excess vibration during operation. Correct any such deficiencies.

1. Any motors with vibration exceeding specified limits, as noted in the Testing, Adjusting and Balancing Section, or manufacturer's recommendations, whichever is more stringent, shall be corrected, at no cost to Owner, until reduced below those limits.
- D. Clean the motor prior to start-up and immediately prior to final turn over to the Owner.

SECTION 220514 - VARIABLE FREQUENCY DRIVES

**END OF CONTENTS TABLE**

DIVISION 22 PLUMBING  
SECTION 220514 - VARIABLE FREQUENCY DRIVES

*REVISIONS:*

*OCTOBER 2008: REVISED TO ADD TOTAL HARMONIC DISTORTION LIMITS, SUBMITTAL REQUIREMENTS, PID CONTROLLER, TIME CLOCK, AND MISC. OTHER CORRECTIONS AND CLARIFICATIONS BY D. KARLE FOR HVAC MECH TECH TEAM.*

*3-11-09: DELETE REQUIREMENT FOR MOTOR-ON-VFD PILOT LIGHT, DRIVE FAILURE PILOT LIGHT; CLARIFY REQUIREMENT FOR RUN PERMISSIVE, POWERED RUN MODE, AND POWERED RUN REQUEST CIRCUITS. BY D. KARLE FOR HVAC MECH TECH TEAM.*

*6-8-09: ADDED: RELAYS TO BE PLUG-IN STYLE, MAIN AND INVERTER DISCONNECT TO BE ACCESSIBLE W/O OPENING CABINET, FUSES TO BE IN FUSE BLOCKS. D. KARLE FOR HVAC MECH TECH TEAM.*

*10-15-09: ADDED: REQUIREMENT THAT WIRES ON THE SUBMITTAL DIAGRAMS SHALL BE LABELED WITH AN IDENTIFIER AND THAT WIRES BE CORRESPONDINGLY TAGGED IN THE DRIVE CABINET. D. KARLE FOR HVAC MECH TECH TEAM.*

*5-9-11: ABB ADDED AS APPROVED MFR. PER HVAC MTT (D.KARLE).*

*9-10-12: ADDED REQUIREMENT THAT DRIVE BE IN A NEMA 1 OR NEMA 3R ENCLOSURE. D. KARLE FOR HVAC MTT.*

*01-24-13: ADDED REQUIREMENT AND EDITOR NOTE FOR SHORT CIRCUIT CURRENT RATING.*

*PROVIDE A COPY OF THIS SECTION TO THE ELECTRICAL ENGINEER FOR COORDINATION. INDICATE LOCATION OF VFD IN MECHANICAL PLANS AND ENSURE IT IS SHOWN IN ELECTRICAL PLANS. INCLUDE VFD SCHEDULE. SPECIFY 480V IN LIEU OF 208V WHERE EVER POSSIBLE, ESPECIALLY WHEN POWER SOURCE ALSO FEEDS COMPUTERS. ON RETROFIT PROJECTS, BE SURE THAT EXISTING MOTOR IS COMPATIBLE WITH THE NEW VFD.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. Provide variable frequency drives (VFD) meeting the requirements contained herein and as indicated in the VFD schedule.

**1.3 QUALITY ASSURANCE:**

- A. VFD shall comply with NFPA 70 (National Electrical Code), IEEE 519, UL 508, NFPA 70, and FCC compliance for Radio Frequency Interference (RFI) and Electro- Mechanical Interference (EMI).

**1.4 WARRANTY:**

- A. Provide a minimum of 3 years parts and labor warranty from the date of final acceptance by the University.

**1.5 ACCEPTABLE MANUFACTURERS:**

- A. Variable speed drives shall be manufactured by one of the following: Danfoss, Toshiba, ABB. VFDs manufactured by parent companies or their subsidiaries are not acceptable.

**1.6 SUBMITTAL DATA**

- A. Submit for approval, the following product data:
  - 1. Dimensions and elevations.
  - 2. Complete product data listing all included features.
  - 3. The electrical rating for each VFD, matched to each piece of driven equipment.
  - 4. Short circuit current (withstand) rating.
  - 5. Project specific wiring diagrams indicating:
    - a. Line/load connection points
    - b. Main input and inverter input disconnect switches
    - c. VFD/bypass switch circuit
    - d. Fusing/circuit breakers
    - e. Auxiliary control transformer
    - f. Local/remote circuit
    - g. Hand-off-auto circuit
    - h. Safety interlock, run permissive, and drive initiated external circuits
    - i. Analog inputs and outputs
    - j. Pilot lights
    - k. Each wire on the wiring diagram shall be labeled with a distinct wire identifier.
  - 6. VFD panel face diagram indicating the location of the main and inverter disconnect switches, local/remote and H-O-A switches, VFD/bypass switch, pilot lights, digital display, keypad, and any other face mounted device, along with the panel face labeling.

**PART 2 - PRODUCTS**

**2.1 GENERAL:**

- A. VFDs designated for installation indoors shall have enclosures rated NEMA 1. VFDs designated for installation outdoors shall have enclosures rated NEMA 3R minimum. The same NEMA requirements shall be provided for enclosures housing a bypass or any other accessory.
- B. Unit shall be dead front construction.
- C. All relays shall be plug-in style base.
- D. All fuses shall be mounted in fuse blocks with insulated covers. Covers shall shield fuse ends and wire terminations.

*COORDINATE WITH THE ELECTRICAL ENGINEER AND INSERT THE REQUIRED MINIMUM SHORT CIRCUIT CURRENT RATING.*

- E. The VFD (including bypass and other accessories) shall have an overall short circuit current (withstand) rating of \_\_\_\_\_ amps symmetrical minimum, and shall be marked with its short circuit current rating in compliance with UL.
- F. The unit, including all specified accessories, shall have a minimum efficiency of 85 percent at any speed from 50 to 100 %. The unit shall have a power factor of 0.9 or higher when operating at any speed from 50 to 100%.
- G. The VFD shall be variable torque type and shall provide full motor torque at any operating speed from 40% to 100%.
- H. The VFD shall provide variable torque V/Hz control when operating at speeds less than 100%.
- I. Provide the drive with a main input disconnect switch, accessible without opening the drive cabinet, equipped with current limiting fuses and fuse rejection clips, or with circuit breakers. All other fuse blocks with current limiting fuses installed shall be equipped with fuse rejection clips. It shall be possible to padlock the disconnect switch in the off position.

*HOSPITAL PROJECTS MAY REQUIRE 18 PULSE DRIVES. REVIEW THE HOSPITAL DESIGN GUIDELINES AND CONSULT WITH HOSPITAL FACILITIES AND ADJUST THE BELOW PARAGRAPH IF REQUIRED.*

- J. Provide minimum 6 pulse PWM type drives.
- K. Provide the necessary electronics to avoid audible noise generated from motor due to frequency change. The unit shall not increase the motor audible noise by more than 3 dB above the motor's across the line noise at any motor speed from 50 to 100 %.
- L. The unit shall include self diagnostics with a digital display that identifies fault conditions and simplifies trouble shooting. Fault indication shall be retained even after a power outage or an input over-current protective device trip.
- M. Unit shall be provided with RFI/EMI filters.
- N. Unit shall be UL, CSA or ETL labeled.

- O. VFD shall include current sensors on all three output phases to accurately measure motor current.

*SPEC EDITOR: THE ENGINEER MUST SPECIFY AS PART OF THE DIVISION 26 ELECTRICAL TESTING SECTION THAT THE CURRENT AND VOLTAGE THD BE MEASURED AT EACH DRIVE.*

- P. Provide minimum 3 percent AC input line reactors and/or minimum 5 percent DC link reactors to limit the maximum current total harmonic distortion (THD) to not more than 100% of the VSD input current waveform at any VSD operating speed from 20% to 100%. Reactors shall be integral to the VSD. The reactor(s) shall not be active when the drive is in bypass mode. If testing reveals the maximum THD is exceeded, the manufacturer shall provide and install additional reactors at no cost to reduce the THD to within these specified limits.
- Q. The unit shall have a dedicated terminal block for all external inputs and outputs.
- R. Provide factory mounted and wired 115V, 1 phase, 60 Hz control power transformer sized for handling an additional 30 VA inductive load. Limit fuse size for the control transformer to 3 amps maximum.

*SPEC EDITOR: 480V IS OUR STANDARD VOLTAGE FOR VFDS, EVEN IF POWER AVAILABLE IS 208V/3P. IN THOSE CASES, WORK WITH THE ELECTRICAL ENGINEER AND PROVIDE A STEP-UP TRANSFORMER. IF MOTOR MUST USE 208V FOR A SPECIFIC APPLICATION, COORDINATE WITH ELECTRICAL ENGINEER AND PROVIDE A DESIGN THAT SEGREGATES VFD FROM ANY FEEDER CIRCUIT OR PANEL THAT ALSO FEEDS COMPUTERS OR ELECTRONIC EQUIPMENT.*

- S. The VFD input and output shall be rated at 480 V, 3 phase.

*SPEC EDITOR: BYPASS MAY BE OMITTED FOR FULLY REDUNDANT EQUIPMENT. SEE U-M DESIGN GUIDELINES FOR FURTHER INFORMATION. DO NOT INDISCRIMINATELY REQUIRE BYPASSES. INSTALL A BYPASS FOR ALL LABORATORY FANS.*

- T. Provide a factory mounted and wired manual bypass device as scheduled. The bypass device shall allow the load to run across-the-line while electrically isolating the VFD so that maintenance can be performed on the drive components.

## **2.2 CONTROL FEATURES:**

- A. The VFD shall be provided with the following control features:
  - 1. Factory mounted and wired Hand-Off-Auto selector switch that allows local or remote starting or stopping of the drive. Separate start and stop buttons, electronic circuits that "virtually" provide this capability, or other alternative devices are not acceptable.
  - 2. Factory mounted and wired VFD-Bypass switch, if bypass device is provided.

3. Factory mounted and wired Local-Remote speed control switch, that allows either local or remote control of the drive speed. Key pad buttons are also acceptable provided that permanently labeled, dedicated buttons are provided for the local and the remote speed control functions.
4. Main input disconnect switch.
5. Inverter input disconnect switch, accessible without opening the drive cabinet, if bypass device is provided.
6. Manual speed potentiometer or keypad control, for local speed control with the Local-Remote speed control switch in the Local position.
7. VFD shall accept an input reference (feedback) signal, 0-10 Vdc analog input, or 4-20 mA analog input, as indicated in VFD schedule, for remote speed control with the Local-Remote speed control switch in the Remote position. Provide input signal isolation to isolate input signal ground from VFD internal control ground.

**SPEC EDITOR: NORMALLY DELETE THE FOLLOWING PARAGRAPH. PNEUMATIC VFD CONTROL IS RARELY USED.**

8. Pneumatic, 3-15 psig analog input (with pressure gauge) for remote speed control, when indicated.
9. A remote start/stop contact input that functions in the automatic mode only.
10. A safety interlock circuit that functions in drive and bypass modes.
11. A run permissive circuit, separate from the safety interlock circuit, which prevents motor operation whether in drive or bypass mode. This circuit, via the customer's external contact device, signals the motor may run, provided the safety interlock contact(s) is made. A typical application would be for a time delay before motor start to allow some external event to occur. The run permissive circuit shall be jumpered from the factory.
12. Provide the following drive initiated external circuits:
  - a. Powered run mode: A circuit that is powered after the motor is started in drive or by-pass modes.
  - b. Powered run request: A circuit that is powered whenever the drive safety interlock contact(s) are closed, and the drive H-O-A is in hand, or the drive H-O-A is in auto and the remote start/stop contact is closed.
13. A standard USB port for direct connection of a Personal Computer (PC) to the VFD. The manufacturer shall provide PC software to allow complete setup and access to the VFD through the USB port. It shall be possible to communicate to the VFD through this USB port without interrupting VFD communications to the building management system
14. An integral PID controller that, when activated, controls drive speed to maintain a programmed setpoint based on a remote analog input feed-back signal.
  - a. The VFD shall be able to apply a scaling factor to the feedback signal
  - b. The VFD shall be able to calculate the square root of the feedback signal so that a pressure sensor can be used to measure flow.
15. A real-time clock shall be an integral part of the VFD.

- a. It shall be possible to use this to display the current date and time on the VFD's display.
  - b. The clock shall include a time clock function with 7 day programmability and a minimum of four programmable time periods per day, with individually selectable ON and OFF functions. The time clock function shall be programmable to control start/stop functions, constant speeds, PID parameter setpoints and output relays. The time clock function shall be programmable through the controller display and keypad, or by included software that allows programming via a PC and a USB connection.
16. VFD shall be capable of starting a coasting load.
  17. VFD shall automatically attempt to restart a minimum of three (3) times during an adjustable time period of no less than 30 seconds after shutting off for any reason, except for short circuit or motor overload.
  18. The VFD shall have adjustable motor acceleration and deceleration rates.
  19. The VFD shall have the ability to lock-out a minimum of four critical frequency ranges to prevent the VFD from operating the load at a speed that causes vibration in the driven equipment.
  20. The VFD shall be configured as required to meet system operational requirements including:
    - a. Provide an additional set of N.O. contacts on the VFD-Bypass switch that close when the switch is set to Bypass.
    - b. Provide one normally open and one normally closed auxiliary contacts to actuate when the motor is started in any mode.
    - c. Provide a minimum of one 4-20 ma analog output signal selectable to proportionally indicate drive output frequency, current, or power, or to indicate the VFD input reference/feedback signal, for monitoring by DDC

**2.3 INDICATORS:**

- A. Indicating lamp for "POWER AVAILABLE" and for "MOTOR ON BYPASS". Lights shall be LED type.
- B. Motor RPM and AMP display factory mounted on the face of the unit, either as a separate indicator or via the controller display..

**2.4 SAFETIES:**

- A. Provide status lights or digital display indication of the cause of any shutdown.
- B. The VFD shall be provided with the following safety features:
  1. VFD over voltage and under voltage protection and protection against temporary power outages.
  2. VFD over temperature protection.
  3. Motor over temperature protection per NEC 430.126(A)(2).
  4. Short circuit and ground fault protection.
  5. Separate motor overload protection functional in by-pass and normal operation. For VFD's controlling multiple motors, provide overload protection for each motor.

6. Adjustable current limiter.

**2.5 LABELING:**

- A. Provide engraved plastic labels permanently attached to the VFD panel face indicating the function of all switches and indicators, and the equipment served.
- B. Tag all wiring in the drive. Tag nomenclature shall match the corresponding wire identification nomenclature indicated on the approved drive submittal.
- C. For VFDs serving smoke purge, stair pressurization, or other smoke control systems, include an engraved permanently attached red faced label, minimum 6" x 6", with the following nomenclature: CAUTION: THIS VFD IS PART OF A LIFE SAFETY SMOKE CONTROL SYSTEM. NOTIFY U-M DEPARTMENT OF PUBLIC SAFETY PRIOR TO ANY CHANGE OR MAINTENANCE ACTIVITY TO THIS DRIVE.

**PART 3 - EXECUTION**

**3.1 INSTALLATION:**

- A. Unit installation, including mounting and supports, and wiring to motor shall be by the Electrical Contractor, in compliance with Division 26. Coordinate with the Electrical Trades and Control Trades as required.
- B. Install the VFD as close as possible to the motor. The load side power cables to the motor shall be kept as short as possible and shall not be run in the same conduit as the line side power cables. Control wiring shall be in separate conduit from power wiring. Where applicable, control wires from the motor disconnect early break contacts may be installed with the motor power wiring.
- C. Protect the unit from dirt, dust, water and physical damage prior to and during construction. If the inside of the unit becomes dirty or dusty before acceptance by the University, it shall be thoroughly cleaned by the unit manufacturer at the contractor's expense.

**3.2 CHECK, TEST AND START:**

- A. Provide the services of a factory trained and certified technician to supervise check, test and start. The contractor shall notify U of M representative 5 days in advance of the start-up.

**3.3 TRAINING:**

*SPEC EDITOR: TRAINING IS NOT GENERALLY REQUIRED FOR VFDS WITH WHICH PLANT IS ALREADY FAMILIAR, BUT MAY BE REQUIRED FOR NEW MODELS. CONSULT THE U-M DESIGN MANAGER REGARDING IF TRAINING IS REQUIRED.*

- A. Conduct a minimum of 4 hours training for maintenance staff on operation, programming and service of VFDs. Training shall be conducted by a factory trained service technician.

- B. Training shall not be performed until system is operational and functional and two (2) weeks after receiving approved job specific technical manuals.

**SPECIFICATION DIVISION 22**

NUMBER            SECTION DESCRIPTION

**DIVISION 22 PLUMBING**

SECTION 220516 - PIPE EXPANSION JOINTS

**END OF CONTENTS TABLE**

**DIVISION 22 PLUMBING**  
**SECTION 220516 - PIPE EXPANSION JOINTS**

**REVISIONS:**

**8-99: REVISED TO VBS.DOT TEMPLATE**

**2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. Provide expansion joints per plans and specifications in the following systems.
1. Steam and Condensate Pipe
  2. Heating Hot Water Piping
  3. Domestic Hot Water and Recirculation Piping

**1.3 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
1. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as  $\leq 0.25\%$  weighted average lead content) (and/or NSF/ANSI-372) and Annex F. Applies to any item in contact with domestic (potable) water.
  2. U.S Safe Drinking Water Act (any item in contact with domestic (potable) water).

**1.4 PRICE BASIS**

- A. Base bid shall be based on "ADSCO" model RJ Rampack joints. Under Alternate x provide price, name and model for one other acceptable manufacturer.

**PART 2 - PRODUCTS**

**2.1 ACCEPTABLE MANUFACTURERS:**

- A. For Slip Joints: ADSCO Manufacturing, Advanced Thermal Systems, Flexonics
- B. For Bellows Joints: ADSCO Manufacturing Corruflex, Metraflex, Flexonics
- C. For slip type (packed) expansion joints only "ADSCO" model RJ Rampack is the acceptable manufacturer and model.

**2.2 GENERAL**

- A. Conform to the standards of the Expansion Joint Manufacturers Association and shall be pressure rated for 60 PSI for low-pressure (9 lbs.) systems and for 175 PSI for high-pressure (60 lbs.) systems.
- B. Expansion joints located in heating fin tube enclosures in the copper serpentine piping shall have bronze elements and external self-guide shell, bronze sweat ends and designed for 100 pounds of working pressure unless indicated otherwise.
- C. Expansion joints sizes 2" and smaller shall have screw threads, welding or sweat ends. Joints 2-1/2 " and larger shall have 150 pound ASA standard flange ends unless indicated otherwise.
- D. All bellows joints shall be pre-set at the factory and "held" with removable metal clips or strips tack welded across the flanges.
- E. Provide guides of the type indicated at locations indicated in the plans.
- F. All slip type expansion joints to be installed in the tunnels or main utility incoming lines shall be precompressed 1", to compensate for pipe contraction.

**2.3 SLIP TYPE (PACKED) EXPANSION JOINTS**

*(USE FOR STEAM LINES IN TUNNELS AND UTILITY WORK.)*

- A. Expansion joints shall be packed slip type permitting the addition of new packing while joint is in service under full line pressure, externally/internally guided, single or double as scheduled, 150 or 300 lb. with weld or flanged end with base, drain and service connections as required suitable, 600 F. maximum operating temperature, and traverse as scheduled. Single expansion joints with base shall be suitable for main anchor. The inner end of each ring shall have a limit stop to prevent slip disengagement should an anchor fail.

- B. Each expansion joint shall have a minimum of four (except 6" dia. or smaller) angle type extended packing gun or other special manufacturer recommended fittings to facilitate access to difficult to reach packing locations. These special packing fittings/extenders shall match existing in tunnels. Vendors are to visit the site or obtain a copy of previous shop drawing submittal from Owner. Provide "Van Stone" floating flanges at the slip end of joints.
- C. Packing shall be semi plastic injectable asbestos free Teflon based or graphite based as recommended by manufacturer of the joints for this application.
- D. Provide a shut off valve in the packing manifold in addition to the check valve.
- E. Where the new expansion joints replace existing joints or are being installed in an existing line, the successful Bidder's representative (before submitting shop drawings for approval) shall visit the job site and obtain necessary field data to verify pipe sizes, to match existing flange to flange dimensions and make sure the joints will physically fit and operate without relocating existing pipes. Joint base heights may have to be custom measured to suit existing pipe location. If this cannot be done the supplier shall advise the mechanical contractor, who shall include necessary funds in his bids to relocate existing pipes, adjust or replace existing supports, guides and anchors. Flanges shall be "floating flanges" type construction to eliminate bolt hole misalignment with existing matching flanges.
- F. Provide a drip connection and base for expansion joint as indicated in the plans.

**2.4 EXPANSION COMPENSATORS: (BELLOWS TYPE JOINTS)**

***SPEC EDITOR: USE THESE IN SMALL SIZE BUILDING WORK: ECONOMICAL DESIGN***

- A. Bellows type expansion joints for iron and steel piping for condensate system shall be constructed with two ply stainless steel bellows and carbon steel shrouds, and end fittings. ADSCO model FASSI or equal by other acceptable manufacturers.
- B. Bellows type expansion joints for hot water systems with copper piping shall be constructed from 2 ply phosphor bronze bellows, brass shrouds and end fittings. All internal parts shall be of non-ferrous metal. ADSCO model FASCBB or equal by other acceptable manufacturer

**2.5 BELLOWS EXPANSION JOINTS (CONTROLLED FLEXING TYPE):**

***(USE THIS FOR CONDENSATE, DHW, AND DHWR LINES IN TUNNELS AND UTILITY WORK)***

- A. Expansion joints shall be multiply stainless steel bellows (high convolute design, low convolute design is not acceptable), with mated neck rings. Bellows shall be welded with minimum number of longitudinal seams and no circumferential seams. The joints shall be single or double with center anchor base where indicated and scheduled, with Van Stone flanges and with internal sleeves (joints are to be insulated). The joints shall be rated for 125 lbs. operating pressure and 500 degree F maximum operating temperature.

**PART 3 - EXECUTION**

**3.1 GENERAL**

- A. The installations shall be in strict accordance with manufacturer's instructions.
- B. During the commissioning period record the initial and final position and record actual movement of the joint.

SECTION 220519 - THERMOMETERS, PRESSURE GAUGES, AND ACCESSORIES

**END OF CONTENTS TABLE**

**DIVISION 22 PLUMBING**

**SECTION 220519 - THERMOMETERS, PRESSURE GAUGES, AND ACCESSORIES**

**REVISIONS:**

**2013-12-01: ADD MILJOCO, LEAD FREE FOR DOMESTIC, AND OTHER MINOR IMPROVEMENTS. D. KARLE FOR HYDRONICS/STM MTT.**

**2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. Thermometers, pressure gauges, and accessories.

**1.3 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
1. UL Compliance: Comply with applicable UL standards pertaining to meters and gauges.
  2. ASME and ISA Compliance: Comply with applicable portions of ASME and Instrument Society of America (ISA) standards pertaining to construction and installation of meters and gauges.
  3. ASME/ANSI B40.1, Pressure Gauge Standard.
  4. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as  $\leq 0.25\%$  weighted average lead content)(and/or NSF/ANSI-372)and Annex F. Applies to any item in contact with domestic (potable) water.
  5. U.S Safe Drinking Water Act (any item in contact with domestic (potable) water).

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 220519 - - 1

**PART 2 - PRODUCTS**

**2.1 THERMOMETERS:**

SPEC EDITOR: "INDUSTRIAL" MERCURY TYPE THERMOMETERS HAVE BEEN REMOVED FROM THE MASTER SPECIFICATIONS BASED ON OSEH REQUIREMENT TO ELIMINATE UNNECESSARY USE OF MERCURY IN CONSTRUCTION.

BI-METAL THERMOMETER DELETED PER HYDRONIC TEAM MEETING 10-19-01

SPEC EDITOR: CHOOSE BETWEEN THE TWO THERMOMETERS LISTED.

- A. Digital Thermometer: electronic, with LCD display and solar cell, clear plastic window, adjustable angle, separable socket.
  - 1. Range and accuracy: -40 to 300 deg.F, accuracy greater of (+/-) 1 deg.F or 1% of reading.
  - 2. Manufacturers: Weiss Model DVBM25 (vari-angle), Tech Controls, Miljoco Corp.
- B. Industrial Glass Thermometer: adjustable angle, scale to be 9" long with white aluminum back and black graduation, aluminum casing, blue appearing liquid tube, glass window. Stem for air duct shall be 6" long with protective aluminum slotted bulb guard and mounting flange. Stem for piping shall be 3-1/2" long aluminum, brass or stainless steel, stem to match specified thermometer well. Adjust stem length for insulation extension.
  - 1. Range and accuracy: (+/-) 1 scale div. Except where otherwise noted, select range for maximum precision for system served:
  - 2. Manufacturers: Ashcroft, H. O. Trerice, Marsh, Weksler, Weiss, Miljoco Corp.

SPEC EDITOR: VERIFY SPECIFIED RANGE FOR EACH PROJECT

Service	Range (deg. F)
Domestic Cold Water	30-130 or 0-120
Domestic Hot Water	30-180
Chilled Water / Condenser water	30-130 or 0-120
Heating Water	30-240
All other locations	shown on drawings

- C. Thermometer Wells: Brass or stainless steel, with neck extension for insulated piping, with cap and chain fastened to well. 3/4"NPT, 2 1/2" insertion length, and extension length as required to extend well to outside of insulation. Lead free when used for domestic water applications.
- D. Outdoor thermometers shall be ultraviolet proof and specifically manufactured for outdoor use.

**2.2 PRESSURE GAUGES**

SPEC EDITOR: THIS SPEC IS GEARED TOWARD MAINSTREAM HVAC APPLICATIONS. EDIT FOR CRITICAL APPLICATION. SOME DISCUSSION ON OPTIONS FOLLOW: STAINLESS MOVEMENT IS A BIT MORE EXPENSIVE

THAN BRASS, BUT PROBABLY WORTHWHILE FOR ALL APPLICATIONS.  
BRASS SOCKET IS SUITABLE FOR ALL BUT VERY AGGRESSIVE SYSTEMS.  
STAINLESS STEEL IS ALSO AVAILABLE.  
1/2" SOCKET WORKS WELL WITH 1/2" ISOLATION AND MANIFOLD WE  
TYPICALLY USE - ALSO LESS PRONE TO PLUGGING THAN 1/4".  
2 1/2" AND 4 1/2" ARE MOST COMMONLY USED IN THE INDUSTRY, AND  
SUITABLE FOR MOST LOCATIONS, EXCEPT WHERE GAUGES ARE  
DIFFICULT TO GET TO AND READ.  
ACCURACY (OF FULL RANGE) OF 2%, 1% AND 1/2% ARE AVAILABLE.  
COST INCREASES SIGNIFICANTLY WITH IMPROVED ACCURACY. 1% IS  
REASONABLE FOR MOST APPLICATIONS. SPECIFY 1/2% FOR CRITICAL  
APPLICATIONS ONLY.  
GLYCERIN FILL HELPS REDUCE VIBRATION AT PUMP, BUT TURNS CLOUDY  
ABOVE 150 DEG. F, NECESSITATING THE USE OF NEEDLE VALVES TO  
DAMPEN ABOVE THAT TEMP. DAMPENERS ARE NOT TYPICALLY REQUIRED.  
THEY PREVENT PRESSURE SURGES WITH A SMALL ORIFICE. DAMPENERS  
ARE PRONE TO PLUGGING UP AND ARE THEREFORE NOT TYPICALLY  
SPECIFIED.

- A. Unless otherwise noted, provide all pressure gauges with clear glass window, cast aluminum, stainless steel or polypropylene case, black on white face, stainless steel wetted parts, brass 1/2" MPT socket, 1% full scale accuracy complying with ASME/ANSI B40-1 Grade 1A. Lead free when used for domestic water applications.
- B. Water and Compressed Air Services through 2" piping (Utility/Economy): 2 1/2" diameter face, stainless steel case, brass or stainless steel 1/4" MPT socket, 2% full scale accuracy.
- C. Water and Compressed Air Services over 2" piping: 4 1/2" diameter face, 6" diameter face for location more than 8 feet above floor, sealed glass window, glycerin filled for connections within 10 feet of pumps. For applications exceeding 145 deg. F, provide 316 stainless steel needle valves rated minimum 500 psi, in lieu of glycerin filled.
- D. Steam Service: 4 1/2" diameter face, 6" diameter face for location more than 8 feet above floor, sealed glass window, brass or stainless steel coil siphon tube with a minimum pressure rating of 1000 psi.

SPEC EDITOR: EDIT OR DELETE THE FOLLOWING

- E. Critical System Pressure Gauges: Stainless steel socket, 1/2% of full range accuracy, 6" diameter face, in accordance with AMSE/ANSI B40-1 Grade 2A. Applicable for the following locations:

SPEC EDITOR: LIST APPLICATIONS

SPEC EDITOR: EDIT OR DELETE THE FOLLOWING

- F. Differential Pressure Gauges: 4 1/2" diameter face, 6" diameter face for location more than 8 feet above floor, sealed glass window, glycerin filled for connections within 10 feet of pumps. For applications exceeding 145 deg. F, provide 316 stainless steel needle valves rated minimum 500 psi, in lieu of glycerin filled. Applicable for the following locations:

**SPEC EDITOR: LIST APPLICATIONS**

G. Except where noted otherwise, select range for twice normal operating pressure:

Service	Range
Water (CW and HW)	0-100 psig
Steam(15#)	30" Hg vac. - 30 psig
Steam(60#)	30" Hg vac. - 100 psig
Comp. Air	0-100 psig

H. Outdoor gauges shall be ultraviolet proof and specifically manufactured for outdoor use.

I. Manufacturers: Ashcroft, H. O. Trerice, Marsh, Weksler, Weiss, Miljoco Corp.

**2.3 PRESSURE/TEMPERATURE TEST PLUGS AND KITS:**

A. Provide 1/4" brass pressure and temperature test plugs where shown on drawings, with two core Nordel rated for 275 degrees and 300 psig.

**SPEC EDITOR: THE FOLLOWING IS NOT TYPICALLY REQUIRED, BUT CAN BE INCLUDED ON LARGE PROJECTS.**

B. Provide one readout meter kit including required hoses with a minimum 3-1/2" dial differential pressure gauge. Gauge shall read 0 to 60 psig and have end connections to match both the flow valves and plugs. Included in the case shall be two pocket thermometers (25 to 125 and 0 to 220 degrees), one gauge adapter, and one pocket pressure gauge (0 to 160 psig). Meter shall become property of U of M (hand over to project engineer) after completion of work.

C. Manufacturers:

1. Plugs: Petes, Sisco, Schrader, Miljoco Corp.
2. Meter: Auto Flow, Griswold

**PART 3 - EXECUTION**

**3.1 THERMOMETERS INSTALLATION**

A. Install and orient wells and thermometers so thermometer can be read from the floor. Digital thermometers shall be located in areas with adequate light, where possible.

B. Thermometer Wells: For piping 2" and below, install in piping tee where thermometers are indicated, in vertical position. For piping below 2 1/2" and above, "weldolets" may be used. Fill well with oil or graphite and secure cap.

C. Install in the following locations and elsewhere as indicated:

**SPEC EDITOR: EDIT LIST BELOW TO SUIT PROJECT REQUIREMENTS.**

1. At inlet and outlet of each hydronic zone.
2. At inlet and outlet of each hydronic boiler and chiller.

3. At inlet and outlet of each hydronic coil in air-handling units over 5000 cfm.
4. At inlet and outlet of each hydronic heat exchanger.
5. At inlet and outlet of each hydronic heat recovery unit.
6. At inlet and outlet of each thermal storage tank.
7. At outside air intake ductwork.
8. At mixed air plenums.
9. At hot/cold deck plenums.
10. At each zone supply duct of multi-zone systems.
11. At supply duct of single zone systems.

### **3.2 INSTALLATION OF PRESSURE GAUGES**

- A. Install pressure gauges with 1/2" isolation ball valve. Where needle valves are specified as a substitute for glycerin filled in Part 2, install the needle valve between the ball valve and the gauge. Locate gauges to be readable from the floor preferably at eye level. Mount gauges securely to prevent excessive vibration, adjust needle valve to dampen pulsations. Install syphon tubes for steam pressure gauges, connected after the isolation ball valve. Do not install pressure gauges on bottom of piping.

**SPEC EDITOR: EDIT LIST BELOW TO SUIT PROJECT REQUIREMENTS.**

- B. Install in the following locations, and elsewhere as indicated on drawings:
  1. At suction and discharge of each pump.
  2. At inlet and outlet of each pressure-reducing valve.
  3. At building water service entrance.
  4. At inlet and outlet of hydronic equipment (HW boilers, chillers, heat exchangers, filters).

### **3.3 INSTALLATION OF TEST PLUGS**

- A. Test Plugs: Install in piping tee where indicated, located on pipe at most readable position. Secure cap.

### **3.4 ADJUSTING AND CLEANING**

- A. Adjusting: Adjust faces of meters and gauges to proper angle for best visibility.
- B. Cleaning: Clean meters and gauges. Replace cracked and broken windows. Touch up scratches.

NUMBER            SECTION DESCRIPTION

**DIVISION 22**

SECTION 220523 - VALVES

**END OF CONTENTS TABLE**

DIVISION 22  
SECTION 220523 - VALVES

**REVISIONS:**

07-17-08 REVISED TO INDICATE DOM. H.P. B.F. TO BE STAINLESS, ALL LOCATIONS (NOT JUST TUNNELS) AND TO ELIMINATE "STANDARD" B.F. VALVE SPEC.

09-16-08: REVISED PREFERRED MANUFACTURERS FOR HP BUTTERFLY VALVES, ADDITIONAL UTILITY TUNNEL REQUIREMENTS AND P/FP MECH TECH TEAM EDITS.

1-09: RECONCILED EDITS BETWEEN 7/08 AND 9/08 REVISIONS, AND ADDRESSED OTHER MINOR ISSUES.

7-19-12: ADDED (2.2.B) THAT SEALS ARE TO BE IMMUNE FROM CHLORAMINES AND THAT ALL EPDM IS TO BE PEROXIDE CURED. D. KARLE FOR PLMG MTT.

07-30-13: REVISED TO UPDATE TUNNEL REQUIREMENTS. D. KARLE PER WAYNE GROTH AND HYDRONICS MTT.

2013-12-17: REMOVED KEYSTONE AS APPROVED FOR HP BF VALVES DUE TO ON-GOING SHUT-OFF PROBLEMS REPORTED BY PLANT, D. KARLE FOR MTT.

2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.

2014-2-28: REVISED TO STRIKE BALL VALVE MODEL NUMBERS, WHICH WERE OUTDATED. JOMAR REMOVED PENDING REVIEW OF THEIR BRASS BALL VALVE OFFERING (JOMAR DOES NOT OFFER BRONZE BALL VALVES). JAMESBURY REMOVED, DON'T OFFER BALL VALVES OF TYPE SPECIFIED. D. KARLE FOR MTT.

2014-12-15: REVISED TO STRIKE BALL VALVE MFR.S NO LONGER APPROVED OR AVAILABLE, ADD SPECIFIC JOMAR MODEL NUMBER BALL VALVE AS APPROVED, STRIKE GRINNELL GHP SINCE IS THE SAME VALVE AS THE KEYSTONE THAT HAS PROVEN UNRELIABLE, AND RESTRICTED USE OF LEAD FREE VALVES TO POTABLE WATER SYSTEMS ONLY DUE TO SOLDERING CHALLENGES. D. KARLE FOR MTT.

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. Provide valves as scheduled and specified for the following systems:
  - 1. Cold Water, Hot Water, Hot Water Return
  - 2. High Purity Water
  - 3. Compressed Air
  - 4. Lab Vacuum
  - 5. Natural Gas
  - 6. Hot Water Heating, Chilled Water, Condenser Water
  - 7. Steam and Condensate
  - 8. Others as indicated

**1.3 QUALITY ASSURANCE:**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  - 1. National Sanitation Foundation NSF/ANSI-61, including Annex G (listed as  $\leq 0.25\%$  weighted average lead content)(and/or NSF/ANSI-372)and Annex F. Applies to any item in contact with domestic (potable) water.
  - 2. U.S Safe Drinking Water Act (any item in contact with domestic (potable) water).

**PART 2 - PRODUCTS**

**2.1 VALVE APPLICATION SCHEDULE:**

*SPEC EDITOR: EDIT 2.1 CAREFULLY TO SUIT PROJECT. CONSIDER USE OF LESS EXPENSIVE STANDARD BUTTERFLY VALVES FOR CW, HW, CHW AND HWH. COORDINATE VALVE SELECTION WITH PLANT. ADD SOLENOID VALVES UNDER SPECIALTY VALVES IF APPLICABLE, CONSIDER USE OF GROOVED BUTTERFLY VALVES. EDIT BALANCING VALVES TO SUIT PROJECT.*

- A. Cold Water, Hot Water and Hot Water Return System:
  - Isolation through 2": Ball Valve
  - Isolation 2 1/2" and larger: High Performance Butterfly Valve, All stainless steel.
  - Check: Swing Check through 2", Silent Check for 2 1/2" and up.
  - Balancing: Automatic Balancing Valve, Manual Balancing Valve

*SPEC EDITOR: SWING CHECK ARE NOT ACCEPTABLE IN UTILITY TUNNELS. ONLY SILENT CHECKS SHALL BE USED IN TUNNELS, FOR ALL SIZES.*

*SPEC EDITOR: ADD/ DELETE SPECIALTY VALVES IF APPLICABLE*  
Specialty Valves:

- B. High Purity Water Systems (deionized, reverse osmosis, distilled):
  - Isolation: High Purity Water Valve

- C. Compressed Air System,  
Lab Vacuum System:  
  
Isolation through 2": Ball Valve  
Isolation 2 1/2" and larger: High Performance Butterfly Valve  
Check: Swing Check Valve
- D. Natural Gas System:  
  
Isolation through 2": Ball Valve certified by UL or CSA for natural gas.  
Isolation 2 1/2" and larger: Lubricated Plug Valve (Section 231123)

*SPEC EDITOR: INSERT BELOW, THE REQUIREMENT FOR UNDERGROUND CHILLED WATER VALVES. IF INCLUDED IN A SEPARATE SPECIFICATION SECTION FOR UNDERGROUND CHW PIPING, REFERENCE THAT SPEC. SECTION.*

- E. Hot Water Heating System,  
Chilled Water System,  
Condenser Water System:  
  
Isolation through 2": Ball Valve  
Isolation 2 1/2" and larger: High Performance Butterfly Valve  
Isolation - Underground chilled water:  
Check: Swing Check through 2", Silent Check for 2 1/2" and up.  
Balancing: Automatic Balancing Valve, Manual Balancing Valve
- F. Steam and Condensate System (through 60 psig):

*SPEC EDITOR: ON STEAM SYSTEMS, A WARM-UP BYPASS VALVE SHOULD BE INSTALLED ON SIZES 3" AND LARGER IN TUNNELS AND WHERE REQUIRED IN BUILDINGS (8" OR HIGHER) DUE TO DOWNSTREAM PIPING CONFIGURATIONS. COORDINATE WITH SECTION 232216 AND AVOID DUPLICATION OF SPECIFICATIONS FOR THE SAME APPLICATION.*

*METAL-TO-METAL BUTTERFLY VALVES ARE SPECIFIED FOR ALL STEAM SYSTEMS 2-1/2" AND LARGER, BASED ON THE ASSUMPTION THAT MOST STEAM SYSTEMS IN BUILDINGS ARE CONNECTED TO THE CENTRAL CAMPUS UTILITY TUNNEL SYSTEM AND SHOULD BE RATED FOR 600°F. IF YOUR PROJECT DOES NOT USE STEAM FROM THE UTILITY TUNNEL SYSTEM, A HIGH PERFORMANCE BUTTERFLY VALVE (RATED 150 PSIG/450°F) ILO A METAL-TO-METAL MAY BE MORE APPROPRIATE; EDIT SPEC ACCORDINGLY.*

Isolation through 2": Ball Valve  
Isolation through 2" in Utility Tunnels: Gate Valve - Steel body with stainless steel trim.  
Isolation 2 1/2" and larger: Metal-to-Metal Seated Butterfly Valve  
Check (condensate only): Swing Check through 2", Silent Check for 2 1/2" and up. In Utility Tunnels, only Silent Checks shall be provided for all sizes.  
Other valves in 232216, as specified.

*SPEC EDITOR: SWING CHECK VALVES ARE NOT ACCEPTABLE IN UTILITY TUNNELS. ONLY SILENT CHECKS SHALL BE USED IN TUNNELS, FOR ALL SIZES.*

**2.2 GENERAL VALVE REQUIREMENTS:**

- A. All valves shall have seats, stem seals and disc materials compatible with intended fluid, temperature, pressure and service.
- B. All EPDM shall be peroxide cured. All wetted seals shall be made from materials that are immune from chloramine degradation.
- C. Valves in contact with domestic (potable) water shall be "lead free" NSF/ANSI-61 Annex G (and/or NSF/ANSI-372) labeled. Soldered lead free valves (all types) are restricted to use on domestic potable water systems only.
- D. Manually operated valves 4" and larger installed 10 feet A.F.F., or higher, shall have chain wheel operators. Chain shall reach to within 7'-0" of floor or operating platform, or within two feet of accessible ceiling.
- E. Gate and globe valves shall be repackable under pressure whether open or closed.
- F. Unless noted otherwise, valves shall be rated for a minimum of 125# WSP (working steam pressure)/ 250# WOG (cold water, oil, gas).
- G. Unless noted otherwise, all butterfly valves shall be full lug construction, suitable for bi-directional dead end service, and have open position memory stop. Manually operated butterfly valves 4" and larger shall have enclosed worm gear operators with position indicators.
- H. Provide extended valve stems for insulated piping.
- I. Where the valves are installed outdoors, all components including the gear operated wheel operators shall be weatherproofed.
- J. Unless noted otherwise, valves through 2" shall have screwed connections for steel piping and sweat connections for copper piping; valves 2-1/2" and larger shall be flanged. Grooved connections are permitted where specified.
- K. Unless noted otherwise, valves shall be same size as piping.

**2.3 BALL VALVE:**

- A. Two-piece, full port, bronze body, stainless steel ball and stem, Teflon seat, plastic coated lever handle and locking devices where noted in drawings.
  - 1. Valves for Natural Gas shall be UL or CSA approved for natural gas service.
- B. Manufacturers: Watts, Nibco, Apollo, Milwaukee, Hammond, Grinnell (Grinnell permitted only where grooved connections permitted). Also approved: Jomar Valve model T/S-100NEG with CW511L brass alloy body and end connection and CW510L brass alloy ball and stem and T.E.A. coated ball.

**2.4 HIGH PERFORMANCE BUTTERFLY VALVE:**

**SPEC EDITOR: STANDARD FOR MOST ISOLATION VALVES 2 1/2" AND LARGER. NOTE, STANDARD BUTTERFLY VALVES ARE NOT TYPICALLY**

**ACCEPTABLE, AND HAVE BEEN REMOVED FROM THIS MASTER SPECIFICATION.**

- A. Full lug, high performance type, carbon steel body, 316 stainless steel disc, stainless steel shaft and bearing, PTFE seat, Teflon stem packing. Rated for 150 psi, 450 degrees F.

**SPEC EDITOR: REMOVE BRAY ON ALL CENTRAL POWER PLANT PROJECTS.**

- B. Manufacturers: Bray - Braylok Series 41, Dezurik - BHP, Jamesbury - 815L, Milwaukee - HP Series, Tri-Seal Valve-Contromatics (formerly Watts/KF Contromatics), Xomox Pliaseal.
- C. For domestic water systems, full lug, high performance type, 316 stainless steel body, 316 stainless steel disc, stainless steel shaft and bearing, (all wetted parts stainless steel) PTFE seat, Teflon stem packing. Rated for 150 psi, 250 degrees F.

**2.5 BUTTERFLY VALVE - GROOVED:**

**SPEC EDITOR: FOR USE WITH GROOVED PIPING, NOT OUR STANDARD, USE SELECTIVELY, WITH APPROVAL FROM PLANT. SELECT APPLICABLE SECTION BELOW. GRINNELL IS NOT ON PREFERRED LIST OF MANUFACTURERS YET. NOT FOR USE IN TUNNELS**

- A. Grooved ductile iron body, suitable for installation with grooved piping, EPDM coated steel disc and shaft, stainless steel hub bearing, EPDM seat, Teflon stem packing. Rated for 300 psi, 230 degrees F.  
Manufacturer: Victaulic Vic-300
- B. Grooved Nylon coated ductile iron body, EPDM coated ductile iron disc, stainless steel shaft, bronze shaft bearing. MSS SP-67  
Manufacturer: Grinnell Gruvlock Series 7700.
- C. Grooved butterfly valves may be used only where grooved piping is specified.

**2.6 METAL-TO-METAL SEATED BUTTERFLY VALVE:**

- A. Full lug or short body flanged for end-of-line dead end service, bi-directional shutoff, triple offset type, single piece carbon steel body per ANSI B16.5 flange dimensions, carbon or stainless steel hardened abrasion-resistant disc keyed to stem with self-centering feature, stainless steel stem, hardened heavy duty stainless steel bearings with line debris ingress protection feature, stainless steel or Inconel seat and seal, bolted replaceable elastically resilient seal, high-temp graphite stem packing with blow-out proof design and adjustable gland. Pressure Class 150 rated for 140 psig, 600 degrees F. per ANSI/ASME B16.34. Valve tested for minimum 5000 cycles, with initial bubble-tight, zero leakage closure classification per FCI 70-2 or equivalent testing and fabricated per ISO 9001 QA program protocols. Operator to be lockable, low operational torque fully enclosed lifetime lubricated worm gear type, keyed to shaft with local position indicator, size based on seating and break away safety factor. Valve warranty shall be 36 months from substantial completion. Mounting taps to be tapered to aid bolt threading. Body to have quantity (4) tapped holes equally spaced around the body for mounting threaded lifting lugs to aid installation.
- B. Valve Flow Capacity: The minimum Cv value for various valve sizes in the full open position shall be as follows:
  - 1. 4 inch: 230
  - 2. 6 inch: 660
  - 3. 8 inch: 1500
  - 4. 10 inch: 2400
  - 5. 12 inch: 3600
  - 6. 14 inch: 5500
  - 7. 16 inch: 7600
  - 8. 18 inch: 10300
  - 9. 20 inch: 13000
  - 10. 24 inch: 20200
- C. Manufacturers: Bray Trilok, Crane Flowseal MS, Metso/Neles Neldisc, Adams MAK, ABZ Extreme 6000 Series, Weir Tricentric, Zwick Tri-Con.

**2.7 GATE VALVE - (FOR 2" AND SMALLER ONLY):**

- A. General Service: Bronze body and trim, screwed, rising stem. de-zincification resistant.
  - 1. Description:
    - a. Standard: MSS SP-80
    - b. CWP Rating: 300 psig
    - c. SWP Rating: 150 psig
    - d. Body Material: Bronze ASTM B 62
    - e. Ends: Threaded
    - f. Stem: Silicon Bronze
    - g. Disc: Solid wedge, Bronze ASTM B 62
    - h. Packing: Asbestos free
    - i. Bonnet: screw in style, Bronze ASTM B 62
    - j. Handwheel: Malleable Iron

- k. For domestic water service: Per above, accept with non-rising stems and rated 200 psig CWP at 300°F. Solder end connections to 3/4 inch size, threaded ends for 1 inch and above.
    - 2. Manufacturers: Nibco T-131 (T/S-113-LF lead free), Stockham, Crane, Grinnell.
  - B. Utility Tunnel Locations: Class 150 Steel Body Gate Valves with stainless steel trim.
    - 1. Description:
      - a. ANSI Class 150 OS&Y Bolted Bonnet ASTM A 105 steel body, 13 Chrome Trim, hard-faced seats, graphite packing.
      - b. Manufacturers:
        - 1) Crane Co.; Crane Valve Group; Crane Valves.
        - 2) Vogt.

**2.8 SWING CHECK VALVE:**

*SPEC EDITOR: TYPICALLY USED FOR ALL SERVICES, 2" AND UNDER, SWING CHECK VALVES ARE NOT ACCEPTABLE FOR UTILITY TUNNELS*

- A. Bronze body and trim.
- B. Manufacturers: Milwaukee model 509, Crane model 37, Grinnell model 3300, Nibco

**2.9 SILENT CHECK VALVE:**

*SPEC EDITOR: TYPICALLY USED FOR ALL SERVICES, 2 1/2" AND OVER*

- A. Spring loaded type check valves, stainless steel spring, iron body, and bronze trim.
- B. Manufacturers:
  - 1. Wafer Style: Milwaukee - Series 1400, APCO - Series 300, Mueller, Metraflex
  - 2. Globe Style: Milwaukee, APCO, Mueller, Metraflex
  - 3. Utility Tunnels:
    - a. Durabula model SCV, stainless body
    - b. Steam Trap Assemblies: "The Connector" by Check-All Mfg. Company, 316 stainless steel body and trim.
  - 4. Condensate pump and pressure powered pump discharge: Durabula model SCV, stainless body

**2.10 DRAIN VALVE:**

- A. General Service: Ball valve with 3/4-inch hose threaded end fitting and cap.
- B. Utility Tunnels:
  - 1. Steam and condensate: Gate valve with 3/4-inch hose end fitting and cap.
  - 2. Domestic hot water and compressed air: ball valve with 3/4-inch hose threaded end fitting and cap.

**2.11 AUTOMATIC BALANCING VALVE:**

**SPEC EDITOR: THIS SECTION STILL NEEDS SOME WORK - EDIT CAREFULLY**

- A. Automatic flow control, pressure independent type, +/- 5 percent accuracy. 304 stainless steel cartridge, two P/T ports for flow reading. Valve size shall match pipe size. Refer to drawings for flow and pressure range.
- B. Manufacturers: Griswold Ultra "Z", Autoflow, Bell and Gossett

**2.12 MANUAL BALANCING VALVES:**

**SPEC EDITOR: THIS SECTION STILL NEEDS SOME WORK - EDIT CAREFULLY**

- A. General Manual Balancing Valve Requirements: ports for measuring flow, memory stop, bubble tight shut-off, valve Cv characteristics suitable for throttling. Size valve to produce readable design flow and maximum full open pressure drop of 3 feet.
- B. Through 2": bronze body, brass ball, calibrated.  
Manufacturers: Bell & Gossett Circuit Setter Plus, Armstrong, Flow Design Inc., TACO, T&A
- C. Valves 2-1/2" and larger: cast iron body, brass ball or bronze disc, TFE seat rings, bronze seat, and stainless steel stem.  
Manufacturers: Bell & Gossett Circuit Setter, Armstrong, Flow Design Inc., TACO, T&A

**SPEC EDITOR: VERIFY PRESSURE DROPS AT DESIGN FLOWS AND INSURE THEY ARE MEASURABLE, IF NOT USE THE FOLLOWING.**

- D. Venturi Style: bronze body, brass ball, and venturi flow measuring station. Manufacturers: Preso B Plus, Accusetter
- E. Provide gauge kit for projects requiring over 20 balancing valves. Gauge kits shall be capable of directly reading GPM, or shall include conversion chart from Cv and pressure.

**2.13 HIGH PURITY WATER VALVE:**

- A. Union body ball valve with Teflon seat and viton stem packing. Construction, material, pipe connections and size to match piping.
- B. Manufacturers: Harvel Plastics, Hayward, Watts

**2.14 SOLENOID VALVES:**

- A. Full port, bronze body, malleable iron coil enclosure, stainless steel plunger, valve stem, bonnet tube, and spring, Buna-N seal, rated for 500 psi. See drawings for voltage, size and position (NC or NO).
- B. Manufacturer: Magnetrol Figure No. 200-A, ASCO, Skinner

**PART 3 - EXECUTION**

**3.1 GENERAL VALVE INSTALLATION REQUIREMENTS:**

- A. Install valves such that operator is completely operable, and the valve position indicator is discernible from the floor.

**3.2 SOLENOID VALVE INSTALLATION REQUIREMENTS:**

- A. Provide a strainer before each solenoid valve. Provide a water hammer arrestor upstream of solenoid valves used for water service.

**3.3 NATURAL GAS VALVE INSTALLATION REQUIREMENTS:**

- A. Install valves in accessible locations, protected from physical damage. Do not locate valves in plenum ceilings.
- B. Install isolation valve upstream and within 6 feet of gas appliance. Install a union or flanged connection downstream from the valve to permit removal of controls.

**3.4 STEAM, CONDENSATE AND DOMESTIC HOT WATER VALVE INSTALLATION:**

- A. For general service applications: steam and condensate flanged valves shall be installed with Flexitallic gaskets, 316 L stainless steel, with "Flexicarb" filler.
- B. For general service applications: domestic hot water flanged valves shall be installed with 100% PTFE gaskets, Interlex SQ-S.
- C. For Utility Tunnels: Domestic hot water flanged valves shall be installed with Garlock Blue-Gard Style 3000 ring type gaskets or comparable. Full face gaskets allowed only when BOTH flanges are full face."
- D. For Utility Tunnels: steam and condensate flanged valves shall be installed with Flexitallic gaskets, 316 L stainless steel, with "Flexicarb" filler. Steam butterfly valves with removable seat screw heads that would interfere with the metal strip winding shall be installed with Garlock Style 9800 gaskets on the seat screw head side.

**DIVISION 22 PLUMBING**

SECTION 220533 - HEAT TRACING FOR PIPING

**END OF CONTENTS TABLE**

**DIVISION 22 PLUMBING**  
**SECTION 220533 - HEAT TRACING FOR PIPING**

***REVISIONS:***

***2-24-00: MINOR CORECTIONS, APROVED AS NEW MASTER.***

***SPEC EDITOR: SCOPE OF HEAT TRACING MUST BE SHOWN ON THE DRAWINGS. CAREFULLY SELECT REQUIRED HEAT TRACE,SCHEDULE AND DETAIL ACCORDINGLY.***

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

***INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.***

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK**

- A. Furnish and install a complete UL listed system of heaters, components, and controls to prevent pipelines from freezing. Refer to drawings for additional scope clarification.

**1.3 COORDINATION**

***SPEC EDITOR: COORDINATE ELECTRICAL REQUIREMENTS WITH DIV. 26***

- A. The heat tracing and all the necessary accessories shall be furnished and installed by the Mechanical Contractor. Electrical Contractor shall provide power supply and related wiring by the per Division 26, and as shown on electrical drawings.

**1.4 MANUFACTURERS**

- A. Raychem
- B. Thermon

**PART 2 - PRODUCTS**

**2.1 MATERIAL**

- A. Electric heat tracing shall be self-limiting type suitable for temperature maintenance up to 40 degrees F.
- B. The heater shall have a self-regulating factor of at least 90 percent. (the percentage reduction, without thermostatic control, of the heater output going from 40 degrees F pipe temperature operation to 150 degrees F pipe temperature operation).

**SPEC EDITOR: COORDINATE ELECTRICAL REQUIREMENTS WITH DIV. 26, EDIT VOLTAGE**

- C. The heater shall operate on line voltages of (select: 120, 208 or 220) volts without the use of transformers.
- D. The heater shall be sized according to this table. The required heater output rating is in watts per foot at 50 degrees F. (Heater selection based on 1" fiberglass insulation on metal piping).

Pipe Size	Min. Ambient - 10 deg.F	Temp. - 20 deg. F
3" or less	5 watt	5 watt
4"	5 watt	8 watt
6"	8 watt	8 watt
8	2 strips - 5 watt	2 strips - 8 watt
12" - 14"	2 strips - 8 watt	2 strips - 8 watt

- E. Connectors and fittings, and indicator lights, and other required installation accessories shall be manufacturers standard recommended for the freeze protection application. The heater shall include a tinned copper braided shield, electrically bonded at splice locations, and bonded to the branch circuit ground conductor at the power connection point.
- F. All the components and system shall be U. L. listed.

**2.2 ELECTRICAL PROTECTION**

- A. Provide ground fault circuit breakers or other ground fault protection with a 30 mA ground fault trip level. See Division 26 for more details.

**2.3 CONTROLS**

- A. Provide heater system controls indicated below, and as shown in the drawings:

**SPEC EDITOR: EDIT LIST AND COORDINATE WITH DETAILS**

- 1. Outdoor air thermostat control to prevent operation when outside air temperature is above 40F (adjustable).

**SPEC EDITOR: PLANT A/C SHOP PREFERS TO HAVE A DDC ALARM, BUT WILL ACCEPT LOCAL ALARM IF IT IS LIKELY TO BE OBSERVED. COORDINATE WITH A/C SHOP.**

- 2. Heater failure alarm, using outdoor piping thermostats, and voltage detectors, with audible and visual alarm and alarm contact for remote monitoring by the owner's Energy Management System.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. The entire installation shall comply with the manufacturer's instructions and all the applicable sections of NEC, latest edition.

- B. The electrical and mechanical installation details shall strictly adhere to manufacturer's recommended practices. The manufacturer's representative shall supervise and test the installation and provide a letter to the Owner that the entire installation complies with their requirements, and the installation tested out satisfactorily.

**3.2 TESTS**

- A. After heater installation and before and after installing the thermal insulation, subject heater to testing using a 1000 VDC megger. Minimum insulation resistance shall be 20 megohms regardless of length. Test both heating cable bus wires to verify the connection of any splices or tees.
- B. After all megger testing and insulation is complete, manufacturer shall conduct functional performance test to ensure system is fully operational, and submit report.

NUMBER            SECTION DESCRIPTION

**DIVISION 22 PLUMBING**

SECTION 220548 - VIBRATION CONTROL

**END OF CONTENTS TABLE**

**DIVISION 22 PLUMBING**  
**SECTION 220548 - VIBRATION CONTROL**

**REVISIONS:**

**8-99: REVISED TO VBS.DOT TEMPLATE**

**9-1-99: "INSTRUCTIONS AND TERMS" DELETED, "SUBMITTALS" MOVED TO DIVISION 01, AND OTHER MINOR CHANGES WERE MADE.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

**SPEC EDITOR: THIS SECTION SHOULD BRIEFLY DESCRIBE ALL THE MECHANICAL WORK TO ENABLE POTENTIAL SUBCONTRACTORS TO DECIDE WHETHER OR NOT TO OBTAIN A FULL SET OF DOCUMENTS AND TO BID.**

- A. Provide vibration control items for isolating vibration of mechanical equipment, piping and ductwork.
- B. Provide all hangers, isolators, bases, pads, sleeves and other devices specified, required, or detailed for the project. Include all vibration isolation system elements as recommended by the equipment manufacturer's representative to make a complete, correct and safe installation. Supply and install all incidental materials needed.

**1.3 QUALITY ASSURANCE**

- A. Work of this section shall be performed by skilled workers who are experienced in the necessary crafts to meet the requirements of this Section.
- B. Provide field supervision and inspection to assure proper installation, adjustment and performance. Replace any isolators that are found to resonate with the supported equipment.
- C. As a minimum provide vibration control per ASHRAE - 1995 - HVAC Applications, Chapter 43 - "Sound and Vibration Control".
- D. Isolators shall be selected, installed and adjusted to prevent the transmission of objectionable vibration and noise to the building structure.
- E. The size and number of mounts and hangers shall be chosen to meet these specifications, even if not specifically shown on the plans. Brackets, rails, bases, braces, etc., shall be provided as needed for a complete and correct installation.

**1.4 ACCEPTABLE MANUFACTURERS**

- A. Subject to compliance with the Contract Documents, manufacturers for products specified in this Section shall be one of the following:
  - 1. Vibration Eliminator Co.
  - 2. Mason Industries, Inc.
  - 3. Korfund Dynamics Co.
  - 4. Vibration Isolation Co.

**PART 2 - PRODUCTS**

**2.1 FLEXIBLE DUCT CONNECTIONS**

- A. Flexible sleeves for duct connections shall be fabricated from flexible, airtight, coated fabric. Each sleeve shall be installed with at least 3 inches slack across a clear metal to metal gap of at least 4 inches. That is, 7 inches of this fabric is required for each sleeve.

**2.2 INERTIA BASES**

- A. Inertia bases fabricated from steel or concrete shall be provided for fans and pumps as described below.
- B. All mounts shall have leveling bolts rigidly secured to the equipment being isolated.
- C. Base Type CIB
  - 1. Inertia base Type CIB (Concrete Inertia Base) shall have an integral rectangular structural steel form into which concrete is poured. Perimeter members shall be beams of depth equal to 10% of the longest span of the base, but not more than 12 inches nor less than 6 inches deep. Forms shall include motor slide base and all reinforcing steel. Where anchor bolt locations fall in concrete, the reinforcing steel shall include drilled members with sleeves welded below the steel to accept the anchor bolts. Height saving steel brackets shall be used in all mounting locations.
  - 2. When the concrete base is "T" shaped, isolators shall be located under the projections as well as under the main body in order to prevent cantilever distortion.
  - 3. Base Type CIB shall be Mason Industries Type KSLFSW or approved equal.
- D. Base Type SIB
  - 1. Inertia base Type SIB (Steel Inertia Base) shall be a structural steel base frame with clearance holes located to correspond to the mounting bolt holes of the equipment mounted on the base.

2. Bases shall have built-in motor slide rails and shall be reinforced as necessary to withstand belt pull without drive misalignment or base distortion. The bases shall be constructed with deep angle steel sections with a minimum vertical angle leg of 4 inches for motors of 7.5 hp or less, 5 inches for motors between 7.5 hp and 20 hp and 6 inches for motors over 20 hp.
3. Base Type SIB shall be Mason Industries Type WFSLFSW, or approved equal.

### 2.3 VIBRATION ISOLATORS

- A. The static deflection of isolators shall be as specified below and in ASHRAE - 1995 Chapter 43.
- B. Vibration isolator sizes and layout shall be determined by the vibration isolator supplier.
- C. Isolator Type WP
  1. Type WP (Waffle Pads) shall be 5/16 inch thick neoprene pads ribbed or waffled on both sides. The pads shall be manufactured with bridge bearing quality neoprene and selected for a maximum durometer of 50 and designed for 15% strain. Where required, steel load-spreading plates shall be incorporated between the equipment and the neoprene pad.
  2. If the isolator is bolted to the structure, a neoprene mounting sleeve shall be installed under the bolt head between the steel washer and the base plate.
  3. Type WP pad shall be Mason Industries Type W or approved equal.
- D. Isolator Type MWP
  1. Type MWP (Metal and Waffle Sandwich Pads) shall consist of two or more 5/16 inch thick ribbed or waffle neoprene pads sandwiching a 16 gauge stainless steel shim plate. The pad shall be manufactured with bridge bearing quality neoprene and selected for maximum durometer of 50 and designed for 15% strain.
  2. If the isolator is bolted to the structure, a neoprene mounting sleeve shall be installed under the bolt head between the steel washer and the base plate.
  3. Type MWP pad shall be Mason Industries Type WSW or approved equal.
- E. Isolator Type DDNM
  1. Type DDNM (Double Deflection Neoprene Mounts) shall be laterally stable, double deflecting, molded neoprene isolators. All metal surfaces shall be covered with neoprene. The top and bottom surfaces shall be ribbed and bolt holes shall be provided in the base. The mounts shall have a leveling bolts rigidly secured to the equipment.
  2. The isolator shall be manufactured with bridge bearing quality neoprene and selected for a maximum durometer of 50 and designed for 15% strain. DDNM mounts shall be selected for a static deflection of 3/8 inch unless otherwise specified.

3. Type DDNM mount shall be Mason Industries Type ND or approved equal.

F. Isolator Type DDNH

1. Type DDNH (Double Deflection Neoprene Hangers) shall consist of a molded neoprene isolating element in a steel hanger box. A neoprene sleeve shall be provided where the lower hanger rod passes through the steel hanger box, such that the hanger rod cannot contact the steel hanger. The diameter of the clear hole in the hanger box shall be at least 3/4 inch larger than the diameter of the hanger rod and permit the hanger rod to swing through a 30° arc. When installed, the hanger box shall be allowed to rotate through a full 360° without encountering any obstructions.
2. The isolator shall be manufactured with bridge bearing quality neoprene and selected for a maximum durometer of 50 and designed for 15% strain. Unless otherwise specified, the static deflection of DDNH hangers shall be 0.3 inches.
3. Type DDNH hanger shall be Mason Industries Type HD or approved equal.

G. Isolator Type SPNM

1. Type SPNM (Spring and Neoprene Mounts) shall have a free-standing and laterally stable steel spring without any housing. Springs shall be designed so that the ratio of the horizontal to vertical spring constant is between one and two. The spring diameter shall be not less than 80% of the compressed height of the spring at rated load. Loaded springs shall have a minimum additional travel to solid equal to 50% of the specified static deflection.
2. Unless otherwise specified, the minimum static deflection of SPNM isolators for equipment mounted on grade slabs shall be 1 inch and for the minimum static deflection for equipment mounted above grade level shall be 2 inches.
3. Two Type WP isolation pads sandwiching a 16 gauge stainless or galvanized steel separator plate shall be bounded to the isolator baseplate.
4. Unless otherwise specified, isolators need not be bolted to the floor for indoor installations. If the base plates are bolted to the structure, a neoprene mounting sleeve shall be installed under the bolt head between the steel washer and the base plate.
5. Type SPNM mount shall be Mason Industries Type SLFSW or approved equal.

H. Isolator Type SPNH

1. Type SPNH (Spring and Neoprene Hangers) shall consist of a steel spring in a series with a neoprene isolating element. The spring shall have a minimum additional travel to solid equal to 50% of the specified deflection. The neoprene element shall have a static deflection of not less than 0.3 inches with a strain not exceeding 15%.
2. Unless otherwise specified, the static deflection of SPNH hangers shall be 2 inches.

3. Spring diameter and hanger box hole size shall be large enough to permit the hanger rod to swing through a 30° arc. A neoprene sleeve shall be provided where the lower hanger rod passes through the steel hanger box, such that the hanger rod cannot contact the steel hanger. The diameter of the clear hole in the hanger box shall be at least 3/4 inch larger than the diameter of the hanger rod. When installed the spring element shall not be cocked and the hanger box shall be allowed to rotate through a full 360° arc without encountering any obstructions.
4. Type SPNH hanger shall be Mason Industries Type 30N or approved equal.

#### **2.4 FLEXIBLE PIPE CONNECTORS**

- A. Flexible connectors for pipes shall be neoprene Mason Type MFNEC, MFTNC or as approved.

### **PART 3 - EXECUTION**

#### **3.1 GENERAL**

- A. All equipment mounted on vibration isolators shall have a minimum operating clearance of 2 inches between the bottom of the equipment or inertia base (and height saving bracket) and the concrete housekeeping pad (or bolt heads) beneath the equipment.
- B. Check the clearance to ensure that no scraps have been left to short circuit the vibration isolators.
- C. Provide a minimum of 4 inches between isolated equipment and the walls, ceiling, floors, columns and any other equipment not installed on vibration isolators.
- D. Piping, ductwork, conduit or mechanical equipment shall not be hung from or supported on other equipment, pipes, or ductwork installed on vibration isolators.
- E. Equipment connected to water or other fluid piping shall be erected on isolators or isolated foundations at correct operating heights prior to connection of piping. Equipment should be blocked-up with temporary shims to final operating height. When the system is assembled and fluid is added, the isolators shall be adjusted to allow removal of the shims.
- F. All mechanical equipment not specifically identified in this specification that contains rotating or vibration elements shall be installed on Type DDNM neoprene isolators as appropriate. Provide supporting steel structure between isolators and equipment if isolator does not readily connect to equipment.

**3.2 BASE MOUNTED PUMPS**

- A. Base mounted pumps shall be bolted and grouted to prefabricated, Type CIB reinforced concrete inertia bases, which shall weigh not less than 1.5 times the combined weight of the fluid filled pump(s) and motor(s). The minimum thickness of the concrete base shall be 6 inches. Any rigid pipe elbows at the pump suction and discharge connections shall be supported from the inertia base. The inertia base shall be supported on at least four (4) Type SPNM isolators.
- B. All pipe connections to pumps shall be with a flexible connector.

**3.3 FAN ISOLATION - GENERAL**

- A. Fans and air handlers shall be mounted on vibration isolators as described herein.
- B. Fans and air handling units shall be leveled with the fans operating before the flexible connectors are attached.
- C. All fan bases and isolators shall be sized so that thrust restraints (which would act against turning moment caused by static pressure) are not required.
- D. Fan plenums, air mixing plenums and package air handler plenums shall be installed on a solid base with a continuous Type WP neoprene isolator at the entire perimeter of the base.
- E. Coils and filters in built-up air handling units shall be supported on Type MWP neoprene pads. Any remaining gap beneath the coil/filter frame shall be sealed airtight with approved non-hardening acoustical sealant.
- F. Fans or air handling units and their respective isolators shall be directly mounted on primary steel. Units and isolators shall not be mounted on resiliently supported steel cabinets or plenum floors or other flexible construction.

**3.4 FLOOR MOUNTED FANS AND AIR HANDLING UNITS**

- A. Each floor mounted fan and fans within package air handling units shall be mounted on a Type CIB base with Type SPNM isolators.
- B. Drain pipes for air handling units shall be supported only from the isolated air handling unit frame. The condensate shall drip into a funnel that is supported from the floor or floor drain.

**3.5 ROOF MOUNTED FANS**

- A. Roof mounted fans or roof top units shall be installed on a curb mounted base.

**3.6 EXPANSION TANKS AND HEAT EXCHANGERS**

- A. Each floor mounted unit shall be supported on Type MWP neoprene sandwich pads.
- B. Each suspended unit shall be supported on Type DDNH hangers.

- C. Where piping on isolators is connected to the units the connections shall be made with a neoprene flexible connector.

**3.7 PIPES CONNECTED TO EQUIPMENT ON SPRING ISOLATORS**

- A. Pipes connected to equipment installed on spring vibration isolators shall be suspended, supported and guided by means of appropriate spring vibration isolators. This includes hot water heating, steam and chilled water, etc. Pipes shall be supported by Type SPNM isolators or hung from the structure on type SPNH isolators.
- B. The first two hangers both upstream and downstream of equipment shall be spring isolators having a static deflection of 1 inch.

**3.8 PIPES CONNECTED TO EQUIPMENT ON NEOPRENE ISOLATORS**

- A. Piping in the Mechanical Equipment Room that is connected only to machinery installed on neoprene isolators shall be either supported from the floor on Type DDNM mounts or suspended from the structure on Type DDNH hangers.

**3.9 PIPES WITH MULTIPLE CONNECTIONS**

- A. Where a pipe run connects multiple items of equipment in the Mechanical Room the pipe isolators for the entire run shall be chosen to suit the connected equipment of greatest static deflection.

**3.10 FLEXIBLE CONNECTORS**

- A. A neoprene flexible hose shall be installed to connect a pipe on isolators to a piece of equipment on isolators of less static deflection than the pipe.

**3.11 ELECTRICAL CONNECTION**

- A. All wiring connections to mechanical equipment on vibration isolators (either spring or neoprene type) shall be made with a minimum 36 inch long flexible conduit in a 360° loop. Coordinate wiring connections with the Electrical Installer.

**3.12 INSPECTION**

- A. Supplier shall inspect and approve the installation of the vibration isolators and shall submit a report to the Owner which verifies that all of the isolation equipment has been properly installed and that the installation is in full conformance with the specification. The report shall record the vibration isolator identification and model or type.
- B. For isolators containing steel springs the report shall also record the size and uncompressed height, design static deflection and measured static deflection of the isolators provided.

5. Marking Services Incorporated

**PART 2 - PRODUCTS**

**2.1 PIPE MARKERS:**

- A. Manufacturer's standard, pre-printed, color-coded, plastic pipe markers, complying with ANSI A13.1, and requirements below. Self-adhesive markers are not acceptable.
- B. For pipe diameter (with insulation) less than 6": full-band, semi-rigid, snap-on pipe markers, extending 360 degrees around pipe.

***SPEC EDITOR: NYLON TIE WRAPS BANDS BEING ASSESSED - FORWARD ANY FEEDBACK TO THE SPEC TEAM.***

- C. For pipe diameter (with insulation) of 6" and larger: full-band or strip-type pipe markers, but not narrower than 3 times letter height. Fasten with nylon or stainless steel bands for pipe 6" through 12". Fastened with stainless steel bands for piping over 12".
- D. Lettering: Standard nomenclature which best describes piping system, as selected by Engineer (in cases of variance from table below).
- E. Arrows: Pipe marker arrows indicating direction of flow, either integrally with piping system lettering, or as a separate marker.
- F. Use the following color coding and nomenclature for pipe markers:

**SPEC EDITOR: EDIT THIS LIST TO COVER ONLY SPECIFIED SYSTEMS.**  
**COORDINATE NOMENCLATURE WITH SYMBOLS SHEET AND PLANS.**

Plumbing and Waste Pipe System Labels	Drawing I.D. (For Reference Only)	Letter and Label Color
Acid Vent Yellow	AV	Black on Yellow
Acid Waste Yellow	AW	Black on Yellow
Brine	BR	White on Green
Cold Water, Potable	CW	White on Green
Compressed Air	A	White on Blue
Deionized Water	DI	White on Green

## 2.2 DUCT MARKERS:

- A. Plastic, adhesive type color-coded duct markers, with arrow indicating direction of flow, and with fan system identified. Conform to the following color code and nomenclature:

**SPEC EDITOR: EDIT THIS LIST TO COVER ONLY SPECIFIED SYSTEMS**

Service/ Duct Label	Drawing I.D. (For Reference Only)	Letter and Label Color
Supply Air (Equip.#)	SA (Eq.#)	White on Green
Return Air (Equip.#)	RA (Eq.#)	White on Green

Exhaust Air (Equip.#)	EA (Eq.#)	Black	on
Yellow			
Outdoor Air (Equip.#)	OA (Eq.#)	White on Green	
Fume Hood Exhaust (Equip.#)	FHEA (Eq.#)	Black	on
Yellow			

- B. Provide plastic adhesive duct access door markers indicating item and associated equipment accessed, and appropriate safety and procedural information. (eg. Fire Damper AHU-1)

**2.3 EQUIPMENT MARKERS:**

- A. Engraved plastic equipment markers for all scheduled equipment, (eg., chillers, pumps, air handling units, heat exchangers, and fans). Indicate drawing I.D., and service, (eg., EF-1 serving FH No.3 in Rm. 2035, or P-7 Primary Chilled Water), nominal capacity (tons, cfm or gpm). Scale marker and lettering to equipment labeled. Typical nomenclature:

**SPEC EDITOR: EDIT THIS LIST TO COVER ONLY SPECIFIED SYSTEMS**

Drawing I.D. & Equip. Label	Equipment
ACC	Air Cooled Condenser
AHU	Air Handling Unit
CH	Chiller
CHWP	Chilled Water Pump
CP	Condensate Pump
CT	Cooling Tower
CUH	Cabinet Unit Heater
CWP	Condenser Water Pump
EWH	Electric Water Heater
FHEF	Fume Hood Exhaust Fan
FP	Fire Pump
GEF	General Exhaust Fan
GWH	Gas-fired Water Heater
HTX	Heat Exchanger
HWB	Hot Water Boiler
HWHP	Hot Water Heating Pump
P	Pump (other than those listed)
RF	Return Fan
SB	Steam Boiler
SF	Supply Fan
TEC	Terminal Equipment Controller
UH	Unit Heater
VAV	Variable Air Volume Box
VP	Vacuum Pump

**2.4 IDENTIFICATION ACCESSORIES:**

- A. Underground Pipe Markers: Manufacturer's standard, permanent, bright-colored plastic tape, intended for direct-burial service, 6" wide x 4 mils thick, continuously printed to indicate service of buried pipe.

**SPEC EDITOR: VALVE TAGS ARE TYPICALLY NOT REQUIRED FOR RENOVATION PROJECTS. CONSIDER VALVE TAGS ONLY FOR NEW BUILDINGS, AND GUT RENOVATION PROJECTS.**

- B. Valve Tags: 1-1/2" diameter brass valve tags with 1/4" stamp-engraved designations with piping system abbreviation and sequenced valve numbers. Provide solid brass chain, or solid brass S-hooks of the size and type required for proper attachment of tags to valves.

**SPEC EDITOR: COORDINATE ARCHITECTURAL ACCESS PANEL LABELING WITH ARCHITECT, ESPECIALLY IN AESTHETICALLY SENSITIVE AREAS..**

- C. Architectural Access Panel Markers: 1/16" thick engraved plastic laminate, with nomenclature corresponding to items for which access door was installed (eg. VAV-7, TEC-7 and HWH control valve V-23).

### **PART 3 - EXECUTION**

#### **3.1 GENERAL INSTALLATION REQUIREMENTS:**

- A. Coordination: Install identification after insulation is applied. Protect identification from paint, or apply after painting is complete. Install above ceiling identification prior to acoustical ceilings.
- B. Attachment: Securely attach all mechanical identification to associated pipe, duct, panels and equipment. Locate identification to be readily visible.

#### **3.2 PIPING SYSTEM IDENTIFICATION:**

- A. Install pipe markers on all piping systems in spaces where piping is exposed, concealed only by removable ceiling system, and where accessible at manholes and access panels.
- B. Locate pipe markers near points where piping continues into shafts, underground, floor or wall; at 25' spacing along exposed runs (15' in congested areas), at valves, equipment and control devices, and where there could be question of flow pattern.
- C. Install marker over pipe insulation segment on hot non-insulated pipes.

#### **3.3 DUCTWORK IDENTIFICATION:**

- A. Install duct markers on all supply, return, exhaust, intake and relief ductwork where duct is exposed, concealed only by removable ceiling system, and where accessible at access panels.
- B. Locate duct markers near points where ductwork originates or continues into shafts, floor or wall, and at 25' spacing along exposed runs.
- C. Install duct access door markers on all access doors.

**3.4 EQUIPMENT IDENTIFICATION:**

- A. Provide equipment markers on scheduled equipment.

**3.5 UNDERGROUND PIPING IDENTIFICATION:**

- A. During back-filling, install continuous underground pipe markers over all buried piping, 6" to 8" below finished grade. Where multiple pipes are in a trench up to 16" wide, install single line marker. For tile fields and similar installations, mark only edge pipe lines of field.

**3.6 VALVE IDENTIFICATION:**

- A. Install valve tags on all new valves for the following piping systems, except for check valves, valves within factory-fabricated equipment, plumbing fixture faucets, hose bibs, and terminal unit valves:

**SPEC EDITOR: SPECIFY SYSTEMS TO RECEIVE VALVE TAGS**

- 1.
- B. List each tagged valve in valve schedule for each piping system. Include a copy of the valve tag schedule in the Operation and Maintenance manuals, and mount a laminated copy as directed by the University.
- C. Where building has previously tagged valves, coordinate numbering with old schedule, and note changes made to previously tagged valves on new schedule.

**3.7 ARCHITECTURAL ACCESS PANEL IDENTIFICATION:**

- A. Install access panel markers on inside and/or outside of access doors, as directed by the University.

SECTION 220719 - MECHANICAL SYSTEMS INSULATION

**END OF CONTENTS TABLE**

**DIVISION 22 PLUMBING**  
**SECTION 220719 - MECHANICAL SYSTEMS INSULATION**

**REVISIONS:**

**8-1-99: CONTENT APPROVED AS NEW MASTER**

**8-11-99: REVISED TO VBS.DOT TEMPLATE**

**1-7-2011: REVISED TO COMPLY WITH ASHRAE 90.1-2007.**

**SPEC EDITOR: MANUFACTURERS WERE UPDATED 6/97 W/ ASSISTANCE FROM ARMSTRONG. HOWEVER, MODEL NUMBERS SEEM TO CHANGE FREQUENTLY IN THE INSULATION INDUSTRY, REVIEW CAREFULLY AGAINST CURRENT CATALOG AND NOTIFY THE SPEC TEAM OF DISCREPANCIES.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**SPEC EDITOR: EDIT THE FOLLOWING AS REQUIRED**

**1.2 SCOPE OF WORK:**

- A. Insulate piping, ductwork and equipment unless indicated as not to be insulated in paragraph 1.2.
- B. Reinsulate items from which asbestos insulation was removed.
- C. Insulate connection points between new and existing items.
- D. Repair or replace insulation damaged during construction.

**1.3 ITEMS NOT TO BE INSULATED:**

**SPEC EDITOR: EDIT LIST BELOW TO SUIT PROJECT**

- A. Equipment: hot water pumps, steam condensate pumps, feed water pump, water softener shell, vacuum pumps, hot water shot feeders, hot water expansion tanks, factory insulated equipment.
- B. In hot piping: Unions, flexible connectors, control valves 2" and smaller, safety valves, discharge vent piping, vacuum breakers, thermostatic vent valves, and steam traps 3/4 inch and smaller.
- C. Other piping: waste and vent, compressed air, natural gas, lab vacuum, refrigerant liquid lines, vertical portion of rain water conductors.
- D. Ductwork: indoor return air ductwork in conditioned areas, exhaust air ductwork.

**SPEC EDITOR: REVISE 1.3 AS REQUIRED; INCLUDE ITEMS CONTAINING ASBESTOS IN DIVISION 02 OR ON PLANS.**

**1.4 ASBESTOS ABATEMENT:**

- A. All asbestos within the contract bounds shall be removed per the requirements described in Division 02. Refer to drawings for items containing asbestos insulation. Reinsulate all piping, ductwork and equipment to remain from which asbestos has been removed.

**PART 2 - PRODUCTS**

**2.1 GENERAL INSULATION DEFINITIONS:**

- A. Insulation thermal conductivity: No greater than value listed, in Btu-inch/hour-square foot-degrees F at 75 degrees F mean temperature.
- B. Water Vapor Permeance (ASTM E97 or E96, Procedure A): No more than value listed, in perms. Water vapor permeability (ASTM C355): No greater than value listed, in perm-inch.
- C. Puncture resistance (ASTM D781): No less than value listed.
- D. Flame spread classification (ASTM E84, NFPA 255): No greater than value listed. Smoke density classification (ASTM E84, NFPA 255): No greater than value listed. Composite listing includes insulation, jacket, and adhesive.
- E. Density no less than value listed, in pounds per cubic foot.

**2.2 PIPING INSULATION THICKNESS TABLE:**

- A. Minimum insulation thickness in inches, shall comply with the table below for the associated piping system and pipe sizes. Values are based on an R value of 4 per inch thickness. Overall conductance shall comply with ASHRAE 90.

**SPEC EDITOR: INSULATION THICKNESSES GENERALLY CORRESPONDS TO ASHRAE TABLE.**

Piping System Fluid	Temp. Range Deg. F	Thickness in Inches For Pipe Sizes Through Size Listed					
		1"	2"	4"	6"	8"	10" & above
MPS (60#) (above to include MPS condensate)	251-305	2.0	3.0	3.0	3.0	3.0	3.0
LPS (15#) (above to include LPS condensate)	201-250	1.5	2.0	2.0	2.0	2.0	2.0
Hot Water (above includes domestic and heating)	110-200	1.0	1.0	1.5	1.5	1.5	1.5
Cold Water	Any	0.5	0.5	0.5	0.5	0.5	0.5
Storm	Any	0.5	0.5	0.5	0.5	0.5	0.5
Chilled W.	Any	0.5	1.0	1.0	1.0	1.0	1.5
Ref. Suct. Energy	Any	1.0	1.5	1.5	N/A	N/A	N/A
Recovery	Any	1.0	1.0	1.0	1.0	1.0	1.0

Free Cooling									
Cond. Water	Any	1.0	1.0	1.0	1.0	1.0	1.0		

- B. For heat traced piping use insulation ¼" diameter larger to allow room for installation of cable.

**2.3 PIPING INSULATION - INDOOR (FIBERGLASS):**

- A. Insulate with fiberglass insulation with factory-applied vapor barrier jacket with self-sealing laps. ASTM C547 Class 1 insulation, conductivity of 0.26. Vapor barrier jacket: laminated white kraft paper, aluminum foil, glass fiber reinforcement, permeance of 0.2 perms, and puncture resistance of 50 units. Composite flame spread/ smoke density of 25/50. Apply insulation in thickness listed in Insulation Thickness Table listed in paragraph 2.2.

Manufacturers: Johns-Manville (Micro-Lok 650 AP-T), Knauf (ASJ-SS1 Pipe Insulation), Owens/Corning (Fiberglass ASJ/SSL-II)

- B. At fittings and flanges, insulate with wrapped fiberglass insulation of same thickness as adjacent pipe, and cover with pre-molded PVC jackets. Seal edge of jacket with self-sealing vapor barrier tape.

Jacket Manufacturer: Zeston, Ceeco, Proto

- C. For valves, strainers, suction diffusers and other accessories that require maintenance: In hot piping, insulate similar to fittings and flanges. In cold piping, insulate with closed cell elastomeric insulation, installed to be removable for maintenance access.

- D. Wherever necessary to seal insulation and provide a complete and continuous vapor barrier, apply two coats of insulating mastic  
Manufacturers: Celotex - MW-1 Insulating and Finishing Cement; Pabco - Pabcote One Coat Insulating Cement.

**2.4 PIPING INSULATION - OUTDOOR (FIBERGLASS):**

**SPEC EDITOR: THIS SECTION SHOULD BE USED FOR VERY HOT PIPING ONLY (SURFACE TEMPERATURE ABOVE 200F)**

- A. Insulate steam and condensate piping systems outside buildings with the materials and methods listed for "Piping Insulation - Indoor (Fiberglass)." Apply insulation 1/2" thicker than listed in table, and weatherproof the insulation with PVC insulation jacketing: Manufacturers: Zeston, Ceeco, Proto

**2.5 PIPING INSULATION (CLOSED CELL ELASTOMERIC):**

**SPEC EDITOR: INDOOR PIPE INSULATION MAY BE SPECIFIED IN ONE OF THE FOLLOWING WAYS:**

- A. FIBERGLASS ONLY (USE PARAGRAPH 2.3)
- B. FIBERGLASS OR ELASTOMERIC (USE PARAGRAPH 2.3 AND 2.5, WITH CONTRACTOR'S OPTION PARAGRAPH)
- C. ELASTOMERIC ONLY (USE 2.5 WITHOUT CONTRACTOR OPTION)

**THESE PRODUCTS ARE SUITABLE FOR TEMPERATURES OF APPROXIMATELY 0 TO 180F.**

**SPEC EDITOR: CHOOSE ONE OF THE FOLLOWING "A." PARAGRAPHS:**

- A. As a Contractor's Option to paragraph 2.3, insulate hot water, cold water, chilled water, refrigerant, piping systems with flexible closed cell elastomeric or Polyolefin pipe insulation, ASTM C534, conductivity of 0.30, water vapor permeability of 0.20. In thickness 1" and less, composite flame spread/ smoke density of 25/50.. Manufacturers: Armstrong - AP Armaflex; Rubatex - R-180-FS, IMCOA.
- B. Insulate hot water, cold water, chilled water, and refrigerant piping systems with flexible closed cell elastomeric or Polyolefin pipe insulation, ASTM C534, conductivity of 0.30, water vapor permeability of 0.20. In thickness 1" and less, composite flame spread/ smoke density of 25/50. Manufacturers: Armstrong - AP Armaflex; Rubatex - R-180-FS, IMCOA.
  - 1. Apply insulation in thickness listed in table in paragraph 2.2. Seal all butt joints and seams by joining cut edges with adhesive as supplied by the insulation manufacturer.
  - 2. For exterior piping, coat insulation with glass mesh and two finish coats compatible with insulation. Manufacturer: Armstrong WB.

**2.6 PIPING INSULATION SPECIALTIES:**

**SPEC EDITOR: ALUMINUM JACKETS ARE NOT GENERALLY RECOMMENDED, BECAUSE OF DAMAGE AND FAILURES WE'VE EXPERIENCED LATELY.**

- A. Expansion Joints Insulation: Expansion joints shall be insulated with prefabricated insulation blankets, installed in a manner to allow for the repacking of the joints without removing blanket. Hold blankets in place with permanently attached Velcro fasteners.
- B. Aluminum Jackets: Where indicated on drawings, provide 0.016" thick alloy 3003 aluminum jacketing with longitudinal lock seam and butt strap circumferential joints. Manufacturers: Childers-Lock-on and Pabco-Surfeit.
- C. Removable Insulation Jackets: Where indicated on drawings, provide removable insulation jackets with fiberglass insulation, flexible fabric jacket and velcro fasteners. Manufacturer: ESI - Q Master; Insulation Technologies Inc.

**2.7 DUCTWORK INSULATION - INDOOR, EXPOSED:**

**SPEC EDITOR: RIGID INSULATION IS AVAILABLE IN DENSITIES OF 1.6, 2.25, 3.0, 4.25 AND 6.0. R VALUE AND COST INCREASE WITH DENSITY. INSULATION THICKNESS WAS INCREASED TO IMPROVE FIT OVER FLANGED CONNECTIONS, MAY BE REDUCED TO 1" FOR SLIP AND DRIVE DUCT.**

- A. In mechanical equipment rooms and all other areas where visible without removing ceilings or opening access panels, insulate ductwork with 1-1/2" thick rigid, fiberglass insulation board with factory-applied vapor barrier. Insulation: ASTM C612 Class 2, conductivity of 0.26, density of 3.0. Vapor barrier: laminated white kraft paper, aluminum foil, glass fiber reinforcement, permeance of 0.02, and puncture resistance of 50 units. Composite flame spread/ smoke density of 25/50.
- B. Manufacturers: CertainTeed - IB600 ASJ Industrial Insulation Board; Schuller - Type 817 Ap Spin-Glas; Knauf - PCF-ASJ Insulation Board; Owens/Corning - Type 705 ASJ-25 Fiberglas Insulation

**2.8 DUCTWORK INSULATION - INDOOR, CONCEALED:**

**SPEC EDITOR: BLANKET INSULATION IS AVAILABLE IN DENSITIES 0.75, 1.0 AND 1.5. R VALUE AND COST INCREASE WITH DENSITY.**

- A. In ceiling spaces, building shafts, and other locations where not visible, insulate ductwork with 1-1/2" thick, blanket-type, fiberglass insulation with factory-applied vapor barrier, and 2" stapling and taping flange along one edge. Insulation: ASTM C553, density of 0.75, conductivity of 0.32. Vapor barrier: laminated white kraft paper, aluminum foil, glass fiber reinforcement, permeance of 0.02, and puncture resistance of 50 units. Composite flame spread/ smoke density of 25/50.
- B. Manufacturers: CertainTeed - Type 75 FSK Standard Duct Wrap; Schuller - R Series Microlite with FSKL; Knauf - Duct Wrap with Multi-Purpose FSK; Owens/Corning - All Service Faced Duct Wrap

**SPEC EDITOR: SCHULLER IS IN QUESTION AS A MANUFACTURER, AS IS JOHNS MANVILLE**

**2.9 DUCTWORK INSULATION - OUTDOOR:**

**SPEC EDITOR: PLANT HAS BEEN EXPERIMENTING WITH USING EPDM ROOFING AS A WRAPPING MATERIAL FOR EXTERIOR DUCTWORK. PRELIMINARY RESULTS LOOK PROMISING. CONSIDER ADDING PLANT WORK ORDER TO BUDGET TO COVER THIS.**

- A. Insulate exterior ductwork with 2.0" thick flexible closed cell elastomeric insulation, ASTM C534, conductivity of 0.30, water vapor permeability of 0.20. Composite flame spread/ smoke density of 25/50..
  - 1. Seal all butt joints and seams by joining cut edges with adhesive as supplied by the insulation manufacturer.
  - 2. Wrap insulation with glass mesh and coat with two finish coats. Manufacturer: Armstrong WB.
  - 3. Taper insulation to prevent ponding.
  - 4. Manufacturers: Armstrong - AP Armaflex; Rubatex - R-180-FS.

**2.10 HOT EQUIPMENT INSULATION:**

- A. Insulate all equipment with surface temperature over 100F, using rigid fiberglass insulation board. Insulation: ASTM C612 Class 2, conductivity of 0.26, density of 6.0. Vapor barrier: laminated white kraft paper, aluminum foil, glass fiber reinforcement, permeance of 0.2, and puncture resistance of 50 units. Composite flame spread/ smoke density of 25/50.
- B. Manufacturers: CertainTeed - IB600 ASJ Industrial Insulation Board; Schuller - Type 817 Ap Spin-Glas; Knauf - 6PCF-ASJ Insulation Board; Owens/Corning - Type 705 ASJ-25 Fiberglas Insulation
- C. Apply insulation in thickness as follows: 1-1/2" for operating temperature up to 150F, 2" for operating temperature of 150F to 200F, 3" for operating temperature over 200F.
- D. Cut, score, or miter insulation to fit contour of equipment and secure with galvanized steel bands or wire, or weld pins. Stagger joints where possible and fill voids with insulating cement. Apply 1" galvanized wire mesh over entire exterior surface and finish with two coats of insulating cement toweled to a hard finish.

**2.11 COLD EQUIPMENT INSULATION:**

- A. Insulate all equipment with surface temperature below 60F with 1" thick, flexible, closed cell, elastomeric foam insulation sheet. Manufacturers: Armstrong - AP Armaflex Sheet Insulation; Rubatex - R-1800-FS Insul-Sheet.
- B. Insulation: ASTM C534, conductivity of 0.30, permeance of 0.20, composite flame spread/ smoke density of 25/50..
- C. Apply elastomeric foam insulation sheet with contact adhesive. Manufacturers: Armstrong - 520 Adhesive; Rubatex - 373 Adhesive. Seal all butt joints with adhesive.

**PART 3 - EXECUTION**

**3.1 INSULATION INSTALLATION**

- A. All systems shall be tested and approved before being insulated.
- B. The insulation shall be applied over clean, dry surface.
- C. Insulate all valves, flanges, couplings and fittings. Valve and flange insulation shall be removable and reinstallable.
- D. Full lengths of insulation shall be used except at end of straight sections and as required to accommodate fittings. Insulation shall be applied with the joints tightly fitted together. Cracks or voids shall be filled with insulation. Manufacturer's recommended installation procedures shall be strictly adhered to.
- E. The edges and seams at all visible locations shall be finished in a neat and workmanlike manner.

- F. All exposed ductwork insulation shall be applied with edges butted. Insulation shall be impaled over stick clips or pins welded to the duct, and secured with speed clips. Spacing of pins shall be as required to hold insulation firmly in place but not less than one pin per square foot. All joints and penetrations of the vapor barrier shall be sealed with a 3" wide strip of the same material, supplied with vapor barrier adhesive to both surfaces as recommended by adhesive manufacturers.
- G. Blanket insulation shall be tightly sealed at all joints and seams. Insulation shall be cut longer than ductwork perimeter to allow maximum thickness on all areas and avoid excessive compression. All joints shall be over lapped at least 2" and stapled in place. The stapled seams shall be sealed with a minimum 3" wide pressure sensitive tape designed for use with the duct insulation. All breaks in the vapor barrier facing shall also be sealed with the tape. The underside of ductwork 18" or greater in width, and vertical surfaces 48" or greater shall have the insulation additionally secured with mechanical fasteners and speed clips spaced approximately 12" on center. The protruding ends of the fasteners shall be cut off flush after the speed clips are installed, and then sealed with the same tape as specified above.
- H. Finished installation shall provide a continuous and effective vapor barrier.
- I. Refer to details on drawings.

SPEC EDITOR: INSULATION SHIELDS AND INSULATION INSERTS (PIPE SHIELDS INC. ETC.) ARE COVERED BY UM STANDARD DETAIL.

**2014-DECEMBER: ADD GEORGE FISCHER AS APPROVED FOR PP PRESSURE PIPING, ADD MATERIAL REQUIREMENTS FOR STORM AND SANITARY PUMP DISCHARGE PIPING. ADD GENERAL REQUIREMENTS FOR PLASTIC PIPE HANGERS/SUPPORTS. D. KARLE FOR P & FP MTT.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.
- B. Related Sections
  - 1. Section 220500 - Common Work Results for Mechanical
  - 2. Section 231123 - Facility Natural-Gas Piping
  - 3. Section 232300 - Refrigerant Piping

**1.2 SUMMARY**

- A. This Section specifies piping materials and installation methods for the piping systems listed in Part 2 and includes joining materials, piping specialties, and basic piping installation instructions.

**1.3 SUBMITTALS**

- A. Product Data: Include manufacturer, catalog illustrations, model, rated capacities, performance, dimensions, component sizes, rough-in requirements, materials of construction, and operating and maintenance clearance requirements. Additionally include:

1. Provide a piping material schedule that indicates, by service, pipe material, pipe manufacturer, fitting type and manufacturer, joint type and manufacturer.
2. Solder and brazing material data sheets.
3. Grooved fittings, couplings, and accessories data sheets.
4. Data sheets for all products listed in this section including flanges, gaskets, unions, hangers, di-electric protection method, thermal hanger shield inserts, di-electric fittings, flexible metal hose, flexible connectors, and seal sleeve systems.
5. For underground pressurized and steam condensate piping systems, provide a simplified drawing of the piping system identifying pipe depth and slope, location and type of each joint and restraint, valve, and similar accessories, and dimensions of any expansion loops.

**QUALITY ASSURANCE: CENTRAL POWER PLANT AND TUNNEL PROJECTS: REVIEW WITH U-M DESIGN MANAGER IF PIPE, FITTINGS AND FLANGES SHOULD BE CERTIFIED AS SOURCED FROM DOMESTIC SUPPLIERS, GERMANY, ITALY, FRANCE, OR GREAT BRITAIN.**

**1.4 QUALITY ASSURANCE:**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  1. All piping, (including vacuum piping), unless noted otherwise, shall comply with ANSI Standard B31.9 - Building Service Piping.
  2. All steam piping above 15 psig, and all steam condensate piping shall comply with ANSI Standard B31.1 - Power Piping.
  3. National Sanitation Foundation NSF/ANSI-61, including Annex G (listed as  $\leq 0.25\%$  weighted average lead content)(and/or NSF/ANSI-372)and Annex F. Applies to any item in contact with domestic (potable) water.
  4. U.S Safe Drinking Water Act (any item in contact with domestic (potable) water)
  5. NFPA 54 - National Fuel Gas Code
  6. AWWA C600 Standard for Installation of Ductile-Iron Water Mains and their Appurtances
  7. AWWA C606 Grooved and Shouldered Joints.
  8. Mill certifications indicating country of origin and compliance to ASTM/ANSI/NSF and other required compliance standards verified by independent third party based in the United States, shall be promptly provided whenever requested.

**1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Store piping materials and accessories raised off the floor or ground on pallets and protected with coverings to prevent damage or contamination due to weather and construction activities. Provide temporary protective caps on pipe ends. Maintain caps installed at all times until just prior to assembly, and recap open pipe ends at the conclusion of each work day. Store in areas that prevent damage due to freezing and extreme temperatures or sunlight. Arrange coverings to provide air circulation to avoid damage from condensation or chemical build-up. Protect from damage, dirt and debris at all times.

**1.6 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 GENERAL PIPING REQUIREMENTS:**

- A. All piping materials shall be compatible for temperature, pressure and service.
- B. All wetted seals shall be made from materials that are immune from chloramine degradation.
- C. Provide long radius elbows and returns on welded steel pipe.

*GROOVED JOINTS ARE ONLY PERMITTED IN ACCESSIBLE LOCATIONS. TYPICALLY MECHANICAL ROOMS AND ABOVE LAY-IN ACOUSTIC CEILING ARE CONSIDERED ACCESSIBLE. SHAFTS AND AREAS ABOVE DRYWALL CEILINGS ARE EXAMPLES OF INACCESSIBLE LOCATIONS. REVISE THE PARAGRAPH BELOW TO INDICATE THE INACCESSIBLE LOCATIONS ON YOUR PROJECT.*

- D. Grooved Joints:
  - 1. Where grooved joints are indicated as permitted, such joints are only permitted in accessible locations. The following locations are considered inaccessible: shafts, above dry wall ceilings.

**2.2 PLUMBING PIPING SYSTEMS:**

*PROJECTS CONSIDERING THE USE GROOVED JOINTS OR COPPER PRESS FITTINGS (E.G. "PROGRESS") SHALL OBTAIN APPROVAL FIRST FROM THE U-M DESIGN MANAGER AND THE PLUMBING/FIRE PROTECTION MECH TECH TEAM. IF GROOVED JOINTS OR COPPER PRESS FITTINGS ARE NOT BEING USED, REMOVE ALL ASSOCIATED REFERENCES TO THESE ITEMS, BELOW. GROOVED AND PRESS JOINTS ARE PROHIBITED ON DOMESTIC HOT WATER/HOT WATER RETURN IN BUILDINGS (OK FOR TUNNELS) DUE TO U-M'S PAST EXPERIENCE WITH LEAKAGE PROBLEMS.*

*PVC PIPING MAY NOT BE USED IN RETURN PLENUMS OR SUPPLY DUCTS, OR IN BUILDING OVER 3 FLOORS HIGH.*

A. Domestic Cold Water, Hot Water and Hot Water Return - Above Ground (including non-potable):

1. For piping through 6":
  - a. Pipe: Type L Copper, hard drawn, ASTM B88
  - b. Fittings: Wrought Copper, ANSI B16.22
  - c. Joints: Soldered through 2"; Brazed for 2-1/2" through 6"

**ONLY USE THE CONTRACTORS OPTIONS BELOW WITH APPROVAL. SEE ARTICLE 2.2 SPEC EDITORS NOTE, ABOVE.**

Contractor Options:

- d. For piping 2-1/2" through 6", excluding inaccessible locations, Grooved Joints - for cold water may be used (not allowed on hot or hot return).
- e. For piping through 4", copper press to connect fittings for cold water may be used (not allowed on hot or hot return).

**U-M'S EXPERIENCE WITH GALVANIZED PIPE HAS NOT BEEN GOOD, THEREFORE COPPER OR STAINLESS STEEL IS PREFERRED AND SPECIFIED FOR 8"-12" PIPE. IF LARGER DIAMETER IS REQUIRED, DESIGNER MUST REVISE SPECIFICATION (BELOW, AND THE FITTINGS SECTION, MUCH FARTHER BELOW) BECAUSE SS SCH. 10 GROOVED PIPING WORKING PRESSURES VARY CONSIDERABLY BY SS TYPE (304 OR 316) AND COUPLING/FITTING MFR. ANOTHER ALTERNATIVE IS POLYPROPYLENE ("AQUATHERM").**

2. For cold water piping 8" through 12":
  - a. Pipe:
    - 1) Type L Copper, hard drawn, ASTM B88 or
    - 2) Sch. 10S Type 304L ASTM A312 seamless stainless steel.
  - b. Fittings:
    - 1) For Copper Pipe: Wrought Copper, ANSI B16.22.
    - 2) For Stainless Steel Pipe:
      - a) Type 304L or 316L ASTM A312 stainless steel.
      - b) ASTM A403 Grade WP Class S or W, ANSI B16.9.
      - c) Flanges: ASTM A182, weld neck, with ASTM A193/ASTM A194 bolts/nuts.
  - c. Joints:
    - 1) Copper Pipe: Brazed. May be grooved where accessible, up to 8" maximum.
    - 2) Stainless Steel Pipe: Welded, or grooved where accessible. Weld per ASTM A312.
3. For tunnel applications:
  - a. Piping: Type L copper, hard drawn, ASTM B88.
  - b. Fittings: Wrought Copper, ANSI B16.22
  - c. Joints: Soldered through 2"; Brazed for 2-1/2" through 6". Piping 2-1/2" through 6" may be grooved joints.

B. Domestic Cold Water - Under Ground(including non-potable):

1. For piping through 4"  
Pipe: Type K Copper, hard drawn, ASTM B88  
Fittings: Wrought Copper, ANSI B16.22  
Joints: Brazed.
2. For piping 5" and larger:  
Pipe: Ductile Iron, AWWA C115 or AWWA C151 with C104 cement mortar lining, polyethylene encased per ANSI/AWWA C105/A21.5.

Fittings: AWWA C110 or AWWA C153, 150 psi rating with C104 cement mortar lining.  
Joints: AWWA C111 rubber gaskets.

**SPEC EDITOR: INVESTIGATE SPECIFIC R.O. AND DEIONIZED WATER REQUIREMENTS WITH CLIENT AND EDIT THE BELOW TWO PARAGRAPHS ACCORDINGLY. CONFIRM NEED FOR HEAT FUSION JOINTS, AND SUITABILITY FOR SCREWED JOINTS. FOR D.I. WATER AT U-M, RESEARCH LABS NORMALLY SHOULD USE POLYPROPYLENE PIPE WITH FUSION JOINTS. ULTRA PURE SYSTEMS SUCH AS FOR SEMI-CONDUCTOR FABRICATION ARE TYPICALLY RECOMMENDED TO BE PVDF PIPE WITH FUSION JOINTS.**

C. Reverse Osmosis Water - Above Ground:

1. Pipe: CPVC, Schedule 80, ASTM D2846  
Fittings: ASTM D2846  
Joints: Screwed or Solvent Welded

D. Deionized Water - Above Ground:

1. Pipe: Unpigmented polypropylene, Schedule 80, ASTM D4101, Type 1.  
Manufacturer: Orion, NIBCO, Georg Fischer PPro-Seal.  
Fittings: ASTM D4101  
Joints: Heat Fusion Welded. "Riontite" mechanical Joints.

E. Lab Vacuum - Above Ground:

1. For piping through 4":  
Pipe: Type L Copper, hard drawn, ASTM B88  
Fittings: Wrought Copper, ANSI B16.22  
Joints: Soldered through 2"; Brazed for 2-1/2" through 4"

**FOR COMPRESSED AIR PIPING ABOVE 6", PRESENT MATERIAL ALTERNATIVES TO THE U-M DESIGN MANAGER FOR APPROVAL.**

F. Compressed Air - Above Ground:

1. For piping through 6":  
Pipe: Type L Copper, hard drawn, ASTM B88  
Fittings: Wrought Copper, ANSI B16.22  
Joints: Soldered through 2"; Brazed for 2-1/2" through 6"

**THE FOLLOWING IS AN ACCEPTABLE ALTERNATE SPECIFICATION FOR COMPRESSED AIR IN HIGH HAZARD AREAS, WHERE PIPING MAY BE SUBJECTED TO PHYSICAL ABUSE. IF USED, UNHIDE TEXT AND INDICATE THE SPECIFIC LOCATION WHERE STEEL PIPE MAY BE USED.**

2. For piping through 2" in areas subjected to physical abuse:  
Pipe: Black Steel, Schedule 40, ASTM A 53, ERW or seamless, grade B  
Fittings: Cast Iron, 125 lb. ASTM A 126 or malleable iron 150 lb. ASTM A 197; unions, 250 lb. ASTM A 197  
Joints: Screwed.

G. Natural Gas - Above Ground:

**SPEC EDITOR: UNDERGROUND NATURAL GAS PIPING IS TYPICALLY PROVIDED ONLY BY THE GAS COMPANY AND IS THEREFORE NOT ADDRESSED HEREIN. IF REQUIRED, CONSULT CODES.**

1. For piping through 2":

- Pipe: Black Steel, Schedule 40, ASTM A 53, ERW or seamless, grade B  
 Fittings: Malleable iron, 150 lb. ASTM A 197; unions, 250 lb. ASTM A 197  
 Joints: Screwed Terminal connections 1/2" and less: Type L Copper, annealed, ASTM B 88, 24" maximum length, flared connections
2. For piping 2-1/2" and larger  
 Pipe: Black Steel, Schedule 40, ASTM A 53, ERW or seamless, grade B, standard weight for 12" and above  
 Fittings: Standard weight, butt welded, black steel, ASTM A 234  
 Joints: Welded. Flanged ASTM A 181, 150#, forged steel at valves, and equipment.

H. Sanitary Waste and Vent - Above and Under Ground:

***SPEC EDITOR: CHOOSE ONE OF THE FOLLOWING. CI IS STANDARD, PVC IS ECONOMICAL ALTERNATIVE ACCEPTABLE IN SOME BUILDINGS.***

1. Pipe: Cast Iron, Service Weight, CISPI Standard 301, ASTM A74, ASTM A888  
 Fittings: Cast Iron, drainage pattern, ASTM A74, ASTM C564  
 Joints: Hubless - Heavy duty, ASTM C1540 and ASTM C1277
2. Pipe: PVC Schedule 40, ASTM D 2665, NSF approved, type DWV  
 Fittings: PVC, ASTM D 3311  
 Joints: Screwed or solvent weld, ASTM D2564

***LAB WASTE AND VENT: DEPENDING ON THE APPLICATION, A LOWER COST ALTERNATIVE TO CONSIDER VERSUS THE PP/FUSED JOINT PIPING LISTED BELOW IS A SOLVENT JOINT SYSTEM MADE ESPECIALLY FOR LAB WASTE, SUCH AS SPEARS LABWASTE™ CPVC PIPING.***

I. Laboratory Waste and Vent - Above Ground:

1. Pipe: Polypropylene, Schedule 40, ASTM- D 4101, Type 1  
 Fittings: ASTM D-4101  
 Joints: Mechanical joints with manufacturer's recommended seals by Orion, or fuse seal joints.  
 Manufacturer: Orion, Enfield, Zurn

J. Laboratory Waste and Vent - Under Ground:

1. Pipe: Polypropylene, Schedule 80, ASTM- D 4101, Type 1  
 Fittings: ASTM D-4101  
 Joints: Mechanical joints with manufacturer's recommended seals by Orion, or fuse seal joints.  
 Manufacturer: Orion, Enfield, Zurn

K. Equipment Condensate Drains, including coils and energy recovery devices - Above Ground:

1. Pipe: Type DWV Copper, hard drawn, ASTM B306  
 Fittings: Wrought Copper, ANSI B16.22  
 Joints: Soldered.

***CHOOSE ONE OF THE FOLLOWING. CI IS STANDARD, PVC IS ECONOMICAL ALTERNATIVE ACCEPTABLE IN SOME BUILDINGS.***

L. Storm - Above and Under Ground:

1. Pipe: Cast Iron, Service Weight, CISPI Standard 301, ASTM A74, ASTM A888

- Fittings: Cast Iron, drainage pattern, ASTM-A74, ASTM C564  
 Joints: Hubless - Heavy duty, ASTM C1540 and ASTM C1277
2. Pipe: PVC Schedule 40, ASTM D-2665, NSF approved, type DWV  
 Fittings: PVC, ASTM D-3311  
 Joints: Solvent welded, ASTM D-2564
- M. Sanitary and Storm Pump Pressure Piping- from pump discharge to connection to gravity main:
- a. Pipe:
    - 1) Type L Copper, hard drawn, ASTM B88; or
    - 2) Sch. 10S Type 304L ASTM A312 seamless stainless steel.
  - b. Fittings:
    - 1) For Copper Pipe: Wrought Copper, ANSI B16.22.
    - 2) For Stainless Steel Pipe:
      - a) Type 304L or 316L ASTM A312 stainless steel.
      - b) ASTM A403 Grade WP Class S or W, ANSI B16.9.
  - c. Joints:
    - 1) Copper Pipe: Soldered. May be grooved where accessible, up to 8" maximum.
    - 2) Stainless Steel Pipe: Welded, or grooved where accessible. Weld per ASTM A312.
  - d. Elevator sump pumps, in plenum return locations:
    - 1) Galvanized steel ASTM A53 pipe, standard weight, with galvanized, Gray-Iron threaded fittings: ASME B16.4, Class 125; or
    - 2) excluding inaccessible locations, Grooved Joints - for Steel Piping may be used, with hot dip galvanized pipe and fittings (couplings may be un-galvanized).
  - e. Elevator sump pumps, in non-plenum return locations:
    - 1) Schedule 40 PVC ASTM D 1785 pipe, ASTM D 2466 socket fittings, ASTM D 2464 Schedule 80 threaded fittings.

**2.3 HYDRONIC, STEAM AND CONDENSATE PIPING SYSTEMS:**

**PROJECTS CONSIDERING THE USE GROOVED JOINTS OR COPPER PRESS FITTINGS (E.G. "PROGRESS") SHALL FIRST OBTAIN APPROVAL FROM THE U-M DESIGN MANAGER AND THE PLUMBING/FIRE PROTECTION MECH TECH TEAM. IF GROOVED JOINTS OR COPPER PRESS FITTINGS ARE NOT BEING USED, REMOVE ALL ASSOCIATED REFERENCES TO THESE ITEMS, BELOW.**

**A. Chilled Water - Above Ground:**

1. For piping through 4":  
 Pipe: Type L Copper, hard drawn, ASTM B88  
 Fittings: Wrought Copper, ANSI B16.22  
 Joints: Soldered through 2"; Brazed for 2-1/2" through 4"

**ONLY USE THE CONTRACTORS OPTIONS BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.**

**Contractor Options:**

- a. For piping 2-1/2" through 4", excluding inaccessible locations, Grooved Joints - for Copper Piping may be used.
  - b. For piping through 4", Copper press to connect fittings may be used
2. For piping 5" and larger:  
 Pipe: Black Steel, Schedule 40, ASTM A53, ERW or seamless, grade B, standard weight for 12" and above

Fittings: Standard weight, butt welded, black steel, ASTM A234  
Joints: Welded. Flanged ASTM A181, 150#, forged steel at  
valves, and equipment.

**ONLY USE THE CONTRACTOR OPTION BELOW WITH APPROVAL AS DETAILED  
IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.**

Contractor Option: excluding inaccessible locations, Grooved  
Joints - for Steel Piping may be used for piping 5" through  
12".

**IF PROJECT HAS BELOW GROUND CHW PIPING LESS THAN 6", AMMEND THE  
BELOW ACCORDINGLY. NOTE THAT DUCTILE IRON PIPE IS AVAILABLE  
DOWN TO 3" PIPE SIZE, BUT MAY NOT BE COST EFFECTIVE IN SMALLER  
SIZES.**

- B. Chilled Water - Below Ground, 6" and above
1. Piping: Ductile iron pipe, 350 PSI minimum working pressure, Class 52, AWWA C151/A21.51, cement mortar lined AWWA C104/A21.4, asphaltic coated outside.
  2. Fittings: ductile iron, AWWA C110/A21.10, rated working pressure 350 psi.
  3. Gaskets: SBR, AWWA C111/A21.11.
  4. Joints: Mechanical joint, EBBA Iron Megalug restraint system for ductile iron pipe, AWWA C110/A21.10. Provide joints with a rated working pressure of 350 psi designed to provide a minimum of 3 degrees deflection after assembly.
  5. Provide polyethylene encasement in compliance with ANSI/AWWA C105/A21.5 on the outside of the pipe.
  6. Ductile iron pipe shall be manufactured in USA. Outside of pipe shall be clearly marked with pipe size, thickness, country of origin, manufacturer, year cast, and marked DI or Ductile Iron. Certification of country of origin shall be provided upon delivery.
  7. Where transition to other pipe materials is necessary, termination of the ductile iron pipe shall be factory threaded and equipped with a screw-on, machine tightened, ductile iron flange that complies with ANSI/AWWA C115, similar to that available from American Ductile Iron Pipe and US Pipe. Flanges shall be designed to mate with Class 250 flanges.

C. Hot Water Heating - Above Ground:

1. For piping through 4":  
Pipe: Type L Copper, hard drawn, ASTM B88  
Fittings: Wrought Copper, ANSI B16.22  
Joints: Soldered through 2"; Brazed for 2-1/2" through 4"

**ONLY USE THE CONTRACTORS OPTIONS BELOW WITH APPROVAL AS DETAILED  
IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.**

- Contractor Options:
- a. For piping 2-1/2" through 4", excluding inaccessible locations, Grooved Joints - for Copper Piping may be used.
  - b. For piping through 4", Copper press to connect fittings may be used.
2. For piping 5" and larger:  
Pipe: Black Steel, Schedule 40, ASTM A53, ERW or seamless, grade B, standard weight for 12" and above

Fittings: Standard weight, butt welded, black steel, ASTM A234  
Joints: Welded. Flanged ASTM A181, 150#, forged steel at valves, and equipment.

**ONLY USE THE CONTRACTOR OPTION BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.**

Contractor Option: excluding inaccessible locations, Grooved Joints - for Steel Piping may be used for piping 5" through 12":

**FOR LENGTHS OF CONDENSER WATER PIPING EXPOSED TO SEASONAL DRAIN DOWN OR WHERE EXTERIOR CORROSION OF UNINSULATED CONDENSER WATER PIPING COULD PRESENT PROBLEMS, CONSIDER SPECIFYING A NONFERROUS PIPING MATERIAL, E.G. SCHEDULE 10 STAINLESS STEEL. A SAMPLE SPEC FOR STAINLESS STEEL PIPE CAN BE FOUND IN HIDDEN TEXT, BELOW.**

D. Condenser Water/ Cooling Tower Water - Above Ground:

1. For piping through 4":  
Pipe: Type L Copper, hard drawn, ASTM B88  
Fittings: Wrought Copper, ANSI B16.22  
Joints: Soldered through 2"; Brazed for 2-1/2" through 4"

**SPEC EDITOR: ONLY USE THE CONTRACTORS OPTIONS BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.**

Contractor Options:

- a. For piping 2-1/2" through 4", excluding inaccessible locations, Grooved Joints - for Copper Piping may be used:.
- b. *For piping through 4", Copper press to connect fittings may be used*
2. For piping 5" and larger:  
Pipe: Black Steel, Schedule 40, ASTM A53, ERW or seamless, grade B, standard weight for 12" and above  
Fittings: Standard weight, butt welded, black steel, ASTM A234  
Joints: Welded. Flanged ASTM A181, 150#, forged steel at valves, and equipment.

**ONLY USE THE CONTRACTOR OPTION BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.**

Contractor Option: excluding inaccessible locations, Grooved Joints - for Steel Piping may be used for piping 5" through 12".

**BELOW IS SAMPLE SPEC FOR SS PIPE, IN HIDDEN TEXT.**

3. For piping 5" and larger, stainless steel pipe:
  - a. Pipe: Sch. 10S Type 304L ASTM A312 seamless stainless steel.
  - b. Fittings: Type 304L or 316L ASTM A312 stainless steel. ASTM A403 Grade WP Class S or W.
  - c. Flanges: ASTM A182, forged, weld neck. Bolts/nuts ASTM A193/ASTM A194.
  - d. Joints: welded per ASTM A312.

**ONLY USE THE CONTRACTOR OPTION BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.**

Contractor Option: excluding inaccessible locations, Grooved Joints - for Stainless Steel Piping may be used for piping 5" through 12".

- E. Steam - to 60 psig - Above Ground:
  - 1. For piping through 2":  
Pipe: Black Steel, Schedule 40, ASTM A53, ERW or seamless, grade B.  
Fittings: Forged steel, ASTM A181, ANSI B16.11.  
Joints: Screwed.
  - 2. For piping 2-1/2" and larger  
Pipe: Black Steel, Schedule 40, ASTM A53, ERW or seamless, grade B, standard weight for 12" and above  
Fittings: Standard weight, butt welded, black steel, ASTM A234  
Joints: Welded. Flanged ASTM A181, 150#, forged steel at valves, and equipment.
  
- F. Steam Condensate (gravity or pumped) - to 60 psig - Above Ground:
  - 1. For piping through 2":  
Pipe: Black Steel, Schedule 80, ASTM A53, ERW or seamless, grade B.  
Fittings: Forged steel, ASTM A181, ANSI B16.11.  
Joints: Screwed.
  - 2. For piping 2-1/2" and larger  
Pipe: Black Steel, Schedule 80, ASTM A53, ERW or seamless, grade B.  
Fittings: Standard weight, butt welded, black steel, ASTM A234.  
For utility tunnels use only extra heavy weight, butt welded, black steel, ASTM A234  
Joints: Welded. Flanged ASTM A181, 150#, forged steel at valves, and equipment.
  
- G. Humidifier Piping (for steam humidifier using deionized or RO water):
  - 1. Steam piping from steam generator to humidifier manifold:  
Pipe: Stainless steel for minimum 12" length at generator and at humidifier manifold.  
Hose: Supplied by humidifier manufacturer, continuously pitched back to humidifier and continuously supported.  
Fittings: Stainless steel.  
Joints: Screwed.
  - 2. Condensate piping from manifold drip to generator or drain.  
Pipe: Stainless steel.  
Fittings: Stainless steel.  
Joints: Screwed.
  - 3. Pipe and fittings: Sch. 40S Type 304L ASTM A312 seamless stainless steel pipe with ASTM A403 Grade WP Class S or W fittings.

**2.4 SPECIAL PIPING SYSTEMS:**

- A. Refrigeration Piping - Above Ground and Under Ground:

1. Pipe: Type L or K Seamless Copper, Nitrogenized ACR, ASTM B 88 or ASTM B 280, annealed for 3/8" and smaller, hard drawn for 1/2" and larger. For underground piping 2" and smaller: Type K, annealed, with no fittings.
2. Fittings: ANSI B16.26 cast copper alloy refrigeration type with 45 degree flare or wrought copper ANSI B16.22 socket fittings  
Joints: brazed, flared (above ground only).

**2.5 PIPE JOINTS:**

- A. Soldered Joints: ASTM B32; Alloy Sb5, (95% Tin, 5% Antimony, maximum 0.20% Lead). When recommended by the component manufacturer, use manufacturer's recommended flux. Unless noted otherwise, joints may be screwed or flanged to suit valves and equipment. Manufacturers: Engelehard "Silverbrite 100", Harris "Bridgit"
- B. Brazed Joints: ASTM B32, silver brazed joints with 1000F minimum melting point, conforming to AWS - A5.8, "Specification for brazing filler metal". Classification BAg-1. For domestic potable water applications, maintain a nitrogen purge during brazing to prevent deposit formation inside the pipe. Unless noted otherwise, joints may be screwed or flanged to suit valves and equipment. Manufacturers: Lucas-Milhaupt Inc. "Sil-Fos", J.W. Harris "Stay-Silv 15" and "Safety Silv"
- C. Screwed Joints: Tapered thread, ASME B1.20.1, joined with compatible compound or sealant tape applied to male thread only.
- D. Welded Joints: Comply with Section II, Part C, ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded. Pipe and fittings shall be beveled and butt welded.

**GROOVED PIPING JOINTS FOR COOPER PIPE ARE LIMITED TO 8", WHICH IS THE MAXIMUM SIZE THAT ALL THREE APPROVED MFR.S HAVE AVAILABLE.**

- E. Grooved Joints - for Copper Piping, maximum pipe size 8": Rolled grooves, peroxide cured EPDM gaskets, ductile iron housing (ASTM A 532 or A 536), wrought copper (ASTM B 75, ANSI B16.22) or cast bronze fittings, rated for minimum 300 psi working pressure at 250°F, when used with grooves that comply with AWWA C606. Grooved system/components shall provide rigid installation. UL and UPC approved. Utilize manufacturer's recommended gasket lubricant. Braze Class 150 ANSI B16.24 cast bronze flanges (or copper companion flange by CTS Fabrication USA) must be used at any component requiring a flanged connection. Clamp-on branch outlets are prohibited. Exact gasket material and style shall be as recommended by the coupling manufacturer for the service, and NSF/ANSI-61 Annex G and NSF/ANSI-372 listed when used for potable water. On potable water service, provide non-standard gasket styles that close off and isolate gasket cavities from the water in the pipe. The manufacturer of the couplings and the fittings shall be the same. The same grooved component manufacturer shall be provided for the entire scope of the work, for each system.
  1. The following manufacturers and coupling model numbers are permitted, provided they comply with all the above: Victaulic Style 607; Tyco Grinnell 672 or 640.
  2. For copper piping in tunnels: Victaulic Style 607 only.

**GROOVED JOINTS FOR STEEL PIPE ARE LIMITED TO 12". THE PRESSURE RATING OF GROOVED COUPLINGS DECREASE ABOVE 12" PIPE SIZE, AND VARIES BY COUPLING MFR. REVISE BELOW CAREFULLY IF USING GROOVED JOINTS ABOVE 12" PIPE SIZE.**

F. Grooved Joints - for Steel Piping, for maximum pipe size of 12": Rolled or cut grooves, peroxide cured EPDM gaskets, ductile iron coupling and fittings (ASTM A532 or A536), rated for minimum 400 psi working pressure at 250°F, when used with grooves that comply with AWWA C606. Grooved system/components shall provide rigid installation. UL and FM approved. Utilize manufacturer's recommended gasket lubricant. Welded flanges must be used at any component requiring a flanged connection. Clamp-on branch outlets are prohibited. Exact gasket material and style shall be as recommended by the coupling manufacturer for the service. The manufacturer of the couplings and the fittings shall be the same. The same grooved component manufacturer shall be provided for the entire scope of the work, for each system.

1. The following manufacturers and coupling model numbers are permitted, provided they comply with all the above: Victaulic Style 07 or 107; Tyco Grinnell Fig. 740 or 772.

**ALTHOUGH THE BELOW ARTICLE CALLS FOR 300 PSI WORKING PRESSURE FOR STAINLESS STEEL FITTINGS UP TO 12", THE PRESSURE RATING OF GROOVED COUPLINGS IS OFTEN LESS ABOVE 8" PIPE SIZE, AND VARIES BY COUPLING MFR. REVISE BELOW CAREFULLY IF USING S.S. GROOVED JOINTS ABOVE 8" PIPE SIZE.**

G. Grooved Joints - for Stainless Steel Piping, for maximum pipe size of 12": Rolled grooves, peroxide cured EPDM gaskets, galvanized ductile iron (indoor piping only) or stainless steel couplings, minimum sch. 10 stainless steel fittings. Provide stainless steel nuts and bolts when couplings are stainless steel. Couplings and fittings rated for a minimum 300 psi working pressure at 250°F. Grooved system/components shall provide rigid installation. NSF/ANSI-61 Annex G and NSF/ANSI-372 listed when used for potable water. On potable water service, provide non-standard gasket styles that close off and isolate gasket cavities from the water in the pipe. Welded flanges must be used at any component requiring a flanged connection. Clamp-on branch outlets are prohibited. Exact gasket material and style shall be as recommended by the coupling manufacturer for the service. Utilize manufacturer's recommended gasket lubricant. The manufacturer of the couplings and the fittings shall be the same. The same grooved component manufacturer shall be provided for the entire scope of the work, for each system. Use the manufacturer's required roll sets for stainless steel pipe.

1. The following manufacturers and coupling model numbers are permitted, provided they comply with all the above: Victaulic Style 89 (indoor), Style 489 (outdoor); Tyco Grinnell Fig. 770 (indoor), Fig. 772 (indoor), Fig. 472 (outdoor).

**THE FOLLOWING JOINING METHOD IS UNDER CONSIDERATION: USE PRESS JOINTS ONLY WHERE APPROVED BY U-M PROJECT MANAGER AND THE PLUMBING/FIRE PROTECTION MECH TECH TEAM.**

H. Press Joints:

1. Limited to a maximum pipe size of 4".
2. Rated for a minimum 200 PSI working pressure from -4°F to 250°F.
3. Compatible with seamless type K, L, and M copper tube conforming to ASTM B88.
4. Fittings shall be a minimum 78% copper and a maximum of 15% zinc, alloyed to prevent dezincification.
5. Fittings shall conform to the material and sizing requirements of ASME B16.18 or ASME B16.12.
6. Seals/O-rings shall be peroxide cured EPDM.
7. Joints shall be pressed using the tool approved by the manufacturer.
8. Provide press fittings from the same manufacturer for the entire scope of the work, for each system.
9. Approved fitting, tool, and process:
  - a. Viega ProPress
  - b. NIBCO Press System.

I. Flanged Joints:

1. Select flange and gasket materials to suit service of piping and to comply with the respective ASME B31.1 or B31.9 piping standard.
2. For steel pipe, provide raised face ANSI B16.5 compliant steel flanges.
3. For copper pipe, provide Class 150 flat face ANSI B16.24 cast bronze flanges, brazed to the copper tube.
  - a. Alternative: Copper companion flange by CTS Fabrication USA rated 450 PSI minimum working pressure from -66°F to 272°F. ANSI B16.5 compliant, powder coated, with an EPDM insulator adhered to the plate steel flange protruding inside of the flange to prevent contact with the copper companion flange adapter. Flange adapter shall be manufactured to ASME B16.22, brazed to the copper tube.
4. Gaskets shall conform to respective ANSI Standards, A21.11, B16.20, B16.21. Gaskets in steam and condensate lines shall be "FLEXALLIC", 316 L stainless steel with "FLEXICARB" filler. Flange gaskets for domestic hot water shall be 100% PTFE. For butterfly valves on replaceable seat side with interfering set-screws, provide Garlock Style 9800.
5. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated. Central Power Plant and Tunnels: Provide ASTM A193 B7 bolts and studs with ASTM A194 grade 2H heavy hex nuts.

J. Hubless Joints: Stainless Steel shield with stainless steel bands and tightening devices, ASTM C 564 rubber sleeve with integral center pipe stop.

1. Approved Manufacturers:
  - a. Anaco/Huskey
  - b. Clamp-All Corp.
  - c. Fernco Inc.
  - d. Ideal Tridon
  - e. Mission Rubber Company (MCP Industries Inc.)

K. Solvent Cement Joints: Select materials suitable for pipe materials joined and compatible with fluid served. Conform to respective ASTM Standards D-2235, D-2564, D-2855 and D-3138.

- L. Gasket Joint Lubricant - for use with grooved and hubless joints: Provide manufacturer's recommended gasket lubricant.

**2.6 MECHANICALLY FORMED TEE CONNECTIONS IN COPPER PIPING:**

*THE T-DRILL TOOL HAS BEEN DEMONSTRATED AT UM A&E, AND TO PLANT, AND SEEMS TO HAVE APPROPRIATE APPLICATIONS. THE SPEC BELOW LIMITS T-DRILL'S USE. FORWARD COMMENTS AND EXPERIENCES TO THE SPEC TEAM.*

- A. Contractor may use mechanically formed Tee connections in copper piping in lieu of tee fitting only where main piping is 2 1/2" or larger and where branch connection is 3/4" or smaller. Joint must be brazed. Tool manufacturer: T-Drill.

**2.7 UNIONS:**

- A. Unions in steel piping systems shall be malleable iron with ground joints made between two bronze inserts.
- B. Unions in copper piping systems shall be wrought copper or brass with sweat ends.

**2.8 PIPE HANGERS AND SUPPORTS:**

*PIPE HANGER MODEL NUMBERS, SPACING, AND APPLICATION OF HANGERS AND SUPPORTS MUST BE ADDRESSED IN DRAWINGS, IT IS NO LONGER INCLUDED HEREIN. SOME DETAILS MAY BE AVAILABLE ON THE U-M AEC WEBSITE.*

- A. Provide adjustable type pipe hangers, supports and accessories for the proper support of all piping. See details on drawings for requirements. Figure and model numbers specified on drawings are for Anvil International, and Pipe Shields Inc. Equivalent products by Carpenter & Paterson, Cooper B-line and PHD Manufacturing are also acceptable. Continuous threaded rod shall be used for intermediate attachments.
- B. Dielectric protection for hangers and supports: Where copper piping is supported with steel hangers and supports, dielectric protection must be provided. Use one of the following means as applicable:
  - 1. Coated hangers (copper or plastic coating)
  - 2. Insulation inserts
  - 3. Cushion clamps
  - 4. Other as approved by Engineer.

**2.9 THERMAL-HANGER SHIELD INSERT ASSEMBLIES**

- A. Except as noted, thermal hanger shield "insert" assemblies shall be used on all insulated pipe systems at each horizontal support, and at each clamped or guided vertical support. Manufactured units shall comply with MSS SP-58 standards and be tested per MSS SP-89 guidelines. Each assembly shall closely fit the various pipe diameters and match the outside diameter of the adjoining pipe insulation. Provide pre-grooved inserts when piping is heat traced. Compressive strength shall be adequate to prevent deformation at the project's hanger spacing requirements, with a minimum 3:1 safety factor.
- B. Thermal hanger shield insert assembly: Water-repellent treated, ASTM C 533, Type I calcium silicate, asbestos free insert. With G-90 galvanized sheet metal shield. With attached vapor barrier, where indicated. Each component shall have an ASTM E84 flame/smoke rating maximum of 25/50.
- C. Inserts for Cold Piping (piping conveying materials less than or equal to 60F), including all chilled water and domestic cold water piping: Insert with an attached vapor barrier.
  - 1. Provide insert and sheet metal shield covering entire circumference of pipe.
- D. Inserts for Hot Piping (piping conveying materials at more than 60F): Insert only.
  - 1. For clevis or band hangers that support pipe from bottom: Insert and sheet metal shield shall cover lower 180 degrees of pipe, or entire circumference of pipe.
  - 2. For trapeze hangers or clamped pipe: Insert and sheet metal shield shall cover entire circumference of pipe.
- E. Inserts for piping less than 3/4 inch diameter: Not required except for piping conveying materials less than 45°F.
- F. Minimum Compressive Strength of Insert Material:
  - 1. 100 psig for sizes smaller than NPS 6.
  - 2. 600 psig for sizes NPS 6 and larger.
- G. Insert Length: Extend 2 inches beyond sheet metal shield.
- H. Vapor barrier: meeting ASTM C1136, with 0.02 perms maximum water vapor permeance.
- I. Adhesives shall comply with NFPA 90-A.
- J. Sheet Metal Shield Dimensions for Pipe: Not less than the following:
  - 1. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
  - 2. NPS 4: 12 inches long and 0.06 inch thick.
  - 3. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick
  - 4. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick
  - 5. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick
- K. Manufacturers
  - 1. Cooper B-Line
  - 2. Pipe Shields Inc.
  - 3. Rilco Manufacturing Company
  - 4. Value Engineered Products.

5. American Mechanical Insulation Sales

2.10 PIPE SLEEVES:

**NOTE THAT SLEEVE DETAILS MUST APPEAR ON DRAWINGS, INCLUDING UNDERGROUND DETAILS IF APPLICABLE.**

- A. Furnish and set pipe sleeves per details on drawings.

2.11 DIELECTRIC FITTINGS:

- A. For pipe 2 inch and less: Provide brass coupling. (Dielectric unions are not acceptable).
- B. For pipe 2-1/2 inch and larger: Provide flange union with dielectric gasket and bolt sleeves. On copper pipe, copper companion flanges by CTS Fabrication USA may be used.
- C. Dielectric waterways are prohibited for all joint systems.

2.12 STRAINERS:

- A. Body shall be bronze, cast steel or cast iron, to match piping materials. Strainers shall be same size as piping, with screwed connections on piping 2" and smaller, and flanged connections on piping 2-1/2" and larger. Where grooved piping is specified, grooved joint strainers may be used. Screen free area shall be a minimum of twice the internal cross sectional area of the piping where installed. Pressure rating shall be that of piping system, minimum Class 125. Provide 3/4" ball valve blow down with hose end connection on all strainers 2" and larger.
- B. For water, steam and condensate service, screen material stainless steel, with maximum openings of 1/32 (0.031) inches for pipes 2" and smaller and 3/64 (0.047) inches for pipe sizes 2-1/2" and larger.
- C. For air and gas service, screen material stainless steel, with maximum openings of 0.006 inches for pipes 2" and smaller and 0.009 inch for pipe sizes 2-1/2" and larger.
- D. Approved Manufacturers: Armstrong, Anvil International, Keckley, Metraflex, Mueller, Spirax-Sarco, Victaulic, Watts, Yarway.

2.13 FLEXIBLE METAL HOSE CONNECTORS:

**USE THIS IN HOT WATER, STEAM, CONDENSATE AND REFRIGERATION SYSTEMS AS REQUIRED**

- A. Length and end fittings as shown in drawings, with an inner corrugated hose made of type 304, 321, or 316 stainless steel and outer braid made of 304 stainless steel. Manufacturers: Metraflex, Flex Hose Co., Flexonics, Mason.
- B. For copper piping systems, use copper construction braided hoses. Approved Manufacturers: Anaconda, Flex Hose Co., Flexonics, Mason, Metraflex

**SPEC EDITOR: USE THE FOLLOWING ARTICLES FOR TUNNELS ONLY**

**2.14 FLEXIBLE METAL HOSE CONNECTORS FOR TUNNELS:**

- A. For steel piping systems, length and end fittings as shown in drawings, with an inner corrugated hose made of type 316 stainless steel and outer braid (double braided) made of 316 stainless steel. Dual floating flanges or one fixed and one floating flange may be used. Manufacturers: Metraflex, Flex Hose Co., Flexonics, Mason.
- B. For copper piping systems, (up to 2" in size) use copper construction braided hoses. Manufacturers: Anaconda, Flex Hose Co., Flexonics, Mason, Metraflex. For sizes 2½" above, all stainless steel with an inner corrugated hose made of type 316 stainless steel and outer braid made of 316 stainless steel, with stainless steel flanges. Dual floating flanges or one fixed and one floating flange may be used. All wetted parts shall be stainless steel. Approved Manufacturers: Metraflex, Flex Hose Co., Flexonics, Mason.

**2.15 FLEXIBLE CONNECTORS (RUBBER):**

**SPEC EDITOR: USE THIS IN LARGE PUMP SYSTEMS**

- A. Flexible connectors with neoprene and nylon type elements, with carbon steel or ductile iron floating flanges. Rated for 150 psig working pressure at 200°F, with peroxide cured EPDM liner and cover, ultraviolet resistant, hand wrapped, non-molded, multiple arch body, with control rods or cables. Approved Manufacturers: Mason Industries, Inc. Type SFDEJ, Mercer Rubber Co., Metraflex Type DS.

**2.16 PIPE ANCHORS:**

- A. Provide pipe anchors where shown and as detailed on drawings.

**2.17 PIPING TRANSITIONS:**

- A. Provide transitions for joining two different types of pipe materials such as cast iron, clay, steel, copper or plastic. Fabricate transitions with bushings capable of resisting normal moisture corrosion.
- B. For copper to steel connections, see "Dielectric Fittings".
- C. For transitions between ductile iron and PVC pipe: Approved Manufacturers: CT-Adapters, Fernco Joint Sealer Co., Joints Inc., Calder.

**2.18 SLEEVE-SEAL SYSTEMS**

- A. Approved Manufacturers:
  - 1. EnPro Industries "Link Seal"
  - 2. Advance Products & Systems, Inc.
  - 3. Metraflex Company (The).
  - 4. Proco Products, Inc.

- B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve. Shall provide a water-proof seal between the pipe and sleeve at up to 20 psig head pressure. Each link and pressure plate shall include permanent identification of size and manufacturer's name. Manufactured in an approved ISO-9001:2000 facility.
- C. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe.
- D. Pressure Plates: Molded of glass reinforced nylon.
- E. Connecting Bolts and Nuts: Mild steel with a 60,000 psi minimum tensile strength and 2-part Zinc Dichromate coating per ASTM B-633 and Organic Coating, tested in accordance with ASTM B-117 to pass a 1,500-hour salt spray test. Of length required to secure pressure plates to sealing elements.
- F. Sleeves:
  - 1. Galvanized steel, ASTM A53/A53M, Schedule 40, with plain ends and welded steel collar, zinc coated. Steel Sleeve sizes 12" and larger shall be 0.375" thick or standard pipe wall thickness. Sleeves through wall shall be cast in place and the pipe shall be installed centered in the sleeve. Provide 2" collar (water-stop) of steel to match sleeve, welded all around on both sides to the sleeve at the point on the sleeve that positions it at the mid-point of the structural wall when the sleeve is in place.
  - 2. Molded non-metallic high density polyethylene sleeves (HDPE) with integral hollow, molded water-stop ring four inches larger than the outside diameter of the sleeve itself. End caps and reinforcing ribs, manufactured in an approved ISO-9001:2000 facility. With nailer flange.

**PART 3 - EXECUTION**

**3.1 GENERAL PIPING INSTALLATION REQUIREMENTS:**

- A. Work shall be done in accordance with applicable ordinances and codes. Arrange for inspections.
- B. For domestic potable water applications, maintain a nitrogen purge during brazing to prevent deposit formation inside the pipe, so that the inner pipe surface remains clean. Properly ventilate the area outside the pipe to avoid unsafe levels of nitrogen.
- C. Install pipe components and joining systems in accordance with the manufacturer's installation instructions.
- D. Install piping to permit complete draining. Provide capped hose end ball type drain valves at all low points.

**EXPANSION OF PIPING MUST BE CONSIDERED IN DESIGN, AND ENGINEERED ON DRAWINGS, INCLUDING DIMENSIONED EXPANSION BENDS IF APPLICABLE.**

- E. If water (flushing water, blow down, etc.) or hydronic system fluids have a pH between 5.0 and 10.0 and meets the requirements of City of Ann Arbor Sewer Use Ordinance, it may be discharged to the sanitary sewer. If the water does not meet the sewer discharge limits, contact OSEH Hazmat at 763-4568 for proper disposal. City of Ann Arbor Sewer Use Limitations (Chapter 28 Sewage and Sewage Disposal, subsection 2:43.1. Prohibited discharges.) can be found at:
1. <http://www.municode.com/resources/gateway.asp?pid=11782&sid=22>
  2. or by contacting OSEH- Environmental Protection & Permitting Program at 936-1920.
- F. Installed piping shall be free from sagging. Provide for expansion and contraction of piping in an approved and safe manner by means of loops or offsets, where mechanical expansion joints are not specifically called for.
- G. Branch connections from horizontal steam, steam condensate, and gaseous system mains shall be taken off the top, up at a 45 degree angle, or off the side.
- H. Branch connections from horizontal hydronic system mains shall not be taken off the main bottom, or at less than 45 degrees from horizontal.
- I. Branch piping shall be valved at the branch connection points.
- J. Provide fittings and specialties necessary to properly interconnect all items, whether or not shown in detail.
- K. Piping shall remain protected and capped until just prior to connection. Immediately after assembly, restore all protection and cap unprotected ends to prevent odors, dust, moisture, and other debris from entering the piping system.
- L. Clean and swab-out all piping before installation.
- M. Lay out pipe lines straight, plumb and in true alignment. Offset as required to avoid interference with other work, to conceal piping, to allow maximum headroom and to avoid interference with windows and doors. Lay out all pipes and establish their levels from bench marks, existing floors or finished grades.
- N. Piping shall be concealed unless indicated otherwise on drawings. Do not conceal piping until it has been inspected, tested, flushed and approved.
- O. Use eccentric reducing fittings to increase or decrease pipe sizes. Bushings are not acceptable. Orient reducers to prevent trapping of water.
- P. Lubricate flange bolts and install with hardened flat washers. Use a torque wrench to tighten flange bolts to the gasket manufacturer's recommended torque.
- Q. Locate groups of pipe parallel to each other, spaced to permit applying insulation and servicing of valves. Install hot and cold water lines at least 6 inches apart.

- R. Install piping at least 3 inches clear of electrical conduit. Do not install pipe within the National Electrical Code (NEC) working space zone of electrical equipment. Examples:
  - 1. Above the footprint of electrical equipment in the zone extending 6' above the installed height of the equipment.
  - 2. Within the NEC working space in front of the electrical equipment. NEC working space varies depending on voltage and other factors, typically for equipment 600 volts or less it extends from the floor to the height of the equipment or 6'-6", whichever greater, 3'-6" in front of the equipment, and for the width of the equipment or 30", whichever is greater.

Verify NEC clearance requirements prior to installing work. Note that variable frequency drives are considered electrical equipment.
- S. Pipe extending into finished areas shall have chrome plated escutcheons large enough to cover pipe sleeves and shall fit snugly over pipe or insulation.
- T. Pitch piping as follows, but not less than required by code:
  - 1. Hydronic piping up in direction of flow at 1/16" per foot
  - 2. Steam piping down in direction of flow at 1/16" per foot
  - 3. Vent piping back toward waste at 1/16" per foot
  - 4. Waste, condensate and compressed air piping down in direction of flow at 1/8" per foot.
- U. Join hubless, cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.

**3.2 NATURAL GAS PIPING INSTALLATION REQUIREMENTS:**

- A. Install, inspect, test, and purge natural gas systems in accordance with NFPA 54, and local utility requirements.
 

*SPEC EDITOR: INDICATE ON THE DRAWINGS, THE ROUTING AND TERMINATION LOCATION OF THE CONDUIT VENT PIPE.*
- B. Gas piping in air plenum ceilings shall be continuously welded or installed in air-tight conduit constructed of Schedule 40 seamless black steel pipe with welded joints. Vent conduit to the outside and terminate with a screened vent cap. Valves shall not be installed in plenums.
- C. Drips and Sediment Traps: Install a drip leg at inlet to terminal equipment, points where condensate may collect, and at the outlet of the gas meter. Do not install drips where condensate is likely to freeze. Construct drips using a tee with plugged or capped bottom outlet. Drip shall be minimum of 3 pipe diameters long, same size as pipe. Locate drips to permit cleaning and emptying.

**3.3 UNDERGROUND PIPING INSTALLATION REQUIREMENTS**

- A. Piping below grade intersecting tunnel walls, basement walls, or penetrating floors, shall be run through a sleeve seal system.
  - 1. Size sleeves and select sleeve seal links per sleeve seal manufacturer's recommendations.

2. Install sleeves and seals per manufacture's recommendations. Center sleeve water stops at midpoint of wall/floor thickness. Provide temporary support to avoid sleeve collapse during pours.

B. Record as-built sketches and dimensions prior to backfilling.

### 3.4 GROOVED PIPING

A. Install couplings from the same manufacturer as the grooved fittings. The same grooved component manufacturer shall be installed for the entire scope of the work, for each system.

B. Groove pipe per manufacturer's requirements. Grooving tools shall be the same manufacturer as the couplings and fittings. Use special roll sets for copper and stainless steel pipe when required by the manufacturer.

C. Lubricate gaskets with manufacturer's recommended gasket lubricant. Use NSF-61 approved lubricant for domestic water piping.

D. Allow room for pipe expansion for couplings that allow pipe ends to separate before the joint acts in a fully restrained manner, for example, certain couplings used on stainless steel pipe.

E. Tighten coupling as recommended by the manufacturer. Use a torque wrench and tighten bolts to required torque level when required by the manufacturer.

### 3.5 WELDING:

A. All welding shall be performed by registered welders qualified to perform welding operations in accordance with the National Certified Pipe Welding Bureau's procedures and standards, ASME Code Standards and the HPACCNA Standard Manual of Welding.

B. Submit a certified copy of "Record of Pipefitter Welder Performance Qualification Test" of any employees who will be doing welding on this project.

C. No welding to building work shall be allowed without approval of Engineer.

D. Except where prohibited by the Reference Standards, code, or ordinance, Black steel piping larger than 6 inch diameter may be welded with chill rings.

**SPEC EDITOR: DELETE THE FOLLOWING PARAGRAPH IF NO STEAM OR CONDENSATE OVER 15 PSIG**

E. Mitered turns will not be allowed. Turns shall be made with factory-made ASME B16.9 long radius wrought steel buttwelding fittings.

F. Except where prohibited by the Reference Standards, code, or ordinance, branch take-offs with manufactured formed nipples will be permitted provided nipple size is at least two pipe sizes smaller than the main size. Formed nipples shall be Bonney Forge "Weldolets", "Threadolets", "Sokolets". In all other cases, use factory-made ASME B16.9 wrought steel buttwelding tee fittings.

- G. Shop welded pipe assemblies shall have all welds plainly stamped by the welding operator for inspection by the Engineer before installation.

**3.6 SPECIAL WELDING REQUIREMENTS (FOR WORK LOCATED IN TUNNELS):**

*THIS ARTICLE IS REQUIRED FOR ALL TUNNEL PROJECTS. EDIT NUMBER OF WELDS AS NECESSARY FOR SCOPE OF PROJECT. THIS ARTICLE IS NOT NORMALLY REQUIRED FOR MOST NON-TUNNEL PROJECTS. IT CONTAINS ADDITIONAL WELDING REQUIREMENTS FOR SPECIAL CONDITIONS.*

- A. Examine all welds by physical method. Include the cost of examining 5% of welds (but a minimum of 2 welds) to be selected by the Engineer, by approved graphic method similar to gamma ray process.
- B. The radiographic examination shall be by technicians of a reputable company regularly engaged in this type of work and skilled in the use of interpretation of results of this type of examination.
- C. The process shall provide visual proof at the site and such proof on photographs with reports which shall become the property of the Owner and will be included in the final Contract Documents.
- D. The report on the interpretation of the radiographic examination shall state whether or not the quality of the welding is suitable for the service for which the piping was designed.
- E. Welds examined by the above process shall be identified by a number and service symbol and shall be stamped into pipe adjacent to weld at the time of examination
- F. Failure to pass this test shall be cause for the rejection of the weld and authority to examine an additional weld. Rejected welds shall be repaired by an approved method and proven satisfactory by radiographic examination.
- G. If a second weld proves unsatisfactory by the radiographic examination, all welds shall be X-Rayed. Any welds proved unacceptable shall be repaired and X-Rayed again at no additional expense to the Owner.

**3.7 PROTECTION AGAINST FREEZING:**

- A. At any time that any of the piping is full of water for testing purposes or otherwise prior to actual heated operation, the system shall be protected against freezing by the introduction of pre-mixed propylene glycol type anti-freeze which will be flushed out before acceptance. Provision for introducing anti-freeze shall be made by means of valved connections to the system in an acceptable manner.

**3.8 INSTALLATION OF PIPE HANGERS AND SUPPORTS:**

- A. Arrange pipe hangers and supports to permit proper pitch of piping, free to move with pipe expansion, installed at proper intervals to totally prevent sagging and attached to building construction through approved means. Hangers shall be located near or at changes in piping direction and concentrated loads. Valves, strainers, in line pumps and other heavy equipment shall be supported independent of the pipes. After systems have been installed and filled adjust hangers and supports to evenly distribute weight, and maintain proper pitch. Refer to drawings for pipe hanger and support details.

**PARA. B MAY BE CONSERVATIVE, REVIEW AND EDIT, OR DETAIL ON DRAWINGS**

- B. Vertical Piping: When support locations are not indicated on the drawings, support piping at every floor level.

**NOTE THAT HANGER SPACING IS TO APPEAR ON THE DRAWINGS - OR "APPLICABLE CODES" WILL DICTATE**

- C. Horizontal Piping Hanger Spacing: Space hangers in compliance with schedule on drawings and applicable codes, or per MSS SP-89, which ever results in shortest spacing.
- D. For cold piping, install hangers and supports to maintain an effective continuous thermal and vapor barrier between cold piping and hangers and supports.

**THE BELOW REQUIREMENTS FOR PLASTIC PIPE ARE GENERAL IN NATURE. THE DESIGNER SHOULD CAREFULLY SPECIFY HANGERS AND SUPPORTS AND PROVIDE DETAILS TO ASSURE PROPER SUPPORT AND TO ACCOMMODATE THE THERMAL EXPANSION OF PLASTIC PIPE.**

- E. Plastic Piping: Hang and support in compliance with manufacturer's recommendations. At hangers and supports, including "Unistrut®" style channel supports, install to prevent plastic pipe contact with metal (exception: angle iron may be used for continuous support, provided all sharp edges are removed). Anchor piping only where required for expansion loops or to protect against pressure surges, etc. Compression style clamps/supports shall not be used. Use plastic pipe sleeves or equivalent as guides at all other locations, to allow longitudinal thermal expansion and to prevent lateral pipe movement. Compression style riser clamps shall not be used, use other support methods such a supporting at fitting shoulders. Support valves and other significant weight components independent of pipe. Space hangers no farther than manufacturer's recommendations for the application temperature but in no case farther than recommended for 100 deg. F application temperature. Continuously support all piping 1.5 inch nominal diameter or less (exception: PVC pipe connected to sump pumps). Provide thrust restraints where piping is subject to cyclic pressure surges, e.g. on/off pump applications.

**3.9 INSTALLATION OF PIPE SLEEVES:**

- A. Install pipe sleeves where piping passes through building construction including all walls, floors and ceilings.

- B. For new wall construction, promptly and accurately locate and securely set sleeves in forms before concrete is poured. For masonry construction, set the sleeves over the piping for Masonry Contractor to build around.

**3.10 INSTALLATION OF STRAINERS:**

- A. Provide Y-strainers in steam, condensate, or water piping preceding control valves, traps, pumps, pressure regulating valves and elsewhere as shown on drawings.
- B. Install strainer elements prior to flushing piping. Remove, clean and reinstall during flushing.

**3.11 TRENCHING AND BACKFILLING:**

*USE THIS ARTICLE ONLY IF NOT COVERED IN ANOTHER DIVISION.*

- A. All trenching and backfilling required for the proper installation of the work shall be done as prescribed in other Divisions.
- B. Excavate trenches so that pipe can be installed at proper depth. Lay pipe on a firm bed bearing its full length except at the bell. Where sewers are installed in backfilled areas, provide machine tamping and be responsible for any settling at, or rupture to the sewer work. Keep trenches water free and as dry as possible during bedding, laying and jointing. After the joints are made, place sufficient backfill along each side of pipe to offset conditions that might tend to move the pipe off line and grade.
- C. Backfill only after pipes have been tested, inspected and approved.
- D. Piping encountered in excavating, (if shown on the drawings or not), shall be supported, and protected from damage. If utility lines are encountered, notify the Owner's Representative and do not disturb the lines unless so directed. If existing utility lines are damaged during excavations, immediately repair the lines at no cost to the Owner.
- E. Storm and sanitary piping may be installed side by side in same trench. Water piping may be installed in same trench with drainage piping, provided trench is benched so the water pipe may be laid on a shelf of firm earth not less than eighteen inches (18") above top of drain pipe.
- F. No excavation for pipe shall be made in filled or disturbed earth until it has been compacted as directed.
- G. Restore street pavements, curbs and sidewalks disturbed in the performance of this work. Restore in a manner prescribed by authorities having jurisdiction.
- H. Where mains are to pass under roadways or in any locations where open ditches are dangerous or undesirable, the work is to be installed by tunneling. In all other locations, excavations shall be done by the open trench method and to the depths and widths as may be necessary. All material excavated shall be deposited on the sides of the trenches and beyond the reach of slides.
- I. Supports:

1. Where lines pass under footings for walls or columns, or lower than adjacent footings, backfill trenches with concrete up to the level of the bottom of the footings.
  2. Where pipes pass over column footings, or are laid in filled ground, or above the original natural grade, or in soil of insufficient bearing quality, or in other cases where necessary, they shall be supported by creosoted timbers carried by brick piers or piles or other approved supports carried down to firm bearing as approved.
- J. Provide shoring, bracing or sheet piling necessary to maintain the banks of the excavations, or tunnels. Take same out as the work is backfilled. Shoring must prevent any movement of the trench banks and strains on the piping and utility lines.

**3.12 FLUSHING AND CLEANING OF PIPING:**

- A. Flush and clean the following piping systems:

*CUSTOMIZE FOR SPECIFIC PROJECT, IN CONJUNCTION WITH COMMISSIONER.*

Domestic Cold Water (flush only)  
 Domestic Hot Water (flush only)  
 Steam and Condensate (flush only)  
 Chilled Water Supply and Return (flush and clean)  
 Heating Hot Water Supply and Return (flush and clean)  
 Cooling Tower Water Supply and Return (flush and clean)

- B. Develop plan for flushing and cleaning piping. Submit plan for approval prior to completion of piping. Provide all temporary and permanent piping, equipment, materials necessary to complete flushing and cleaning.
- C. Prior to flushing, swab out underground piping to remove all particulate.
- D. Prior to flushing, temporarily remove, isolate or bypass dirt sensitive equipment and devices, including the following:

*LIST BELOW TO SUIT PROJECT*

1. Automatic flow control valves
2. Heating and cooling coils
3. Boilers
4. Chillers
5. Heat exchangers
6. Flow measuring devices

Reinstall after flushing is complete.

- E. Prior to flushing, install fine mesh construction strainers at inlet to all equipment. Install fine mesh construction element in permanent strainers. During flushing and cleaning, remove and clean strainers periodically. At completion of final flush, clean permanent strainers, remove construction strainers.

*CUSTOMIZE THE FOLLOWING PARAGRAPH IN CONJUNCTION WITH U-M PROJECT MANAGER AND COMMISSIONER. IDEALLY, PIPING SHOULD BE FLUSHED A MINIMUM OF ONE HOUR AT 6' PER SECOND. IN PROJECTS WHERE THIS IS SPECIFIED AND NO WATER SOURCE IS IMMEDIATELY*

*AVAILABLE, HAVE CONTRACTOR PROVIDE SOURCE OF WATER, PIPING, HOSES AND PUMPS AS REQUIRED TO FLUSH PIPING.*

- F. Flushing for new piping: Flush all piping with cold water (or fire protection system where approved by owner) for a minimum of one hour, until water runs clear. Water supply shall be equivalent to piping to be flushed. Use (2) 2-1/2" fire hose connections for piping 3" and larger. Drain all low points.

*THE FOLLOWING PARAGRAPH IS TYPICALLY USED FOR CLEANING A COMPLETE HYDRONIC SYSTEM USING SYSTEM PUMPS, CIRCULATING THROUGH THE ENTIRE SYSTEM. NOT APPLICABLE FOR MINOR PIPING MODIFICATIONS.*

- G. Chemical Cleaning for new and existing hydronic piping: Where flushing could not be completed at 6 feet per second, or where chemical cleaning is required for new and existing piping, circulate flush water and clean strainers prior to installing cleaning chemicals. Provide cleaning chemicals, under the direction of the owner's chemical supplier. Following flushing, install cleaning chemicals and circulate through the entire system for a minimum of one hour, or as directed by chemical supplier. Take water sample for owner's use. Drain system, including all low points. Flush, drain and fill system, circulate for one hour, sample for owner's use. Drain, flush, fill, circulate and sample until system is free of cleaning chemicals, as indicated by owner's analysis of samples.

*EDIT BELOW, ADD ESTIMATED SYSTEM VOLUME.*

- 1. Estimated system volume for Hot Water Heating System:
- 2. Estimated system volume for Chilled Water System:
- 3. Estimated system volume for Condenser Water System:

*THE FOLLOWING PARAGRAPH IS NOT TYPICALLY USED. DELETE, OR EDIT CAREFULLY FOR SPECIFIC PROJECT*

- H. Special Provisions for Chemical Cleaning: Provide temporary pumps and piping to chemically clean piping at a minimum velocity of 6 fps without using the system pumps. Otherwise comply with chemical cleaning requirements stated above. These special provisions are required for the following piping systems:

- 1. \_\_\_\_\_
- 2. \_\_\_\_\_
- 3. \_\_\_\_\_

*THE FOLLOWING PARAGRAPH IS NOT TYPICALLY USED. DELETE, OR EDIT CAREFULLY FOR SPECIFIC PROJECT*

- I. Provide temporary bypass piping around the following equipment:

- 1. \_\_\_\_\_
- 2. \_\_\_\_\_
- 3. \_\_\_\_\_

**3.13 PIPING SYSTEMS PRESSURE TESTING**

- A. General

1. Test new systems only, from point of connection to the existing systems. Perform initial tests and correct deficiencies prior to requesting acceptance test.
2. Perform acceptance pressure tests in the presence of the authorities having jurisdiction. Acceptance tests must be satisfactorily completed before piping surfaces are concealed.
3. Pneumatic tests shall be conducted using dry, oil free compressed air, carbon dioxide or nitrogen. Evacuate personnel not directly involved in testing prior to performing pneumatic testing. Perform testing in two stages, initial and acceptance. Conduct initial testing at 5 PSI or less. Swab joints with a commercial leak detector. Repair deficiencies prior to testing at higher pressures. Under no circumstances shall plastic piping of any type be pneumatically tested, including pre-acceptance tests.
4. Components shall be removed or isolated during testing if damage may occur due to test pressure and/or test media.
5. Existing steam and hot water piping connected to piping to be tested shall be shutoff, drained and cooled before testing.

B. Acceptance Pressure Testing:

*NOTE THAT THIS SPEC DOES NOT INDICATE ACTUAL PRESSURE TESTING VALUES. IT IS NECESSARY TO INCLUDE A PRESSURE TEST TABLE, SUCH AS THAT AVAILABLE FROM THE U-M AEC WEBSITE, ON THE PROJECT DOCUMENTS. EDIT THE TABLE TO MAKE IT PROJECT SPECIFIC. ALSO EDIT BELOW PARAGRAPH AS APPROPRIATE.*

1. Perform acceptance pressure testing per table found on the drawings, or if a table is not provided, per UM website: <http://www.umaec.umich.edu/for.archs/StandardDetails.html>.
2. Remake leaking gasket joints with new flange bolting. Where welded joints fail, submit proposed method of repair for approval by the Owner's representative and authorities having jurisdiction.
3. For each system tested, provide a certificate testifying that the system was satisfactorily tested and passed, using owner furnished forms.

**3.14 FLUSHING, DISINFECTING, AND TESTING DOMESTIC WATER**

A. Flush, disinfect and test domestic water piping as follows:

1. Prior to disinfection, flush all domestic water piping as described under Flushing and Cleaning of Piping.
2. Purge and disinfect domestic water piping per plumbing code and City of Ann Arbor requirements. Do not use excessive amounts of disinfectant as it may damage piping seals.
3. Submit water samples in sterile bottles to the City of Ann Arbor. Repeat the procedure if the biological examination made by the City of Ann Arbor shows evidence of contamination.

B. Prepare reports for all purging and disinfecting activities. Furnish owner final copy of test results for acceptance.

**3.15 DYE TESTING - STORM AND SANITARY WASTE**

*DYE TESTING IS TYPICALLY REQUIRED ON ALL UNDERGROUND STORM AND SANITARY CONNECTIONS, NEW CONNECTIONS TO CONCEALED STORM AND SANITARY PIPING, AND ON ALL PROJECTS CONTAINING MORE THAN 10 NEW PLUMBING FIXTURES. DYE TESTING LINK UPDATED IN 2 PLACES BELOW ON 10/1/13 PER REQUEST OF JODY SCHAUB OF OSEH ON SAME DATE.*

- A. Conduct Dye Testing on storm and sanitary piping connections as specified herein and in compliance with U-M OSEH "Dye Testing Guidelines for Storm Water and Sanitary Systems" (Refer to <http://www.oseh.umich.edu/environment/dye.shtml>).
- 1. Dye testing is not required if all of the following apply:
  - a. Minor renovation with fewer than 10 total fixtures.
  - b. All piping can be clearly, visually traced back to clearly labeled existing piping.
  - c. No new underground connections.
- B. Preconstruction Phase: Prior to beginning demolition and construction activities:
  - 1. Identify point of connection for all storm and sanitary connections. Provide pipe labels on existing piping if required for clear identification.
  - 2. Identify dye test validation points in conjunction with U-M OSEH (in general, first manhole outside the building).
  - 3. Develop dye testing plan in conjunction with U-M OSEH and U-M Project Manager or assignee.
- C. Demolition and Construction Phase:
  - 1. Furnish dye and conduct dye testing of all new connections to new and existing storm and sanitary piping prior to making connection. Coordinate testing with U-M Project Manager, U-M OSEH and U-M Code Inspector. No dye testing shall be performed without explicit consent of code inspector. (Refer to <http://www.oseh.umich.edu/environment/dye.shtml> for dye requirements.)
  - 2. Correct any cross-connect conditions revealed by the testing and retest to validate corrections.
- D. Post-Construction:
  - 1. Conduct additional dye testing at plumbing fixtures when instructed by U-M OSEH (where new illicit connection is suspected).

**3.16 MECHANICAL SYSTEM FLUID HANDLING**

- A. Glycol Handling:
  - 1. Disposal of glycol (propylene or ethylene) into Sanitary Waste or Storm Water systems is strictly forbidden by City of Ann Arbor regulations, U-M's OSEH Department, and State of Michigan requirements.

2. Where indicated, remove and properly dispose of glycol mixture from hydronics systems. Drained mixture and associated flush water (flushing must be done until the water leaving the system has allowably low levels of glycol per U-M OSEH - 4 system flushes minimum) is considered Liquid Industrial Waste unless otherwise notified by U-M OSEH. Mixture shall be removed and disposed of by U-M OSEH approved sub-contractors only. Contact OSEH HazMat at (734) 763-4568 for current approved sub-contractors

SECTION 221119 - DOMESTIC WATER PIPING SPECIALTIES

**END OF CONTENTS TABLE**

**DIVISION 22 PLUMBING**

**SECTION 221119 - DOMESTIC WATER PIPING SPECIALTIES**

**REVISIONS:**

**8-1-99: CONTENT APPROVED AS NEW MASTER**

**8-11-99: REVISED TO VBS.DOT TEMPLATE**

**7-19-12: ADDED (2.1) THAT SEALS ARE TO BE IMMUNE FROM CHLORAMINES AND THAT EPDM SEALS ARE TO BE PEROXIDE CURED. D. KARLE FOR PLMG MTT.**

**2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. Provide piping, fittings, and specialties up to point 5 feet beyond the building for the following systems:
  - 1. Domestic Cold Water System
  - 2. Domestic Hot Water System

**1.3 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  - 1. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as  $\leq 0.25\%$  weighted average lead content) (and/or NSF/ANSI-372)\_and Annex F.
  - 2. U.S Safe Drinking Water Act.

**PART 2 - PRODUCTS**

**2.1 GENERAL**

- A. All wetted seals shall be made from materials that are immune from chloramine degradation. EPDM seals shall be peroxide cured.

**2.2 PIPING SPECIALTIES**

- A. Water Hammer Arresters: Certified per PDI Standard WH-201. Bellows type, with stainless steel casing and bellows, pressure rated for 250 psi. Piston type, precharged to 60 psig, suitable for installation in any position.  
Manufacturers: (Bellows) Zurn Shoktrol or by J.R. Smith, Wade; (Piston) Sioux Chief

*SPEC EDITOR: WALL FAUCETS ARE INEXPENSIVE ALTERNATIVE TO WALL HYDRANTS. CHROME PLATE AND T-KEY HANDLE ARE OPTIONS.*

- B. Wall Faucet - Freezeless: Bronze body, extended stem to suit wall construction, renewable composition disc, wheel handle, 3/4 inch MPT inlet, hose outlet with integral vacuum breaker.  
Manufacturers: Woodford 15, J. R. Smith, Chicago, Zurn
- C. Wall Faucet - for indoor use: Bronze body, renewable composition disc, wheel handle, 3/4 inch FPT inlet, hose outlet with integral vacuum breaker.  
Manufacturers: Woodford 24, J. R. Smith, Chicago, Zurn

*SPEC EDITOR: SELECT FROM 2 OPTIONS BELOW.*

- D. Recessed Nonfreeze Wall Hydrants: Brass box with chrome-plated face, hinged locking cover, brass body and casing, T-Key handle, vacuum breaker, 3/4-inch FPT inlet, hose outlet, inlet stem to suit wall construction.  
Manufacturers: Woodford B65, J. R. Smith, Chicago, Zurn
- E. Exposed Nonfreeze Wall Hydrants: Chrome plated brass body, T-Key handle, vacuum breaker, 3/4-inch inlet, and hose outlet, inlet stem to suit wall construction.  
Manufacturers: Woodford 65, J. R. Smith, Chicago, Zurn
- F. Vacuum Breakers: Hose connection vacuum breakers shall conform to ASSE Standard 1011, with finish to match hose connection.  
Manufacturers: Chicago, Watts, Kewanee

*SPEC EDITOR: ITEMS G THROUGH K ARE USED FOR PROTECTING DOMESTIC WATER SYSTEMS FROM CONTAMINATION. SELECT APPLICABLE ITEMS CAREFULLY, AND COORDINATE WITH DETAILS. GENERALLY, SIZE OR CAPACITY SHOULD BE ADDED TO DRAWINGS, INCLUDING FLOW AND ALLOWABLE PRESSURE DROP.*

*SPEC EDITOR: ITEM G BELOW IS USED FOR LARGE HIGH HAZARD CONNECTIONS, INCLUDING BUILDING MAIN, FIRE PROTECTION BRANCH, BOILER FEED. DRAIN IS REQUIRED.*

- G. Backflow Preventer - Reduced Pressure Zone: Includes dual check valves, reduced pressure relief valve and air vent, shutoff valves on inlet and outlet, strainer on inlet, test ports with test cocks, manufacturer's standard materials. ASSE Standard 1013 certified.

Manufacturer: Watts 909 Series, Conbraco, Febco

*SPEC EDITOR: ITEM H BELOW IS USED FOR LARGE LOW HAZARD CONNECTIONS, INCLUDING COOLING TOWER MAKE-UP WHERE OUTLET IS ABOVE TOWER OVERFLOW. NO DRAIN IS REQUIRED.*

- H. Backflow Preventer - Double Check Valve Assembly: Includes double check valves, shutoff valves on inlet and outlet, strainer on inlet, test ports with test cocks, manufacturer's standard materials. ASSE Standard 1015 certified.

Manufacturer: Watts 709 Series, Conbraco, Febco.

*SPEC EDITOR: ITEM I BELOW IS USED FOR SMALL LOW HAZARD CONNECTIONS, INCLUDING ICE MACHINE AND WATER COOLERS. NO DRAIN IS REQUIRED.*

- I. Backflow Preventer - Dual Check Valve: Includes two removable check valve assemblies, manufacturer's standard materials. ASSE Standard 1024 certified.

Manufacturer: Watts 7 Series, Conbraco, Febco.

*SPEC EDITOR: ITEM J BELOW IS USED FOR SMALL HIGH HAZARD CONNECTIONS NOT SUBJECT TO CONTINUOUS PRESSURE, INCLUDING INDIVIDUAL FUME HOODS. MUST BE LOCATED OUTSIDE OF FUME HOOD, DOWNSTREAM OF SHUT-OFF VALVE. NO DRAIN IS REQUIRED. FOR NEW FUME HOODS, THIS PARAGRAPH IS NOT REQUIRED, IT SHOULD BE INCLUDED IN HOOD SPECIFICATION*

- J. Atmospheric Vacuum Breaker - Single float and disc with large atmospheric port. Angle pattern brass body, with chrome plated finish, ½" inlet and outlet unless otherwise noted. ASSE Standard 1001 certified.

Manufacturer: Watts 288A Series, Chicago Water Saver Model L-102.

*SPEC EDITOR: ITEM K BELOW IS USED FOR SMALL HIGH HAZARD CONNECTIONS SUBJECT TO CONTINUOUS PRESSURE, INCLUDING GANGED FUME HOODS. MUST BE LOCATED OUTSIDE OF FUME HOOD. NO DRAIN IS REQUIRED.*

- K. Pressure Type Vacuum Breaker - Spring loaded single float and disc with independent first check valve, manufacturer's standard materials, with test cocks and ball type isolation valves. ASSE Standard 1020 certified. Manufacturer: Watts 800 Series, Conbraco, Febco.

*SPEC EDITOR: ITEM L BELOW IS USED FOR AUTOMATIC FILL FOR HW HEATING AND CHILLED WATER SYSTEMS. EDIT BELOW FOR OTHER APPLICATIONS. INDICATE FLOW RATES AND INLET AND OUTLET PRESSURES ON THE DRAWINGS.*

- L. Pressure-Regulating Valves: Single-seated, direct-operated type, having bronze body with integral strainer and complying with requirements of ASSE Standard 1003. Select proper size for maximum flow rate and inlet and outlet pressures indicated. Manufacturer: B&G Model 350, Conbraco, Watts.

*SPEC EDITOR: ITEM M BELOW IS USED FOR DOMESTIC WATER HEATERS. IT IS USUALLY SPECIFIED WITH WATER HEATER OR OTHER EQUIPMENT. COORDINATE.*

- M. Combined Pressure-Temperature Relief Valves: Bronze body, test lever, thermostat, ANSI Z21.22. Factory set at 210 degrees F, and 150 psig. Size valves in accordance with ASME Boiler and Pressure Vessel Codes. Manufacturers: Watt series 40, 140, 240, 340, Spirax-Sarco, Leslie

### 2.3 WATER METER

*SPEC EDITOR: APPROACH SPECIFIED BELOW IS THE USUAL METHOD. SIZE SHOULD BE COORDINATED BY DESIGNER, AND INDICATED ON DRAWINGS. USE DETAIL "WATMETR"*

- A. General: Water meters are supplied and installed by the City of Ann Arbor, paid for by the owner. Coordinate piping rough in and installation with the City of Ann Arbor.

## PART 3 - EXECUTION

### 3.1 INSTALLATION OF PIPING SPECIALTIES

*SPEC EDITOR: VERIFY LOCAL AUTHORITY REQUIREMENTS.*

- A. Install backflow preventers and vacuum breakers where shown on drawings, in compliance with the plumbing code and authority having jurisdiction. Install air gap fitting and pipe relief (where applicable) to sanitary waste. Test backflow prevention for proper operation. Tests shall be by Certified Tester. Provide Owner with one (1) copy of each backflow prevention test report.
- B. Install water hammer arrestors complete with accessible isolation valve on hot and cold water supply piping to lavatories and sinks.

*SPEC EDITOR: DISINFECTING IS TYPICALLY REQUIRED FOR LARGE DOMESTIC WATER SYSTEMS ONLY. DISINFECTING IS ALSO REQUIRED FOR ANY PIPING UPSTREAM OF THE BACKFLOW PREVENTER THAT PROTECTS THE CITY WATER SYSTEM. FLUSHING AND SAMPLING IS TYPICALLY ALL THAT IS DONE ON SMALL PROJECTS. SELECT FROM THE TWO APPROACHES SPECIFIED BELOW.*

*SPEC EDITOR: SELECT 3.2 BELOW FOR LARGE PROJECTS:*

### 3.2 FLUSHING, DISINFECTING AND TESTING

- A. Flush, disinfect and test domestic water piping as follows:
  - 1. Flush all domestic water piping per Related Section 221113.

2. Purge and disinfect domestic water piping per City of Ann Arbor requirements.
  3. Submit water samples in sterile bottles to the City of Ann Arbor. Repeat the procedure if the biological examination made by the City of Ann Arbor shows evidence of contamination.
- B. Prepare reports for all purging and disinfecting activities. Furnish owner final copy of test results for acceptance.

**SPEC EDITOR: SELECT 3.3 BELOW FOR SMALL PROJECTS:**

**3.3 FLUSHING AND TESTING**

- A. Flush and test domestic water piping as follows:
1. Flush all domestic water piping per Related Section 221113.
  2. Submit water samples in sterile bottles to the City of Ann Arbor. Repeat the procedure if the biological examination made by the City of Ann Arbor shows evidence of contamination.
- B. Furnish owner final copy of test results for acceptance.

**SECTION 221123 - DOMESTIC-WATER PACKAGED BOOSTER PUMPS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

*SPEC EDITOR: IN ARTICLE BELOW, SELECT PROPER SPEC SECTION NUMBER BY PROJECT. DELETE SUSTAINABLE DESIGN / LEED IF NOT APPLICABLE TO PROJECT.*

- B. Related Sections:

1. Section 018113 - Sustainable Design Requirements
2. Section 019110/019100 - Commissioning
3. Section 221113- Piping Materials and Methods
4. Section 220523 - Valves
5. Section 220519 - Thermometers, Pressure Gauges, and Accessories
6. Section 220513 - Motors
7. Section 232123 - Pumps
8. Section 220548 - Vibration Control
9. Section 220719 - Mechanical Systems Insulation
10. Section 220514 - Variable Frequency Drives
11. Section 230900 - Mechanical Systems Controls
12. Division 26 - Electrical

**1.2 SUMMARY**

- A. Packaged, skid mounted, domestic water booster pump system including pumps, starters or variable frequency drives (VFDs), controls, piping, valves, hydro-pneumatic tanks, and accessories.

**1.3 SUBMITTALS**

- A. Product Data: Include catalog illustrations, model, rated capacities, performance, weights, dimensions, component sizes, rough-in requirements, piping and wiring diagrams and details, materials of construction, accessories, operating and maintenance clearance requirements. Wiring diagrams shall be project specific, and differentiate between factory wiring and field wiring. Include shop drawings and fabrication drawings for equipment indicating piping connections, power and utility requirements, rigging, installation and support details and instructions. Include written sequence of operations for all controls. Additionally include:

1. Overall dimensional drawing and weight of the pump package
2. Pump submittal including individual pump curves and composite curve for booster package

3. Starter submittal (non-VFD equipped packages)
4. For packages equipped with VFDs:
  - a. VFD submittal
  - b. Pressure sensor data including installation instructions and calibration procedures
5. Valve, pipe, pressure gauge, and motor submittals
6. Installation, operation, and maintenance manuals
7. Factory test reports
8. Hydro-Pneumatic Tanks:
  - a. Tank volume and tank acceptance volume
  - b. Bladder replacement instructions

#### **1.4 QUALITY ASSURANCE**

- A. **Manufacturers and Products:** The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. **Reference Standards:** Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  1. American Water Works Association
  2. ANSI/HI 9.6.1-1998, NPSH Margin
  3. ANSI/HI 9.6.3-1997 Operating Region
  4. NEC-National Electrical Code
  5. National Electrical Manufacturers Association
  6. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as  $\leq 0.25\%$  weighted average lead content) (and/or NSF/ANSI-372) and Annex F.
  7. U.S Safe Drinking Water Act.
  8. Underwriters Laboratories Inc. listed as a manufacturer of packaged pumping systems under UL/CUL Category QCZJ.
  9. Underwriters Laboratories Inc. listed as a manufacturer of control panels under UL/CUL 508a.
- C. The pumping package shall be assembled by the acceptable manufacturers listed in Part 2. Manufacturers shall assume "Unit Responsibility" for the complete pumping package. Unit responsibility shall be defined as responsibility for interface and successful operation of all system components supplied by the pumping system manufacturer.

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Ship the pump package with entire skid in weather-proof wrap for storage outdoors. Protect control panels, pipe openings, and other sensitive components with heavy plastic or other durable means to ensure cleanliness and prevent damage during shipping and storage. Maintain protection during installation. Comply with protection requirements for variable frequency drives (VFD) described in Related Section.

#### **1.6 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

*SPEC EDITOR: SCHEDULE THE PUMP SKID PERFORMANCE DATA ON THE DRAWINGS, INCLUDING QUANTITY OF PUMPS, VFD.S, AND REMOTE PRESSURE SENSORS. CONSIDER CONSTANT VOLUME STAGED PUMP CONTROL WHEN FRICTION LOSSES ARE LOW RELATIVE TO FIXED HEAD (STATIC HEAD AND RESIDUAL PRESSURE) REQUIREMENTS.*

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Acceptable Manufacturers:
  - 1. Armstrong
  - 2. Bell & Gossett
  - 3. Canariis
  - 4. Grundfos
  - 5. Paco

**2.2 GENERAL**

- A. Provide, as indicated and scheduled on the drawings, a UL labeled domestic water booster pump packaged system consisting of pumps, motors, controls, suction and discharged piping, hydro-pneumatic tanks, and all required accessories, mounted on a unitized structural steel support frame ("skid"). Hydro-pneumatic tank(s) shall be provided mounted on the skid when indicated on the drawings.
- B. Skid frame shall consist of welded A-36 structural steel support members designed to support all equipment, and rigid enough to withstand transportation to site, rigging, installation, and operation. Skid frame shall be suitable for floor mounting, and painted with two coat system consisting of oxide primer and alkyd enamel finish, minimum 3 mils dry film thickness. Provide holes in the base for the installation of anchor bolts and leveling of skid. Bolts to mount equipment components shall be stainless steel or zinc plated and shall meet ASTM Grade A193 B7.
- C. Pumps, valves and all wetted components shall be manufactured in compliance with NSF/ANSI-61 and NSF-61 Annex G.
- D. All elastomeric seals utilized in the skid including pump seals shall be immune from chloramine degradation.
- E. All components provided on the skid shall comply with Related Sections.
- F. Packaged system shall be rated for 300 PSIG working pressure at 250°F, or the system's maximum operating pressure and temperature at point where installed, whichever is greater, with a 3 to 1 pressure safety factor.

- G. Piping shall be in compliance with Related Section, either type L copper or (minimum) Schedule 10 type 304 stainless steel. Dissimilar metal piping shall not be used, ancillary piping including that associated with sensors shall be the same material as the suction and discharge manifolds. Provide welded or brazed flange connections at pumps, butterfly valves, and at suction and discharge connections (both ends of each manifold) to skid piping. Piping shall be sized to provide a maximum fluid velocity of 10 ft./sec. at the scheduled design flow rate. Header piping shall be easily removable to facilitate moving package through doorways.
- H. Provide isolation valves in compliance with Related Section. Valves 2-1/2" and larger shall be butterfly valves. Valves less than 2-1/2" shall be full-port ball valves. Provide isolation valves on the suction and discharge of each pump, and for each pressure gauge.
- I. Provide pressure gauges per related section, located on the suction and discharge of each pump.
- J. Provide a self-contained high temperature relief valve on the discharge of each pump, located between the pump and the downstream pump isolation valve. Factory set as required for project conditions.
- K. Provide a low point drain consisting of a ball valve and hose thread connection, in the suction and discharge header.

**SPEC EDITOR: FOR VFD CONTROLLED PUMPS WHEN THE VFD IS EQUIPPED WITH A BYPASS, SPECIFY THE APPROPRIATE RELIEF VALVE PRESSURE SETTING IN THE PARAGRAPH BELOW. DRIVE BYPASSES ARE TYPICALLY NOT RECOMMENDED ON DOMESTIC BOOSTER PUMP APPLICATIONS.**

- L. For VFD controlled pumps when the VFD is equipped with a bypass: Provide a pressure relief valve between the pump discharge and the pump downstream isolation valve, factory set at 125 PSIG.
- M. All control and power wiring shall be factory prewired on the skid. All exposed wiring shall be installed to minimize potential damage, and all power wiring, 110V and higher, shall be in a NEC compliant conduit system.
- N. Starters and variable frequency drives shall be mounted on the skid and configured to provide electrical clearances in compliance with the NEC. Examine installation area of skid and also adjust mounting locations in consideration of structures adjacent to the skid to provide NEC electrical clearances.

### 2.3 PUMPS

- A. Provide pumps of capacity and performance scheduled.

**SPEC EDITOR: SELECT CLOSED COUPLE PUMP SPEC OR MULTISTAGE PUMP SPEC, BELOW, OR EDIT TO SPECIFY THE PUMP TYPE REQUIRED FOR YOUR PROJECT.**

- B. Provide close coupled end suction pumps per Related Section with the following additional features:
  - 1. Lead free per NSF/ANSI-61 and NSF-61 Annex G.

2. Casing Construction: Bronze or stainless steel.
3. Impeller Construction: Bronze or stainless steel.
4. Replaceable casing wear rings.
5. Stainless steel shaft with replaceable bronze or stainless steel shaft sleeve completely covering the wetted area of the shaft under the seal.
6. Seals: Mechanical seals consisting of carbon rotating ring, stainless steel spring, ceramic seat, and flexible bellows and gasket.
7. Pump motors shall be secured to mounting frame, not supported by the volute alone.
8. Back pull-out design allowing servicing of pump internals without disturbing piping.

C. Provide multistage vertical mounted pumps.

1. Lead free per NSF/ANSI-61 and NSF-61 Annex G.
2. Casing Construction: Bronze or stainless steel.
3. Impeller Construction: Bronze or stainless steel.
4. Stainless steel shaft with replaceable bronze or stainless steel shaft sleeve completely covering the wetted area of the shaft under the seal.
5. Mechanical seal shall be silicon carbide/carbon with Viton or peroxide cured EPDM elastomers.
6. Pump motor coupler design shall allow seal replacement without having to remove motor.

**SPEC EDITOR: TO REDUCE SPEC SIZE IT IS RECOMMENDED THAT THE CHECK VALVE TYPE (BELOW) NOT APPLICABLE TO THE PROJECT BE DELETED.**

## 2.4 PUMP CHECK VALVES

- A. For constant volume pump packages provide in-line combination pressure reducing/regulating/check valve as manufactured by Cla-Val Company.
1. Pilot operated, adjustable, spring-loaded, normally open diaphragm type valve.
  2. Valve shall be sized for a maximum pressure drop of 10 PSIG at the scheduled flow rate for its respective pump.
  3. Designed to permit flow when controlled pressure is less than the spring setting.
  4. Suitable for working pressures up to 150 psig at 180°F.
  5. Certified for potable water service and lead free, per NSF/ANSI-61 and NSF-61 Annex G. (Use of a fusion bonded epoxy barrier coating is permitted to provide conformance to NSF ANSI-61/NSF-61 Annex G.)
  6. Flanged in accordance with ANSI B16.1, Class 125.
  7. Valve body equal to nominal pipe diameter at all points through the valve(full port design).
  8. Valve body and cover shall be constructed of ASTM A536 ductile iron.
  9. Hydrostatically tested and seat tested to demonstrate zero leakage.
  10. Locate check valves between the pump discharge and the pump downstream isolation valve.

- B. For variable speed pump packages provide non-slam resiliently hinged type check valves, "SWING-FLEX" as manufactured by Val Matic Valve and Manufacturing Corporation.
1. Suitable for working pressures up to 150 psig at 180°F.
  2. Full body type, with one moving part, the resiliently hinged disc.
  3. Bolted dome shaped access cover allowing replacement of resiliently hinged disk without removing valve from line.
  4. Certified for potable water service and lead free, per NSF/ANSI-61 and NSF-61 Annex G.
  5. Exterior and interior of the valve coated with an NSF/ANSI 61 approved fusion bonded epoxy coating.
  6. American Water Works Association Standard ANSI/AWWA C508 compliant.
  7. Flanged in accordance with ANSI B16.1, Class 125.
  8. Valve body equal to nominal pipe diameter at all points through the valve. The 4 in. valve shall be capable of passing a minimum 3 in. sphere.
  9. Hinged disk: One-piece construction, molded with integral o-ring type sealing surface, with alloy steel and nylon reinforcement in the flexible hinge area. Provide disc material compatible with domestic water service, unaffected by chloramines. Flex portion of disc shall be warranted for twenty-five years. The valve disc design shall have been cycle tested 1,000,000 times in accordance with ANSI/AWWA C508 and show no signs of wear, cracking, or distortion to the valve disc or seat and shall remain drip tight at all pressures.
  10. Disk seating surface on a 45 degree angle to minimize disc travel. 35 degree maximum disc stroke and memory disc return action to provide a cracking pressure of 0.25 psig.
  11. Valve body and cover shall be constructed of ASTM A536 ductile iron.
  12. Hydrostatically tested and seat tested to demonstrate zero leakage.
  13. Locate check valves between the pump discharge and the pump downstream isolation valve.

*SPEC EDITOR: HYDRO-PNEUMATIC TANKS ARE RECOMMENDED FOR BOTH CONSTANT AND VARIABLE SPEED APPLICATIONS TO ALLOW NO-FLOW PUMP SHUT DOWN AND TO IMPROVE PRESSURE CONTROL. THE SPECIFICATION BELOW IS FOR LARGER STYLE TANKS WITH TANK VOLUMES OF APROX.50 GALLONS AND LARGER. SMALLER TANKS ARE TYPICALLY NOT AVAILABLE WITH THE REPLACEABLE BLADDER SPECIFIED BELOW. DESIGNER MUST PROVIDE TANK DIMENSIONS, VOLUME, ACCEPTANCE VOLUME, PRESSURE/TEMPERATURE RATING, AND PRECHARGE PRESSURE (PROJECT SPECIFIC, FIELD SET) ON THE DRAWINGS. FOR VERY LARGE TANKS IT IS RECOMMENDED THAT THE DESIGNER SPECIFY A "FULL ACCEPTANCE VOLUME" TANK (WHERE ACCEPTANCE VOLUME EQUALS TANK VOLUME), WHICH AVOIDS BLADDER DAMAGE IF THE AIR CHARGE IS LOST. IF TANK IS TO BE MOUNTED ON THE PUMP SKID, INDICATE SUCH ON THE DRAWING.*

## 2.5 HYDRO PNEUMATIC TANKS

- A. Acceptable Manufacturers:

1. Amtrol
  2. Armstrong
  3. Wessels
- B. ASME rated, precharged, vertical style bladder tank with bottom system (water) connection.
1. NSF/ANSI-61 and NSF-61 Annex G listed for drinking water use.
  2. Replaceable (non-EPDM) butyl bladder, minimum 0.10 inch thick.
  3. Large flanged bladder service openings to allow bladder to be replaced without tipping tank on its side.
  4. Steel shell with red oxide exterior primer. FDA approved liner of polypropylene or epoxy.
  5. Rated for system pressure and temperature, but not less than 125 PSIG at 200F.
  6. Provide the following additional features: Tire valve style charging connection to permit on-site charging. Bronze or malleable iron water connection. Auxiliary gauge/pressure switch connection. Lift ring(s). Steel floor support skirt.

***SPEC EDITOR: SELECT EITHER CONSTANT VOLUME OR VARIABLE VOLUME PUMP CONTROL BY DELETING ONE OF THE TWO BELOW ARTICLES.***

**2.6 STARTER AND CONTROLS - CONSTANT VOLUME PUMP PACKAGES**

- A. Provide UL listed and labeled controller/starter assembly specifically designed for constant speed domestic water pumping applications.
- B. Pump staging shall be user-selectable based on kilowatts (kW), current (amps), or pressure (PSI).
1. kW shall be true power derived from a transducer. Amps shall be RMS obtained from the kW transducer. kW and amps shall be controller calibrated with calibration held in non-volatile memory. PSI shall be derived from a pressure transducer with a 4-20 mA analog output.
- C. The controller shall operate the pump(s) to provide the following sequence of operation:
1. Pump(s) shall be staged based on DESIGNER SELECT ONE: kilowatts/current/pressure.
  2. In the "AUTO" mode, the lead pump shall start upon initiation of the system either by activation of the "START" button or by digital input from the Owner's Building Automation System (BAS).
  3. The lead pump shall operate at the point on its curve where system demand is satisfied. If the lead pump is unable to satisfy demand, lag pumps shall be sequentially started as required to meet system demand.
  4. As demand decreases, the lag pumps shall be de-staged to minimize energy consumption.
  5. The system shall continue to operate, subject to the controller safety features and alarms, or a low/zero flow condition.

- a. The controller shall detect low/zero flow conditions. When the (user adjustable) low/zero flow condition limit is reached, the controller shall shut off the pump(s) and allow system demand to be provided by the hydro-pneumatic tank. The controller shall automatically restart the pumps as hydro pneumatic tank storage is depleted (user adjustable), to maintain the required system pressure/flow.
  - 6. In the event of a failure due to motor overload, the next pump in sequence shall be started.
  - 7. In the event of any safety/alarm condition, controller shall activate a common alarm contact hardwired back to the Owner's BAS system.
  - 8. The controller shall equalize pump run-times.
  - 9. In "MANUAL" mode, it shall be possible to manually turn individual pumps on and off. When a pump is started manually, controller safety and alarm features shall continue to operate including pump cut-out.
- D. The controller shall provide the following safety features and alarms:
- 1. Low suction pressure alarm and cut out(automatic reset)
  - 2. High suction pressure alarm and cut out(automatic reset) (suction pressure is sufficient to satisfy building demand)
  - 3. Low system pressure alarm
  - 4. High system pressure alarm and cut out (manual reset)
  - 5. Pump failure alarm
  - 6. High temperature alarm and cut out (automatic reset)
  - 7. Motor overload failure alarm (manual reset)
- E. The control enclosure shall conform to NEMA 1 and shall include motor starters, overloads, control power transformer and a digital microprocessor based controller with a NEMA 4 rated operator interface. Provide a single point electrical power connection that provides power to all controls.
- F. Controller shall be capable of operation in ambient conditions of 32°F to 140°F and a humidity range of 5% to 95%, non-condensing.
- G. The controller will include the following features:
- 1. Liquid crystal display user interface.
  - 2. Pump status indication.
  - 3. Alarms shall be displayed in plain English on the display.
  - 4. Fault information accessed by interrogating the controller through its HELP and log keys.
  - 5. Minimum one level of software password security provided for protection of field modifiable data.
  - 6. Data logging to provide historical information of key events with date and time stamps. Log information shall include alarms, pump run timers, system on-off times and pump cycle counters. The data log shall display the minimum, maximum and average values of temperature, pressure and flow. It shall also display kilowatt-hours.
  - 7. Capable of operating in automatic, manual or off-line diagnostic modes.
  - 8. A common alarm contact for hardwiring back to Owner's BAS system, which will activate when any alarm condition occurs.

- H. The controller shall be microcomputer based and hold its software in non-volatile memory. On-line field modified data entries, such as stage point, or method of staging, shall be stored in flash memory with capability to prevent accidental loss of data due to power loss, voltage surge or spike. In the event of a complete power outage, all field and factory settings shall remain stored and shall automatically be restored when power is restored.
- I. The controller shall be powered by 115V/1ph/60Hz AC power from a control power transformer provided within the control enclosure. The control panel shall be equipped with a regulated 24VDC power supply to power analog input signals. The controller shall be capable of receiving up to four 4-20 mA analog input signals and RTD signals.
- J. All external sensors/transmitters and switches shall be powered by the controller through its integral 24VDC power supply. Over voltage and short circuit protection shall be on-board. All analog circuits shall be protected from up to 575V with a fast-acting fuse and sacrificial input resistors. All digital outputs shall be externally isolated. The incoming power and I/O circuitry shall reject electromagnetic (EMI) and radio frequency interference.

**2.7 VARIABLE FREQUENCY DRIVE (VFD) AND CONTROLS- VARIABLE VOLUME PUMP PACKAGES**

- A. Provide UL listed and labeled variable speed drive(s) and controller assembly specifically designed for variable speed domestic water pumping applications. The controller shall provide multi-pump parallel operation control, duty-standby pump selection, automatic alternation and automatic transfer to the standby pump upon pump/VFD failure.
- B. Unless noted otherwise, provide a separate variable frequency drive for each pump.
- C. The controller shall operate the pump(s) to provide the following sequence of operation:
  - 1. When the controller mode is in REMOTE, the pumping system shall start and operate automatically upon the closure of Owner's BAS contact.
  - 2. When the controller mode is in LOCAL, the pumping system shall start immediately and operate automatically.
  - 3. It shall be possible to manually turn individual pumps on and off. When a pump is started manually, controller safety and alarm features shall continue to operate including pump cut-out.

**SPEC EDITOR: INDICATE QUALITY AND LOCATION OF REMOTE PRESSURE SENSORS ON THE DRAWINGS. PRESSURE SENSORS LOCATED AT THE PUMP SKID DEFEAT THE PRIMARY ADVANTAGE OF VFD PUMPING SYSTEMS AND ARE NOT RECOMMENDED.**

  - 4. The controller shall control pump speed based on remote mounted pressure transmitter(s), quantity as indicated on drawings.

5. The pump logic controller shall compare each remote pressure transmitter signal ("process variable") to the user adjustable set point. It shall be possible to set an individual setpoint for each process variable location.
  6. When the process variable set points at all locations are satisfied the pump speed shall remain constant at the optimum energy consumption level.
  7. The controller shall continuously scan and compare each process variable to its individual set point and control to the least satisfied zone.
  8. If the set point cannot be satisfied by the designated lead pump, the controller shall initiate a timed sequence of events to stage on a lag pump.
  9. The lag pump shall accelerate resulting in the lead pump(s) decelerating until they equalize in speed.
  10. Further changes in process variable shall cause the pumps to change speed together.
  11. As the worst case zone deviates from set point, the controller shall send the appropriate analog signal to the VFD to speed up or slow down the pump(s).
  12. When the set point can be safely satisfied with fewer pumps, the controller shall initiate a timed pump de-stage sequence and continue variable speed operation.
  13. The controller shall provide end-of-pump-curve point protection.
  14. In the event of any safety/alarm condition, controller shall activate a common alarm contact hardwired back to the Owner's BAS system.
  15. The system shall continue to operate, subject to the controller safety features and alarms, or a low/zero flow condition.
    - a. The controller shall detect low/zero flow conditions. When the (user adjustable) low/zero flow condition limit is reached, the controller shall shut off the pump(s) and allow system demand to be provided by the hydro pneumatic tank. The controller shall automatically restart the pumps as hydro pneumatic tank storage is depleted (user adjustable), to maintain the required system pressure/flow.
  16. In the event of a VFD fault, the controller shall automatically initiate a timed sequence of events to start the redundant pump/VFD set in the variable speed mode.
  17. In the event of the failure of a sensor/transmitter, its process variable signal shall be removed from the controllers scan/compare program and a plain English alarm message shall be displayed.
  18. In the event of failure to receive a pressure variable signal, a user selectable number of the VFDs shall maintain a user adjustable speed; reset shall be automatic upon correction of the sensor failure.
  19. The controller shall equalize pump run-times.
- D. The controller shall provide the following safety features and alarms:
1. Low suction pressure alarm and cut out(automatic reset)
  2. High suction pressure alarm and cut out(automatic reset).  
(suction pressure is sufficient to satisfy building demand)

3. Low system pressure alarm
  4. High system pressure alarm and cut out (manual reset)
  5. Pump failure alarm
  6. High temperature alarm and cut out (automatic reset)
  7. Motor overload failure alarm (manual reset)
- E. The control enclosure shall conform to NEMA 1 and shall include a control power transformer and a digital microprocessor based controller with a NEMA 4 rated operator interface. Provide a single point electrical power connection that provides power to all controls.
- F. Controller shall be capable of operation in ambient conditions of 32°F to 140°F and a humidity range of 5% to 95%, non-condensing.
- G. The controller will include the following additional features:
1. Liquid crystal display user interface.
  2. Pump status indication.
  3. Alarms shall be displayed in plain English on the display.
  4. Fault information accessed by interrogating the controller through its HELP and log keys.
  5. Minimum one level of software password security provided for protection of field modifiable data.
  6. Hydraulic stabilization program with proportional-integral-derivative control, providing smooth pump start-up, speed control, and pump stage and de-stage; and shall prevent damaging hydraulic conditions including motor overload, pump flow surges, and hunting. PID values shall be field adjustable.
  7. Display readout shall display the following values at minimum:
    - a. Pressures at each remote pressure sensor (PSIG)
    - b. Skid discharge pressure (PSIG)
    - c. Skid total flow (GPM)
  8. Data logging to provide historical information of key events with date and time stamps. Log information shall include alarms, pump run timers, system on-off times and pump cycle counters. The data log shall display the minimum, maximum and average values of temperature, pressure and flow. It shall also display kilowatt-hours.
  9. Capable of operating in automatic, manual or off-line diagnostic modes.
  10. A common alarm contact for hardwiring back to Owner's BAS system, which will activate when any alarm condition occurs.
  11. Shall meet Part 15 of FCC regulations pertaining to class A computing devices.
  12. Upon VFD fault(s), the pump controller shall display an alarm condition through a plain English message.
    - a. VFD fault indication shall be continuously displayed on the operator interface of the controller until the fault has been corrected and the controller has been manually reset.

13. Analog input resolution from flow meters and pressure sensors shall be 12-bit minimum, and the controller shall scan each analog input a minimum of once every 100 milliseconds. All sensor/transmitter inputs shall be individually wired to the pump logic controller for continuous scan and comparison function. All analog inputs shall be provided with current limit circuitry to provide short circuit protection and safeguard against incorrect wiring of sensors
14. The controller shall be microcomputer based and hold its software in non-volatile memory. On-line field modified data entries, such as stage point, or method of staging, shall be stored in flash memory with capability to prevent accidental loss of data due to power loss, voltage surge or spike. In the event of a complete power outage, all field and factory settings shall remain stored and shall automatically be restored when power is restored.
15. The controller shall be powered by 115V/1ph/60Hz AC power from a control power transformer provided within the control enclosure. The control panel shall be equipped with a regulated 24VDC power supply to power analog input signals. The controller shall be capable of receiving up to four 4-20 mA analog input signals and RTD signals.
16. All external sensors/transmitters and switches shall be powered by the controller through its integral 24VDC power supply. Over voltage and short circuit protection shall be on-board. All analog circuits shall be protected from up to 575V with a fast-acting fuse and sacrificial input resistors. All digital outputs shall be externally isolated. The incoming power and I/O circuitry shall reject electromagnetic (EMI) and radio frequency interference (RFI)

#### H. Variable Speed Drive

1. Provide variable speed drives per Related Section. The following features described in the Related Section are not required, except as necessary to meet other parts of this specification.
  - a. VFD manual across-the-line electrical bypass.
  - b. Local-Remote speed control switch
  - c. A run permissive circuit, separate from the safety interlock circuit, which prevents motor operation whether in drive or bypass mode. This circuit, via the customer's external contact device, signals the motor may run, provided the safety interlock contact(s) is made.
  - d. "Powered run mode" and "powered run request" circuits.
  - e. PID controller integral to VFD.
  - f. Auxiliary contacts that actuate when the motor is started in any mode.
  - g. Indicating lamp for "POWER AVAILABLE" and for "MOTOR ON BYPASS".

#### I. Pressure Transmitters

1. Two wire 24 VDC system providing 4-20mA output signal to pump controller. Waterproof NEMA 4 electrical enclosure with a 0.5" NPT conduit connection. 316 stainless steel wetted parts. Adjustable span. Maximum inaccuracy 0.5% of full span including linearity, hysteresis and repeatability errors. Range 0-50 PSIG. Provide higher range transmitters when required by system design or configuration. Capable of withstanding over pressurization of no less than 300 PSIG. Immune from radio frequency interference.

*SPEC EDITOR: THE ARTICLE HEADING BELOW (IN HIDDEN TEXT) IS RESERVED FOR SPECIFYING A FLOW METER IF DESIRED. A FLOW METER IS NOT REQUIRED FOR PUMP CONTROL BUT COULD ASSIST IN TROUBLE SHOOTING. FOR VERY LARGE BOOSTER PUMP INSTALLATIONS A MAGNETIC FLOW METER SHOULD BE CONSIDERED DUE TO DURABILITY, ACCURACY, AND HIGH TURN-DOWN. A MAGNETIC FLOW METER CAN EASILY BE SPECIFIED BY REVISING THIS SECTION TO REFERENCE THE MAGNETIC FLOW METER SPECIFICATION FOUND IN SECTION 230900 - MECHANICAL SYSTEMS CONTROLS.*

- J. Flow Meter

## **2.8 FACTORY TESTING**

- A. Prior to shipment, hydrostatically and electrically test each unit, including all safeties and control functions. Test system with motors connected to starters or VFD output. Operate skid from 0 to 100% of design flow requirement and validate proper pump staging and speed control. Calibrate and test all safety features. Test all inputs, outputs and program execution specific to this application.
- B. The Owner's Representative shall be allowed to witness the factory testing. A report detailing the results of the factory test shall be provided. An officer of the manufacturer's company shall certify by signature that the report accurately reflects the test results, and that the package meets all performance requirements. The report shall clearly identify any performance requirements that were not achieved.

## **PART 3 - EXECUTION**

*SPEC EDITOR: WHEN REMOTE SENSORS ARE USED, COORDINATE DOCUMENTS TO PROVIDE SENSOR LOCATION AND CONDUIT/WIRING FROM SENSOR TO PUMP CONTROLLER. DESIGNER MUST SHOW SENSOR LOCATIONS ON PLANS.*

### **3.1 EXAMINATION AND PREPARATION**

- A. Rig units off delivery trucks. Comply with Manufacturer's rigging instructions.
- B. Store units protected from weather, dirt, water, construction debris, and physical damage. Support stored units at points as required by manufacturer.

- C. Examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting equipment performance, maintenance, and operations. Assure that required NEC electrical clearances will be available at skid mounted components such as VFDs, starters, control panels, and similar electrical equipment. Existing and new piping cannot run over skid control panels or skid VFDs. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 INSTALLATION**

- A. Install in strict compliance with manufacturer's installation instructions and Related Sections. Maintain manufacturer's recommended clearances for service and maintenance.
- B. Install skid and hydro-pneumatic tanks on support structures or concrete bases as indicated. Install skid vibration isolation when indicated or required by Related Section. Set skid base level, using stainless steel shims and metal blocks designed for leveling machinery bases. Anchor base to floor using all mounting holes.
- C. Install separate devices furnished by skid manufacturer and not factory installed, including but not limited to pressure transmitters and flow meters. Install such devices in compliance with Related Sections.
- D. Connect suction and discharge headers to building piping using flexible piping connectors per Related Section, whether indicated or not. Cap unused ends of skid manifolds.
- E. Install flow meters and pressure transmitters when included or required. Final termination of devices (both ends) shall be accomplished by the factory service technician.
  - 1. Install flow meters per flow meter manufacturer's recommendations and with the recommended up and downstream straight lengths of pipe. Install piping as required to provide these straight lengths. When manufacturer does not indicate the required up and downstream requirements, provide a minimum of 5 pipe diameters upstream and downstream of straight pipe. Provide wiring in conduit between the flow meter and the skid controller.
  - 2. Install pressure transmitters at locations specified on the drawings.
    - a. Install pressure transmitters in locations easily accessible for calibration and replacement.
    - b. Install ball type isolation valve to isolate the pressure transmitter.
    - c. Provide a pressure gauge at the same location as each pressure transmitter, to validate pressure transmitter reading.
    - d. Provide wiring in conduit between the pressure transmitter and the skid controller.
  - 3. Install wiring in conformance with Related Section (Mechanical Systems Controls), utilizing approved contractors listed in that section.
- F. Install hydro pneumatic tanks as indicated on the drawings.

1. Install to maintain manufactures specified clearance above tanks, minimum 18 inches.
  2. Connect to system piping. Provide separate isolation valve and drain valve with hose bib for each hydro-pneumatic tank.
  3. Install pressure gauge (or switch when indicated) on hydro-pneumatic tank auxiliary air connection.
  4. Isolate each tank from the system, drain the tank, then charge to specified precharge pressure. If precharge pressure is not indicated, obtain from project engineer. Factory precharge is not to be considered the correct precharge pressure. Commissioner shall witness the setting of precharge pressure.
- G. Complete all manufacturer's pre-start checks.
- H. Prior to placing system into operation, sanitize skid piping, hydro-pneumatic tanks, and any building piping not previously sanitized. Assure sanitizing solution enters each hydro-pneumatic tank. Provide temporary piping and bypasses as required to accomplish sanitization.
- I. Insulate skid piping and hydro-pneumatic tanks; materials and installation per Related Section.

### **3.3 TEMPORARY SERVICE**

- A. Start units for temporary use only with the express written permission of the Project Manager and in compliance with all requirements of the Contract Documents.
- B. Prior to placement into temporary service perform manufacturer's pre-start protocols.
- C. Utilize factory trained service technician to perform start-up as described under the Field Quality Control article. Commission prior to putting into temporary service to the extent required by the Commissioning Authority. Re-perform factory service technician start-up and all commissioning activities prior to Owner acceptance, even if previously completed to ready for temporary service.
- D. Perform all required routine maintenance procedures during temporary service. Continuously maintain a log of such procedures. Store log at unit during temporary use period and include log as part of the final O & M manual.

### **3.4 FIELD QUALITY CONTROL**

- A. Provide a factory trained service technician to perform start-up services. The service technician shall perform the following:
  1. Verify correct installation and organize, instruct and assist the mechanical contractor's personnel in start-up procedures
  2. Terminate all control wiring connections associated with the skid.
  3. Perform manufacturer's pre-start checks.
  4. Set all safety devices.
  5. Start skid controller and VFDs. Set all controller and VFD parameters. Tune the controller.

6. Commission the pump package, including demonstrating all safeties, proper pump staging, de-staging, and speed control, zero-flow shutdown, restart after power failure, and all other skid features.
  - a. Optimize the setpoint of each pressure transmitter control variable to the minimum pressure (with reasonable safety factor) required for the plumbing fixtures actually installed. Obtain preliminary setpoints in advance from project engineer. Adjust setpoints under the direction of the Commissioning Authority.
  - b. On constant volume pump packages, adjust pump pressure regulating valves to provide adequate pressure at the most remote plumbing fixture (with reasonable safety factor). Set controller to specified staging method (kW/amps/pressure); reset to another staging method and adjust controller parameters as required to provide proper performance.
7. Provide a written service report prepared on site and submitted at the time of each service visit (with copies immediately provided to the Owner and Commissioner). Report shall indicate services provided and list all controller settings, PID settings, and set points.
8. Train Owner personnel. Training and start up services are separate functions and training shall not be combined with startup services.

### **3.5 COMMISSIONING**

- A. Perform commissioning activities per Related Sections.

### **3.6 TRAINING**

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.
- B. Train Owner's maintenance personnel on equipment operation, start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel.
  1. Provide 2 hours training minimum.

**SPECIFICATION DIVISION 22**

NUMBER            SECTION DESCRIPTION

**DIVISION 22 PLUMBING**

SECTION 221319 - DRAINAGE SPECIALTIES

**END OF CONTENTS TABLE**

**DIVISION 22 PLUMBING**  
**SECTION 221319 - DRAINAGE SPECIALTIES**

**REVISIONS:**

**8-1-99: CONTENT APPROVED AS NEW MASTER**

**8-11-99: REVISED TO VBS.DOT TEMPLATE**

**EDITOR: FUTURE SECTION WILL ADDRESS PVC CLEANOUTS, ROOF DRAINS AND FLOOR DRAINS.**

**SPEC TEAM: I SUGGEST WE DELETE THE FOLLOWING FOR SHORT SPEC VERSION:**

**2.3 TRENCH DRAINS**

**2.4 ROOF DRAINS**

**2.5 DRAINAGE SPECIALTIES**

**3.5 INSTALLATION OF ROOF DRAINS**

**APPLICABLE PORTIONS OF 1.1 SCOPE OF WORK**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK**

**SPEC EDITOR: REVISE EDIT TO SUIT PROJECT**

- A. Provide piping, fittings, and specialties up to point 5 feet beyond the building for the following systems:
1. Sanitary Waste and Vent System
  2. Storm Waste System
- B. This section specifies materials and installation for the following specialties:
1. Clean-outs
  2. Floor Drains
  3. Trench Drains
  4. Roof Drains
  5. Drainage Specialties (backwater valves, trap primers, neutralization tanks)

**PART 2 - PRODUCTS**

**2.1 CLEAN-OUTS**

*SPEC EDITOR: STANDARD APPLICATION IS SPECIFIED BELOW. OTHER OPTIONS INCLUDE SQUARE COVER, RECESSED COVER, TRACTOR COVER, WATER TIGHT COVER, FLANGE AND CLAMP WITH MEMBRANE (FOR WET, ABOVE GRADE LOCATIONS). CONSULT CATALOG FOR SPECIAL APPLICATIONS.*

- A. Floor Clean-Out: Cast iron body, round, adjustable, scoriated, secured, nickel-bronze top, threaded and slotted bronze closure plug, outlet connection to suit application. For carpeted floors, provide nickel bronze carpet clamping frame and cover. Manufacturer: Smith 4020 to 4031, Wade, Zurn
- B. Wall Clean-Out: Treaded bronze plug in cast iron tee or ferrule, with stainless steel cover.
- C. Exposed Clean-Out: Threaded plug, of material compatible with system piping.

**2.2 FLOOR DRAINS**

*SPEC EDITOR: THE FLOOR DRAINS LISTED BELOW ARE STANDARD APPLICATION FLOOR DRAINS. ADD ADDITIONAL FLOOR DRAINS FOR SPECIALTY APPLICATIONS (HOSPITALS ETC.). OPTIONS INCLUDE: GRATE MATERIAL, SQUARE OR HINGED GRATES, SIDE OUTLETS, INTEGRAL BACKWATER VALVES, TRAPS, TRAP PRIMERS, 12" DIAMETER GRATES, ANIMAL ROOMS (WITH AUTO FLUSH), COATED BODY.*

- A. General floor drain requirements: Unless otherwise noted, provide round strainer/ grate, cast iron body, seepage flange and clamping collar, bottom outlet same size as pipe served, with caulked, no-hub or neoprene gasket connection. Load classifications per ASME A112.21.1M. Waterproofing: 40 mils sheet membrane, chlorinated polyethylene, Chloraloy 240.
- B. Provide funnel type floor drain cover for floor drains used for cooling coil condensate drains, equipment drains and wherever shown on drawings. See details.

*SPEC EDITOR: USE FD-A IN TOILET ROOMS, SHOWERS, SMALL KITCHENS, FINISHED AREAS, SMALL MECHANICAL ROOMS.*

- C. Type FD-A: Light duty, adjustable, nickel bronze strainer, minimum strainer diameter equal to twice pipe diameter. Manufacturer: Smith 2005-A, Wade, Zurn.

*SPEC EDITOR: USE FD-B IN LARGE KITCHENS, AND AREAS WITH HEAVIER LOADS, WHERE FINAL ADJUSTMENT IS IMPORTANT, AND SEDIMENT BUCKET IS NOT REQUIRED.*

- D. Type FD-B: Medium duty, adjustable 8 1/2" diameter cast iron grate. Manufacturer: Smith 2310, Wade, Zurn.

*SPEC EDITOR: USE FD-C OR FD-D IN LARGE MECHANICAL ROOMS, LOADING DOCKS AND AREAS WITH HEAVIER LOADS, WHERE FINAL ADJUSTMENT IS LESS IMPORTANT, AND SEDIMENT BUCKET IS REQUIRED.*

- E. Type FD-C: Medium duty, 8 1/2" diameter cast iron grate, free standing sediment bucket. Manufacturer: Smith 2110, Wade, Zurn.
- F. Type FD-D: Heavy duty, 10" x 12" cast iron grate, free standing sediment bucket. Manufacturer: Smith 2450, Wade, Zurn.

**2.3 TRENCH DRAINS**

*SPEC EDITOR: SEE JAY R. SMITH POLYMER CONCRETE AND FIBERGLASS DRAINAGE SYSTEMS FOR A VIABLE ALTERNATIVE TO CAST IRON. ADDITIONAL RESEARCH AND EDITTING IS REQUIRED TO MAKE TRENCH DRAINS PROJECT SPECIFIC.*

- A. Trench drain type designations and sizes are indicated on Drawings.
- B. Cast Iron Trench Drains: Cast-iron shallow hub body and grate with end plates and gaskets, assembled in standard lengths for total length and width as indicated, with the following features:
  - 1. Sediment bucket.
  - 2. Flashing device.
  - 3. Heel-proof, ADA compliant grate.
  - 4. Vandal-proof grate.
  - 5. Backwater valve.
  - 6. Convex grate.
  - 7. Dome bottom strainer.
  - 8. Bottom outlet, inside caulk.
- C. Manufacturers: Smith, Wade, Zurn.

**2.4 ROOF DRAINS**

*SPEC EDITOR: THESE ROOF DRAINS ARE STANDARD FOR MOST INSULATED ROOFS. USE RD-C WHERE PRACTICAL. OTHER CONSIDERATIONS: CAST IN PLACE DRAINS, PROMENADE DRAINS, EXPANSION JOINTS, OVERFLOW DRAINS, IRMA ROOFS. SECONDARY ROOF DRAINAGE IS REQUIRED BY CODE - COORDINATE WITH ARCHITECT.*

- A. General roof drain requirements: Unless otherwise noted, provide secured round cast iron dome, cast iron body and flashing clamp/ gravel stop, sump receiver, underdeck clamp, bottom outlet same size as pipe served, with caulked, no-hub or neoprene gasket connection.

*SPEC EDITOR: RD-A IS FOR SMALL AREAS, 2" - 4" OUTLET*

- B. Type RD-A: 8" diameter, 40 sq. in. free area, cast iron extension and collar. Manufacturer: Smith 1330, Wade, Zurn.

*SPEC EDITOR: RD-B IS FOR MEDIUM AREAS, 2" - 4" OUTLET*

- C. Type RD-B: 12" diameter, 70 sq. in. free area, cast iron extension and collar. Manufacturer: Smith 1310, Wade, Zurn.

*SPEC EDITOR: RD-C IS FOR LARGE AREAS, 2" - 6" OUTLET*

- D. Type RD-C: 15" diameter, 100 sq. in. free area, cast iron adjustable extension and collar. Manufacturer: Smith 1015, Wade, Zurn.

*SPEC EDITOR: RD-D IS FOR VERY LARGE AREAS, 8" TO 10" OUTLET*

- E. Type RD-D: 20" diameter, 150 sq. in. free area, cast iron extension and collar. Manufacturer: Smith 1010, Wade, Zurn.

## 2.5 DRAINAGE SPECIALTIES

*SPEC EDITOR: EDIT ITEMS BELOW CAREFULLY. OTHER ITEMS TO CONSIDER ADDING: GREASE INTERCEPTORS, AIR ADMITTANCE VALVE (IN LIEU OF VENT - TO BE FURTHER INVESTIGATED WITH INSPECTORS)*

- A. Backwater Valve (in-line): Bronze fitted cast-iron, bolted cover. Flapper shall provide a maximum 1/4 inch clearance between flapper and seat for air circulation. Manufacturer: Smith 7022, Wade, Zurn.
- B. Trap Primers: ASSE 1018, bronze body valve with automatic vacuum breaker, with 1/2 inch connections. Manufacturers: Precision Plumbing Products Model P-1
- C. Dilution and Neutralization Tank: Plastic construction, for use with acid laboratory waste, see details. Manufacturers: Orion, Wessels, Town and Country Plastics.
- D. Acid Waste Clean-out: For lab waste piping, specified to be polypropylene, provide corrosion resistant fire retardant polypropylene cleanouts, ASTM-D 401, with nickel bronze cover. Manufacturer: Orion, Sioux Chief
- E. Acid Waste Floor Drain: For lab waste piping specified to be polypropylene, provide corrosion resistant floor drains manufactured with fire retardant polypropylene, ASTM-D-4101. Grate funnel and covers shall be fiber filled polypropylene. Manufacturer: Orion: Model FD-3, Sioux Chief

## PART 3 - EXECUTION

### 3.1 EXAMINATION AND PREPARATION

- A. Verify existing grades, inverts, utilities, obstacles, and topographical conditions prior to installations.
- B. Examine rough-in requirements for plumbing fixtures and other equipment having drain connections to verify actual locations of piping connections prior to installation.
- C. Examine walls, floors, roof, and plumbing chases for suitable conditions where piping and specialties are to be installed.

### 3.2 INSTALLATION OF PIPING

- A. Refer to Related Section 221113 for additional requirements.

*SPEC EDITOR: TAL WILL ORDER A COPY OF THIS MANUAL.*

- B. Install underground cast iron piping per Cast Iron Soil Pipe Institute Engineering Manual.

### 3.3 INSTALLATION OF CLEANOUTS

*SPEC EDITOR: CLEANOUT LOCATIONS SHOULD BE INDICATED ON DRAWINGS. CLEANOUTS IN ULAM AREA SHALL BE LOCATED IN WALLS. CLEANOUTS LOCATED IN THE FLOOR WILL NOT BE PERMITTED.*

- A. Provide cleanouts at each change in direction of piping greater than 45 degrees, where indicated on drawings and where required by code. Clean-outs shall be same size as pipe served through 4". Above Ground Cleanouts: Install cleanouts at minimum intervals of 50' for piping 4 inch and smaller and 100' for larger piping, at base of each vertical soil or waste stack.
- B. Encase exterior cleanouts in concrete flush with grade.
- C. Cleanouts shall be aesthetically located with respect to tile patterns, masonry bond and alignment. Coordinate installation with masonry and concrete work.
- D. Prior to acceptance of the system, demonstrate that cleanout plugs are easily removable and can be easily rodded.
- E. When cleanouts are required in above grade floors, flash and clamp cleanouts in floors provided with membrane waterproofing as specified for floor drains.

### 3.4 INSTALLATION OF FLOOR DRAINS

- A. Install floor drains as indicated on drawings, at low points of surface areas to be drained.
- B. Provide trap for all floor drains, minimum 3" trap and waste.
- C. Check drainage of surfaces by flooding with the hose.
- D. Provide vent for floor drain piping per code, minimum 1 1/2".

### 3.5 INSTALLATION OF ROOF DRAINS

*SPEC EDITOR: USE DETAIL SHOWING INSTALLATION OF WATERPROOF MEMBRANE*

- A. Install drain flashing collar or flange so that no leakage occurs between roof drain and adjoining roofing. Maintain integrity of waterproof membranes, where penetrated.
- B. Check drainage of surfaces by flooding with hose.

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

***INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.***

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 018113: Sustainable Design Requirements
  - 2. Section 019110/019100: Commissioning
  - 3. Section 220500: Common Work Results for Mechanical
  - 4. Section 220513: Motors
  - 5. Section 220523: Valves
  - 6. Division 26: Electrical

***EDIT SUMMARY TO MAKE PROJECT SPECIFIC. THIS SPECIFICATION PERTAINS TO PUMPS SERVING BUILDING DRAINS, I.E. PUMPS LOCATED WITHIN BUILDINGS. IT IS NOT WRITTEN TO APPLY TO PUMPS SERVING BUILDING SEWERS OR OTHER SEWERS. SUCH PUMPS HAVE ADDITIONAL REQUIREMENTS (EXPLOSION PROOF, ETC.) PER NFPA 820.***

**1.2 SUMMARY**

- A. Pumps and accessories serving Building Drains. This specification does not apply to pumps and accessories serving sewers of any type. Products specified in this section include the following:
  - 1. Submersible pumps for elevator sumps
  - 2. Submersible storm pumps
  - 3. Submersible sewage pumps
  - 4. Submersible grinder sewage pumps
  - 5. Controls for the specified pumps
  - 6. Sump basins and covers
  - 7. Check valves and accessories for submersible pumps
  - 8. Guide rail support system

**1.3 SUBMITTALS.**

- A. Product Data: Include catalog illustrations, model, rated capacities, performance, weights, dimensions, component sizes, rough-in requirements, piping and wiring diagrams and details, materials of construction, accessories, operating and maintenance clearance requirements. Wiring diagrams shall be project specific, and differentiate between factory wiring and field wiring. Include written sequence of operations for all controls.
- B. Provide information for the following:

1. Individual pump curves indicating flow rate, head, horsepower, and pump efficiency.
2. Pump pipe connection size and type.
3. Maximum passable solid size.
4. Shaft seals, bearings, and cord sealing information.
5. Motor insulation data.
6. Pump starter information.
7. Float information.
8. Control panel wiring diagrams.
9. Control panel face diagrams indicating components on the panel face and sides and how the components are labeled.
10. Float rod information.
11. Basin data, including depth, diameter; size, arrangement, and elevations of all openings; and data on gaskets and bushings to seal the cover and cover penetrations gas-tight.
12. Guide rail support system data.

C. Installation, Operation and Maintenance Manuals

#### **1.4 QUALITY ASSURANCE STANDARDS**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  1. American Water Works Association
  2. ANSI/HI 9.6.1-1998, NPSH Margin
  3. ANSI/HI 9.6.3-1997 Operating Region
  4. NEC-National Electrical Code
  5. National Electrical Manufacturers Association
  6. National Sanitation Foundation
  7. Underwriters Laboratories Inc. listed as a manufacturer of packaged pumping systems under UL/CUL Category QCZJ.
  8. Underwriters Laboratories Inc. listed as a manufacturer of control panels under UL/CUL 508a.
  9. UL Standard 778 Motor Operated Water Pumps.

#### **1.5 DEFINITIONS**

- A. Building Drains: Refer to the Michigan Plumbing Code.

#### **1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Ship the pump and accessories in weather-proof wrap for storage outdoors. Protect control panels, pipe openings, and other sensitive components with heavy plastic or other durable means to ensure cleanliness and prevent damage during shipping and storage. Maintain protection during installation.
- B. Comply with pump manufacturer's written rigging instructions for handling and installation.

**1.7 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

*PROVIDE A DETAIL ON THE DRAWINGS INDICATING PIT SIZE AND DEPTH, QUANTITY AND ELEVATIONS OF FLOATS, INVERT ELEVATIONS OF CONNECTIONS TO PIT, ETC.*

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Acceptable Manufacturers:
  - 1. Barnes
  - 2. Zoeller
  - 3. Hydromatic
  - 4. Goulds

*ELEVATOR SUMP PUMPS MUST DISCHARGE TO SANITARY. SEE THE CONVEYING SYSTEMS DESIGN GUIDELINE FOR DETAILED REQUIREMENTS REGARDING ELEVATOR SUMP PUMPS.*

**2.2 SUBMERSIBLE CENTRIFUGAL PUMPS FOR ELEVATOR SUMPS**

- A. Simplex design, minimum capacity of 3000 gallons per hour per hoistway.
- B. Pump Type: Completely submersible, end-suction, close-coupled, overhung-impeller, centrifugal pump with controls. Capable of operating un-submerged without damage to pump. Factory-assembled and tested.
- C. Impeller: Capable of passing spherical solids 1/2 inch in diameter or greater. Statically and dynamically balanced, cast iron, stainless steel, or engineered plastic, keyed and secured to shaft.
- D. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection. Powder coated epoxy finish. Stainless steel screws, bolts, and lift handle.

*EDIT MOTOR HP BELOW, OR DELETE AND INCLUDE IN PUMP SCHEDULE. MICHIGAN ELEVATOR CODE PROHIBITS PUMPS OVER 300 VOLTS. VOLTAGE RANGES INDICATED BELOW ARE THE TYPICAL DESIRED BUT MAY REQUIRE REVISION DEPENDING ON THE PROJECT. SEE THE CONVEYING SYSTEMS DESIGN GUIDELINE FOR MORE INFORMATION.*

- E. Motor: Hermetically sealed, oil filled, with waterproof power cable of length required with cord cap (control panel will be wired to control a receptacle in the elevator hoistway that the pump will be plugged into) and a cable-sealing assembly for connection at pump. Class B or better insulation, 1.15 service factor minimum. Non-overloading through the length of the curve.
  - 1. Pumps 1 HP or less: 120 VAC single phase.

2. Pumps greater than 1 HP: 208 VAC three phase.
  3. Single Phase Pumps: Provide capacitor-start type motors with built-in overload protection.
- F. Pump and Motor Shaft: Stainless steel with factory-sealed, oil or grease-lubricated ball bearings. Upper bearing may be sleeve type.
- G. Shaft Seals: Mechanical seals, single or double.
- H. Controls:
1. Float Switches: Provide multiple tethered style float switches to turn the pump on and off and to detect high level, with waterproof cables of length required. High level detection shall be provided by use of a separate float switch. Float switches shall be non-mercury mechanical type. Provide stainless steel clamps to secure floats to the pump discharge pipe.
  2. Control Panel: Minimum NEMA 1 rated. Hinged, lockable, dead front cover. No electrical switches, indicator lights, or enunciators of any kind shall be located on the outside of the panel/panel cover.
  3. Controls: Provide UL listed controller/starter assembly. Provide a magnetic contactor (single phase pumps) or magnetic starter with overload protection (three phase pumps) that starts and stops the pump via float switch(es) separately wired to the control panel. Provide a non-latching dry alarm contact for monitoring by the Owner's building monitoring system. The dry alarm contact shall energize *whenever the pump runs*, and when high sump level is detected by the high level float switch. When high water level is detected by the high level float switch, the pump shall turn on (if not already running) and the dry alarm contact shall energize. Provide panel circuit breaker or fuse, numbered terminal strip(s) for all electrical connections, and a project specific wiring diagram in a plastic pouch inside the panel.

**THE ARTICLE BELOW IS FOR STORM PUMP APPLICATIONS.**

### **2.3 SUBMERSIBLE DOUBLE SEAL CENTRIFUGAL STORM WATER PUMPS**

- A. Pump Type: **Duplex** design, completely submersible, end-suction, close-coupled, overhung-impeller, centrifugal pump with controls. Capable of operating un-submerged without damage to pump. Factory-assembled and tested.
- B. Impeller: Vortex style, uncoated, capable of passing spherical solids 3/4 inch in diameter or greater. Statically and dynamically balanced cast or ductile iron, bronze, or stainless steel; keyed and secured to shaft.
- C. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection. Powder coated epoxy finish. All fasteners exposed to liquid shall be 300 series stainless steel. Provide stainless steel lifting handle. Provide lift ring (of stainless steel) and self-sealing discharge fittings for connection to guide-rail supports, when guide rail supports are indicated.

- D. Motor: Hermetically sealed, oil filled, with waterproof power cable of length required. Class B or better insulation, 1.15 service factor minimum. Non-overloading through the length of the curve.
  - 1. Single Phase Pumps: Provide capacitor-start type motors with built-in overload protection.
- E. Cable-sealing assembly at pump connection: shall employ compression gland and epoxy potting of individual motor leads to prevent moisture from entering the motor housing if cord is damaged.
- F. Pump and Motor Shaft: Stainless steel with factory-sealed, oil or grease-lubricated upper and lower ball bearings.
- G. Shaft Seals: Double mechanical seals. Lower and upper seals to be silicon carbide/silicon carbide. Provide seal moisture probes for leak detection.

*THE ARTICLE BELOW SHOULD BE USED FOR SEWAGE PUMPS THAT PRIMARILY SERVE LIGHT DUTY SANITARY APPLICATIONS SUCH AS FLOOR DRAINS IN MECHANICAL SPACES OR WHERE A FEW LOW USE WATER CLOSETS DRAIN TO THE PUMP. FOR PUMPS THAT SERVE A SIGNIFICANT NUMBER OF WATER CLOSETS A SEWAGE GRINDER PUMP AS SPECIFIED IN THE NEXT SECTION IS TYPICALLY RECOMMENDED. BE SURE TO INDICATE WHICH TYPE PUMP IS REQUIRED ON THE PROJECT DRAWINGS, PREFERABLY IN A SCHEDULE.*

#### 2.4 SUBMERSIBLE DOUBLE SEAL CENTRIFUGAL SEWAGE PUMPS

- A. Pump Type: **Duplex** design, completely submersible, end-suction, close-coupled, overhung-impeller, centrifugal pump with controls. Capable of operating un-submerged without damage to pump. Factory-assembled and tested.
- B. Impeller: Vortex style, uncoated, capable of passing spherical solids 2 inch in diameter or greater. Statically and dynamically balanced cast or ductile iron, bronze, or stainless steel; keyed and secured to shaft.
- C. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection. Powder coated epoxy finish. All fasteners exposed to liquid shall be 300 series stainless steel. Provide stainless steel lifting handle. Provide lift ring (of stainless steel) and self-sealing discharge fittings for connection to guide-rail supports, when guide rail supports are indicated.
- D. Motor: Hermetically sealed, oil filled, with waterproof power cable of length required. Class B or better insulation, 1.15 service factor minimum. Non-overloading through the length of the curve.
  - 1. Single Phase Pumps: Provide capacitor-start type motors with built-in overload protection.
- E. Cable-sealing assembly at pump connection: shall employ compression gland and epoxy potting of individual motor leads to prevent moisture from entering the motor housing if cord is damaged.

- F. Pump and Motor Shaft: Stainless steel with factory-sealed, oil or grease-lubricated upper and lower ball bearings.
- G. Shaft Seals: Double mechanical seals. Lower and upper seals to be silicon carbide/silicon carbide. Provide seal moisture probes for leak detection.

*THE ARTICLE BELOW SHOULD BE USED FOR SEWAGE PUMPS RECEIVING THE DISCHARGE FROM A SIGNIFICANT QUANTITY OF WATER CLOSETS, IN PARTICULAR FOR AREAS WHERE WATER CLOSETS MAY BE SUBJECT TO ABUSE SUCH AS DORMITORYS. FOR PUMPS SUBJECT TO HEAVY USE, CONSIDER SPECIFYING A REVERSE FLOW ASSEMBLY.*

**2.5 SUBMERSIBLE DOUBLE SEAL CENTRIFUGAL GRINDER SEWAGE PUMPS**

- A. Pump Type: **Duplex** design, completely submersible, end-suction, close-coupled, overhung-impeller, centrifugal pump with controls. Capable of operating un-submerged without damage to pump. Factory-assembled and tested. 1-1/4 inch minimum discharge opening.
- B. Impeller: Vortex style, uncoated, capable of passing solids. Statically and dynamically balanced cast or ductile iron, bronze, stainless steel, or engineered thermoplastic; keyed and secured to shaft. Provide hardened stainless-steel cutter/grinder with shredding device.
- C. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical or horizontal discharge (as required for the project) for piping connection. Powder coated epoxy finish. All fasteners exposed to liquid shall be 300 series stainless steel. Provide stainless steel lifting handle. Provide lift ring (of stainless steel) and self-sealing discharge fittings for connection to guide-rail supports, when guide rail supports are indicated.
- D. Motor: Hermetically sealed, oil filled, with waterproof power cable of length required. With Class F motor insulation. Non-overloading through the length of the curve.
  - 1. Single Phase Pumps: Provide capacitor-start type motors with built-in overload protection.
- E. Cable-sealing assembly at pump connection: shall employ compression gland and epoxy potting of individual motor leads to prevent moisture from entering the motor housing if cord is damaged.
- F. Pump and Motor Shaft: Stainless steel with factory-sealed, oil or grease-lubricated upper and lower ball bearings, to provide radial and thrust support.
- G. Shaft Seals: Double mechanical seals. Lower and upper seals to be silicon carbide/silicon carbide. Provide seal moisture probes for leak detection.

*THE PUMP CONTROL ARTICLE BELOW REFLECTS TYPICAL U-M REQUIREMENTS. MODIFY AS REQUIRED TO MAKE PROJECT SPECIFIC. INCLUDE A MORE DETAILED PUMP SEQUENCE OF OPERATION WITH THE PUMP DETAIL ON THE DRAWINGS OR WITH THE ARTICLE BELOW, IF NECESSARY. INFORMATION BELOW DOES NOT INDICATE QUANTITY OF FLOATS SINCE FLOAT QUANTITIES VARY WITH PUMP CONFIGURATION.*

**THEREFORE, INDICATE REQUIRED QUANTITY OF FLOATS ON THE PUMP  
DETAIL OR BELOW.**

**2.6 PUMP CONTROLS:**

- A. Unless otherwise noted, provide UL listed controller/starter assembly with the following features for each pump.
1. Float Switches: Provide multiple tethered style non-mercury mechanical style float switches to turn the pump on and off and to detect high level, with waterproof cables of length required. Provide float rod/pipe, tether clamps, and hardware, to secure the floats at the required elevations, all of stainless steel construction.
  2. Control Panel: Minimum NEMA 1 rated. Hinged, lockable.
  3. Controls: Provide UL listed controller/starter assembly. Provide a magnetic contactor (single phase pumps) or magnetic starter with adjustable overload protection (three phase pumps) that starts and stops the pump via float switch(es) separately wired to the control panel.
    - a. Automatic Alternator (duplex pump arrangements): Electrical alternator that starts pumps on successive cycles and starts multiple pumps if one cannot handle load.
    - b. High-Water Alarm: Rod-mounted mechanical-float switch.
    - c. Panel features (all mounted on panel face): control on/off switch, hand-off-auto switch and pump run light for each pump, high water alarm light, high water alarm test switch, seal failure light.
    - d. Provide an audible alarm that activates upon high water or seal failure condition.
    - e. Provide a latching dry auxiliary alarm contact for monitoring by the Owner's building monitoring system, that energizes upon either a high water or seal failure condition.
    - f. Provide an alarm silence button which deactivates the audible alarm but does not deactivate the local alarm lights or auxiliary alarm contact until the alarm condition clears.
    - g. Provide motor disconnect for each motor, control transformer, control panel circuit breaker or fuse, numbered terminal strip(s) for all electrical connections, a project specific wiring diagram in a plastic pouch inside the panel, and all required accessories.
    - h. Label all components on the exterior of the control panel with engraved plastic labels screwed to the panel face. Label all wiring, terminal strips, and electrical components inside the panels using labels made for that purpose.

**2.7 SUMP BASINS AND BASIN COVERS**

**PROVIDE A DETAIL ON THE DRAWINGS INDICATING QUANTITY AND ELEVATIONS OF TOP AND SIDE WALL CONNECTIONS AND FLOAT ACTIVATION ELEVATIONS. DUE TO RADON CONCERNS ALL COVERS (I.E. INCLUDING STORM PUMPS) ARE SPECIFIED AS GAS TIGHT, WITH THE EXCEPTION OF THOSE USED FOR ELEVATOR SUMP PUMPS.**

- A. Basins: Factory-fabricated, watertight, cylindrical, basin sump with top flanges and sidewall openings for pipe connections.
  - 1. Material: Fiberglass.
  - 2. Reinforcement: Mounting plates for pumps, fittings, guide-rail supports if used, and accessories, adequately braced. Provide integral water tight anchor flange(s) that match the guide rail base plate and side support mounting holes, when guide rails are used.
 

**RETAIN SUBPARAGRAPH BELOW IF REQUIRED TO ANCHOR BASIN TO CONCRETE SLAB IN CASE OF GROUND-WATER PROBLEMS.**
  - 3. Anchor Flange: Same material as or compatible with basin sump, cast in or attached to sump, in location and of size required to anchor basin in concrete slab.
- B. Basin Covers: Gas tight cover with gaskets, seals, and bushings to seal hatches, piping, conduit and cords gas tight. Sealants and caulks shall not be used.
  - 1. Cover Reinforcement: Reinforced to support anticipated loads in the area of use but no less than required for supporting foot traffic.
  - 2. For basins larger than 36" diameter and for any duplex pump arrangement, provide a bolted sub-hatch centered above each pump and pump discharge pipe that allows the pump to be removed through the sub-hatch without disturbing the basin cover, cover vent or drainage connections, sump float rod, or adjacent pumps and their discharge pipes and power cords. Additionally, provide an inspection hatch that can be opened without disturbing any component penetrating the basin cover.
- C. Covers for basins in elevator hoistways: Provide removable galvanized steel grating (capable of supporting foot traffic), notched around the pump discharge pipe to allow grate removal without disconnecting the discharge pipe.

**2.8 ACCESSORIES**

- A. Check valves for elevator sump pumps and storm pumps:
  - 1. Silent check valve per Related Section.
 

**SILENT CHECK VALVES ARE NOT RECOMMENDED FOR WASTE WATER SERVICE, THEREFORE A RESILIENTLY HINGED TYPE CHECK VALVE HAS BEEN SPECIFIED FOR THAT SERVICE, BELOW.**
- B. Check valves for sewage pumps and grinder sewage pumps:
  - 1. Non-slam resiliently hinged type check valve with peroxide cured EPDM disk, disk accelerator, and flanged connections; "SurgeBuster" as manufactured by Val Matic Valve and Manufacturing Corporation.

**SPECIFY GUIDE RAIL SUPPORT SYSTEMS WHEN SUMP DEPTH EXCEEDS FOUR FEET. DELETE ARTICLE BELOW WHEN GUIDE RAILS ARE NOT REQUIRED.**

**2.9 GUIDE-RAIL SUPPORT SYSTEM:**

- A. Provide a guide rail support system allowing automatic disconnect and removal of pump, furnished by the same manufacturer that supplied the submersible pump.
- B. Guide Rails: Vertical pipes or structural members, made of stainless steel, attached to baseplate and basin sidewall or cover.
- C. Baseplate: Stainless Steel plate, attached to basin floor, supporting guide rails and stationary elbow.
- D. Hardware: all nuts, bolts, fasteners and hardware shall be stainless steel.
- E. Pull rods and lifting cable: Stainless steel.
- F. Sliding guide rail connector: Stainless steel motor-mounted or casing-mounted yokes or other attachments for aligning pump during connection of flanges and sliding pump up and down rails.
- G. Movable Elbow: Cast iron pump discharge-elbow fitting with flange and positioning device.
- H. Stationary Elbow: Cast iron fixed discharge-elbow fitting with flange that mates to movable-elbow flange and connects to baseplate.
- I. Seal between movable and stationary elbow: Elastomeric seal retained by non-corrosive clamp ring and stainless steel fasteners.

**2.10 SOURCE QUALITY CONTROL**

- A. All pumps shall be factory tested. Verify all control panel functions. Verify pump grounding and integrity of winding insulation by megger testing. Run each pump submerged prior to shipment at maximum running point. Verify flow rate, head, amperage draw, and water tightness.

**THE TEST REPORT BELOW IS OPTIONAL, BUT TYPICALLY RECOMMENDED FOR CRITICAL OR LARGE PUMP INSTALLATIONS.**

- B. A report detailing the results of the factory test shall be provided. An officer of the manufacturer's company shall certify by signature that the report accurately reflects the test results, and that the package meets all performance requirements. The report shall clearly identify any performance requirements that were not achieved.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

- A. Examine roughing-in for equipment support, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting equipment performance, maintenance, and operations. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install in strict compliance with manufacturer's installation instructions and Related Sections. Maintain manufacturer's recommended clearances for service and maintenance.
- B. Install separate devices furnished by manufacturer and not factory installed, including but not limited to float rods and floats, basins, basin covers and all related accessories, guide rail system, lift rods/cables, control panels, and any manufacturer's accessory devices necessary or recommended to meet the particular needs of the pump installation.
- C. Protect basins from trash and debris at all times including during temporary service.

**SEWAGE AND GRINDER SEWAGE PUMP INSTALLATIONS SHOULD NOT BE DESIGNED WITH A DISCHARGE PIPE LESS THAN 2". INDICATE THE PIPE SIZE ON THE DRAWINGS.**

- D. For all sewage and grinder sewage pump installations, regardless of pump connection size, provide minimum 2 inch diameter pipe (or larger as indicated) on the discharge side of each pump.
- E. Provide a check valve and an isolation valve on each pump discharge pipe, near and above the basin cover or sump top rim level. Locate the check valve upstream of the isolation valve. Provide check valves of the type specified in Part 2.
- F. Where discharge piping is below grade, locate the check and isolation valves outside of the basin in an access pit with access cover.
- G. Run all power, float, and control wiring in conduit between basin cover and control panel. Seal inner diameter of conduit with sealing putty and connect to basin cover.
  - 1. Power cords of elevator sump pumps shall not be run in conduit. Connect directly to the non-GFCI outlet in the elevator hoistway that is controlled by the pump control panel. Install weatherproof cover on the outlet.
- H. Verify proper pump rotation of pumps before installing in basins.
- I. Adjust level control to prevent effluent in the sump basin from rising to within 2 inches of the invert of the lowest gravity drain inlet connection to the sump.
- J. Adhere to manufacturer's start-up instructions.

### 3.3 TEMPORARY SERVICE

- A. Start units for temporary use only with the expressed written permission of the Project Manager and in compliance with all requirements of the Contract Documents.
- B. Prior to placement into temporary service, perform manufacturer's pre-start protocols.
- C. Commission equipment prior to putting into temporary service to the extent required by the Commissioning Authority. Re-perform all commissioning activities prior to Owner acceptance, even if previously commissioned to prepare for temporary service.

- D. Perform all required routine maintenance procedures during temporary service. Continuously maintain a log of such procedures. Store the log at unit during temporary use period and include log as part of the final O&M manual.

**3.4 FIELD QUALITY CONTROL**

- A. In the presence of the Commissioning Authority:
  - 1. Demonstrate the functionality of the slide rails by sliding the pump over the full length of the rails and out the basin cover, and reseating the pump on the stationary flange without entering the basin.
  - 2. Demonstrate the operation of the pump by filling the basin with water and verifying all functions of the pump and control panel. Provide temporary plugs in basin connections to allow filling the basin for testing. Remove plugs at completion of testing.

*WHEN JUSTIFIED, REQUIRE START-UP SERVICES BY A FACTORY SERVICE TECHNICIAN, OTHERWISE DELETE THE PARAGRAPH BELOW.*

- B. Provide a factory trained service technician to perform start-up services. The service technician shall perform the following:
  - 1. Verify correct installation and organize, instruct and assist the mechanical contractor's personnel in start-up procedures.
  - 2. Perform manufacturer's pre-start checks.
  - 3. Set all safety devices.
  - 4. Commission the pump package, including demonstrating all safeties, proper pump staging, alteration, and all other features.
  - 5. Provide a written service report prepared on site and submitted at the time of each service visit (with copies immediately provided to the Owner and Commissioner). Report shall indicate services provided and list all controller settings.
  - 6. Train Owner personnel. Training and start up services are separate functions and training shall not be combined with startup services.

*INCLUDE THE ARTICLE BELOW IN EVERY SPECIFICATION SECTION.*

**3.5 COMMISSIONING**

- A. Perform Commissioning activities per Related Sections above.

*WHEN JUSTIFIED, REQUIRE TRAINING BY A FACTORY SERVICE TECHNICIAN, OTHERWISE DELETE THE FIRST PARAGRAPH BELOW.*

**3.6 TRAINING**

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.

B. Train Owner's maintenance personnel on equipment operation, start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures, pump access and pump removal. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel.

1. Provide 2 hours training, minimum.

**DIVISION 22 PLUMBING**

SECTION 221500 - COMPRESSED AIR ACCESSORIES

**END OF CONTENTS TABLE**

**DIVISION 22 PLUMBING**

**SECTION 221500 - COMPRESSED AIR ACCESSORIES**

**REVISIONS:**

**8-1-99: CONTENT APPROVED AS NEW MASTER**

**8-11-99: REVISED TO VBS.DOT TEMPLATE**

**EDITOR: SEE 230900 FOR COMPRESSORS, DRYERS, AND ACCESSORIES FOR CONTROL (INSTRUMENT) AIR USE. THE ACCESSORIES SPECIFIED BELOW ARE NOT TYPICALLY SPECIFIED FOR CONTROL AIR USE; NOTE THE DESCRIPTION IN THE SCOPE OF WORK, BELOW.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. Provide piping, fittings, and specialties for the following systems:
  - 1. Compressed air regulators, filters, drain valves, relief valves and lubricators, for compressed air systems **not** associated with control (instrument) air or medical air systems.

**PART 2 - PRODUCTS:**

**2.1 COMPRESSED AIR SPECIALTIES:**

**SPEC EDITOR: BELOW FOR LARGE CAPACITY ON AIR MAINS. MODIFY DESCRIPTION AS REQUIRED. ADDITIONAL RESEARCH REQUIRED.**

- A. Pressure Regulating Valve: Bronze body, direct-acting, spring-loaded, manual pressure setting adjustment, pressure gauges, and rated for 150-psig inlet pressure. Manufacturers: Landis and Staefa Series 201, Van Aire, Wilkerson
- B. Compressed Air Filter - General Requirements: Housings shall be corrosion resistant, rated for minimum of 150psig. Capacity, accessories and configuration (simplex or duplex) as indicated on drawings. Furnish spare filter set. Manufacturers: Hankinson, Van Aire, Wilkerson, Zeks

**SPEC EDITOR: THIS IS A GOOD GENERAL PURPOSE FILTER, SUITED FOR REMOVAL OF HIGH VOLUMES OF OIL AND WATER.**

- C. Compressed Air Filter - Centrifugal/Coalescing and Impingement: Cleanable perforated stainless steel coalescing inner core, with automatic drain and in-depth impingement filter outer section. Designed for efficient removal of water droplets (99%) and oil aerosols (40%) via coalescence, and removal of particles to 3 microns. Manufacturer: Hankinson Centriflex

*SPEC EDITOR: THE FOLLOWING IS FOR MORE EFFICIENT REMOVAL OF WATER AND OIL AND PARTICLES.*

- D. Compressed Air Filter - Combination Coalescing and Impingement: Glass fiber coalescing inner core, with automatic drain and in-depth impingement filter outer section. Designed for efficient removal of water droplets (100%) and oil aerosols (70%) via coalescence, and removal of particles to 1 microns. Manufacturer: Hankinson 3100 Series

*SPEC EDITOR: THE FOLLOWING IS FOR FINE FILTRATION AND WATER AND OIL REMOVAL, BUT IN LOWER QUANTITIES. GOOD FINAL FILTER FOR CONTROL AIR, BUT USE ONE OF THE FILTERS ABOVE FIRST.*

- E. Compressed Air Filter - Fine Impingement: Inner foam distributing core, fine glass fiber coalescing and impingement core, foam final coalescing outer section, and with automatic drain. Designed for efficient removal of oil (99.999%) via coalescence, and removal of particles to 0.025 microns. Manufacturer: Hankinson Aerolescer

*SPEC EDITOR: THE FOLLOWING IS NOT GENERALLY REQUIRED. IF USED, IT SHOULD HAVE A COALESCING FILTER FIRST.*

- F. Compressed Air Filter - Adsorption: Include activated carbon capable of removing virtually 100% of oil aerosols, with color change dye to indicate when carbon is saturated, and with final filter to contain carbon dust to 0.025 microns. Manufacturer: Hankinson Hypersorb

*SPEC EDITOR: THE FOLLOWING IS AN OLD CARRYOVER SPEC WITH SOME EDITS AND MANUFACTURERS ADDED. ADDITIONAL RESEARCH IS REQUIRED. CONSIDER AUTOMATIC BALL FLOAT TYPE (WRIGHT AUSTINB MODEL 90-AC OR ARMSTRONG NO.21 VS. ATOMIZING TYPE, NICHOLSON DRAIN-AIR.)*

- G. Automatic Drain Valves: Corrosion-resistant metal body and internal parts, rated for 150-psig minimum working pressure, capable of automatic discharge of collected condensate. Manufacturer: Drain-all, Van Aire Draintender, Zeks, Hankinson Snap-Trap

*SPEC EDITOR: RELIEF VALVE IS USUALLY SPECIFIED WITH THE AIR COMPRESSOR.*

- H. Pressure Relief Valve: Brass body, spring relief, capacity and factory set relief pressure as indicated on drawings.

*SPEC EDITOR: LUBRICATORS ARE INFREQUENTLY REQUIRED, ONLY WHERE PNEUMATIC TOOLS REQUIRE OIL FOR LUBRICATION. ADDITIONAL RESEARCH IS REQUIRED. CHECK FISHER TYPE 67FR.*

- I. Air-Line Lubricators: Sizes and capacities indicated; equip with drip chamber and sight dome for observing oil drop entering air stream; with oil feed adjustment screw, and quick-release collar for easy bowl removal.

**PART 3 - EXECUTION**

**3.1 PIPING INSTALLATION**

- A. See Related Section 221113 for piping materials and installation requirements.

**3.2 SPECIALTIES INSTALLATION AND START-UP**

- A. Install drain and vent from automatic drain valves per manufacturer's instructions. Route drain to floor drain or location approved by engineer.
- B. After installation is complete test operation of regulators, and automatic drain valves.
- C. Instruct owner on location, operation, and maintenance of piping specialties.

  - 6. Division 26: Electrical.

*SPEC EDITOR: WHEN EDITING THIS SPEC TO MAKE IT PROJECT SPECIFIC, REVISE THE SUMMARY SECTION BELOW ACCORDINGLY.*

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Brine Regenerated Water Softening Systems.

**1.3 SUBMITTALS**

- A. Product Data: For each type of fixture product.
  - 1. Water softening system and accessories including rated capacities, operating characteristics, furnished specialties, accessories, dimensions of individual components and profiles.
  - 2. Construction details and piping diagrams of water softening system and components.
  - 3. Wiring diagrams for power, signal, control wiring and monitoring points tied into the owners building monitoring system.
  - 4. Proof of NSF 61 compliance for softeners used for drinking water systems.
  - 5. Operation and maintenance manuals.

**1.4 QUALITY ASSURANCE**

**SPEC EDITOR: RETAIN PARAGRAPHS A AND B IN EVERY PROJECT SPECIFICATION.**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

**SPEC EDITOR: REVISE THE REFERENCE STANDARDS FOR PROJECT REQUIREMENTS.**

- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
  - 1. Michigan Plumbing Code
  - 2. Electrical components, devices and accessories: UL Listed and labeled as defined as in NFPA 70, Article 100.
  - 3. ASME Boiler and Pressure Vessel Code: Section VII, Division 01, where indicated.
  - 4. ASME compliance for FRP Tanks: Fabricate and label mineral tanks to comply with ASME Boiler and Pressure Vessel Code
  - 5. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as  $\leq 0.25\%$  weighted average lead content) (and/or NSF/ANSI-372) and Annex F.
  - 6. U.S Safe Drinking Water Act.

**1.5 COORDINATION**

- A. Coordinate size and location of concrete bases.

**1.6 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers:
  - 1. Siemens Water Technologies
  - 2. Crown Solutions
  - 3. R.A. Bruner
  - 4. Ecodyne Industrial

**2.2 WATER SOFTENER**

- A. Provide a factory assembled, pressure type packaged water softener, consisting of a softener tank, valve, brine tank (including first full fill of the brine tank), etc., all as required for a complete system. Constructed to handle up to 120 degree Fahrenheit water.

- B. When used for drinking water systems, water softening system shall comply with NSF 61, "Drinking Water System Components - Health Effects"

*SPEC EDITOR: REVISE THE PERFORMANCE FOR PROJECT REQUIREMENTS.*

**2.3 PERFORMANCE**

- A. Provide a water softening systems that delivers the output water quality, capacity, and performance indicated below at the specified water input characteristics indicated.
- B. Input water characteristics:
  - 1. Raw City of Ann Arbor water. City of Ann Arbor water quality base line data can be found at the following web site: [http://www.a2gov.org/government/publicservices/water\\_treatment](http://www.a2gov.org/government/publicservices/water_treatment).
  - 2. Up to 120 degree Fahrenheit water inlet temperature.
- C. Output capacity and performance:

*SPEC EDITOR: REVISE TO SIMPLEX RESIN TANK IF CONTINUOUS SOFTENER OPERATION IS NOT REQUIRED.*

- 1. Duplex resin tanks to provide continuous operation.
- 2. Minimum Control valve pipe size 1".
- 3. Peak flow rate: \_\_\_\_\_ GPM @ a maximum 15 psi pressure drop.
- 4. Total water softened in 24 hours: \_\_\_\_\_ gallons.
- 5. Maximum of one regeneration per 72 hour period.
- 6. Regenerations between brine tank refills: \_\_\_\_\_.
- 7. Water quality output conditions in CaCO3 equivalents:
  - a. - ppm hardness
  - b. - ppm ferrous iron

*SPEC EDITOR: REVISE THE TANK PRESSURE RATINGS GIVEN BELOW, IF NECESSARY FOR THE APPLICATION.*

**2.4 RESIN TANK**

- A. Resin tank shall have no less than 50% free-board, be designed for 100 psig, and be tested at 150 psig. Tanks shall be steel with phenolic lining or fiberglass wound type. Steel tanks shall be internally lined with a phenolic epoxy to a 4-6 mil thickness and then baked at 400 degrees F. The exterior shall be sand blasted, painted with a rust-inhibiting primer and then finished with a gloss epoxy top coat. Tank shall have a 15 year non-prorated guarantee.
- B. Tank shall be equipped with an opening in the top head for mineral filling and periodic inspection.

**2.5 BRINE SYSTEM:**

- A. Brine system shall consist of combination salt storage and brine tank. Tank shall be molded of corrosion-proof, high density polyethylene.

- B. Brine tank shall be equipped with an elevated salt plate for brine collection, and a chamber to house a brine valve assembly. The brine valve shall automatically open to admit brine to the resin tank during eduction and close automatically to prevent introduction of air into the resin tank. During refill, the brine valve shall regulate the flow of treated water into the brine tank, working with the timed refill feature of the control valve. Together these components shall admit the correct volume of water to the brine tank in accordance with the salt dosage settings on the control valve. The brine valve shall include a float operated safety shut-off valve as a backup to the timed refill valve on the controller to prevent brine tank overflow

**2.6 DISTRIBUTOR SYSTEM:**

- A. Resin tank shall have a stainless steel upper distributor which shall disperse water laterally to avoid channeling within the resin bed. The lower distributor shall be of all plastic construction in a hub-radial design. It shall incorporate fine slot distributors to avoid passing of resin to service in the event of plumbing system upset. No slots shall face upward to minimize the opportunity of channeling. One layer of gravel shall be provided to aid in the even collection of water and make efficient use of the softening capacity of the resin.

**2.7 SOFTENING MEDIA:**

- A. High-capacity sulfonated polystyrene ion-exchange resin that is stable over the entire pH range of the water being treated with good resistance to bead fracture from attrition or shock. Minimum exchange capacity of 30,000 grains/cu. ft. when regenerated with 15 pounds of salt. The media shall be solid, of the proper particle size and shall contain no agglomerates, shells, plates or other shapes that might interfere with the normal function of the water softener. The resins shall be manufactured to comply with the food additive regulations, 21 CFR 173.25 as set forth by the US FDA.

**2.8 AUTOMATIC CONTROLS:**

- A. Automatic controls shall be of top mount design. Provide corrosion proof valve head construction, with no dissimilar metals, utilizing a bolt-down flange connection to permit proper positioning between the valve and the conditioner tank openings. Valve head shall have provisions for either left-hand or right-hand raw water plumbing connections to simplify installation while maintaining a forward facing controller for easy servicing. Provide readily accessible service connections. Provide a fully automatic multi-port control valve operated by a rotary pilot that hydraulically or pneumatically activates cartridge style diaphragm valves to accomplish regeneration. The multi-port valve shall incorporate self-adjusting flow regulators to control the rate of flow and prevent resin loss during back-wash, brine rinse, and brine refill positions, regardless of pressure fluctuations between 30 and 100 psig. The control shall open and close slowly to prevent noise and hydraulic shock. It shall have provisions for manual by-pass of hard water. The electrical control mechanism shall be enclosed in a gasketed, moisture-and corrosion resistant case. The enclosure shall conform to NEMA 3 enclosure standards.
- B. On duplex resin tank systems, the controller shall automatically switched back and forth between charged and expended resin tanks to provide a continuous supply of soft water.
- C. Provide a digital demand control system installed on the unit. It shall include a turbine meter and a solid state control device to permit regeneration on a metered volume basis. The totalizing turbine water meter shall be installed in the outlet pipe of the unit. This meter shall continuously measure and record the amount of treated water that has flowed to the service. Regeneration shall not be activated until a user adjustable time of day. The controller shall also indicate the current flow rate and the estimated days' remaining before a brine tank refill is required.
- D. Controls shall have an adjustable duration of the various steps in regeneration and allow for pushbutton manual operation. Control system shall have 10 year non prorated guarantee. Regeneration shall be initiated based on total gallons softened (programmable) and average daily use, compensated for extra-high or low use, with time of regeneration preset to a user selectable time.

**2.9 AUXILIARY EQUIPMENT**

- A. Provide pressure gauge on inlet and outlet of softener.
- B. Provide test cock to sample water in and soft water out.

**2.10 BRINE**

- A. High-purity sodium chloride, free of dirt and foreign material. Processed, food grade salt pellets, 99% pure. Rock and granulated forms are not acceptable.

**2.11 INSTRUCTIONS:**

- A. Provide 4 complete sets of installation, operation and maintenance manuals covering the equipment.

**PART 3 - EXECUTION**

**3.1 INSTALLATION:**

- A. Complete installation shall be in accordance with manufacturer's instruction and recommendations. Contractor shall be responsible for receiving all equipment, placing and assembling of all components for a complete and operational system.
- B. Install the equipment level on a concrete base sloped so that water will not stand under or around the equipment.
- C. Make all connections required. Provide rigid connections to softener input and output water connections, using approved joining methods. Hoses shall not be used.
- D. Install service valves to isolate the softener system input and output, and to provide a bypass path around the softener to allow softener servicing.
- E. Install brine tank overflow drain line, routed to a floor drain, terminated with an approved air gap. Use approved materials and secure drain line using approved hangers.
- F. For softeners used in drinking water systems, flush, clean, and disinfect per Related Section and manufacturer's instructions.

**3.2 CHECK, TEST & START-UP:**

- A. Check, test and start-up services shall be provided by a factory trained representative as follows:
  - 1. Inspect the equipment to verify proper installation.
  - 2. Set-up the controller and place the equipment into operation.
  - 3. Test to verify all performance.
- B. The manufacturer representative's shall provide a written report within 3 days of the Check, Test, Start-up. Report shall include information on services provided, document all controller settings, and indicate the results of the water quality performance tests.

**3.3 TRAINING**

- A. Factory trained representative shall provide training to owner maintenance staff on the control and operation of the softening equipment and accessories. This shall include adjusting controller settings, cleaning of eductor and filters, other general maintenance procedures, and rebuilding the control valve head. Provide a spare control valve head to demonstrate rebuilding.

**3.4 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

**END OF SECTION 223116**

**DIVISION 22 PLUMBING**

SECTION 224200 - PLUMBING FIXTURES

**END OF CONTENTS TABLE**

**DIVISION 22 PLUMBING**  
**SECTION 224200 - PLUMBING FIXTURES**

*2011-05-18: REVISED FORMAT, REINSERTED SUBMITTAL, EXTENSIVE MODIFICATIONS TO TECHNICAL CONTENT.*

*2011-05-24: ADDED REQUIREMENT TO ALL EMERGENCY FIXTURES THAT THEY BE BARRIER FREE.(D.KARLE PER J. JEFFERY)*

*2012-09-12: ADDED SPEC. EDITORS NOTE TO SECTION 2.31 TO ASK DESIGN MANAGER IF BOTTLE FILLERS SHOULD BE PROVIDED.*

*2013-09-06: REVISED SS SINK MODEL NUMBERS (ARTICLES 2.16, 2.17, 2.18 AND WATER COOLER MODEL NUMBERS (2.31). M. OLIVER.*

*2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 123553 Laboratory Casework
  - 2. Section 115313 Laboratory Fume Hoods
  - 3. Section 220500 Common Work Results for Mechanical
  - 4. Section 221113 Piping Materials and Methods
  - 5. Section 220523 Valves
  - 6. Division 26: Electrical.

*SPEC EDITOR: WHEN EDITING THIS SPEC TO MAKE IT PROJECT SPECIFIC, REVISE THE SUMMARY SECTION BELOW ACCORDINGLY.*

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Water Closets
  - 2. Water Closet Seats.
  - 3. W.C. and Urinal Wall Carriers.
  - 4. Urinals.
  - 5. W.C. and Urinal Flush Valves.
  - 6. Lavatories, Sinks, Service Sinks, and related Faucets and Trim.
  - 7. Lavatory Support Systems.
  - 8. Under-Sink Waste and Supply Pipe Guards.

9. Thermostatic Mixing Valves (for hand-wash facilities).
10. Shower Heads and Shower Control Valves.
11. Electric Water Coolers.
12. Emergency Fixtures, Tempering Valve, Alarm System.
13. Garbage Disposer.
14. Washing Machine Valve Box.
15. Supply Tubes and Stops.
16. Installation of fixtures including fixtures supplied by others for casework and fume hoods.

### 1.3 SUBMITTALS

- A. Product Data: For each type of fixture product.
  1. Construction details, material descriptions, rated capacities, operating characteristics dimensions of individual components and profiles, and finishes for fixtures.
  2. Water consumption data.
  3. Wiring diagrams for power, signal, and control wiring
  4. Proof of compliance to NSF/ANSI 61.

### 1.4 QUALITY ASSURANCE

**SPEC EDITOR: RETAIN PARAGRAPHS A AND B IN EVERY PROJECT SPECIFICATION.**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. The Contractor shall verify and resolve compatibility between separate components (e.g. that lavatory hole quantity and centering match that of the specified faucet, supports are compatible with respective urinals and water closets, etc.). **Model numbers, when provided, are partial model numbers for identifying style. Provide fixtures that meet all the specified requirements.**

**SPEC EDITOR: REVISE THE REFERENCE STANDARDS FOR PROJECT REQUIREMENTS.**

- C. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
  1. Michigan Plumbing Code
  2. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as  $\leq 0.25\%$  weighted average lead content) (and/or NSF/ANSI-372) and Annex F.
  3. U.S Safe Drinking Water Act.
  4. ANSI Z358.1-2009 Standard for Emergency Eyewash and Shower Equipment

**1.5 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 WATER CLOSETS - GENERAL**

- A. Vitreous china; color white unless noted otherwise. Elongated bowl, direct-fed siphon jet action. 1-1/2 inch top spud for external flush valve. China bolt covers. For 10 in. or 12 in. rough-in (floor mounted models). Dimensions within ASME Standard A112.19.2 tolerances.
- B. Shall meet ASME A112.19.2 flush requirements at 1.1 gpf (liquids disposal) and 1.6 gpf (solids disposal) when equipped with a dual flush style valve.

**2.2 WATER CLOSETS - STANDARD AND BARRIER FREE**

- A. WC-A - Wall mounted.
  - 1. ADA compliant when installed so top of seat is 17 in. to 19 in. from the finished floor.
  - 2. Acceptable Manufacturers:
    - a. American Standard "Afwall".
    - b. Kohler "Kingston".
    - c. Crane "Placidus".

*SPEC EDITOR: ITEM WC-B BOWL IS 15 IN. HIGH FOR STANDARD INSTALLATION. NOT ADA COMPLIANT.*

- B. WC-B: Floor mounted 15" nominal height, non-ADA compliant.
  - 1. Acceptable Manufacturers:
    - a. American Standard "Madera"
    - b. Kohler "Wellcomme".
    - c. Crane "Whirlton".

*SPEC EDITOR: ITEM WC-C BOWL IS NOMINAL 17 IN. HIGH FOR ELDERLY, SPECIAL NEEDS, AND ADA INSTALLATIONS*

- C. WC-C-Floor mounted ADA compliant.
  - 1. Acceptable Manufacturers:
    - a. American Standard "Madera Right Height".
    - b. Kohler "Highcliff".
    - c. Crane "Hymont".

**2.3 WATER CLOSET FLUSH VALVES**

*SPEC EDITOR: THE BELOW DUAL FLUSH VALVE IS U-M'S STANDARD FOR WATER CLOSET APPLICATIONS.*

A. WC-FLV-A: Manual, dual flush valve. Chrome plated, exposed, diaphragm type, water closet flushometer. ASTM classified as semi-red brass alloy. Chloramine resistant synthetic rubber diaphragms/seals. With 1-1/2 inch top spud, escutcheons, seat bumper, integral screwdriver stop and vacuum breaker. ADA compliant.

1. Lifting Handle up initiates reduced flush 1.1 gpf eliminating liquid waste. Pushing handle down initiates full flush of 1.6 gpf eliminating all waste.
2. Provide metal wall plate etched with flushing instructions.

*SPEC EDITOR: PIPE SUPPORT RING, BELOW, IS RECOMMENDED FOR HIGH USE AREAS, FOR EXAMPLE, RESIDENCE HALLS. BLOCKING SHOULD BE SPECIFIED FOR NON-MASONRY WALLS IF THIS PIPE SUPPORT IS SPECIFIED.*

3. With flush valve manufacturer's chrome plated split ring wall pipe support accessory.
4. Acceptable Manufacturers and Models:
  - a. Sloan "Uppercut".
  - b. Zurn "AquaVantage".

#### **2.4 WATER CLOSET ACCESSORIES**

A. WCS-A Standard Seat: 1 in. high: Solid white plastic, open front, extended back, self-sustaining stainless steel bolts and hinges, molded-in bumpers, without cover. Acceptable Manufacturers:

1. Bemis.
2. Church.
3. Centoco

B. WCS-B High Style ADA Seat: where required to meet ADA requirements; 2 in. high, solid white plastic, open front, extended back, self-sustaining stainless steel bolts and hinges, molded-in bumpers, without cover. Acceptable Manufacturers:

1. Bemis
2. Church
3. Centoco.

C. Water Closet Wall Carrier: Fully compatible with water closet installation, adjustable, high extension (barrier free), cast iron frame with integral drain hub and vent, lugs for floor and wall attachment and threaded fixture studs. Acceptable Manufacturers and Models:

1. Zurn.
2. Josam.
3. J.R. Smith.
4. Wade Drain.

#### **2.5 URINALS - GENERAL:**

A. Vitreous china with extended sides and 14 in. elongated rim. Color white unless noted otherwise. With wall hangers.

**SPEC EDITOR: CLARIFY WHICH FLUSH VALVE IS TO BE USED WITH URINAL, EITHER THROUGH DRAWING SCHEDULE OR PROJECT SPECIFIC SPECIFICATION EDIT.**

**2.6 URINALS AND ACCESSORIES**

- A. UR-A: Shall meet ASME A112.19.2 flush requirements at 0.125 gpf. Washout action. 3/4 inch top spud, 2-inch back spud. Vandal resistant outlet strainer.
  - 1. Acceptable Manufacturers:
    - a. American Standard "Washbrook FloWise".
    - b. Kohler "Bardon".
    - c. Zurn "The Pint".
  - B. Urinal Wall Carrier: Fully compatible with urinal installation. Cast iron or steel frame, complying with load and deflection requirements of ASME Standard A112.6.1M. Tubular legs, lugs for floor and wall attachment, threaded fixture studs and hardware for hanger and bearing plate. Acceptable Manufacturers and Models:
    - 1. Zurn.
    - 2. Josam.
    - 3. J.R. Smith.
    - 4. Wade Drain.

**2.7 URINAL FLUSH VALVES**

**SPEC EDITOR: AUTOMATIC BATTERY OPERATED URINAL FLUSH VALVE IS U-M STANDARD.**

- A. U-FLV-A: 0.125 gpf Sensor Activated Urinal Flush Valve. Chrome plated, exposed, diaphragm type, urinal flushometer. ASTM classified as semi-red brass alloy. Chloramine resistant synthetic rubber diaphragms/seals. With 3/4 inch top spud, escutcheons, integral screwdriver stop and vacuum breaker. ADA compliant. Infrared sensor, controls.
  - 1. Shall meet ASME A112.19.2 flush requirements at 0.125 gpf.
  - 2. Size AA size batteries, factory installed.
  - 3. Acceptable Manufacturers:
    - a. Sloan "ECOS".
    - b. Zurn "EcoVantage".
    - c. Kohler 1/8 gpf touchless.

**SPEC EDITOR: SELECT MANUAL URINAL FLUSH VALVE ONLY WHEN AUTHORIZED BY THE DESIGN MANAGER.**

- B. U-FLV-B: Manual Urinal Flush Valve. Chrome plated, exposed, diaphragm type, urinal flushometer. ASTM classified as semi-red brass alloy. Chloramine resistant synthetic rubber diaphragms/seals. With 3/4 inch top spud, escutcheons, integral screwdriver stop and vacuum breaker. ADA compliant.
  - 1. Shall meet ASME A112.19.2 flush requirements at 0.125 gpf.
  - 2. Acceptable Manufacturers and models:
    - a. Sloan "Royal".
    - b. Zurn "AquaVantage".

*SPEC EDITOR: LAVS AND SINKS AND ASSOCIATED FAUCETS ARE TYPICALLY PROVIDED IN THIS SECTION FOR TOILET ROOMS AND KITCHENS. SINKS AND FAUCETS ARE SPECIFIED FOR LAB CASEWORK IN A DIVISION 12 SECTION AND PIPED UNDER THIS SECTION. MODEL NUMBERS INDICATED ARE PARTIAL MODEL NUMBERS FOR STYLE ONLY. DESIGNER MUST EDIT THE BELOW TO MATCH LAVS WITH LAV FAUCETS; FOR PROJECTS WITH MULTIPLE LAV AND FAUCET STYLES THIS IS BEST DONE WITH A SCHEDULE ON THE DRAWINGS.*

*LAVS ARE ADA COMPLIANT IF INSTALLED IN COUNTERTOP OR MOUNTED ON WALL IN COMPLIANCE WITH ADA REQUIREMENTS.*

**2.8 LAVATORIES - GENERAL**

- A. Lavatories: Vitreous china. Color white unless noted otherwise. With faucet ledge, overflow, and polished chrome plated brass strainer grid drain. ADA compliant.

**2.9 LAV-A: COUNTERTOP LAVATORY (SINGLE CENTER FAUCET HOLE)**

*SPEC EDITOR: THE FOLLOWING BASIN IS TYPICALLY USED WITH FAUCET LF-A SENSOR FAUCET.*

- A. Lav-A: Countertop Self-rimming Lavatory: Oval, single center faucet hole.
1. Nominal overall: 20-3/8 in. wide by 17-3/8 in. front to back.
  2. Bowl: Nominal 5-5/8 in. deep.
  3. Acceptable manufacturers and models:
    - a. American Standard "Aqualyn" 0475.
    - b. Crane "Galaxy" 1287.
    - c. Kohler "Bryant" K-2699.
    - d. Zurn Z5110 Series.

**2.10 LAV-B: COUNTERTOP LAVATORY (8-IN. CENTER FAUCET HOLES)**

*SPEC EDITOR: THE FOLLOWING BASIN IS TYPICALLY USED WITH FAUCET LF-B TWO HANDLED MANUAL FAUCET.*

- A. Lav-B: Countertop Self-rimming Lavatory: Oval, three hole with 8-in. center faucet holes.
1. Nominal overall: 20-3/8 in. wide by 17-3/8 in. front to back.
  2. Bowl: Nominal 5-5/8 in. deep.
  3. Acceptable manufacturers and models:
    - a. American Standard "Aqualyn" 0475.
    - b. Crane "Galaxy" 1287.
    - c. Kohler "Bryant" K-2699.
    - d. Zurn Z5110 Series.

**2.11 LAV-C: WALL MOUNTED LAVATORY (SINGLE CENTER FAUCET HOLE)**

*SPEC EDITOR: THE FOLLOWING BASIN IS TYPICALLY USED WITH FAUCET LF-A SENSOR FAUCET. KOHLER "KINGSTON" IS THE ONLY*

**KOHLER SINK AVAILABLE WITH SPLASH SHIELDS, HAS A HIGH BACKSPLASH COMPARED TO COMPETITORS, AND HAS A DATED LOOK.**

- A. Lav-C: Wall Mounted Lavatory D-shaped bowl: with single center faucet hole, self-draining deck area with contoured back and side splash shields.
  - 1. Nominal overall dimensions: 20-1/2 in. wide by 18-1/4 in. front to back.
  - 2. Bowl: 6-1/2 in. deep.
  - 3. Acceptable manufacturers and models:
    - a. American Standard "Lucerne" 0356.
    - b. Kohler "Kingston".
    - c. Zurn Z5340 Series.

**2.12 LAV-D: WALL MOUNTED LAVATORY (8-IN. CENTER FAUCET HOLES)**

**SPEC EDITOR: THE FOLLOWING BASIN IS TYPICALLY USED WITH FAUCET LF-B TWO HANDLED MANUAL FAUCET. ORDER FOUR HOLE VARIATION IF SOAP DISPENSER TO BE USED ON LAV DECK (INTEGRAL SOAP DISPENSER NOT PREFERRED AT U-M). KOHLER "KINGSTON" IS THE ONLY KOHLER SINK AVAILABLE WITH SPLASH SHIELDS, HAS A HIGH BACKSPLASH COMPARED TO THE COMPETITORS, AND HAS A DATED LOOK.**

- A. Lav-D: Wall Mounted Lavatory, D-shaped bowl: three hole with 8 in. center faucet holes, self-draining deck area with contoured back and side splash shields.
  - 1. Nominal overall dimensions: 20-1/2 in. wide by 18-1/4 in. front to back.
  - 2. Bowl: 6-1/2 in. deep.
  - 3. Acceptable manufacturers and models:
    - a. American Standard "Lucerne" 0356.
    - b. Kohler "Kingston".
    - c. Zurn Z5340 Series.

**2.13 LF-A: LAVATORY FAUCET (SENSOR OPERATED)**

**SPEC EDITOR: AUTOMATIC FAUCET IS UNIVERSITY STANDARD IN PUBLIC TOILET ROOMS.**

**SPEC EDITOR: MODEL NUMBERS INDICATED ARE PARTIAL MODEL NUMBERS FOR STYLE ONLY. FEATURES LISTED BELOW REPRESENT THOSE FOUND IN A QUALITY COMMERCIAL FAUCET. THEREFORE, IF ALTERNATE STYLES ARE BEING CONSIDERED, THEY SHOULD PROVIDE THE SAME FEATURES. U-M PREFERS SOLID BRASS FAUCETS FOR VANDAL RESISTANCE; NOTE THAT SOME MFR.'S METAL FAUCETS ARE NOT BRASS.**

- A. LF-A Lavatory Faucet: Automatic sensor activated hand washing faucet, battery powered. Polished chrome plated solid brass construction. ADA compliant. With trim.
  - 1. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as  $\leq 0.25\%$  weighted average lead content.
  - 2. Nominal spout height: 5-3/4 in.
  - 3. For use in single hole lavatory.

**SPEC EDITOR: THE BASE PLATE REQUIREMENT FOR THE STYLES BELOW IS SO THAT ALL MFR.'S MODELS LOOK SIMILAR. NOTE THAT SLOAN EBF-85 HAS AN INTEGRAL BASE PLATE WHICH CAN'T BE OMITTED.**

4. Chrome/brass trim plate base for 4 in. faucet centers.
5. Serviceable filtered solenoid valve.
6. Batteries included, factory installed.
7. 0.5 gpm vandal resistant spray head with pressure compensating flow control.
8. Trim: Rigid supplies with metal handled stops, flat grid strainer, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.
9. Acceptable manufacturers and models:
  - a. Sloan Model Optima EBF-85.
  - b. American Standard "Selectronic" 6055.
  - c. Zurn AquaSense Z6913.

**2.14 LF-B: LAVATORY FAUCET (TWO HANDLED MANUAL, 8" CENTERS)**

**SPEC EDITOR: MANUAL FAUCET BELOW IS FOR AREAS WHERE AUTOMATIC LAV FAUCETS ARE NOT DESIRED. SPECIFIED FAUCET IS UNDER-MOUNT (CONCEALED) "WIDESPREAD" (8" FAUCET CENTERS) TYPE SUITABLE FOR USE WITH LAVATORIES OR COUNTERTOP MOUNTED SINKS. NOTE THAT A GRID DRAIN IS SPECIFIED; MODIFY DESCRIPTION IF A POP-UP DRAIN IS REQUIRED.**

**SPEC EDITOR: MODEL NUMBERS INDICATED ARE PARTIAL MODEL NUMBERS FOR STYLE ONLY. FEATURES LISTED BELOW REPRESENT THOSE FOUND IN A QUALITY COMMERCIAL FAUCET. THEREFORE, IF ALTERNATE STYLES ARE BEING CONSIDERED, THEY SHOULD PROVIDE THE SAME FEATURES. U-M PREFERS SOLID BRASS FAUCETS FOR VANDAL RESISTANCE; NOTE THAT SOME MFR.S METAL FAUCETS ARE NOT BRASS.**

- A. LF-B Lavatory Faucet: Polished chrome plated brass valves, spout, handles, spray head. Concealed (under-mount) body. ADA compliant. With trim.

1. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as  $\leq 0.25\%$  weighted average lead content.

**SPEC EDITOR: EDIT FLAT GRID STRAINER TO POP-UP DRAIN, IF POP-UP REQ'D.**

2. Chrome plated brass flat grid strainer.
3. Center of body to center of spout: 4" minimum.
4. Lever style handles, with hot and cold color indicators and vandal resistant mounting screws.
5. 8" rigid valve body centers (flexible tubing connections between valves and spout not allowed).
6. 0.5 gpm vandal resistant spray head.
7. Ceramic disc valve cartridges.
8. Trim: Rigid supplies with metal handled stops, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.
9. Acceptable manufacturers and models:

- a. American Standard "Heritage" Widespread with No. 342 lever handles.
- b. Moen "M-Dura"
- c. Chicago 404 (for grid) or 746 (for pop-up) with curved lever handles.

**2.15 LAVATORY SUPPORT SYSTEMS**

*SPEC EDITOR: SELECT EITHER OR BOTH SUPPORT SYSTEMS LISTED BELOW. GENERALLY, USE WALL MOUNTING BRACKET (LOWER COST) IN LIEU OF CARRIER, EXCEPT WHERE WALL FRAMING CANNOT SUPPORT THE LOAD OF THE LAVATORY (DRYWALL, ETC).*

- A. Wall Mounting Bracket: Steel bearing plate anchored to wall, furnished by lavatory manufacturer. Use at masonry walls only.
- B. Wall Mounted Concealed Carrier Arms: cast iron and steel frame with tubular legs, lugs for floor and wall attachment, concealed arm supports, bearing plate and studs. Use at all walls except masonry type. Acceptable manufacturers:
  - 1. Josam.
  - 2. J.R. Smith.
  - 3. Wade.
  - 4. Zurn.

**2.16 SINK-A: COUNTERTOP (SINGLE BOWL STAINLESS STEEL SELF-RIMMING)**

*SPEC EDITOR: SINK-A IS USED FOR KITCHENETTES/ COFFEE ROOMS WITH SINGLE BOWL SINK. USE SWING ARM FAUCET WITH SIDE SPRAY. NOTE THAT SIDE SPRAY 6" HOLE CENTER HAS BEEN SPECIFIED TO ACCOMMODATE ADA LEVER HANDLES.*

- A. Sink-A: Countertop Single Bowl: Type 304 stainless steel, 18 gauge, self-rimming, chrome plated brass drain/removable strainer, sound deadening coating, with mounting clamps.
  - 1. Nominal overall dimensions 22 in. long by 25 in. wide by 8 in. deep.
  - 2. 4 faucet holes, three holes on 4-in. centers, forth on nominal 6" center to accommodate side spray.
  - 3. Acceptable manufacturers and models:
    - a. Elkay "Gourmet."
    - b. Kohler "Staccato."
    - c. Just "SL" Series.

**2.17 SINK-B: COUNTERTOP (DOUBLE BOWL STAINLESS STEEL SELF-RIMMING)**

*SPEC EDITOR: SINK-B IS USED FOR KITCHENETTES/ COFFEE ROOMS. USE SWING ARM FAUCET WITH SIDE SPRAY. NOTE THAT SIDE SPRAY 6" HOLE CENTER HAS BEEN SPECIFIED TO ACCOMMODATE ADA LEVER HANDLES.*

- A. Sink-B: Countertop Double Bowl: Type 304 stainless steel, 18 gauge, equal compartment size, self-rimming, (2) chrome plated brass drains/removable strainers (delete (1) if sink equipped with disposer), sound deadening coating, with mounting clamps.

1. Nominal overall dimensions. 22 in. long by 33 in. wide by 8 in. deep.
2. 4 faucet holes, three holes on 4-in. centers, fourth on nominal 6" center to accommodate side spray.
3. Acceptable manufacturers and models:
  - a. American Standard "Prevoir".
  - b. Elkay "Lustertone."
  - c. Kohler "Staccato."
  - d. Just "DL" Series

**2.18 SINK-C: COUNTERTOP (SMALL SINGLE BOWL SS SELF-RIMMING)**

*SPEC EDITOR: SINK-C IS USED FOR SMALLER SCALE KITCHENETTES/ COFFEE ROOMS. USE SWING ARM FAUCET WITHOUT SIDE SPRAY. NOT TYPICALLY AVAILABLE IN 18 GA.*

- A. Sink-C: Countertop Single Bowl: Type 304 stainless steel, self-rimming, chrome plated brass drain/removable strainer, sound deadening coating, with mounting clamps.
  1. Nominal overall dimensions: 15 in. long by 15 in. wide by 7-11/16 deep.
  2. 2 faucet holes on 4-in. centers.
  3. Acceptable manufacturers and models:
    - a. Kohler "Toccata."
    - b. Elkay "Celebrity."
    - c. Just "SL" Series.

**2.19 SINK-D: COUNTERTOP (INTEGRAL)**

*SPEC EDITOR: THE FOLLOWING PARAGRAPH DESCRIBES ARCHITECTURALLY SPECIFIED BOWLS SUCH AS CORIAN SINK BOWL INTEGRAL WITH COUNTERTOP. COORDINATE WITH ARCHITECTURAL WORK.*

- A. Sink-D: Countertop Sink and countertop shall be provided by architectural (general) trades and specified in another Section.

*SPEC EDITOR: SERVICE SINKS ARE USED IN MECHANICAL ROOMS AND JANITOR CLOSETS. SS-A IS FOR HEAVY DUTY LOCATIONS SUCH AS CHILLER AND BOILER ROOMS. SS-C IS FOR LIGHT DUTY LOCATIONS.*

**2.20 SS-A: SERVICE SINK (C.I. WALL MOUNTED)**

- A. SS-A: Wall mounted, concealed support, enameled cast iron, perforated grid strainer drain, with cast iron drain/trap.
  1. Nominal 22 in. wide by 18- in. front to back by 9 in. high back by 11-1/4 in. high bowl.
  2. Drilled back with 2 holes on 8 -in. centers.
  3. Rim guard of stainless steel or chrome-plated brass on three sides.
  4. Acceptable manufacturers and models:
    - a. American Standard "Lakewell" Model 7692.008.
    - b. Kohler "Bannon" Model K-6714 and 44602 rim guard.
    - c. Zurn Z5898.

- B. Cast Iron Drain/Trap: Cast iron P-trap with integral removable strainer, adjustable mounting foot, threaded brass cleanout plug. Supplied by sink manufacturer.

**2.21 SS-B: SERVICE SINK (C.I. FLOOR MOUNTED CUSTODIAL)**

- A. SS-B: Floor mounted, enameled cast iron, corner model, strainer/drain, and vinyl-coated removable rim guard.
  - 1. Nominal 28 in. wide by 28 in. long by 13 in. high at walls and 8 in. high rim at room side.
  - 2. Acceptable manufacturers and models:
    - a. American Standard "Florwell" Model 7745.811 with removable vinyl rim guard and flat grid drain 7721.038.
    - b. Kohler K-6710 "Whitby" service sink with K-8940 Coated wire rim guard.
    - c. Zurn Z5850-RG with removable vinyl-coated rim guard.
- B. Strainer/Drain: Perforated flat grid strainer drain, polished chrome solid brass.

**2.22 SS-C: SERVICE SINK (MOLDED FLOOR MOUNTED UTILITY)**

- A. SS-C: Floor mounted, fabricated from compression molded resin material with integral drain connection. Integral molded self-draining faucet ledge and 4 in. centered faucet holes.
  - 1. Overall nominal outside dimensions at top of tub 23 in. by 23 in. by 13 in. tub depth. Nominal 20-gallon capacity.
  - 2. 4 angular steel legs with levelers.
  - 3. Acceptable manufacturers and models:
    - a. The Swan Corporation Model MF-1F.
    - b. E.L. Mustee and Sons Model 17F

**SPEC EDITOR: USE FAUCET SF-A WITH COUNTERTOP SINK-A AND B. COULD ALSO BE USED WITH SINK-D.**

**2.23 SF-A SINK FAUCET (SWING GOOSENECK W/SIDE SPRAY)**

- A. SF-A Faucet: Polished chrome plated brass valves, spout, handles, aerator. Concealed (under-mount) body. ADA compliant. With trim.
  - 1. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as  $\leq 0.25\%$  weighted average lead content.
  - 2. Gooseneck swing spout with side spray.
  - 3. 8" minimum center of body to spout center. Minimum 12" high spout.
  - 4. Lever style handles, with hot and cold color indicators and vandal resistant mounting screws.
  - 5. 8" rigid valve body centers (flexible tubing connections between valves and spout not allowed).
  - 6. With aerator, maximum flow rate of 2.2 gpm.
  - 7. Ceramic disc valve cartridges.
  - 8. Trim: Rigid supplies with metal handled stops, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.

9. Acceptable manufacturers and models:
  - a. American Standard "Heritage/Amarilis" with No. 342 lever handles.
  - b. Moen "M-Dura"
  - c. Chicago Faucets 200 (base/spout) with curved lever handles.

**SPEC EDITOR: MORE COMPACT FAUCET SF-B FOR USE WITH SINK-C.**

**2.24 SF-B SINK FAUCET (SWING GOOSENECK, 4" CENTERS, NO SIDE SPRAY)**

- A. SF-B Faucet: Polished chrome plated brass valves, spout, handles, aerator. Deck mount. ADA compliant. With trim.
  1. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as  $\leq 0.25\%$  weighted average lead content.
  2. Gooseneck swing spout.
  3. 5" minimum center of body to spout center. Nominal 11" high spout.
  4. Lever style handles, with hot and cold color indicators and vandal resistant mounting screws.
  5. 4-inch centers.
  6. With aerator, maximum flow rate of 2.2 gpm
  7. Ceramic disc valve cartridges.
  8. Trim: Rigid supplies with metal handled stops, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.
  9. Acceptable manufacturers and models:
    - a. American Standard "Heritage/Amarilis" with No. 342 lever handles.
    - b. Moen "M-Dura"
    - c. Chicago Faucets 895 (base/spout) with lever handles.

**SPEC EDITOR: USE SERVICE SINK-FAUCET SSF-A WITH SERVICE SINKS SS-A. SSF-A IS FOR MOUNTING ON VERTICAL SURFACE OF SINK BACK.**

**2.25 SSF-A SERVICE SINK-FAUCET (SINK WALL MOUNT)**

- A. SSF-A: Utility Faucet: For mounting on vertical surface of sink back. Rough or polished chrome plated brass body, spout, handles. ADA compliant.
  1. Metal lever handles with hot and cold indicators.
  2. Compression or ceramic disc valve cartridges.
  3. Integral vacuum breaker.
  4. 8" centers.
  5. Spout with 3/4 in. threaded hose end.
  6. 3 ft. hose with one end a 3/4 in. threaded brass conn.
  7. Minimum 5" wall-to-spout projection.
  8. Acceptable manufacturers and models:
    - a. American Standard Model 8350
    - b. Chicago Faucets 540.
    - c. Zurn AquaSpec Z842L1-RC

**SPEC EDITOR: USE SERVICE SINK-FAUCET SSF-B WITH SERVICE SINKS SS-B**

**2.26 SSF-B SERVICE SINK-FAUCET (WALL MOUNT)**

- A. SSF-B: Wall-Mount Utility Faucet: Chrome plated brass valves, spout, handles. ADA compliant.
1. Metal lever handles with hot and cold indicators.
  2. Ceramic disc valve cartridges.
  3. Vacuum breaker.
  4. Wall-to-spout brace.
  5. Integral check valves to prevent cross-flow.
  6. Offset adjustable shanks capable of adjustment to 8" centers.
  7. Spout with 3/4 in. threaded hose end and bucket hook.
  8. Minimum 9" wall-to-spout projection.
  9. Acceptable manufacturers and models:
    - a. American Standard Model 8354
    - b. Chicago Faucets 540.
    - c. Zurn AquaSpec Z843M1-RC

**SPEC EDITOR: USE SERVICE SINK-FAUCET SSF-C WITH SERVICE SINK SS-C**

**2.27 SSF-C SERVICE SINK-FAUCET (4" CENTER DECK MOUNT)**

- A. SSF-C Deck-Mount Utility Faucet: Chrome plated brass valves, spout, handles. ADA compliant.
1. 4 in. centers.
  2. Metal lever handles with hot and cold indicators.
  3. Ceramic disc valve cartridges.
  4. 6" minimum center of body to spout center.
  5. Swivel spout with 3/4 in. threaded hose end and in-line or integral vacuum breaker.
  6. Acceptable manufacturers and models:
    - a. Chicago 891.
    - b. Zurn Z812N1.

**2.28 UNDERSINK WASTE AND SUPPLY PIPE GUARDS**

**SPEC EDITOR: PROVIDE UNDER SINK PROTECTIVE INSULATION FOR ADA COMPLIANT WALL MOUNTED LAVATORIES**

- A. Provide ADA compliant undercounter protective covers on all supply and waste piping at barrier free lavatories. Covers shall be UV protected PVC, with reusable fastening system. Provide product type designed for the specific piping material over which it will be applied.
1. Acceptable manufacturers and models:
    - a. Zurn.
    - b. IPS Corporation Truebro.

**SPEC EDITOR: CENTRAL DOMESTIC WATER MIXING VALVES ARE NOT INCLUDED IN THIS SPECIFICATION BECAUSE THEY NEED TO BE SELECTED SPECIFICALLY FOR PROJECT CONDITIONS IF THEY ARE TO WORK PROPERLY. IF SUCH A VALVE IS REQUIRED THE DESIGNER SHOULD**

**CAREFULLY SELECT AN APPROPRIATE MODEL AND ADD IT TO THIS SPECIFICATION.**

**2.29 THERMOSTATIC MIXING VALVE - HAND WASHING FACILITIES**

- A. The Michigan Plumbing Code 2009 section 607.1 (2) (h) has been modified by local rule as follows:
  - 1. A ASSE 1070 mixing valve (water temperature limiting device) is permitted to control up to 5 accessible plumbing fixtures within the same room. The ASSE 1070 mixing valve shall be certified for a minimum flow rate of 0.5 gpm or less.
- B. Provide a thermostatic mixing valve at all public lavatories including at accessible plumbing fixtures. A maximum of 5 faucets within the same room may be served by 1 mixing valve.
  - 1. At other locations identified in the Michigan Plumbing Code, provide individual water temperature limiting devices (thermostatic mixing valves) to individual fixtures.
- C. Provide mixing valves based on the following selection criteria:
  - 1. Mixing valve serving a single fixture: Valve pressure drop shall not exceed 5 psi at 1 gpm flow rate.
  - 2. Mixing valve serving 2-5 fixtures: Valve pressure drop shall not exceed 5 psi at 4.0 gpm flow rate.
- D. Mixing valve specification:
  - 1. Manually adjustable thermostatically controlled domestic water tempering valve.
  - 2. ASSE 1070 listed to control down to 0.5 GPM flow rate.
  - 3. All bronze or brass body, rough finish, chrome plated if exposed. Brass and stainless steel internal components.
  - 4. Chloramine resistant seals.
  - 5. Integral check valves and stainless steel strainers (screens) in hot and cold water inlet connections.
  - 6. Tamper resistant temperature adjustment handle.
  - 7. Union with male or female NPT connections, or compression fittings.
  - 8. Valves shall operate properly:
    - a. At supply pressures between 20 PSIG and 125 PSIG.
    - b. With up to 20 percent pressure differential between hot and cold water supplies.
  - 9. Outlet temperature shall be adjustable to within 10 deg. F of inlet hot water temperature.
  - 10. Hot inlet operating range: 120-180 deg. F.
  - 11. Lower temperature adjustment range: not more than 95 deg. F.
  - 12. Upper temperature adjustment range: not more than 140 deg. F.
- E. Acceptable manufacturers and models:
  - 1. Powers Hydroguard.
  - 2. Symmons Maxline.
  - 3. Wilkins Aqua-Gard.

**2.30 SHOWER HEADS, SHOWER CONTROL VALVES, AND TRIM**

**SPEC EDITOR: SELECT SH-A AND/OR SH-B TO SUIT PROJECT**

A. SH-A: ADA Shower System: Including chrome plated brass supply ell, wall flange, and 30-inch slide bar. Hand held shower head with shut-off, swivel cradle with adjusting knob, (min.) 69 in. chrome plated stainless steel hose, in line vacuum breaker. Shower head flow rate 2.5 gpm. All components shall be ADA compliant. Shower head shall be compatible with shower control valve range. Acceptable manufacturers:

1. American Standard.
2. Chicago Faucet.
3. Speakman.
4. Symmons.
5. Kohler.

B. SH-B Shower Head: Chrome plated brass shower head, shank, and ball joint. 2.0 GPM flow rate. Spray adjusting side handle. Shower head shall be compatible with shower control valve range. Acceptable manufacturers and models:

1. American Standard.
2. Chicago Faucet.
3. Speakman.
4. Symmons.
5. Kohler.

*SPEC EDITOR: U-M HOUSING TYPICALLY USES A SYMMONS MODEL 4-500 "SAFETY MIX" SHOWER CONTROL VALVE IN A SYMMONS "HYDAPIPE" HOUSING. FOR HOUSING PROJECTS VERIFY IF THE AFOREMENTIONED SYMMONS SHOWER ASSEMBLY IS REQUIRED, AND REVISE BELOW ACCORDINGLY.*

*SPEC EDITOR: HOSPITAL PROJECTS SHALL ONLY EMPLOY COMBINATION BALANCED PRESSURE/THERMOSTATIC SHOWER VALVES, REVISE BELOW ACCORDINGLY.*

C. Shower Control Valve (including tub/shower combination valves): Balanced pressure, thermostatic, or combination balanced pressure/thermostatic valve. ADA compliant.

1. Vandal resistant chrome plated brass face plate, single handle, and tub spout (provide 4-port valve, diverter, and spout for bathtub applications).
2. Brass body mixing valve with integral check stops, for concealed piping connections, capable of back-to-back installation.
3. Adjustable limit stop factory set to 110 deg. F (120 deg. F max adjustment).
4. Shall provide anti-scald protection and temperature regulation at inlet pressures as low as 20 psig (flowing), at flows from 1.75-2.5 gpm, at supply temperatures from 40 deg. F to 160 deg. F.
5. Minimum static pressure rating: 125 psig.

D. Acceptable manufacturers and models:

1. American Standard.
2. Chicago Faucet.
3. Speakman.
4. Symmons.

5. Kohler.
6. Powers.

**SPEC EDITOR: THE DESIGNER SHALL CONSULT WITH THE U-M DESIGN MANAGER TO DETERMINE IF BOTTLE FILLERS SHOULD BE PROVIDED FOR THE PROJECT, AND IF SO AT WHAT LOCATIONS. BOTTLE FILLERS CAN CONSIST OF GOOSE NECKS ADDED TO WATER COOLERS (OR PROVIDED ELSEWHERE), OR AUTOMATIC BOTTLE FILLING UNITS WITH OR WITHOUT A WATER BUBBLER, NONE OF WHICH ARE SPECIFIED BELOW. THEREFORE IF BOTTLE FILLERS ARE REQUIRED, EDIT THIS SPECIFICATION ACCORDINGLY.**

### **2.31 ELECTRIC WATER COOLERS**

- A. EWC-A Electric Water Cooler: Vandal-resistant, wall mounted, refrigerated water cooler. ADA compliant.
  1. 14 gauge satin-finish stainless steel vented cabinet and integral basin, with removable access panel.
  2. Self-closing button operated. Polished chrome-plated bubbler head with flow adjustment. In-line removable strainer.
  3. Cooling System: Integral to water cooler. Insulated stainless steel evaporator tank. Copper tube/aluminum fin condenser. Non-CFC/HCFC refrigerant. Adjustable thermostat. 115V/1Ph/60Hz. UL listed.
  4. Delivers a minimum of 8 gph of water at 50 deg. F, cooled from 80 deg. F inlet water, at 90 deg. F, ambient.
  5. Certified to NSF/ANSI 61-G.
  6. Acceptable manufacturers and models:
    - a. Halsey-Taylor "HVRHD" Series.
    - b. Haws Model "H" Series.
    - c. Oasis International "PG" Series.
  
- B. EWC-B Electric Water Cooler: Bi Level, vandal-resistant, wall mounted, refrigerated water cooler. ADA compliant.
  1. 14 gauge satin-finish stainless steel vented cabinet and integral basin, with removable access panel.
  2. Self-closing button operated. Polished chrome-plated bubbler head with flow adjustment. In-line removable strainer.
  3. Cooling System: Integral to water cooler. Insulated stainless steel evaporator tank. Copper tube/aluminum fin condenser. Non-CFC/HCFC refrigerant. Adjustable, accessible thermostat. 115V/1Ph/60Hz. UL listed.
  4. Delivers a minimum of 8 gph of water at 50 deg. F, cooled from 80 deg. F inlet water, at 90 deg. F, ambient.
  5. Certified to NSF/ANSI 61-G.
  6. Acceptable manufacturers and models:
    - a. Halsey-Taylor "HVRHD" Series.
    - b. Haws Model "H" Series.
    - c. Oasis International Model "PG" Series.

**SPEC EDITOR: EMERGENCY FIXTURES SPECIFICATION MUST BE MODIFIED TO BE PROJECT SPECIFIC. BELOW SPEC.S COVER SOME COMMONLY USED TYPES.**

2.32 EMERGENCY FIXTURES

*SPEC EDITOR: THE PLUMBING CODE REQUIRES THAT TEPID WATER BE DELIVERED TO EMERGENCY FIXTURES. THE BELOW ARTICLE CALLS FOR A DEDICATED TEMPERING VALVE PER EMERGENCY FIXTURE, WHICH MAY NOT BE COST EFFECTIVE FOR EVERY PROJECT. DESIGNER SHALL CAREFULLY EVALUATE TEMPERING VALVE OPTIONS AND REVISE THE BELOW ACCORDINGLY. DESIGNER IS CAUTIONED IN PARTICULAR TO EVALUATE PRESSURE DROP ACROSS THE TEMPERING VALVE.*

*SPEC EDITOR: PLASTIC BOWLS, EYE WASH HEADS, AND SHOWER HEADS CAN SAVE CONSIDERABLE COST BUT MAY BE MORE SUSCEPTIBLE TO BREAKAGE AND BACTERIAL GROWTH, EVEN WITH ANTIMICROBIAL PROTECTION. BELOW EYEWASH/SHOWERS ARE SPECIFIED WITH THESE PARTS IN TRADITIONAL STAINLESS STEEL OR CHROME PLATED, FOR CLEANLINESS AND DURABILITY.*

*SPEC EDITOR: MULTIPLE SWING ARRANGEMENTS ARE AVAILABLE FOR EYE WASH COUNTERTOP MODELS, THEREFORE MODEL NUMBERS ARE NOT PROVIDED BELOW. REVISE THE BELOW TO SPECIFY THE SPECIFIC MFR.S MODEL NUMBERS THAT WILL ACCOMMODATE YOUR PROJECT'S MOUNTING LOCATION(S).*

- A. EEWS-A Emergency Eye Wash: Countertop mounted. Swing away when not in use. ANSI Z358.1-2009 compliant. Provide swing arrangement that accommodates mounting location. Barrier Free.
  - 1. Stainless steel or chrome plated brass eye wash head(s) with tethered dust cover(s) and auto-flow control.
  - 2. Chrome-plated brass pipe, fittings, deck escutcheon, and stay-open ball valve, with stainless steel ball and stem.
  - 3. Universal emergency sign mounted on stainless steel ball valve paddle.
  - 4. Test card to record weekly checks.
  - 5. Emergency Fixture Tempering Valve.
  - 6. Acceptable manufacturers and models:
    - a. Haws.
    - b. Bradley
    - c. Speakman.
  
- B. EEWS-B Emergency Eye/Face Wash: Pedestal mounted, self-supporting. ANSI Z358.1-2009 compliant. Barrier Free.
  - 1. Stainless steel or chrome plated brass combination eye and face wash head(s) with tethered dust cover(s) and auto-flow control.
  - 2. Chrome-plated brass fittings and stay-open ball valve, with stainless steel ball and stem.
  - 3. Universal emergency sign mounted on stainless steel ball valve paddle.
  - 4. Stainless steel bowl.
  - 5. In-line strainer.
  - 6. 1-1/4 in. sch. 40 hot-dipped galvanized steel pipe stand/waste tee and cast-iron floor flange. Stand and floor flange painted/powder coated.
  - 7. Test card to record weekly checks.
  - 8. Emergency Fixture Tempering Valve.
  - 9. Acceptable manufacturers and models:

- a. Haws.
- b. Bradley.
- c. Speakman.

**SPEC EDITOR: BELOW FLUSH CEILING-MOUNTED DRENCH SHOWER IS SPECIFIED W/SS SHOWER (AS OPPOSED TO PLASTIC) AND PULL ROD BASED ON THE ASSUMPTION THAT THIS TYPE SHOWER WAS SPECIFIED FOR AESTHETIC REASONS.**

C. EEWS-C Emergency Shower: Drench shower, flush ceiling-mounted shower head with concealed horizontal supply pipe and valve. ANSI Z358.1-2009 compliant. Barrier Free.

- 1. Stainless steel shower head with 20 gpm flow control.
- 2. Stainless steel or brass stay-open ball valve, with stainless steel ball and stem.
- 3. Stainless steel triangular pull rod; provide length required to meet ANSI Z358.1 69" maximum distance to floor requirement.
- 4. Pull rod ceiling escutcheon.
- 5. 1.0 in. sch. 40 galvanized steel supply pipe/fittings.
- 6. Universal emergency sign and weekly test card.
- 7. Emergency Fixture Tempering Valve.
- 8. Acceptable manufacturers:
  - a. Haws
  - b. Bradley.
  - c. Speakman.

D. EEWS-D Emergency Shower/Eye-Face Wash: Combination shower eye/face wash, self-supporting. ANSI Z358.1-2009 compliant. Barrier Free.

- 1. Stainless steel or chrome plated brass combination eye and face wash head(s) with tethered dust cover(s) and auto-flow control. Operated by stainless steel paddle with universal emergency sign.
- 2. Stay-open stainless steel or chrome plated brass ball valve, with stainless steel ball and stem, for eye/face wash and for shower.
- 3. Stainless steel bowl.
- 4. In-line strainer for eye/face wash.
- 5. 1-1/4 in. sch. 40 hot-dipped galvanized steel pipe stand/waste tee and cast floor flange. Stand and floor flange painted/powder coated.

**SPEC EDITOR: COMBINATION SHOWER/EYE-FACE WASH UNITS ARE AVAILABLE WITH DRAIN AND SUPPLY CONNECTIONS LOCATED AT VARIOUS ELEVATIONS. EDIT THE BELOW TO PROVIDE CONNECTIONS SUITABLE FOR YOUR PROJECT.**

- 6. Low waste connection, supply connection to be tee at top of pipe stand.
- 7. Universal shower emergency sign and weekly test card.
- 8. Stainless steel shower head with 20 gpm flow control.
- 9. Stainless steel or aluminum triangular pull rod; provide length required to meet ANSI Z358.1 69" maximum distance to floor requirement.
- 10. Emergency Fixture Tempering Valve.
- 11. Acceptable manufacturers and models:
  - a. Haws.

- b. Bradley.
- c. Speakman.

*SPEC EDITOR: TEMPERING VALVE CONSIDERATIONS: LOCATION? MOUNTING CABINET? ONE TEMPERING VALVE TO SERVE MULTIPLE FIXTURES? IS THERE ADEQUATE WATER SUPPLY PRESSURE FOR TEMPERING VALVE AND FIXTURE PRESSURE DROP?*

- E. Emergency Fixture Tempering Valve: ANSI Z358.1-2009 compliant and ASSE 1071 listed emergency fixture tempering valve. Provide one tempering valve per emergency fixture. Cold water bypass when hot supply lost; shut-off of hot supply when cold supply lost; shut off hot and allow cold flow if thermal actuator fails.
  - 1. Select valve to control accurately across the entire flow range of the emergency fixture. Tempering valve pressure drop shall not exceed 10 PSI at the emergency fixture's maximum flow rate.
  - 2. Tamper resistant temperature adjustment, range 65 deg. F to 95 deg. F, factory set at 85 deg. F.
  - 3. Rough bronze finish. Brass and stainless steel internal components.
  - 4. Chloramine resistant seals.
  - 5. Integral check valves and stainless steel strainers (screens) in hot and cold water inlet connections.
  - 6. Provide thermometer to measure the mixed temperature, range 0-140 deg. F. Thermometer may be integral to tempering valve or field supplied.
  - 7. Approved manufacturers:
    - a. Haws
    - b. Bradley
    - c. Powers Hydroguard XP
    - d. Leonard Valve Company

*SPEC EDITOR: THE BELOW EMERGENCY FIXTURE ALARM SPECIFICATION (IN HIDDEN TEXT) IS A SAMPLE SPECIFICATION ONLY. TURN ON TEXT IF USED. TYPICALLY AT U-M, EMERGENCY FIXTURE ALARMS ARE ONLY USED FOR SHOWERS IN AREAS HIGHLY PRONE TO VANDALISM. HAWS, BRADLEY, AND SPEAKMAN ALL MAKE ALARM PACKAGES WITH THE FEATURES DESCRIBED BELOW. DESIGN CONSIDERATIONS: LOCATION OF THE HORN/LIGHT? IS ADEQUATE FLOW-SWITCH-TO-ALARM CABLE LENGTH AVAILABLE FROM THE MFR? HORN/LIGHT MOUNTED TO WHAT? DOME COLOR? REMOTE MONITORING? FOR EYEWASHES, SHOWERS, OR BOTH?*

- F. Emergency Fixture Alarm System: Complete stand-alone alarm system with flow switch, horn, and flashing light or strobe. For non-hazardous locations.
  - 1. 120 VAC single phase. UL listed electrical components. On-off horn silence switch. NEMA 3R rated electrical components. Factory pre-wired flow switch, silence switch, horn, and flashing light/strobe. Provide adequate cable length between flow switch and alarm devices to accommodate installation conditions.
  - 2. Amber light dome.
  - 3. Horn volume 85 dB at 10 feet.
  - 4. Additional alarm contact for remote monitoring.

5. Vapor proof flow switch. Provide flow switch compatible with emergency fixture served.
6. Approved manufacturers:
  - a. Haws
  - b. Bradley
  - c. Speakman

### **2.33 GD-A - GARBAGE DISPOSAL**

- A. GD-A Garbage Disposal:
  1. Corrosion proof polymer or stainless steel hopper and grinding chamber.
  2. Compact shell, 14 in. maximum overall height. Sound insulated.
  3. Stainless steel grind ring, swivel impellers, and turntable.
  4. Motor: 3/4 HP, 120V single phase permanently lubricated. Built-in overload protection with manual reset.
  5. Stainless steel 3-bolt sink flange connection, stainless steel stopper, and dishwasher drain connection.
  6. For operation with wall switch (continuous feed).
  7. Acceptable manufacturers and models:
    - a. Insinkerator Evolution Compact Series.
    - b. Waste King Legend 9940.

### **2.34 WASHING MACHINE VALVE BOX**

- A. ABS plastic outlet box and trim ring and with supply and drainage connections. Box shall allow piping from bottom or top. With separate quarter turn ball valve for each supply connection. Ball valves shall be brass body, 1/2 in. sweat inlet connection, stainless steel ball and stem, with 3/4 in. hose bib. Provide dual drain "Du-All" box or a separate supply and drain box "Ox Box" as convenient for installation. Provide fire rated outlet boxes when required.
  1. Approved manufacturers:
    - a. IPS Corporation ("Du-All")
    - b. Sioux Chief ("Ox Box" and fire rated)

### **2.35 ACCESSORIES**

- A. Supply Tubes, Stop Valves, and Escutcheons for Faucets: Sweat, threaded or compression connection. Rigid supplies. Metal handled valves. Valves and escutcheons chrome plated brass where exposed, may be rough brass where concealed. Supply tubes chrome plated brass where exposed, may be rough brass or plastic where concealed. Brass tubes and valves NSF/ANSI-61-G listed as  $\leq 0.25\%$  weighted average lead content. Acceptable manufacturers:
  1. Watts
  2. Chicago.
  3. BrassCraft.
  4. Faucet manufacturer.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation. Verify that walls and floor finishes are prepared and ready for installation of fixtures.
- B. Review millwork/casework shop drawings. Confirm location and size of fixtures and openings before rough-in and installation. Confirm that millwork/casework is constructed with adequate provision for the installation of countertop lavatories and sinks.
- C. Coordinate cutting and forming of roof and floor construction to receive drains to required invert elevations.

**3.2 INSTALLATION OF PLUMBING FIXTURES AND LABORATORY SERVICE OUTLETS - GENERAL**

- A. Fixtures shall not be used for construction activities. Protect fixtures from damage during construction.
- B. Install fixture supports securely to building substrate, utilizing bolts in every mounting hole provided in the fixture support. Provide additional blocking/backing when required.
- C. Install Barrier Free water closets, urinals, lavatories, and other devices at mounting heights and with clearances in conformance with the applicable Building Code and ADA requirements.
- D. Install supply, vent and drain connections to fixtures full size of fixture connection, unless larger required by code or indicated otherwise on drawings. Provide the following minimum branch piping and connection sizes:
  - 1. Lavatory and Sink Faucets: 1/2 in. branch piping to wall, 3/8 in. connection between wall and fixture, length of each 3/8 in. supply not to exceed 30 in.
  - 2. Wall Hydrants: 3/4 in. branch piping.
  - 3. Fume Hood Cup Sinks: 1/2 in. branch piping.
  - 4. Eye/Face Wash: 3/4 in. branch piping.
- E. Install fixtures and fixture carriers level and plumb.
- F. Countertop Lavs: Coordinate with architectural trades.
- G. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork. Install deep-pattern escutcheons if required to conceal protruding fittings.
- H. Install each fixture with trap, easily removable for servicing and cleaning.
- I. Provide rigid supply tubes and stops to all lavatories and sinks..
- J. Provide accessible ball type isolation valves (construction per Related Section) in the supplies to shower control valves and electric water coolers.

- K. Provide accessible ball type isolation valves and spring check valves (construction per Related Section) in the supplies to service sink faucets. These check valves are in addition to checks integral to the faucet. Locate isolation valves to isolate faucet and checks.
- L. Provide plumbing fixtures complete with supply, waste and vent piping connections; together with all fittings, supports, fastening devices, and valves.
- M. Use strap wrenches and padded tools to preclude injury to chrome plated and other decorative surfaces.
- N. Exposed to view supply and drainage trim for fixtures and equipment shall be connected to the rough piping systems at the wall, unless noted otherwise.
- O. Wall sleeves on supply and drain connections are not required at the immediate connection to plumbing fixtures. Provide escutcheons.
- P. For faucets without an included gasket, seal areas between faucet base and sink top with non-hardening plumber's putty.
- Q. Seal joints between plumbing fixtures and walls and floors using mildew-resistant 100% silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Division 07 section for Joint Sealants.
- R. Install emergency fixture placards at approved location.

**3.3 INSTALLATION OF WATER CLOSETS AND URINALS - STANDARD AND BARRIER FREE**

*SPEC EDITOR: COORDINATE MOUNTING HEIGHTS WITH ARCHITECTURAL DRAWINGS*

- A. Mounting Heights:
  - 1. Water closets - standard: 15 in. to 17 in. from top of toilet seat to finished floor.
  - 2. Water closets - barrier free: 17 in. from top of toilet seat to finished floor.
  - 3. Urinals- standard: 24 in. from rim to finished floor.
  - 4. Urinals - barrier free: 17 in. from rim to finished floor, 44 in. maximum from hand operated flush valve to finished floor.
  - 5. Flush Valve: Mount flush valve handle on wide side of stall or room.
  - 6.
- B. Apply dual flush instruction plates to wall centered above flushometer.
- C. Install toilet seats on water closets.

**3.4 INSTALLATION OF FIXTURES IN CASEWORK AND FUME HOODS**

*SPEC EDITOR: BACKFLOW PREVENTER MAY BE REQUIRED - SPECIFY IN 221119 DOMESTIC WATER SPECIALTIES*

- A. Fixtures (including tailpiece) and outlets to be installed in casework and fume hoods shall be furnished by others and installed by this contractor as part of the work under this section. Contractor shall install fixtures and outlets complete including all piping, supports, stops, etc. Contractor shall provide rough-in and shall make all final connections. Contractor shall coordinate his work with fume hood and casework manufacturers and with all other trades. Refer to Related Sections Laboratory Casework and Laboratory Fume Hoods. Refer to Architectural drawings for location and quantities of outlets and fixtures and for piping details within fume hoods.

**3.5 INSTALLATION OF THERMOSTATIC MIXING VALVES (NON-EMERGENCY FIXTURES)**

- A. Install in a location readily accessible for cleaning, adjustment, and valve/cartridge replacement.
- B. Install mixing valve after checks and stops are installed. Thoroughly flush all piping immediately prior to mixing valve installation.
- C. Install isolation valves on the hot and cold water inlet pipe connections, near the mixing valve.
- D. Install check valves between the mixing valve and the mixing valve isolation valves. These check valves are in addition to the mixing valve's integral check valves.
- E. Adjust valve temperature set point to 110 deg. F, following manufacturer's adjustment instructions.

**3.6 INSTALLATION OF EMERGENCY FIXTURE TEMPERING VALVES**

- A. Install in a location readily accessible for cleaning, adjustment, and valve/cartridge replacement.
- B. Install tempering valve after checks and stops are installed. Thoroughly flush all piping immediately prior to tempering valve installation.
- C. Install isolation valves on the hot and cold water inlet pipe connections, near the mixing valve.
- D. Install check valves between the mixing valve and the mixing valve isolation valves. These check valves are in addition to the tempering valve's integral check valves.
- E. Install individual fixture tempering valves a maximum of 10 feet from the emergency fixture served, closer if recommended by the manufacturer.
- F. Install a downstream thermometer with a range of 0-140 deg. F, to measure the mixed temperature. Not required if tempering valve is supplied with an integral thermometer.
- G. Remove isolation valve handles.
- H. Adjust valve temperature set point to 85 deg. F +/- 3 deg. F, or as indicated on drawings. Follow manufacturer's adjustment instructions.

**3.7 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section for Commissioning and other requirements of the Contract Documents.

**3.8 ADJUSTING AND CLEANING**

- A. Flush all water closets and urinals and verify performance. Adjust or clean flush valves to produce proper flow.
- B. Back-flush shower heads, faucet aerators/spray heads, and in-line strainers at electric water coolers, emergency fixtures, and wherever installed, and reinstall.
- C. Adjust pop-up drains for proper operation.
- D. Adjust eyewashes to provide proper flow.
- E. Adjust shower control valve limit stops to deliver maximum 120 deg. water.
- F. Adjust stops or valves for intended water flow rate to fixtures without splashing, noise or overflow.
- G. Replace dead batteries in sensor operated flush valves and faucets. Adjust sensor operation to satisfaction of commissioner.
- H. At completion of project, remove excess caulk and sealants and clean plumbing fixtures and equipment.

**SPECIFICATION DIVISION 22**

NUMBER            SECTION DESCRIPTION

**DIVISION 22 PLUMBING**

SECTION 226313 - MEDICAL GAS CERTIFICATION (FOR HOSPITAL FUNDED PROJECTS)

**END OF CONTENTS TABLE**

**DIVISION 22 PLUMBING**

**SECTION 226313 - MEDICAL GAS CERTIFICATION (FOR HOSPITAL FUNDED PROJECTS)**

*2012-09-17 NEW SPEC ISSUED.*

*2013-11-20: REVISED LINK TO UMH FPD WEBSITE AND DELETED COMPLIANT HEALTHCARE TECHNOLOGIES AS AN APPROVED PROVIDER. D. KARLE PER A. DESMARAIS.*

*THIS SPECIFICATION SECTION APPLIES TO ALL HOSPITAL FUNDED PROJECTS THAT MODIFY/ADD MEDICAL GAS/VACUUM SYSTEMS REQUIRING 3<sup>RD</sup> PARTY CERTIFICATION PER NFPA 99. THIS SECTION REQUIRES SIGNIFICANT REVISION IF THE DESIRE IS TO USE IT FOR NON U-M HOSPITAL MED. GAS PROJECTS. FOR EXAMPLE, REFERENCES TO UMH FACILITIES PLANNING & DEVELOPMENT WOULD NOT APPLY.*

*UNDER THE RELATED DOCUMENTS SECTION BELOW, INSERT THE SPECIFICATION SECTION NUMBER FOR MEDICAL GAS SYSTEMS.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 018113: Sustainable Design Requirements.
  - 2. Section 019110/019100: Commissioning
  - 3. Section 220500 Common Work Results for Mechanical
  - 4. Section 221113 Piping Materials and Methods
  - 5. Section **XXXXXX** Medical Gas Systems

**1.2 SUMMARY**

- A. Perform certification of all medical gas/ vacuum installations in conformance with NFPA 99C.

*SPEC EDITOR: THE PARAGRAPH BELOW IS TYPICAL FOR MOST PROJECTS, COORDINATE WITH UM PROJECT MANAGER*

- B. Certification services will be a direct contract between UM and the certification contractor and should not be included in the contractor's bid. Contractor shall be responsible for coordination of and with the certification contractor's services. The information expressed in this specification is for contractor information purposes only.
- C. Section Includes:

1. Owner approved medical gas certification companies
2. Certifiers scope of services

### 1.3 REFERENCES

#### A. Definitions

1. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.

### 1.4 SUBMITTALS

#### A. Documentation:

1. Certification reports in conformance with NFPA 99C
  - a. Submit to the State of Michigan Health Facilities Evaluation Section at the completion of each project phase. All submittals shall be conducted thru the UM Project Manager.
  - b. Final, approved reports shall be delivered in hard copy and electronic Adobe Acrobat pdf form to the UMH Plumbing Shop Foreman at the completion of each project phase.
2. Medical gas as-built drawings
  - a. Medical gas as-builts shall be uploaded in electronic Adobe Acrobat pdf form to the UMH Facilities Planning & Development website:
  - b. <http://www.med.umich.edu/facilities/plan/vn/>

#### B. All Submittals: Identify and incorporate information in each submittal as follows:

1. Assemble complete submittal package per project into a single indexed file. Report hard copies shall be bound and compiled in an orderly fashion. Report electronic copies shall be saved and compiled as a single pdf file.
2. Submitted documents shall be FINAL, APPROVED reports and as-builts. Partial, preliminary reports or reports identifying outstanding issues of non-compliance should not be submitted to UMHHC. Prior to submitting FINAL reports, all outstanding issues and/or code deficiencies shall be resolved and re-certified.

#### C. Electronic Submittals: File name shall use project identifier (UMH project RTN number) and project name followed by a description of the file contents. An example of a file name:

1. RTN 1234567 Emergency Dept Expansion- FINAL Med Gas Certification Report.pdf
2. RTN 1234567 Emergency Dept Expansion- FINAL Med Gas As-Built.pdf

### 1.5 QUALITY ASSURANCE

- #### A. Reference Standards: Services described in this section shall be in compliance with the following quality assurance standards; latest editions, unless noted otherwise.

1. NFPA 99C, "Standard for Health Care Facilities", 2005 edition
- B. All medical gas certification services shall be conducted under the direct supervision of an ASSE 6020 certified inspector and ASSE 6030 certified verifier.
- C. All medical gas certifications required under a given project shall be conducted by a single certification company.
- D. Coordinate testing and inspections with the University of Michigan mechanical inspector, UM project manager and UMH plumbing shop.

**1.6 ACCEPTABLE CERTIFICATION CONTRACTORS**

- A. Acceptable Medical Gas Certification Service Providers:
  1. Airgas, Bethany, OK (Rob Rawlings)
  2. Pneumatic Medical, Au Gres, MI (Matt Bussinger)

**PART 2 - PRODUCTS**

**2.1 NOT APPLICABLE**

**PART 3 - EXECUTION**

**3.1 GENERAL SERVICE REQUIREMENTS:**

- A. Inspection and testing shall be performed on all new piped gas systems, additions, renovations, temporary installations, or repaired systems to assure the facility, by a documented procedure, that all applicable provisions of NFPA 99C have been adhered to and system integrity has been achieved and/or maintained.
- B. The verifier will check all source equipment, piping distribution, valving, outlets & inlets and labeling for form, function and conformance. All alarm systems shall be tested for set points, signals, and pressures monitored. Piping systems are to be tested for purity, free of both gaseous and particulate contaminants.
- C. The duties of the medical gas certifier shall include:
  1. Coordination with project manager and project phasing in order to avoid delays in the project schedule. Certifications shall be conducted, certified and submitted for each phase of construction.
  2. Coordination with the project's UM mechanical inspector to ensure that medical gas installations are certified prior to mechanical inspection.
  3. Alerting UM Project Manager of any errors or violations that may impact project budget or schedule.
- D. If deficiencies are found, the certifier shall summarize in a deficiency report issued thru the UM Project Manager. The mechanical contractor shall make corrections as required and coordinate with the certification contractor for re-certifying the installation.

**3.2 CERTIFICATION REPORT:**

- A. The verifier is to inspect, test, and develop a document that proves that the installation meets all current code requirements and that it is safe and ready for patient use.
- B. Submit reports in conformance with NFPA 99C, specifications and the requirements listed below.
- C. Reports shall be signed by a licensed ASSE 6030 certifier.
- D. Reports shall be bound and include UM/ UMH project numbers (ie UM AEC Project # and UMH FPD RTN #) and project name (from project construction documents) clearly labeled on the cover sheet.
- E. Report shall include a list of all deficiencies, corrections made and final re-certification results. Reports shall not be submitted with outstanding, unresolved deficiencies.

**3.3 MEDICAL GAS AS-BUILTS**

- A. The University of Michigan Hospitals & Health Centers Facilities Planning & Development (UMHHC FPD) maintains a web-based, digital record drawing of all medical gas/ vacuum systems in use in UMHHC facilities. Access to viewing, printing and downloading the current medical gas as-built as well as uploading proposed changes to these documents is controlled thru a secure log-in thru the UMH FPD website:
  - 1. <http://www.med.umich.edu/facilities/plan/vn/>
- B. At the completion of the medical gas certifier's services, the certifier shall be responsible for generating an as-built of all source equipment, piping distributions, isolation valves, alarms and outlets/ inlets modified and/ or added in the scope of the project.
- C. The certification contractor shall be responsible for uploading the project medical gas as-built to the UMHHC FPD website to aid in the upkeep of accurate medical gas as-builts.
- D. Submitted as-builts will be incorporated into the hospital's master record drawings and re-posted to UMHHC FPD's website.

**SPEC EDITOR: INCLUDE THE BELOW ARTICLE IN EVERY SPECIFICATION SECTION.**

**3.4 COMMISSIONING**

- A. Perform commissioning activities in accordance with Related Sections.

**END OF SECTION 226313**

ARCHITECTURE & ENGINEERING  
326 East Hoover, Mail Stop B  
Ann Arbor, MI 48109-1002

BuildingName  
The Description of the Project  
P00000000 0000

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**

SECTION 230593 - TESTING, ADJUSTING AND BALANCING (TAB)

**END OF CONTENTS TABLE**

DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)  
SECTION 230593 - TESTING, ADJUSTING AND BALANCING (TAB)

*REVISIONS:*

*10-12-00: SUBSTANTIALLY REVISED, APPROVED AS NEW MASTER*

*REVISED FOR HVAC MECH TECH TEAM BY D. KARLE, AUGUST 2008.*

*ADDED GAS CABINET BALANCE INSTRUCTIONS TO ARTICLE 3.8 (WORDING DUPLICATES MMC) D. KARLE NOVEMBER 2010.*

*ADDED (ARTICLE 3.8) THAT ALL ADJUSTMENTS TO LAB TERMINAL AIRFLOW UNITS ARE TO BE DONE BY THE LABORATORY CONTROLS CONTRACTOR, NOT THE TAB CONTRACTOR. D. KARLE, DECEMBER 2013.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

*EDITOR: EDIT SCOPE CAREFULLY. CONSIDER OTHER SYSTEMS THAT MAY REQUIRE TAB WORK, SUCH AS PROCESS COOLING WATER SYSTEMS AND RODI SYSTEMS, AND ADD TO THIS SCOPE OF WORK SECTION. ALSO CONSIDER IF TAB DATA SHOULD BE TAKEN ON EXISTING SYSTEMS PRIOR TO NEW CONSTRUCTION. WHILE THIS SPECIFICATION IS INTENDED TO COVER GENERAL TESTS ASSOCIATED WITH FUME HOOD TESTING SUCH AS FACE VELOCITY READINGS, IT DOES NOT COVER ASHRAE 110 TESTING.*

- A. Adjust and balance the following systems:
1. Supply air systems
  2. Return air systems
  3. Exhaust air systems
  4. Hydronic systems
  5. Domestic hot water systems
- B. Conduct the following systems testing:
1. Sound testing
  2. Vibration testing
  3. Fume hood testing

*EDITOR: PERFORMANCE TESTING IS EXPENSIVE AND DIFFICULT TO ACCOMPLISH IN MOST CASES, AND IS THEREFORE NOT USUALLY SPECIFIED. FOR CRITICAL SYSTEMS, CONSIDER FACTORY TESTING RATHER THAN FIELD PERFORMANCE TESTING.*

4. Equipment Performance Testing for the following equipment:  
(none)

- C. Hydronic Balancing shall include as a minimum all devices for which a GPM is indicated in the plans, schedules or specifications.
- D. Air Balancing shall include as a minimum all devices for which a CFM is indicated in the plans, schedules or specifications.
- E. Testing, Adjusting and Balancing Reports, as detailed in part 3.

**1.3 QUALITY ASSURANCE:**

- A. The Contractor shall obtain the services of an independent (third party) Test, Adjust and Balance (TAB) Contractor.
- B. Air balance and water balance shall be done by the same Test and Balance Contractor.
- C. Testing and balancing shall be performed in accordance with standards of either AABC ("National Standards for Field Measurement and Instrumentation - Total System Balance", Current Volume and Supplements,) or NEBB ("Procedural Standards for Testing, Adjusting and Balancing of Environmental Systems"), and ASHRAE Standard 111-1988.
- D. The TAB supervisor shall be currently certified under the requirements of either NEBB or AABC, and shall directly supervise the project TAB activities. Supervisors shall be certified in all areas germane to the project's work scope: air, hydronic, fume hood and sound/vibration testing. Sound and vibration testing may be subcontracted to other qualified firms as approved by the Engineer.
- E. Test equipment accuracies shall be no less than recommended by NEBB or AABC; provide higher accuracy test equipment if dictated by project needs. Test equipment shall have been calibrated within the time intervals recommended by NEBB or AABC, but in all cases shall have been calibrated within the last year.

**1.4 ACCEPTABLE BALANCING CONTRACTORS:**

- A. The following are the only acceptable balancing companies:
  - 1. Absolut Balance
  - 2. Air Flow Testing
  - 3. Enviro-Aire/ Total Balance, Inc.

**1.5 SUBMITTALS**

- A. Provide the following for approval:
  - 1. Test instrument list including the following information:
    - a. Instrument type and accuracy
    - b. Instrument manufacturer and model number
    - c. Instrument serial number
    - d. Copy of current calibration certificate
  - 2. Proof of TAB supervisor certification.
  - 3. Resume of the TAB supervisor and of all TAB technicians proposed for the project.

4. Proposed reporting forms for each TAB procedure.

**1.6 SEQUENCING AND SCHEDULING:**

- A. Where performance testing is specified, equipment and systems must be tested under conditions that are near design conditions. Various components and systems shall be tested in summer or winter design conditions to accurately reflect specified conditions.

**1.7 WARRANTY:**

- A. For a period of 90 days after the acceptance of the balancing report, the TAB contractor shall recheck or reset any part of any system to meet the Owner's needs, where these variations are within the capabilities of the equipment.

**PART 2 - PRODUCTS**

**2.1 NOT APPLICABLE.**

**PART 3 - EXECUTION:**

**3.1 PREPARATION**

- A. Pre-Balancing Conference: Prior to the pre-balance conference, inspect system readiness for testing, adjusting, and balancing (TAB). Prepare and submit a list of system deficiencies. Afterwards, meet with the Project Engineer, Commissioner and contractors to resolve system deficiencies, to verify TAB procedures and system readiness for TAB, and to coordinate TAB activities and schedule.
- B. Coordinate testing, adjusting and balancing of fume hood exhaust systems with U-M OSEH.
- C. Phased Construction: Coordinate TAB procedures with any phased construction requirements for the project so that usable increments of finished work may be accepted for beneficial occupancy. Systems serving partially occupied phases of the project may require balancing for each phase prior to final balancing.
- D. Scheduling: Identify to the contractor anticipated durations for TAB work, and what items must be complete prior to proceeding with TAB work. Allow sufficient time in the construction schedule for TAB prior to final project inspection.
- E. Conduct final TAB after system has been completed and is in full working order. Prior to completing balancing, inspect and test systems and components to verify proper installation and operation, including but not be limited to:
  - 1. Verify strainers and filters are installed and clean.
  - 2. Verify motor and equipment rotation, lubrication and alignment.

3. Align belts and pulleys. Adjust tension.
4. Check operation of all automatic valves and dampers.
5. Check position of isolation valves and dampers.
6. Verify air has been vented from hydronic systems.

F. In cooperation with other contractors, correct deficiencies.

### **3.2 TESTING, ADJUSTING AND BALANCING - GENERAL REQUIREMENTS:**

- A. Notify Commissioner and / or University Project Engineer when testing and balancing activities are commencing.
- B. Immediately notify the Commissioner and University Project Engineer when any deficiencies are detected, whether associated with design, installation, or equipment.
- C. Properly repair any damage to mechanical systems resulting from TAB procedures, e.g. patch duct test holes, repair pipe insulation, etc.
- D. TAB contractor shall provide all required tools and equipment necessary to perform TAB services. Take measurements with certified and calibrated devices. Do not use field installed sensors and gauges.
  1. Exception: Magnetic flow meters may be utilized for flow measurements when available. However, the TAB contractor shall make secondary checks such as pump pressure readings and shall indicate the results of those tests in the TAB report.
- E. Take air and hydronic measurements on equipment at the same time, e.g. take air handler coil water flow data at the same time as air handler air side data.
- F. Measure the total air and water flow rate of each system and each major system component.
- G. Coordinate work with the building controls contractor(s).
- H. Measure motor and equipment speed (RPM) with strobe tachometer. Record full load and part load slippage, and calculate motor brake horsepower (BHP) using  $BHP = \text{nameplate HP} \times (\text{part load slip} / \text{full load slip})$ .

### **3.3 AIR BALANCING - GENERAL REQUIREMENTS:**

- A. Place systems in operation with filters installed and control systems complete and operating. Temporarily block filters to simulate dirty filter pressure drop (obtain dirty filter pressure drop from drawing schedules. If not stated, contact design engineer to obtain). Balance systems to design ratings. Adjust each air terminal unit, inlet and outlet within plus or minus 10 percent of design requirements, but total air for each system shall be not less than shown.
- B. Check flow rates for all factory set air terminal units and reset if not correct.
- C. Adjust fan speeds by adjusting or replacing sheaves and belts. If replacement is required, follow project change order procedures and obtain authorization prior to proceeding.

- D. Set supply fan static pressure as low as practicable while maintaining required pressure at the most aerodynamically remote terminal units.
- E. Record pressure drop readings across all major system components and significant drops within duct systems.
- F. Verify the calibration of air flow measuring stations by taking traverse readings across associated ducts.
- G. For fans equipped with variable speed drives, set the drive to 60 hertz and measure motor and fan RPM to validate that, at the maximum drive speed setting, the fan rotates at the maximum design fan speed. The maximum design fan speed shall be as indicated on the approved fan curve. Assure that running the fan at maximum design speed will not cause any damage prior to making this test.
- H. Label all diffusers, registers and grilles with clear plastic adhesive labels indicating air flow rate, terminal unit number and outlet number corresponding to the balance report.

**3.4 AIR BALANCING - CONSTANT VOLUME SYSTEMS:**

- A. Adjust fan speed to minimize wasted horsepower and noise at throttled balancing dampers.
- B. Verify each CAV box or zone for proper control: normally open or normally closed position, and type of control.

**3.5 AIR BALANCING - VARIABLE VOLUME SYSTEMS (INCLUDING CAV AND VAV BOXES):**

- A. Balance systems to minimize throttling losses and to optimize (reduce to lowest possible) end-of-line (E-O-L) differential pressure set points. Prior to beginning balancing, meet with the project Commissioner and agree to the exact procedures to be followed. Set static pressure set points to ensure the most hydraulically remote terminal unit can achieve design flow. Measure flow at each terminal unit individually to verify scheduled design flow is achieved at the lowest possible differential pressure set point. Reset E-O-L set point and re-measure flow at each terminal unit until the lowest E-O-L set point is achieved. For DDC systems, coordinate with DDC programmer to optimize E-O-L set point where the sum of the loads exceeds system capacity, the ratio of capacity/loads is defined as the system diversity factor. Calculate diversity factor and indicate calculated diversity factor in the balance report. Adjust belts and sheaves to achieve design flow. Test maximum equipment capacity with all boxes forced open to design maximum CFM. Document design diversity, actual diversity, E-O-L set point, and fan volume. Show all calculations
- B. Verify each VAV box for proper control: normally open or normally closed position, and type of control.
- C. Check each individual VAV box for minimum and maximum flow. Calibrate boxes as required to meet design CFMs. For electronically controlled boxes, check and correct correction factor at each box. Coordinate with the DDC programmer.

- D. Check supply and return fan tracking and assure compliance with design requirements.

*SPEC EDITOR: ROOM PRESSURIZATION VERIFICATION (3.6.A.1) SHOULD BE INCLUDED FOR ALL LABS AND OTHER AREAS WHERE A PRESSURE RELATIONSHIP IS IMPLIED BY CFM DIFFERENTIAL BETWEEN SUPPLY AND EXHAUST. HOWEVER, TRUE ROOM PRESSURIZATION CONTROL (3.6.A.2 AND 3) IS INFREQUENTLY USED, TYPICALLY ONLY FOR ANIMAL ROOMS, CLEAN ROOMS, BIOSAFETY LABS, AND OTHER CRITICAL LABS.*

### **3.6 AIR BALANCING - ROOM PRESSURIZATION VERIFICATION:**

- A. Perform room pressurization verification on all systems where drawings indicate a pressure relationship between rooms based on a differential in supply, return and exhaust cfm. Test systems in each operational mode (e.g. close fume hood sashes, change room temperature set point, etc.) and verify that correct air flow direction at doorways and correct CFM offset between terminal units is maintained in any mode. Indicate if the room "passed" in the air balance report. In all cases, record room pressurization in cfm differential. Verify that all architectural patching of penetrations has been completed. Conduct final testing and balancing with all doors closed. Coordinate work with Laboratory Controls Contractor.
  - 1. For room pressurization designed with cfm offset:
    - a. Balance air flow to all terminal units.
    - b. Verify the room pressure relationships implied by scheduled cfm. Smoke stick test all rooms and record results.
  - 2. For room pressurization designed with controlled differential pressure offset:
    - a. Balance air flow to all terminal units.
    - b. Verify room pressure relationships. Document offset achieved in inches w.c. at design set points.
  - 3. For room pressurization systems with adjustable or reversible controls: Verify room pressure relationships with controls set in both the positive and the negative direction. Test at maximum offsets and document offsets achieved in inches w.c. Set at design offset (if indicated) and document offset achieved in inches w.c.
  - 4. For room pressurization designed with visual indicators (Ping-Pong balls or similar devices): Verify correct function of the visual indicators in each operational mode.

### **3.7 AIR BALANCING - AIR HANDLING EQUIPMENT AND SYSTEMS:**

- A. Test air handling units, exhaust and return fans, and associated automatic dampers in all modes of operation. Determine the most restrictive operating mode and balance systems in this mode.
- B. In addition to values listed in ASHRAE Standard 111-1988, the following shall also be measured and reported:
  - 1. Minimum and maximum outdoor air quantities. (Include setting minimum outside air where applicable.)
  - 2. Power factor or watts for motors larger than 10 HP
  - 3. Component air pressure drops, including across open dampers.

- C. Record actual motor amps, volts, and rpm, and fan flow, static pressure and rpm.
- D. Check all equipment motors, belts, drives, bearings, filters.
- E. Check supply and return fan tracking/offset by traverse duct measurements and validate compliance with design requirements.
- F. For new air handling units, fan coils, or any other air handling equipment equipped with a condensate drain: In conjunction with the commissioner, test cooling coil condensate drain and trap performance. Artificially load filters to simulate dirty filter conditions. Verify drain pan does not overflow, and air does not blow by trap.

**3.8 AIR BALANCING - LABORATORY SYSTEMS:**

*EDITOR: THIS ARTICLE CONTAINS ITEMS SPECIFIC TO LAB SYSTEMS. REVIEW AND EDIT CAREFULLY TO ADDRESS PROJECT REQUIREMENTS.*

- A. Test, adjust and balance laboratory air systems, including all laboratory terminal airflow units, fume hoods, bio-safety cabinets (exhausted, or partially exhausted type), snorkels, chemical cabinets, canopy hoods, etc.
  - 1. All adjustments to Lab Terminal Airflow Units (LTAUs) shall be done by the Laboratory Controls Contractor, not the TAB contractor. TAB contractor shall take flow readings to verify the accuracy of these devices, only.
- B. Test supply and exhaust tracking through full system performance range. Record room pressurization in cfm differential. Correlate to room air balancing plan.
- C. Fume Hoods: In conjunction with U-M OSEH and the laboratory air flow controls contractor:
  - 1. Adjust the fume hood terminal air flow unit to achieve the design fume hood face velocity with the sash set at the sash stop position.
  - 2. Measure the face velocity at sash stop position and at the fully open sash position.
  - 3. Verify operation of the fume hood alarm monitor (sash at sash stop position) by temporarily reducing air flow through the hood until the alarm set point indicated on the design drawings is achieved.
  - 4. Measure the hood face dimensions (sash at sash stop) and include this info along with the calculated face area and calculated face velocity in the balance report.
- D. Lab Exhaust Fans:
  - 1. Test operation of bleed-in dampers.
  - 2. Measure total exhaust air flow from the building to each exhaust fan/fan plenum.
  - 3. Test every fan on plenumized fan systems.
- E. Gas Cabinets:

1. Balance exhaust to achieve an average face velocity at the face of gas cabinet access ports or windows (while open) of not less than 200 FPM, and a minimum velocity of 150 FPM at any point at the face of the access port or window.

### 3.9 HYDRONIC BALANCE - GENERAL REQUIREMENTS

- A. Perform final hydronic balance after all systems have been flushed, cleaned, and filled.
- B. Test hydronic systems in all modes of operation. In general, balance systems in the most restrictive operating mode.
- C. Hydronic balance includes performance readings (flow, pressures, temperatures) on all pumps, coils, heat exchangers, and flow measuring devices. For coils 3 gpm or less at terminal units, record flows only. Adjust pump flows to actual system heads by adjusting balancing valves (constant volume systems). Flow measuring devices take precedence over pump head readings. Record discrepancies for evaluation. Provide pump head and flow (i.e. flow determined from shut off head, operating head and pump curve) and flow measuring device data.
- D. Report pressure drop readings across all major system components both for flow determination and for deviations between actual and design values.
- E. Record the pressure drop across water filtering devices.
- F. Where Y or basket strainers are equipped with inlet and outlet pressure gauges, record the pressure drop.
- G. Record (on flow diagrams) the flows and pressures obtained in each of the various circuits and modes of operation. Measure flows in parallel pumping systems when operating independently and jointly.
- H. Adjust and set the memory stop for each balancing valve.
- I. For auto-balancing valves, record differential pressure with auto-balancing valve throttling against maximum flow mode. .
- J. For 3-way control valves, balance "bypass" flow to match "through" flow.

- K. In general, balance variable flow systems to achieve design flow at all units simultaneously. Where the sum of the loads exceeds system capacity, the ratio of capacity/loads is defined as the system diversity factor. Calculate diversity factor and indicate calculated diversity factor in the balance report. Balance variable flow systems to minimize throttling losses and to optimize (reduce to lowest possible) differential pressure set points. Prior to beginning balancing, meet with the project Commissioner and agree to the exact procedures to be followed. Set static pressure set points to ensure the most hydraulically remote load can achieve design flow. Measure flow at each load individually to verify scheduled design flow is achieved at the lowest possible differential pressure set point. Reset and re-measure flow at each load until the lowest differential pressure set point is achieved. Verify that no control valve "lifts" at the final differential pressure set point, by closing all other control valves, allowing the controls to settle to the differential pressure set point, and then verifying the valve remains fully closed. Record the final differential pressure set point in the TAB report. Throttle balance valves at loads only as required to obtain accurate flow data; generally balance valves should otherwise be left fully open. (Exception: throttle balance valves at stacked coil sections (or similar arrangements) to provide equal flow to each coil in the stack.) For DDC systems, coordinate with DDC programmer to optimize differential set point.

### **3.10 VIBRATION TESTING**

- A. Perform vibration measurements for all rotating equipment 1/2 horsepower and larger, including compressors, pumps, fans and motors.
- B. Inspect vibration isolation system and alignment and report deficiencies.
- C. Allowable Vibration Tolerances: Self-excited, vibration maximum velocity shall not exceed the following limits, measured in inches per second RMS (not in mils peak to peak), filter in. Measure vibration at bearing caps of machine in vertical, horizontal and axial directions or at equipment mounting feet if bearings are concealed.
1. Except where noted otherwise: 0.20
  2. Pumps: 0.13
  3. Centrifugal Compressors: 0.13
  4. Fans: 0.09
- D. For variable speed equipment, inspect at full range of speeds. Verify the maximum safe speed the system can be run at before beginning tests. Modulate speed from minimum to maximum to test for possible harmonic vibrations. Record vibration at maximum operating speed and at any speed displaying harmonic vibration.
- E. Include in the report a summary sheet indicating pass / fail for each unit. For each unit of equipment, record detailed initial measurements, corrections made, retest measurements, and suggested course of action for equipment that still fails limits after contractor correction.

*SPEC EDITOR: EDIT ACOUSTICAL TESTING SECTION TO MAKE PROJECT SPECIFIC. CONSIDER ALWAYS INCLUDING THE SECTION ON TESTING 6 ROOMS IN CASE NOISE ISSUES ARISE AFTER CONSTRUCTION IS COMPLETE.*

### 3.11 ACOUSTIC TESTING

- A. Conduct acoustic testing with a calibrated sound level meter and octave band analyzer of the accuracy required by AABC or NEBB. Include dBA and individual octave readings. Use current ASHRAE manuals for reference levels, formulas and coefficients.
- B. Record sound pressure readings by octave and in weighted dBA scale. Plot dB by octave and calculate RC and NC values. Compare against specified levels indicated on drawings or in specifications.

*SPEC EDITOR: THE FOLLOWING ARE RECOMMENDED ROOM CRITERIA (RC - THE NEW STANDARD) VALUES FOR VARIOUS ROOM TYPES. (NOISE CRITERIA, NC - IS THE OLD STANDARD):*  
*OFFICES: RC 30-35 (N) FOR PRIVATE, RC 35-40 (N) FOR OPEN*  
*LECTURE HALLS: RC 25-30 (N)*  
*OPEN PLAN CLASSROOMS: RC 35-40 (N)*  
*PUBLIC AREAS: RC 35-45 (N)*  
*LABS: RC 30-40 (N) - OFTEN NOT ACHIEVABLE WITH HEAVY AIR FLOW.*

*EDIT LIST BELOW AND/OR THE DRAWINGS OR DELETE SOUND PRESSURE TESTING.*

- 1. Conduct sound pressure testing:
  - a. In six rooms, designated by the Owner/Engineer.
  - b. Where RC/NC criteria appears on the drawings.

### 3.12 PERFORMANCE TESTING

*SPEC EDITOR: THIS PARAGRAPH IS RARELY USED. ACCURATE PERFORMANCE TESTING IS DIFFICULT AND EXPENSIVE. SOME SMALL EQUIPMENT (EG: ARI FAN COIL UNITS) AND COMPONENTS IN LARGER EQUIPMENT (EG: AMCA FANS) CARRY PERFORMANCE CERTIFICATION. IF WARRANTED, FACTORY TESTING OF CUSTOM EQUIPMENT IS GENERALLY PREFERRED OVER FIELD PERFORMANCE TESTING.*

- A. Equipment Performance Testing: For the equipment listed, test performance and verify that it meets scheduled capacity. Develop a system specific testing plan for review by the Architect / Engineer and the commissioner. Document all testing procedures, and corrections due to variations in actual testing condition versus scheduled performance.

*SPEC EDITOR: THIS PARAGRAPH IS RARELY USED. WEATHER IS DIFFICULT TO PREDICT, AND RARELY COOPERATES WITH CONSTRUCTION AND OCCUPANCY SCHEDULES. IF USED, EDIT VERY CAUTIOUSLY.*

- B. Seasonal Performance Testing: For the systems listed, conduct testing at or near design outdoor conditions. Test, adjust, and balance air conditioning systems during summer season and heating systems during winter season, including at least a period of operation at outside conditions within 5 deg F wet bulb temperature of maximum summer design condition, and within 10 deg F dry bulb temperature of minimum winter design condition. Take final temperature readings during seasonal operation.

**3.13 COMPLETION SERVICES**

- A. Final Check: Make final checks and complete any testing as directed.
- B. Acceptance: Final acceptance of the project will not be made until a satisfactory report is received. Owner reserves the right to spot check the report by field verification prior to final acceptance.

**3.14 TESTING, ADJUSTING, AND BALANCING REPORT**

- A. Submit TAB reports in compliance with specifications and the requirements listed below.
- B. Submit progress TAB reports within 3 days of balancing each air, hydronic, and plumbing system, and more frequently if requested by the project Commissioner. Submit the final TAB report within one week of completing all testing, adjusting and balancing
- C. Report all data in inch/pound units.
- D. Provide date and time all readings were taken.
- E. Include brief system descriptions, deficiencies, corrections made, unresolved problems, and recommendations.
- F. Provide as-built schematic sketches for each system indicating all equipment, balancing related components, terminal devices, diffusers, grilles, registers, and valves. Use equipment nomenclature as defined in construction documents. Indicate room numbers, and correlate all devices to the balance report data.
- G. Include a list of all testing equipment and devices used, including type, accuracy, manufacturer, model number, serial number, and calibration date.
- H. Include definition of all abbreviations and acronyms, and all formulas used in calculations.
- I. Provide the outside air dry bulb and wet bulb temperature at the beginning and end of each TAB day, correlated to the day's TAB work.
- J. Number all report pages. Tab major sections of the report and provide a report table of contents.
- K. Include complete nameplate data for all equipment.
- L. Include flows and pressures in all operating modes. Indicate final E-O-L differential pressure set points, and the results of all tests (e.g. smoke stick tests, etc.)

- M. Describe TAB procedures used; including procedure used in establishing differential pressure set point for variable speed drive controlled systems.
- N. Include performance data for all major equipment, including providing copies of the approved fan curves, pump curves, coil data sheets, flow element curves, and Cv characteristics. This is not required for terminal units 2000 cfm or less.

SECTION 230900 - MECHANICAL SYSTEMS CONTROLS

**END OF CONTENTS TABLE**

DIVISION 23  
SECTION 230900 - MECHANICAL SYSTEMS CONTROLS

REVISION NOTES:

SEPTEMBER 2014: GENERAL REVISION INCLUDING: U-M TO PROVIDE UPS ENCLOSURE, REQUIRE THAT ALL COMPONENTS TO ACHIEVE THE SEQUENCE OF OPERATION BE PROVIDED, REQUIRE ALARMS BE PROGRAMMED, "ITEMIZE QUOTATION" REVISED TO "WHEN REQUESTED", "SUBMITTALS" REVISED TO REQUIRE DATA SHEETS BE ORGANIZED BEHIND TABS, VARIOUS TECHNICAL UPDATES INCLUDING: RELOCATED CONTROL VALVE RANGEABILITY REQUIREMENTS TO APPLY TO CONTROL VALVES, TEC ELECTRONIC ACTUATORS REVISED TO SPECIFY A MINIMUM STROKE LENGTH, "PNEUMATIC ACCESSORIES" REVISED TO ELIMINATE DRYERS WHEN USING TUNNEL AIR. REVISED STAT HEIGHT TO 44" A.F.F. TO MATCH ELECTRICAL SPEC.S AND ADA. D. KARLE FOR HVAC MTT.

DEC. 2013: REVISED BTU METER DESCRIPTION TO DELETE SPARLING (BTU COMPUTER NO LONGER AVAILABLE FROM SPARLING), IMPROVE DESCRIPTION, ADD BTU METER ENCLOSURE INFO. DELETED SOME MFR.S AS APPROVED FROM STM AND STM CONDENSATE LIST BASED ON FEEDBACK FROM U-M PLANT ON QUALITY PROBLEMS. D. KARLE FOR HVAC MTT.

OCT. 2011: ADDED REQUIREMENT TO PROVIDE UPS PANEL (ARTICLES 1.1 AND 2.11) OPEN WIRE (ARTICLE 2.6) AND IMPROVED THE DAMPER SPECIFICATION (ARTICLE 2.8) (DK, PER HVAC MECH TECH TEAM)

LATEST REVISION DATE: 1/4/11 - BY S. WOLDT FOR THE HVAC MECH/TECH TEAM

DEC. 2010: REVISED FOR COMPLIANCE WITH ASHRAE 90.1 2007 (DK, PER MECH TECH TEAM)

DEC. 2010: ADDED PART 2.3, SPEC. FOR FAN COIL CONTROLLER. ADDED SPEC FOR ELECTRICALLY ACTUATED BALL STYLE CONTROL VALVES (2.7) (DK, PER MECH TECH TEAM).

6/26/06: ADDED ADA REQUIREMENTS FOR DEVICE MOUNTING HEIGHTS, SECTION 3.1.B. (DK)

5/31/06: ADDED PARAGRAPHS C AND D TO ARTICLE 2.5, REQUIRING CONTROLS CONTRACTOR TO RUN 120 VAC POWER TO ALL CONTROL ACCESSORIES. THIS REQUIREMENT WAS ONLY PARTIALLY COVERED IN SOME SECTIONS. CLARIFIED IN 1.1.C.10 THAT CONTRACTOR DELIVERS AND PICKS UP LPI DOORS FROM U-M'S SHOP. (DK)

EDITOR'S NOTE:

THESE SPECIFICATIONS MUST BE CUSTOMIZED APPROPRIATELY FOR EACH PROJECT, E.G. ADDING SPECIFICATIONS FOR COMPONENTS NOT ALREADY SPECIFIED IN PART 2. HOWEVER, DELETING COMPONENTS SPECIFIED IN PART 2 IS NOT TYPICALLY NECESSARY OR RECOMMENDED. IN ADDITION TO THESE SPECIFICATIONS, THE PLANS ARE TO INCLUDE THE FOLLOWING, AS A MINIMUM:

SCHEMATIC LAYOUT OF EACH SYSTEM SHOWING ALL DDC AND CONTROL COMPONENTS. COMPONENTS TO BE INSTALLED IN AUXILIARY CONTROL PANELS (LOOP POWERED INDICATORS, E.P. RELAYS, P.E. SWITCHES, DIFFERENTIAL PRESSURE TRANSDUCERS, ETC.) SHALL BE SO INDICATED BY SOME METHOD. (I.E. ASTERISK)

LOCATIONS OF ALL DDC PANEL ARRAYS.

PROVIDE TWO 20 AMP POWER CIRCUITS AT EACH DDC/AUXILIARY PANEL LOCATION. ONE CIRCUIT IS FOR THE DDC PANEL, THE OTHER IS FOR THE AUXILIARY PANEL. ELECTRICAL POWER REQUIREMENTS TO BE COORDINATED WITH ELECTRICAL DRAWINGS.

WIRING DIAGRAMS FOR EACH SYSTEM TO SHOW INTENT OF AUTOMATIC OR INTERLOCKED OPERATION.

SCHEDULES FOR DAMPERS, AIRFLOW MEASURING STATIONS, STATIC PRESSURE PROBE LOCATIONS, HUMIDITY RESET, TEMPERATURE RESET, DAY/NIGHT CONTROL ZONE, ETC.

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*ALWAYS INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections
  - 1. 220523 Valves

**1.2 SUMMARY**

- A. This Section specifies mechanical systems controls applicable to all project controls except Laboratory Airflow Controls.

*IF THE PROJECT WILL NOT SPLIT THE WORK BETWEEN THE MECHANICAL SYSTEMS CONTROLS CONTRACTOR AND THE UNIVERSITY OF MICHIGAN AS DESCRIBED IN 1.3, REVISE 1.3 AND THE BALANCE OF THE SPECIFICATION ACCORDINGLY.*

**1.3 SCOPE OF WORK**

- A. The complete control system work shall be split between the Mechanical Systems Controls Contractor and the University of Michigan as outlined below. As it relates to the extent of responsibility for work within this specification section, "provide" shall mean the identified party both furnishes and installs such item(s). "Furnish" shall mean the identified party furnishes the item for installation by others.

- B. The Mechanical Systems Controls Contractor shall be a direct Sub-contractor to the Contractor.
- C. Summary of work by the Mechanical Systems Controls Contractor- shall include, but not be limited to:
  - 1. Temperature control system consisting of all pneumatic and Direct Digital Controls (DDC) sensors, transducers, relays, switches, data communication network, etc. and all associated control wiring and conduit systems.
  - 2. Install Terminal Equipment Controllers (TECs) on terminal equipment. Install Room Temperature Sensors (RTS's).

**EDITOR: DRAWINGS SHOULD INDICATE LOCATION AND TYPE OF COMMUNICATION CONNECTION SHOWING NECESSARY CONDUIT TO THAT LOCATION (NEAREST DDC PANEL FOR EXISTING BUILDINGS OR NEAREST PHONE CLOSET FOR NEW BUILDINGS) .**

- 3. Connection of new DDC panels to the Automation Level Network (ALN) to permit communication to the Building Automation System (BAS). Connection to host computer via trunk connection to an existing DDC panel, communications closet, or local Ethernet data port, as indicated on the drawings.
- 4. Engineering, submittals, as-built drawings, and operation and maintenance manuals. Configure modular DDC panel terminations such that analog inputs and analog outputs terminate on separate modules, do not intermix analog outputs and inputs on the same module.
- 5. Provide an auxiliary temperature control panel adjacent to each DDC panel. Provide additional auxiliary panels as required to house the required quantity of control components. Auxiliary panels shall not be smaller than 24"x24", and shall have a 1' high by minimum 2' wide (but not less than panel width) contiguous clear area which can be used for future expansion. Provide all wiring between the DDC panel and the auxiliary panel(s).
- 6. Provide a Loop-Powered Indicator (LPI) panel adjacent to the auxiliary panel. Provide additional LPI panels as required to house the required quantity of LPIs. Provide all wiring between the DDC panel and the LPI panel(s).
- 7. Install a UPS panel directly under the DDC enclosure. Provide all interconnecting power wiring between the DDC panel power supply and the UPS panel duplex receptacle.
- 8. Provide a 6"x 6" wiring trough extending over and between each DDC, auxiliary temperature control, and LPI panel.
- 9. Installation of U-M furnished DDC and UPS panel enclosures.
- 10. Provide thermostats, control valves, dampers, operators, meters, control air tubing, etc.
- 11. Provide gauges, indicating devices, electric and electronic control accessories, and other control system devices.
- 12. Provide calibration and start-up services of non-DDC control systems.
- 13. Termination of all wires for input/output (I/O) devices external to the DDC panel, including, but not limited to: sensors, H/O/A switches, hard-wired safeties, relays, etc., TECs, RTS's, Field Level Network (FLN), and any other field devices.
- 14. Termination of all wires inside auxiliary panels.

15. Provide site supervision of mechanical control work and coordination with related electrical and fire alarm work and packaged controls.
16. Provide all control wiring and electrical components necessary for each system to permit automatic or interlocked operation, such as: air cooled condensing units, high level alarm circuits, damper end switches, fuel oil pumping/monitoring systems, chiller control/interface panels, boiler control/interface panels, early break contacts on disconnects to VSD's, cooling tower vibration switches, etc.
17. All other work and components required for complete and operational control systems, and that allows the sequence of operation indicated on the drawings or elsewhere to be achieved, except work specified as provided or furnished by the University of Michigan.
18. Start-up, calibration, and checkout of sensors, transducers, thermostats, control valves, dampers/damper operators, meters, and all other components provided.
19. Commission all mechanical controls provided. Provide a detailed list of every control point installed to the project Commissioning Authority (CxA), and verify proper operation of each component prior to commissioning the controls with the CxA. Include, in checklist format, a detailed procedure to verify all aspects of the controls' Sequence of Operation.
20. Training of U-M personnel to familiarize operations staff with the configuration, operation, and maintenance of provided controls.

D. DDC related work by the University of Michigan:

1. Termination of all wires and pneumatic lines within the DDC panel, excluding the power supply.
2. Termination of the I/O wires that run between the DDC panel and the auxiliary panel(s) (DDC panel end only).
3. Termination of the LPI wires within the LPI panel(s).
4. Point database entry.
5. Create, enter and checkout all "Powers Process Control Language" (PPCL) programming.
  - a. Provide all programming required to achieve the sequence of operation and the control intent indicated on the documents.
  - b. Program the following alarms, whether specifically indicated in the sequence of operation or not. Include appropriate deadbands and time delays:
    - 1) For every indicated or implied setpoint, create a variation from setpoint alarm. Examples include air handler discharge temperature, chilled water temperature, end-of-line DP, etc.
    - 2) Status does not match command.
    - 3) Failed point.
    - 4) Exception: Unless specifically indicated, alarms are not required for Terminal Equipment Controllers controlling space temperature.
  - c. Programming lines shall be grouped into subparts and explained with comment fields. The comment fields shall include the related part of the project sequence of operation that each program subpart is intended to accomplish.

6. Provide temporary programming to provide building heating or cooling during construction.
7. Selection of the appropriate size, type, and quantity of DDC panels to be used.
8. Provide all DDC panel circuit boards, associated I/O modules, and communication hardware.
9. Furnish DDC panel UPS.
10. Furnish TECs and RTS's.
11. Furnish all DDC panel enclosures and UPS enclosures.
12. Punch the LPI panel doors provided by MSCC. MSCC must drop off and pick up doors from U-M's shop.
13. Start-up and checkout of DDC panels and termination of associated sensors, transducers, and other components at the DDC panel.
14. Verify correct functionality of every DDC point associated with every DDC panel, and for every input and output associated with every TEC.
15. Configure trends for every analog (30 minute trend interval) and digital(change of value) input to DDC panels. Configure room temperature (or the controlled variable) trends for every terminal equipment controller, at a 30 minute interval.
16. Commission DDC panels and verify each sequence of operation including at TECs and similar DDC controllers, with the project CxA.
17. Training of U-M personnel on the various Sequences of Operation, the DDC panel and its connections, the LPI panel, the UPS panel, and the TECs or similar controllers and their related components that were provided by the University of Michigan.

#### **1.4 ITEMIZED QUOTATION**

- A. When requested, immediately provide an itemized bid breakdown to the Owner post bid, for review and approval. Include itemized material costs for all major components, installation labor costs, subcontractor labor and itemized material cost, and engineering costs, for base bid and for each alternate, for the entire work scope of the Mechanical Systems Controls.

#### **1.5 ACCEPTABLE MECHANICAL SYSTEMS CONTROLS CONTRACTORS**

- A. The following MSCCs are acceptable for the furnishing and installation of pneumatic, electric and DDC components as specified in this section:
  1. Siemens Building Technologies
  2. Honeywell, Inc.
  3. Johnson Controls, Inc.
  4. Service Controls, Inc.

**EDITOR: CONTACT THE UM DESIGN MANAGER TO DETERMINE WHICH OF THE ABOVE CONTROLS INSTALLATION CONTRACTORS ARE TO BE LISTED AS ACCEPTABLE FOR YOUR SPECIFIC PROJECT. DO NOT LIST CONTRACTORS IN HIDDEN TEXT WITHOUT SPECIFIC PERMISSION FROM U-M DESIGN MANAGER OR PLANT ENGINEER.**

**1.6 COORDINATION**

- A. Provide controls and control wiring compatible with equipment provided by others and with existing equipment and controls.
- B. Coordinate the installation of controls with the installation of other project equipment.
- C. Ensure all control components are located and installed correctly so that the specified and intended performance and the sequence of operation is achieved, including components supplied and installed by others.

**1.7 SUBMITTALS**

- A. The Mechanical Systems Controls Contractor (MSCC), prior to submitting the specified number of submittal drawings through the General Contractor (GC) or Construction Manager (CM) shall:
  - 1. Pre-submit two copies of preliminary shop drawing submittals directly to the designated Plant Operations Engineer and. Submit copies of the transmittal only to the GC or CM.
  - 2. The Plant Engineer will meet with the MSCC to discuss his review comments.
  - 3. The MSCC shall incorporate the review comments, as required, into the final shop drawing submittals. No work shall be done until the final submittals are approved.
- B. Shop drawings shall contain, as a minimum, the following:
  - 1. Schematic diagrams of all systems being controlled and/or monitored indicating all DDC points, point numbers (using UM conventions), sensors, relays, controllers, valves, dampers, complete control wiring schematics (including starter, VSD, DX system, etc. wiring diagrams), pneumatic tubing, DDC panel maps, etc.
  - 2. Wiring of each point to the DDC panels, including terminal block numbers.
  - 3. Layout of all auxiliary devices and panels, and wiring of relays, contacts, etc. Include terminal block numbers at all control panels, at all mechanical equipment, and at all control devices.
  - 4. Complete Sequence of Operation for each system being controlled, including set points, alarms settings, etc. in narrative format.
  - 5. Schematic diagram of the total DDC system layout, including all panels, trunk cables, peripheral devices, locations, etc.
  - 6. Pneumatic compressed air supply equipment, risers, and major tubing runs.
  - 7. Complete bill of materials to identify and quantify all devices.
  - 8. A schedule of all nameplates and associated wording.
  - 9. An index of sheets for ease of access.
- C. Submit, as a minimum, the following design data schedules indicating:
  - 1. Airflow Measuring Probes:
    - a. Device tag.
    - b. Equipment served/function.
    - c. Model number.

- d. Size, type, and location.
- e. Station area in square feet.
- f. Max/Min Range.
- g. Magnehelic scale range.
- h. Velocity pressure range.
- 2. Air and water pressure sensors:
  - a. Device tag.
  - b. Equipment served/function.
  - c. Model number.
  - d. Size, type, and location.
  - e. Max/Min Range.
- 3. Control Dampers:
  - a. Damper tag.
  - b. Equipment served/function.
  - c. Model number.
  - d. Blade configuration and orientation.
  - e. Size in width, height, and blade width.
  - f. Pressure drop.
  - g. Type of seals (blade and edge).
  - h. Normal position.
  - i. Size, quantity, type, and model number of actuators.
  - j. Method of actuator mounting and actuation.
  - k. .
- 4. Control Valves:
  - a. Valve tag.
  - b. Equipment served/function.
  - c. Valve flow rate (GPM).
  - d. Line size.
  - e. Specified valve pressure drop (ft. head).
  - f. Valve size.
  - g. Valve Cv.
  - h. Actual valve pressure drop (ft. head).
  - i. Valve normal position.
  - j. Valve spring range.
  - k. Valve shut-off rating (ft. head).
  - l. Valve body pressure/temperature rating.
  - m. Valve type/model number.
  - n. Actuator type/model number.
- 5. TECs:
  - a. Device tag.
  - b. Equipment served/function.
  - c. Model number and application code.
  - d. Associated sensor location/tag.
  - e. Size, control values, etc.

D. Submittal Requirements

- 1. Shop drawings shall be 11" x 17" size (minimum).
- 2. All schematics and drawings shall be done on CAD. The electronic files shall be in IBM compatible Autocad version 2004 (or above) format.
- 3. Product data shall include description and complete engineering data for each control system component.
- 4. Data sheets shall be organized behind sheet tabs. Each sheet tab shall indicate the category or component name (i.e. valves, dampers, relay & switches, thermostats, temperature transmitters, pressure transmitters, air flow stations, TECs, etc.).

5. Since many items are interrelated and should be checked concurrently, all of the MSCC's DDC related shop drawings shall be submitted at one time. No consideration will be given to partial submittals, except valve and damper submittals on approval only. Any partial submittals must be included in the complete submittal package.

E. Project Record Documents

1. Revise shop drawings to reflect actual installation and operating sequences and provide a final electronic file on CD.

F. Operation and Maintenance Manuals

1. The MSCC shall provide the specified number of copies of complete operation and maintenance instructions for all system components furnished.

2. Include as-built system schematic drawings.

3. Indicate final set points, settings, and adjustments of all components.

4. Include project specific catalog cuts and data sheets indicating installation, operation, maintenance, repair, wiring diagrams, calibration, calibration tolerances, inspection period, cleaning methods and cleaning materials for all components.

## 1.8 QUALITY ASSURANCE

A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

1. Where not indicated in Part 2, all devices shall be as manufactured by Honeywell, Johnson Controls or Siemens.

B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.

1. Underwriters Laboratory (listed and labeled).

2. National Electric Manufacturer's Association (standards pertaining to components and devices for electrical control systems)

3. National Fire Protection Associate NFPA 90A "Standard for the Installation of Air Conditioning and Ventilating Systems"

4. National Electrical Code NFPA 70.

## 1.9 DELIVERY, STORAGE AND HANDLING

A. Shipping and storage protection shall be provided by manufacturer to insure that the interior and exterior of components are completely protected from damage, dirt or weather. Components shall be continuously covered with plastic or other durable means, until just prior to installation. Maintain protection after installation to protect against on-going construction activities.

**1.10 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 GENERAL**

- A. DDC panels, including field and zone controllers/panels and all related software shall be the Siemens Apogee Building Automation System.
- B. Provide components compatible with new and existing DDC controller I/O modules, and with equipment provided by others. The MSCC shall become familiar with the DDC system's requirements, limitations, and characteristics.

**2.2 ELECTRONIC SENSORS, INDICATORS, TRANSDUCERS AND COMPONENTS**

- A. Temperature and Humidity Sensors:
  - 1. Temperature sensor assemblies shall consist of a Resistive Temperature Device (RTD's) with a 4-20 mA 2-wire transmitter and gasketed utility box enclosure. Sensing element shall be platinum with 100 ohms resistance at 32 deg. F. Accuracy shall be +/- 1/2 deg. F over the entire range.
    - a. Single point duct temperature sensor shall be rigid bulb type with stainless steel (SS) sheath, aluminum tip, and have a calibrated span of 20-120 deg. F or 30-250 deg. F for heating applications.
    - b. Averaging element duct mounted temperature sensor shall have a SS minimum 25 ft. long continuous element sensor along the entire length, and have a calibrated span of 20-120 deg. F or 30-250 deg. F for heating applications.
    - c. Rigid averaging element duct mounted temperature sensor shall have a brass case, bendable sheath, continuous element sensor along the entire length, and have a calibrated span of 20-120 deg.
    - d. Outside air sensor shall be designed to mount on a conduit, include an elbow type enclosure, sun shield, and have a calibrated span of -58-122 deg.
    - e. Liquid immersion temperature sensors shall have 5 1/2" long probe with SS well, and weather tight enclosure. Transmitters for chilled water shall have a calibrated span of 20-120 deg. F or 30-250 deg. F for heating applications.
    - f. Surface mount thermal-ribbon flexible sensor for pipe mounting shall have SS braid over lead wires, use pressure sensitive adhesive, must be properly insulated, and have a calibrated span of 30-250 deg. F.
    - g. Room temperature sensors (non-TEC) shall have a span of 20-120 deg. F, locking covers, and when pneumatic, match the pneumatic thermostats used.

- h. Adjustable room temperature sensors (non-TEC) shall have a digital temperature display, high accuracy set point slide, flush mounted override button, and a temperature range of 55-95 deg. F.
    - i. Approved Manufacturers:
      - 1) TCS
      - 2) Siemens
      - 3) Minco
- 2. Outside Air Master Temperature and Humidity Sensors - Dual System:
  - a. Single point outside air temperature RTD shall be 1000-ohm thin film platinum resistor sensor with 4-20 mA 2-wire output transmitter with solar shield.
  - b. Outside air humidity sensor shall be thin film alumina substrate capacitance signal generating sensor with 4-20 mA 2-wire output transmitter with 0-100% relative humidity range within +/- 1% RH.
  - c. Approved Manufacturers:
    - 1) Viasala
- 3. High Precision Temperature Sensors: (for temperature inputs used for BTU calculations)
  - a. Temperature transmitter with 100 ohm platinum RTD sensor and 4-20 mA 2-wire DC output. Zero and span shall be continuously adjustable. Sensor and transmitter shall be a matched assembly. Accuracy shall be +/- 0.1% of calibrated transmitter span, including combined effects of repeatability, hysteresis and linearity. Calibrated range shall be 20 to 120 deg. F. Both CHWS and CHWR sensor/transmitter assemblies shall have the same span and shall be factory calibrated as a matched pair.
  - b. Liquid immersion sensors shall have welded stainless steel thermowell. Transmitters shall be of the potted type or shall have a thermally isolated watertight enclosure. Length of sensor and thermowell shall be selected based on the diameter of the pipe to provide accurate, reliable and homogeneous sensing of the liquid temperature.
  - c. Approved Manufacturers:
    - 1) TCS
    - 2) Minco
- 4. Humidity Sensors:
  - a. Sensor element shall be thin film capacitive type or bulk polymer resistance type, accuracy of +/- 2% RH, range of 0-100% RH with 4-20 mA 2-wire linear output. Factory calibrate for maximum accuracy at mid-range of normal operating humidity. All humidity sensors shall be resistant to chlorine and other cleaning agents.
  - b. Room Sensors shall have locking cover.
  - c. Duct Sensors shall have duct probe and mounting plate.
  - d. Approved Manufacturers:
    - 1) Siemens
    - 2) TCS
    - 3) General Eastern
    - 4) Vaisala
- 5. Vivarium Temperature and Humidity Sensors: (for wet service)
  - a. Room temperature RTD shall be 100 ohm platinum sensor with 4-20 mA 2-wire output transmitter. Transmitter shall be waterproof or shall be remote mounted.

- b. Room humidity sensor shall have a 4-20 mA 2-wire output transmitter, 0-100% relative humidity range, accuracy of +/- 2% RH, shall be waterproof, and shall be resistant to chlorine and other cleaning agents.
- c. Combination units shall comply with the above, but shall be mounted in a single enclosure.
- d. All vivarium sensors shall have rust proof and waterproof covers and be protected by a stainless steel "U"-shaped guard firmly attached to the wall.
- e. Approved Manufacturers:
  - 1) Viasala
  - 2) TCS
  - 3) General Eastern
  - 4) Siemens

B. Loop-Powered Indicators

- 1. All analog sensors (i.e., temperature, humidity, CO2, CO, etc.) shall be provided with a Loop-Powered Indicator (LPI) mounted on a separate dedicated LPI panel, except those sensors that are provided with a local display. Local displays shall be mounted at the DDC panel array.
- 2. Indicator shall be designed to display any 4-20 mA transmitter signal directly in the engineering unit of the measured media. The display shall be powered directly by the measured 4-20 mA signal without requiring an additional power supply. Indicator shall not impose impedance on the current loop beyond the capability of the transmitter.
- 3. Display shall have minimum 5/16" LCD digits, with 3-1/2 digit capability selectable decimal point and selectable scale. Accuracy of indication shall be 0.1% of scale.
- 4. Indicator shall be provided with a lettered plate indicating appropriate engineering units.
- 5. Approved Manufacturer:
  - a. R. E. Technologies, Inc. (Kele Assoc.)

C. Pressure and Flow Sensors

- 1. Air Differential Pressure Transducer:
  - a. Variable capacitance type with ranges not exceeding 150% of maximum expected input. Transducer shall have zero and span adjustment. Output shall be 2-wire 4-20 mA with 24 VDC input.
  - b. Safe over pressure rating shall be minimum 5 times the range.
  - c. Temperature compensated with thermal error of not greater than 0.04% of full scale in temperature range of 40 to 100 deg. F.
  - d. Accuracy shall be 1% of full scale.
  - e. Approved Manufacturers:
    - 1) Air Monitor
    - 2) Setra
    - 3) Modus
- 2. Air Static Pressure Sensors:
  - a. Duct mounted sensors shall be easily removable for cleaning, have multiple sensing ports, and fabricated of aluminum, copper, or SS. Sensors used in outdoor or condensing environments shall not be copper.

- b. Wall or ceiling mounted sensors shall be shielded, suitable for surface or flush mounting, complete with multiple sensing ports, contain a pressure impulse suppression chamber, and fabricated of aluminum, paintable steel, or SS as required.
  - c. Outside air mounted sensors shall be shielded, complete with multiple sensing ports, maintain sensing accuracy regardless of wind flow direction or pattern, and fabricated of aluminum or SS.
  - d. Accuracy shall be 1% of actual pressure value.
  - e. Provide a companion 4" Magnehelic gauge, mounted at auxiliary panel, of appropriate span for each sensor. Gauges shall be graduated in inches W.C. Provide a phenolic identification tag for each gauge.
  - f. Approved Manufacturers:
    - 1) Air Monitor
    - 2) Siemens
    - 3) Dwyer
    - 4) Honeywell
3. Airflow Sensors:
- a. Provide where indicated amplified signal airflow traverse probe(s) or airflow stations, complete with straighteners when required, capable of continuously monitoring the fan or duct capacities (air volumes) it serves.
  - b. Each airflow array shall contain multiple total and static pressure sensors positioned at the center of equal and symmetrical cross-sectional areas, and interconnected by their respective averaging manifolds.
  - c. Sensors shall not protrude beyond the surface of the array, nor shall be adversely affected by particle contamination normally present in building airflow systems.
  - d. The airflow array shall be fabricated of galvanized steel or aluminum of adequate gauge to withstand the velocities to be encountered and with all required mounting brackets, plates, gaskets, and flanges.
  - e. Accuracy shall be a minimum of 3 percent of actual airflow over the designed range of flow.
  - f. Provide a companion 4" Magnehelic gauge, mounted at auxiliary panel, of appropriate span for each sensor array. Gauges shall be graduated in CFM for airflow measurement. Provide a phenolic identification tag for each gauge.
  - g. Approved Manufacturers:
    - 1) Air Monitor
    - 2) Tek-Aire
    - 3) Dietrich-Standard
    - 4) Ramsey Air
4. Steam/Liquid Differential Pressure Transducers: (flow only)
- a. Each differential pressure transducer shall be selected and calibrated for operations between 0 and 125% of the normal differential pressure and up to 150-psig line pressure. The calibration point shall be rounded upward to the nearest 10 inches WC (for spans less than 200" WC) or to the nearest 5 psi for larger spans. Calibration date shall be included on an embossed tag attached to each transmitter.

- b. The accuracy, including linearity, hysteresis and repeatability, of the transducer for measuring differential pressure shall be better than 0.25% of the span stated above throughout a minimum of a 6:1 turndown. Turndown ratio shall be based on the actual flow span.
  - c. The transducer shall not be damaged by pressures of up to 500 psig on either side of the transducer and all wetted parts shall be inert in the presence of up to a 40% concentration of ethylene or polypropylene glycol in water.
  - d. Provide a drain valve for each side of the pressure chamber. Furnish and install mounting brackets appropriate for the installation location.
  - e. Span and zero shall be individually adjustable.
  - f. Shall be 2-wire and 4-20mA output.
  - g. Approved manufacturers:
    - 1) Tobar
    - 2) ITT Barton
    - 3) Dietrich - Standard
    - 4) ABB
    - 5) Siemens
    - 6) Rosemont/Fischer
    - 7) Honeywell
5. Steam/Liquid Differential Pressure Transducers: (pressure only)
- a. Each differential pressure transducer shall be selected and calibrated for operations between 0 and 200% of the normal differential pressure. The calibration point shall be rounded upward to the nearest 10 inches WC (for spans less than 200" WC) or to the nearest 5 psi for larger spans. Calibration date shall be included on an embossed tag attached to each transducer.
  - b. The accuracy, including linearity, hysteresis and repeatability, of the transducer for measuring differential pressure shall be better than 2% of the span stated above throughout a minimum of a 4:1 turndown. Turndown ratio shall be based on the actual differential span.
  - c. The transducer shall not be damaged by pressures of up to 500 psig on either side of the transducer and all wetted parts shall be inert in the presence of up to a 40% concentration of ethylene or polypropylene glycol in water.
  - d. Provide a drain valve for each side of the pressure chamber. Furnish and install mounting brackets appropriate for the installation location.
  - e. Span and zero shall be individually adjustable.
  - f. Shall be 2-wire and 4-20 mA output.
  - g. Approved manufacturers:
    - 1) Tobar
    - 2) ITT Barton
    - 3) Dietrich - Standard
    - 4) ABB
    - 5) Siemens
6. Indication Gauges for Steam/Liquid Pressure Transducers:
- a. Each transducer shall come with an indicating gauge that reads in GPM for flow measurement or inches WC for pressure sensing. The gauge shall be analog differential pressure type piped in parallel to the transducer.
  - b. The analog pressure gauge shall be selected and calibrated for the same span as the transducer it serves.

- c. The accuracy, including linearity, hysteresis and repeatability, of the gauge for measuring differential pressure shall be better than 3% of the span stated above throughout its span. Calibration data shall be included on an embossed tag attached to each gauge.
  - d. The gauge shall not be damaged by pressures of up to 500 psig on either side of the gauge and all wetted parts shall be inert in the presence of up to 40% concentration of ethylene or polypropylene glycol in water.
  - e. Scale shall be a minimum of 4.5" diameter. Furnish and install two bleed fittings for each gauge and mounting brackets appropriate for the installation location.
  - f. Gauges shall be field mounted. Provide a LPI for readout at the DDC panel array. Provide a phenolic identification tag for each gauge and indicator.
  - g. Approved manufacturers:
    - 1) Beckman
    - 2) Moore
    - 3) Testoterm
    - 4) Dwyer
    - 5) Transducer manufacturer's gauge
7. Steam/Liquid Flow Sensors: (differential pressure type)
- a. Uni-directional sensors shall be of the venturi type or velocity pressure type. They shall be constructed of stainless steel, sized to the system's range of flow, and have an accuracy of 0.5%.
  - b. Bi-directional sensors shall be of the velocity pressure type. They shall be constructed of stainless steel, sized to the system's range of flow, and have an accuracy of 0.5%.
  - c. Approved Manufacturers
    - 1) Preso
    - 2) Gerand
    - 3) Dietrich-Standard (Annubar Diamond II)
8. Three Valve Manifolds for Steam/Liquid Pressure Transducers:
- a. Provide a three-valve manifold for each transducer. Pressures of up to 500 psig shall not damage the manifold. All wetted parts shall be inert in the presence of up to a 40% concentration of ethylene or polypropylene glycol in water.
  - b. The manifold shall be designed for direct mounting on the transducer it serves and utilizes two quarter turn valves to provide zeroing, blocking and normal service modes.
  - c. Approved Manufacturers:
    - 1) D/A Manufacturing

**EDITOR: CONTACT THE UTILITIES AND PLANT ENGINEERING DEPARTMENT VIA THE U-M DESIGN MANAGER FOR INSTRUCTIONS ON TYPE OF FLOW METER TO USE FOR STEAM, CONDENSATE, CHILLED WATER, AND HEATING HOT WATER.**

- 9. Liquid Flowmeters: (Electro-Magnetic Type)

- a. The meter system shall consist of a primary flow sensor and transmitter. The flow sensor shall be equipped with 150-lb. flanges. The meter system shall be installed with all necessary grounding components and gaskets per manufacturer's instructions. The meter shall be capable of bi-directional operation. The meter shall be sized appropriately for the range of flow for the system. The electrodes shall be SS or Hasteloy C. The transmitter shall be provided with a remote mounting bracket, cable, integral LCD display, NEMA 4X housing, and shall indicate flow rate, totalize flow, and shall have an isolated 2-wire 4-20 mA linear output signal and a pulsed output signal for totalization. The transmitter shall be capable of being field calibrated and reprogrammed from the outside housing via magnetic probe or integral keypad menu switching. Unit electronics shall have noise immunity. The primary flow sensor and transmitter shall be mounted in accessible locations. Unit shall have the capability to maintain flow total in non-volatile memory. The flow-meter and transmitter as a unit shall have the following minimum characteristics:
    - 1) Flowmeter Liner:
      - a) Heating hot water, domestic hot water, and other water systems operating at or above 110°F: Teflon
      - b) Chilled water, domestic cold water, and other water systems operating below 110°F: Polyurethane
      - c) Steam condensate: Teflon to 300°F, Ceramic over 300°F, and as suitable for the expected fluid conditions.
    - 2) Accuracy:
      - a) At 1 to 33 feet per second velocity: ±0.5% of rate.
      - b) At 0.3 feet per second velocity: ±2% of rate.
    - 3) Each unit shall be factory calibrated for the specified flow and shall be calibrated in both directions if the application is bi-directional. Calibration shall be a minimum of three point. Specific performance test data shall be furnished with the meter.
    - 4) Each meter shall provide two analog 4-20 mA signals or a single 4-20 mA signal and a digital contact closure on reverse flow.
    - 5) Meters for steam condensate shall be capable of sensing with condensate conductivity down to 6 µS/cm.
  - b. Provide a phenolic tag for each transmitter to identify service and meter ID number (i.e. SECONDARY CHILLED WATER FLOW, FM-1, etc.).
  - c. Approved Manufacturers (Water)
    - 1) ABB
    - 2) Siemens
    - 3) EMCO
    - 4) Rosemount
    - 5) Krohne
  - d. Approved Manufacturers ( Steam Condensate)
    - 1) Rosemount
    - 2) Krohne
10. Steam (Vapor) Flowmeters (Vortex-shedding type):

- a. The meter system shall consist of a primary flow sensor and transmitter. The flow sensor body and wetted parts shall be SS, and shall be flanged and suitable for the service rating. The meter shall be installed with all necessary grounding components and gaskets per manufacturer's instructions. The transmitter shall be provided with a remote mounting bracket and cable, integral LCD display, NEMA 4X housing, shall indicate flow rate, totalize flow, and shall have an isolated 2-wire 4-20 mA linear output signal and a pulsed output signal for totalization. The transmitter shall be capable of being field calibrated and reprogrammed from the outside housing via magnetic probe or integral keypad menu switching. Unit electronics shall have noise immunity. Unit shall have the capability to maintain flow total in non-volatile memory. The primary flow sensor and transmitter shall be mounted in accessible locations. The flowmeter shall be provided with a 1-year warranty and application non-degradation performance guarantee. The flowmeter and transmitter as a unit shall have the following minimum characteristics:
    - 1) Temperature range shall be -40 to +750°F.
    - 2) Accuracy shall be 1.0% of rate and 0.1% of full scale.
    - 3) Repeatability shall be 0.15% of flow rate.
    - 4) Each meter shall be factory calibrated for the specified flow range prior to shipment and specific performance test data shall be furnished with the meter.
    - 5) Meter range shall accommodate the minimum and maximum expected flow for the steam pressure at the installed location.
    - 6) Meter shall be equipped with a temperature compensation feature.
  - b. Provide a phenolic tag for each transmitter to identify service and Meter ID number (i.e. MEDIUM PRESSURE STEAM FLOW - LSI BUILDING, etc.).
  - c. Approved Manufacturers
    - 1) Rosemount
    - 2) Krohne
11. Steam (Vapor) Flow Meters (Differential-pressure type)
- a. The meter system shall consist of a differential pressure primary flow element, a differential pressure transmitter (or transmitters), and a flow monitor/computer. The flow sensor body and wetted parts shall be SS, and shall be equipped with 150-lb. flanges. The transmitter(s) and flow computer shall be provided with a remote mounting bracket and cable, integral LCD display, and NEMA 4X housing. Flow computer shall indicate flow rate, totalize flow, and shall have an isolated 2-wire 4-20 mA linear output signal and a pulsed output signal for totalization. Unit electronics shall have noise immunity. The transmitter shall be capable of being field calibrated and reprogrammed from the outside housing via magnetic probe or integral keypad menu switching. Unit shall have the capability to maintain flow total in non-volatile memory. The flowmeter and transmitter as a unit shall have the following minimum characteristics:
    - 1) Temperature range shall be -40 to +750°F.

- 2) Accuracy shall be 1.0% of rate or better and 0.1% of full scale.
  - 3) Repeatability shall be 0.15% of flow rate.
  - 4) Each meter shall be factory calibrated for the specified flow range prior to shipment and specific performance test data shall be furnished with the meter.
  - 5) Meter range shall accommodate the minimum and maximum expected flow for the steam pressure at the installed location.
  - 6) Meter shall be equipped with a temperature compensation feature.
  - 7) V-cone horizontal pilot lines shall be pitched back to steam lines and shall not trap condensate.
- b. Provide a phenolic tag for each meter to identify service and Meter ID number (i.e. MEDIUM PRESSURE STEAM FLOW - LSI BUILDING, FM-1 etc.).
- c. Approved Manufacturers
- 1) McCrometer (V-cone-style meter)
  - 2) Preso (Venturi-style meter)
  - 3) Gerand Engineering (Venturi-style meter)

**TWO METHODS OF CALCULATING ENERGY CONSUMPTION (BTUS), WITH THE RESPECTIVE EQUIPMENT REQUIRED, ARE SPECIFIED BELOW: (1) BY THE DDC SYSTEM OR (2) BY A "BTU METER". 12.b IS USED WHEN UTILITY (REVENUE) BILLING OF A SYSTEM IS PLANNED. 12.a IS USED WHEN ENERGY CONSUMPTION IS COLLECTED FOR INFORMATIONAL PURPOSES ONLY. ASSURE THE CONTROL DRAWINGS INDICATE WHICH METHOD, IF ANY, IS TO BE USED FOR EACH SYSTEM.**

12. BTU Metering
- a. DDC BTU metering shall be accomplished using the following equipment at each metering point:
    - 1) One (1) liquid flowmeter unit with transmitter as specified elsewhere in this section.
    - 2) Two (2) high-precision matched temperature sensor assemblies with transmitters as specified elsewhere in this section. Sensor with SS well shall be installed in each respective supply and return pipe as shown on project drawings.
    - 3) These devices shall be wired to a local DDC panel. Calculations for instantaneous and totalized load shall be incorporated into the panel control code, and the necessary virtual points shall be created to allow remote monitoring and trending via the DDC system.
  - b. When a BTU meter is indicated on the control drawings, provide a Flow/BTU computer which is programmable for various flow meter types including linear, square law, or multi-point linearization data interpretation.
    - 1) Inputs shall include 4-20ma flow from flow meter, and 4-20ma from two temperature sensors.
    - 2) Flow and temperature inputs shall be simultaneously connected to this computer and looped to the local DDC panel.
    - 3) Flow/BTU computer shall operate in an environment of 0 to 50 C, shall include a keypad for data input and retrieval, and an EEPROM/nonvolatile RAM. Unit shall calculate and provide:

- a) Two 4-20ma analog outputs indicating btu, mass or volume flow rate, temperature 1, temperature 2, delta temperature, pressure, density, and peak demand.
  - b) One isolated pulse output indicating btu, mass or volume total
  - c) Two NC/NO relay outputs assignable to trip according to various rate, total, temperature or pressure readings Programmable as latching or non-latching, or as pulsed output of a total.
- 4) Outputs shall be stored in a battery backed data logger, selectable for continuous or periodic log modes.
  - 5) Unit shall have a real time clock and shall date stamp logged data. Unit shall have an RS-232 port and shall be capable of setup from a laptop computer. The supplier shall set up and verify BTU measurement and shall train U of M personnel in all aspects of BTU computer setup and operation.
  - 6) Computer shall calculate and display heat, mass or Volume flow rate, resettable total, non-resettable total, temperature input 1, temperature input 2, delta temperature, density, pressure, peak demand, and time/date stamp.
  - 7) Provide a phenolic tag for each transmitter and flow computer (as applicable) to identify service and ID number (i.e. CHILLED WATER BTU METER - LSI BUILDING, etc.).
  - 8) Mount Flow/BTU computer in a NEMA 4 enclosure: Minimum size 16" (H) x 14" (W) x 8" (D), hinged cover, pad-lockable latch, and stainless steel hinge. Provide cutout in enclosure face and mount computer in face. Where multiple computers are supplied, they may be mounted in a common enclosure.
  - 9) Approved Manufacturers and Models for Flow/BTU Computer:
    - a) Kessler-Ellis Supertrol II with MS816 enclosure.

D. Electronic to Pneumatic Transducers

- 1. Provide transducers to convert electronic signals from the Siemens analog output modules to linear proportional pneumatic signals for all DDC controlled modulating pneumatic devices. The transducer shall be a panel-mounted device, with hand/auto switch, override dial for manual override control, and a 0-30 psig output gauge. Supply voltage shall be 19-26 VAC. Control signal shall be 0-10 VDC or 4-20 mA. Output accuracy shall be 1/4 psig at 75 Deg. F, producing a 0-15 psig pneumatic signal. Output repeatability shall be .05 psig maximum. Transducers shall be high capacity non-bleed devices with a minimum output capacity of 500 SCIM, except special circumstances that require a constant bleed controller with branch exhaust on signal loss.
- 2. Approved Manufacturers:
  - a. Non-bleed Type:
    - 1) Siemens
    - 2) ACI - PXP
  - b. Bleed Type:
    - 1) ACI - PXP

E. Pressure to Electronic Transducers

1. Provide transducers to convert linear proportional pressure signals to interface with the Siemens analog input modules. The transducer shall be a panel-mounted device, with input pressure snubber, as required, and gauge. Supply voltage shall be 19-26 VAC. Control signal shall be 4-20 mA. Accuracy shall be 1 percent full scale. Thermal effect shall be less than 1 percent full scale on zero and less than 1 percent of reading on span. Transducer shall have elastomer seals and SS wetted parts.
2. Approved Manufacturers:
  - a. Siemens
  - b. Setra
  - c. Modus
  - d. ACI
  - e. Dwyer

F. Carbon Dioxide Sensors:

1. Carbon dioxide sensing cell shall consist of a nondispersive infrared carbon dioxide gas cell that uses a pulsed source and has no free air optical path. Output shall be linearized 4-20 mA for use with 24 VDC input. The unit shall be specifically designed for the wall or duct application specified. Duct aspiration boxes shall be by the manufacturer. Unit shall have span adjustment. The unit shall have no moving parts.
2. Minimum requirements:
  - a. Range: 0-2,000 ppm
  - b. Accuracy: 3 % of full scale
  - c. Repeatability: 1% of full scale
  - d. Power Consumption: less than 3 watts
  - e. Zero Drift at Constant Temp.: 100 ppm per 24 hrs (random not cumulative)
  - f. Max. allowable Drift in 1 year: 20 ppm
3. Unit shall not require calibration for a period of 1 year or more.
4. Approved Manufacturers:
  - a. Valtronics
  - b. Telaire

G. Carbon Monoxide and Combustible Gas Sensors:

1. Sensors shall be a micro-processor-based system for continuous monitoring and use catalytic, electro-chemical, diffusion cell, or solid-state type sensing. Output shall be linearized 4-20 mA for use with 24 VDC input with green LED normal operation indicator. Unit shall provide a SPDT pilot duty low voltage alarm contact with an adjustable set point. The unit mounting shall be wall, duct aspiration, or ceiling to suit application. The unit shall specifically designed for the application and shall be explosion proof, as required. Unit shall have single point set point and span adjustment. The unit shall have no moving parts. Units mounted outdoors shall be waterproof and rustproof.
2. Minimum requirements:
  - a. Range: as required for application; ppm, %, % L.E.L.
  - b. Accuracy: 3-5% of full scale
  - c. Repeatability: 1% of full scale

- d. Power Consumption: 5 watts or less
  - e. Relay contact rating: 5 amp at 24 VDC, 150 VA max. inductive
  - f. Zero Drift at Constant Temp.: 0 per 24 hrs (random not cumulative)
  - g. Max. allowable Drift in 1 year: 1% of full scale.
3. Approved Manufacturers:
- a. Draegar
  - b. Vulcain

H. Current Sensing Relays

- 1. Provide current sensors with donut transformers capable of monitoring AC current, maximum input current ranges from 20 to 300 amp, peak, with digital output signals having adjustable high and low current trips. An LED shall provide visual indication and shall not bleed through.
  - a. Provide special current sensing relays designed to monitor belt breakage, when indicated or described in the Sequence of Operation.
- 2. Approved Manufacturer:
  - a. Neilsen Kuljian
  - b. Veris Industries

I. Liquid Detectors

- 1. Liquid detectors shall utilize microchip technology for detection of conductive liquids through one of the following types of sensors: gold-plated probes, self-adhesive sensor tape with copper electrodes and durable cotton cover, or rope type sensor. Detectors shall be selected based on the best use for the application. Power requirement shall be 11-27 VAC or VDC and have a green LED normal operation indicator. Unit shall have a SPDT pilot duty low voltage alarm contact. Unit shall be waterproof and rustproof. A red LED shall indicate the presence of liquid. Unit shall have an adjustable set point.
- 2. Approved Manufacturers:
  - a. R. E. Technologies, Inc
  - b. Water Alert

**2.3 ELECTRONIC ROOM TEMPERATURE CONTROLLER- FAN COILS (FCU) AND CABINET UNIT HEATERS (CUH)**

A. Room Temperature Controller:

- 1. UL listed programmable electronic room temperature controller with LCD display, for two position and modulating control of 2 or 4 pipe FCU/CUHs, with the following features (Fan speed relay board and control transformer are provided with the controlled equipment. Coordinate with equipment manufacturer and assure controller is compatible with relay board. Provide additional components to make compatible if required.):

- a. Two part controller consisting of plastic base plate and detachable plastic controller housing, white color. The base shall include screw terminals to allow all wiring to be terminated on the base, as opposed to directly on the controller. The controller housing shall mechanically and electrically engage the base and shall include all electronics and a built-in room temperature sensor.
- b. LCD display shall display the measured room temperature in °F.
- c. Control shall be by room temperature sensing. Provide re- turn air sensor where indicated as required.
- d. Outputs for on/off or modulating valve actuator and three- speed fan control.
- e. Fan Speed Selector Switch or Button: Three-position switch that allows occupant to select high, medium, or low fan speed. When setpoint dead-band is exceeded, the con- troller shall open the two position control valve and turn on the fan at the speed selected by the three position switch.
  - 1) If controlling single speed equipment, jumper con- troller so that regardless of fan switch position, controller turns on fan when setpoint dead-band is exceeded.
- f. Setpoint Adjustment Buttons: The controller face shall provide an "up" setpoint adjustment button and a "down" setpoint adjustment button, to allow occupant adjustment of setpoint.
- g. It shall be possible to set the fan control for either continuous fan operation independent of room temperature, or for the fan to turn on and off dependent on room tem- perature.

**NOTE THE AUTOMATIC CHANGEOVER MODE DESCRIBED BELOW. IF A MFR. OTHER THAN SIEMENS IS SPECIFIED FOR 2-PIPE HEATING/COOLING APPLICATIONS, PIPING AT THE FAN COIL WILL NEED TO BE CONFIGURED WITH A SMALL BYPASS TO ASSURE CONTROLLER SENSES THE CURRENT 2- PIPE SYSTEM WATER TEMP. SIEMENS IS THE ONLY KNOWN MFG. WHERE THE CONTROLLER HAS A PURGE FUNCTION, WHICH AVOIDS THE NEED FOR A PIPE BYPASS.**

- h. Automatic Changeover Mode (two pipe fan coils): the con- troller shall detect if the system is in heating or cooling mode by measuring the system water temperature at the fan coil and automatically switching the controller to heating or cooling control mode. An icon on the controller LCD shall indicate which mode the system is in, heating or cooling. Provide a strap-on-pipe temperature sensor de- vice wired to the controller, for measuring system water temperature. The controller shall also include a purge mode function to assure proper acquisition of system water temperature by the strap-on sensor. Purge mode function shall open the fan coil 2-way control valve (for an ad- justable time period) at two hour intervals if the control valve has remained closed during that interval.
- i. The controller shall provide the following setpoint modes:
  - 1) Normal Mode: Controller maintains the heating and cooling occupant adjustable setpoint.

- 2) Standby Mode: Controller maintains standby heating and cooling setpoints. Not occupant adjustable.
- 3) Economy Mode: Controller maintains set-back/set-up heating and cooling setpoint; activated by a remote contact closure wired to a status input on the controller. Not occupant adjustable.
- j. Standby Switch or Button: the controller face shall include a standby switch or button that allows the occupant to activate stand-by mode by a single key stroke.
- k. Operating Voltage: 24 VAC.
- l. Power Consumption: 8 VA maximum.
- m. Output Rating: 3 amp minimum, each output, higher if required for control valve or fan operation.
- n. Output Action: Selectable normally open or normally closed.
- o. Control Deviation Including Sensor Inaccuracy at 77 °F: ± 1 °F maximum.
- p. Programmable Features: It shall be possible to program the following controller functions. Programming mode shall be accessible via either a password or by non-intuitive button activation sequences.
  - 1) Minimum Setpoint Limitation in Normal Mode: Adjustable 41 °F to 68 °F.
  - 2) Maximum Setpoint Limitation in Normal Mode: Adjustable 70 °F to 95 °F.
  - 3) Heating Setpoint, Economy Mode: Adjustable 41 °F to 68 °F or "off".
  - 4) Cooling Setpoint, Economy Mode: Adjustable 70 °F to 95 °F or "off".
  - 5) Heating Setpoint, Standby Mode: Adjustable 41 °F to 68 °F or "off".
  - 6) Cooling Setpoint, Standby Mode: Adjustable 70 °F to 95 °F or "off".
  - 7) Heating/Cooling Changeover (2-pipe) Cooling Switch Point: Adjustable 50 °F to 77 °F.
  - 8) Heating/Cooling Changeover (2-pipe) Heating Switch Point: Adjustable 81 °F to 104 °F.
  - 9) Switching differential for heating and cooling.
  - 10) Purge function active or inactive.
  - 11) Purge function time duration.
  - 12) Fan Control in the Economy Mode: On or off.
  - 13) Output Minimum "On" Time and "Off" Time: Adjustable 1 minute to 120 minutes.
  - 14) Other parameters as required to meet the requirements of this specification and the control sequence of operation.
2. Warranty: 2 year unconditional parts and labor warranty and 5 year unconditional warranty for all parts including sensors.

**NOTE THAT AS OF 6/2010 SIEMENS MODEL RDF WAS NOT AVAILABLE WITH A MODULATING OUTPUT FOR 4-PIPE CONTROL. RDF FOR 2-PIPE IS AVAILABLE FOR EITHER MODULATING OR 2-POSITION CONTROL, MODEL NUMBER FOR MODULATING CONTROL IS GIVEN. REVISE TO RDF-10 IF 2-POSITION CONTROL IS DESIRED. NOTE THAT THESE ARE ONLY PARTIAL**

**MODEL NUMBERS. RDF CONTROLLERS ARE AVAILABLE FOR A WIDE RANGE OF OTHER APPLICATIONS (E.G. W/ELECTRIC HEATING), CONSULT SIEMENS.**

3. Approved Manufacturers for Two Pipe Units:
  - a. Siemens Model RDF 50 (modulating control).
4. Approved Manufacturers for Four Pipe Units:
  - a. Siemens Model RDF 30 (2-position control).

**2.4 DDC TERMINAL EQUIPMENT CONTROLLERS (TEC)**

- A. U-M will furnish application specific DDC TECs and RTSS. Other devices shall be furnished by the equipment manufacturer or by the MSCC. Coordinate to provide a complete operating package in accordance with the sequence of operation requirements. The TECs shall be connected to the Siemens DDC control panel controller FLN of the AHU or system being served by the MSCC. The MSCC may send TECs to the equipment manufacturer for factory mounting, or may field mount the TECs, at his option.
  1. Pneumatic VAV, CAV, and Dual Duct terminal box TECs shall consist of differential pressure (DP)transducer(s), pneumatic output module(s), and an electronic controller (DP transducer(s), output module(s), and controller furnished by U-M). The box manufacturer shall provide the pneumatic damper operator(s) and airflow-sensing array(s).
  2. Electronic VAV, CAV, and Dual Duct terminal box TECs shall consist of differential pressure transducer(s) and an electronic controller (DP transducer(s) and controller furnished by U-M). The box manufacturer shall provide the airflow-sensing array(s).
  3. Electronic heat pump, unit conditioner (fan coil unit), and unit ventilator TECs shall consist of an electronic controller (controller furnished by U-M).
  4. Electronic room pressurization TECs shall consist of differential pressure transducers, pneumatic output module(s), and an electronic controller (DP transducers, output module(s), and controller furnished by U-M).
  5. Pneumatic output modules will be furnished by U-M with a 0-30 psig output gauge on the module. Any additional gauges shall be provided by the MSCC.
  6. TECs shall be provided with metal enclosure, complete with conduit knockouts (enclosure provided by MSCC).
  7. Install U-M furnished wall mounted RTS for each TEC as required. RTS shall have a digital temperature display, high accuracy set point slide, flush mounted override button, and a temperature range of 55-95 deg. F.
- B. Power to TECs and associated controlled devices shall be 24 VAC, provided by the MSCC.
- C. Approved Manufacturers:
  1. Siemens

**2.5 ELECTRIC COMPONENTS**

- A. Components shall be Honeywell, Johnson, or Siemens, unless listed otherwise.

- B. Low temperature detection thermostats shall be duct type, fixed 5 deg. F differential, range 30 to 60 deg. F. Sensing element shall have a 20-foot long capillary tube responding to the lowest temperature sensed along any 12 inches of bulb length. Switch shall be SPDT 120 VAC, UL listed, rated for 10 amps at 120 VAC full load. Unit shall be manually reset. Provide one thermostat for every 20 square feet of coil surface.
- C. High temperature detection thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load. Unit shall be manually reset.
- D. Immersion electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required, with stainless steel separable well. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- E. Remote-bulb electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required, with stainless steel separable well as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- F. Wall-mounted electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- G. Strap-on electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- H. Differential Pressure Switches:
  - 1. Shall provide electrical switching action upon a sensed pressure differential increase between two points. Sensitivity shall be suitable for the application. Set point shall be adjustable over the full range of the device. Switching action shall SPDT. Electrical switch rating shall be 10 amps at 120 VAC, minimum.
  - 2. Pressure rating of switch and connecting tubing:
    - a. Fan - Rated for 12 inches WC.
    - b. Pump - Maximum deadhead system pressure.
  - 3. Switches used for safety shutdown applications shall be of the manual reset type.
  - 4. Approved Manufacturers:
    - a. Honeywell
    - b. Siemens
    - c. Dwyer
    - d. Cleveland Airflow
- I. Limit Switches:

1. Limit switches shall be oil tight type with appropriate operator to provide required function.
2. Approved Manufacturers:
  - a. Honeywell
  - b. Siemens
  - c. Allen-Bradley
  - d. GE
  - e. Square D

J. Control Relays and Contactors:

1. Relays shall be a minimum DPDT, of proper coil voltage, with neon indicator light, and of sufficient rating for specified purpose. Relay base shall be of the screwed terminal type.
2. Contactors shall be definite purpose type, have adequate number of poles, of proper coil voltage, and of sufficient rating for specified purpose. Contactors used for DDC interface control shall contain a Hand-Off-Auto switch.
3. Approved Manufacturers:
  - a. Dayton
  - b. Siemens
  - c. Allen-Bradley
  - d. GE
  - e. Square D

K. Selector Switches:

1. Switches shall be multiple position type, oil-tight, water-tight, dust-tight, have the adequate number of contact blocks, capable of additional contact blocks, and of sufficient rating for specified purpose. Nomenclature plate shall be provided with appropriate wording, units, etc.
2. Approved Manufacturers:
  - a. Dayton
  - b. Siemens
  - c. Allen-Bradley
  - d. GE
  - e. Square D

L. Push Buttons and Pilot Lights:

1. Push button switches and pilot lights shall be, oil-tight, wa-tertight, dust-tight, have the adequate number of contact blocks, capable of additional contact blocks, and of sufficient rating for specified purpose. Nomenclature plate shall be provided with appropriate wording, units, etc.
2. Pilot lights shall be neon or LED, push-to-test type with replaceable lens. Lens shall be of the appropriate color for application served.
3. Approved Manufacturers:
  - a. Dayton
  - b. Siemens
  - c. Allen-Bradley
  - d. GE
  - e. Square D

M. Fuse Holder/Disconnects:

1. Fuse holder/disconnects shall be provided for all control circuits inside auxiliary control panels, and shall be of appropriate size/type for service.
2. Approved Manufacturers:
  - a. Little Fuse
  - b. Dayton
  - c. Buss
  - d. GE

N. Terminal Blocks:

1. Terminal blocks shall be modular, barrier type, direct mount, single pole, and snap together to any required number of poles. Units shall be rated for 300 volts, 20 amp., handle wire sizes from 22-12 AWG, and have a marking strip for identification.
2. Approved Manufacturers:
  - a. Little Fuse
  - b. Dayton
  - c. Buss
  - d. GE

O. Toggle Switches:

1. A toggle switch shall be provided for every auxiliary and local control panel that utilizes a 120 VAC power source as a means to turn off the power to that panel and shall be of appropriate size/type for service. Toggle switches shall be rated 120/277 volts, 20 amps, SPDT, specification grade, extra-heavy duty, back and side wired, with brown handles.
2. Approved Manufacturers:
  - a. Leviton
  - b. Pass & Seymour
  - c. Hubbell
  - d. Arrow Hart
  - e. Bryant

**2.6 ELECTRICAL ACCESSORIES**

A. Wiring and Conduit

1. The MSCC shall provide all DDC and related control wiring, conduit, and J-hook cable hanging system. Wire and cable shall be pulled from device or control point to the DDC, Auxiliary, UPS, or LPI panels and run between DDC, Auxiliary, UPS, or LPI panels, with 6'-0" spare coiled at the panel. All wire and cable shall be labeled and tagged 4 inches down from the point at which the wire enters the cabinet with the corresponding point number.
2. All wiring carrying voltages greater than 24 volts shall be run in conduit.
3. All wiring carrying voltages 24 volts nominal or less shall be run as follows:
  - a. Wiring routed in shafts, walls, below grade, and in any concealed or inaccessible space, or above ceilings requiring the use of a tool to access or held in place by clips or similar devices: run wiring in conduit.
  - b. Wiring routed in exposed locations such as mechanical and electrical rooms or in rooms without ceilings (i.e. exposed to deck above): run in conduit.

- c. ALN wiring: run in conduit.
- d. Wiring above accessible lay-in ceiling areas: Utilize J-hook hangers.
  - 1) Provide UL Listed zinc electro-plated steel or plastic J-hooks, sky blue color, plenum use approved, with minimum 1-inch wide cable support area, rated for the cable type being supported. Provide with integral cable retainer strap to provide containment of cables within the hanger.
  - 2) Install J-hooks with J-hook bottoms a minimum of 10 feet A.F.F. and no less than 2 feet above the ceiling.
  - 3) Space hangers at maximum 5 foot intervals, with additional hangers located a maximum of 3 feet from both sides of any change in direction. Wiring shall not sag more than 12 inches between J-hooks. Install wiring and J-hooks in a neat and workman-like manner, routed parallel or perpendicular to the building column lines.
  - 4) Install to protect wire from damage and to allow for wire replacement. Do not exceed 50 % of the wire capacity specified by the J-hook manufacturer (first installation), or route control wiring in non-control-wiring J-hooks.
- e. Wiring to wall mounted devices such as room sensors, switches, and similar devices: Route wiring in wall in minimum 1/2 inch conduit. Stub conduit up/down into accessible ceiling space, terminating conduit with a 90 degree bend and a strain relief to prevent wire damage. Install wall box for device mounting.
- f. Wiring to perimeter radiation valves and similar control devices requiring wiring to be routed in walls: Route wiring in wall in minimum 1/2 inch conduit. Stub conduit up/down into accessible ceiling space, terminating conduit with a 90 degree bend and a strain relief to prevent wire damage. Provide maximum 12 inch long flexible metal conduit for the final connection to the device.
- 4. Conduits shall be sized on a maximum fill of 40% capacity.
- 5. Four separate conduit systems shall be provided:
  - a. DO/DI and 120 VAC control wiring.
  - b. AO/AI wiring.
  - c. Pneumatic tubing.
  - d. ALN/FLN cables.
 Exception: DO's, DI's, AI's, and AO's (including pneumatic tubing) installed between VSD's and DDC panels may share the same conduit.
- 6. All junction boxes and couplings on conduit containing DDC related wiring or pneumatic tubing shall be painted sky blue color. Alternative: Allied Tube True Color® EMT, color blue, may be used in lieu of painted fittings and junction boxes.
- 7. Data transmission cabling and equipment grounding procedures shall meet the latest FCC guidelines for electromagnetic field generation.
- 8. All control wiring sizes and types shall meet the equipment manufacturer's recommendations.
- 9. DDC Wiring and Cable Requirements:
  - a. Digital Output: Minimum #14 AWG THHN

- b. Digital Input: Teflon jacketed twisted pair #16 -or- #16 AWG THHN minimum
  - c. Analog Output: Twisted pair NEC-rated CMP #20 AWG
  - d. Analog Input: Twisted pair NEC-rated CMP #20 AWG
  - e. Data Transmission: Teflon jacketed twisted shielded pair #22 AWG 12-1/2 pico-ferrad, 6 twists/foot, with 22 AWG ground wire.
- All wire sizes listed are for lengths up to 750'.
- 10. All control wiring shall have insulation rated for 300 volts minimum, and be installed per NEC requirements. Exposed wiring running in return plenums, air handling devices, and where required by code shall be plenum rated.
  - 11. FLN wiring insulation outer jacket color shall be sky blue.
  - 12. TEC Wiring Requirements:
    - a. Provide all necessary 24 VAC transformers, 24 VAC power distribution wiring, etc. to TECs for a complete operating system. Transformers shall have primary and secondary fuse protection and shall be mounted in an electrical closet, auxiliary panel or other suitable accessible location with disconnecting means. Provide a pilot light for each transformer, to indicate the presence of load power.
    - b. Terminal fittings or insulating bushings shall be used to protect wiring associated with TECs at enclosures, junction boxes, etc.
  - B. Provide all necessary 24 VAC transformers, 24 VAC power distribution wiring, etc. for a complete operating system. Transformers shall have primary and secondary fuse protection and shall be mounted in an electrical closet, auxiliary panel or other suitable accessible location with disconnecting means. Provide a pilot light for each transformer, to indicate the presence of load power.
  - C. Provide conduit and wiring to power all 120 VAC control accessories such as flow meters, BTU meters, and actuators. Feed this power from an auxiliary control panel, with a separate disconnect and fuse, located in the auxiliary panel.
  - D. For TEC's, provide 120 VAC conduit and wiring between electrical panels and TEC power supply transformers.

**2.7 AUTOMATIC CONTROL VALVES AND ACTUATORS**

- A. General:
  - 1. With the exception of TECs, actuators shall be pneumatic unless specifically noted otherwise on the drawings.
  - 2. Valve bodies 2 inches IPS and smaller shall be single seated bronze, and shall have screwed end connections. Valve bodies 2-1/2 inches IPS and larger shall be cast iron, and shall have flanged end connections. Valve stem packing shall be tetrafluorethylene, spring-loaded, self-adjusting. Packless construction is acceptable. Valve linkage shall have an adjustment for valve lift. Valve to have rising stem, renewable seat and disc, repackable under pressure.
  - 3. Valve rangeability shall be no less than 50:1 for valve  $C_v \leq 1$ , no less than 100:1 for valve  $C_v > 1$ .

4. When indicated, provide separate SPDT limit switches which actuate at the full open and full closed valve position.
- B. High performance butterfly valves may be used when approved for valves 2-1/2" and larger and shall be full lug, have carbon steel body, 316 stainless steel offset disc, one-piece stainless steel shaft and bearings with thrust surfaces, PTFE seat, Teflon stem packing and rated for 150 psi and 450 degrees F, and in compliance with Related Section "Valves".

*STEAM CONTROL VALVES: REVISE THE VALVE PRESSURE DROP SPECIFIED BELOW TO THAT APPROPRIATE FOR YOUR PROJECT. FOR EXAMPLE, FOR LOCATIONS CLOSE TO THE CENTRAL POWER PLANT, A PRESSURE DROP HIGHER THAN THE INDICATED 4 PSIG WOULD BE APPROPRIATE. ALSO NOTE THAT THE BELOW VALVE SIZING CRITERIA ASSUMES THAT THE STEAM PRESSURE REQUIREMENT FOR THE EQUIPMENT SERVED BY THE CONTROL VALVE IS 1 PSI OR LESS. ALWAYS VERIFY THE EQUIPMENT PRESSURE REQUIREMENT AND MODIFY THE BELOW ACCORDINGLY.*

- C. Steam valve bodies and trim shall be rated for scheduled saturated steam service pressures. Steam valve replaceable plugs and seats shall be stainless steel, hardened to not less than 500 Brinell. Valves shall have modified linear characteristics and shall be sized based on a 5 psig inlet pressure and a maximum drop of 4 psig.

*ALTHOUGH AVAILABLE UP TO 4", BALL VALVES SHOULD TYPICALLY ONLY BE USED FOR SMALL CONTROL VALVE APPLICATIONS, E.G. FAN COILS. THIS SPECIFICATION IS ONLY FOR BALL VALVES UP TO 3/4" DIAMETER. DESIGNER SHALL SPECIFICALLY NOTE ON THE DESIGN DRAWINGS WHERE BALL STYLE CONTROL VALVES WITH ELECTRIC ACTUATORS ARE TO BE USED. BE AWARE OF THE MAXIMUM DIFFERENTIAL PRESSURE RATING (E.1.H) FOR THESE TYPE VALVES. NOTE THAT THE MINIMUM FLUID TEMP. RATING IS 35°F; THIS BALL VALVE SPEC IS NOT SUITABLE FOR LOW TEMP SERVICE, HOWEVER LOW TEMP TRIM IS AVAILABLE, CONSULT MFR.S.*

- D. Ball Style Control Valve and Actuator Assembly (permitted only where specifically noted on the design drawings):
  1. Control Valve Body: Quarter turn ball valves, 2-way and 3-way configuration as indicated, for 2 position or modulating service, with the following features:
    - a. 1/2" or 3/4" valve size.
    - b. Forged brass body with female NPT end connections.
    - c. Nickel or chrome plated brass ball, with Teflon reinforced EPDM O-ring seals.
    - d. Blow-out proof brass stem with double O-ring EPDM seals.
    - e. Shall provide safe and reliable operation in water or in up to 50% glycol/water solutions, at fluid temperatures between 35°F and 212°F and static pressures up to 300 psi.
    - f. Ball and stem seals shall be formulated to prevent degradation by typical water treatment chemicals and Chloramines.
    - g. Minimum close-off rating: 200 PSI.
    - h. Differential pressure rating (valve operating): 30 PSID maximum.
    - i. Downstream leakage: maximum of 0.01% of design flow at rated close-off differential pressure.
    - j. 0 - 90 degree angle of rotation.

- k. Valves for modulating service shall be equipped with a characterized ball (glass filled polymer flow insert) that provides an equal percentage flow characteristic.
  - l. Valves for two position control shall be reduced port type as required for the appropriate valve Cv.
  - m. Provide valves with the flow coefficient indicated, or if not indicated, subject to engineer's approval, with a Cv appropriate for good control and considering the system differential pressure available.
2. Actuators: UL listed electronic rotary actuator designed for operation with the ball type control valve, with the following features:
- a. The actuator shall be of the same manufacturer as the valve body and shall be integrally mounted to the valve at the factory.
  - b. For direct coupling to the valve shaft without the use of linkages, to an ISO-style mounting pad.
  - c. Minimum cycle life: 60,000 full strokes at maximum rated torque.
  - d. Torque: as required for smooth positioning and closure of the valve against a maximum differential pressure of 30 PSI and to provide close-off up to 200 PSI.
  - e. Motor runtime to rotate the valve ball 90°: 90 seconds maximum, 20 seconds minimum.
  - f. Spring return runtime to rotate the valve ball 90°: 90 seconds maximum, 20 seconds minimum.
  - g. For use with a 24VAC power supply with the ability to operate off the same power supply required for the temperature controller.

**MODIFY THE NEXT TWO PARAGRAPHS TO MATCH THE CONTROL TYPE (MODULATING OR TWO POSITION) AND FAILURE MODE REQUIRED. THE PARAGRAPHS AS WRITTEN ARE TYPICAL FOR USE WITH SIEMEN'S "RDF" ELECTRONIC ROOM CONTROLLERS AVAILABLE AS OF 6/2010; THESE CONTROLLERS NOT AVAILABLE AS MODULATING FOR 4-PIPE FAN COILS.)**

- h. 2-pipe fan coils: Normally open spring return actuation, for use with 0-10Vdc output proportional plus integral room controllers, fully compatible with the specified temperature controller.
- i. 4-pipe fan coils: For use with 2 position output room controllers, fully compatible with the specified temperature controller.
  - 1) Heating coil: Normally open spring return actuation.
  - 2) Cooling coil: Normally closed spring return actuation.
- j. Electronic stall detection/overload protection. Actuator shall sense that maximum rotational position has been reached even when control signal is still applied and stop rotating prior to actuator damage.
- k. Rotation mechanically limited by adjustable integral limit stops.
  - l. Mechanical range adjustment.
  - m. Valve position indicator.

- n. Actuator/actuator housing: Brushless DC motor design, NEMA type 1 or 2 enclosure, die-cast aluminum alloy or UL 94 listed plastic housing, lubricated gears, with a thermal barrier to prevent condensation on the actuator parts when used for chilled water applications. It shall be possible to rotate the actuator to any of four rotational angles in 90° increments, relative to the valve body.
  - o. Ambient temperature operating range: -20°F and 120°F.
  - p. Maximum actuator noise level, running or spring return: 40 dBA.
- 3. 2 year unconditional warranty, parts and labor. 5 year unconditional parts warranty.
  - 4. Approved Manufacturers:
    - a. Siemens
    - b. Johnson Controls
    - c. Belimo
- E. Hydronic system valve bodies and trim shall be rated for service pressures through 125 psig at 250 deg. F, globe style. Hydronic system valves shall have replaceable plugs and seats of SAE 72 brass or AISI 300 series stainless steel, selected for maximum lift under application conditions. Maximum pressure drop across any hydronic system valve at maximum flow and valve size shall be as indicated. Two-way valves shall have equal percentage characteristics for heating and cooling applications, either linear or equal percentage for other applications as appropriate, linear for three-way valves. When not indicated, valves shall be sized for a pressure drop of 3 psig for chilled water and 4 psig for hot water.
- F. Standard Valve Actuators:
- 1. Pneumatic, rolling diaphragm, spring loaded, piston type.
  - 2. Spring range shall be as required for non-overlapping sequencing or as indicated on drawings.
  - 3. Ratio relays or cumulators used for sequencing valves are not acceptable unless specifically indicated on the drawings.
  - 4. Valves shall spring return to normal position as indicated.
  - 5. Select with sufficient close-off power for system pressure, pump shut off head, highest operating torque, and torque requirements of valves that may stick because of infrequent use.
  - 6. Select to provide smooth proportioning control under operating conditions normal to the system.
- G. Butterfly Valve Actuators:
- 1. Pneumatic actuators shall be rotary type with rack and pinion to provide constant output torque rated for at least 125 percent, pilot positioner with gauges, spring return, adjustable travel stops, factory tested, factory lubricated, self-draining body, integral pneumatic parting, localized mechanical position indicator readable at 25 feet, 0-90 deg. reversible operation, capable of operating in any valve mounting attitude, capable of being mounted in line or transverse to pipeline, and bolt directly to valve top plate. Valves shall be actuated with 60-psig air and 3-15 psig pilot service. Valves used for isolation do not require pilot positioners. Actuator shall include a manually operated hand wheel for manual override.

EDITOR: WHEN THE USE OF ELECTRIC ACTUATORS IS PLANNED THE METHOD OF GETTING POWER TO THOSE ACTUATORS MUST BE CONSIDERED. READ THE BELOW SPEC SECTION CAREFULLY AND NOTE THE SIZE RANGE FOR VARIOUS ACTUATOR VOLTAGES. THE CONTROLS CONTRACTOR SHALL NOT RUN POWER WIRING ABOVE 120V. THEREFORE:

FOR 120V ACTUATORS, POWER TO SUCH ACTUATORS IS THE RESPONSIBILITY OF THE CONTROLS CONTRACTOR AND IS TO BE ROUTED FROM THE DDC AUXILIARY PANEL (SEE SECTION 2.5). IF YOUR PROJECT HAS A LARGE NUMBER OF 120V ACTUATORS THE STANDARD (2) 20 AMP CIRCUITS RUN TO THE DDC AUX. PANEL MAY NOT BE ENOUGH. DETERMINE THE TOTAL AMPERAGE OF SUCH ACTUATORS AND DIRECT THE ELECTRICAL DESIGNER TO DESIGNATE ADDITIONAL 120V CIRCUITS TO THE DDC AUX. PANEL, IF REQUIRED.

FOR 208V OR 480V ACTUATORS, POWER TO THE ACTUATORS SHALL BE DESIGNATED AS THE RESPONSIBILITY OF THE ELECTRICAL CONTRACTOR. FOR THESE HIGH VOLTAGE ACTUATORS, DIRECT THE ELECTRICAL DESIGNER TO INDICATE POWER TO EACH ACTUATOR ON THE ELECTRICAL DRAWINGS. THIS POWER SHALL NOT BE RUN OUT OF OR THROUGH THE DDC AUXILIARY PANEL.

2. Electric actuators shall have permanent split capacitor, reversible electric motor which drives a compound epicyclic gear, thermal overload protection, factory tested, factory lubricated, localized mechanical position indicator readable at 25 feet, 0-90 degree reversible operation, bolt directly to valve top plate. Housing shall be weatherproof and suitable for outdoor location. Provide thermostatically controlled heater for prevention of condensation at low temperatures. Actuator voltage shall be 120 VAC through 12" and 208 or 480 VAC above 12". 120V actuators shall be fed out of the auxiliary panel with a separate disconnect and fuse. Disconnect and fuse to be located in the auxiliary panel. 208V or 480V actuator power shall be provided to 208/480V actuators by others. In all cases the MSCC shall provide the required control wiring to the actuators. Actuator ambient temperature range shall be -20 deg. F to +140 deg. F. Actuator shall include a manually operated hand wheel for manual override of the valve position.
- H. Electronic valve actuators used with TECs shall be 24 VAC and use 3-position floating control, 7/32" (5.5 mm) stroke minimum, shall be direct-coupled to valve bodies without the use of tools, shall have sufficient power to prevent valves from lifting off their seats, shall provide visual position indication, shall include manual override knob, and shall be UL-listed for plenum installations. Actuators shall be fail-safe or fail-in place as follows:
  1. Actuators shall be fail-safe open for perimeter heating applications.
  2. Actuators shall be fail-in-place for reheat control valves and cooling coil valves.
- I. Typical valve body/actuator control actions shall be as follows:
  1. Heating coil valves (non-vivarium) shall be normally open to flow through the coil.
  2. Heating coil valves (vivarium) shall be normally closed to flow through the coil.

3. Heat exchanger valves (steam or water) shall be normally open to flow through the heat exchanger.
4. Cooling coil valves shall be normally closed to flow through the coil.
5. Humidifier valves shall be normally closed to flow through the humidifier.
6. Condenser water valves shall be normally open to flow through the cooling tower.
7. Isolation valves shall be normally open.
8. Drain valves shall be normally closed.

J. Approved Manufacturers:

1. All control valves except butterfly type:
  - a. Siemens
  - b. Honeywell
  - c. Johnson
2. High performance butterfly valves:
  - a. Jamesbury - 815L
  - b. Watts - QF series X
  - c. Dezurik - BHP
  - d. Xomox Pliaseal
  - e. Bray - Braylok Series 41

**CONTROL DAMPERS SHALL BE SCHEDULED ON THE DRAWINGS. INDICATE THE DAMPER STATIC PRESSURE AND VELOCITY RATING IN THE SCHEDULE.**

**2.8 AUTOMATIC CONTROL DAMPERS**

- A. Multi-blade type. Provide with parallel blades for two-position, throttling, and modulating service unless noted otherwise. Provide required drive axles, linkage, jackshafts, and accessories for proper damper operation. Damper blades, frames, linkages, jackshafts and other parts of the damper actuation system shall not distort or rack during operation. Dampers shall close tightly, and operate in a smooth, hesitation and slack-free manner over the entire range of travel, at the maximum air pressure and velocity at the mounting location. Additionally, multiple section dampers shall operate in unison section-to-section.
- B. Face and bypass dampers shall each be capable of passing 100% of unit rated CFM. Pressure drops shall be approximately the same in either extreme position, including the pressure drops of coils and bypass components.
- C. All automatic control dampers shall conform to these specifications, including those provided by equipment manufacturers.
- D. All control dampers shall be low leakage type and shall meet the following minimum requirements:
  1. Leakage: 6.0 CFM/sq. ft. max. at 3" WC.
  2. Frames: 13 gauge (minimum) galvanized steel, minimum 2 inch in frame depth, welded or riveted with corner reinforcement.

3. Blades: 16 gauge (minimum) galvanized steel or aluminum airfoil type, maximum blade size 8 inches wide, 48 inches long. Axles and axle extensions shall be minimum 1/2 inch solid galvanized steel. Dampers which are required to have a static pressure rating over 4" WC shall have minimum 3/4 inch solid galvanized steel axles/axle extensions.
  4. Blade Seals: Synthetic elastomeric or neoprene, inflatable type, mechanically attached, field replaceable.
  5. Jackshafts: Provide to drive adjacent vertical sections of multiple damper assemblies to ensure uniform operation. Minimum 3/4 inch solid or 1" hollow (minimum 1/8 inch wall thickness) galvanized steel. Where jackshafts penetrate air handling casing walls, provide greasable ball bearing supports sleeved and sealed to prevent casing leakage. Provide intermediate greasable ball bearing supports bolted to damper frames for jack shafts extending across multiple damper sections.
  6. Jamb Seals: Stainless steel.
  7. Bearings: Oil impregnated sintered bronze or lubricant free, solid stainless steel. Provide thrust washers at bearings for all dampers that are to be mounted with blades in the vertical position.
  8. Linkages: Deflection and slack-free. Zinc plated, fully exposed, connected to blade faces (located in the air stream). Linkages may be located in-jamb for single damper flange mounting arrangements, provided linkage is external to the duct and easily accessible for maintenance.
  9. Static pressure Rating: As scheduled on the drawings, or provide dampers rated for the maximum pressure to be encountered at the mounting location but not less than 4" WC.
  10. Velocity Rating: As scheduled on drawings, or provide dampers rated for the maximum velocity to be encountered at the mounting location.
  11. Temperature Limits: -40 to 200 deg. F.
  12. Provide through-bolted connections for connecting axle or jackshaft extensions. Set screw arrangements are not allowed.
  13. Selection and sizing criteria: Damper selection and sizing shall be based on damper schedule shown on the drawings. For dampers that are not scheduled on the drawings, selection and sizing shall be based on the procedure contained in Engineering Manual of Automatic Control, Honeywell, Inc., 1988.
- E. For dampers located in stainless steel ductwork, PVC coated ductwork, fume hood exhaust ductwork, and exhaust fan outside air bleed-in ductwork, fabricate and size as indicated above, with the following additional requirements:
1. Frames, blades, blade axles and extensions, blade seals, jackshafts, linkages, and all other components exposed to the air-stream: Type 316 stainless steel.
  2. Bearings: Solid stainless steel.
  3. Damper operators shall be mounted outside of air stream. Extend damper axles and jackshafts to permit mounting outside of air stream.
- F. Approved Manufacturers:
1. Honeywell
  2. Ruskin
  3. Vent Products

4. American Warming & Ventilating
5. Arrow United Industries
6. White Environmental
7. Johnson Controls

## 2.9 DAMPER OPERATORS

- A. General:
1. With the exception of TECs, operators shall be pneumatic unless specifically noted otherwise on the drawings.
  2. Provide smooth, proportional control with sufficient power for air velocities 20% greater than maximum design velocity and to provide tight seal against maximum system pressures. Provide spring return to normal position. Damper operators shall be installed in accessible locations. Damper operators shall not be installed inside ducts or air units that convey hazardous exhaust.
- B. Pneumatic Operators: Rolling diaphragm piston type with 8-13# spring range, as indicated on drawings, or as required to achieve specified performance.
- C. Electric Operators: Maintenance free electric actuator, reversible, with push rod and bracket for swivel mounting and for the transmission of power. Synchronous motor with load independent running time providing parallel operation of several operators. Gear train with low noise level. Magnetic hysteresis coupling with magnetic transmission of torque, with no mechanical contact between the coupling members. The actuator shall be safe against blocking and overload proof even when operated continuously.
- D. Electronic Operators: Maintenance free, 24 or 120 VAC, 4-20 mA or 0-10 VDC input, reversible, direct-drive or push rod and bracket, metal or aluminum housing, brushless DC motor with stall protection, quiet, low-power operation, have visual position indicator, and manual override.
- E. Electronic damper operators used with TECs shall be 24 VAC 3-position floating control type and utilize a 90-degree rotation. Operators shall be direct-drive, have sufficient power to operate the damper against system pressures, provide visual position indication, have manual override, and shall be UL-listed for plenum installations. Operators shall be of the fail-in-place type.
- F. Provide operator mounting brackets. Provide devices to connect operator drive shafts to dampers, damper linkages, and jackshafts.
- G. Quantity of operators: Provide a sufficient number to achieve unrestricted movement throughout damper range, such that one operator does not operate more than the maximum square footage of damper area as recommended in standard catalog of manufacturer. Provide sufficient number so dampers close tightly, operate in a smooth, hesitation and slack-free manner over the entire range of travel at the maximum air pressure and velocity at the mounting location, and so that multiple section dampers operate in unison section-to-section.
- H. Approved Manufacturers:
1. Honeywell
  2. Johnson

- 3. Siemens
- 4. Belimo

**2.10 PNEUMATIC COMPONENTS**

- A. Components shall be Honeywell, Johnson, or Siemens, unless listed otherwise.
- B. Electric-pneumatic relays shall be two-position, have a metallic body, can be field or panel mounted, have a 120 VAC coil, and 3 or 4 ports. Only Johnson E.P. relays are acceptable.
- C. Pressure-electric switches shall be two-position, appropriate range and element, suitable for the service, single or double pole, normally open or normally closed as required. Set point shall adjustable over the full range. Switch rating shall be 8.0 amps at 120 VAC, minimum.
- D. Differential pressure transmitter shall be one-pipe, 3-15 psig output, capable of measuring pressure differentials of positive or negative type, operate on the force-balance principal, have an over-pressure rating of 30" WC, accuracy of 5 percent full scale, and of the range suitable for the service.
- E. Pneumatic room thermostats shall be direct acting, dual (minimum 5°F dead band - 2 output branch lines) or single setpoint, 2-pipe, large capacity, adjustable proportioning type, containing dual or single bi-metallic elements, adjustable differential, minimum setting no greater than 1-1/2 deg. F over a range of 55 to 85 deg. F. Provide tamperproof covers with exposed setpoint indicator in black lettering, exposed thermometer, exposed setpoint adjustment in non-public areas and key operated setpoint adjustment in public areas.
- F. Pneumatic humidistats shall be of the adjustable proportioning, 2-pipe type, duct or wall mounted, reverse acting, adjustable sensitivity, sensitive hygroscopic membrane, temperature compensated, 20-90% RH range room, 25-65% RH range for duct, and 55-95% RH range for high-limit applications. Room type shall have tamperproof cover. Duct type shall come mounted inside a galvanized duct mounting box.
- G. Temperature transmitters shall be one pipe, directly proportional output signal to measured variable, linearity within plus or minus 1/2% of range for 200 deg. F span and plus or minus 1% for 50 deg. F span, with appropriate 50, 100, 200 deg. F temperature range, compensated bulb, averaging capillary, rod and tube or room transmitter operating on 20 psig input pressure and 3 to 15 psig output. Room transmitter shall be provided with cover and wall plate.
- H. Humidity transmitters shall be one pipe, directly proportional output signal to measured variable, linearity within plus or minus 1% of range, temperature compensated, sensitive hygroscopic membrane, room or duct mounted, operating on 20 psig input pressure and 3 to 15 psig output. Room transmitter shall be provided with cover and wall plate.

- I. Receiver-controllers shall be single or dual input models direct or reverse acting with mechanical set point adjustment, calibrated proportional band adjustment, and calibrated authority adjustment. Provide proportional control mode for temperature control applications, and proportional plus integral control mode for differential pressure control applications. Proportional band shall extend from 2 to 40% of primary sensor span, authority from 0 to 200% of primary sensor span and integral time from 1/2 to 20 minutes. Suitable for input signal of associated transmitter and output signal required by controlled device.
- J. Signal selector relays shall be capable of receiving two or more input signals and transmitting the highest or lowest pressure, with 1:1 input/output ratio.
- K. Booster relays shall be proportional type for increasing the volume capacity of an input signal to a directly proportional output signal.
- L. Pneumatic switching relays shall be snap acting, switching type with adjustable switching setpoint and fixed differential, single or double pole, and metallic body, for connecting a common port to either of two other ports based on the switching signal.
- M. Pneumatic multi-purpose relays shall be two-valve design, high accuracy, high repeatability, metallic body, internal relief, high capacity, proportional, with adjustable set point, capable of being used as direct or reverse acting, amplifying, signal advancing, minimum pressure output, or lower pressure transfer. Removal of main air to the relay causes the branch line output to go to zero.
- N. Pneumatic gradual position switches shall provide regulated pressure to a controlled device, with knob and pointer for manual adjustment, graduated scale plate with appropriate markings, suitable for surface or flush mounting on wall or panel as indicated.
- O. Pneumatic selector switches shall be two or three position with metallic bodies, have indicating plates with appropriate markings, and suitable for panel or wall mounting. Switches installed in finished rooms shall be recessed in wall and provided with faceplate.
- P. Field Mounted Gauges:
  - 1. Provide 1-1/2" air pressure gauges on branch lines of pneumatic systems at controllers, transmitters, valve and damper operators, relays, switches, regulators; and DDC output points. Accuracy shall be 2.5 percent of full scale for the middle half of scale and 3.5 percent elsewhere. At dampers or devices that utilize multiple actuators, a single gauge in a readily visible location is acceptable.
- Q. Panel Mounted Pneumatic Gauges:
  - 1. All transmitters shall be provided with receiver gauges.
  - 2. Door mounted analog indicator gauges shall be 3-1/2" diameter with a 1% accuracy.
  - 3. Sub-panel mounted analog indicator gauges shall be 2-1/2" diameter with a 1% accuracy.
  - 4. A 1-1/2" gauge shall be provided on the main air supply inside each control panel.

**2.11 LOCAL, AUXILIARY, UPS AND LPI CONTROL PANELS**

- A. Unitized cabinet type for each system under automatic control with relays and controls mounted in cabinet and temperature indicators, pressure gauges, pilot lights, push buttons and switches flush on cabinet panel face, or as detailed on drawings.
- B. Doors shall be removable, right or left hand hinged, locking, keyed alike and to other U-M control panels.
- C. Removable perforated subpanel to permit mounting of controls without drilling holes.
- D. Wall mounted or support kit or unistrut type frame for floor mounting.
- E. Unit shall have knockouts, NEMA Type 1, and listed under UL508 Industrial Control Panel Enclosures.
- F. UPS and LPI panel minimum size shall be 19-1/2" high by 16-3/8" wide by 5-3/4" deep.

**2.12 AHU SAFETIES ENCLOSURES**

- A. Enclosures shall utilize a standard 4-11/16" x 4-11/16" square electrical box and blank cover. One half of the blank cover shall be painted red and the other blue. A red neon indicator light shall be installed in the red half of the cover and a blue neon indicator light shall be installed in the blue half of the cover. A terminal strip shall be installed inside the electrical box with two terminals in one half, labeled "H1" and "H2" (for HVAC use), and two additional terminals in the other half, labeled "F1" and "F2" (for fire alarm use). The red neon indicator shall be wired to the F terminals and the blue neon indicator to the H terminals.

**2.13 ROOM DIFFERENTIAL PRESSURE INDICATING GAUGES**

- A. Dial (4" dia.) in metal case, diaphragm actuated, black figures on white background, front recalibration adjustment, scale -0.25" WC to +0.25" WC, suitable for surface or flush mounting. Accuracy +/- 2% of full scale.
- B. Approved Manufacturers:
  - 1. Dwyer

**THE UNIVERSITY'S HIGH PRESSURE AIR SUPPLY IS AVAILABLE ON CENTRAL CAMPUS VIA THE STEAM TUNNEL SYSTEM AND IS DELIVERED AT -50 DEG. F DEW POINT. THEREFORE CONTROLS USING THIS AIR SUPPLY SHOULD NOT NORMALLY REQUIRE REFRIGERATED OR DESICCANT AIR DRYERS, EVEN WHEN EXPOSED TO OUTDOOR AIR CONDITIONS.**

**2.14 PNEUMATIC ACCESSORIES**

- A. Control Air Supply

1. Control air supply shall be from the University's high-pressure (steam tunnel) air supply or from a temperature control compressed air station as indicated on the project documents. System shall be sized for expected use, including air usage of laboratory airflow units or process control actuators (whether this equipment is provided by the MSCC or not), plus 10 percent extra capacity. When providing a control Compressed Air Station, provide a Refrigerated Air Dryer if none of the pneumatic tubing or pneumatic components are exposed to outside air conditions. Provide a Regenerative Desiccant Air Dryer when pneumatic tubing or pneumatic components are exposed to outside air conditions. For projects utilizing the University's high pressure air supply, unless indicated otherwise on the drawings, no air dryers are required.

B. Compressed Air Station

1. Temperature control air compressors shall be reciprocating oil type through 25 HP, rotary screw over 25 HP, specifically designed for pneumatic controls, shall be of the simplex or duplex type, tank or base mounted unit assemblies, have combination intake filter/silencer, and totally enclosed belt guards. Compressors shall be sized based on no more than 1/3 run time with an appropriately sized tank and an average tank pressure of 70 psig for optimum performance. Simplex units shall only be used when backing up another control air supply.
2. Tank shall be of adequate size and contain a shut-off ball valve, ASME safety relief valve, pressure switch operated start/stop control, 120 VAC electronic automatic drain with manual bypass and air pressure gauge.
3. Duplex models shall be complete with NEMA 1 enclosure, starters, disconnects, automatic alternator, H-O-A switches (left H position spring return for test only), low oil shutdown switch, push-to-test pilot lights, and 3-position switch for selection of: compressor 1 only/automatic alternate/compressor 2 only operation. PRV/filter/dryer assemblies may be mounted to the compressor/tank assembly.
4. Approved Manufacturers:
  - a. Quincy
  - b. ACP
  - c. Divilbis
  - d. Ingersol-Rand

C. Tubing

1. Copper tubing shall be new hard drawn, air grade, ASTM B75 for 3/8 inch and smaller or type L, ASTM B68 for 1/2 inch and larger, with solder joint or compression type fittings, at the option of the MSCC.
2. Plastic tubing (all sizes) shall be black virgin, polyethylene, ASTM D1248, Type 1, Class C, Grade 5, meeting crack test performance required by ASTM D1693 and be fire retardant (FR) rated. Multi-tube harness material shall be as specified above with a polyester film barrier and vinyl jacket not less than 0.062 inches thick. All non-metallic tubing shall be 1/4" O.D. minimum; micro-sleeve is not acceptable.

D. Pressure Reducing Valves:

1. Pressure reducing valves (PRV) shall be diaphragm operated, self-relieving, designed to provide precision control of air supply pressures, and shall be located after any filters or dryers.
  2. PRV shall be capable of being mounted in any position, shall have locking set point handle, and SS inlet strainer.
  3. PRV shall have metal or plastic body and shall be provided with 2-1/2" gauge of appropriate units.
  4. PRV's that are not self-relieving shall be provided with a separate relief valve of appropriate range.
  5. Approved Manufacturers:
    - a. Wilkerson
    - b. Hankison
    - c. Parker
    - d. Van-Air
    - e. Johnson
    - f. Honeywell
    - g. Siemens
- E. DDC/Auxiliary/Local Control Panel Air Filters:
1. Provide an in-line air filter for main air supply to each DDC, auxiliary and local control panels capable of removing solids and petroleum-based oils.
  2. Filter efficiency shall be 99.9% of 0.5 micron particles.
  3. Filter element shall be visible and shall change color to indicate when to be replaced.
  4. Minimum capacity shall be 500 SCIM and 30 psig.
  5. Approved Manufacturers:
    - a. Wilkerson
    - b. Hankison
    - c. Parker
    - d. Van-Air
- F. Coalescing Air Filters:
1. Provide a duplex set of coalescing air filters for the main air supply to all building temperature controls.
  2. Duplex assembly shall include upstream and downstream pressure gauges and isolation ball valves for each filter.
  3. Filter shall have a replaceable cartridge and drain port.
  4. Filter shall be designed to remove oil and water droplets down to 0.01 microns and particulates down to 0.08 microns. Minimum capacity shall be 10 SCFM and 150 psig.
  5. Coalescing filters shall be located downstream of refrigerated air dryers and upstream of chemical or desiccant dryers.
  6. Approved Manufacturers:
    - a. Wilkerson
    - b. Hankison
    - c. Parker
    - d. Van-Air
- G. Particulate Air Filters:
1. Whenever chemical or desiccant dryers are used, provide a duplex set of particulate air filters for the main air supply to all building temperature controls located downstream of chemical or desiccant dryers.
  2. Duplex assembly shall include upstream and downstream pressure gauges and isolation ball valves for each filter.

3. Filter shall have a replaceable cartridge and drain port.
4. Filter shall be designed to remove particulates down to 0.1 microns. Minimum capacity shall be 10 SCFM and 150 psig.
5. Approved Manufacturers:
  - a. Wilkerson
  - b. Hankison
  - c. Parker
  - d. Van-Air

H. Refrigerated Air Dryers:

1. Provide a 120 VAC air-cooled refrigerated dryer capable of providing 35 deg. F dew point air.
2. Unit shall have power on light, high temperature light, valved air bypass piping, and air-to-air precooler/reheater.
3. Heat exchanger to be non-fouling, tube-in-tube, self-cleaning with smooth surfaces.
4. Compressor shall have hot gas bypass, as required, and shall be protected by thermal and current overloads.
5. Condenser fan shall have thermal overload protection.
6. Approved Manufacturers:
  - a. Wilkerson
  - b. Hankison
  - c. Parker
  - d. Van-Air

I. Regenerative Desiccant Air Dryers:

1. Provide a 120 VAC regenerative type desiccant dryer of the optimal size to ensure sufficient contact time and capable of providing -40 deg. F dew point air at 150 psig.
2. Units shall have an adjustable solid-state timer and purge flow economizer valve, on/off switch, power on light, separate fill and drain ports for ease of desiccant replacement without piping removal, heavy duty purge exhaust mufflers for quiet operation, non-lubricated air control valves, Teflon seated check valves, visible moisture indicator, visible purge flow indicator, pressure relief valve, ASME code constructed/stamped pressure vessels, SS support screens and air diffusers, tower pressure gauges, structural floor frame and stand for large sizes, wall mounting brackets and supports for small sizes, pre-piped and wired, and complete with air bypass piping.
3. Approved Manufacturers:
  - a. Wilkerson
  - b. Hankison
  - c. Parker
  - d. Van-Air

J. In-line Desiccant Air Dryers:

1. Provide an in-line desiccant dryer of the optimal size to ensure sufficient contact time and capable of providing 4,000 cubic feet of -40 deg. F dew point air at 150 psig with a dryer inlet temperature of 68 deg. F.
2. Units shall have a removable bowl or fill port for ease of desiccant replacement without piping removal, visible moisture indicator, and air bypass piping.
3. Not to be used as a substitute for Regenerative Desiccant Air Dryers when providing a control compressed air station.
4. Approved Manufacturers:

- a. Wilkerson
- b. Hankison
- c. Parker
- d. Van-Air

## 2.15 IDENTIFICATION AND LABELS

- A. The MSCC shall provide black phenolic nameplates with engraved white minimum 1/4" high lettering, for each DDC or auxiliary panel, panel door mounted devices, and all LPI's, permanently attached, to identify field panel number, building, area, service, etc.
- B. All control devices located within auxiliary panels shall be labeled with legible identification that corresponds with the as-built drawings via black permanent marker. Use plastic or metal tags when it is not possible to mark directly on the device.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Install all system components as recommended by the manufacturer, including air compressors, dryers, filters, etc.
- B. Thermostats, room temperature sensors, push-buttons, and other adjustable devices meant for room occupant operation shall be mounted 44" to center above the finished floor. This requirement does not apply to control panels and devices mounted in penthouses, mechanical rooms, and other spaces normally inaccessible to room occupants.
- C. Zone thermostatic controls used to control both heating and cooling, e.g. a variable volume terminal unit also controlling a reheat coil and/or fin tube radiation, shall be programmed (DDC systems) or set up (non-DDC systems) with a heating setpoint of 71 deg. F and cooling setpoint of 76 deg. F, and a dead-band of 5 deg. F, unless indicated otherwise on the Drawings.
- D. System I/O's shall not be split between different DDC panels.
- E. AHU safeties enclosure shall be mounted at the wiring/tubing DDC panel array interface trough.
- F. Install all conduit, wiring, cable, tubing and equipment in a first-class manner, using proper tools, equipment, hangers, and supports, and in locations as required for a neat, attractive installation. No material shall be exposed if it is possible to conceal it. Exposed materials shall be installed only with consent of the Owner. Conduit shall not be supported from work of other trades.
- G. Support all sensors and devices as recommended by the manufacturer. Space sensors shall be mounted on an electrical box.
- H. Provide a control air shut-off valve for each panel.
- I. Panels shall be rigidly mounted.
- J. Plastic tubing may be used in all locations, except in mechanical rooms, shafts, or exposed locations, unless run in conduit.

- K. Tubing shall not be attached to conduits with current carrying conductors or fire protection piping. It shall be adequately supported with no noticeable sagging between supports, and protected from abrasion and galvanic corrosion. All pneumatic tubing shall be concealed in finished areas.
- L. A PRV shall be installed on each floor to provide control air supply.
- M. All wiring to devices installed inside auxiliary/local panels shall enter/exist via terminal strips, except twisted/shielded sensor wiring.
- N. Provide a pouch or other containing method inside each control panel and insert a copy of the corresponding system control drawings.
- O. Provide supplemental Hand-Off-Auto switches and contactors, as required, to permit automatic operation of equipment from the DDC system (i.e. single phase equipment which uses fractional motor starters, etc.).
- P. Extreme care shall be used in making connections to other equipment to see that the safeties on this equipment are not inadvertently bypassed or overridden by the DDC.
- Q. All equipment having moving parts and controlled by the DDC shall be provided with warning labels no less than 2 in. in height, and in bright warning color, stating that the equipment is remotely started by automatic controls. Such labels shall be posted clearly in the area of any moving parts, such as belts, fans, pumps, etc. The University of Michigan will furnish and install these warning labels.
- R. Ensure all dampers, valves, thermowells, flowmeters, and other miscellaneous control components are located and installed correctly so that the specified and intended performance and the sequence of operation is achieved, including components supplied and installed by others.
- S. Limit switches used on dampers shall be set at approximately 95% of full stroke (opened and closed). Where a single limit switch is indicated, set at approximately 75% of full stroke.
- T. MSCC shall provide all necessary equipment, test gases, etc. for calibration, and shall calibrate all sensors (i.e. CO<sub>2</sub>, CO, combustible gas, etc.) in accordance with the manufacturer's recommendations. Specialized equipment, test gases, etc. shall be turned over to owner upon completion and acceptance.
- U. Flow meters shall be installed with at least 10 diameter of straight pipe length upstream and five diameter of straight pipe length downstream. Power supply to flow meters and BTU meters shall be 115 VAC from the auxiliary DDC panel, and power connection for each device shall be installed with a lockable local service disconnect. Flow meter transmitters/displays and BTU meters shall be mounted 4 feet above finished floor and shall be located at the DDC panel array unless the maximum available cable length is exceeded. All meter components, including sensors, shall be mounted in accessible locations.
- V. Airflow sensors shall be installed with the appropriate upstream and downstream clearances per manufacturer's instructions.

- W. Remove any unused items that are part of renovations or demolition, including, but not limited to: conduit, wire, tubing, controllers, controlled devices, relays, enclosures, etc. Do not abandon in place.
- X. DDC sensor cabling shall not be spliced.
- Y. Locate all control components and accessories such that they are easily accessible for adjustment, service and replacement.
- Z. Participate in the commissioning process in accordance with the project commissioning documents.
- AA. For fan coil controllers and similar programmable electronic controllers, obtain approval of programmable settings from the Engineer and Commissioning Authority prior to programming. Revise settings as required during commissioning.

**3.2 CALIBRATION AND START-UP**

- A. The University of Michigan will start-up the DDC panels. The MSCC shall provide calibration and start-up for temperature control devices and systems, including compressors, dryers, etc.
- B. After control components have been installed and connected, test, adjust and re-adjust as required all control components in terms of function, design, systems balance and performance. Control devices, linkages and other control components shall be calibrated and adjusted for stable and accurate operation in accordance with the design intent and to obtain optimum performance from the equipment controlled. All control valves shall be stroked and spring ranges verified and set. All dampers shall be stroked to verify proper and smooth operation. Cause every device to automatically operate as intended to ensure its proper functionality. Make systems ready for acceptance tests.
- C. After equipment has been accepted and operated in normal service for two weeks, check the adjustment of control components and recalibrate/replace where required.

SECTION 230910 - LABORATORY AIRFLOW CONTROLS-DDC

**END OF CONTENTS TABLE**

*SECTION: OCTOBER 2011.*

*JULY 2013: REVISED TO INDICATE THAT ALL PHOENIX CONTROLS SHALL BE LONWORKS® BASED AND THAT BACNET PROTOCOL IS NOT ACCEPTABLE, TO ASSURE PHOENIX CONTROL POINTS CAN BE MONITORED BY BAS. D. KARLE FOR HVAC MTT.*

*DECEMBER 2013: ADDED (ALL IN PART 3): DO NOT "CLIP" VALVES. LTAU VOLUME FOR VALVES SERVING HOODS WITH HORIZONTAL SASHES TO BE SET TO MAINTAIN THE REQUIRED FACE VELOCITY WITH THE SASHES IN THE POSITION THAT CREATES THE MAXIMUM FREE AREA OPENING. ALSO: ALARM SETTINGS FOR FLOOR MOUNTED HOODS. D. KARLE FOR HVAC MTT.*

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 230910 - LABORATORY AIRFLOW CONTROLS-DDC**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

***INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.***

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

***CAREFULLY VERIFY, EDIT AND COORDINATE RELATED SECTIONS.***

- B. Related Sections:
1. Section 115313: Laboratory Chemical Fume Hoods
  2. Section 233300: Air Duct Accessories and RGDs
  3. Section 230900: Mechanical Systems Controls
  4. Section 230593: Testing, Adjusting, and Balancing (TAB)
  5. Division 26: Electrical

**1.2 SUMMARY**

- A. Section Includes:
1. Laboratory Airflow Control (LAC) system, including controls for Laboratory Terminal Airflow Units (LTAUs), fume hoods, reheat coils, chilled beams, fin tube, and other devices to control laboratory (or other specialized spaces) pressurization, temperature, and other functions as indicated.
  2. Laboratory terminal airflow units.
  3. Sound attenuators for LTAUs.
  4. LAC system interface with Owner's Building Automation System.
- B. The Laboratory Controls Contractor shall be a direct Subcontractor to the Contractor.

**1.3 REFERENCES**

- A. Abbreviations, Acronyms, Definitions (partial list)
1. BAS: Owner's Siemens brand Building Automation System.
  2. Owner: The University of Michigan.
  3. Laboratory: For the purposes of this specification, a broad designation for any space served by laboratory airflow controls.

#### 1.4 DIVISION OF WORK

- A. As it relates to the extent of responsibility for work within this specification section, "provide" shall mean the identified party both furnishes and installs such item(s). "Furnish" shall mean the identified party furnishes the item to the project site for installation by others.

**IMPORTANT: DESIGNER SHALL CLEARLY DELINEATE ON THE PROJECT DRAWINGS WHICH SPACES ARE TO BE SERVED BY 230910 "LABORATORY AIRFLOW CONTROLS-DDC" (I.E. THIS SPECIFICATION) VERSUS 230900 "MECHANICAL SYSTEMS CONTROLS". MAKE A CLEAR DELINEATION ON THE CONTROL DRAWINGS. NORMALLY ANY SPACE UTILIZING LTAUS IS CONSIDERED LABORATORY CONTROL, BUT IN SOME CASES A SPACE MAY BE SERVED BY BOTH TYPES OF CONTROL (ANIMAL ROOMS ARE AN EXAMPLE WHERE THIS FREQUENTLY OCCURS). SUCH SPACES REQUIRE SPECIAL CARE TO INDICATE THE BOUNDARIES OF THE SPLIT.**

- B. The Laboratory Controls Contractor (LCC) shall provide a complete LAC system as described in this specification.
1. Any space designated as a laboratory, served by LTAUs, or where indicated, shall be provided with a LAC system.
  2. All items specified shall be provided by the LCC, including items specified in Related Sections, except where explicitly indicated otherwise.
  3. The LCC shall be an installer authorized by the laboratory controls manufacturer.
  4. Provide supervision and instruction to insure proper installation of all furnished laboratory control components.
- C. The LCC shall furnish LTAUs and LTAU sound attenuators to the mechanical contractor. The mechanical contractor shall install in the duct work.
- D. The mechanical contractor shall provide reheat coils, duct transitions to connect to LTAUs/LTAU reheat coils, and all other components not specified in this specification section.

#### 1.5 COORDINATION

- A. Coordinate with laboratory equipment suppliers (fume hoods, etc.) regarding cut-out dimensions for alarm monitors and to assure proper accommodation is made for the installation of sash sensors and other devices related to laboratory airflow controls.

#### 1.6 ITEMIZED QUOTATION

- A. The Laboratory Controls Contractor shall submit with bid, an itemized cost breakdown listing all major components, labor cost (including subcontractor labor and material cost), and engineering costs, for base bid and for each alternate, for the entire work scope of the Laboratory Controls. When requested, provide the itemized breakdown to the Owner post bid, for review and approval.

#### 1.7 SUBMITTALS

- A. Submit the following for approval:

1. A separate schematic drawing and wiring diagram for each laboratory room or zone, with sequence of operation. Indicate all set points and alarm settings.
2. Equipment schedule for each room or zone, with the following information:
  - a. Equipment tag, room served, occupied/unoccupied min., max., and offset CFM; lab subnet description, name, and network address; network and power trunk identifier.
  - b. Model number of each LTAU and control component.
  - c. Function of each LTAU and control component.
3. Equipment data sheets indicating performance, wiring diagram, dimensions, weights, required clearances, component locations, and location and size of each field connection.
  - a. Data sheets shall be organized behind sheet tabs. Each sheet tab shall indicate the category or component name (i.e. LTAUs, control valves, sensors, etc.)
4. Calibration certificate for each LTAU, certified by an officer of the manufacturer.
5. Ductwork connection types and sizes.
6. Network diagram indicating routers, servers, and peripheral devices, including location of each device (room number) and indicating network connection points to Owner's BAS system.
7. Wiring diagrams for each network device.
8. Wiring diagrams and locations of power supplies.
9. Conduit and wire/cable data sheets.
10. Octave band and A-weighted sound power data for each LTAU, with and without sound attenuators.
11. Installation, operation, and maintenance instructions for each component. Include calibration method, calibration tolerance, inspection period, and cleaning method.
12. As-built schematic drawings and wiring diagrams. Indicate set points, settings and adjustments of all components.

#### **1.8 DELIVERY, STORAGE AND HANDLING**

- A. Mark each LTAU before factory shipment with a unique identifier corresponding to the LTAU drawing schedule.
- B. Shipping and storage protection shall be provided by manufacturer to insure that the interior and exterior of components are completely protected from damage, dirt or weather. Components shall be continuously covered with plastic or other durable means, until just prior to installation. Maintain protection after installation to protect against on-going construction activities.

#### **1.9 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions unless noted otherwise.
  1. AMCA 610 Laboratory Method of Testing Airflow Measurement Stations for Performance Ratings.

2. AHRI 880 Performance Rating of Air Terminals.
3. NFPA 70 National Electric Code.
4. NFPA 90A Installation of Air-Conditioning and Ventilating Systems.
5. ASTM C916 Standard Specification for Adhesives for Duct Thermal Insulation.
6. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials
7. UL 916 Energy Management Equipment
8. Components shall be Underwriters Laboratories (UL) or Intertek (ETL) listed.

#### **1.10 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of 3 years from the date of Substantial Completion.
- B. Provide 24 hour per day service during the warranty period, with a maximum response time from when service is requested of 4 hours.

### **PART 2 - PRODUCTS**

#### **2.1 MANUFACTURERS**

- A. Acceptable Laboratory Controls Manufacturers:
  1. Phoenix Controls
  2. Siemens (Direct Digital Control venturi valve solution)

#### **2.2 GENERAL**

- A. Provide a complete laboratory airflow control system including programming, controllers, software; temperature, pressure, and other sensors/transmitters; control valves; control, network, and power wiring; routers, servers, and all other devices required for a complete system.
  1. LAC system shall be Direct Digital Control (DDC) type.
  2. LAC system shall function to achieve the sequences of operation detailed on the drawings.
  3. Each laboratory shall have a dedicated LAC system. LAC systems shall be independent and stand-alone from the Owner's BAS. Failures of the BAS system or network communications between the BAS and the LAC system (cut communication cables, router or server failures, etc.) shall have no impact on individual laboratory control.
  4. The LAC system shall perform the following control functions:

- a. Lab Pressurization Control: Control supply and auxiliary exhaust LTAUs at a volumetric offset to maintain lab pressurization positive, negative, or neutral. Controller shall maintain a constant offset (adjustable) between the sum of the room's total exhaust and the make-up/supply air volumes. This offset shall represent the volume of air that will transfer to or from the corridor or other adjacent rooms. Pressurization control shall consider networked devices, non-networked devices, and any number of constant volume devices.
  - b. Lab Temperature Control: Regulate lab space temperature through a combination of supply air volumetric control and control of reheat coils and other auxiliary temperature control devices, in response to temperature sensor(s).
  - c. Occupancy Control: Reset LTAU minimum volume settings and/or temperature control set points, based upon external signals from occupancy detectors, local override buttons, and similar devices.
  - d. Constant Volume Control: The LTAU shall maintain a constant airflow set point.
  - e. Fume Hood Control: Control the face velocity of fume hoods indicated to be variable air volume (VAV) type.
  - f. Fume Hood Monitoring: Alarm various conditions at each fume hood.
  - g. Other lab control functions as indicated on the drawings.
  - h. Interface with the Building Automation System.
5. Input power requirements for LAC devices shall not exceed 120 VAC.

### **2.3 LABORATORY TERMINAL AIRFLOW UNITS**

- A. The laboratory terminal airflow unit shall be of venturi control type utilizing a cone shaped element.
- B. Provide LTAUs of the diameter and volumetric range indicated on the drawings. Provide larger or smaller diameter valves versus that indicated when necessary to match the volumetric range specified on the drawings (this may be necessary when providing valves from a mfr. other than the design basis).
  1. Mechanical contractor shall adjust duct layout and provide any required transition fittings necessary to accommodate the valve diameter provided.
- C. LTAUs shall have an equal percentage flow characteristic to provide stable control at low flow values. Butterfly, opposed blade, or parallel blade style dampers or VAV boxes are not acceptable
- D. LTAUs shall provide pressure independent air flow control and the scheduled air flows over a pressure range of 0.3" WG to 3.0" WG static pressure drop across the valve. LTAU shall respond within 1 second of a change in duct static pressure/flow change under all conditions.

- E. Total LTAU control error (including the combined effects of nonlinearity, hysteresis, repeatability, temperature and drift over a one year period) shall not exceed +/- 5% of flow set point. Example: If the LTAU's current flow set point is 1000 CFM, the volume of air delivered by the LTAU shall be within +/- 50 CFM of that set point. This error shall not be exceeded regardless of duct inlet or exit configurations, over the entire cataloged volumetric operating range of the LTAU, and at any pressure drop across the LTAU from 0.3" WG to 3.0" WG static pressure.
1. Systems using air flow sensors (Siemens):
    - a. The +/- 5% control error specified above shall be achieved when one straight equivalent duct diameter is provided upstream of the inlet to the LTAU.
    - b. Mechanical contractor shall provide one straight equivalent duct diameter upstream of the inlet to the LTAU.
    - c. Airflow sensors shall be constructed of corrosion proof material for room supply, return, and general exhaust air. Construct of 316L stainless steel (parts exposed to exhaust air) for all other exhaust applications.
- F. Every LTAU shall be factory calibrated to the air flows indicated on the drawings using NIST traceable air flow stations and instrumentation with a combined accuracy of +/- 1 percent of signal over the entire range of measurement. Air flow shall be verified to be within an accuracy of +/- 5 percent of signal at a minimum of 48 different air flows. Provide factory calibration certificate for each valve, certified by an officer of the manufacturer.
- G. LTAUs shall be constructed of minimum 16 gauge aluminum. Shaft and shaft support brackets shall be 316 stainless steel. Pivot arm and internal linkage shall be aluminum or stainless steel. Springs shall be spring-grade stainless steel. Shaft bearing surfaces shall be made of Teflon, polyester, or polyphenylene sulfide composite.

**NOTE BELOW PARAGRAPH. IF LTAUS OTHER THAN FUME HOOD LTAUS (EXAMPLE: SNORKELS HANDLING CORROSIVE CHEMICALS) NEED CORROSION PROTECTION, BE SURE TO INDICATE THAT FACT ON THE DRAWINGS. NOTE THAT LTAUS SHOULD NOT BE USED ON THE EXHAUST OF CAGE AND RACK WASH EQUIPMENT BECAUSE EVEN LTAUS WITH ENHANCED COATING SYSTEMS HAVE NOT PROVEN TO HOLD UP TO THE CORROSIVE EFFECTS OF THE EXHAUST FROM THESE DEVICES. RATHER, CAGE OR RACK WASHERS SHOULD BE EXHAUSTED BY DEDICATED EXHAUST FAN(S).**

1. Additional construction requirements for LTAUs connected to fume hood exhaust or where indicated on drawings:
  - a. Coat LTAU with minimum 5.0 mil dry film thickness Heresite P403 coating material, applied and baked per coating manufacturer's recommendations.
  - b. Shaft, pivot arm and linkage, and other internal metal parts (nuts, bolts, rivets, etc.) shall be stainless steel.
  - c. Shaft shall be Teflon coated.
  - d. Shaft bearing surfaces shall be made of Teflon or polyphenylene sulfide composite.

*IF LOW LEAKAGE CONSTRUCTION IS REQUIRED, THE DESIGNER MUST SPECIFY THE MAXIMUM LEAK RATE PERMITTED FOR CASING LEAKAGE AND SHUT-OFF LEAKAGE. CONSULT MFR.'S CATALOGS TO DETERMINE AVAILABLE LEAKAGE PERFORMANCE OPTIONS.*

- H. Low Leakage Construction
  - 1. Provide where indicated.
  - 2. Provide low leak seal materials compatible with the severity of service indicated by the particular valve coating that has been specified.
- I. Supply air LTAUs shall come factory insulated with minimum 3/8" thick flexible closed cell polyethylene insulation with a flame/smoke rating not to exceed 25/50, K value not to exceed 0.270 btu-in/hr-ft<sup>2</sup>-°F @ 75°F mean temperature, and a permeability maximum of 0.08 Dry Cup. Perm-In. Rubatex Therma-Cel, AP/Armaflex, or equivalent. Insulation shall be installed per insulation mfr. recommendations using mfr. recommended adhesives and joint vapor barrier sealants.

*DESIGNER SHALL PROVIDE PERFORMANCE DATA FOR THE SOUND ATTENUATORS ON THE DRAWINGS. DESIGNER MUST SPECIFICALLY INDICATE WHERE ATTENUATORS ARE REQUIRED. DESIGNER SHALL REVISE SPEC SECTION REFERENCE BELOW, IF REQUIRED.*

#### **2.4 LABORATORY TERMINAL AIRFLOW UNIT SOUND ATTENUATOR**

- A. Furnish sound attenuators only when specifically indicated.
- B. Attenuator shall be properly matched to each individual LTAU to meet the sound performance scheduled. Provide stainless steel packless type attenuators for all fume hood and "wet" exhaust applications.
- C. Attenuator pressure drop shall not exceed 0.20 in. w.c. at the LTAUs maximum rated flow, unless indicated otherwise on drawings.
- D. Refer to Related Section "Sheet Metal Accessories" for additional attenuator specifications.

#### **2.5 LTAU/LAB CONTROL**

- A. The control devices (controllers) shall be microprocessor-based DDC type and shall use closed loop control to linearly regulate airflow based on digital control signals. The device shall generate a digital feedback signal that represents its airflow.
- B. Laboratory controls shall be segregated into subnets at a lab room level. Provide commercially available routers to isolate each subnet from BAS communications, when required. All control points including all subnet points (both inputs and outputs) shall be available to the BAS for monitoring and trending. Laboratory control performance shall be unaffected by the quantity of points being monitored, processed, or controlled.
  - 1. Phoenix Controls: All control shall be LONWORKS® based. BACnet protocol is not acceptable.
- C. Speed of Response:

1. Labs with VAV fume hoods or where indicated:
    - a. Speed of response shall be less than 1 second. High speed electronic actuators shall be provided.
      - 1) Phoenix Controls Accel II Venturi Valves/Celeris
      - 2) Siemens venturi style air valves with high speed actuators
  2. All other lab control applications:
    - a. Speed of response shall be less than 60 seconds. Standard speed electronic actuators shall be provided.
      - 1) Phoenix Controls Traccel
      - 2) Siemens venturi style air valves with standard speed actuators
- D. The control devices shall store control algorithms in non-volatile, re-writeable memory. The device shall be able to stand-alone or be networked with other room-level digital airflow control devices using an industry standard protocol.
- E. Room-level control functions shall be embedded in and carried out by the controllers using peer-to-peer distributed control architecture. Critical control functions shall be implemented locally.
- F. The control devices shall use industry standard 24 VAC power.
- G. It shall be possible to connect a notebook PC commissioning tool at the room level lab controls and every point on the network shall be accessible from that connection point.
- H. The control devices shall have built-in integral input/output connections ("points") that address all network and non-network sensors switches and control devices indicated on the drawings and as necessary to accomplish the required sequence of operation. Unless explicitly indicated otherwise in the sequence of operation, every device controlled shall be controlled by an output dedicated to that device. For example, multiple actuators **shall not** be controlled by the same 0 to 10 Vdc or 4 to 20 mA output. At a minimum, the airflow controller shall have:
1. Three universal inputs capable of accepting 0 to 10 Vdc, 4 to 20 mA, 0 to 65 K ohms, or Type 2 or Type 3 10 K ohm @ 25 degree C thermistor temperature sensors.
  2. One digital input capable of accepting a dry contact or logic level signal input.
  3. Two analog outputs capable of developing either a 0 to 10 Vdc or 4 to 20 mA linear control signal.
  4. One Form C (SPDT) relay output capable of driving up to 1 A @ 24 VAC/VDC.
- I. Provide digital electronic summing devices and any other devices necessary to accomplish the intended sequence of operation.
- J. Control devices shall meet FCC Part 15 Subpart J Class A and be UL 916 listed.
- K. Actuators

**HIGH SPEED ELECTRONIC ACTUATORS CAN BE SET FAIL LAST POSITION AS WELL AS FAIL OPEN OR FAIL CLOSED. STANDARD SPEED ACTUATORS FAIL TO LAST POSITION ONLY.**

1. High Speed Electronic:

- a. UL 916 listed high-speed electronic actuator with an actuator stroke speed of 1 second or less when positioning the valve to respond to a flow change of 5:1. Factory mounted to the valve. Loss of main power shall cause the valve to position itself in a failsafe state. This position shall be maintained constantly without external influence, regardless of external conditions on the valve (within product specifications). Failsafe states shall be as indicated on drawings. Where not indicated, supply LTAUs shall fail normally closed-minimum position, exhaust LTAUs shall fail normally open-maximum position.
2. Standard Speed Electronic:
    - a. UL 916 listed standard speed electronic actuator factory mounted to the valve. Loss of main power shall cause the valve to remain at "last position". This position shall be maintained constantly without external influence, regardless of external conditions on the valve (within product specifications).

## **2.6 VAV FUME HOOD CONTROL**

- A. The fume hood controller shall use a sash position sensor to measure sash opening to proportionally control the hood's exhaust airflow. Controller shall maintain an "average" constant face velocity to +/- 5% tolerance, over a minimum range of 20% to 100% of sash travel.
- B. The hood exhaust airflow control device shall respond to a change in sash position by reaching 90% of the final commanded position within one (1) second of the sash reaching 90% of its final position, with no more than a 5% overshoot or undershoot, and with no noticeable oscillation. This shall be accomplished at any sash movement rate up to 1-1/2 feet per second.
- C. The fume hood monitor shall receive sash position signals from sash sensors. The monitor shall compute the total open sash area and then output an exhaust airflow control command signal to the appropriate exhaust airflow control device (LTAU).
  1. A vertical sash position sensor shall be employed to measure the height of each vertically moving fume hood sash. The vertical sash sensor shall consist of a precision 10-turn potentiometer mechanically coupled to a constant tension spring reel. Resolution shall be +/- 1/2 inch or better. A stainless steel, burr and snag-free cable shall be attached to the spring reel. Expected lifetime based on manufacturer's tests shall be over 200,000 full height sash movements. Sash sensor shall be installed in a location on the fume hood easily accessible for service.
  2. A horizontal sash position sensor shall be provided for each horizontal sash. The horizontal sash sensor shall consist of magnetic bars or a sensor strip/actuator block. Resolution shall be +/- 1/2 inch or better.
  3. Provide both vertical and horizontal sash position sensors for hoods with combination sashes.

## 2.7 FUME HOOD MONITORS

*CONSIDER IF OTHER LABORATORY EQUIPMENT WOULD BENEFIT FROM BEING EQUIPPED WITH A FUME HOOD MONITOR AND INDICATE THAT EQUIPMENT ACCORDINGLY.*

- A. Provide fume hood monitors for all chemical fume hoods and for other laboratory equipment where indicated.
  - 1. Monitor shall include audible alarm, visual LED alarm, and alarm silence button.
  - 2. The fume hood monitor shall provide an alarm indication for the following conditions:
    - a. Low fume hood face velocity as detected by:
      - 1) Insufficient differential static pressure as detected by the exhaust airflow LTAU pressure switch (Phoenix).
      - 2) Insufficient air volume, as detected by the air flow station (Siemens).
      - 3) Sash raised above sash stop position.
      - 4) Signal loss between the exhaust airflow LTAU and the fume hood monitor (VAV hoods only).
    - b. When an alarm condition is detected, audible and visual alarm indicators shall activate. Pushing the alarm silence button shall mute the alarm for an adjustable time delay, initially set at 10 minutes. Alarm shall re-sound after the time delay, until alarm condition clears. Visual alarm shall remain lit until alarm conditions clears.
  - 3. Sash position shall be sensed by using a vertical sash position sensor. Vertical sash position sensor shall be as specified under the article "VAV Fume Hood Control".
  - 4. Fume hood monitor shall be suitable for surface mounting on the front of the fume hood.
  - 5. Approved fume hood monitors:
    - a. Phoenix FHM530 Controller (Constant volume use)
    - b. Phoenix FHM430 Controller (Variable volume fume hoods)
    - c. Siemens

## 2.8 SENSORS/TRANSMITTERS

- A. Except as noted below, sensors and transmitters shall comply with the requirements of Related Section "Mechanical Systems Controls", including approved manufacturers.
  - 1. Room temperature sensors (RTS) shall have a digital temperature display, high accuracy temperature set point slide, and a minimum temperature range of 55-95°F. 10K Type 2 thermistor, inaccuracy of  $\pm 0.5^\circ\text{F}$  or less between 55-95°F. Provide with integral communications jack.
    - a. Approved manufacturers: Phoenix, Siemens
    - b. Provide combination room temperature/humidity sensors where indicated.
      - 1) Features: same as RTS.
      - 2) Temperature: Thermistor, same as RTS.
      - 3) Humidity transmitter: 4-20 mA output, inaccuracy  $\pm 2\%$  or less between 15%-95% RH at 25°C.
        - a) Approved manufacturer: Phoenix.

## 2.9 CONTROL VALVES

- A. Control valves shall comply with the requirements of Related Section "Mechanical Systems Controls", including approved manufacturers.
  - 1. Unless noted otherwise, control valves for reheat coils, cooling coils, chilled beams, fin tube radiation, and other terminal devices shall utilize 3-position floating point electronic actuators as specified for "TECs" in Related Section Mechanical Systems Controls.
    - a. Fail-last-position: Reheat and cooling coils; chilled beams.
    - b. Fail open (maximum heat): Fin tube.
    - c. Fail closed (zero heat): Reheat coils serving animal rooms or ventilated cage racks.

## 2.10 MISCELLANEOUS COMPONENTS

- A. Except as specified in this section, laboratory airflow controls shall be provided in compliance with the requirements of Related Section "Mechanical Systems Controls", including approved manufacturers.

## 2.11 POWER SUPPLIES

- A. Provide all necessary power supplies/control transformers, power distribution wiring, etc. for a complete operating system. This includes but is not limited to power supplies for lab airflow controls, sensors/transmitters, control valves, and network devices such as routers and servers.

*BELOW PARAGRAPH INDICATES THAT POWER SUPPLIES SHOULD BE INSTALLED ABOVE DOORS TO LABS. DESIGNATE THE LOCATION OF THIS EQUIPMENT ON THE DRAWINGS. WORK WITH ELECTRICAL ENGINEER TO DESIGNATE THE RECEPTACLE PANEL CIRCUITS TO FEED LAB CONTROL POWER SUPPLIES. DEPENDING ON LOAD, MULTIPLE POWER SUPPLIES MAY BE FED FROM A SINGLE 120 VAC CIRCUIT.*

- B. Install power supplies secured to a wall and mounted above the doors to labs, unless indicated otherwise. Utilize receptacle panel circuits designated for powering lab control power supplies.
- C. Provide power supplies for lab airflow controls in NEMA 1 metal enclosures, adequately ventilated to prevent overheating of the equipment, with exterior labeled "Laboratory Airflow Controls Power Supply", and listing the room numbers served. Maximum cabinet projection from wall shall be 8 inches. Label each secondary circuit inside the cabinet with the room number(s) served.
  - 1. Control transformers shall be rated NEC Class 2 and shall meet all the requirements and recommendations of the laboratory airflow controls manufacturer.
  - 2. No more than five pressurization zones shall be served from a single control transformer. No control transformer shall exceed 500 VA.

3. Each pressurization zone shall be powered by a dedicated (isolated) secondary circuit. Each secondary circuit shall include a disconnect switch, "power on" indicator, and be current limited with a slow blow fuse or circuit breaker.
  4. Provide a disconnect switch, with shielded terminations, for line side power (one per control transformer). Locate inside the power supply enclosure.
- D. Provide network power supplies of type and size recommended by LAC manufacturer.

**THE UPS SHOULD BE CONNECTED TO A STANDBY POWER CIRCUIT (EMERGENCY GENERATOR) WHEN STANDBY POWER IS AVAILABLE IN THE BUILDING. COORDINATE WITH ELECTRICAL ENGINEER.**

- E. Provide an uninterruptible power supply (UPS) for any server provided to allow communication to the BAS system.
1. Provide a UPS large enough to operate the server for a minimum of 5 minutes upon a loss of normal power.

#### **2.12 INTERFACE TO BUILDING AUTOMATION SYSTEM**

- A. The laboratory airflow control system network shall digitally interface with the BAS system. The interface to the BAS shall be BACnet over IP/Ethernet communications protocol or BACnet MS/TP.
- B. Every room-level point shall be available to the BAS for monitoring, trending and control, both inputs and outputs. The laboratory airflow controls system shall maintain a cache of all points to be monitored by the BAS. The room-level airflow control devices shall update this cache continually.
- C. Provide all equipment, including but not limited to routers, servers, software interface drivers, and network interface cards to allow communication between the laboratory airflow controls and the BAS.

**DESIGNER MUST INDICATE ON THE DRAWINGS, THE QUANTITY OF FIELD LEVEL NETWORKS CONNECTING LAB CONTROLS TO THE U-M BAS, AND THE LOCATIONS WHERE THE NETWORKS CONNECT TO U-M BAS. TYPICALLY THIS WILL BE AT BUILDING DDC PANELS. CONTACT THE U-M DESIGN MANAGER, WHO WILL OBTAIN A NETWORK RISER DIAGRAM FROM U-M PLANT DEPARTMENT FOR DESIGNER'S USE.**

1. The LCC is responsible for providing the entire network up to and including final network connection to Owner's BAS via connection to building direct digital controller or data closet location(s), as indicated on the drawings.
  - a. Owner will provide the BAS interface card where the lab control network connects to the Owner's DDC panel. All other network devices including termination at these cards shall be provided by the LCC.
2. Provide servers and routers specifically designed for the laboratory air flow controls network and recommended by the LAC manufacturer.

**NEXT PARAGRAPH SPECIFIES A "MACROSERVER" SERVER WHICH IS REQUIRED FOR PHOENIX HIGH SPEED APPLICATIONS, BUT IS NOT REQUIRED FOR ANY SIEMENS. MACROSERVER IS DEFAULT TO ASSURE A**

*LARGE POINT COUNT CAN BE ACCOMMODATED. PHOENIX "MICROSERVER" MAY BE APPROPRIATE IN SOME CASES WITH LIMITED POINT COUNTS AND WHERE IT IS UNLIKELY FUTURE LAB CONTROLS WILL BE LATER ADDED. FOR RENOVATIONS, A MACROSERVER MAY ALREADY EXIST. EDIT NEXT PARAGRAPH ACCORDINGLY.*

- a. Phoenix Controls: Provide Phoenix Controls "MacroServer".

*BELOW PARAGRAPH INDICATES THAT NETWORK DEVICES SHOULD BE INSTALLED ABOVE LAB DOORS AND IN ELECTRICAL CLOSETS. DESIGNATE THE LOCATION OF THIS EQUIPMENT ON THE DRAWINGS. LAC NETWORK EQUIPMENT SHOULD NOT BE INSTALLED IN BUILDING DATA CLOSETS DUE TO RESTRICTIONS ON THE PERSONNEL ALLOWED TO ACCESS DATA CLOSETS.*

- D. Install routers secured to a wall and mounted above the doors to labs, or where indicated. Install servers and server UPS in building electrical closets, or where indicated.
  - 1. Provide in a wall mounted metal enclosure, adequately ventilated to prevent overheating of the equipment, and separate from LAC power supply cabinets.
    - a. Routers may be mounted in LAC power supply cabinets.
    - b. Maximum cabinet projection from wall shall be 8 inches.
    - c. Label cabinets "Laboratory Airflow Controls Network" and with router/server tag number.
- E. Provide communication cable types, connectors, termination devices, and other accessories recommended specifically for the LAC networks by the LAC manufacturer.
- F. The Owner shall configure any BAS alarms, trending, or control commands at the BAS; LCC shall assist in trouble shooting the creation of such items for a period of one year after the final acceptance of the LAC system.

### **2.13 MISCELLANEOUS ELECTRICAL**

- A. Provide all wiring in conduit and J-hooks per Related Section Mechanical Systems Controls, except as noted below:
  - 1. Wiring between occupancy sensors and lab controls shall be run in conduit at all locations.
  - 2. J-hooks shall be painted bright white color.
  - 3. Conduit fittings and junction box covers shall be painted bright white. Alternative: Allied Tube True Color® EMT, color white, may be used in lieu of painted fittings and junction boxes.
- B. Provide 120 VAC wiring from receptacle panels to power supplies and to any other equipment associated with the laboratory airflow controls.
- C. All electrical work shall conform to Related Sections Division 26 and Mechanical Systems Controls. Maintain all NEC clearances.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Install all components in strict compliance with component manufacturers' recommendations.

*DESIGNER SHALL LAY OUT SHEET METAL DUCTWORK TO PROVIDE ONE STRAIGHT EQUIVALENT DUCT DIAMETER UPSTREAM OF THE INLET TO ALL LTAUS (REGARDLESS OF BASIS OF DESIGN MFR.).*

- B. Systems using air flow sensors (Siemens):
  - 1. Provide one straight equivalent duct diameter upstream of the inlet to the LTAU.
- C. Install fume hood monitors surface mounted on the front of the fume hood. Furnish exact cut-out dimensions to the fume hood factory to allow for concealed wiring to the monitor.
- D. Install the sash position sensors and sash travel limit brackets in a neat and workmanlike manner. Install cables and wires in a manner which avoids contact by the user during normal fume hood use, and allows horizontal and vertical sashes to be positioned in any combination without binding, twisting or tangling.
- E. Terminate wiring at all devices.
- F. No material shall be exposed if it is possible to conceal it. Exposed materials shall be installed only with consent of the Owner.
- G. Installation shall also comply with Related Sections Mechanical Systems Controls and Division 26.
- H. Install components so that they are easily accessible for service and in conformance with NEC clearance requirements.

*DESIGNER: NOTE THE PARAGRAPH BELOW AND INCLUDE U-M STANDARD DETAIL "SUPPLY AIR LTAU CLEARANCE" ON THE DESIGN DRAWINGS.*

- I. Install LTAUs with proper NEC clearances at LTAU mounted controls, including at actuators.

### **3.2 SYSTEM START-UP**

- A. Program, start-up, calibrate, and test all laboratory airflow controls.
- B. Program, start-up, and test integration to the BAS system.
- C. Adjust LTAU air volume to provide hood face velocity to within +/- 5% of required setpoint. Operate the lab airflow controls to assist the TAB Contractor in verifying that correct airflow rates and alarm settings are within +/- 5% tolerance..
  - 1. All adjustments to the LTAUs shall be done by the LCC, not the TAB contractor. TAB contractor shall take flow readings to verify the accuracy of these devices, only.

2. If LTAU air flow verification indicates calibration is not within +/- 5% tolerance, do not field adjust. Notify Owner and return to factory for recalibration.
- D. Unless indicated otherwise, set controls to maintain hood face velocities as follows:
1. VAV Hoods
    - a. To maintain 100 fpm (standard hoods) and 70 FPM (Reduced Face Velocity Hoods) for the entire sash travel, for all vertical and horizontal sash positions. Note: The LTAU's capacity may be insufficient to maintain the required air flow velocity through the entire travel of the sash as it is raised above the sash stop. Do not "clip" LTAU air flow, allow the LTAU to open as far as it can in an attempt to maintain face velocity.
      - 1) Hoods with Horizontal Sashes: Set controls to maintain the required face velocity with the sashes in the position that creates the maximum free area opening. Example:, If the sash has 4 horizontal sashes, the face velocity must be achieved with 2 sashes in the full open position (with the sash vertical position closed)
  2. CAV Hoods
    - a. To maintain 100 fpm (standard hoods) and 70 FPM (Reduced Face Velocity Hoods) at sash stop position.
- E. Set fume hood monitor alarms as follows:
1. Insufficient differential static pressure/air volume:
    - a. Face velocity 80 FPM (standard hoods) or 60 FPM (Reduced Face Velocity Hoods).
    - b. LTAU valve cone at maximum travel (VAV hoods).
  2. Sash above the sash stop position.
    - a. Time delay to re-alarm after silence button pushed: 10 minutes.
    - b. Alarm shall clear when sash returned to sash stop position or lower.
    - c. Floor mounted hoods: Alarm shall activate when any sash is above its sash stop position; time delay and alarm clear shall be same as above.
- F. Set other control parameters/alarms to comply with the laboratory airflow control drawings.

### 3.3 COMMISSIONING

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.
- B. Demonstrate that the laboratory controls perform per the sequence of operation and the design intent.
- C. Demonstrate every fume hood monitor alarm set point.
- D. Demonstrate that the laboratory airflow control system communicates properly to the BAS system, including:
  1. Every point specifically indicated on the drawings as to be monitored, logged, or controlled by the BAS.

2. For each pressure zone, a minimum of 10% of points. Specific points to be designated by the U-M Commissioning Authority (CxA).
  3. If more than 20% of the demonstrated points fail to communicate correctly, demonstrate that every point on the system communicates correctly to the BAS
- E. Demonstrate that UPS' support connected loads for the specified duration.
- F. Perform other demonstrations as may be required by the CxA.

#### **3.4 CLOSEOUT ACTIVITIES**

- A. Submit as-built documentation per article "Submittals". Obtain approval of as-built documentation prior to Owner training.
- B. Provide on-site training to Owner's maintenance personnel. Familiarize personnel with location of LTAUs, controllers, system components, power supplies, and network devices. Review the control concept for each lab and room type.

*9-28-04: MINOR CORRECTION*

*DECEMBER 2013: REVISED PART 1 TO MASTER SPEC TEMPLATE FORMAT. MOVED ITEMS IN PART 1 THAT BELONG IN PART 2. REVISED FUME HOOD MONITOR TO INCLUDE SASH ALARM, THE SAME AS REQUIRED FOR DDC LAB CONTROLS. REVISED 3.2 TO MATCH DDC LAB AIR FLOW CONTROLS SPEC. D. KARLE FOR HVAC MTT.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

*CAREFULLY VERIFY, EDIT AND COORDINATE RELATED SECTIONS.*

- B. Related Sections:

1. Section 115313: Laboratory Chemical Fume Hoods
2. Section 233300: Air Duct Accessories and RGDs
3. Section 230900: Mechanical Systems Controls
4. Section 230593: Testing, Adjusting, and Balancing (TAB)
5. Division 26: Electrical

**1.2 SUMMARY**

- A. Section Includes:

1. Laboratory Airflow Control (LAC) system, including controls for Laboratory Terminal Airflow Units (LTAUs), fume hoods, and other devices to control laboratory (or other specialized spaces) pressurization, temperature, and other functions as indicated.
2. Laboratory terminal airflow units.
3. Sound attenuators for LTAUs.

- B. The Laboratory Controls Contractor shall be a direct Subcontractor to the Contractor.

**1.3 REFERENCES**

- A. Abbreviations, Acronyms, Definitions (partial list)

1. Owner: The University of Michigan.
2. Laboratory: For the purposes of this specification, a broad designation for any space served by laboratory airflow controls.

**1.4 DIVISION OF WORK**

- A. As it relates to the extent of responsibility for work within this specification section, "provide" shall mean the identified party both furnishes and installs such item(s). "Furnish" shall mean the identified party furnishes the item to the project site for installation by others.

**IMPORTANT: DESIGNER SHALL CLEARLY DELINEATE ON THE PROJECT DRAWINGS WHICH SPACES ARE TO BE SERVED BY 230920 "LABORATORY AIRFLOW CONTROLS-DDC" (I.E. THIS SPECIFICATION) VERSUS 230900 "MECHANICAL SYSTEMS CONTROLS". MAKE A CLEAR DELINEATION ON THE CONTROL DRAWINGS. NORMALLY ANY SPACE UTILIZING LTAUS IS CONSIDERED LABORATORY CONTROL, BUT IN SOME CASES A SPACE MAY BE SERVED BY BOTH TYPES OF CONTROL (ANIMAL ROOMS ARE AN EXAMPLE WHERE THIS FREQUENTLY OCCURS). SUCH SPACES REQUIRE SPECIAL CARE TO INDICATE THE BOUNDARIES OF THE SPLIT.**

- B. The Laboratory Controls Contractor (LCC) shall provide a complete LAC system as described in this specification.
1. Any space designated as a laboratory, served by LTAUs, or where indicated, shall be provided with a LAC system.
  2. All items specified shall be provided by the LCC, including items specified in Related Sections, except where explicitly indicated otherwise.
  3. The LCC shall be an installer authorized by the laboratory controls manufacturer.
  4. Provide supervision and instruction to insure proper installation of all furnished laboratory control components.
  5. Furnish and install all control wiring and pneumatic tubing related to laboratory controls, including interconnection tubing and wiring to thermostats, switches, etc. Temperature Control Contractor (TCC) shall provide and install the control air main tubing to the lab area to be used by the LCC. TCC shall also provide and install all room level control components, including thermostats, control valves (on LTAU reheats, fin tube, chilled beams, etc.), switches, etc.
  6. Furnish and install differential pressure gauges at locations indicated on the drawings to indicate (visually) the room pressurization.
- C. The LCC shall furnish LTAUs and LTAU sound attenuators to the mechanical contractor. The mechanical contractor shall install in the duct work.
- D. The mechanical contractor shall provide reheat coils, duct transitions to connect to LTAUs/LTAU reheat coils, and all other components not specified in this specification section.

**1.5 COORDINATION**

- A. Provide supervision and instruction to insure proper installation of all laboratory airflow components installed by others.
- B. Coordinate work with Temperature Controls Contractor (TCC).
- C. Coordinate work with Air Balancing Contractor.
- D. Coordinate with Architectural Trades regarding location and exact dimensions of recessed components.
- E. Coordinate with laboratory equipment suppliers (fume hoods, etc.) regarding cut-out dimensions for alarm monitors and to assure proper accommodation is made for the installation of sash sensors and other devices related to laboratory airflow controls.

**1.6 ITEMIZED QUOTATION**

- A. The Laboratory Controls Contractor shall submit with bid, an itemized cost breakdown listing all major components, labor cost (including subcontractor labor and material cost), and engineering costs, for base bid and for each alternate, for the entire work scope of the Laboratory Controls. When requested, provide the itemized breakdown to the Owner post bid, for review and approval.

**1.7 SUBMITTALS**

- A. Submit the following for approval:
  - 1. A separate schematic drawing and wiring diagram for each laboratory room or zone, with sequence of operation. Indicate all set points and alarm settings.
  - 2. Equipment schedule for each room or zone, with the following information:
    - a. Equipment tag, room served, occupied/unoccupied min., max., and offset CFM.
    - b. Model number of each LTAU and control component.
    - c. Function of each LTAU and control component.
  - 3. Equipment data sheets indicating performance, wiring and tubing diagram, dimensions, weights, required clearances, component locations, and location and size of each field connection.
    - a. Data sheets shall be organized behind sheet tabs. Each sheet tab shall indicate the category or component name (i.e. LTAUs, controllers, sensors, etc.)
  - 4. Calibration certificate for each LTAU, certified by an officer of the manufacturer.
  - 5. Ductwork connection types and sizes.
  - 6. Wiring diagrams and locations of power supplies.
  - 7. Conduit and wire/cable data sheets.
  - 8. Octave band and A-weighted sound power data for each LTAU, with and without sound attenuators.
  - 9. Installation, operation, and maintenance instructions for each component. Include calibration method, calibration tolerance, inspection period, and cleaning method.
  - 10. As-built schematic drawings and wiring diagrams. Indicate set points, settings and adjustments of all components.

**1.8 DELIVERY, STORAGE AND HANDLING**

- A. Mark each LTAU before factory shipment with a unique identifier corresponding to the LTAU drawing schedule.
- B. Shipping and storage protection shall be provided by manufacturer to insure that the interior and exterior of components are completely protected from damage, dirt or weather. Components shall be continuously covered with plastic or other durable means, until just prior to installation. Maintain protection after installation to protect against on-going construction activities.

**1.9 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions unless noted otherwise.
  - 1. AMCA 610 Laboratory Method of Testing Airflow Measurement Stations for Performance Ratings.
  - 2. AHRI 880 Performance Rating of Air Terminals.
  - 3. NFPA 70 National Electric Code.
  - 4. NFPA 90A Installation of Air-Conditioning and Ventilating Systems.
  - 5. ASTM C916 Standard Specification for Adhesives for Duct Thermal Insulation.
  - 6. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials
  - 7. UL 916 Energy Management Equipment
  - 8. Components shall be Underwriters Laboratories (UL) or Intertek (ETL) listed.

**1.10 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of 3 years from the date of Substantial Completion.
- B. Provide 24 hour per day service during the warranty period, with a maximum response time from when service is requested of 4 hours.

**PART 2 - PRODUCTS**

**2.1**

- A. Acceptable Laboratory Controls Manufacturers:
  - 1. Phoenix Controls

**2.2 GENERAL**

- A. All control components except for pneumatic actuators shall be strictly analog electronic in nature.
- B. All laboratory airflow controls and laboratory terminal airflow unit system components shall be products of a single manufacturer.

**2.3 FUME HOOD MONITORS AND CONTROLS**

A. Monitors

- 1. Monitor shall include emergency exhaust control switch and LED (VAV hoods only), audible alarm, visual alarm, and alarm silence switch.
  - a. VAV system - Phoenix FHM430 Controller
  - b. CAV system - Phoenix FHM530 Controller
- 2. Normal operation and alarm conditions
  - a. The fume hood monitor shall provide an alarm indication for the following conditions.
    - 1) Insufficient differential static pressure as detected by the exhaust airflow LTAU pressure switch.
    - 2) Signal loss between the exhaust airflow LTAU and the fume hood monitor(VAV hoods only).
    - 3) Sash raised above sash stop position.
  - b. When an alarm condition is detected, audible and visual alarm indicators shall activate. Pushing the alarm silence button shall mute the alarm for an adjustable time delay, initially set at 10 minutes. Alarm shall re-sound after the time delay, until alarm condition clears. Visual alarm shall remain lit until alarm conditions clears.
    - 1) Sash position shall be sensed by using a vertical sash position sensor. Vertical sash position sensor shall be as specified under the article "VAV Fume Hood Controls".

B. VAV Fume Hood Controls

- 1. The fume hood controller shall use a sash position sensor to measure sash opening to proportionally control the hood's exhaust airflow. Controller shall maintain an "average" constant face velocity to +/- 5% tolerance at all sash positions.
- 2. Signal
  - a. The fume hood monitor shall receive the sash opening signals from the sash sensors. The monitor shall compute the total open sash area and then output an exhaust airflow control command signal to the appropriate exhaust airflow control device.
  - b. Vertical Sash Sensor

- 1) A vertical sash sensor shall be employed to measure the height of each vertically moving fume hood sash. The vertical sash sensor shall consist of a precision 10-turn potentiometer mechanically coupled to a constant tension spring reel. A stainless steel, vinyl coated cable shall be attached to the spring reel. Expected lifetime based on manufacturer's component data and tests shall be over 200,000 full height sash movements. Sash sensor shall be installed in an easily accessible location on the fume hood for service.
    - a) Phoenix VSS
  - c. Horizontal Sash Sensor
    - 1) A horizontal sash sensor shall be provided for each pair of horizontal or overlapping sashes that are located on horizontal, combination or walk-in sash fume hoods. The horizontal sash sensor shall consist of two long flat bars for each pair of overlapping sashes. The first bar shall contain a magnetic element to send magnetic flux to the second bar. The second bar shall contain a multitude of magnetic sensors spaced every .75" or less. The bars shall be mounted at the top of each sash, one per sash. As the two sashes slide past each other, the bars shall overlap to determine the total amount of sash opening.
      - a) Phoenix HSS
    - d. Combination Horizontal & Vertical Sash Sensor
      - 1) Provide the required combination of vertical and horizontal sash sensors as required by the types of fume hoods to be controlled.
        - a) Phoenix CSS
  3. Emergency Exhaust
    - a. An emergency exhaust capability shall be provided to override the sash sensor and command maximum exhaust airflow. A push-to-start, push-to-stop, push button switch shall initiate this mode.
  4. The fume hood control system shall respond to a step change in sash position by reaching 90% of the final position CFM value within 3 seconds with no more than a 5% overshoot or undershoot and with no noticeable oscillation.
- C. Mounting of Monitor
- a. Fume hood monitor shall be suitable for surface or fully recessed mounting on the front of the fume hood.

## 2.4 LABORATORY TERMINAL AIRFLOW UNITS (LTAU)

### A. Description

1. The laboratory terminal airflow unit (LTAU) shall be of venturi control type utilizing a cone shaped element. All LTAUs shall have an equal percentage flow characteristic to provide stable control at low flow values. Butterfly, opposed blade, or parallel blade style damper or VAV boxes are not acceptable.

B. Accuracy

1. LTAU accuracy shall be +/- 5% of reading regardless of duct inlet or exit configurations over a turndown range of no less than 8 to 1 and over a pressure range of 0.3" WG to 3.0" WG static pressure drop across the valve.

C. Construction

**EDITOR: IF VALVES OTHER THAN FUME HOOD VALVES (FOR EXAMPLE SNORKELS (THOUGH COATING IS NOT ALWAYS REQUIRED FOR SNORKELS)) NEED TO BE COATED VALVES, BE SURE TO INDICATE SO ON THE DRAWINGS.**

1. LTAUs shall be constructed of heavy gauge aluminum. All bearing surfaces related to the control of airflow shall be made of Teflon or Teflon coated aluminum.
2. Supply air LTAUs shall come factory insulated with minimum 3/8" thick flexible closed cell polyethylene insulation with a flame/smoke rating not to exceed 25/50, K value not to exceed 0.270 btu-in/hr-ft<sup>2</sup>-°F @ 75°F mean temperature, and a permeability maximum of 0.08 Dry Cup. Perm-In. Rubatex Therma-Cel, AP/Armaflex, or equivalent. Insulation shall be installed per mfg. recommendations using mfg. recommended adhesives and joint vapor barrier sealants.
3. LTAUs on fume hoods or as indicated on drawings shall be coated with at least two baked coats of Heresite P403 coating material. The shaft and other exposed metal parts shall be made of 316 stainless steel. Stainless steel shaft shall be Teflon coated.
4. LTAUs used on cage or rack washer equipment shall be coated with two coats on all surfaces, including body, cone, shaft and hardware. Coating shall be suitable to eliminate corrosion for each installation application.

D. Electronically Controlled LTAUs:

1. Description
  - a. Valves shall be pressure independent and use closed loop control to regulate air volume linearly proportional to a 0-10 volt DC analog electronic control signal. Valves shall also generate a 0-10 volt DC feedback signal linearly proportional to valve airflow for internal volume control, monitoring, or airflow tracking control. Signal shall be factory calibrated using NIST traceable instrumentation.
2. Actuator
  - a. A pneumatic actuator shall be factory mounted to the LTAU body to vary the position of the internal cone from its minimum to maximum flows. Provide electronic "stops" to set maximum and minimum controllable airflows. Loss of control signal or power shall cause the units to fail to the position indicated on drawings. Fail-in-last-position actuators are not acceptable.
3. Flow Measuring Devices
  - a. No electronic (hot wire, thermistor, etc.) flow measuring devices may be used.
4. Power Supply to LTAU

- a. Unless power supply is integral to a wall mounted control panel, provide a unit mounted power supply and disconnect switch on same side of LTAU as controller for each LTAU.
  - 5. Static Pressure Switch:
    - a. Fume hood exhaust LTAUs shall include a unit-mounted static pressure switch to sense and alarm on a reduction in airflow below set point. The switch shall operate by measuring the pressure drop across the unit's orifice.
- E. Pneumatically Controlled LTAUs:
  - 1. Description
    - a. LTAUs shall be pressure independent and shall have two factory calibrated min/max flow set points in the form of mechanical stops. Valves shall reposition between min/max flow set points based on a switched 0 to 20 psi pneumatic signal. Where required, LTAU shall generate a 0 to 10 volt feedback signal linearly proportional to LTAU airflow. Signal shall be factory calibrated to a stated CFM per volt scale factor using NIST traceable instrumentation.
  - 2. Actuator
    - a. A pneumatic actuator shall be factory mounted to the unit body to vary the position of the internal cone from its minimum to maximum flows. Loss of pneumatic supply air shall cause the units to fail to the position indicated on the drawings. Fail-in-last-position actuators are not acceptable.
  - 3. Flow Measuring Device
    - a. No electronic (hot wire, thermistor, etc.) flow measuring devices may be used.
- F. Constant Volume Airflow Control Valves:
  - 1. Valve Description:
    - a. Valve shall be pressure independent and shall maintain a constant volume set point. Valves shall be factory calibrated, NIST traceable and set for the desired airflow rate. Valves shall also be field adjustable to allow for future changes of airflow rate.

**2.5 VAV FUME HOOD ROOM CONTROLLER**

- A. Make-up/supply air and exhaust air controller shall control the airflow balance of the laboratory. The controller shall be unit mounted or wall mounted, as indicated on drawings. If no indication is given on drawings, provide wall-mounted controller.
- B. Controller shall maintain a constant offset (adjustable) between the sum of the room's total exhaust and the make-up/supply air volumes. This offset shall represent the volume of air that will transfer to or from the corridor or other adjacent rooms.
- C. The controller shall generate signals linearly proportional to the airflow of each exhaust LTAU as indicated by the calibrated input signals. Similar outputs signals shall also be provided for the supply, other general exhaust (where appropriate), and total exhaust airflow volume signals.

- D. An integral power supply for each wall-mounted controller shall power the complete laboratory airflow control system from one (1) 120 volt AC line connection. Provide a labeled disconnect switch at each 120 volt AC connection. Locate switch above ceiling.

**2.6 ENHANCED TRACKING CONTROL SYSTEM**

*EDITOR: ENHANCED TRACKING CONTROL REQUIRES MORE EXPENSIVE VALVES FOR PHOENIX SYSTEMS (AND FOR PHOENIX IS TYPICALLY CHARACTERIZED BY "MAV" AND "EXV" VALVE COMBINATIONS) AND IS TYPICALLY USED ONLY IN VAV FUME HOOD APPLICATIONS OR WHERE THERE IS A HIGH PROBABILITY VAV FUME HOODS WILL BE USED IN THE FUTURE. SINCE IT REQUIRES MORE EXPENSIVE PHOENIX VALVES IT SHOULD NOT BE INDISCRIMINATELY SPECIFIED BY THE DESIGNER OR ACCEPTED FROM PHOENIX.*

- A. Tracking controller shall control the operation of electronically controlled supply, exhaust, or return air LTAUs to provide proper room pressurization and airflow balance. Provide this system only when specifically indicated on the design drawings, and where VAV type fume hoods are indicated.
- B. The tracking controller shall be unit mounted and shall accept one input signal (multiple sources summed as one input) and produce one output signal.
- C. Tracking controller shall maintain a constant offset between the room's exhaust (return) and make-up/supply volumes. This offset shall be electronically adjustable.
- D. It shall be possible to electronically scale and calibrate the input and output signals. Both the minimum and maximum value of the tracking airflow shall be separately adjustable.

**2.7 STANDARD TRACKING CONTROL SYSTEM**

*EDITOR: STANDARD TRACKING CONTROL CAN BE USED FOR MOST APPLICATIONS AND FOR PHOENIX IS TYPICALLY CHARACTERIZED BY "BSV" AND "EXV" VALVE COMBINATIONS.*

- A. Tracking controller shall control the operation of supply, exhaust, or return air LTAUs to provide proper room pressurization and airflow balance. Provide this system unless specifically noted otherwise on the drawings. One LTAU within the system shall be electronically controlled; the other shall be pneumatically controlled with a feedback potentiometer.
- B. The tracking controller shall be unit mounted and shall accept one input signal (multiple sources summed as one input) and produce one output signal.
- C. Tracking controller shall maintain a constant offset between the room's exhaust (return) and make-up/supply volumes.
- D. Both the minimum and maximum value of the tracking airflow shall be separately adjustable.

**2.8 LABORATORY TERMINAL AIRFLOW UNIT SOUND ATTENUATOR**

*EDITOR: DESIGNER SHALL PROVIDE PERFORMANCE DATA FOR THE SOUND ATTENUATORS ON THE DRAWINGS. DESIGNER MUST SPECIFICALLY INDICATE WHERE ATTENUATORS ARE REQUIRED. DESIGNER SHALL REVISE SPEC SECTION REFERENCE BELOW, IF REQUIRED.*

- A. Sound attenuator shall be furnished by the LTAU manufacturer. Attenuator shall be properly matched to each individual LTAU to meet sound performance as scheduled. Provide packless type stainless steel attenuators for all fume hood and "wet" exhaust applications. Provide attenuators only where specifically indicated.
- B. Refer to other Division 23 sections for additional attenuator specifications.

**2.9 FUME HOOD CALIBRATION BLAST GATE**

- A. Refer to other Division 23 sections for specifications for the blast gate used for low flow alarm calibration.

**2.10 HOOD OCCUPANCY SENSOR**

- A. Provide manufacturer' standard occupancy sensors when specifically indicated on the drawings.

**2.11 DIFFERENTIAL PRESSURE GAUGE**

- A. Provide where indicated. Dwyer Series 2000 Dual Scale (-0.25" to 0.25" W.G.)
- B.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Install the fume hood monitor fully recessed on the front of the fume hood.
- B. Furnish fume hood monitor mounting bracket and exact cut-out dimensions to the fume hood factory to allow for a fully recessed field installation.
- C. Install the sash position sensors and sash travel limit brackets in a neat and workmanlike manner. Install cables and wires in a manner which avoids contact by the user during normal fume hood use, and which allows both the horizontal and vertical sashes to be opened and closed in any combination without binding, twisting or tangling.
- D. Install the wall-mounted controllers in a neat and workmanlike manner, fully recessed in the locations indicated on the drawings. Rough-in conduit and tubing connections to the panel so that they are concealed in the wall.

- E. Pneumatic tubing shall be furnished and installed in accordance with the requirements of Temperature Controls Section.
- F. Electrical wiring and conduit shall be furnished and installed in accordance with the requirements of the Division 26 Specifications.
- G. No more than ten (10) LTAUs shall be served from one (1) power supply.
- H. Conduit fittings and junction box covers shall be painted bright orange.

**3.2 VERIFICATION OF FUME HOODS FACE VELOCITIES AND ALARMS**

- A. Program, start-up, calibrate, and test all laboratory airflow controls.
- B. Adjust LTAU air volume to provide hood face velocity to within +/- 5% of required setpoint. Operate the lab airflow controls to assist the TAB Contractor in verifying that correct airflow rates and alarm settings are within +/- 5% tolerance.
  - 1. All adjustments to the LTAUs shall be done by the LCC, not the TAB contractor. TAB contractor shall take flow readings to verify the accuracy of these devices, only.
  - 2. If LTAU air flow verification indicates calibration is not within +/- 5% tolerance, do not field adjust. Notify Owner and return to factory for recalibration.
- C. Unless indicated otherwise, set controls to maintain hood face velocities as follows:
  - 1. VAV Hoods
    - a. To maintain 100 fpm (standard hoods) and 70 FPM (Reduced Face Velocity Hoods) for the entire sash travel, for all vertical and horizontal sash positions. Note: The LTAU's capacity may be insufficient to maintain the required air flow velocity through the entire travel of the sash as it is raised above the sash stop. Do not "clip" LTAU air flow, allow the LTAU to open as far as it can in an attempt to maintain face velocity.
      - 1) Hoods with Horizontal Sashes: Set controls to maintain the required face velocity with the sashes in the position that creates the maximum free area opening. Example:, If the sash has 4 horizontal sashes, the face velocity must be achieved with 2 sashes in the full open position (with the sash vertical position closed)
  - 2. CAV Hoods
    - a. To maintain 100 fpm (standard hoods) and 70 FPM (Reduced Face Velocity Hoods) at sash stop position.
- D. Set fume hood monitor alarms as follows:
  - 1. Insufficient differential static pressure/air volume:
    - a. Face velocity 80 FPM (standard hoods) or 60 FPM (Reduced Face Velocity Hoods).
    - b. LTAU valve cone at maximum travel (VAV hoods).
  - 2. Sash above the sash stop position.

- a. Time delay to re-alarm after silence button pushed: 10 minutes.
  - b. Alarm shall clear when sash returned to sash stop position or lower.
  - c. Floor mounted hoods: Alarm shall activate when any sash is above its sash stop position; time delay and alarm clear shall be same as above.
- E. Set other control parameters/alarms to comply with the laboratory airflow control drawings.
- F.

**3.3 IDENTIFYING AND MARKING**

- A. Each LTAU shall be marked before shipment to the job site with a unique identifier corresponding to its location and function in the building. This identifier shall correspond to the plans and the shop drawings and shall be as approved by the owner. Additionally, the final (i.e. as finally set in the field) maximum and minimum CFM settings shall be marked on the LTAU.

**3.4 OWNER INSTRUCTION AND TRAINING**

- A. Provide on-site training and instruction to Owner's maintenance personnel. Familiarize personnel with location of LTAUs, controllers and system components and review the general control concept for each lab and room type.

**3.5 COMMISSIONING**

- A. The Laboratory Controls Contractor shall perform commissioning services on all equipment provided as part of the work of this section.
- B. Verification testing of each system component shall be made on an individual component basis. Each component shall be tested and verified at its extreme operating range, as well as its normal operating range. Verify operation of all alarms.

SECTION 230930 - REFRIGERANT DETECTION AND ALARM

**END OF CONTENTS TABLE**

**DIVISION 23**

**SECTION 230930 - REFRIGERANT DETECTION AND ALARM**

*REMOVED THE STATEMENT THAT U-M PROVIDES THE REFRIGERANT MONITOR AND CALIBRATES IT. PART 1 UPDATED TO THE CURRENT U-M MASTER SPEC FORMATTING TEMPLATE. PART 2 UPDATED TO PROVIDE TECHNICAL DETAIL ON REFRIGERANT MONITORS. PART 3 UPDATED TO REQUIRE FINAL SETUP AND CALIBRATION OF MONITOR BY A FACTORY SERVICE REP. D. KARLE FOR HVAC MTT OCT. 2014*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including Standard General Conditions, Supplemental General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, apply to this Section.
- B. Related Sections:
  - 1. Section 018113 - Sustainable Design Requirements
  - 2. Section 019110/019100 - Commissioning
  - 3. Section 221113- Piping Materials and Methods
  - 4. Section 220500 - Common Work Results for Mechanical
  - 5. Section 230900 - Mechanical Systems Controls
  - 6. Division 26: Electrical.

**1.2 SUMMARY**

- A. Refrigerant monitor/controller and accessories for detecting refrigerant leaks, controlling equipment, and providing local and remote alarms.

**1.3 SUBMITTALS**

- A. Product Data: Include manufacturer, catalog illustrations, model, rated capacities, performance, dimensions, component sizes, rough-in requirements, materials of construction, and operating and maintenance clearance requirements. Additionally include:
  - 1. Project specific wiring diagram indicating inputs and outputs to the refrigerant monitor/controller.
  - 2. Installation, operation, and maintenance instructions for all devices.

**1.4 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.

1. Michigan Mechanical Code.
2. ASHRAE Standard 15: Safety Standard for Refrigeration Systems (ANSI Approved).
3. ASHRAE Standard 34: Designation and Classification of Refrigerants.
4. UL 2075: UL Standard for Safety Gas and Vapor Detectors and sensors.

**1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Store materials and accessories raised off the floor or ground on pallets and protected with coverings to prevent damage or contamination due to weather and construction activities. Provide temporary protective caps on pipe or tubing ends. Store in areas that prevent damage due to freezing and extreme temperatures or sunlight. Protect from damage, dirt and debris at all times.

**1.6 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

*DESIGNER TO PROVIDE REFRIGERANT DETECTION, ALARM, AND VENTILATION SYSTEM THAT COMPLIES WITH ASHRAE STANDARD 15 AND THE BUILDING CODE. PROVIDE A CONTROL DRAWING INDICATING THAT THE REFRIGERANT MONITOR PLACES THE MACHINERY ROOM INTO THE CODE REQUIRED VENTILATION MODE UPON DETECTION OF A REFRIGERANT LEAK. INDICATE THE NUMBER AND LOCATION OF WARNING ANNUNCIATORS AND LIGHTS THAT ARE ACTIVATED WHEN A REFRIGERANT LEAK IS DETECTED, AND THE WARNING SIGN NOMENCLATURE. INDICATE A COMMON ALARM TO OWNERS DDC, TO ACTIVATE AT A WARNING LEVEL, AND AT THE TLV-TWA ALARM LEVEL FOR THE REFRIGERANT. BE SURE TO INDICATE THE REFRIGERANT TYPE(S) TO BE DETECTED, IN THE DESIGN DOCUMENTS.*

*DESIGNER TO SELECT CHILLGARD RT OR LE-SERIES. LE MAY NOT BE APPROPRIATE FOR AMMONIA SYSTEMS DUE TO 20 PPM MINIMUM DETECTION LIMIT.*

**2.1 REFRIGERANT MONITOR (CHILLGARD-RT)**

- A. Provide Chillgard RT photoacoustic infrared technology refrigerant monitor and controller by MSA, capable of detecting the refrigerant types in the machinery room.
  1. Minimum detection limit: ±1 ppm
  2. Accuracy: 0-50 ppm, ±1 ppm; 51-1000 ppm, ±10% of reading
  3. 4-20mA isolated output indicating refrigerant concentration
  4. Manual alarm reset
  5. Capable of sensing up to 8 locations
  6. Maximum sampled tube length (3/16" I.D. tube): 500 feet
  7. 120 VAC power supply
- B. Provide remote relay modules and a multipoint sequencer, to accomplish the design intent expressed in the contract documents.

- C. Provide minimum 3/16" I.D. rigid copper tubing with compression joints for sensing and exhaust tubes, with end-of-line filters of type recommended by MSA. Provide stainless steel tubing for ammonia refrigerant detection.

**2.2 REFRIGERANT MONITOR (CHILLGARD-LE SERIES)**

- A. Provide Chillgard LE photoacoustic infrared technology refrigerant monitor and controller by MSA, capable of detecting the refrigerant types in the machinery room.
  - 1. Minimum detection limit: ±20 ppm
  - 2. Accuracy: 20-100 ppm, ±5 ppm; 100-1000 ppm, ±6% of reading
  - 3. 4-20mA isolated output indicating refrigerant concentration
  - 4. Manual alarm reset
  - 5. Capable of sensing up to 4 locations
  - 6. Maximum sampled tube length (1/8" I.D. tube): 300 feet
  - 7. 120VAC power supply
- B. Provide remote relay modules and a multipoint sequencer, to accomplish the design intent expressed in the contract documents.
- C. Provide minimum 1/8" I.D. rigid copper tubing with compression joints for sensing and exhaust tubes, with end of line filters of type recommended by MSA. Provide stainless steel tubing for ammonia refrigerant detection.

**2.3 ACCESSORIES**

- A. Provide alarm strobe lights and horns, quantity as indicated, compatible with the refrigerant monitor. Horns shall be minimum 100 dB.
- B. Provide all wiring, conduit, additional relays, etc., required to allow the refrigerant monitor to activate the machinery room ventilation system, alarm lights, and horns, and to signal the Owner's DDC system.
- C. Provide all indicated signage.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Install refrigerant monitor, strobes, horns, and sensing lines per manufacturers recommendations.
- B. Mount strobes and horns adjacent to one another, in locations easily visible from the machinery room floor.
- C. Screw signs to mounting surfaces.

**3.2 FIELD QUALITY CONTROL**

- A. Provide a factory trained service technician to perform start-up services. The service technician shall perform the following:
  - 1. Verify correct installation of the monitor.

2. Perform set-up and calibration of the monitor. Calibrate monitor using a NIST traceable test mixture, and demonstrate an error of no larger than plus or minus 5 PPM. Attached a calibration sticker on the monitor listing date of calibration and calibration details.
3. Participate in the commissioning of the refrigerant monitor system.
4. Provide a written service report prepared on site and submitted at the time of the service visit (with copies immediately provided to the Owner and Commissioner). Report shall indicate services provided and list all controller settings and alarm setpoints.

### 3.3 COMMISSIONING

- A. Perform the commissioning activities as outlined in the Division 1 Section titled Commissioning and other requirements of the Contract Documents.

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
SECTION 231113 - FUEL OIL SYSTEMS

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 231113 - FUEL OIL SYSTEMS**

**REVISIONS:**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. This Section includes fuel oil piping system and equipment, including:
  - 1. Piping, fittings, and specialties.
  - 2. Oil transfer equipment.
  - 3. Oil storage tanks and accessories.

**SPEC EDITOR: LIST ONLY MATERIALS IN THIS PROJECT WHICH THE READER MAY EXPECT TO FIND IN THIS SECTION. VERIFY THAT LISTED SECTIONS ARE INCLUDED IN THIS PROJECT SPECIFICATION AND THAT THEIR TITLES ARE CORRECTLY INDICATED HERE.**

**1.3 DEFINITIONS**

- A. Pipe sizes used in this Specification are Nominal Pipe Size (NPS).

**1.4 QUALITY ASSURANCE**

- A. Qualify welding processes and welding operators in accordance with ASME "Boiler and Pressure Vessel Code," Section IX, "Welding and Brazing Qualifications."
- B. Regulatory Requirements: Comply with provisions of the following codes:
  - 1. NFPA 31 - Standard for the Installation of Oil Burning Equipment, for oil piping materials and components, oil piping installations, and inspection, and testing of fuel oil piping systems.

**SPEC EDITOR: MODIFY BELOW BY SUBSTITUTING PLUMBING CODE ENFORCED BY THE AUTHORITY HAVING JURISDICTION. INSERT THE EDITION IN FORCE.**

- 2. BOCA Basic National Mechanical Code.
- C. UL Compliance: Provide fuel oil piping components and storage tanks which are listed and labeled by UL.

1.5 SEQUENCING AND SCHEDULING

- A. Coordinate the size and location of concrete ballast pads and fill and sounding boxes for underground storage tanks, and housekeeping equipment pads for oil transfer pumps. Cast anchor bolt inserts into pad. Concrete reinforcement and formwork requirements are specified in Division 3.

1.6 WARRANTY

*SPEC EDITOR: BE CAUTIOUS NOT TO REDUCE THE PROTECTION THE OWNER MIGHT OTHERWISE BE ENTITLED TO, BY INCLUDING UNINFORMED REQUIREMENTS FOR WARRANTIES. SEE EVALUATIONS AND DIVISION 1 SECTION "WARRANTIES AND BONDS."*

*SPEC EDITOR: RETAIN THIS ARTICLE WHEN SPECIFYING STEEL TANKS WITH STI-P3 CATHODICALLY PROTECTED TANKS.*

- A. Special Product Warranty: Submit a written warranty for the underground fuel oil storage tanks, executed by the manufacturer, agreeing, at the manufacturer's option, to repair the failure, replace the failed tanks limited to delivery of new tank to the site of original installation, or refund the original purchase price of the tanks, provided the tanks are installed in accordance with the manufacturer's instructions. Warranty shall protect the Owner for a period of 30 years from the date of original purchase, against structural failures of the tanks, including cracking, breakup, or collapse; and failure of the tanks due to external corrosion, and internal corrosion when the tanks are used for storage of fuel oils at temperatures not exceeding 150 deg. F. This warranty shall be in addition to, and not a limitation of, other rights the Owner may have against the Contractor under the Contract Documents.

*SPEC EDITOR: USE THE ARTICLE BELOW WHEN SPECIFYING GLASS-FIBER REINFORCED PLASTIC TANKS.*

- B. Special Project Warranty: Submit a written warranty for the underground fuel oil storage tanks, executed by the manufacturer, agreeing, at the manufacturer's option, to repair the failure, replace the failed tanks limited to delivery of new tank to the site of original installation, or refund the original purchase price of the tanks, provided the tanks are installed in accordance with the manufacturer's instructions. Warranty shall protect the Owner for a period of 30 years from the date of original purchase, against failure of the tanks due to external corrosion, and internal corrosion when the tanks are used for storage of fuel oils at temperatures not exceeding 150 deg. F. This warranty shall be in addition to, and not a limitation of, other rights the Owner may have against the Contractor under the Contract Documents.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Vertical Ball Check Valves:
  - 1. Keystone
  - 2. Milwaukee
  - 3. Grinnell
  - 4. APCO
  - 5. Crane
  - 6. Stockham
  
- B. Strainers:
  - 1. Armstrong Machine Works.
  - 2. Hoffman Specialty ITT; Fluid Handling Div.
  - 3. Metraflex Co.
  - 4. R-P&C Valve; Div. White Consolidated Industries, Inc.
  - 5. Spirax Sarco.
  - 6. Trane Co.
  - 7. Victaulic Co. of America. (low pressure applications only)
  - 8. Watts Regulator Co.
  
- C. Oil Transfer Pumps:
  - 1. ITT Marlow.
  - 2. Roper Pump Co.
  - 3. Viking Pump Div.; Houdaille Industries, Inc.
  - 4. Webster Electric Co; Sub. of Sta-Rite Industries, Inc.
  
- D. Oil Piping Specialties:
  - 1. McDonald Mfg. Co., A.Y.
  - 2. OPW Division; Dover Corp.
  
- E. Steel Underground Oil Storage Tanks:
  - 1. Adamson Co., Inc.
  - 2. Buffalo Tank, Div. Bethlehem Steel Corp.
  - 3. Highland Tank & Mfg. Co.
  - 4. Modern Welding Co., Inc.
  
- F. Glass Fiber Reinforced Plastic Underground Oil Storage Tanks:
  - 1. Lifetime Fiberglass Tank Co.
  - 2. Owens-Corning Fiberglas Corp.
  - 3. Xerxes Fiberglass Inc.

**2.2 PIPE AND TUBE MATERIALS**

***SPEC EDITOR: SELECT ONE - ANNEALED COPPER IS NOT TO BE USED INDOORS.***

- A. Steel Pipe: ASTM A 120, Schedule 40, seamless, black steel pipe, with beveled ends, with threaded joints and fittings for 2 inch and smaller, and with welded joints for 2-1/2 inch and larger.

- B. Copper Tubing: ASTM B 88, Type L, hard drawn copper tubing with wrought copper fittings and brazed joints for 2 inch and smaller, above ground, within building. Use Type K, annealed copper tubing for 2 inch and smaller without joints, for underground installations.

### 2.3 FITTINGS

*SPEC EDITOR: FITTINGS BELOW ARE ALSO AVAILABLE IN CLASS 250.*

- A. Cast-Iron Threaded Fittings: ANSI B16.4, Class 125, standard pattern, for threaded joints. Threads shall conform to ANSI B1.20.1.

*SPEC EDITOR: FITTINGS BELOW ARE ALSO AVAILABLE IN CLASS 300.*

- B. Malleable Iron Threaded Fittings: ANSI B16.3, Class 150, standard pattern, for threaded joints. Threads shall conform to ANSI B1.20.1.
- C. Steel Fittings: ASTM A 234, seamless or welded, for welded joints.
- D. Wrought-Copper Fittings: ANSI B16.22, streamlined pattern.

*SPEC EDITOR: FLANGES BELOW ARE ALSO AVAILABLE IN CLASS 250.*

- E. Cast-Iron Threaded Flanges: ANSI B16.1, Class 125; raised ground face, bolt holes spot faced. Threads shall conform to ANSI B1.20.1.

*SPEC EDITOR: BELOW FLANGES AND FITTINGS ARE AVAILABLE IN SEVERAL CLASSES, MATERIALS, FACINGS, AND END CONNECTIONS. VERIFY WITH PROJECT REQUIREMENTS.*

- F. Steel Flanges and Flanged Fittings: ANSI B16.5, including bolts, nuts, and gaskets of the following material group, end connection and facing:
  - 1. Material Group: 1.1.
  - 2. End Connections: Butt Welding.
  - 3. Facings: Raised face.

### 2.4 JOINING MATERIALS

- A. Brazing Filler Metals: AWS A5.8, Classification BAgl (silver).
- B. Gaskets for Flanged Joints: Gasket material shall be full-faced for cast-iron flanges and raised-face for steel flanges. Select materials to suit the service of the piping system in which installed and which conform to their respective ANSI Standard (A21.11, B16.20, or B16.21). Provide materials that will not be detrimentally affected by the chemical and thermal conditions of the fluid being carried.

**2.5 PIPING SPECIALTIES**

- A. Y-Pattern Strainers: 125 psig working pressure; cast-iron body conforming to ASTM A 126, Class B; flanged ends for 2-1/2 inch and larger, threaded connections for 2 inch and smaller, bolted cover, perforated stainless steel screen, and plugged blow-down drain.

*SPEC EDITOR: THE FOLLOWING ARE FOR 1-1/2 INCH PIPE AND SMALLER.*

- B. Flexible Connectors: minimum 150 psig working pressure, maximum 250 deg F operating temperature; stainless steel bellows with woven flexible bronze wire reinforcing protective jacket. Connectors shall have flanged or threaded end connections to match equipment connected; and shall be capable of 3/4 inch misalignment.

**2.6 GENERAL DUTY VALVES**

- A. General duty valves (i.e., gate, globe, ball, and butterfly valves) are specified in Division 22 Section "Valves". Special duty valves are specified in this Article by their generic name. Refer to Part 3 below, Article "VALVE APPLICATION" for specific uses and applications for each valve specified.

**2.7 SPECIAL DUTY VALVES**

*SPEC EDITOR: INTEGRAL RELIEF VALVE ON OIL TRANSFER PUMP MAY BE SUFFICIENT TO ELIMINATE INLINE SAFETY RELIEF VALVES.*

- A. Oil Safety Valves: 250 psig maximum working pressure, 550 deg. F. maximum operation temperature; ASTM B 61 bronze body and bronze bases and discs, and field adjustable cadmium-plated carbon steel springs factory-set at 20 percent above operating pressure. End connections shall be inside threaded with threads conforming to ANSI B1.20.1. Valve shall be UL-listed for flammable or volatile liquids.
- B. Vertical Ball Check Valves: Class 200, 400 psig maximum operating pressure, 2-piece bronze construction with threaded end connections; integral bronze seats and replaceable stainless steel ball.

**2.8 FUEL OIL TRANSFER PUMPS AND ACCESSORIES**

*SPEC EDITOR: CAPACITY IN GPM MAY BE PRESENTED IN A SCHEDULE IF THERE ARE SEVERAL PUMPS WITH VARIOUS CAPACITIES, OR MAY BE SPECIFIED HERE. ALSO AVAILABLE WITH FLANGE MOUNTING MANY OPTIONAL FEATURES AVAILABLE TO SUIT UNIQUE PROJECT REQMTS, CONSULT MFR LITERATURE.*

- A. General Description: single-stage, positive displacement rotary type, with the following features and accessories; foot-mounted, cast-iron housing, steel gears, bronze bearings, steel shaft, standard mechanical seals; built-in pressure relief bypass; steel base; and drive coupling. Provide pumps with capacities and electrical characteristics as scheduled for number 2 or 3 fuel oil. Pumps shall be constructed in accordance with UL 343, and be UL-listed and bear the UL label.

**SPEC EDITOR: SELECT FROM THE FOLLOWING 2 DRIVE OPTIONS.**

- B. Drive: V-belt drive, with belt guard.
- C. Drive: direct drive, close coupled.
- D. Motor: Split phase for single-phase motors; capacitor-start, induction-run, totally enclosed for 3-phase motors.

## 2.9 STEEL UNDERGROUND STORAGE TANKS AND ACCESSORIES

**SPEC EDITOR: SELECT ONE OF 2 OPTIONS BELOW. INDICATE SIZE AND CAPACITY ON THE DRAWINGS.**

- A. General Description: single-wall factory-fabricated and tested, cathodically-protected, and bearing UL and sti-P3 labels. Fabricate wall and headers using hot-rolled carbon steel plates or sheets, as specified in UL 58. Size and capacity as indicated.
- B. General Description: double-wall, factory-fabricated and tested, cathodically-protected, and bearing UL and sti-P3 labels. Fabricate inner and outer walls and headers using hot-rolled carbon steel sheets or plates, as specified in UL 58. Size and capacity as indicated.
- C. Fabrication: Tanks shall be fabricated for operation at atmospheric pressure; to store liquids with specific gravities up to 1.1, and with maintained temperatures of up to 150 deg. F. Fabricate shell and head joints, lifting lugs, manholes, masonry supports, and pipe connections in accordance with UL 58. Fabricate tanks for the following internal and external loads:
  - 1. External Hydrostatic Pressure: 3'-0" depth of bury from top of tank and hole fully flooded; withstand general buckling with safety factor of 2:1.
  - 2. Surface Loads: H-20 axle loads when installed in accordance with manufacturer's installation instructions.
- D. Tank Fittings and Accessories: Provide storage tank with the following factory-installed fittings and accessories:

**SPEC EDITOR: INCLUDE TANK DETAILS ON DRAWINGS INDICATING LOCATION OF FITTINGS. FLANGED FITTINGS ARE ALSO AVAILABLE.**

- 1. Tank Manhole: 24 inch diameter, bolted, flanged, and gasketed manhole, with extension collar, for access to inside of tank.
- 2. Threaded pipe connection fittings on top of tanks, for fill, supply, return, vent, gages, heating coils, and hot-well in locations and of sizes as indicated. Provide cast-iron plugs for shipping.

3. Anchor Straps: Provide manufacturer's standard anchoring system (straps, cables, turnbuckles, etc.) with the strength of at least 1-1/2 times the maximum uplift force of the empty tank without backfill in place.
4. Lifting Lugs: Provide lifting lugs to facilitate handling and installation.

**SPEC EDITOR: IF PARAGRAPH BELOW IS RETAINED, INDICATE LADDER LOCATION ON TANK DETAIL ON DRAWINGS.**

5. Ladders: Provide carbon steel ladder inside tank, anchored to top and bottom, and located as indicated.
6. Masonry Supports: (2) 6" x 6" x 3/8" steel angles 6' - 0" long located longitudinally on each side of the manhole and continuously welded in place.

**SPEC EDITOR: SELECT FROM 2 OPTIONS BELOW, BUT ONLY FOR HEAVY OIL STORAGE TANKS. HOT-WELLS ARE USED IN SOME AREAS IN LIEU OF HEATING COILS FOR HEAVY OIL. EDIT AS DESIRED. SCHEDULE HEATING CAPACITY OR INDICATE ON DRAWINGS.**

7. Heating Coils: Provide heating capacity as scheduled. Coils shall be continuous spiral having a 3 inch slope, made of Type K soft annealed copper with no joints within the tank.
8. Hot-Wells: Provide 8 inch diameter hot-well extending from 4 inch above tank top to 4 inch above tank bottom. Provide tappings above tank for connection of oil suction and return piping. Provide 2 inch hole in well, just below top of tank, for venting.
9. Supply Tube: Provide extension of transfer pump suction line fitting into tank, terminating 6 inch above tank bottom and cut at 45 degree angle.
10. Vent Cap: cast iron threaded tee inlet; 40 mesh brass wire cloth screen.
11. Fill Box: Flush heavy duty, waterproof, cast iron body and top cap, and brass inner cap with lock with key wrench.
12. Remote Oil Gages: Balanced hydraulic type providing a true volumetric indication. Gage volume range to suit capacity storage; UL-listed and labeled.

**SPEC EDITOR: RETAIN ONLY ONE OF THE 3 PARAGRAPHS BELOW, DEPENDING UPON REQUIREMENTS WITHIN YOUR LOCAL AREA. AUTHORITY HAVING JURISDICTION MAY WAIVE THE REQUIREMENTS FOR CORROSION PROTECTION WHERE EVIDENCE IS PROVIDED THAT SUCH PROTECTION IS NOT NECESSARY.**

- E. Corrosion Protection System: Tanks and their piping shall be protected by a properly engineered, installed, and maintained corrosion protection system in accordance with the Steel Tank Institute of Standard No. sti-P3 "System for External Corrosion Protection of Underground Steel Storage Tanks." Provide means monitoring cathodic protection by either "Protection Prover 1" or "Protection Prover 2" monitoring system.

## 2.10 SOURCE QUALITY CONTROL

- A. Perform tests at the factory after fabricating and prior to shipment in accordance with sti-P3.

**2.11 GLASS-FIBER-REINFORCED POLYESTER UNDERGROUND STORAGE TANKS**

- A. General Description: double-wall factory-fabricated and tested, in conformance with ASTM D 4021; bearing UL label. Tanks shall be designed to be vented and operated at atmospheric pressure; designed to store liquids with specific gravities up to 1.1, and with maintained temperatures of up to 150 deg F; and shall be chemically inert to petroleum being stored, plus their additives.

**SPEC EDITOR: COORDINATE ELECTRICAL CONNECTIONS.**

- B. Hydrostatic Monitoring System: Include a brine antifreeze solution, UL listed reservoir sensor, and UL listed electronic control panel to monitor leaks in inner and outer tank walls. Controls shall operate with 120 volts A.C.
- C. Tank Fittings and Accessories: Provide storage tank with the following factory-installed fittings and accessories:

**SPEC EDITOR: INCLUDE TANK DETAILS ON DRAWINGS INDICATING LOCATION OF FITTINGS. FLANGED FITTINGS ARE ALSO AVAILABLE.**

1. Tank Manhole: 24 inch diameter, bolted, flanged, and gasketed manhole, with extension collar, for access to inside of tank.
2. Threaded pipe connection fittings on top of tanks, for fill, supply, return, vent, gages, heating coils, and hot-well in locations and of sizes as indicated. Provide cast-iron plugs for shipping.
3. Anchor Straps: Provide manufacturer's standard anchoring system (straps, cables, turnbuckles, etc.) with the strength of at least 1-1/2 times the maximum uplift force of the empty tank without backfill in place.
4. Lifting Lugs: Provide lifting lugs to facilitate handling and installation.

**SPEC EDITOR: IF BELOW IS RETAINED, INDICATE LADDER LOCATION ON TANK DETAIL ON DRAWINGS.**

5. Ladders: Provide carbon steel ladder inside tank, anchored to top and bottom, and located as indicated.

**SSPEC EDITOR: ELECT FROM 2 OPTIONS BELOW, BUT ONLY FOR HEAVY OIL STORAGE TANKS. HOT-WELLS ARE USED IN SOME AREAS IN LIEU OF HEATING COILS FOR HEAVY OIL. EDIT AS DESIRED.**

6. Heating Coils: Provide spiral type heating coil of capacity as scheduled, installed in tank manhole.
7. Hot-Wells: Provide 8 inch hot-well extending from 4 inch above tank top to 4 inch above tank bottom. Provide tappings above tank for connection of oil suction and return piping. Provide 2 inch hole in well, just below top of tank, for venting.
8. Supply Tube: Provide extension of transfer pump suction line fitting into tank, terminating 6 inch above tank bottom and cut at 45 degree angle.
9. Vent Cap: cast iron threaded tee inlet; 40 mesh brass wire cloth screen.
10. Fill Box: Flush heavy duty, waterproof, cast iron body and top cap, and brass inner cap with lock with key wrench.

11. Remote Oil Gages: Balanced hydraulic type providing a true volumetric indication. Gage volume range to suit capacity storage; UL-listed and labeled.

## 2.12 GRADE MANHOLE

- A. Precast Concrete Manhole Sections: ASTM C478, base and concentric cone sections with integral ladder.
- B. Cast-Iron Ring and Cover: heavy-duty, water-resistant, cast-iron manhole frame, gasket, and bolted lid; 24 inch diameter inside opening dimension; 8 inches overall height.

## PART 3 - EXECUTION

### 3.1 PIPE INSTALLATIONS

- A. General: Refer to Section 221113 - Piping Materials and Methods" for basic piping installation instructions.
- B. Install supply, return, fill, and vent piping at a uniform grade of 1/4 inch in ten feet downward in the direction of the storage tank.

### 3.2 UNDERGROUND TANK INSTALLATION

- A. Perform air pressure test on tanks prior to placing into excavations. Test pressure shall not exceed 5 psi. Apply a soap solution to joints.
- B. Excavate to a sufficient depth for a minimum of 3 foot earth cover from top at tank to grade; allowing for cast-in-place, reinforced concrete ballast pad, plus 6 inches of sand or pea gravel between ballast pad and tank. Excavation shall extend one foot around the perimeter of the tank.

**SPEC EDITOR: BALLAST PAD SIZE AND REINFORCING SHOULD BE SUFFICIENT TO HOLD DOWN EMPTY TANK COMPLETELY SUBMERGED IN WATER.**

- C. Place reinforcing and concrete as specified in Division 03. Excavation floor and walls may serve as forms. Use ASTM C150 Portland Cement concrete, Type I, with normal weight aggregate conforming with ASTM C33, and having a 28 day compressive strength at 3,000 psi.
- D. Set tiedown eyelets for hold-down straps in concrete ballast pad and tie to reinforcing steel.
- E. Place 6 inches of clean sand or pea gravel on top of ballast pad.
- F. Set tank on fill materials.

**SPEC EDITOR: RETAIN BELOW FOR STEEL TANKS.**

- G. Protect anodes during tank placement and backfilling operations.
- H. Install holddown straps.
- I. Make piping connections.

- J. Backfill excavation with clean sand or pea gravel. Tamp backfill to consolidate.

### 3.3 FIELD QUALITY CONTROL

- A. Test oil piping in accordance with NFPA 31.
- B. Remake leaking joints and connections using new materials.

### 3.4 COMMISSIONING

- A. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- B. Train Owner's maintenance personnel on procedures and schedules related to start-up and shut-down, troubleshooting, servicing, and preventative maintenance.
- C. Review data in Operating and Maintenance Manuals. Refer to Division 01 section "Project Closeout."
  - 1. Schedule training with Owner through the Architect, with at least 7 days advance notice.
- D. Before activating system perform these steps:
  - 1. Open valves to full open position. Close bypass valves.
  - 2. Remove and clean strainer screens.
  - 3. Check pump for proper direction of rotation.
  - 4. Fill oil storage tank with proper fuel type.
  - 5. Check operating controls of fuel burner units.
  - 6. Check operation at automatic bypass valves.
  - 7. Check and set operating temperature controls on oil heaters.
  - 8. Check corrosion monitoring systems for proper operation.

SECTION 231123 - FACILITY NATURAL-GAS PIPING

**END OF CONTENTS TABLE**

DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)  
SECTION 231123 - FACILITY NATURAL-GAS PIPING

**REVISIONS:**

**8-1-99: CONTENT APPROVED AS NEW MASTER**

**8-11-99: REVISED TO VBS.DOT TEMPLATE**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. Provide piping, fittings, and specialties for Natural Gas Systems

**1.3 WORK BY OTHERS - UTILITY COMPANY:**

**SPEC EDITOR: GAS METERS ARE TYPICALLY FURNISHED AND INSTALLED BY THE MICHCON, WITH CHARGES BILLED DIRECTLY TO THE OWNER. IF OTHER THAN MICHCON, CONTACT THE UTILITY SERVING THE SITE FOR INFORMATION AND COORDINATE WITH CONSTRUCTION MANAGEMENT. VERIFY AVAILABLE PRESSURE WITH MICHCON AND REQUIRED PRESSURE AT APPLIANCES. MICH CON GENERALLY LIMITS PRESSURE TO 14"WC UNLESS YOU CAN PROVE THE NEED FOR HIGHER PRESSURE.**

- A. Gas meter, pressure regulator and related valves will be furnished and installed by MichCon.
- B. All gas piping outside the building, upstream of the gas meter is provided by MichCon.
- C. Contractor shall coordinate installation of meter and related components with MichCon and owner.
- D. Expenses and fees for MichCon work shall be paid for by the owner.

**1.4 QUALITY ASSURANCE:**

- A. Comply with the requirements of NFPA 54 - National Fuel Gas Code, for gas piping materials and components, and gas piping systems installation, inspection, testing, and purging.

**PART 2 - PRODUCTS**

**2.1 GAS LINE PRESSURE REGULATORS:**

*SPEC EDITOR: DO NOT SPECIFY APPLIANCE PRESSURE REGULATORS HERE IF THEY ARE SPECIFIED TO BE INTEGRAL WITH GAS APPLIANCE IN EQUIPMENT SECTION. GAS LINE PRESSURE REGULATORS ARE NORMALLY FURNISHED BY GAS SUPPLIER, AND BY GAS-FIRED EQUIPMENT MANUFACTURER. ADDITIONAL PRESSURE LIMITING AND RELIEF VALVES ARE NOT REQUIRED IN ALL CASES. CONSULT NFPA 54 AND GAS SUPPLIER.*

*SPEC EDITOR: IF USED, INCLUDE SCHEDULE OR OTHERWISE INDICATE INLET AND OUTLET PRESSURES AND FLOW*

- A. Single stage, steel jacketed, corrosion-resistant gas pressure regulators; with atmospheric vent, elevation compensator; with threaded ends for 2 inch and smaller, flanged ends for 2-1/2 inch and larger; for inlet and outlet gas pressures, specific gravity, and volume flow indicated.

*SPEC EDITOR: VEN WILL ADD NAMES BELOW*

- B. Manufacturers:
  - 1. \_\_\_\_\_
  - 2. \_\_\_\_\_
  - 3. \_\_\_\_\_
  - 4. Etc...

**2.2 LUBRICATED PLUG VALVES:**

*SPEC EDITOR: THIS GAS ISOLATION VALVE IS TYPICALLY SPECIFIED FOR LARGER PIPING ONLY, AT BOILERS ETC. FOR LAB ISOLATION, USE BALL VALVES SPECIFIED IN 220523. DELETE PARAGRAPH 2.2.A IF BALL VALVES ARE SPECIFIED FOR 2" AND LESS IN SECTION 220523.*

- A. Gas Cocks 2 Inch and Smaller: 150 psi WOG, bronze body, straight-away pattern, square head, threaded ends.
- B. Gas Cocks 2-1/2 Inch and Larger: MSS SP-78; 175 psi, lubricated plug type, semi-steel body, single gland, wrench operated, flanged ends.
- C. Manufacturers: Jenkins Bros., Lunkenheimer Co., NIBCO, Inc., Powell Co., Stockham

**2.3 MASTER GAS SHUT OFF VALVE AND VALVE BOX**

*SPEC EDITOR: THIS WAS REQUIRED ON LABS AT ONE TIME, BUT IS NO LONGER. SPECIFIC APPLICATIONS MAY WARRANT ITS USE. ADDITIONAL RESEARCH SHOULD BE DONE PRIOR TO SPECIFYING. CONSIDER CHEMTROL.*

- A. Master gas shut off valve shall be bronze body ball valve. Recessed valve box constructed of extruded aluminum with aluminum back plate and frame cover. Assembly shall include clear flexible window with emergency pull ring. Permanently affix the following to the window:

CAUTION: MASTER GAS SHUT OFF VALVE

- a) CLOSE ONLY IN EMERGENCY

- B. Manufacturers: Ohmeda

### **PART 3 - EXECUTION**

*SPEC EDITOR: DELETE ARTICLE 3.1 AND 3.2 FOR NEW PROJECTS.*

#### **3.1 PREPARATION:**

- A. Precautions: Before turning off gas, turn off all equipment valves. Perform a leakage test to determine that all equipment is turned off.

#### **3.2 HANDLING FLAMMABLE LIQUIDS:**

- A. Remove and legally dispose of liquid from drips in existing gas piping. Handle cautiously to avoid spillage or ignition.

#### **3.3 NATURAL GAS PIPING INSTALLATION REQUIREMENTS:**

- A. See Section 221113 for piping materials and installation requirements.
- B. Install, inspect, test, and purge natural gas systems in accordance with NFPA 54, and local utility requirements.
- C. See Section 220523 for valve installation requirements.

*SPEC EDITOR: INDICATE ON THE DRAWINGS, THE ROUTING AND TERMINATION LOCATION OF THE CONDUIT VENT PIPE.*

- D. Gas piping in air plenum ceilings shall be continuously welded or installed in air-tight conduit constructed of Schedule 40 seamless black steel pipe with welded joints. Vent conduit to the outside and terminate with a screened vent cap. Valves shall not be installed in plenums.
- E. Drips and Sediment Traps: Install a drip leg at inlet to terminal equipment, points where condensate may collect, and at the outlet of the gas meter. Do not install drips where condensate is likely to freeze. Construct drips using a tee with plugged or capped bottom outlet. Drip shall be minimum of 3 pipe diameters long, same size as pipe. Locate drips to permit cleaning and emptying.

#### **3.4 GAS LINE PRESSURE REGULATOR INSTALLATION:**

*SPEC EDITOR: REFER TO NFPA 54 FOR OVERPRESSURE PROTECTION.*

- A. Install a gas isolation valve upstream of each gas pressure regulator. Where two gas pressure regulators are installed in series in a single gas line, a valve is not required at the second regulator.
- B. Install pressure relief or pressure limiting devices so they can be readily operated to determine if the valve is free; so they can be tested to determine the pressure at which they will operate; and examined for leakage when in the closed position.
- C. Install vent line from pressure regulators to outdoors.

**3.5 ELECTRICAL BONDING AND GROUNDING:**

- A. Install above ground portions of gas piping systems, upstream from equipment shutoff valves electrically continuous and bonded to a grounding electrode in accordance with NFPA 70 - "National Electrical Code."
- B. Do not use gas piping as a grounding electrode.
- C. Conform to NFPA 70 - "National Electrical Code," for electrical connections between wiring and electrically operated control devices.

**REVISIONS:**

**8-1-99: CONTENT APPROVED AS NEW MASTER**

**8-11-99: REVISED TO VBS.DOT TEMPLATE**

**02-25-04: LAST SPEC TEAM REVISION**

**06-03-08: ADDED TACO**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. Provide hydronic specialties for the following systems:
1. Chilled Water System
  2. Condenser Water System
  3. Hot Water Heating System
  4. Process Cooling Water System

**PART 2 - PRODUCTS**

**2.1 AUTOMATIC AND MANUAL AIR VENTS:**

**SPEC EDITOR: INCLUDE THE U-M STANDARD DETAILS FOR AIR VENTS ON THE PROJECT DOCUMENTS.**

- A. Manual air vents shall be ¾" ball valve per Section 220523.
- B. Automatic air vents shall be non-ferrous, rated for 150 psig maximum operating pressure.
1. Manufacturers:
    - a. For pipe sizes 2" and less. Bell & Gosset model 87, Armstrong model 75, Taco Hy-Vent
    - b. For pipe sizes 2 ½" and larger. Hoffman model 78, Armstrong model 75.

**2.2 SUCTION DIFFUSERS:**

- A. Provide angle pattern suction diffusers rated at 175 psig, 250 F., having cast iron or ductile iron body, with flanged (grooved piping if grooved piping is specified for system) connections. Provide a stainless steel combination diffuser-strainer cylinder with 3/16" or 1/8" diameter perforations, stainless steel flow straightening inlet vanes, a 16 mesh bronze start-up strainer, a permanent magnet and an adjustable support foot.
- B. Manufacturers: Bell & Gossett, Armstrong, Wheatley, Taco

**2.3 TRIPLE DUTY VALVE:**

- A. Provide a straight or angle pattern combination bubble tight shut-off, calibrated balancing and non-slam check valve rated at 175 psig working pressure and 250 degrees F. Body shall be cast iron or ductile iron, with flanged or grooved piping connections.
- B. Valve shall have a bronze seat, replaceable bronze disc with EDPM seat insert, stainless steel stem and spring. Provide brass readout valves with integral check valves to measure differential pressure readings across the orifice.
- C. Valve design shall permit re-packing under full system pressure.
- D. Manufacturers: Bell & Gossett model 3D or 3DS, Armstrong, Wheatley, Taco

**2.4 WATER PRESSURE REGULATING/REDUCING VALVE:**

*SPEC EDITOR: THIS IS USED ON LASER COOLING WATER AND MAKE UP TO CLOSED HEATING & COOLING SYSTEMS, 1/2" THROUGH 3"*

- A. Bronze valve body, renewable stainless steel seat. Adjustable reduced pressure range, built-in bypass, diaphragm type with spring cage and orifice. Pressure to be adjustable from a top screw on the valve.
- B. Manufacturers: Watts model 223BHP, Bell & Gossett, Hoffman

**2.5 WATER PRESSURE RELIEF VALVE:**

*SPEC EDITOR: THIS IS USED WITH REGULATOR LISTED ABOVE*

- A. ASME rated, sized for the full installed capacity of the low pressure side of the regulating station. Factory set valve at not more than 20% above low side pressure. Furnish seat material suited for the service.
- B. Manufacturers: Consolidated, ITT Bell & Gossett, ITT McDonnell Miller, Watts

**2.6 AIR SEPARATORS:**

*SPEC EDITOR: INCLUDE THE U-M STANDARD DETAIL FOR COALESCING AIR SEPARATORS ON THE PROJECT DOCUMENTS.*

**SPEC EDITOR: PRIMARILY FOR CLOSED LOOP SYSTEMS FOR AIR REMOVAL.**

- A. Provide a centrifugal air separator, ASME stamped for 125 psig., 350 F, with flanged or grooved piping connections (same size as the pipe mains on the drawings) tangential to the vessel shell. Internal stainless steel air collector tube.
- B. Manufacturers: Bell & Gossett Type RL, Armstrong, Amtrol, Taco.

**2.7 COALESCING SEPARATOR:**

**SPEC EDITOR: DESIGNER MAY INCLUDE FLANGED LOWER HEAD TO FACILITATE COALESCING MEDIA REMOVAL OR INSPECTION.**

- A. Provide coalescing type air and dirt separator of size and location as indicated on the drawings. Separator shall include separate air chamber for air removal and lower vessel extension for dirt separation.
- B. Separator shall be steel fabricated with ANSI B16.5 flange connections and rated for 150 psig design pressure. Separator shall include internal copper coalescing medium and stainless steel collector tube.
- C. Separators shall include manufacturer's integral high capacity air vent or cast iron air vent as specified in Section 2.1. Separator shall also include manufacturers side tap valve to facilitate system filling and bottom drain connection with ball valve drain.

**SPEC EDITOR: ONLY ONE MANUFACTURER PER PLANT ENGINEERING.**

- D. Manufacturers: Spirotherm (Spirovent Dirt HV)

**2.8 EXPANSION TANKS:**

**SPEC EDITOR / DESIGNER: INCLUDE THE U-M STANDARD DETAIL FOR EXPANSION TANKS ON THE PROJECT DOCUMENTS.**

- A. Provide expansion tank, constructed of welded steel with butyl rubber bladder, replaceable and full acceptance volume, ASME stamped for 125 psig at 240F. Tank shall have capacity, size and operating pressures as shown on drawings.
- B. Manufacturer: Bell & Gossett, Wessels, Amtrol, Armstrong or Taco.

**2.9 CENTRIFUGAL SOLID SEPARATOR:**

**SPEC EDITOR: THIS IS FOR REMOVAL OF HEAVY SOLIDS (RUST, SCALE, DIRT ETC.), PRIMARILY IN OPEN LOOP CONDENSER WATER WITH PLATE AND FRAME HEAT EXCHANGERS. PERFORMANCE MUST BE SCHEDULED ON DRAWINGS, PIPING CONNECTIONS SHOULD BE DETAILED.**

- A. Provide centrifugal solids separator, with efficiency of 98% to 40 microns, as scheduled and detailed on drawings. Body shall be steel, ASME stamped for 125 psig, with flanged connections and factory painted exterior. Provide 4"x6" cleanout for lower section, and flanged upper dome for easy maintenance access.

- B. Provide automatic recovery tank with bag filter (solids collection vessel) as scheduled and detailed. Controlled continuous flow, 25 micron solids collection bag, 600 cubic inches capacity, manual isolation valves, sight glass for flow verification and differential pressure switch, Annunciator in an independent junction box, contacts rated for 4 amps at 115 volts, set at 10 psid with a range of 4 to 25 psid.
- C. Manufacturers: LAKOS, Griswold Controls

**2.10 IN -LINE FILTER:**

- A. Cartridge type impingement filter, with replaceable 100 micron or 300 micron filter media. Size and capacity shall be as indicated on drawings.
- B. Manufacturers: Bruner, Culligan, Cuno, Dollinger, Honeywell.

**PART 3 - EXECUTION**

**3.1 INSTALLATION OF AUTOMATIC & MANUAL AIR VENTS**

*INCLUDE THE U-M STANDARD DETAILS FOR AIR VENTS ON THE PROJECT DOCUMENTS.*

- A. Install automatic air vents at high points (where pipe drops in direction of flow) in hydronic systems, refer to details on drawings.
- B. Only when air vent installation is not possible, provide a gooseneck pipe fitting at ball valve discharge for collection of carry-over water.
- C. Install manual air vents where indicated on drawings.

**3.2 INSTALLATION OF SUCTION DIFFUSERS:**

- A. Install to allow complete removal of strainer elements. Remove 16 mesh bronze start-up mesh after system start-up and flushing is complete. Replace with standard operating strainer. Adjust support foot to carry weight of suction piping (to inertia pad where applicable).

**3.3 INSTALLATION OF AIR SEPARATOR:**

*INCLUDE A DETAIL ON THE PROJECT DOCUMENTS THAT INDICATES THE INSTALLATION REQUIREMENTS OF THE AIR SEPARATOR.*

- A. Install air separator per detail on drawings.

**3.4 INSTALLATION OF EXPANSION TANK:**

*INCLUDE THE U-M STANDARD DETAIL FOR EXPANSION TANKS ON THE PROJECT DOCUMENTS*

- A. See drawings for locations, support and piping details. Document initial and operating pressures, and temperature, and submit report for approval.

**3.5       INSTALLATION OF CENTRIFUGAL SOLID SEPARATOR**

*INCLUDE A DETAIL ON THE PROJECT DOCUMENTS THAT INDICATES THE  
INSTALLATION REQUIREMENTS OF THE CENTRIFUGAL SOLIDS SEPARATOR.*

- A. Install per detail in plans.

**3.6       INSTALLATION OF COALESCING SEPARATOR**

*INCLUDE THE U-M STANDARD DETAIL FOR THE INSTALLATION OF  
COALESCING SEPARATORS. D*

- A. Install per detail in plans.

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**

SECTION 232123 - PLUMBING AND HYDRONIC PUMPS

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 232123 - PLUMBING AND HYDRONIC PUMPS**

*THIS SECTION SPECIFIES CENTRIFUGAL PUMPS FOR HVAC SYSTEMS (CHILLED WATER, CONDENSER WATER, HEATING HOT WATER), PROCESS COOLING, AND DOMESTIC HW RETURN PUMPS. STEAM CONDENSATE PUMPS AND RECEIVERS, SMALL HVAC CONDENSATE PUMPS, CW BOOSTER PUMP PACKAGES, AND HEAT TRANSFER PACKAGES, SUMP PUMP, FIRE PUMPS ARE SPECIFIED ELSEWHERE.*

*7/16/12: ADDED THAT PUMP SEALS SHALL BE UNAFFECTED BY CHLORAMINES. ADDED NSF 61 REFERENCE UNDER QUALITY ASSURANCE.*

*2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 220513: Motors.
  - 2. Section 220548: Vibration Control
  - 3. Division 26: Electrical.

**1.2 SUMMARY**

- A. Includes pumps for hydronic and domestic hot water return service. Includes process pumps except those covered in other specification sections.
  - 1. Does not include steam condensate, domestic booster package, sump, or fire pumps.

**1.3 SUBMITTALS**

- A. Submit the following product data for approval:
  - 1. Manufacturer information.
  - 2. Dimensions and elevations.
  - 3. Performance data/pump curves.
  - 4. Materials of construction.
  - 5. Motor data including motor manufacturer.
  - 6. Vibration isolation and inertia bases

**1.4 QUALITY ASSURANCE:**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
  - 1. Hydraulic Institute Compliance: Design and manufacture pumps in accordance with ANSI/ Hydraulic Institute Standards.
  - 2. National Electrical Code Compliance: Provide components complying with NFPA 70 National Electrical Code.
  - 3. UL Compliance: Provide HVAC pumps which are listed and labeled by UL, and comply with UL Standard 778 "Motor Operated Water Pumps."
  - 4. Pumps used for potable water service: National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as  $\leq 0.25\%$  weighted average lead content) (and/or NSF/ANSI-372) and Annex F.
  - 5. Pumps used for potable water service: U.S Safe Drinking Water Act.
- C. Single Source Responsibility: Obtain pumps from a single manufacturer.

**SPEC EDITOR: REVISE WARRANTY PER PROJECT. LONGER WARRANTY PERIOD MAY BE APPROPRIATE FOR CERTAIN TYPES OF WORK. INCLUDE THIS ARTICLE IN EVERY SPECIFICATION SECTION.**

**1.5 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 GENERAL PUMP REQUIREMENTS:**

- A. Unless noted otherwise, provide pumps meeting these general requirements.

**SPEC EDITOR: NOTE THE GENERALIZED PUMP AND SEAL T/P RATINGS AND THE NOTATION "SUITABLE FOR SERVICE," INDICATED BELOW. EDIT THE SPECIFIC PUMP SECTIONS IF YOUR PROJECT HAS SEVERE SERVICE OR MORE DEMANDING T/P REQUIREMENTS.**

- B. Suitable for the service, rated for the temperature and pressure indicated. When not indicated, pump and pump seals shall be rated for not less than 175 psig working pressure and 225 degrees F continuous water temperature. Provide pumps with capacities and performance as scheduled on the Drawings.

- C. Pumps shall have steel shaft, cast iron case, and cast bronze or stainless steel impeller. Flanged pumps shall have suction and discharge taps in flanges, and drain and vent taps in the volute. Piping connections shall be flanged for connection sizes 2 1/2 inches and larger.
- D. Pumps shall have statically and dynamically balanced impeller, with a constantly dropping head curve from shutoff to cutoff, and shall not overload their respective motors on any point throughout the head capacity curve. Key and lock impeller to shaft.
- E. Motors shall be factory coupled to pump and comply with requirements of Related Section Motors, with rpm, voltage and HP as scheduled. Single phase motors shall have built-in overload protection.
- F. Where flexible coupling is specified, coupling shall be EPDM, center dropout type, capable of absorbing torsional vibration and shaft misalignment, complete with ANSI B15.1/OSHA 1910.219 coupling guard.
- G. Pumps for domestic water systems shall be lead free (less than 0.25 percent lead by weight in all wetted surfaces) all bronze or stainless steel construction.

**SPEC EDITOR: FOR PUMPS USED FOR GLYCOL SERVICE, SILICON CARBIDE SEALS SHOULD BE SPECIFIED. HOWEVER, ENGINEER MUST VERIFY WHICH MFR.S CAN OFFER SILICON CARBIDE SEALS, AND THEN EDIT THE SPEC ACCORDINGLY.**

- H. Pump seals shall be unaffected by chloramines.
- I. Pumps used for glycol shall have seals rated for glycol service.
- J. Pump selection:
  - 1. Select pumps so an impeller/volute is sized to accommodate 10 percent more head than at duty point, unless noted otherwise on pump schedule.
  - 2. Select pump no greater than 85 percent of end of curve flow.
  - 3. Select pump at the point of best efficiency for a given impeller-casing combination. Deviations shall be within 3 percent of maximum efficiency point on the increasing capacity side of the maximum efficiency point.
  - 4. Maximum Pump Suction velocity:
    - a. Inline: 12 fps.
    - b. End Suction: 13 fps.
    - c. Double Suction: 15 fps.
- K. Balance pumps per ANSI / Hydraulic Institute procedures. Perform electronic vibration analysis for all pumps 1/2 hp and above. Unless noted otherwise, the maximum allowable RMS (filter in) velocity at maximum pump motor speed, measured at each pump and motor bearing, shall not exceed 0.13 inches/sec in the vertical, horizontal and axial directions. For pumps to be applied in variable speed applications, balance and test to assure this vibration limit is not exceeded at any pump speed. Pumps may be field tested after installation by an independent testing agency. Any pump found to exceed the specified vibration limits shall be corrected to perform within those limits without cost to the Owner.

## 2.2 IN-LINE CIRCULATORS

SPEC EDITOR: GENERALLY NOT RECOMMENDED FOR MORE THAN 1/2HP. SYSTEM LUBRICATED/NO OILING. 3-PIECE OIL LUBE MODELS TO BE PHASED OUT. TYPICAL CONSTRUCTION HAS MOTOR CARTRIDGE REPLACEABLE WITH ROTOR ATTACHED. SLEEVE TYPE BEARINGS IN LIEU OF BALL TYPE. NO MECHANICAL SEAL. AVAILABLE METALLURGY CI BODY W/ BRONZE IMPELLER; CI BODY W/ STAINLESS STEEL IMPELLER. THESE PUMPS ARE USUALLY SUPPORTED BY THE PIPE; DO NOT USE INLET/OUTLET FLEXIBLE PIPE CONNECTORS. THEY COME IN STANDARD SIZES; IMPELLER TRIMMING IS NOT DONE; SINGLE PHASE MOTORS.

- A. Domestic Hot Water: Close coupled, single suction, lead free bronze or stainless steel impeller and body. System-lubricated, ceramic shaft. Permanently lubricated, bronze or carbon sleeve bearings.
- B. Hydronic Systems: Close coupled; single suction bronze or stainless steel impeller. System-lubricated, alloy steel shaft, Cast iron body. Permanently lubricated sleeve bearings.
- C. Rated for 150 psig working pressure, minimum.
- D. Acceptable Manufacturers:
  - 1. ITT Bell & Gossett.
  - 2. Armstrong.
  - 3. Grundfos.
  - 4. Weinman.
  - 5. Taco In-Line Circulators.

## 2.3 IN-LINE HORIZONTAL CLOSE COUPLED PUMPS - HANGER SUPPORTED

SPEC EDITOR: SIZE GENERALLY 1/4 TO 3HP. KEEP MOTOR IN HORIZONTAL POSITION WHERE POSSIBLE, BUT UNIVERSAL MOUNT MOTOR ALLOWS FOR ANY PIPE ORIENTATION. SUPPORT PUMP VIA PIPES, NOT MOTOR. TYPICALLY DO NOT USE FLEXIBLE COUPLINGS. CONSIDER ADDING CAST IMPELLER (VS STAMPED) AS REQUIRED.

- A. Close/rigid coupled, single suction impeller. Ceramic mechanical seal. Permanently sealed, permanently lubricated.
- B. Domestic Hot Water: Lead free.
- C. Pump shall be equipped with an internally flushed seal assembly.
- D. Provide universal mount motors that meet NEMA specifications and of size, voltage and enclosure indicated on Drawings. Motor shall be provided with heavy-duty, permanently lubricated ball bearings rated for the maximum load for which the pump is designed.
- E. Acceptable Manufacturers:
  - 1. ITT Bell & Gossett Series 60.
  - 2. Armstrong.
  - 3. Grundfos.
  - 4. Weinman.
  - 5. Taco Series 1600.

**2.4 FLOOR-MOUNTED, VERTICAL IN-LINE SPLIT COUPLED PUMPS**

SPEC EDITOR: GENERALLY, FOR SIZES MORE THAN 3HP; TO 1000 HP. TYPICAL SPLIT-COUPLED PUMPS CAN BE DIRECT-COUPLED OR FLEXIBLE-COUPLED. CONSTRUCTION HAS BALL BEARINGS, MECHANICAL SEAL; THESE PUMPS ARE SUPPORTED/ANCHORED TO CONCRETE PAD, WITH INLET/OUTLET FLEXIBLE PIPE CONNECTORS. CONSIDER ADDING REQUIREMENT FOR FLEXIBLE COUPLING (DODGE, OMEGA, DURA - FLEX) FOR SEPARATE REMOVAL/REPLACEMENT OF LARGER (+15 HP) MOTORS. USE SLOWER SPEEDS 1800/1200 RPM FOR HIGH FLOW, LOW HEAD APPLICATIONS. VERTICAL MOTOR ORIENTATION OFFERS LOWER VIBRATION/NOISE, LOWER IMPELLER/SHAFT LOADING (LESS PRESSURE IMBALANCE), LOWER CAVITATION POTENTIAL. NO SUCTION DIFFUSER REQUIRED.

- A. Split-coupled, single suction enclosed impeller. Mechanical seals. Carbon graphite throttle bushing.
- B. Pump shall be equipped with an externally flushed seal assembly with manual air vent valve.
- C. Provide universal mount motors that meet NEMA specifications and of size, voltage and enclosure indicated on Drawings. Motor shall be provided with heavy-duty, greaseable or permanently lubricated ball bearings rated for the maximum load for which the pump is designed.
- D. Acceptable Manufacturers:
  - 1. ITT Bell & Gossett Series 80-SC.
  - 2. Armstrong.
  - 3. Grundfos.
  - 4. Weinman.
  - 5. Taco KS Vertical Split coupled.

**2.5 FLOOR MOUNTED, DOUBLE SUCTION PUMPS**

SPEC EDITOR: THIS SECTION CAN BE USED FOR VERTICAL OR HORIZONTAL SPLIT CASE. EDIT TO SUIT PROJECT REQUIREMENTS. VERTICAL SPLIT CASE PUMPS SAVE SPACE BUT ARE SINGLE SOURCE AND SHALL ONLY BE SPECIFIED WITH THE PERMISSION OF THE U-M DESIGN MANAGER.

- A. Single stage, double suction centrifugal, bronze fitted, base mounted, flexibly coupled pump.
- B. Vertical or horizontal split case as indicated, cast iron volute with integrally cast feet, gauge ports at nozzles, vent, and drain ports. Horizontal shaft unless specifically indicated otherwise.
- C. Stainless steel shaft designed for less than 0.002 inch deflection, with mechanical seals suitable for temperature and service scheduled, with re-greaseable bearings. Bearing life shall be L10 50,000 hr. life minimum. Bearing grease shall be rated to 700 Deg F and resist water/condensation washout.
- D. Mechanical carbon face seal rotating against a stationary silicon carbide face.
- E. Pump shall be equipped with an internally flushed seal assembly.

- F. Impeller shall be of the enclosed double suction type made of low zinc silicon brass or bronze, hydraulically and dynamically balanced and keyed to shaft.
- G. The pump bearings and mechanical seals shall be serviceable without disturbing the upper casing half, piping connections or electrical motor connections.
- H. Base: Pump and motor shall be mounted on a single, rigid, groutable, welded, structural steel frame.
- I. Acceptable Manufacturers Vertical Split Case Pumps:
  - 1. ITT Bell & Gossett VSX.
- J. Acceptable Manufacturers Horizontal Split Case Pumps.
  - 1. ITT Bell & Gossett.
  - 2. Armstrong.
  - 3. Weinman.
  - 4. Paco.

**2.6 END-SUCTION, CLOSE-COUPLED PUMPS**

**SPEC EDITOR: BASIS OF DESIGN: SERIES 1531 BELL & GOSSETT. OCCASIONALLY USED FOR HYDRONIC SERVICE, OFTEN USED FOR DOMESTIC BOOSTERS.**

- A. Single stage, end suction centrifugal, bronze fitted, close-coupled with base plate.
- B. Provide lead free when used for domestic water service.
- C. Mechanical seals with ceramic seal seat and carbon seal ring. Oil or grease lubricated, bronze sleeve bearings. Provide slinger on motor shaft between motor and seals to prevent liquid that leaks past pump seals from entering the motor bearings.
- D. Back pull-out design to allow pump bearings and seals to be serviced without disturbing piping.
- E. Provide universal mount motors that meet NEMA specifications and of size, voltage and enclosure indicated on Drawings.
- F. Acceptable Manufacturers:
  - 1. ITT Bell & Gossett.
  - 2. Armstrong.
  - 3. Weinman.
  - 4. Taco.

**2.7 FLOOR-MOUNTED, END-SUCTION, FLEXIBLY-COUPLED PUMPS**

**SPEC EDITOR: BASIS OF DESIGN: SERIES BELL & GOSSETT 1510**

- A. Single stage, end suction centrifugal, bronze fitted, base mounted pump, flexibly-coupled.
- B. Vertical split case back pull-out design to allow pump bearings and seals to be serviced without disturbing piping connections or electric motor connections.
- C. Wear Rings (if provided as standard): Replaceable, bronze.

- D. Mechanical seals with ceramic seat and carbon seal ring. Oil or grease lubricated, bronze sleeve bearings.
- E. Base: Pump and motor shall be mounted on a single, rigid, groutable, welded, structural steel frame.
- F. Acceptable Manufacturers:
  - 1. ITT Bell & Gossett.
  - 2. A-C Pump - ITT Corp.
  - 3. Armstrong.
  - 4. Weinman.
  - 5. Taco.

### **PART 3 - EXECUTION**

#### **3.1 GENERAL PUMP INSTALLATION**

- A. Install the pump as recommended by the manufacturer and as shown on the Drawings. Provide adequate clearance for service access.
- B. Independently support piping from the pump casing, regardless of what is recommended by the manufacturer. Demonstrate to the Commissioner that the piping is independently supported.
- C. Fill and vent the system of all air. Purge the pump of air as recommended by manufacturer; check for proper rotation.
- D. Place the pump in service and check for proper operation. When required by the Commissioner, record voltage and amperage draw (separate from the T&B contractors work) and provide report to Commissioner.

#### **3.2 IN-LINE PUMP INSTALLATION**

- A. Install suction and discharge flexible connectors as recommended by the manufacturer and as shown on the drawings.
- B. Verify pump is designed for the intended orientation; horizontal versus vertical motor/shaft orientation.
- C. Support the pump as recommended by manufacturer. Do not attach supports to motor.

#### **3.3 FLOOR-MOUNTED PUMP INSTALLATION**

- A. Set pump base level, using stainless steel shims and metal blocks designed for leveling machinery bases. Anchor/attach to base as recommended by the manufacturer. Pre-align, connect piping, re-check alignment, and then grout with non-shrink grout.
- B. Provide final alignment in field via laser alignment device, by the manufacturer's representative. Submit alignment test data for approval. If report indicates pump cannot be aligned properly, correct conditions and re-laser-align.

**3.4 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

**3.5 MANUFACTURER INSPECTION AND START-UP**

- A. For all floor mounted pumps and for all inline pumps greater than 3 HP, after installation and prior to operation, pump manufacturer's factory trained field representative shall inspect the pumps for proper installation and lubrication, final align pump/motor/coupling using laser alignment, conduct start-up, and submit written report.

SECTION 232216 - STEAM AND CONDENSATE PIPING SPECIALTIES

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 232216 - STEAM AND CONDENSATE PIPING SPECIALTIES**

**REVISIONS:**

**8-1-99: CONTENT APPROVED AS NEW MASTER**

**3-29-05: LAST SPEC TEAM REVISION**

**1-05-07: UPDATED PER STEAM & HYDRONICS COMMITTEE MTG JAN 07**

**06-03-08: ADDED WATON-MCDANIEL TO FLASH TANK**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. Furnish and install piping, fittings, and specialties for the following systems:
1. Low pressure steam and condensate systems (nominal 5 to 15 psig)
  2. Medium pressure steam and condensate systems (nominal 60 psig)
  3. Pumped condensate

**PART 2 - PRODUCTS**

**SPEC EDITOR: FOR ALL TRAPS, PROVIDE A SCHEDULE ON DRAWINGS WITH MAKE AND MODEL NUMBER.**

**2.1 FLOAT AND THERMOSTATIC TRAPS:**

**SPEC EDITOR: F&T TRAPS ARE FOR LOW PRESSURE STEAM, 25 PSI AND UNDER. THEY ARE SUBJECT TO DAMAGE IF WATER HAMMER, EXCESSIVE TEMPERATURES OR PRESSURES ARE PRESENT. THEY CAN BE USED FOR 60 PSIG STEAM.**

- A. Cast iron body, bolted cap, renewable, stainless steel internal components, balanced pressure thermostatic air vent. Internal parts shall be accessible without disturbing piping.
- B. Capable of discharging condensate, air and other non-condensable gasses at pressures from 125 psig to 25 inches of vacuum without loss of steam.
- C. Manufacturers: Armstrong A and B series, ITT Hoffman, Spirax-Sarco, Watson McDaniels.

**2.2 INVERTED BUCKET TRAPS:**

*SPEC EDITOR: BUCKET TRAPS ARE INFREQUENTLY USED. USE WHERE CONDENSATE MUST BE LIFTED, AND FOR 60 PSIG TRAPS*

- A. ASTM A 278, class 30 cast iron body and cap, pressure rated for 250 psi; stainless steel head and seat; stainless steel valve retainer, lever, guide pin assembly, brass or stainless steel bucket.
- B. Manufacturers: Armstrong Series 800, ITT Hoffman, Spirax-Sarco, Watson McDaniels

**2.3 CONDENSATE FLASH TANK:**

*SPEC EDITOR: FOR USE WITH 60 PSIG STEAM ONLY.*

- A. Provide condensate flash tank of size and with openings as shown on drawings. Tank shall be ASME constructed and stamped for 125 PSIG.
- B. Manufacturers: Cemline, Spirax-Sarco, Wessels, Watson Mcdaniel.

**2.4 VACUUM BREAKERS:**

*SPEC EDITOR: PSIG. IS THIS THE MINIMUM ? 125 OR 150 PSIG ?*

- A. Brass body, stainless steel retainer tube, ball and spring, rated for 365F, 300 psig.
- B. Manufacturers: Hoffman, Spirax-Sarco, Bell & Gossett

*SPEC EDITOR: USED TYPICALLY WHEN VENTING STEAM.*

**2.5 DRIP PAN ELBOWS:**

- A. Cast iron construction, ASTM A126, Class B, rated for 250psig, 450F.
- B. Manufacturers: Keckley, Spence, Spirax-Sarco.

**2.6 GATE VALVE - CAST STEEL (FOR USE IN CENTRAL POWER PLANT ONLY):**

*SPEC EDITOR: USED ONLY IN POWER PLANT WORK.*

- A. Cast steel body, bolted bonnet, rising stem, seal-welded seat rings, flanged connections, with chromium stainless steel trim, O.S. & Y class 150, type 410 stainless steel hard facing seating surfaces, rated for steam at 1000 F.
- B. Valves 10" and larger shall be positively proven to be new with a dated certificate of manufacture from the manufacturer.
- C. Manufacturers: Crane No: 47XU, Stockham No: J1009B8F, Nibco, Grinnell.

**2.7 GATE VALVE - CAST IRON (FOR USE AT BUILDING BOILERS ONLY):**

*SPEC EDITOR: REVISE TO MEET BOILER CODE WITH INTERGRAL DRAIN.*

**SPEC EDITOR: USED ONLY AT THE DISCHARGE FROM STEAM BOILERS.**

- A. Cast iron body ASTM A126 class B or class C, bolted bonnet, rising stem, flanged connections, bronze trim with bronze seat rings, nickel plate steel stem, wedge disk type gate, O.S.& Y. class 125.
- B. Manufacturers: Crane Fig. 465, Grinnell 6020A, NIBCO F-637-31, Stockham

**2.8 GLOBE VALVE:**

**SPEC EDITOR: ONLY USED FOR STEAM PRV BYPASS.**

- A. Through 2": 150 pound rated, bronze body, threaded, Teflon disc, rising stem.  
Manufacturer: Crane No. 7TF, Grinnell No. 3240, Nibco, Stockham B-22-T.
- B. 1/2" and larger": 125 pound rated, iron body, bronze trim, renewable seat and disc.  
Manufacturer: Crane No. 351, Grinnell No. 6200A, Nibco, Stockham G-512.

**2.9 SAFETY RELIEF VALVES:**

**SPEC EDITOR: IF SAFETY RELIEF VALVES ARE REQUIRED, ADD TEXT TO SPECIFICATIONS. USE THIS RELIEF VALVE WITH PRV INSTALLATION. BOILER RELIEF VALVES SHOULD BE SPECIFIED WITH THE BOILER.**

**SAFETY RELIEF VALVES IN FLASH TANKS - VM/RP TO ADD SPECS.**

**2.10 PRESSURE REDUCING VALVES:**

**SPEC EDITOR: VERIFY SECO METAL DISC.**

- A. Pressure reducing valves shall be single seated, flanged, ASA 250 lb.; cast iron body, stainless steel diaphragm, Seco metal disc, stainless steel stem, and carbon steel main spring. Valves shall be normally closed type and designed for dead end service. Steam velocity through the valve shall be limited to 7,000 fpm.
- B. Provide muffling orifice required to limit sound level to 85 dba, 3 feet from the valve.
- C. Manufacturers: Armstrong, Leslie, Spirax-Sarco, Spence.

**PART 3 - EXECUTION**

**3.1 PIPING INSTALLATION:**

- A. See Section 221113 for piping materials and installation requirements.
- B. Do not raise gravity condensate return pipe unless authorized by the engineer.

**SPEC EDITOR: DRIP LEG AND ALL THE TRAP LOCATIONS SHALL BE INDICATED IN DRAWINGS**

- C. Drip and Trap: At end of steam mains, at the end of horizontal runs, prior to control valves (where condensate will collect behind valve when closed), at low points (where steam pipe rises in direction of flow), at intervals of no less than 200 feet for continuous pipe, and where noted on the drawings, provide drip leg and connect to gravity condensate return piping through float and thermostatic, minimum 3/4". See drawings for drip size and detail.

**3.2 STEAM TRAP SELECTION AND INSTALLATION:**

**SPEC EDITOR: INSTALLATIONS AND PIPING ARRANGEMENTS VARY WITH EQUIPMENT SERVED, STEAM PRESSURES, TRAP TYPE AND MANY OTHER CONSIDERATIONS. CONSULT MANUFACTURER'S REPRESENTATIVE FOR PROPER APPLICATION AND INSTALLATION DETAILS.**

- A. Unless noted otherwise, select traps for three times design load for coils, and two times design load for converters. Install steam traps in accessible locations as close as practical to connected equipment. Locate trap below outlet of equipment served to minimize condensate accumulation in equipment. See drawings for installation requirements.

**3.3 PRESSURE REDUCING STATION INSTALLATION:**

**SPEC EDITOR: DRIP PAN ELBOW IS REQUIRED ON RELIEF VALVE INSTALLATION WHERE DISCHARGE MUST GO UP AFTER COMING OUT OF RELIEF VALVE. SHOW ROUTING OF RELIEF VALVE ON DRAWINGS. ROUTE TO SAFE LOCATION, WHERE DISCHARGE WILL NOT POSE A HAZARD TO PEOPLE.**

- A. Provide single stage PRV stations where indicated and as scheduled on drawings. Each station shall consist of steam pressure reducing valves, strainers, relief valves, isolation gate valves, globe style bypass valves, pressure gauges etc. as detailed.

**3.4 BYPASS AND DRAIN INSTALLATION:**

**SPEC EDITOR: THIS IS USED TO SLOWLY ACTIVATE STEAM LINES, AND TO REDUCE WATER HAMMER. IT IS NOT REQUIRED AT TERMINAL CONNECTION (ABSORPTION CHILLERS). IT IS USED PRIMARILY IN MAIN VALVES. INDICATE REQUIRED LOCATIONS ON DRAWINGS.**

- A. Provide bypass and drain connection for steam valves 8" and larger. Comply with MSS SP-45 bypass and drain connections.

**3.5 PRESSURE REDUCING STATION INSTALLATION:**

- A. Install drip pan elbow as close as possible to relief valve. Extend drains for drip pan elbow to indirect waste at floor drain.
- B. Extend relief valve discharge as indicated on drawings.

- C. Set valves to relieve at 15 psig.
- D. Properly hang, guide and anchor all related piping to secure the pipe during PRV operation.

**3.6 SAFETY RELIEF INSTALLATION:**

- A. Install in vertical upright position as close as possible to the pressure reducing valve.
- B. The installation shall comply with all manufacturer's recommendations.

**3.7 FLASH TANK INSTALLATION:**

- A. Install as detailed and per manufacturer's recommendation.

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**

SECTION 232300 - REFRIGERANT PIPING

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 232300 - REFRIGERANT PIPING**

**REVISIONS:**

**8-1-99: CONTENT APPROVED AS NEW MASTER**

**8-11-99: REVISED TO VBS.DOT TEMPLATE**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK**

- A. Provide refrigerant piping and accessories used for air conditioning applications.

**1.3 QUALITY ASSURANCE**

- A. Regulatory Requirements: Comply with provisions of the following codes:
  - 1. ANSI B31.5: ASME Code for Pressure Piping - Refrigerant Piping.
  - 2. ANSI/ASHRAE Standard 15: Safety Code for Mechanical Refrigeration.
  - 3. ASHRAE Standard 34: Number Designation and Safety Classification of Refrigerants.
  - 4. EPA requirements in Section 608: Prohibition of Venting and Regulation of CFC Requirements

**1.4 ACCEPTABLE MANUFACTURES**

- A. Refrigerant Valves and Specialties: Alco Controls Div., Emerson Electric., ASCO, Danfoss Electronics, Inc., EATON Corporation, Control Div., Henry Valve Company, Parker-Hannifin Corporation, Refrigeration and Air Conditioning Division, Sporlan Valve Company.

**PART 2 - PRODUCTS:**

**2.1 REFRIGERANT PIPING**

- A. Refer to Section 221113 for piping, fittings, and joints.

**2.2 REFRIGERANT VALVES**

- A. General: Complete valve assembly shall be and designed to conform to ARI 760.
- B. Globe: 450 psig maximum operating pressure, 275 deg. F maximum operating temperature; cast bronze body, with cast bronze or forged brass wing cap and bolted bonnet; replaceable resilient seat disc; plated steel stem. Valve shall be capable of being repacked under pressure. Valve shall be straight through or angle pattern, with solder-end connections.
- C. Check Valves - Smaller Than 7/8 Inch: 500 psig maximum operating pressure, 300 deg. F maximum operating temperature; cast brass body, with removable piston, Teflon seat, and stainless steel spring; straight through globe design. Valve shall be straight through pattern, with solder-end connections.
- D. Check Valves - 7/8 inch and Larger: 450 psig maximum operating pressure, 300 deg. F maximum operating temperature; cast bronze body, with cast bronze or forged brass bolted bonnet; floating piston with mechanically retained Teflon seat disc. Valve shall be straight through or angle pattern, with solder-end connections.

**SPEC EDITOR: REVIEW SOLENOID VALVES CAREFULLY, SELECT VOLTAGE AND NORMAL POSITION**

- E. Solenoid Valves: UL-listed, 250 deg. F temperature rating, 400 psig working pressure; forged brass, with Teflon valve seat, two-way straight through pattern, and solder end connections. Provide manual operator to open valve. Furnish complete with NEMA 1 solenoid enclosure with 1/2 inch conduit adapter, holding coil, voltage to meet controls requirements.
- F. Thermal Expansion Valves: thermostatic adjustable, modulating type; size as required for specific evaporator requirements, and factory set for proper evaporator superheat requirements. Valves shall have copper fittings for solder end connections; complete with sensing bulb, a distributor having a side connection for hot gas bypass line, and an external equalizer line.
- G. Hot Gas Bypass Valve: adjustable type, sized to provide capacity reduction beyond the last step of compressor unloading; and wrought copper fittings for solder end connections.
- H. Charging and Purging Valves:  
Manufacturer: Henry Series.
- I. Refrigeration Ball Valve:  
Manufacturer: Henry Series 900,000

**2.3 REFRIGERANT PIPING SPECIALTIES**

- A. General: Complete refrigerant piping specialty assembly shall be UL-listed and designed to conform to ARI 760.
- B. Strainers: 500 psig maximum working pressure; forged brass body with monel 80-mesh screen, and screwed cleanout plug; Y-pattern, with solder end connections.

- C. Moisture/liquid Indicators: 500 psig maximum operation pressure, 200 deg. F maximum operating temperature; forged brass body, with replaceable polished optical viewing window, and solder end connections.

**SPEC EDITOR: CAREFULLY REVIEW AND EDIT PARAGRAPHS D, E AND F.**

- D. Filter-driers: 500 psig maximum operation pressure; steel shell, flange ring, and spring, ductile iron cover plate with steel capscrews, and wrought copper fittings for solder end connections. Furnish complete with replaceable filter-drier core kit, including gaskets, as follows:

**SPEC EDITOR: SELECT FROM THE FOLLOWING TWO OPTIONS.**

1. Standard capacity desiccant sieves to provide micron filtration.
  2. High capacity desiccant sieves to provide micron filtration and extra drying capacity.
- E. Suction Line Filter-Drier: 350 psig maximum operation pressure, 225 deg. F maximum operating temperature; steel shell, and wrought copper fittings for solder end connections. Permanent filter element shall be molded felt core surrounded by a desiccant for removal of acids and moisture for refrigerant vapor.
- F. Suction Line Filters: 500 psig maximum operation pressure; steel shell, flange ring, and spring, ductile iron cover plate with steel capscrews, and wrought copper fittings for solder end connections. Furnish complete with replaceable filter core kit, including gaskets, as follows:
- G. Flexible Connectors: 500 psig maximum operating pressure; seamless tin bronze or stainless steel core, high tensile bronze braid covering, solder connections, and synthetic covering; dehydrated, pressure tested, minimum 7 inch in length. Manufacturer: Anaconda

### **PART 3 - EXECUTION**

#### **3.1 REFRIGERANT PIPING INSTALLATION**

- A. General: Install refrigerant piping per Section 221113, and in accordance with ASHRAE Standard 15.
- B. Arrange piping to allow normal inspection and servicing of compressor and other equipment. Install valves and specialties in accessible locations to allow for servicing and inspection.
- C. Install branch tie-in lines to parallel compressors equal length, and pipe identically and symmetrically.
- D. Slope refrigerant piping as follows:
  1. Install horizontal hot gas discharge piping with 1/2" per 10 feet downward slope away from the compressor.
  2. Install horizontal suction lines with 1/2 inch per 10 feet downward slope to the compressor, with no long traps or dead ends which may cause oil to separate from the suction gas and return to the compressor in damaging slugs.

3. Install traps and double risers where indicated, and where required to entrain oil in vertical runs.
  4. Liquid lines may be installed level.
- E. Install strainers immediately ahead of each expansion valve, solenoid valve, hot gas bypass valve, compressor suction valve, and as required to protect refrigerant piping system components.
  - F. Install moisture/liquid indicators in liquid lines between filter/driers and thermostatic expansion valves and in liquid line to receiver.
    1. Install moisture/liquid indicators in lines larger than 2-1/8 inch OD, using a bypass line.
  - G. Install unions to allow removal of solenoid valves, pressure regulating valves, expansion valves, and at connections to compressors and evaporators.
  - H. Install flexible connectors at the inlet and discharge connection of compressors.

### 3.2 VALVE INSTALLATION

- A. General: Install refrigerant valves where indicated, and in accordance with manufacturer's instructions.
- B. Install globe valves on each side of strainers and driers, in liquid and suction lines at evaporators, and elsewhere as indicated.
- C. Install a full sized, 3-valve bypass around each drier.
- D. Install solenoid valves ahead of each expansion valve and hot-gas bypass valve. Install solenoid valves in horizontal lines with coil at the top.
  1. Electrical wiring for solenoid valves is specified in Division 26 and 230900. Coordinate electrical requirements and connections.
- E. Thermostatic expansion valves may be mounted in any position, as close as possible to the evaporator.
  1. Where refrigerant distributors are used, mount the distributor directly on the expansion valve outlet.
  2. Install the valve in such a location so that the diaphragm case is warmer than the bulb.
 

**SPEC EDITOR: VERIFY PROPER LOCATION FOR BULB WITH VALVE MANUFACTURER.**
  3. Secure the bulb to a clean, straight, horizontal section of the suction line using two bulb straps. Do not mount bulb in a trap or at the bottom of the line.
  4. Where external equalizer lines are required make the connection where it will clearly reflect the pressure existing in the suction line at the bulb location.
- F. Install pressure regulating and relieving valves as required by ASHRAE Standard 15.

### 3.3 FIELD QUALITY CONTROL

- A. Inspect, test, and perform corrective action of refrigerant piping in accordance with ASME Code B31.5, Chapter VI.
- B. Repair leaking joints using new materials, and retest for leaks.

### 3.4 CLEANING

**SPEC EDITOR: THIS ARTICLE IS REQUIRED WHERE OTHER THAN TYPE ACR TUBING IS ALLOWED.**

- A. Before installation of copper tubing other than Type ACR tubing, clean the tubing and fitting using following cleaning procedure:
  - 1. Remove coarse particles of dirt and dust by drawing a clean, lint free cloth through the tubing by means of a wire or an electrician's tape.
  - 2. Draw a clean, lint free cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
  - 3. Draw a clean, lint free cloth, saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint. Inspect tube or pipe visually for remaining dirt and lint.
  - 4. Finally, draw a clean, dry, lint free cloth through the tube or pipe.

### 3.5 ADJUSTING

- A. Verify actual evaporator applications and operating conditions, and adjust thermostatic expansion valve to obtain proper evaporator superheat requirements.
- B. Adjust controls and safeties. Replace damaged or malfunctioning controls and equipment with new materials and products.

### 3.6 CHECK, TEST AND START-UP

- A. Charge system using the following procedure:
  - 1. Install core in filter dryer after leak test but before evacuation.
  - 2. Evacuate refrigerant system with vacuum pump; until temperature of 35 deg F is indicated on vacuum dehydration indicator.
  - 3. During evacuation, apply heat to pockets, elbows, and low spots in piping.
  - 4. Maintain vacuum on system for minimum of 5 hours after closing valve between vacuum pump and system.
  - 5. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psi.
  - 6. Complete charging of system, using new filter dryer core in charging line. Provide full operating charge.
- B. Train Owner's maintenance personnel on procedures and schedules related to start-up and shut-down, troubleshooting, servicing, and preventative maintenance of refrigerant piping valves and refrigerant piping specialties.

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**

SECTION 232513 - CHEMICAL WATER TREATMENT, CLOSED LOOP WATER SYSTEMS

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 232513 - CHEMICAL WATER TREATMENT, CLOSED LOOP WATER SYSTEMS**

***SPEC EDITOR: THE CHILLED WATER SYSTEM AT UNIVERSITY HOSPITAL IS A HYBRID CLOSED/OPEN LOOP SYSTEM; THIS SPECIFICATION MUST BE SPECIALLY MODIFIED WHEN USED FOR WORK ON THAT SYSTEM. CONTACT THE U-M DESIGN MANAGER FOR DIRECTION.***

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

***INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.***

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

***SPEC EDITOR: IN 1 AND 2 BELOW, SELECT PROPER SPEC SECTION NUMBER BY PROJECT. DELETE SUSTAINABLE DESIGN / LEED IF NOT APPLICABLE TO THE PROJECT.***

- B. Related Sections:
1. Section 018113 - Sustainable Design Requirements
  2. Section 019110/019100 - Facilities Commissioning
  3. Section 220500 - Common Work Results for Mechanical
  4. Section 221113 - Piping Materials and Methods
  5. Section 220523 - Valves
  6. Section 220519 - Thermometers, Pressure Gauges, and Accessories
  7. Section 220553 - Mechanical Identification
  8. Section 220719 - Mechanical Systems Insulation

**1.2 SUMMARY**

- A. Products specified in this section include the following:
1. Chemical Inhibitors for Water
  2. Chemicals for Inhibitors and cleaning
  3. Shot Feeder
  4. Corrosion Coupon Rack
  5. Glycol Feed System
  6. Ethylene Glycol
- B. Provide a Chemical Services Provider (CSP) to perform the services described below.
- C. Provide water treatment products and services including:
1. Chemicals for cleaning, passivation, and treatment of each system.
  2. On-going treatment, chemicals, testing, certification, and reports to demonstrate effective water treatment is maintained at all times.
  3. Start-up and operation of chemical treatment equipment.

- D. Provide a complete chemical water treatment program during construction for all new and reused piping networks. This program shall begin from the point each system is filled during construction and extend until Substantial Completion or final Owner acceptance of each system, whichever occurs later. The program shall include water analysis, chemicals, testing, equipment, consulting and service for the following systems:
  - 1. Heating Hot Water System
  - 2. Chilled Water System
  - 3. Dual Temperature Water System
  - 4. Process Cooling System
  - 5. Glycol System
  - 6. All other closed loop systems
- E. Attend project meetings as required to plan, schedule and coordinate above activities with other project contractors and the Owner.
- F. Provide recommended testing procedures and chemical treatment schedule for Owner's personnel. This information shall be submitted to the owner in a Program Administration Manual.

### 1.3 SUBMITTALS

- A. Product Data: Include rated capacities; water-pressure drops; shipping, installed, and operating weights; and complete data on furnished products listed below:
  - 1. Shot Feeders
  - 2. Coupon Racks
  - 3. Glycol Feed System
  - 4. Flow Indicators
  - 5. Valves
  - 6. Product specifications and MSDS's for each chemical used
  - 7. Cleaning Procedures
  - 8. Passivation Procedures
  - 9. Chemical Treatment Procedures
  - 10. Shop Drawings
- B. Shop Drawings to include detailed equipment assemblies indicating dimensions, weights, loads, required clearances, method of field assembly, components, and the location and size of each field connection as necessary to assist the mechanical contractor with proper system installations
- C. Submit resume of water treatment personnel and name of Chemical Services Provider.
- D. Service Reports as indicated under Part 2 below.

### 1.4 QUALITY ASSURANCE

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

- B. Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  - 1. American Society for Testing and Materials (ASTM)
    - a. D859 - Test Method for Silica in Water
    - b. D1067 - Test Methods for Acidity/Alkalinity in Water
    - c. D1068 - Test Methods for Iron in Water
    - d. D1126 - Test Method for Hardness in Water
    - e. D3370 - Practices for Sampling Water from Closed Conduits
    - f. D4012 - Test Method for Adenosine Triphosphate (ATP) Content of Microorganisms in Water
    - g. D5465 - Practice for Determining Microbial Colony Counts from Waters Analyzed by Plating Methods
- C. Conform to all applicable Codes, Regulations, and Municipal requirements for the use and disposal of chemicals (including cleaning compounds) and waste to public sewer systems.
  - 1. Wastewater shall be discharged to the sanitary sewer only if it has a pH between 5.0 and 10.0 and meets the requirements of the City of Ann Arbor Sewer Use Ordinance. For wastewater not meeting such criteria, contact U-M Occupational Safety and Environmental Health (OSEH) Hazmat at 734-763-4568 for proper disposal instructions. City of Ann Arbor Sewer Use Limitations can be found at the following website: <http://www.municode.com/resources/gateway.asp?pid=11782&sid=22> or by contacting U-M OSEH Environmental Protection & Permitting Program (EP3) at 734-936-1920
  - 2. Glycols (of any type) shall not be discharged to the sanitary sewer. Contact U-M OSEH HazMat at 734-763-4568 for proper disposal instructions.
- D. Wastewater containing any chemical or sediment is prohibited from discharge to the storm water system. No chemical shall contain Chromates or Inorganic Phosphates.

**1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Package for delivery to best protect finished surfaces while using the least amount of single-use packaging as possible. Deliver equipment and components adequately packaged for lifting, skidding, or rolling into final position, according to manufacturer's instructions. If possible, package and ship products using reusable blankets and fabrics, or reusable cardboard and crate systems.
- B. Store materials and equipment raised off the floor on pallets and protected with coverings to prevent damage due to weather and construction activities. Store in areas that prevent damage due to freezing and extreme temperatures or sunlight. Arrange coverings to provide air circulation to avoid damage from condensation or chemical build-up. Protect from damage, dirt and debris at all times.

- C. Store chemicals in curb protected area. Such secondary containment areas must have the capacity to hold the volume of the largest container or 10% of the combined containers, whichever larger. If room has no floor drains, then the room itself may be considered sufficient secondary containment. If the room is considered the secondary containment ensure there is a lip at the door so no liquids can exit the room in the event of a leak. Verify field conditions before storing any chemicals
  - 1. Provide temporary containment areas when permanent containment areas do not exist. Remove temporary containment at the end of construction.

**1.6 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion. This warranty does not include ongoing chemical treatment or monitoring.

**1.7 ACCEPTABLE CHEMICAL SERVICE PROVIDERS (CSPS)**

- A. Approved CSPs
  - 1. Chemtreat
  - 2. Crown Solutions
  - 3. GE Water
  - 4. Kroff
  - 5. Mitco
  - 6. Nalco
  - 7. Rochester Midland

**PART 2 - PRODUCTS**

**2.1 GENERAL**

- A. CSP Services:
  - 1. The CSP shall provide all cleaning and treatment chemicals, basic services, testing, equipment and materials necessary for a complete water treatment program.
  - 2. The CSP shall perform an analysis of the supply water to determine the type and quantities of chemical treatment needed to maintain the required water quality to prevent corrosion, scaling, and biological growth. The CSP will at minimum provide weekly site visits to verify proper water treatment for the first month after any system or part of a system is treated. Provide monthly visits thereafter, or more often if required to assure performance requirements are being met, to analyze water samples, inspect equipment, and add additional chemicals as required to maintain proper water treatment, until final written Owner acceptance of the respective system.

3. At each site visit CSP shall analyze each system for corrosion inhibitors, pH, total iron, total copper, bacteria levels (provide monthly analytical laboratory analysis), and conductivity; inspect loss from corrosion coupons (provide analytical laboratory analysis every three months), record make-up meter readings, and perform any other tests necessary to validate that corrosion, scale, and organic growth is being prevented.
4. Reports:
  - a. Submit a written startup test report for each system placed into service.
  - b. A service report shall be prepared on site by the CSP, submitted at the time of each service visit (with copies immediately provided to the Owner and Commissioner), which shall include all required test results and recommendations.
  - c. Additionally, provide final reports for approval to the Owner and Commissioner regarding each site service visit, certified by an Officer of the CSP, within one week of any water treatment activity. Such reports shall include the results of any field or lab tests. Reports shall clearly state if the required water quality and maximum corrosion rates are being achieved.
  - d. At a minimum, each report shall include the following information:
    - 1) System Treated:
    - 2) Date
    - 3) Conductivity
    - 4) pH
    - 5) Total Iron
    - 6) Total Copper
    - 7) Bacteria(cfu) (monthly analytical laboratory analysis)
    - 8) Coupon Corrosion Rates (three month analytical laboratory analysis)
    - 9) Make-up Water Quantity since Last Visit
    - 10) Corrosion Inhibitor level (ppm)
    - 11) Silica level (ppm)
5. Conduct final on-site system turn over meeting with Owner and Commissioner. Present final validation report demonstrating that performance requirements have been achieved and that each system is currently properly treated.
6. When required by Part 3, train Owner's maintenance personnel in water treatment procedures.
7. Program Administration Manual:
  - a. The CSP shall provide the Owner with two (2) Program Administration Manuals including sections covering program control, testing requirements, in plant logs, safety data and system information. Each section shall include the following:
    - 1) Program Control: Include a complete program outline with chemical descriptions, control ranges, and required action for "out of range" situations. Also include complete ordering instructions with applicable account numbers and phone numbers.

- 2) Testing Requirements: This section will include basic testing practices as well as detailed test instructions for each test to be performed.
- 3) In-Plant Logs: Include detailed testing log sheets for each system to be tested including room to record one (1) month's data on one (1) sheet and a section to log chemical inventory.
- 4) Safety Data: Include the CSP's 24-hour toll free safety hotline number as well as MSDS sheets for each chemical used.
- 5) System Information: Include any equipment manuals and related information.

## 2.2 TREATMENT PROGRAM - FLUSHING AND CLEANING

- A. Cleaning chemicals shall be non-phosphate and non-acidic.
- B. Flush and clean all new and reused piping.
- C. Provide a flush/clean plan for approval. Provide and later remove all temporary bypasses, drains, vents, etc. required to flush and clean the system. Temporary components for flushing and cleaning are not indicated on the drawings.
- D. Flush and clean systems per the general procedures specified in Related Sections; clean systems per the approved cleaning procedures submitted under this specification section. Provide and install all required cleaning chemicals.
- E. Verify that adequate cleaning chemical was added, that cleaning was effective, and test that cleaning chemicals were properly rinsed from the system. Provide a report certifying that cleaning and rinsing, was properly executed.
- F. Provide passivation and chemical treatment immediately after each system has been cleaned and flushed. Systems shall not stand filled with fluids for periods longer than 48 hours without beginning flushing and cleaning which shall immediately be followed by the passivation and chemical treatment procedures.

## 2.3 TREATMENT PROGRAM - CHEMICAL TREATMENT AND PASSIVATION

- A. Provide passivation and chemical treatment per the approved chemical treatment procedures. Chemically treat new and reused piping networks using chemicals and treatment procedures compatible with the system being cleaned and the chemical treatment chemicals in existing piping systems being connected to. Test existing piping systems or otherwise determine chemical treatment in existing piping and validate compatibility. Note that existing systems may be silica based, adjust water treatment program accordingly.

***SPEC EDITOR: WHEN CONNECTING INTO EXISTING ACTIVE SYSTEMS, DEVELOP A COORDINATION PLAN IN CONSULTATION WITH U-M PLANT AND REVISE THE BELOW SAMPLE PARAGRAPH ACCORDINGLY. THIS SPECIFICATION REQUIRES POLYMER BASED INHIBITORS, EXISTING SYSTEMS MAY BE SILICA BASED. IT MAY BE DESIRABLE TO CONVERT THE EXISTING PIPING NETWORK TO POLYMER BASED AS A PART OF YOUR PROJECT.***

- B. When connecting into active existing systems, treat piping networks installed or reused by the project and verify by lab analysis that the treatment levels per the treatment plan have been attained prior to connecting into the existing active system. Submit validating report for approval.
  - 1. Do not connect into existing active system until report is approved by Owner.
  - 2. Provide temporary valves, piping, and accessories as required to treat the project's piping prior to connection to the active system.
- C. Provide passivation/chemical treatment at system startup or immediately upon operation of a system for temporary cooling and heating, whichever comes first.
- D. Provide chemical treatment immediately after each system has been cleaned and flushed. Thereafter immediately begin the approved water treatment maintenance program to passivate and prevent corrosion, scale, and organic growth and to maintain treatment chemical levels. Note that systems or parts of systems will not typically be started at the same time; adjust treatment strategy accordingly.
- E. Provide chemicals that comply with State and Federal regulations.
- F. Chemical inhibitor shall be polymer based and contain azole in an amount appropriate for the percentage of internal copper surface area of the system piping. Provide products with PTSA (p-Toluenesulfonic acid) florescent tracer dyes. Molybdenum shall not be used as a tracer. Optionally, for hot water heating systems only, nitrite/azole based inhibitors may be used.
- G. No chemicals shall contain chromates or inorganic phosphates.
- H. Utilize non-oxidizing biocides in the event sterilization is required.
- I. Adjust chemical concentrations as required to achieve the required performance

**2.4 PERFORMANCE REQUIREMENTS**

- A. The water treatment programs proposed by the CSP shall maintain corrosion rates below 0.5 mils per year for mild steel and 0.1 mils per year for copper. These rates shall be verified with corrosion coupons provided by the CSP. Coupons shall be analyzed in the CSP's analytical laboratory every three months, more often if required, to assure these levels are not exceeded.
- B. Microbiological growth levels shall be maintained below 10,000 cfu's aerobic bacteria and 10 cfu's anaerobic bacteria. The CSP shall perform detailed microbiological culturing at the CSP's company's analytical laboratory monthly, more often if required, to assure these levels are not exceeded

**2.5 EQUIPMENT**

- A. Provide all components required for a fully operational water treatment system. Provide components that are not adversely affected by the treatment chemicals employed.

**CHEMICAL SHOT FEEDERS: OTHER MFR.S OF SHOT FEEDERS SUCH AS WINGERT AND VECTOR OFFER ONLY QUARTER-TURN STYLE TOPS WHICH U-M PLANT HAS DETERMINED TO BE UNSAFE. IF OTHER MFR.S CAN BE FOUND THAT INCLUDE ALL THE FEATURES LISTED BELOW, THEY MAY BE ADDED AS ACCEPTABLE MFR.S.**

- B. Chemical Shot Feeders:
1. Acceptable Manufacturers:
    - a. Neptune
  2. Provide shot feeders for each system. Provide steel 5-gallon minimum tank with interior and exterior epoxy coating, removable screwed and gasketed top (4" diam. minimum), pipe threaded inlet and outlet, dish bottom style with floor skirt, rated at 200 psi, 200°F.
- C. Corrosion Coupon Rack:
1. Acceptable Manufacturers:
    - a. Cannon Water Technology
    - b. J.L. Wingert
    - c. Vector Industries
  2. Supply for each corresponding shot feeder:
    - a. Chilled water: ¾" stainless steel coupon rack, with two coupon holders, inlet/outlet 316 stainless steel full port ball valves, and a ¼" sample valve. Include a 0-5 gpm nominal range variable area flow meter, rated 150 psig at 70°F, with graduated polysulfone or acrylic cylinder, with an accuracy of +/-5%. Provide mild steel and copper coupons.
    - b. Heating hot water and dual temperature systems: ¾" stainless steel coupon rack, with two coupon holders, inlet/outlet 316 stainless steel full port ball valves, and a ¼" sample valve. Include a 0-5 gpm nominal range variable area flow meter, rated 100 psig at 250°F, graduated glass cylinder with stainless steel or brass connections, with an accuracy of +/-2%. Provide mild steel and copper coupons.

**SPEC EDITOR: GLYCOL FEED SYSTEMS MUST BE INSTALLED WITHIN A CONTAINMENT AREA, CONTACT U-M DESIGN MANAGER FOR SPECIFIC REQUIREMENTS.**

- D. Glycol Feed System:
1. Acceptable Manufacturers:
    - a. J.L. Wingert Co.
    - b. Neptune Chemical Pump Co.
    - c. Advantage Controls Inc.
    - d. Wessels Co.
  2. Provide a floor mounted packaged glycol feed system that is pre-wired and pre-plumbed, and includes a storage tank, control panel, controls, pump, piping, and valves, all supported on a steel frame.
  3. Provide a 50-gallon minimum translucent polyethylene single wall tank with polyethylene cover. Minimum ¼ inch thick walls.

4. Provide a welded steel stand suitable for floor mounting and painted with two coat system consisting of oxide primer and alkyd enamel finish. Provide holes in the base for the installation of anchor bolts and leveling of equipment.
5. Provide a bronze gear pump, 120 V, single phase, and rated for a minimum of 1.5 gpm at 90 psig.
6. Valves and Piping: Pump suction shall include ball valve and Y-strainer. Pump discharge shall include silent check valve, pressure switch, pressure gauge, and 150 psi relief valve piped back to tank. All piping shall be Type L Copper. Connect pump suction and discharge with braided stainless steel or bronze flex connectors. All piping, valves and accessories shall conform to Related Sections.
7. Provide a NEMA 4X control panel with 8 foot, 120 V grounded power cord. Equip the panel with motor starter, 2-position main power switch with light, hand /off/ auto switch with light for gear pump, low level red light, low level audible alarm with push button silence switch, dry contacts for remote monitoring of alarm, and a 15 amp fuse.

**SPEC EDITOR: PROVIDE THE PRESSURE SWITCH RANGE AND SET POINT EITHER IN THE BELOW PARAGRAPH OR ON THE PROJECT DRAWINGS.**

8. Provide an adjustable pressure switch, selected with a range to match system operating pressure.
9. Provide electrical components that conform to Division 26 requirements. Provide all wiring in conduit. Loose, exposed or unprotected wire is not acceptable

**SPEC EDITOR: REVISE CONCENTRATION IN ARTICLE BELOW AS REQUIRED: AT MINUS 15°F, A CONCENTRATION OF 30% IS RECOMMENDED FOR BURST PROTECTION, 45% FOR FREEZE PROTECTION. FREEZE PROTECTION CONCENTRATIONS ALLOW FLUID TO BE PUMPED. EDITOR SHOULD CAREFULLY DETERMINE IF THE CONCENTRATION IS FOR BURST PROTECTION OR FREEZE PROTECTION. AVOID SPECIFYING EXCESS CONCENTRATIONS SINCE FLUID HEAT TRANSFER RATE DECREASES AS CONCENTRATION INCREASES.**

**DO NOT SPECIFY ETHYLENE GLYCOL FOR SNOW MELTING SYSTEMS; USE PROPYLENE GLYCOL.**

**2.6 PREMIXED INHIBITED ETHYLENE GLYCOL**

- A. Acceptable Manufacturer and Product:
  1. Dow Chemical - Dowtherm SR-1
- B. Provide for hydronic systems as indicated on the drawings.
- C. Provide inhibited ethylene glycol, factory pre-mixed with water at a concentration of 30% by volume Dowtherm SR1.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

- A. Pre-Treatment Conference: Prior to treatment activities, meet with the Project Engineer, Commissioner and contractors to verify treatment procedures, discuss coordination with existing piping networks, and to coordinate treatment activities with construction schedule.
- B. Flush and clean systems per Related Sections and Part 2 above.

**3.2 INSTALLATION**

- A. Install all required components, and chemically passivate/treat and maintain the system as described in Part 2.
- B. Use and dispose of chemicals and wastewater (including from existing piping networks) per the Quality Assurance section of this specification. All costs of disposal shall be borne by the contractor.
- C. Provide and install all chemicals and all incidental components. Install equipment at locations shown on the Drawings. Follow the manufacturer's installation and startup instructions.
- D. Passivate and chemically treat each system immediately after it has been cleaned and flushed.
- E. Install shot feeders with openings no higher than 4' above finished floor. Pipe shot feeder drain to nearest floor drain. Install top coupon of corrosion coupon rack no higher than 6' above finished floor.

***SPEC EDITOR: SOME PROJECTS, SUCH AS HOSPITAL PROJECTS, MAY DESIRE THAT WATER TREATMENT SERVICES CONTINUE BEYOND SUBSTANTIAL COMPLETION, E.G. A ONE OR MORE YEAR SERVICE CONTRACT. CONTACT THE U-M DESIGN MANAGER FOR DIRECTION, AND IF NEEDED, REVISE THE PARAGRAPH BELOW TO INCLUDE THAT REQUIREMENT.***

- F. The treatment program shall begin at system start-up or immediately upon first operation of the system by the contractor for temporary heating and cooling, whichever comes first. Continue the program until Substantial Completion.

**3.3 INSTALLATION OF PREMIXED INHIBITED ETHYLENE GLYCOL SYSTEM**

- A. Following system flushing and cleaning, drain the entire piping system. Add premixed ethylene glycol/inhibitor solution into the system. Circulate system fluid, adding additional pre-mixed glycol/inhibitor as required until all air is purged from the system.
- B. Sample fluid, measure concentration of glycol and inhibitor. Drain system fluid as required and add additional pre-mixed solution to achieve the design concentration of glycol and the manufacturer's recommended concentration of inhibitor. Submit report of activities, including volumes of all fluids used.

**3.4 INSTALLATION OF GLYCOL FEED SYSTEM**

- A. Level and bolt Glycol Feed System to the floor within the containment area. Support all piping and conduits independent of the Glycol Feed Unit.

**3.5 FIELD QUALITY CONTROL:**

- A. The CSP shall:
  - 1. Verify that systems and equipment have been properly cleaned, flushed, and filled with water, and are fully operational before introducing operational chemicals for water-treatment systems.
  - 2. Introduce and maintain chemical treatment to achieve the specified performance requirements.
  - 3. Submit a written startup test report for each system placed into service.
  - 4. Provide validation testing and required reports.
  - 5. Attend final on-site system turn over meeting with Owner and Commissioner. Present final validation report demonstrating that performance requirements have been achieved and that each system is currently properly treated.

**3.6 COMMISSIONING:**

- A. Perform Commissioning activities per Related Sections above.

***SPEC EDITOR: CONSULT WITH THE U-M DESIGN MANAGER TO DETERMINE IF TRAINING IS DESIRED FOR YOUR PARTICULAR PROJECT; KEEP OR DELETE OR MODIFY THE ARTICLE BELOW ACCORDINGLY.***

**3.7 OWNER TRAINING**

- A. CSP shall train Owner's maintenance personnel on equipment operation, adding and maintaining proper chemical levels, troubleshooting, servicing and preventative maintenance procedures. Do not conduct training until after start up and commissioning is completed. Provide training using documents including the Program Administration Manual and the approved Operations and Maintenance manuals. Provide these documents to the Owner at least two weeks prior to the training to allow sufficient time for review.
  - 1. Provide 2 hours training minimum.
- B. Schedule training at least 7 days in advance, at date and time approved by Owner.

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**

SECTION 232516 - CHEMICAL WATER TREATMENT - OPEN LOOP SYSTEMS

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 232516 - CHEMICAL WATER TREATMENT - OPEN LOOP SYSTEMS**

*NEW MARCH 2013.*

*THIS SPECIFICATION IS DESIGNED FOR CHILLED WATER COOLING TOWER CONDENSER WATER SYSTEMS AND MAY NEED REVISION IF USED FOR OTHER OPEN LOOP SYSTEMS, SUCH AS EVAPORATIVE COOLERS AND AIR WASHERS.*

*THE CHILLED WATER SYSTEM AT UNIVERSITY HOSPITAL IS A HYBRID CLOSED/OPEN LOOP SYSTEM; THIS SPECIFICATION MUST BE SPECIALLY MODIFIED WHEN USED FOR WORK ON THAT SYSTEM. CONTACT THE U-M DESIGN MANAGER FOR DIRECTION.*

*ADDED SPEC FOR INJECTION QUILL. D. KARLE FOR HYDRONICS MTT 6/17/2013.*

*ENHANCED THE DESCRIPTION OF BROMINE TABLETS PER RECOMMENDATION FROM M. WILLET AND M. MAU. D. KARLE 9-5-2013.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

*IN 1 AND 2 BELOW, SELECT PROPER SPEC SECTION NUMBER BY PROJECT. DELETE SUSTAINABLE DESIGN / LEED IF NOT APPLICABLE TO PROJECT. DELETE COMMISSIONING IF NOT APPLICABLE TO PROJECT.*

- B. Related Sections:
1. Section 019110/019100 - Commissioning
  2. Section 220500 - Common Work Results for Mechanical
  3. Section 221113 - Piping Materials and Methods
  4. Section 220523 - Valves
  5. Section 220553 - Mechanical Identification
  6. Section 230900 - Mechanical Systems Controls
  7. Section 26 - Electrical

**1.2 SUMMARY**

- A. Products for chemical water treatment systems specified in this section include the following:
1. Chemical Inhibitors and Biocides for Water
  2. Motor Operated Ball Valves
  3. Chemical Feed Pumps

4. Bromine Feeder Tank
  5. Chemical Treatment Controller with Conductivity Probe and flow switch.
  6. Corrosion Coupon Rack
  7. Solid Corrosion Inhibitor Dissolver
  8. Clear Plastic Strainers
  9. Flow Indicators
  10. Ball Valves
  11. Injection Quill Assembly
  12. Chemical Solution Tubing
- B. Provide a Chemical Services Provider (CSP) to perform the services described below.
- C. Provide water treatment products and services including:
1. Chemicals for cleaning, passivation, and treatment of each system.
  2. On-going treatment, chemicals, testing, certification, and reports to demonstrate effective water treatment is maintained at all times.
  3. Start-up and operation of chemical treatment equipment.
- D. Provide a complete chemical water treatment program during construction for all new and reused piping networks. This program shall begin from the point each system is filled during construction and extend until Substantial Completion or final Owner acceptance of each system, whichever occurs later. The program shall include water analysis, chemicals, testing, equipment, consulting and service for the following systems:
- REVISE BELOW, THE SYSTEMS COVERED BY THIS SPEC FOR YOUR PARTICULAR PROJECT.**
1. Chilled Water Condenser Water System
- E. Attend project meetings as required to plan, schedule and coordinate above activities with other project contractors and the Owner.
- F. Provide recommended testing procedures and chemical treatment schedule for Owner's personnel. This information shall be submitted to the owner in a Program Administration Manual.

### 1.3 SUBMITTALS

- A. Product Data: Include rated capacities; water-pressure drops; shipping, installed, and operating weights; and complete data on furnished products listed below:
1. Product specifications and MSDS's for each chemical used
  2. Cleaning Procedures
  3. Passivation Procedures
  4. Chemical Treatment Procedures
  5. Motor Operated Ball Valves
  6. Chemical Feed Pumps
  7. Bromine Feeder Tank and Piping Kit
  8. Chemical Treatment Controller with Conductivity Probe
  9. Corrosion Coupon Rack
  10. Solid Corrosion Inhibitor Dissolver
  11. Clear Plastic Strainers

12. Flow Indicators
13. Ball Valves
14. Injection Quill
15. Chemical Solution Tubing
16. PVC back-board

- B. Schematic diagram of the water treatment system showing the arrangement of all components and piping connections.
- C. Project specific wiring diagram reflecting wiring between all devices and connections to Owner's monitoring system.
- D. Details regarding the construction, support, and arrangement of devices on the PVC back-board.
- E. Submit resume of water treatment personnel and name of Chemical Services Provider.
  1. Provide a current copy of CSPs State of Michigan Commercial Pesticide Applicators Category 5B certification.
- F. Service Reports as indicated under Part 2 below.
- G. Sequence of Operation: Provide a written sequence of operation detailing the operation of the chemical treatment system.
- H. Program Administration Manual.
- I. Passivation Confirmation Report(provide when passivation is specified): Verify passivation of galvanized-steel surfaces, and confirm this observation in a written report to the Architect and Construction Manager.
- J. Shop Drawings to include detailed equipment assemblies indicating dimensions, weights, loads, required clearances, method of field assembly, components, and the location and size of each field connection as necessary to assist the mechanical contractor with proper system installations.

#### **1.4 QUALITY ASSURANCE**

- A. Manufacturers and Products: The manufacturer listed as the "Basis of Design" establishes the standard of quality that shall be provided for the Work. Subject to compliance with all requirements indicated and the features provided by the Basis of Design, provide specified products from the manufacturers named in Part 2.
- B. Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  1. American Society for Testing and Materials (ASTM)
    - a. D859 - Test Method for Silica in Water
    - b. D1067 - Test Methods for Acidity/Alkalinity in Water
    - c. D1068 - Test Methods for Iron in Water
    - d. D1126 - Test Method for Hardness in Water
    - e. D4012 - Test Method for Adenosine Triphosphate (ATP) Content of Microorganisms in Water
    - f. D5465 - Practice for Determining Microbial Colony Counts from Waters Analyzed by Plating Methods
  2. NFPA 70 National Electric Code

- C. CSP shall be currently certified by the State of Michigan for Commercial Pesticide Application Category 5B.
- D. Chemicals shall comply with all Federal, State and Local/Municipal requirements as defined by the governing agencies.
- E. Conform to all applicable Codes, Regulations, and Municipal requirements for the use and disposal of chemicals (including cleaning compounds) and waste to public sewer systems.
  - 1. Wastewater shall be discharged to the sanitary sewer only if it has a pH between 5.0 and 10.0 and meets the requirements of the City of Ann Arbor Sewer Use Ordinance. For wastewater not meeting such criteria, contact U-M Occupational Safety and Environmental Health (OSEH) Hazmat at 734-763-4568 for proper disposal instructions.
  - 2. City of Ann Arbor Sewer Use Limitations can be found at the following Ann Arbor City website: <http://www.municode.com/resources/gateway.asp?pid=11782&sid=22> or by contacting U-M OSEH Environmental Protection & Permitting Program (EP3) at 734-936-1920.
  - 3. Contact U-M OSEH HazMat at 734-763-4568 for special disposal requirements and proper disposal instructions.
  - 4. Wastewater containing any chemical or sediment is prohibited from discharge to the storm water system. No chemical shall contain Chromates or Inorganic Phosphates.

**1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Package for delivery to best protect finished surfaces while using the least amount of single-use packaging as possible. Deliver equipment and components adequately packaged for lifting, skidding, or rolling into final position, according to manufacturer's instructions. If possible, package and ship products using reusable blankets and fabrics, or reusable cardboard and crate systems.
- B. Store materials and equipment raised off the floor on pallets and protected with coverings to prevent damage due to weather and construction activities. Store in areas that prevent damage due to freezing and extreme temperatures or sunlight. Arrange coverings to provide air circulation to avoid damage from condensation or chemical build-up. Protect from damage, dirt and debris at all times.
- C. Store chemicals in curb protected area. Such secondary containment areas must have the capacity to hold the volume of the largest container or 10% of the combined containers, whichever larger. If room has no floor drains, then the room itself may be considered sufficient secondary containment. If the room is considered the secondary containment ensure there is a lip at the door so no liquids can exit the room in the event of a leak. Verify field conditions before storing any chemicals
  - 1. Provide temporary containment areas when permanent containment areas do not exist. Remove temporary containment at the end of construction.

**1.6 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion. This warranty does not include ongoing chemical treatment or monitoring.

**1.7 ACCEPTABLE CHEMICAL SERVICE PROVIDERS (CSP)**

- A. Approved CSPs
  - 1. Chemtreat
  - 2. Crown Solutions
  - 3. GE Water
  - 4. Kroff
  - 5. Mitco
  - 6. Nalco
  - 7. Rochester Midland

**PART 2 - PRODUCTS**

**2.1 GENERAL**

- A. CSP Services:
  - 1. The CSP shall provide all cleaning and treatment chemicals, basic services (including set-up and programming of all water treatment control devices), testing, equipment and materials necessary for a complete water treatment program.
  - 2. The CSP shall perform an analysis of the supply water to determine the type and quantities of chemical treatment needed to maintain the required water quality to prevent corrosion, scaling, and biological growth. The CSP will at minimum provide weekly site visits to verify proper water treatment after any system or part of a system is treated. Weekly visits shall be conducted to assure performance requirements are being met, analyze water samples, inspect equipment, and adjust feed rates as required to maintain proper water treatment, and continue until final written Owner acceptance of the respective system.
  - 3. At each site visit CSP shall analyze each system for corrosion inhibitors, pH, total iron, total copper, bacteria levels (provide analytical laboratory analysis monthly) and conductivity; inspect loss from corrosion coupons (provide analytical laboratory analysis monthly), record make-up meter readings, and perform any other tests necessary to validate that corrosion, scale, and organic growth is being prevented.
  - 4. Reports:
    - a. Submit a written startup test report for each system placed into service.
    - b. A service report shall be prepared on site by the CSP, submitted at the time of each service visit (with copies immediately provided to the Owner and Commissioner), which shall include all required test results and recommendations.

- c. Additionally, provide final reports for approval to the Owner and Commissioner regarding each site service visit, certified by an Officer of the CSP, within one week of any water treatment activity. Such reports shall include the results of any field or lab tests. Reports shall clearly state if the required water quality and maximum corrosion rates are being achieved.
- d. At a minimum, each report shall include the following information (levels shall be reported in ppm unless noted otherwise):
  - 1) System Treated
  - 2) Date
  - 3) Conductivity (microsiemens)
  - 4) pH
  - 5) Total Iron
  - 6) Total Copper
  - 7) Coupon Corrosion Rates (monthly analytical laboratory analysis)
  - 8) Make-up Water Quantity Since Last Visit
  - 9) Corrosion Inhibitor Level
  - 10) Silica Level
  - 11) Biocide Level
  - 12) "P" Alkalinity
  - 13) Free "OH" Alkalinity
  - 14) Chemical Oxygen Demand
  - 15) Total Suspended Solids (TSS)
  - 16) Ammonia
  - 17) Calcium Carbonate Hardness
  - 18) Calcium Carbonate Alkalinity
  - 19) Microbiological in organisms/mL (monthly analytical laboratory analysis)
    - a) Total Aerobic Plate Count
    - b) Total Anaerobic Plate Count
    - c) Nitrate Reducers
    - d) Sulfate Reducers
    - e) Iron Bacteria
- 5. Conduct final on-site system turn over meeting with Owner and Commissioner. Present final validation report demonstrating that performance requirements have been achieved and that each system is currently properly treated.
- 6. When required by Part 3, train Owner's maintenance personnel in water treatment procedures.
- 7. Program Administration Manual:
  - a. The CSP shall provide the Owner with two (2) Program Administration Manuals including sections covering program control, testing requirements, in plant logs, safety data and system information. Each section shall include the following:
    - 1) Program Control: Include a complete program outline with chemical descriptions, control ranges, and required action for "out of range" situations. Also include complete ordering instructions with applicable account numbers and phone numbers.
    - 2) Testing Requirements: This section will include basic testing practices as well as detailed test instructions for each test to be performed.

**BuildingName**

**The Description of the Project**

P00000000 0000 Issued for: BID

232516 - 6

- 3) Sequence of operation detailing the operation of the chemical treatment system.
- 4) In-Plant Logs: Include detailed testing log sheets for each system to be tested including room to record one (1) month's data on one (1) sheet and a section to log chemical inventory.
- 5) Safety Data: Include the CSP's 24-hour toll free safety hotline number as well as MSDS sheets for each chemical used.
- 6) System Information: Include any equipment manuals and related information.

## 2.2 TREATMENT PROGRAM - FLUSHING AND CLEANING

- A. Cleaning chemicals shall be non-phosphate and non-acidic.
- B. Flush and clean all new and reused piping.
- C. Provide a flush/clean plan for approval. Provide and later remove all temporary bypasses, drains, vents, etc. required to flush and clean the system. Temporary components for flushing and cleaning are not indicated on the drawings.
- D. Flush and clean systems per the general procedures specified in Related Sections; clean systems per the approved cleaning procedures submitted under this specification section. Provide and install all required cleaning chemicals.
- E. Verify that adequate cleaning chemical was added and that cleaning was effective. Test that cleaning chemicals were properly rinsed from the system. Provide a report certifying that cleaning and rinsing, was properly executed.
- F. Provide chemical treatment immediately after each system has been cleaned and flushed. Systems shall not stand filled with fluids for periods longer than 48 hours without beginning flushing and cleaning of the system, which shall then be immediately followed by the chemical treatment procedures.

## 2.3 CHEMICAL TREATMENT - GENERAL

- A. Provide passivation and chemical treatment per the submitted and reviewed chemical treatment procedures and Program Administration Manual and to maintain the Performance Requirements.
- B. Chemically treat new and reused piping networks using chemicals and treatment procedures compatible with the system being cleaned and the chemical treatment chemicals in existing piping systems being connected to. Test existing piping systems or otherwise determine chemical treatment in existing piping and validate compatibility.

*THE BELOW PARAGRAPH IN HIDDEN TEXT IS FOR EQUIPMENT WITH SUBSTANTIAL QUANTITIES OF WET GALVANIZED METAL SURFACES; UNHIDE WHEN APPROPRIATE. NORMAL U-M PRACTICE IS TO REQUIRE STAINLESS STEEL HOT AND COLD WATER BASINS ON COOLING TOWERS IN WHICH CASE PASSIVATION IS NOT CONSIDERED NECESSARY FOR THE SMALL AMOUNT OF REMAINING GALVANIZED COMPONENTS.*

- C. Passivate cooling towers, evaporative coolers, and similar equipment with galvanized-steel components in strict compliance with manufacturers recommendations. Maintain the pH of the circulating water between 7.0 and 8.0 for a minimum of 8 weeks after start-up until zinc surfaces turn a dull gray color; maintain manufacturer's recommended hardness and alkalinity levels during the passivation interval. If white deposits form on galvanized surfaces after pH is returned to normal service levels, repeat the passivation process until galvanized surfaces are properly passivated/no white deposits form.

**WHEN CONNECTING INTO EXISTING ACTIVE SYSTEMS, DEVELOP REQUIREMENTS AND A COORDINATION PLAN IN CONSULTATION WITH U-M PLANT AND REVISE THE BELOW SAMPLE PARAGRAPH ACCORDINGLY.**

- D. When connecting into active existing systems, treat piping networks installed or reused by the project and verify by lab analysis that the treatment levels per the treatment plan have been attained prior to connecting into the existing active system. Submit validating report for approval.
  - 1. Do not connect into existing active system until report is approved by Owner.
  - 2. Provide temporary valves, piping, and accessories as required to treat the project's piping prior to connection to the active system.
- E. Provide chemical treatment program at system startup or immediately upon operation of a system for temporary cooling, whichever comes first.
- F. Provide chemical treatment immediately after the system has been cleaned and flushed. Immediately thereafter, begin the approved water treatment maintenance program to passivate and prevent corrosion, scale, and organic growth and to maintain treatment chemical levels.
- G. Chemical inhibitors for open loop chemical systems shall be polymer based without molybdenum as a corrosion inhibitor and contain azole in an amount appropriate for the percentage of internal copper surface area of the system piping. Provide products with PTSA (p-Toluenesulfonic acid) florescent tracer dyes. Molybdenum shall not be used as a tracer.
- H. Use 1" halogenated isocyanurate bromine tablets for biological control.
- I. No chemicals shall contain chromates or inorganic phosphates.
- J. Adjust chemical concentrations as required to achieve the required performance.

**2.4 PERFORMANCE REQUIREMENTS**

- A. The water treatment programs proposed by the CSP shall maintain corrosion rates below 0.5 mils per year for mild steel and 0.1 mils per year for copper. These rates shall be verified with corrosion coupons provided by the CSP. Coupons shall be analyzed in the CSP's analytical laboratory monthly, or more often if required, to assure these levels are not exceeded.

- B. Microbiological growth levels shall be maintained below 10,000 cfu's aerobic bacteria and 10 cfu's anaerobic bacteria. The CSP shall perform detailed microbiological culturing at the CSP's company's analytical laboratory monthly, or more often if required, to assure these levels are not exceeded
- C. The Langelier Stability Index shall be maintained to not exceed 2.50.

**2.5 EQUIPMENT - GENERAL**

- A. Provide all components required for a fully operational water treatment system. Provide components that are not adversely affected by the treatment chemicals employed, and that are rated for the maximum pressures and temperatures that may be encountered by the treatment system.

**DESIGNER MUST INCLUDE U-M DETAIL 15710002 - CONDENSER WATER TREATMENT EQUIPMENT DIAGRAM ON THE DESIGN DRAWINGS.**

- B. Refer to the condenser water treatment equipment detail for additional equipment requirements.

**2.6 MOTOR OPERATED BALL VALVE:**

- A. Acceptable Manufacturers:
  - 1. Belimo (Basis of Design)
  - 2. Siemens
  - 3. Johnson Controls
- B. 120 VAC, on/off control, normally closed/fail closed/spring return, full port ball valve, 1 inch size with NPT female ends.
- C. Forged Brass, nickel plated body, stainless steel ball and stem, PTFE seals and lubricated O-ring packing. Rated for minimum 200 PSI at 212°F.
- D. 200 PSI close-off pressure rating, capable of operation at differential pressures up to 30 PSI.
- E. Actuator with visual position indicator, manual hex crank valve over-ride, and conduit fitting for electrical connection.
- F. Valve and actuator shall also comply with the requirements for ball style control valves in Related Section "Mechanical Systems Controls".

**2.7 CHEMICAL FEED PUMP**

- A. Acceptable Manufacturers:
  - 1. Pulsatron Series E Plus model LPB4 (Basis of Design)
  - 2. Grundfos
  - 3. LMI-Flomotion
- B. Nominal capacity of 1.00 GPH (24 GPD) at 100 PSIG.
- C. 120 VAC/60 HZ/1 PH with minimum 6 foot long three prong grounded plug. UL or ETL approved for indoor and outdoor use.
- D. Reproducibility +/- 2% at maximum capacity.

- E. It shall be possible to manually adjust the stroke rate and stroke length via an adjustment means located on the pump body. Provide the following minimum adjustment ranges:
  - 1. Stroke rate turn down ratio 10:1
  - 2. Stroke length turn down ratio 10:1
- F. It shall also be possible to start and stop the pump via an external mechanical or solid state relay contact.
- G. Provide hand-off-auto switch, circuit protection, and solenoid thermal overload protection with automatic reset.
- H. Pump shall be constructed of glass filled polypropylene (GFPPPL), with Teflon diaphragm. Fittings, bleed valve, injection valve, and foot valve shall be GFPPPL. Fittings shall accommodate 1/4" to 3/8" I.D. tubing. Provide guided check valves with ceramic balls and Teflon seats and o-rings. With bleed valve for priming.

**2.8 BROMINE FEEDER TANK**

- A. Acceptable Manufacturers:
  - 1. Neptune Chemical Pump Company model BT (Basis of Design)
- B. Vinylester resin body tank, minimum capacity of 20 gallons. 4 inch top opening with threaded, gasketed closure. Two threaded side connections and one threaded bottom connection, all 1 inch NPT. Maximum tank diameter 18 inches.
- C. Tank rated 150 PSI at 150°F.
- D. Provide with accessory piping kit to include inlet diffuser/strainer fitting and exit strainer fitting.
  - 1. All accessories to be rated 150 PSI at 73°F
  - 2. All components, including manufacturer, shall comply with the requirements of the related articles in this specification section.
  - 3. Unions shall have buttress threads.
- E. All materials shall be compatible with a 20% bromine solution at a pH of 5.0-7.5. All seals shall be Viton, PTFE, or FKM.

**2.9 CHEMICAL TREATMENT CONTROLLER WITH CONDUCTIVITY PROBE**

- A. Acceptable Manufacturers:
  - 1. Pulsafeeder "Microvision" model MVS1PB (Basis of Design)
- B. Multi-function chemical treatment controller for controlling inhibitor feed, biocide feed, and bleed (blow-down). Complete with toroidal conductivity sensor assembly and back-board for mounting of indicated chemical treatment devices. UL, CSA or ETL listed.
- C. Controller features shall include:
  - 1. Polypropylene enclosure rated NEMA 4X
  - 2. Pre-wired 15 ft. power cord and pigtails for 115 VAC.
  - 3. Large LCD display with statistics screen
  - 4. 0-9,999 µS/cm setpoint range
  - 5. Battery backup

6. Password protection
  7. Selectable timer
  8. Flow switch to make controller inoperative when no flow is detected. Rated minimum 125 PSIG at 122°F.
  9. Water meter inputs: dry contact and Hall Effect types
  10. Three drum level detection inputs (opened/closed relay type detection)
  11. Dual biocide output relays
  12. Inhibitor output relay
  13. Bleed output relay
  14. Dry contact alarm relay output
  15. All relay outputs rated for 2 amps
  16. Conductivity output: 4-20 mA isolated analog output
  17. PVC back-board for mounting the controller with PVC chemical feed pump shelf attached to the back-board.
- D. Toroidal sensor assembly features shall include:
1. No exposed electrodes
  2. Temperature compensated
  3. With in/out ball valves, strainer, injection tee, and rail.
  4. Rated minimum 125 PSI at 122°F

**2.10 CORROSION COUPON RACK:**

- A. Acceptable Manufacturers:
1. Advantage Controls Model ACR (Basis of Design)
  2. Cannon Water Technology
  3. J.L. Wingert
  4. Vector Industries
- B. 3/4" diameter Schedule 80 PVC coupon rack with two coupon holders, flow indicator, and a 1/4" sample tee with valve. Provide mild steel and copper coupons.
1. All components, including manufacturer, shall comply with the requirements of the related articles in this specification section.

**2.11 SOLID CORROSION INHIBITOR DISSOLVER**

- A. Acceptable Manufacturers:
1. Solv-Ultima Model 150 (Basis of Design)
  2. Hydro Systems Company Model 590
- B. Rated for 1.2 GPM minimum, and 100 PSIG at 100°F.
- C. Constructed of chemical resistant parts molded of polypropylene and polyethylene.
- D. Back-up reservoir and float for overflow protection.
- E. Pressure regulator adjustable between 20-40 PSIG.
- F. Pressure gauge and removable filter.
- G. Atmospheric siphon breaker for backflow prevention.

**2.12 STRAINERS- CLEAR PLASTIC**

- A. Acceptable Manufacturers:
  - 1. Spears Manufacturing
  - 2. Hayward
  - 3. Nibco
- B. Clear PVC y-strainer rated 150 PSI at 73°F, with removable basket. With 8 mesh (0.094 inch opening) stainless steel screen.

**2.13 FLOW INDICATORS**

- A. Acceptable Manufacturers:
  - 1. Blue White model F-440 (Basis of Design)
  - 2. King Instrument
  - 3. GF Signet
- B. Variable area flow meter, 0-10 gpm (conductivity loop) 5-21 gpm (brominator loop) nominal range, rated 150 psig at 68°F, with graduated polysulfone or acrylic cylinder, with an accuracy of +/- 5%. Rod guided float with stainless steel rod. Provide 3/4 inch pipe size union end connections.

**2.14 PVC BALL VALVES**

- A. Acceptable Manufacturers:
  - 1. Spears Manufacturing
  - 2. Hayward
  - 3. Nibco
- B. True union PVC ball valve rated 200 PSI at 73°F. Full port, PTFE ball seat, peroxide cured EPDM seals, polypropylene handle, buttress threaded union nuts.
- C. Ball valves downstream of the brominator shall be provided with Viton or FKM seals.

*DUE TO THE CORROSIVE NATURE OF BROMINE, THE QUILL ASSEMBLY COMPONENTS SPECIFIED BELOW SHOULD NOT BE INDISCRIMINATELY MODIFIED. FOR THE SAME REASON, REVIEW QUILL SUBMITTAL CAREFULLY FOR COMPLIANCE TO THE BELOW. ASSURE ALL COMPONENTS UTILIZE VITON, PTFE, OR FKM SEALS, INCLUDING UNIONS AND BALL VALVES AT AND DOWNSTREAM OF BROMINATOR. CHECK VALVE PREVENTS BACK FLOW DURING CIRCUMSTANCES SUCH AS A HOSE LEAK.*

**2.15 RETRACTABLE INJECTION QUILL ASSEMBLY**

- A. Acceptable Manufacturers:
  - 1. Saf-T-Flo Water Services Inc. EB-159 (Basis of Design)
  - 2. Hydro Instruments
- B. Injection quill assembly allowing retraction under pressure consisting of 1-1/2 inch brass stop (ball valve) and compression gland, 1 inch diameter sch. 80 PVC solution tube with 45 degree bevel end, check valve, and 1 inch braided PVC hose assembly. All seals shall be Viton or FKM accept as noted.

1. All components shall be rated for 150 PSIG working pressure at 100°F. All bromine wetted materials shall be compatible with a 20% bromine solution at a pH of 5.0-7.5.
2. With 1 inch male inlet connection, 1-1/2 inch male main connection, brass solution tube adapter and packing nut, stainless steel restraint hook, and stainless steel restraint chain. Restraint chain length shall be selected by the manufacturer to allow closure of the stop before withdrawal of the solution tube.
3. Check valve: Diaphragm style with PVC body, FKM diaphragm, and union nut body. Plast-O-Matic Series CKM. May be provided separate from quill assembly. Mount on solution tube inlet, at downstream end of PVC hose.
4. Solution tube length shall project into the pipe for a distance equal to 1/3 the diameter of the pipe.
5. Provide braided PVC hose length adequate to allow solution tube retraction.
6. Provide stainless steel hose clamps and PVC fittings to allow quill, hose, and pipe connections.

**2.16 PIPING AND MISCELLANEOUS COMPONENTS**

- A. Provide per Related Sections. For components at or downstream of the brominator, provide with Viton, PTFE, or FKM seals.

**2.17 CHEMICAL SOLUTION TUBING**

- A. Chemical solution tubing for connection to suction and discharge of chemical feed pump and inhibitor dissolver:
  1. Opaque polyethylene tubing rated minimum of 125 PSIG from -50°F to 140°F. Provide polypropylene or stainless steel threaded, compression, or other positive locking style fittings of equivalent rating as required for connection to pump, inhibitor vessel, and rigid piping. Push-on "barbed" style fittings shall not be used.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

- A. Pre-Treatment Conference: Prior to treatment activities, meet with the Project Engineer, Commissioner and contractors to verify treatment procedures, discuss coordination with existing piping networks, and to coordinate treatment activities with construction schedule.
- B. Flush and clean systems per Related Sections and Part 2 above.
- C. Examine roughing-in for equipment support, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting equipment performance, maintenance, and operations. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install all required components per manufacturer's recommendations and per Related Sections and chemically passivate, treat, and maintain the system per the requirements of Part 2.
- B. Use and dispose of chemicals and wastewater (including from existing piping networks) per the Quality Assurance section of this specification. All costs of disposal shall be borne by the contractor.
- C. Install equipment at locations shown on the Drawings.
- D. Provide all chemicals and all incidental components.
- E. Provide union connections at inlet and outlet to the bromine feed tank.
- F. Make piping connections between dissimilar-metal piping with dielectric fittings per Related Sections.
- G. Provide electrical components in conformance with Related Section.
- H. Provide interconnecting control wiring for chemical treatment controls and sensors per Related Section 230900.
- I. Rigidly support PVC piping at injection quill assembly to prevent pipe movement when operating the isolation valve upstream of the hose connection. Support the quill hose with a hanger that does not abrade the hose surface. Verify that all components at and downstream of the brominator are equipped with the specified seals. Install quill in a location easily accessible for quill removal. Do not mount quill in bottom of pipe. Provide caution label, per detail.
- J. Mount sensors, meters, and all other required components.
- K. Passivate and chemically treat each system immediately after it has been cleaned and flushed.

*SOME PROJECTS, SUCH AS HOSPITAL PROJECTS, MAY DESIRE THAT WATER TREATMENT SERVICES CONTINUE BEYOND SUBSTANTIAL COMPLETION, E.G. A ONE OR MORE YEAR SERVICE CONTRACT. CONTACT THE U-M DESIGN MANAGER FOR DIRECTION, AND IF NEEDED, REVISE THE PARAGRAPH BELOW TO INCLUDE THAT REQUIREMENT.*

- L. The treatment program shall begin at system start-up or immediately upon first operation of the system by the contractor for temporary use, whichever comes first. Continue the program until Substantial Completion of the system.

### 3.3 FIELD QUALITY CONTROL

- A. The CSP shall:
  - 1. Verify that systems and equipment have been properly cleaned, flushed, and filled with water, and are fully operational before introducing operational chemicals for water-treatment systems.
  - 2. Introduce and maintain chemical treatment to achieve the specified performance requirements.

3. Set-up and program all water treatment control devices. Program water treatment controller to be inoperative when no flow is detected.
4. Submit a written startup test report for each system placed into service.
5. Provide validation testing and required reports.
6. Attend final on-site system turn over meeting with Owner and Commissioner. Present final validation report demonstrating that performance requirements have been achieved and that each system is currently properly treated.

*INCLUDE THE BELOW ARTICLE IN EVERY SPECIFICATION SECTION.*

**3.4 COMMISSIONING**

- A. Perform commissioning activities in accordance with Related Sections.

*CONSULT WITH THE U-M DESIGN MANAGER TO DETERMINE IF TRAINING IS DESIRED FOR YOUR PARTICULAR PROJECT; KEEP OR DELETE OR MODIFY THE ARTICLE BELOW ACCORDINGLY.*

**3.5 OWNER TRAINING**

- A. CSP shall train Owner's maintenance personnel on equipment operation, adding and maintaining proper chemical levels, troubleshooting, servicing and preventative maintenance procedures. Do not conduct training until after start up and commissioning is completed. Provide training using documents including the Program Administration Manual and the approved Operations and Maintenance manuals. Provide these documents to the Owner at least two weeks prior to the training to allow sufficient time for review.
- B. Provide 4 hours training minimum.
  1. Schedule training at least 14 days in advance, at date and time approved by Owner.

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 232519- STEAM BOILER CHEMICAL WATER TREATMENT**

***REVISIONS:***

***12-7-09: APPROVED AS NEW MASTER.***

***SPEC EDITOR: DEVELOPED BY HYDRONICS AND STEAM MECH TECH TEAM.  
EDIT CAREFULLY ON A PROJECT SPECIFIC BASIS.***

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

***INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.***

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes
  - 1. This Section of the Specification includes the provision of all the materials, equipment and chemicals to provide complete chemical treatment systems for the steam boilers.

**1.3 REFERENCES**

- A. American Society for Testing and Materials (ASTM)
  - 1. D859 - Test Method for Silica in Water.
  - 2. D1066 - Practice for Sampling Steam.
  - 3. D1067 - Test Methods for Acidity or Alkalinity in Water.
  - 4. D1068 - Test Methods for Iron in Water.
  - 5. D1126 - Test Method for Hardness in Water.
  - 6. D3370 - Practices for Sampling Water from Closed Conduits.
- B. Underwriters Laboratories Inc. (UL)
  - 1. 486A - Wire Connectors and Soldering Lugs for Use With Copper Conductors.

**1.4 SYSTEM DESCRIPTION**

- A. Provide complete chemical water treatment system.
- B. Provide chemicals required for the water treatment systems in sufficient quantities for initial operation of the systems.
- C. Provide controls, control wiring, motors and starters. Refer to Div. 26 for electrical requirements for motors and starters and electrical items.
- D. submittals

- E. Product Data: Include rated capacities; water-pressure drops; shipping, installed, and operating weights; and furnished products listed below:
  - 1. Pumps.
  - 2. Chemical solution tanks.
  - 3. Agitators.
  - 4. Control equipment and devices.
  - 5. Test equipment.
  - 6. Chemical feeders.
- F. Shop Drawings: Detail equipment assemblies indicating dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 1. Wiring Diagrams: Detail power and control wiring and differentiate between manufacturer-installed and field-installed wiring.
- G. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project site.
- H. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.
- I. Maintenance Data: For pumps, agitators, filters, system controls, and accessories to include in maintenance manuals specified in Division 01.

**1.5 QUALITY ASSURANCE**

- A. Field Samples
  - 1. Procure and perform an analysis of a sample of the local water supply and base the water treatment proposal on the results therefrom.

**1.6 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion. This warranty does not include ongoing chemical treatment or monitoring..

**PART 2 - PRODUCTS**

**2.1 STEAM BOILER CHEMICAL TREATMENT SYSTEM**

- A. General
  - 1. Provide a complete chemical treatment system as detailed in the drawings with operational sequence as indicated in the drawings.
- B. Treatment Chemicals

1. The chemicals for periodic regular boiler water treatment will be by owners' chemical treatment contractor, WATCON; contact Dave Russell, 419-283-4495. This contractor shall provide initial chemicals, required for flushing and boil out of the boiler and boiler feed water unit. The chemicals shall be provided by WATCON and paid for by this contractor.

C. Chemical Treatment Equipment

1. Provide one control panel as detailed in the drawings.
2. Enclosure: NEMA 1, general purpose, with all controls, switches, and lights mounted on the front.
3. Provide chemical metering pumps as detailed in the drawings.
4. Provide an external pressure relief valves constructed of type 316 stainless steel to protect the chemical pumps and discharge piping.
5. Chemical tank assembly, where indicated in the detail, shall consist of a polyethylene tank, welded steel support frame with agitator support, removable cover, suction strainer, drain fitting, and inter-connecting suction piping to chemical pumps with a tank capacity of \_\_\_ gallons.
6. For convenience of servicing and adjusting the chemical pumps, mount the pumps on a side mount platform.
7. Provide one agitator, where indicated in the details, with mounting hardware for chemical tank assembly of the direct drive type suitable for the mixing of low viscosity chemical treatment solutions. Provide agitator motor not less than 1/4 hp, 115/1/60, 1500/1750 rpm. Construct shaft and impeller of type 304 stainless steel.
8. Provide one dip tube assembly for each boiler constructed so that it may be inserted through any standard threaded 1/2-inch or larger fitting on the boiler drum, above or below the water line. Provide the insertion length to be adjustable at the time of installation so that the dip tube extends 4 to 6 inches below the normal water level in the boiler. Provide the tubing material of type 304 stainless steel and the fittings of type 316 stainless steel. Rate the tubing and fittings at not less than 150 percent working pressure of the boiler.

**PART 3 - EXECUTION**

**3.1 PREPARATION**

A. Chemical Treatment Program - Steam Boilers

1. Cleaning
  - a. Immediately after the hydrostatic testing of the system has been completed, drain each boiler, flush with clean water, and refill with clean water to which the appropriate cleaning compound has been added to remove pipe joint compound, fabrication lubricants, oils, welding slag, loose mill scale, and other extraneous materials. Then boil out the boilers in accordance with the boiler manufacturer's instructions. Cool the boilers slowly and flush with clean water.
2. Chemical treatment

- a. Once each boiler is clean, immediately fill it with clean water to which appropriate scale and corrosion inhibitors have been added. Then slowly bring the boilers up to boiling temperature and steam slowly with vents open for 60 minutes to deaerate the boiler water. Then close the boilers and put into service. Upon operation, dump the returning condensate to waste for the first 24 to 48 hours, or until it is free of contaminants and debris.
- b. Sample boiler water at one-week intervals after boiler startup for a period of five weeks, and prepare certified test report for each required water performance characteristic. Where applicable, comply with ASTM D 3370 and the following standards:
  - 1) Silica: ASTM D 859.
  - 2) Steam System: ASTM D 1066.
  - 3) Acidity and Alkalinity: ASTM D 1067.
  - 4) Iron: ASTM D 1068.
  - 5) Water Hardness: ASTM D 1126.

### **3.2 CHEMICAL CONTAINMENT**

- A. Install the chemical drums on 2-drum polyethylene, 235-liter (62-gallon) capacity, 419 mm (16-1/2-inch) high pallets with top grating deck; McMaster-Carr Model 12635T13 or as approved.

### **3.3 WATER ANALYSIS**

- A. Perform an analysis of supply water periodically to determine the type and quantities of chemical treatment needed to maintain the water quality.

### **3.4 INSTALLATION**

- A. Install treatment equipment level and plumb.
- B. Add cleaning chemicals as recommended by manufacturer.

### **3.5 CONNECTIONS**

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Confirm applicable electrical requirements in Division 26 Sections for connecting electrical equipment.
- D. Ground equipment.
  - 1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A.

### 3.6 FIELD QUALITY CONTROL

- A. Coordinate with outlying boiler group technicians and WATCON representative and perform startup service under their supervision.
  - 1. Inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.
  - 2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
- B. Test chemical feed piping as follows:
  - 1. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
  - 2. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
  - 3. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
  - 4. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
  - 5. Repair leaks and defects with new materials and retest piping until satisfactory results are obtained.
  - 6. Prepare test reports, including required corrective action.

### 3.7 ADJUSTING

- A. Occupancy Adjustments: Within 12 months of Substantial Completion, perform two separate water analyses to prove that automatic chemical feed systems are maintaining water quality within performance requirements specified in this Section. Perform analyses at least 60 days apart. Submit written reports of water analysis.

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
1. Section 220500: Common Work Results for Mechanical
  2. Section 220548: Vibration Control
  3. Section 220719: Mechanical Systems Insulation
  4. Section 233300: Air Duct Accessories and RGDS
  5. Division 26: Electrical.

**1.2 SUMMARY**

- A. Section Includes:
1. Ductwork materials, plenums, construction, , fabrication, and support
  2. Galvanized steel ductwork.
  3. Polyvinyl chloride coated galvanized steel ductwork (PCD).
  4. Stainless steel ductwork.
  5. Round and flat oval ductwork.
  6. Reinforcing and supports.
  7. Flexible duct.
  8. Flexible nonmetallic duct.
  9. Special ductwork construction including exhaust plenums; perchloric acid ductwork system; double-wall ductwork; and exhaust stacks.
  10. Custom fabricated canopy hoods.
  11. Double-walled panels, plenums, and duct at outside air intake plenums.
  12. Blank-off panels for unused louver areas.
  13. Dryer vent ductwork.
  14. Bellmouth connections.

17. Ductwork sealing, inspection, and leakage testing.

### 1.3 QUALITY ASSURANCE

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
- C. ASTM A653 / A653M Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
- D. ASTM A 666 - Standard Specification for Austenitic Stainless Steel Sheet, Strip, Plate, And Flat Bar.
- E. ASTM B 209 & 209M - Standard Specification for Aluminum and Aluminum Alloy Sheet and Plate.
- F. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.
- G. NFPA 90B - Standard for the Installation Of Warm Air Heating and Air Conditioning Systems.
- H. NFPA 91 - Standard for Exhaust Systems for Conveying of Materials.
- I. NFPA 92A - Standard for Smoke Control Systems.
- J. NFPA 92B - Standard for Smoke Management Systems.
- K. NFPA 96 - Standard for Ventilation Control of Cooking Operations.
- L. NFPA 99 - Standard for Health Care Facilities.
- M. SMACNA - All standards.
- N. AWS - All applicable standards.
- O. UL 181, 181A, & B - Factory-made Air Ducts and Connectors and Closure Systems.
- P. UL 760 - Standard for Exhaust Hoods For Commercial Cooking Equipment.
- Q. UL 723 - Standard for Surface Burning Characteristics of Building Materials.
- R. Air Diffusion Council - Flexible Duct Performance and Installation Standards.
- S. National Air Duct Cleaners Association (NADCA).

### 1.4 SUBMITTALS

- A. Provide the following information and product data:

1. Project specific duct fabrication schedule including materials, methods of installation, and location of fitting types. Indicate the metal gauge and reinforcement method intended for each pressure classification and size of duct.
2. Construction details for double wall duct and panels, plenums, stacks, canopy hoods, etc.
3. Double wall duct and panel fill material
4. Hangers and supports
5. Duct fittings
6. Turning vanes
7. Duct sealant
8. Flexible duct
9. Dryer duct and fittings

**1.5 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 GENERAL**

- A. Provided duct and fittings of G90 galvanized steel unless otherwise indicated.
- B. Constructed duct and fittings in compliance with SMACNA standards and recommendations and per the additional requirements indicated.
- C. Duct dimensions indicated on drawings are inside dimensions. The sheet metal dimensions shall be increased an equivalent amount to accommodate internal liner where liner is required.
- D. Drawings are diagrammatic and indicate the arrangement of the principal apparatus, ductwork, and piping, and shall be followed as closely as possible. All the required offsets, rises, drops, fittings and accessories are not indicated on the drawings, but shall be provided as required for a complete system. Carefully investigate structure, finish conditions, and the work of other sections affecting sheet metal work, including work associated with testing, adjusting and balancing, in order to arrange all items accordingly. Provide best possible arrangement to provide maximum headroom and maintenance clearances.
- E. In addition to sheet metal ductwork specified herein, provide, or install as furnished by other sections, accessories and devices including, but not limited to, smoke detectors, plenums, canopy hoods, control dampers, and blank-off panels at unused louver areas.
- F. Provide intake and exhaust plenums attached to louvers.
- G. Alternate Joining Methods: As an alternate to SMACNA joining methods, Contractor may propose proprietary joining systems with performance equivalent to SMACNA for Owner's approval.

**IMPORTANT: INCLUDE THE DUCT APPLICATION SCHEDULE ON DRAWINGS AND EDIT APPROPRIATELY FOR SPECIFIC PROJECTS. SEE U-M STANDARD**

**DETAILS FOR SAMPLE SCHEDULE, CONSTRUCTED FOR USE WITH THIS SPECIFICATION.**

H. Refer to Drawings for ductwork construction and application schedule.

**2.2 DUCTWORK MATERIALS AND FABRICATION**

A. General Ductwork Fabrication Requirements:

1. Provide fittings, branches, inlets and outlets in such a manner that air turbulence is reduced to a minimum.
2. Turns:
  - a. Use radius type elbows wherever possible. Where it is not possible to install a 1.5 times width to centerline radius elbow (full radius elbow), use lesser radii configurations, with 'radius-proportional' splitter vanes permanently installed within. No radius shall be less than 1.0 times width. Provide square elbows of equivalent pressure drop in rectangular ducts where radius elbows will not fit or where specifically noted on drawings. Elbows shall be installed with vanes in accordance with Related Section "Sheet Metal Accessories." Stamped elbows may be used up to and including a diameter of 12 in.
3. Transitions:
  - a. Limit transition angles (for each side) to 15 degrees diverging and 30 degrees converging.
4. Take-Off Fittings:
  - a. For take-offs carrying more than 25 percent of duct main, provide an increasing branch elbow with an inside radius equal to branch duct width. Size branch and main at elbow for equal velocity.
  - b. For take-offs carrying 25 percent or less of duct main, provide flanged increased area branch take-off (45 degree entry, "shoe" type) or 45 degree lateral wye takeoffs. Conical fittings shall be used for spiral, round, and oval ductwork.
  - c. For take-offs directly to side outlet for register or grille, provide an increased area tap. For take-offs directly to diffusers see appropriate SMACNA figures.
  - d. Acceptable take-off fitting manufacturers:
    - 1) Sheet Metal Connectors, Inc.
    - 2) United Sheet Metal.
    - 3) McGill AirFlow LLC.
    - 4) Foremost.
    - 5) Tangent.
    - 6) Flexmaster.
    - 7) SEMCO Incorporated.
    - 8) Sheet Metal Connectors, Inc.
5. Crossbreak or bead rectangular ductwork.
6. Rectangular duct longitudinal seams shall be Pittsburgh lock 3/8 in. minimum pocket.
7. Bolts and Fasteners
  - a. Carbon steel, zinc coated per ASTM A153 for G-90 and stainless steel for aluminum and stainless steel ducts.
8. Welding Materials

**Building Name**

**Edit Custom Properties**

**P00000000 0000 Issued for: 233100 - - 4**

- a. Refer to SMACNA "Guidelines for Welding Sheet Metal" for applicable requirements.
- B. Galvanized Steel Ductwork:
1. Minimum steel rectangular duct gage shall be as follows:
    - a. Ducts through 12 in. wide: 24 Gage
    - b. Ducts 13 in. through 30 in. wide: 22 Gage.
    - c. Ducts 31 in. through 84 in. wide: 20 Gage.
    - d. Ducts 84 in. and larger: 18 Gage
  2. ASTM A653, A924 mill galvanized steel sheet, 1.25 oz per sq. ft. zinc coating on each side in conformance with coating designation G-90.
- C. Galvanized Touch-Up Paint: Inorganic zinc-rich touch up paint containing a minimum of 65 percent metallic zinc by weight for damaged galvanized coating.
1. Acceptable manufacturers/product: Carboline/Carbo-Zinc, Tnemec/Tneme-Zinc.
- D. Polyvinyl Chloride Coated Galvanized Steel Ductwork (PCD):
1. Except where noted, comply with Galvanized Steel Ductwork paragraph above. Factory coat interior and exterior with a 4 mil thick coat of fused polyvinyl chloride. Construct and install horizontal ductwork and fittings with longitudinal seam located on top of duct.
  2. Screws and rivets that penetrate ducts shall be stainless steel.
  3. Cut edges or coating damage shall be touched up to match the 4 mil thick coat of fused polyvinyl chloride.
  4. Acceptable Manufacturers: Foremost, Tangent, United McGill
- E. Stainless Steel Ductwork
- CONSIDER IF THE LESS EXPENSIVE 304 STAINLESS STEEL IS SUITABLE FOR YOUR APPLICATION.**
1. Minimum stainless steel rectangular duct gauge shall be 18 gauge, for welding.
  2. ASTM A167, type 316L.
  3. Concealed stainless steel ductwork shall have an ASTM mill rolled No.1 or No.2 D finish.
  4. Exposed stainless steel ductwork shall have an ASTM mill rolled No.2 B finish, or as indicated. Welds shall be ground smooth and final brushed with stainless steel wire brushes. Welds on exposed stainless steel ductwork shall be free of stain, burn-through, or discoloration to the satisfaction of the University's Representative/Project Design Engineer.
  5. Screws and rivets shall be stainless steel.
- F. Round and Flat Oval Ductwork
1. All round and oval duct shall be manufactured of spiral lock seams, with minimum gage per the appropriate SMACNA Tables and per manufacturers recommendations. Ductwork up to 12 in. diameter and 2 in. w.g. can be manufactured with longitudinal lock seams.

2. Tees shall be conical. Laterals shall be straight. Taps through 10 in. diameter in size shall have a machine drawn entrance and fittings shall have longitudinal seams, continuously welded. Both sides of welds shall be primed with zinc chromate. Tap entrances shall be free of weld build-up.
3. Elbows in diameters 2 in. through 10 in. shall be stamped or pleated. Elbows shall be 5 gore for 90 degrees and 3 gore for 45 degrees. Elbows shall have 1.5 times width to centerline radius (full radius elbow).
4. Flanges, access doors and taps into spiral ducts shall be factory fabricated.
5. Field joints in diameters through 48 in. shall be made with 2 in. long slip-fit, sleeve coupling, or flanges. Ductwork 48 in. diameter and over, and for all sizes where disassembly or removal is required, shall be joined with flanges.

G. Reinforcing and Supports

1. Structural steel per ASTM A36; Mill galvanized per ASTM A653, Coating Designation G-90. Equivalent rolled steel structural support systems (such as TDF or TDC) may be used in lieu of mill rolled structural steel. Use double nuts and lock washers on threaded rod supports.
2. Tie-Rods
  - a. Maximum tie rod spacing shall be 42 in., unless specifically engineered in accordance with SMACNA Industrial Rectangular Duct Standard.
  - b. Minimum tie rod diameter shall be 1/2 in.
  - c. Tie Rods shall not be used in any plenum or ducts that require access.
  - d. Tie rods shall not be used in any PCD, cage wash, BSL-3 or BSL-4, Vivarium, stainless steel, or ducts carrying lint.
  - e. Tie rods shall not be used in any return or exhaust ducts in health care facilities.

**2.3 FLEXIBLE DUCT**

A. General

1. Flexible duct shall be UL listed, and shall maintain shape when installed. Sagging shall not exceed 1/2 in. per linear foot when installed horizontally.
2. Flexible duct shall not be used where system pressure is greater than plus or minus 2 in. w.g.
3. Insulated flex shall have a gray fire retardant polyethylene outer jacket with an 8 oz. density, 1-1/3 in. thick fiberglass insulation blanket, factory wrapped.
4. Flexible duct used on negative pressure systems shall be specifically rated for negative pressure use.

***FLEXIBLE METALLIC DUCT IS SELDOM USED, AND NOT COVERED BELOW.***

B. Flexible Nonmetallic Duct

1. Flexible nonmetallic duct shall be constructed of sound transparent foil. Material shall be mechanically locked to the outside helix. Use of adhesives to lock fabric in place is not acceptable. The helix shall be constructed of corrosion resistant galvanized steel, formed and mechanically locked to the duct fabric on the outside to prevent tearing.
2. Flexible fabric duct shall be rated at 6 in. positive pressure and at 4 in. negative pressure.
3. Flexible nonmetallic duct shall be listed UL Class 1.
4. Acceptable manufacturers:
  - a. Flexmaster.
  - b. Hart & Cooley.
  - c. Atco.

**2.4 SPECIAL DUCTWORK CONSTRUCTION**

- A. Ductwork required to be removable shall utilize companion flanges.
- B. Ductwork systems serving areas of high process humidity shall be constructed of aluminum, min. thickness of 0.040 in., or 316L stainless steel. Ductwork shall be continuously welded and watertight. Pitch duct to low point drains. Pipe drains to floor drains or utility sinks.
  1. Provide in the following areas, and where indicated:
    - a. Non-insulated ductwork exposed on roof.
    - b. Dishwasher exhaust.
    - c. Within 20 feet of a shower area exhaust register/grille.
    - d. From sterilizer and glass washer exhaust register/grille, canopy, or equipment connection to main or lateral duct (stainless steel only).
- C. Exhaust plenums on roof shall be double wall with 2 in. thick duct liner, G-90 stainless steel solid inner wall (gauge per specified duct minimum standards) and minimum 18 gauge, G-90 stainless steel outer wall.
 

*SEE THE U-M DESIGN GUIDELINE FOR PERCHLORIC ACID SYSTEMS. EDIT PARAGRAPH BELOW ACCORDINGLY.*
- D. Perchloric Acid Ductwork System.
- E. Double Wall Ductwork.

*AVOID THE USE OF PERFORATED DOUBLE WALL DUCT DUE TO CONCERNS WITH ABILITY TO CLEAN PROPERLY, INSULATION EROSION, MOLD/FUNGUS GROWTH, AND COST. INDICATE ON DRAWINGS OR IN SPECIFICATION WHERE SOLID DOUBLE WALL AND PERFORATED DOUBLE WALL IS TO BE USED.*

1. Solid outer and inner wall, or solid outer wall and perforated inner wall, as indicated.
  - a. Outer wall: comply with Galvanized Steel Ductwork paragraph above.
  - b. Insulation: 1-in. thick, 3.0 lb. density fiberglass acoustical liner with fire resistant fiber bonding coating and a 1 mil vapor barrier on inside of Tedlar or Mylar.
  - c. Inner wall solid: Minimum 18 gauge.

- d. Inner wall perforated: Minimum 18 gauge perforated steel, nominal 3/32 in. diameter perforations, overall open area of 23 percent. Tightly secure liner along all seams.
2. Double wall ductwork from a point 10 feet upstream of steam humidifiers to a point 20 feet downstream of humidifiers shall have a solid inner wall.
3. Acceptable manufacturers: McGill AirFlow LLC; Semco, or as approved.

**DETAIL THE STACK HEIGHT AND CONSTRUCTION ON DRAWINGS.**

- F. Exhaust Stacks:
1. Construct stacks from same material as exhaust duct or as indicated on drawings.
  2. Stacks shall be self-supporting and constructed for wind velocities at a minimum of 100 MPH from all directions.

**2.5 CUSTOM FABRICATED CANOPY HOODS**

**DETAIL CANOPY CONSTRUCTION ON DRAWINGS.**

- A. Fabricate from 18 gauge 316L stainless steel, all welded construction, number 2B finish, or from material as indicated on Drawings.
- B. Welds shall be ground smooth and final brushed with stainless steel wire brushes. Welds shall be free of stain, burn-through, or discoloration.
- C. Provide a continuous turned-up lip forming a trough around the inside perimeter of the hood with separate drain connections consisting of a welded stainless steel nipples, and as indicated on the drawings.
- D. Size and configuration of each hood shall be as indicated on the drawings. Coordinate with other trades for lights, fire protection, controls, and other interconnections.

**2 1/2 IN. THICK PANELS ARE DESCRIBED BELOW, EDIT TO MAKE PROJECT SPECIFIC.**

**2.6 DOUBLE-WALLED PANELS, PLENUMS, AND DUCT AT OUTSIDE AIR INTAKE PLENUMS**

- A. Double-walled type panels, 2-1/2-in.-thick, constructed from smooth or embossed mill finish G-90 galvanized steel or aluminum facing sheets. Each panel shall contain an integral frame of G-90 galvanized steel or extruded aluminum bonded to the facing sheets to provide a moisture-tight seal at the panel perimeter. Panels shall be load bearing and capable of forming the plenum or duct without the installation of structural members. Join panels together with G-90 galvanized steel or extruded aluminum mullions and fasten with closed end rivets. Make connections to the duct or plenum using a support mullion that is an integral part of the panel and not bolted to or through the panel. Gasket all joining mullions with a double vinyl gasket or a double butyl gasket to provide a permanent air-tight seal. Design panel skins, core density, rib spacing, and mullion spacing to eliminate panel pulsation and to a maximum deflection of 1/200 of any span at design pressure, positive or negative. The overall "U" factor of the panels shall not exceed 0.14 BTU/ft<sup>2</sup>/°F.
- B. Removable panels shall be the same construction as described above, with double seals around periphery to guarantee tight closure.
- C. Access doors shall be constructed as follows:
  - 1. Doors shall be minimum 24 in. wide whenever possible, or widths as indicated on drawings. Provide doors that are the full height of the panel, maximum 5 ft. high.
  - 2. Each access door shall be equipped with continuous double gaskets and shall fit in the door frame in a manner to guarantee tight closure.
  - 3. Hinges and hardware shall be galvanized, stainless steel or aluminum. Outdoor unit hardware shall be stainless steel, or aluminum. Provide at least 2 handles per door, operable from either side.
  - 4. Access doors in positive pressure sections shall open inward, in negative pressure sections shall open outward.
  - 5. Where indicated, provide a glass window in the access door, minimum 6 in. by 6 in. size, located at a height convenient for viewing, sealed to prevent leakage, rated to operate safely against the duct/plenum pressure rating. Provide double pane insulating type glass at all locations connected to outdoors/exterior or exposed to air temperatures below 55F; single pane at other locations.
- D. The manufacturer shall have published literature available stating the coefficient of absorption and the sound transmission loss characteristics of the panels system per ASTM C 423 and the sound transmission loss properties per ASTM E 90 and E 413. Published acoustic data shall show the trademark or name of the manufacturer, shall have been verified by a recognized independent testing laboratory, and shall specify the coefficient of acoustic absorption and attenuation by octave band. Submit acoustic performance data in graphic and tabular form as part of the shop drawings. Minimum panel performance for 2-1/2 inch thick panels shall be as follows:

**Building Name**

**Edit Custom Properties**

**P00000000 0000 Issued for: 233100 - - 9**

Frequency (Hz)	125	250	500	1000	2000	4000	
Transmission Loss (dB)		14	22	28	35	43	48
Absorption Coefficient	0.3	0.7	0.95	0.95	0.95	0.95	0.85

- E. The duct and plenum systems, in addition to supporting indicated equipment, scheduled maximum operating pressure, and system test pressure, shall sustain a 35 lb. per sq. foot maintenance function load without permanent deformation or damage.
- F. Acceptable Manufacturers:
  1. McGill Airflow LLC.
  2. Semco Mfg Co.
  3. Vibro-Acoustics

**2.7 BLANK-OFF PANELS FOR UNUSED LOUVER AREAS**

- A. Provide a minimum 20 gauge, G-90 galvanized or aluminum, insulated sheet metal blank-off panels for unused louver sections. Panels may be of the double-walled or single wall insulated type. For double-walled type panels, the insulation shall have an overall "U" factor of 0.14 BTU/ft<sup>2</sup>/°F. Insulation for single skin panels shall be of the rigid type and of the thickness as specified for outside air intake ducts located in mechanical rooms in Related Section "Mechanical Systems Insulation," permanently secured to the panel skins. Panels shall have a maximum deflection of 1/200 of any span at wind velocities of up to 100 MPH.
- B. Exterior/visible face of blank-off panel shall be cleaned and painted flat black, prior to installation.

*THE SPECIFICATION BELOW FOR CLAMP-TOGETHER DRYER VENTING IS INTENDED FOR HEAVY USE CLOTHES DRYER APPLICATIONS SUCH AS RESIDENT HALL LAUNDRY ROOMS WITH MULTIPLE DRYERS WHERE ACCESS TO DISASSEMBLE DUCT FOR PERIODIC CLEANING MAY BE CHALLENGING. FOR SIMPLE DRYER APPLICATIONS, SPECIFYING CONVENTIONAL DUCT MAY BE MORE APPROPRIATE.*

**2.8 CLOTHES DRYER VENT DUCTWORK**

- A. Dryer vent duct system shall consist of a clamp-together rigid duct system utilizing single lever reusable clamps at transverse joints.
- B. Ductwork and fittings shall be round G-90 galvanized steel, of gauge and construction as recommended by SMACNA for the system's static pressure, minimum 22 gauge.
- C. Duct shall be roll formed and continuously laser welded along longitudinal seams with the exception of the 3-in. duct that may be lock formed. Non laser welded elbows, branches, reducers, etc. to have a buffed smooth interior. End connections shall be die-formed rolled edge for use with single lever clamps.
- D. All connections and seams shall have gaskets, seals and sealant compatible with the application, not degraded by chemicals with a PH range of 0-14, temperature rating not less than 500°F. Duct leakage shall not exceed SMACNA Class 3 at 5 in. w.g. static pressure.

- E. Clamp gaskets shall be PTFE.
- F. Include all elbows, fittings, adapters and accessories for a complete installation.
- G. Elbows shall be long radius type with centerline radii of 1.5 x diameter whenever space permits. Elbows with centerline radii of 1.0 x diameter in congested spaces: submit for approval. Branch fittings shall be concentric.
- H. Approved manufacturer: Nordfab Quick-Fit/ACS, Fenton, MO.

**2.9 BELLMOUTH CONNECTIONS**

- A. Bellmouth fittings shall be constructed to match material requirements as indicated on drawings.
- B. Bellmouth shall have a minimum radius of 1 1/2 in. with 1/2 in. flange and 1/2 in. by 1/8 in. thick neoprene gasket.
- C. Manufacturers:
  - 1. Buckley Associates.
  - 2. McGill Airflow LLC. Semco.

**2.10 DUCT SEALANTS**

*DETERMINE IF SOLVENT BASED DUCT SEALANT IS APPROPRIATE FOR THE AREA OF WORK AND EDIT THE BELOW ACCORDINGLY. NOTE THAT LEED© TYPICALLY PERMITS SOLVENT BASED DUCT SEALANTS IN WELL-VENTILATED AREAS DURING LOW AMBIENT TEMPERATURES (<40°F), BUT WATER BASED SEALANTS OTHERWISE.*

- A. Solvent-based sealants may only be used if the outdoor air temperature will be below 40°F within 24 hours of applying.
- B. Sealant shall be non-asbestos type, and comply with UL and NFPA 90A.
- C. Sealant: Water or solvent based elastomeric compound, gun or brush grade, maximum 25 flame spread and 50 smoke developed (dry state) specifically for sealing ductwork. Use products as recommended by manufacturer for low, medium or high-pressure systems.
  - 1. Manufacturers
    - a. Hardcast.
    - b. McGill Airflow LLC.
    - c. Polymer Adhesives.
    - d. Ductmate.
- D. Tape shall not be used.
- E. Gaskets and mastics used for flanged joints shall be compatible for the service of use and per the manufacturer's recommendations.

**2.11 DUCTWORK CLEANING AND DISINFECTING**

*DETERMINE IF THIS SECTION IS REQUIRED. INSERT AND EDIT THE NADCA SPECIFICATION APPROPRIATELY.*

- A. When scheduled, the minimum requirements for commercial HVAC system cleaning shall be as described in the National Air Duct Cleaners Association (NADCA) "General Specifications for the Cleaning of Commercial Heating, Ventilation and Air Conditioning Systems."
- B. Approved Cleaning Specialists:
  - 1. Sani-Vac Service
  - 2. Power Vac
  - 3. High Tech Vacuum
  - 4. Aero Filter Inc.

**PART 3 - EXECUTION**

**3.1 GENERAL SHEET METAL INSTALLATION**

- A. Ductwork shall be installed to true alignment, parallel or perpendicular to adjacent building walls, floors and ceilings, to present a neat and workmanlike appearance.
- B. Provide necessary offsets and transitions to avoid interference with the building construction, piping, or equipment. Locate ducts with sufficient space around equipment to allow operating and maintenance activities.
- C. Bullhead tees and straight tap connections are not acceptable.
- D. Provide straight runs of ductwork, upstream and downstream, at equipment, fans, coils, TAU's, LTAUs, and humidifiers per manufacturer's recommendations and as indicated on drawings.
- E. Provide flexible connector where ductwork connects to fans, air handling units and other rotating equipment and where indicated on drawings.
- F. Repair damaged galvanized surfaces with zinc rich paint.
- G. For ductwork mounted outdoors, install duct with slight lateral pitch to prevent water ponding on top of duct.
- H. Repair PCD ductwork where coating is damaged or exposed by connections with compatible liquid PVC or per manufacturer's recommendations.
- I. Enclose dampers located behind architectural intake or exhaust louvers in a sheet metal collar and seal to building construction.
- J. Air volume control on parallel flow branches shall be accomplished with branch dampers; splitter type dampers are not acceptable.
- K. Install special equipment items in ductwork systems including, but not limited to: control dampers, thermometers, airflow measuring devices and other related items, according to manufacturer's recommendations.
- L. Set plenum doors 6 in. to 12 in. above floor. Arrange door swings so that fan static pressure holds door in closed position.

- M. Store duct at least 4 in. above floor on wood pallets or similar devices. Protect duct from odors, dust, moisture, and other debris while stored on or off the jobsite, and when transporting to the jobsite, by tightly covering with plastic.
- N. Ductwork openings shall remain protected and covered until just prior to connection. Immediately after assembly, restore all protection to prevent odors, dust, moisture, and other debris from entering ductwork system. Remove any internal labels.
- O. Provide required penetrations and sleeves in building structure.
- P. Blank-off panels shall be screwed to louver blades and caulked to provide a weather tight seal.

### **3.2 FLEXIBLE DUCT INSTALLATION**

- A. Flexible duct runs shall not exceed 5 ft. long. Cut to length so that it is not compressed. Trim ends squarely. Sag shall not exceed 1/2 in. per linear foot when installed horizontally.
- B. Provide a minimum of 3 ft. of flexible non-metallic duct at connections to supply, return and exhaust diffusers/grilles, unless otherwise noted.
- C. Support at a maximum spacing of 2 ft. using 4 in. wide sheet metal protection saddles at each duct hanger. Flex duct directional changes shall not exceed 45 deg with centerline radius of bend no less than one-half times duct diameter.
- D. For connection to supply, return and exhaust diffusers/grilles located in horizontal ceilings, use pre-fabricated 90 degree plastic supports (such as the Flexflow Elbow by Thermaflex), or 90 degree sheet metal elbow fittings.
- E. Apply duct sealant to outside surface of collars and secure with metallic draw-band where flexible duct joins other duct or devices.
- F. Flexible duct shall not be used to connect terminal units to branch or main ducts.

### **3.3 DUCTWORK HANGERS AND SUPPORTS**

- A. Generally, hang and support ductwork per the latest edition of SMACNA. Additionally, adhere to the more specific requirements found in this specification section, the Related Sections, and as indicated on the project drawings.
- B. Hanging duct, equipment, or accessories with cables or wires is prohibited.
- C. Comply with Related Sections and drawing details regarding hangers, building attachments, fasteners, beam clamps and retaining clips, and as note below.
- D. Provide vibration isolation as specified in Related Section.
- E. Ductwork shall be supported and anchored to structure so that horizontal ducts are without sag or sway, vertical ducts without buckle and all ducts are free from deformation, collapse or vibration

- F. Support un-insulated rectangular ducts in sizes to 36 in. by non-perforated galvanized steel strap or by trapeze hangers. Support insulated rectangular ducts and ducts larger than 36 in. with trapeze hangers.
- G. Provide at least one support for each length of duct, with a maximum hanger spacing of 10 feet. Install supports on both ends of duct turns, branch fittings and transitions.
- H. Do not hang ductwork from piping, ducts, other trades hangers, existing hangers, or equipment.
- I. Single band hangers are not acceptable on ducts greater than 24 in. diameter.
- J. Provide supports on each side of any duct mounted equipment or device, including fans, coils, dampers, etc, to permit removal of item without removal of adjacent duct sections.
- K. Provide supplemental steel required to support ductwork in shafts, mechanical rooms or on the floor where structural steel is not properly positioned.
- L. Beam clamps shall be double sided on ducts over 36 in. by 36 in. Use double sided or single sided beam clamps with retaining clips on all other sizes.
- M. Do not modify existing structural steel without approval of U-M project manager and a structural engineer's review.
- N. Provide clamping systems that are compatible with the structural steel system of the building.
- O. Use angle iron "V" construction supports or similarly rigid construction for vertical ducting that requires lateral support.
- P. Ductwork mounted on roof or otherwise exposed to elements shall be supported with frames constructed of galvanized steel angles and channels, regardless of duct size. Supports shall not rest on top of roof, but shall be firmly attached to roof structure and properly flashed. Ducts that penetrate through the roof shall utilize curbs and shall be counter-flashed. All fasteners shall be galvanized.
- Q. Provide angle sway bracing and diagonal cross bracing to the structure to provide support against maximum lateral loads that may be imposed on the ductwork installed downstream of fan discharges and ductwork exposed to wind loads, and any other locations exposed to lateral loads.

### 3.4 DUCT PAINTING

- A. Where the interior of duct is visible through grilles, registers, diffusers or other air diffusion devices, paint the interior flat black. Coordinate work with Architectural Trade.
- B. For plenum returns, where equipment and structure above ceiling is visible through return air grilles, provide black sheet metal baffle with turned edges suspended from building construction. Size and position the baffle to prevent restriction of air flow. Where space above ceiling precludes use of a baffle, paint visible building surfaces flat black.

**3.5 TEMPORARY USE**

- A. Develop a plan that assures ductwork is protected during temporary use. Obtain approval of the plan from the Owner's Representative.
- B. Maintain the protection plan until just prior to Owner turn-over.
- C. Successfully complete return/negative pressure duct leak testing prior to duct temporary use.
- D. Temporary filters shall be provided in return or negative pressure duct to protect ductwork and building contents when any fans are operated during construction. Filters shall have an equal or better performance rating than the air handling unit pre-filters specified for permanent use, but not less than MERV 8, in order to prevent construction dirt infiltration into duct systems. Install filters over grilles, diffusers, and all duct openings. Provide filters over supply grilles, diffusers and duct openings if construction dust and debris will enter when operated for temporary service (e.g. air system cycles off during periods when construction continues). Seal around temporary filters to prevent filter bypass.
- E. Continuously maintain all filters and replace when pressure drop exceeds 1 in. w.c., or at manufacturer's recommended change-out pressure drop, whichever is lower.
- F. Remove temporary filters and associated materials, and clean any adhesive residue from finished surfaces, at completion of temporary use.

**3.6 DUCTWORK SEALING, INSPECTING AND LEAKAGE TESTING**

- A. Seal, inspect and test prior to insulating or concealing ductwork. Leak test per procedures in the latest edition of SMACNA.

*FOR EXPOSED DUCT IN FINISHED AREAS, CONSIDER IMPACT OF SEALANT ON AESTHETICS OF DUCT. POSSIBLE OPTIONS ARE NO SEALANT, WELDED JOINTS, OR BANDS TO COVER THE SEALANT.*

- B. Seal ductwork to meet the following SMACNA seal classifications:

*BELOW DUCT SEAL REQUIREMENTS MEET OR EXCEED ASHRAE 90.1 2007 REQUIREMENTS EXCEPT FOR UNCONDITIONED SPACES. ENGINEER TO REFER TO 90.1 FOR THE DEFINITION OF AN UNCONDITIONED SPACE AND IDENTIFY IF THE PROJECT HAS ANY DUCT RUNNING IN UNCONDITIONED SPACES. IF SO, SPECIFICALLY IDENTIFY WHICH SPACES ARE CONSIDERED UNCONDITIONED AND INDICATE THE REQUIRED SEAL CLASS, MATCHING 90.1 REQUIREMENTS.*

- 1. Pressure class 2 in. w.c. or less (except exhaust or outdoor): Class C (seal transverse joints only.)
- 2. Exhaust ductwork, pressure class 2 in. w.c. or less: Class B (seal all transverse joints and longitudinal seams).
- 3. All outdoor ductwork: Class A (seal all transverse joint, longitudinal seams, and duct wall penetrations)
- 4. All ductwork rated for a pressure greater than 2 in. w.c: Class A (seal all transverse joints, longitudinal seams, and duct wall penetrations).

**Building Name**

**Edit Custom Properties**

**P00000000 0000 Issued for: 233100 - - 15**

5. All inaccessible ductwork (duct in shafts, above hard ceilings, and any made inaccessible by work of other trades): Class A.

C. Perform measured leak testing on the following ductwork:

1. All duct sealed to SMACNA Class A.
2. All welded duct.
3. Maximum permissible leakage rate:
  - a. SMACNA Leakage Class 3.
  - b. Welded Ductwork: Zero leakage.

D. Duct Leakage Testing Procedures:

1. Prior to fabrication and installation, develop and submit for approval a ductwork testing plan, indicating locations of temporary caps, surface area of ductwork test sections, test pressure, leakage class and allowable leakage in cubic feet per minute.
2. Notify the Owner's Representative at least 2 days prior to each test.
3. Provide all blank-off plates, flanges, and safing required to isolate each section of duct to be tested.
4. Provide necessary testing apparatus.
5. For all ducts, pressurize ductwork to the specified pressure class and inspect ductwork for visual and audible leaks, and leaks perceptible to a hand 2 in. from duct. Reseal all perceptible leaks until acceptable to Owner's Representative.
6. After completing visual and audible inspection, conduct measured ductwork leakage tests at the specified pressure class for the duct. Reseal and retest as required until successfully achieving the specified leakage class.
7. Submit leakage test report for approval, using SMACNA or other approved form.

### 3.7 COMMISSIONING

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

### 3.8 DUCTWORK CLEANING

*DETERMINE IF THIS SECTION IS REQUIRED. INSERT AND EDIT THE NADCA SPECIFICATION APPROPRIATELY.*

- A. Clean HVAC system as specified in the National Air Duct Cleaners Association (NADCA) "General Specifications for the Cleaning of Commercial Heating, Ventilation and Air Conditioning Systems."

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**

SECTION 233300 - AIR DUCT ACCESSORIES AND RGD'S

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 233300 - AIR DUCT ACCESSORIES AND RGD'S**

**REVISIONS**

**12-17-2010: APPROVED AS NEW MASTER**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**CAREFULLY EDIT AND COORDINATE RELATED SECTIONS.**

**RETAIN THE DIVISION 26 ELECTRICAL REFERENCE IN THIS SECTION TO  
ASSURE THAT ELECTRICAL WORK STANDARDS ARE OBSERVED AND  
ENFORCED**

- B. Related Sections:

1. Section 233100: HVAC Ducts and Casings.
2. Section 230900: Mechanical Systems Controls.
3. Section 233600: Air Terminal Units.
4. Division 26: Electrical.

**1.2 SUMMARY**

- A. Section Includes:

1. Sheet metal accessories as shown in the Contract Documents and required for a complete and operable air distribution system
2. Access doors in ductwork.
3. Duct test holes.
4. Duct air turning vanes.
5. Flexible connectors.
6. Fire dampers, fire/smoke dampers, smoke dampers, and combination smoke/isolation dampers.
7. Balance dampers.
8. Iris balance dampers
9. Backdraft dampers.
10. Sound attenuators.
11. Registers, grilles and diffusers.
12. Duct connections to laboratory airflow units.
13. Fume hood low airflow alarm set-up damper.
14. Wire mesh screens.

- B. This Section does not include sheet metal accessories for fiberglass reinforced duct (FRP) or other specialty duct systems. Refer to other specification sections for requirements.

- C. Section does not include automatic control dampers. See Related Section 230900 Mechanical Systems Controls.

### 1.3 SUBMITTALS

- A. Product Data: Submit performance data, rated capacities, furnished specialties, sound-power ratings, and accessories for each type of product.
- B. Duct Silencers: Include pressure drop and dynamic insertion loss data. Include breakout noise calculations for high transmission loss casings.
- C. Damper manufacturer's installation instructions.
- D. Product Data for each type of product.
- E. Shop Drawings:
  - 1. Indicate the location and rating of all dampers on shop drawings and submittals.
- F. Operation and maintenance data.

### 1.4 QUALITY ASSURANCE

**RETAIN PARAGRAPHS A AND B IN EVERY PROJECT SPECIFICATION SECTION.**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

**EDIT THE REFERENCE STANDARDS FOR PROJECT REQUIREMENTS.**

- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
- C. NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."
- D. SMACNA "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods, unless otherwise indicated.
- E. UL 555C "Standard for Fire Dampers."
- F. UL 555S "Standard for Smoke Dampers."

**REVIEW WARRANTY TERM PER PROJECT. LONGER WARRANTY PERIOD MAY BE APPROPRIATE FOR CERTAIN TYPES OF WORK. RETAIN THIS ARTICLE IN EVERY PROJECT SPECIFICATION.**

### 1.5 WARRANTY

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 ACCESS DOORS IN DUCTWORK**

- A. Provide access doors in ductwork to permit access to the linkage side of automatic dampers, fire dampers, smoke damper, combination fire/smoke dampers, upstream side of coils, filters, humidifiers, airflow measuring stations, other equipment or devices requiring access or other locations as indicated on Drawings for cleaning, maintenance, or inspection purposes.
- B. Hang access doors on heavy gauge continuous hinges and secure in the closed position by means of metal clinching type cam latches. Hinges shall move freely. Where space conditions preclude hinges, provide four heavy duty cam-lock type latches, in addition to a retainer chain.
- C. Access doors shall be of double wall insulated construction of not less than 20 gauge sheet metal, neoprene gasketed around the entire perimeter. Insulation between the metal panels shall be of the same thickness as the duct or panel adjacent to the access doors. Doors shall match duct material type, and at a minimum, the pressure class of the duct system in which they are installed.
- D. Minimum Size: 24 inches by 24 inches when permitted by duct size. For smaller ducts, provide largest size access door that can be accommodated by duct height or width.
- E. Acceptable Manufacturers:
  - 1. Air Balance, Inc.
  - 2. Ruskin Company,
  - 3. Ductmate Industries, Inc.
  - 4. Nailor Industries, Inc.
  - 5. American Warming & Ventilating.

**2.2 DUCT TEST HOLES**

- A. A. Permanent, factory fabricated duct test holes, with air-tight flanged fittings and screw cap. Provide extended neck fittings to clear insulation. Acceptable manufacturer and model:
  - 1. Ventlock Model 699 by Ventfabrics, Inc.

**2.3 DUCT AIR TURNING VANES**

- A. Provide factory manufactured turning vanes in each elbow where inside radius is less than the width of the duct, and in all square elbows located in duct construction of greater than 2 inches w.g.
- B. Turning vane assemblies shall be adequately supported and affixed to prevent rattling, breakaway, and shall not deform. Assemblies longer than 12 inches shall be double wall.
- C. Turning vanes in negative pressure ductwork with pressure rating above 2 inches shall be installed in accordance with SMACNA Industrial Duct Construction Standard.
- D. Turning vanes shall match the duct material construction.

- E. In lieu of turning vanes, use long radius elbows when the elbow free area is less than one square foot.
- F. Airfoil turning vanes are not permitted.
- G. Acceptable Manufacturers:
  - 1. Aero Dyne.
  - 2. Ductmate Industries, Inc.
  - 3. Sheet Metal Connectors, Inc.
  - 4. Duro-Dyne.
  - 5. DynAir Inc.

**2.4 FLEXIBLE CONNECTORS**

- A. Provide flexible connectors of 4-inch minimum fabric width.
- B. Fabric for flexible duct connectors at equipment shall be a minimum of 22 oz. glass fabric, double coated with neoprene, fire retardant, flame-proofed, waterproof, airtight, and approved by UL and conforming to NFPA 90A. Flexible connectors susceptible to sweating shall be of the insulated type.
- C. Flexible connectors shall be rated for the same pressure as duct or equipment.
- D. Flexible connectors in laboratory and process exhaust systems shall be of the material and type suitable for that environment.
- E. Acceptable Manufacturers:
  - 1. Senior Flexonics Pathway, Inc.
  - 2. McGill AirFlow LLC, An enterprise of United McGill Corporation.
  - 3. Duro-Dyne.
  - 4. Ventfabrics, Inc.

**DESIGNER SHALL EDIT U-M DAMPER CONSTRUCTION AND APPLICATION SCHEDULE DETAIL TO MAKE IT PROJECT SPECIFIC, AND INCLUDE IT ON THE DRAWINGS. SEE:**

**[HTTP://WWW.UMAEC.UMICH.EDU/FOR.ARCHS/STANDARDDETAILS.HTML.](http://www.umaec.umich.edu/for.archs/standarddetails.html)**

**2.5 GENERAL DAMPER CONSTRUCTION REQUIREMENTS**

- A. Dampers shall be rated for the maximum close-off pressure at the installed location, but not less than the rating as indicated in the Damper Construction and Application Schedule.
- B. Dampers installed in galvanized ductwork shall be all galvanized construction including blades, shafts, bearings, linkages, etc. or as indicated in other sections.
- C. Dampers installed in stainless steel ductwork, polyvinyl coated ductwork (PCD), or located in any corrosive atmosphere shall be constructed of Type 304 or Type 316 stainless steel construction including blades, shafts, bearings, linkages, etc.
- D. Refer to the Damper Construction and Application Schedule on the Drawings for additional requirements. If not on the Drawings, refer to the following location for the Damper Construction and Application Schedule.

1. <http://www.umaec.umich.edu/for.archs/StandardDetails.html>.

**2.6 FIRE DAMPERS, FIRE/SMOKE DAMPERS, SMOKE DAMPERS, AND COMBINATION SMOKE/ISOLATION DAMPERS**

***DESIGNER SHALL SHOW ALL REQUIRED FIRE, FIRE/SMOKE, SMOKE, AND SMOKE/ISOLATION DAMPERS ON DRAWINGS.***

**A. General:**

1. Devices shall be of the appropriate service for the partition rating into which they are installed.
2. Dampers shall meet the requirements of NFPA 90A and labeled in accordance with the latest editions of UL 555, UL 555S, and UL 555C.
3. Provide dynamic rated dampers.
4. Each damper shall be rated to close against the maximum design air velocity and pressure at its installed location, with an additional 400 fpm velocity and 0.5 in. w.g. static pressure safety factor.
5. Dampers of all ratings and types shall be of the nominal 100 percent face area type, with blade package and frame components out of the airstream (type B). Dampers shall include the required oversize enclosures that shall be sealed by the damper manufacturer for the appropriate duct pressure class. Dampers shall have rectangular, flat oval or round duct collars for connection to mating ductwork.
6. Furnish sleeves and mounting accessories as required per code.

**B. Fire Dampers**

1. Fire dampers shall be provided as shown on the Drawings and wherever Drawings indicate fire rated partitions.
2. Fusible link temperature rating for fire dampers shall be 165 degrees F, or 50 degrees F above the highest duct system temperature, whichever is greater.

***ENGINEER MUST EDIT THE SPECIFICATION TO INCLUDE THE PROJECT SPECIFIC REQUIREMENTS FOR SMOKE AND COMBINATION FIRE/SMOKE DAMPERS. INCLUDE INFORMATION ON REMOTE AND/OR LOCAL OVERRIDES, PRIMARY/SECONDARY HEAT SENSING DEVICE TEMPERATURE SET POINTS, MANUAL OR AUTOMATIC RESET FEATURES, PNEUMATIC OR ELECTRIC ACTUATORS (NOTE THE TEXT BELOW SPECIFIES PNEUMATIC ACTUATORS), AND OTHER REQUIRED FUNCTIONS, AS WELL AS A SEQUENCE OF OPERATION FOR EACH SMOKE AND FIRE / SMOKE DAMPER TYPE.***

**C. Smoke Dampers and Combination Fire/Smoke Dampers**

1. Provide smoke dampers and combination fire/smoke dampers as shown on the Drawings and where architectural drawings indicate smoke/fire rated partitions.
2. Smoke dampers and combination fire/smoke dampers and actuators shall meet the requirements of NFPA 92A and NFPA 92B and shall be labeled as a "Leakage Rated Damper for Use in Smoke Control Systems" in accordance with latest edition of UL 555S. Smoke dampers shall be of low leakage design qualified to UL 555S leakage Class I and shall have a UL 555S elevated temperature rating of 350 degrees F minimum.

3. Supply each smoke damper and combination fire/smoke damper with a factory mounted damper actuator. Combination fire/smoke dampers shall be manufactured with a metal sleeve of appropriate length and thickness for the required damper installation, and the damper actuator shall be installed on the sleeve exterior. Damper actuators shall be pneumatic unless otherwise indicated. Dampers shall fail to the closed position.
4. Damper Frame: Galvanized steel formed into a structural hat channel shape with reinforced corners. The blades shall be airfoil type. Bearings shall be sintered bronze sleeve turning in an extruded hole in the frame. Blade edge seals shall be silicone rubber designed to withstand 250 degrees F and jamb seals shall be stainless steel flexible metal compression type with silicone rubber backing, Class I rated.

**ENGINEER MUST ADD THE PROJECT SPECIFIC REQUIREMENTS FOR COMBINATION FIRE/SMOKE DAMPERS NO DETAILS HAVE BEEN PROVIDED IN THIS SECTION.**

5. Each combination fire/smoke damper shall also be equipped with a temperature limited re-openable feature as required by Code to meet the smoke control sequence of operation.

D. Smoke/Isolation Damper:

1. Smoke/isolation dampers, typically used at air handling units in discharge and return ductwork, shall comply with NFPA 90A and the above requirements for smoke dampers, except that dampers shall have UL rated pneumatic actuators, with a minimum of one actuator for each sixteen square feet of damper area.

E. Acceptable Manufacturers:

1. Ruskin Company.
2. Air Balance Inc, a Mestek Company.
3. American Warming & Ventilating Co.
4. Vent Products Co., Inc.
5. Nailor Industries Inc.
6. Greenheck.

## 2.7 BALANCE DAMPERS

**DESIGNER SHALL SHOW ALL REQUIRED BALANCE DAMPERS ON DRAWINGS.**

- A. For pressure dependent systems, as a minimum, provide balance dampers at each branch duct, at each outlet or inlet, and as indicated for supply air, return air, and exhaust air duct systems.
- B. For pressure independent systems, as a minimum, balance dampers shall be provided at each branch for each outlet downstream of each supply air Terminal Airflow Unit (TAU) or Laboratory Terminal Airflow Unit (LTAU) and at each branch inlet upstream of each return air or exhaust air TAU or LTAU box and as indicated.
- C. Comply with SMACNA requirement and provide continuous rod and bearings on each end of shaft regardless of pressure class.

- D. Use 3/8 inch continuous square rod and 18 gauge stiffened blade for duct sizes 18 inches wide by 18 inches high and smaller, or 12 inches diameter and smaller.
- E. Use 1/2 inch continuous square rod and 16 gauge stiffened blade for single blade dampers in ducts 19 inches to 48 inches wide by a maximum of 10 inches high; and in 12-inch to 16-inch round ducts.
- F. When multi-blade dampers are required, use a manufactured 16 gauge, stiffened, opposed blade damper in a 14 gauge hat channel steel frame with reinforced corners. All hardware shall be galvanized, except use brass trunnions and bronze, steel, or synthetic bearings.
- G. Quadrant shall be locking type.
- H. Quadrant end of damper rod shall be factory slotted to indicate blade position.
- I. Provide galvanized or stainless steel sheet metal "hat section" on ducts with exterior insulation so that quadrant will be exposed. Provide tight sealing nylon brushing at duct opening for damper shaft under hat section.
- J. Each square rod shall be installed so that quadrant will be accessible for adjusting.
- K. Provide 24-inch-by-24-inch access door through ceiling or wall construction for each balance damper that is not accessible.
- L. Acceptable Manufacturers:
  - 1. Ruskin Company.
  - 2. Young Regulator Company,
  - 3. American Warming & Ventilating Co.
  - 4. Vent Products Co., Inc.
  - 5. Arrow United Industries.
  - 6. Greenheck.

**2.8 IRIS BALANCE DAMPERS**

- A. Supply and exhaust air duct connections at ventilated animal racks, and where indicated, shall utilize Iris type balance dampers.
- B. Damper shall use interlocking steel plates and a calibrated positioning system to form an adjustable aperture. Differential pressure ports on either side of aperture shall allow airflow measurement from catalogued (damper position vs. differential pressure) performance curves.
- C. Accuracy of measurement shall be plus or minus 7 percent with one diameter of straight duct upstream of damper.
- D. Damper shall be constructed of heavy gauge galvanized steel and suitable for slip-in duct installation.
- E. When indicated, provide positive seal type iris dampers capable of being set at a fully closed position.
- F. Acceptable Manufacturer:
  - 1. Continental Fan Manufacturing Inc.

**2.9 BACKDRAFT DAMPERS**

- A. Frames shall be flanged, a minimum of 3 inches wide, and a minimum of 20 gauge roll formed galvanized steel or 0.125 inch extruded aluminum with pre-punched mounting holes and welded corner clips for maximum rigidity.
- B. Blades shall be a single piece, with a maximum width of 6 inches, counter-balanced, and shall be constructed of a minimum of 28 gauge roll formed galvanized steel or 0.070 inch extruded aluminum. Blade ends shall overlap for maximum weather protection.
- C. Blade seals shall be extruded vinyl and mechanically attached to blade edge.
- D. Bearings shall be corrosion resistant synthetic.
- E. Linkages shall use a galvanized tie bar with stainless steel pivot pins.
- F. Axles shall be stainless steel.
- G. Mounting shall be suitable for the required orientation.
- H. Acceptable Manufacturers:
  - 1. Young Regulator Company.
  - 2. American Warming & Ventilating Co.
  - 3. Vent Products Co., Inc.
  - 4. Arrow United Industries.

**2.10 SOUND ATTENUATORS**

- A. Silencers shall be of the size, configuration, capacity, and acoustic performance as indicated on drawings.
- B. Insertion losses listed in the schedule are minimums allowable and pressure drops are maximum allowable. Silencer performance data shall be in accordance with ASTM E477 and validated by a National Voluntary Laboratory Accreditation Program (NVLAP) accredited independent testing laboratory.
- C. All silencers shall be factory fabricated and supplied by the same manufacturer. Inlet and outlet dimensions must be equal to duct sizes shown whether rectangular or round. Duct transitions at silencers are not permitted unless shown.
- D. Outer casing shall be a minimum of 20 gauge G-90, galvanized steel. Inner partitions shall be minimum of 24 gauge G-90 galvanized steel. Casings shall be airtight.
- E. Filler material shall be inorganic glass fiber of proper density to obtain specified performance and packed under a minimum of 5 percent compression to eliminate voids due to vibration and settling. Material shall be inert, vermin-proof, moisture-proof, and shall be totally encapsulated with a 1.5 mils thick Mylar or Tedlar film.
- F. Combustion rating for fill shall be in accordance with ASTM E84, NFPA 255, or UL 723.
- G. Provide packless type attenuator when indicated.
- H. Mounting shall be suitable for the required orientation.

- I. Acceptable Manufacturers:
  - 1. Industrial Acoustics.
  - 2. SEMCO Incorporated.
  - 3. Vibro-Acoustics.

**REVIEW THIS SECTION CAREFULLY AND SPECIFY DIFFUSERS THAT ARE APPROPRIATE FOR THE PROJECT OR APPLICATION. ADD SPECIALTY DIFFUSERS AS REQUIRED.**

**2.11 REGISTERS, GRILLES AND DIFFUSERS**

A. General:

- 1. Diffusers, grilles, and registers shall be of steel or aluminum construction, factory primed and painted with baked enamel or acrylic, white color, unless otherwise scheduled.
- 2. Diffusers, registers and grilles shall be compatible with the designed ceiling/wall type. Provide registers and grilles with frames that are compatible with adjacent construction, with countersunk mounting holes. Refer to architectural drawings for exact details of ceiling/wall construction.
- 3. Engineering data shall be based upon tests conducted in accordance with the latest ASHRAE Standard 70, Method of Testing for Rating the Performance of Air Outlets and Inlets at non-isothermal conditions. Published Noise Criteria (NC) data shall be determined based upon a 10 dB room attenuation across all octave bands. Lab test reports shall be available upon request.

B. Supply diffuser:

- 1. Diffusers shall be of the restricted multi-orifice jet induction and air mixing type, consisting of louvered sections with built-in diffusing vanes.
- 2. Diffusers shall be square with neck sizes to match connecting duct size.
- 3. Diffusers shall be assembled for indicated patterns that provide 1-way, 2-way, 3-way or 4-way air discharge with each side delivering a quantity of air proportional to the area served.
- 4. The diffusers shall be constructed with an integral leak-proof collar extending minimum 1 inch above the core to accommodate duct connection. Square and rectangular collars shall have welded corners.

C. Return and Exhaust diffuser:

- 1. Diffusers shall be square with neck sizes to match connecting duct size.
- 2. The diffusers shall be constructed with an integral leak-proof collar extending minimum 1 inch above the core to accommodate duct connection. Square and rectangular collars shall have welded corners.

D. Sidewall Adjustable Supply Register:

- 1. Sidewall registers shall have mitered corners, double deflection adjustable blades, and horizontal front blades.

E. Low Wall Return/Exhaust registers:

1. Return and exhaust registers shall have (1) set of fixed blades, 42 to 45 degree deflection.
2. Wall return and exhaust registers mounted 18 inches AFF or lower, shall be have mitered corners, fixed blades, horizontal front louvers. Frame and blade shall be manufactured of minimum 8 gauge aluminum or 12 gauge steel for rugged use.
3. Low wall registers used in UMHHC facilities for clinical rooms shall utilize a hinged register face with turn screws for access to filter media, mounted in a factory provided channel behind the register face.

F. Supply and Return Bar Grille

1. Bar grilles shall be extruded aluminum, nominal 1/8 inch wide bars with 0 degree deflection, on maximum 1/4 inch centers, or as scheduled.
2. Continuous grilles over 72 inches in length shall be butted together using keyed splices for precise alignment.
3. Concealed spring latch fasteners shall be used for attaching grille to plaster frame. No screw holes shall be visible on plaster frame or grille.
4. Provide blank-off baffles for inactive sections of grilles, as noted on the drawings.

G. Plenum Slot Diffusers

1. Diffusers shall be insulated for supply and uninsulated for return and shall have of the slot widths, number of slots, and lengths as indicated on the Drawings.
2. Units shall be constructed of a minimum of 24 gauge galvanized steel with a black face.
3. Inlets shall be drawn from the plenum wall to eliminate leakage and shall have a minimum of a 1 inch duct connection flange.
4. Slot face shall be constructed of double metal thickness to provide rigidity and pattern controller shall be of the adjustable type.
5. Provide blank-off baffles for inactive sections, as indicated on Drawings.

H. Acceptable Manufacturers:

1. Tuttle & Bailey.
2. MetalAire.
3. Titus.
4. Price Industries.
5. Nailor Industries, Inc.

**2.12 DUCT CONNECTIONS TO LABORATORY TERMINAL AIRFLOW UNITS**

- A. Inlet and outlet connections may utilize draw bands with dual bolts/nuts and elastomeric gasket or, as a minimum, be permanently attached using appropriate fasteners and sealed with appropriate duct sealant.

**2.13 FUME HOOD LOW AIRFLOW ALARM SET-UP DAMPER**

- A. Provide a fume hood low airflow alarm set-up damper with locking quadrant at the outlet (downstream) of each fume hood laboratory terminal airflow unit.
- B. Damper shall be constructed of a minimum of 16 gauge Type 304 stainless steel with bearings and extended shaft. End of shaft shall indicate blade position.
- C. Gauge and construction of sleeve and blade components shall be as required to meet project duct static pressure ratings.

**2.14 WIRE MESH SCREENS**

- A. Screen assemblies shall be removable.
- B. Mesh: 1/2 -inch square pattern, 1/16 inch galvanized wire, interwoven, welded at wire intersections and to the frame to prevent rattles.
- C. Frames: Minimum of 1 inch by 1 inch by 1/8 inch galvanized steel angles for duct sizes through 24 inches, 1-1/2 inch by 1-1/2 inch by 3/16 inch for duct sizes between 25 inches to 48 inches, and 2 inches by 2 inches by 3/16 inch for ducts larger than 48 inches continuous around perimeter of screen. Provide intermediate supports to limit screen deflection to 1/16 inch at maximum design airflow.

**PART 3 - EXECUTION**

**3.1 SHEET METAL ACCESSORIES INSTALLATION**

- A. Install sheet metal accessories in accordance with manufacturers' recommendations, Contract Drawings and approved submittals.
- B. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- C. Refer to other related sections for installation requirements, including joint connections and sealant requirements.
- D. Install duct accessories according to applicable details in SMACNA "HVAC Duct Construction Standards - Metal and Flexible."
- E. Install duct accessories of materials suited to duct materials. Use galvanized-steel accessories in galvanized-steel ducts, stainless-steel accessories in stainless steel ducts, use aluminum accessories in aluminum ducts.

**3.2 DUCT ACCESS DOORS INSTALLATION**

- A. Locate access doors so they can be opened completely without interferences and to allow easy access by maintenance personnel.
- B. Fire, smoke, combination fire/smoke damper or similar automatic shutting device access doors shall be mounted downstream (after shutoff) to permit resetting and inspection.
- C. Doors shall seal tightly into frame.

- D. Label access doors to note equipment that is accessed through the door. Labels and lettering on labels shall be in accordance with the mechanical identification section. Provide 1-inch-high minimum letters.

### 3.3 DUCT AIR TURNING VANES INSTALLATION

- A. Mount the outboard-most vane in the duct heel. Vanes shall be spaced across the entire corner diagonal, parallel to the airstream, adequately supported and affixed to prevent rattle and breakaway.

### 3.4 DUCT TEST HOLES INSTALLATION

- A. Provide duct test holes where required for testing and balancing purposes and as shown on Drawings.

### 3.5 DAMPER- INSTALLATION - GENERAL (INCLUDING AUTOMATIC CONTROL DAMPERS FURNISHED UNDER RELATED SECTION)

- A. Dampers shall be installed square and plumb to casing, duct, wall, etc. without racking. Align and adjust dampers to ensure proper opening and closing without binding or hesitation.
- B. Seal completely around frame.
- C. Install dampers designed for horizontal mounting in horizontal orientation, and dampers designed for vertical mounting in vertical orientation.
- D. Adequately reinforce multiple section dampers per manufacturer's recommendations.
- E. Install dampers so quadrants will be accessible for adjusting.
- F. Coordinate access through ceilings or walls to ensure each damper is accessible.

*TO MINIMIZE DUCT NOISE GENERATED BY VOLUME DAMPERS, SMACNA RECOMMENDS LOCATING DAMPERS AT LEAST TWO DUCT DIAMETERS FROM FITTINGS AND AS FAR AWAY AS POSSIBLE FROM OUTLETS.*

- G. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
- H. Set dampers to fully open position before testing, adjusting, and balancing.

### 3.6 FIRE, SMOKE, AND COMBINATION FIRE/SMOKE DAMPERS INSTALLATION

- A. Provide sleeves, mounting angles, and all other required accessories.
- B. Fire dampers shall not be installed in hazardous exhaust systems.
- C. Demonstrate re-setting of fire dampers to authorities having jurisdiction.

- D. Install fire, smoke, and combination fire and smoke dampers according to UL listing.

**3.7 FLEXIBLE CONNECTORS INSTALLATION**

- A. Flex connectors shall be used in all ductwork that crosses building expansion joints and at attachment to any equipment mounted on vibration isolators, and inlets and outlets of fans.
- B. The connectors shall be installed as close to equipment as practical and the clear gap at rest shall not be less than 3 inches.
- C. There shall be no tension of the fabric under static or dynamic loads. Connector shall be free of wrinkles caused by misalignment or fan reaction. End and overlaps shall be sealed airtight.
- D. Check connections during operation for leaks and binding.
- E. Outdoor flexible connectors shall be protected by a three-sided sheet metal weatherhood, open on the bottom, securely anchored on one side of the flexible connector only. Weatherhood to be of the same material as the ductwork.

**3.8 REGISTERS, GRILLES AND DIFFUSERS INSTALLATION**

- A. Support devices independent of the ceiling construction when required for safe and workmanlike installation.
- B. Paint visible duct, mounting clips, and accessories behind registers and grilles flat black.
- C. Adjust throw patterns as shown on Drawings.

**3.9 FUME HOOD LOW AIRFLOW SET-UP DAMPER INSTALLATION**

- A. Install the damper a minimum of four duct diameters downstream of each fume hood laboratory terminal airflow unit.
- B. Assure the damper is mounted downstream of any differential pressure switch probe or bulkhead fitting.

**3.10 WIRE MESH SCREEN INSTALLATION**

- A. Screen assemblies shall be firmly affixed and shall not vibrate.

**3.11 FIELD QUALITY CONTROL**

- A. Tests and Inspections:
  - 1. Operate dampers and operators to verify full range of movement.
  - 2. Inspect locations of access doors and verify proper labeling and access to equipment.
  - 3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
  - 4. Inspect turning vanes for proper and secure installation.

**INCLUDE THIS ARTICLE IN EVERY SPECIFICATION SECTION.**

**3.12 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

**END OF SECTION 233300**

DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)  
SECTION 233400 - FANS

*REVISIONS:*

*MAJOR REVISIONS - D. KARLE FOR AEC MECH TECH TEAMS - HVAC/CONTROLS GROUP, OCT 13, 2006.*

*REVISED SECTION 1.3 TO INCLUDE NEW AMCA STANDARD FOR INDUCED FLOW FANS D. KARLE FEB 15, 2008.*

*REVISED TO REQUIRE CERTAIN PRODUCT DATA W/SUBMITTALS, PER MECH TECH TEAM. D. KARLE, 7/29/08.*

*REVISED HIGH PLUME INDUCTION FAN SPEC TO ALLOW MULTIPLE FAN MANUFACTURERS TO BE IN COMPLIANCE, PER MECH TECH TEAM. D. KARLE, 09/10/09.*

*REVISED CONTENT AND FORMAT MARCH 2011*

*7-19-2012: ADDED THAT MULTIPLE BELTS ARE TO BE PROVIDED AS A MATCHED SET, SO THAT BELT DRIVE INFO IN 220500 COULD BE REMOVED AND ALL BELT DRIVE INFO CARRIED IN THE SPECIFIC SECTIONS WHERE BELT DRIVES ARE USED. D. KARLE FOR MTT.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 019100/019110: Commissioning.
  - 2. Section 220513: Motors.
  - 3. Section 220548: Vibration Control
  - 4. Section 233300: Air Duct Accessories and RGDs
  - 5. Section 230593: Testing, Adjusting, and Balancing
  - 6. Section 230900: Mechanical Systems Controls.
  - 7. Division 26: Electrical.

**1.2 SUMMARY**

*ROOF CURBS ARE NOT SPECIFIED IN THIS SECTION. IF A ROOF CURB IS NEEDED, MAKE SURE IT IS SPECIFIED IN THE ARCHITECTURAL SPEC. SECTIONS OR ADD TO THIS SECTION.*

- A. Section Includes:
  - 1. Centrifugal Fans:

- a. Housed centrifugal fans.
  - b. Utility Sets.
  - c. Domed roof, up blast roof and sidewall exhaust fans.
  - d. Ceiling fans.
  - e. Cabinet fans.
  - f. Inline fans:
    - 1) Square Inline Centrifugal.
    - 2) Tubular Inline Centrifugal.
2. Inline Fans:
- a. Propeller fans.
  - b. Tube-axial fans.
  - c. Vane-axial fans.
3. Specialty Use Fans:
- a. Plenum fans.
  - b. High-plume induction type lab fans.
  - c. Smoke purge fans.
  - d. Kitchen exhaust fans.

**1.3 SUBMITTALS**

- A. Submit the following product data for each unit:
- 1. Static pressure, airflow (CFM), speed (RPM), system curve, outlet velocity and fan tag for each fan.
  - 2. Certified fan curves showing fan performance with the system operating points identified on curves. Surge, or "Do not operate" line, shall also be indicated on fan curve.
  - 3. Performance curves shall be published by the fan manufacturer and based on tests in accordance with AMCA 210. The curves shall be drawn with the fan flow rate plotted against fan total pressure and fan brake horsepower as per section 10.2.1 of AMCA 210.
  - 4. Bearing sizing and life calculations for each similar size and type of fan. Fan bearing calculations shall be based on fan maximum operating conditions including belt pull. Calculations shall be provided for both fan bearings and motor bearings.
  - 5. Sound power levels for each size and type of fan. Sound levels shall be provided for all 8 octave bands for discharge of fan, inlet to fan, and radiated noise through casing.
  - 6. Dimensional data for each size and type of fan, including operating and maintenance clearances.
  - 7. Details of vibration isolation bases including selections for vibration isolation springs.
  - 8. Details of fan discharge flexible duct connector.
  - 9. Details of motor and belt guards.
  - 10. Motor ratings, electrical characteristics, and motor accessories.
  - 11. Fan anti-corrosion coating data sheets.

**1.4 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.

1. AMCA Standard 99-0401, "Classification for Spark Resistant Construction."
2. ANSI/AMCA Standard 99-2404, "Drive Arrangements for Centrifugal Fans."
3. ANSI/AMCA Standard 99-2406, "Designation for Rotation and Discharge of Centrifugal Fans."
4. AMCA Standard 99-2408, "Operating Limits for Centrifugal Fans."
5. ANSI/AMCA Standard 210 ANSI/ASHRAE 51, "Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating."
6. ANSI/AMCA Standard 260 "Laboratory Methods of Testing Induced Flow Fans for Rating."
7. ANSI/AMCA Standard 300, "Reverberant Room Method for Sound Testing of Fans."
8. ANSI/AMCA Standard 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data."
9. ANSI/AMCA Standard 204, "Balance Quality and Vibration Levels for Fans."
10. UL-705, "Power Ventilators" (applies only for fans exposed to outdoor conditions).
11. UL-762, "Power Roof Ventilators for Restaurant Exhaust Appliances."
12. UL-793, "Standard for Automatically Operated Roof Vents for Smoke and Heat."
13. American Bearing Manufacturers Association (ABMA) Standards.

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

A. Fan manufacturer shall provide protection to insure that the interior and exterior of each fan is completely protected from dirt or weather during shipping. Openings shall be covered with sealed sheet metal, plastic or other durable means to ensure unit cleanliness is maintained.

#### **1.6 WARRANTY**

A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

### **PART 2 - PRODUCTS**

#### **2.1 MANUFACTURERS**

A. Acceptable Manufacturers:

1. All fan types specified in this Section, except Vane Axial, Tube Axial, and High-Plume Induction Type Lab Fans:
  - a. Loren Cook Co.
  - b. Acme.
  - c. Twin City.
  - d. Aerovent.
  - e. Greenheck.

- f. Trane.
  - g. Barry Blower.
  - h. Penn.
2. Vane-Axial and Tube-Axial:
- a. Buffalo Fan Co.
  - b. Howden Buffalo, Inc.
  - c. Woods.
  - d. Trane.
  - e. Greenheck.

**IF FRP INDUCTION FANS ARE REQUIRED, THE FOLLOWING MANUFACTURER MAY BE ADDED WITH APPROVAL FROM U-M HVAC MECH TEAM. CONSULT WITH U-M DESIGN MANAGER. MANUFACTURER: M-K PLASTICS.**

3. High-Plume Induction Type Lab Fans:
- a. Strobic.
  - b. Greenheck Vektor.

## **2.2 GENERAL CONSTRUCTION- ALL FANS**

- A. Provide balanced variable sheaves for motors 7.5 HP and under and fixed sheaves for motors 10 HP and over. Size variable sheaves at midpoint of specified operating conditions to allow field adjustment up or down during balancing procedures. Where fixed speed sheaves are specified for a specific fan, provide one (1) additional sheave set, if required, for final balancing.
- B. Fan selection and ratings shall be based on tests made in accordance with AMCA 210.
- C. Fans shall be AMCA licensed and shall bear the AMCA seal for both sound and performance levels.
- D. Fan shall be minimum Class I construction with proper UL label.
- E. The specified fan RPM, outlet velocity, and tip speed are the maximum acceptable. The motor horsepower, CFM, and static pressure are the minimum acceptable.
- F. Unless noted otherwise by specific fan type or per schedule, fan housing shall be heavy gauge continuous welded corrosion resistant steel construction with fan scroll and bearings supported from structural steel framework.
- G. All fasteners shall be corrosion resistant type.
- H. Fan housing shall be of suitable thickness and bracing required for stable and rigid construction, with no deflection, and to prevent vibration and pulsation.
- I. Fans having duct-connected inlets shall be provided with a flanged inlet and/or outlet collar matching companion flange.
- J. Provide OSHA belt guards on all belt driven fans.
- K. Fans shall be spark-proof Type A, B or C (AMCA 99-0401) as required by application.
- L. For exterior mounted fans, a weatherproof housing shall be provided with ventilation grilles to cover motor and drive assembly.

- M. Provide special construction fans, such as spark-proof, explosion-proof, or specially coated fans as required by schedules or as specified herein.
- N. Provide birdscreen on fans exposed to the exterior environment.
- O. Provide adequate space for service of fan, motor and bearings.
- P. The fan shaft shall be solid high carbon steel, accurately turned, ground and polished, and ring gauged for accuracy.
- Q. Recommended bearing manufacturer tolerances shall be met in the area of the shaft in contact with the bearings.
- R. Shafts must be dial indicator inspected for straightness after the keys are cut.
- S. Fan shaft shall be coated with rust inhibitive coating.
- T. Fan wheel assembly or propeller assembly shall be statically and dynamically balanced prior to fan assembly.
- U. The entire rotating assembly shall be designed so the first critical speed is at least 25% over the maximum fan class speed.
- V. Fan Shaft Bearings
  - 1. Fan bearings shall be bolted on a rigid welded steel framework integral with the housing.
  - 2. Bearings shall be designed and individually tested specifically for use in air handling applications.
  - 3. Bearings shall be sized for a minimum L-10 life of 200,000 hours at the maximum fan class operating speed and horse power. Selection shall account for all operating conditions including belt pull. Bearings shall be selected in accordance with standards set forth by the American Bearing Manufacturers Association (ABMA).
  - 4. Bearings shall be grease lubricated self-aligning ball or roller type. Provide tapered roller bearings for vertical applications.
  - 5. Bearing housings shall be solid cast iron, pillow block or flange mount type. Provide split pillow block bearings where required by the application speed.
  - 6. Stamped bearing housings are permitted on fans of 1/4 HP or less.
  - 7. Bearings shall be of the type that can be re-lubricated, and shall be equipped with grease fittings.
- W. Where fan bearings are not easily accessible or are installed in a hazardous exhaust airstream, provide clear plastic grease leads, properly secured to avoid damage or fatigue, routed to an accessible location.
- X. Fan Drive

1. Fan drive shall be a multiple V-belt type sized for 1.65 times the fan motor horsepower. Sheaves shall be fixed or adjustable based on fan motor horsepower as specified herein before. Fan sheave shall have a tapered lock, split and keyed hub. Groove spacing on equipment and motor pulleys shall align. For fans 1/2 HP and larger, quantity of belts shall be such that if any one belt fails, remaining belts shall allow fan to continue functioning as designed. Multiple belts shall be provided as a matched set.
  2. Motors shall meet requirements as specified in Motors section.
  3. Motor shall be 1800 rpm maximum for belt driven or direct drive fans.
  4. On OSHA approved type fan drive guard shall be provided with provision for RPM measurement at both motor and fan without removing the guard. The guard shall be made of 1/2 in., 16 gauge flattened expanded steel, wrapped around a 16 gauge channel frame suitably braced to prevent vibration. Guard shall be G-90 galvanized, or painted to match fan housing paint.
  5. Fan belts shall be oil resistant 24,000-hour non-static belts.
- Y. Provide thrust arrestors as required to limit movement of the fan upon start-up.
- Z. Provide riveted, engraved aluminum nameplate containing pertinent, specific fan data, including manufacturer, model, serial number, and electrical data, etc.

### 2.3 PAINTING

- A. Each fan component shall be thoroughly cleaned, degreased and deburred.
- B. Prior to assembly, prime coat all non-galvanized ferrous metal parts with zinc rich primer (minimum 70 percent zinc), total dry film thickness of not less than 1.3 mils.
- C. For interior units, finish paint all non-galvanized ferrous metal parts with alkyd enamel paint.
  1. Low-luster interior enamel; total dry film thickness of not less than 2.6 mils.
- D. For exterior units, finish paint all non-galvanized ferrous metal parts with alkyd enamel paint.
  1. Semi-gloss exterior enamel; total dry film thickness of not less than 2.6 mils.
- E. Aluminum and stainless steel parts do not require painting.
- F. Special coatings for corrosive exhaust systems are specified in the exhaust fan specifications.

### 2.4 CENTRIFUGAL FANS

- A. General

1. Centrifugal type fans shall be belt drive, unless noted otherwise
2. Fans shall be backwardly inclined, airfoil, or flat blade type with a minimum of 9 blades.
3. Fans shall have sharply rising pressure characteristics at the operating point specified and shall be quiet and stable in operation. Horsepower characteristics shall be self-limiting (non-overloading) and at peak value at the specified operating point.
4. Each fan base shall be fully assembled with motor and drive on a structural steel base.

B. Fan Base

1. Fan with motor and drive shall be mounted on a structural steel base.
2. Base shall be welded. After welding, the base shall be cleaned, primed and painted to match fan coating.
3. Base steel sizing and construction shall be sufficient to allow the entire assembly to withstand the rigors of shipping and rigging.
4. Base shall be provided with lifting lugs and motor slide rails.
5. Fans with inertia bases shall be in accordance with Mechanical Vibration Control section.
6. Bases shall be constructed with gusseted brackets to accommodate field installed spring isolators as specified in Mechanical Vibration Control section.

C. Fan Housing

1. Fans having wheel diameters 36 in. and larger shall have horizontally flanged split housings as required for installation.
2. Fan housing and inlet shall be constructed to allow the fan wheel(s) to be removed through the inlet opening when the inlet cone is removed.
3. Provide a quick opening inspection door with heavy duty latches.
4. A 1/2 in. NPT tapped 3/4 in. diameter pipe coupling drain connection shall be welded to the fan scroll at the lowest point, equipped with a pipe plug.
5. Class I and II fans shall be convertible to a minimum of 8 standard discharge arrangements.
6. Provide a Fan cut-off to deliver good pressure distribution.

D. Fan Inlet and Wheel Cone

1. Provide a precision die-spun or formed, and matched inlet and wheel cones for streamlined airflow into the wheel to ensure full loading of the blades.
2. Inlet and wheel cones shall be hyperbolic. Radial side sheets are not acceptable.
3. Inlet cone shall be heavy gauge, bolted to fan housing to allow for removal.
4. Fans that are not duct-connected shall be provided with inlet/outlet screen(s). Screen(s) shall be standard manufacturer provided screen or galvanized maximum nominal 1 in. by 1 in. mesh fabricated 10 gauge steel.

5. Hubs shall be straight bored or use taper lock bushings, keyed and set screwed to shaft for positive attachment. Hubs shall be securely riveted or bolted to the backplate or center plate. Bushed hubs are not acceptable.
  6. Double-width double-inlet fans shall be a single wheel of the common center plate design or 2 single-width single-inlet wheels back-to-back, each keyed and set screwed to a common shaft.
  7. Fan blades shall be continuously welded to the inlet hub and the backplate.
  8. Wheel center plate or backplate shall be heavy gauge steel construction with a minimum gauge as indicated in material construction schedule.
- E. Housed Centrifugal Fans
1. Housing shall be per Related Section "Custom Air Handling Units."
  2. Access doors shall be per Related Section "Custom Air Handling Units."
- F. Utility Set Fans
1. Utility sets shall meet all applicable centrifugal fan specification requirements.
- G. Domed Roof, Up Blast Roof and Sidewall Exhaust Fans
1. General:
    - a. Housing shall be constructed of heavy gauge spun aluminum with a rigid internal support structure.
    - b. Fan wheel shall be backward inclined.
    - c. Drive frame assembly shall be constructed of heavy gauge steel.
    - d. Motors and drives shall be mounted on vibration isolators, out of the air stream.
    - e. Fresh air for motor cooling shall be drawn into the motor through a tube free of contaminants or through a space between the fan shroud and the motor cover.
    - f. Fan drives shall be sized for 1.5 times the motor horsepower. Pulleys shall be cast type, keyed and securely attached to the wheel and motor shafts.
    - g. Motor pulleys shall be adjustable for final balancing.
    - h. Provide a factory-installed disconnect switch, wired from the fan motor to a junction box installed within the motor compartment. Provide a conduit chase through the base to the motor compartment.
    - i. When backdraft dampers are installed below fan, provide a heavy gauge hinge kit to allow entire fan to tilt away from roof curb for access to dampers. Construct hinge kit with aluminum hinges and hold open cables for field installation.
  2. Roof-mounted up blast exhaust fans shall have a leak proof housing constructed with a one-piece windband with an integral rolled bead, and shall be joined to the curb-cap with a continuously welded seam.
  3. Sidewall mounted exhaust fans shall have a leak proof housing constructed with a one-piece windband with an integral rolled bead. Provide a mounting plate that will be attached and sealed to the wall prior to installing fan.

H. Ceiling Fans

1. Fans shall be direct drive.
2. Outlet duct collar shall include an aluminum backdraft damper and shall provide for connection to ductwork as required.
3. Grille shall attach firmly and securely to housing and shall be easily removable for access to motor.
4. Fan wheel shall be forward curved.
5. Mount motor on vibration isolators.
6. Access to wiring shall be external.
7. Motor disconnect shall be internal and of the plug-in type.
8. Sound power rating shall not exceed 5 sones.

I. Cabinet Fans

1. Duct mounted fan shall be belt-driven, inline type.
2. Housing shall be rectangular, galvanized steel and shall include rectangular duct mounting collars.

**CAUTION, FORWARD CURVED FANS MAY OVERLOAD IF RESISTANCE DOES NOT MEET DESIGN ASSUMPTIONS (IF RESISTANCE IS LESS THAN DESIGN ASSUMPTIONS).**

3. Fan wheel shall be backward inclined or forward curved.
4. Fan drives shall be sized for 1.65 times the motor horsepower. Pulleys shall be cast type, keyed and securely attached to the wheel and motor shafts.
5. Motor pulleys shall be adjustable for final balancing.
6. Provide a hinged or removable panel in the fan cabinet of sufficient size to allow access for service to all internal fan components without dismantling cabinet.

J. Centrifugal Inline Fans

1. Tubular Inline Centrifugal
  - a. Fan housing shall be provided with mounting brackets at both inlet and discharge suitable for hanger rods or bolting directly to structure.
  - b. Fan shall be suitable for horizontal or vertical mounting.
  - c. Motor, drive and bearings shall be out of the airstream and housed to facilitate ease of maintenance. Motor cooling shall be through the fan drive and motor housing. Housing for motor drive and bearings shall be of same construction as the fan housing.
2. Square Inline Centrifugal
  - a. Fan housing shall be of bolted and welded construction utilizing corrosion resistant fasteners. Housing shall include airflow straightening vanes and integral duct flanges. Adjustable motor plate shall utilize threaded studs for positive belt tensioning. Access doors and mounting feet shall be located as required for the specified position.
  - b. Construct fan wheel of 100 percent aluminum, including a precision-machined cast aluminum hub. Wheel inlet shall overlap an aerodynamic aluminum inlet cone to provide maximum performance and efficiency.

## 2.5 **INLINE FANS**

- A. General: The aerodynamic design of the fan is such that the maximum power absorbed by the impeller occurs within the normal working range, i.e., the fan has a non-overloading characteristic.
- B. Propeller Fans

**CONSIDER IF FAN SHOULD BE BELT OR DIRECT DRIVE. CONSIDER IF THE FOLLOWING ACCESSORIES ARE REQUIRED FOR YOUR APPLICATION: WEATHER HOOD, FILTERS, ACTUATED (INSTEAD OF GRAVITY) BACK-DRAFT DAMPERS, DIFFUSERS.**

1. Entire fan shall be heavy duty, industrial type construction.
2. Provide direct or belt drive fans, as scheduled.
3. Construct fan panel of heavy gauge plate steel with a die-formed or spun venturi-shaped inlet cone built into the panel.
4. Fan panel edges shall be formed back. Corners shall be welded and ground.
5. Fan wheel, motor, and bearings shall be supported from fan panel using structural channel or heavy plate steel. Bearing housings and motor base shall be mounted on a heavy steel plate spanning the 2 vertical support members. All construction shall be welded or bolted.
6. Wheel shall have a minimum of 4 propeller blades, die-formed constructed of heavy gauge steel or aluminum. A reinforcing gusset shall be welded or riveted to the blades and to a machined hub.
7. Provide a protective welded-wire steel guard to completely enclose the motor/drive/fan assembly.
8. Provide heavy duty gravity operated back draft dampers made of galvanized steel, with blade and jamb seals.

**YOUR APPLICATION MAY NOT REQUIRE A DAMPER GUARD. DELETE BELOW IF NOT REQUIRED.**

9. Provide an OSHA damper guard that completely encloses the damper. Damper guard shall consist of galvanized expanded metal screen welded to a galvanized metal frame.
- C. Tube-Axial Fans
    1. Fans shall be Arrangement No.9 for belt drive or Arrangement No.4 for direct drive.
    2. Fan casing, flanges and supports shall be of suitable thickness and bracing required for stable and rigid construction, with no deflection, and to prevent vibration and pulsation.
      - a. Fans 38 in. diameter or less shall be minimum 12 gauge construction.
      - b. Fans over 38 in. diameter shall be min 10 gauge construction.
    3. Fan casings shall be fitted with mounting legs or hanging clips as required for the mounting arrangement indicated.
      - a. Fan mounting legs shall be fabricated from steel plate suitably braced to ensure stability and rigidity.
      - b. Clips for horizontal suspension shall be minimum 3/8 in. steel plate welded and mounted at fan centerline.

- c. Clips for vertical suspension shall be minimum 3/8 in. steel plate welded and mounted at center of moment of inertia of fan assembly.
- 4. Fans shall be provided with supports for horizontal or vertical mounting, as required. When required, inlet bell, inlet screen, acoustical diffuser and outlet cone shall be provided by the manufacturer.
- 5. The impeller shall be secured to the motor shaft by a key and keyway. Axial location shall be provided by a collar or shoulder on the drive shaft with a retaining washer and screw fitted into a tapped hole in the end of the shaft. The screw shall be locked in position.
- 6. External grease fittings with extended grease leads shall be provided for motor lubrication. Motor shall be removable from either end of the fan. Foot mount or "C" face flange mount motors are acceptable.

D. Vane-Axial Fans

- 1. Adjustable pitch vane-axial fans shall be direct or belt driven, as indicated, axial flow type, with fan blade angle capable of manual adjustment while fan is stopped.
- 2. Fans shall be Arrangement No.9 for belt drive or Arrangement No.4 for direct drive. The fan rotor shall be mounted directly on the motor shaft with the assembly enclosed entirely within the fan casing, suitable for inline duct mounting.
- 3. Fan casing, flanges and supports shall be of suitable thickness and bracing required for stable and rigid construction, with no deflection, and to prevent vibration and pulsation.
  - a. Fans 38 in. diameter or less shall be min 12 gauge construction.
  - b. Fans over 38 in. diameter shall be min 10 gauge construction.
- 4. Fan casings shall be fitted with mounting legs or hanging clips as required for the mounting arrangement indicated.
  - a. Fan mounting legs shall be fabricated from steel plate suitably braced to ensure stability and rigidity.
  - b. Clips for horizontal suspension shall be minimum 3/8 in. steel plate welded and mounted at fan centerline.
  - c. Clips for vertical suspension shall be minimum 3/8 in. steel plate welded and mounted at center of moment of inertia of fan assembly.
- 5. Fans shall be provided with supports for horizontal or vertical mounting, as required. Inlet bell, inlet screen, acoustical diffuser and outlet cone shall be provided by the manufacturer.
- 6. Fan shall have inlet and outlet static regain cone.
- 7. Provide discharge cone silences, as scheduled, optimized to fan discharge geometry with minimum dynamic insertion loss of 15/18 dB at 250/500 Hz at 2000 fpm duct velocity.
- 8. Fan blades and hubs shall have aluminum castings, alloy 356 T6 aluminum alloy. Fan blades shall be designed for maximum efficiency and be airfoil shaped, varying in twist and width from base to tip. Blade tip clearance shall be within tolerance to meet certified performance of fan. Fan hub shall be one-piece aluminum casting. The fan hub shall have the capacity to add or delete impellers in the field for final balance.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID

233400 - 11

9. Fan blade pitch angle shall be individually, manually adjustable using common wrenches. Special tools shall not be required to adjust blade angle.
  - a. Fan manufacturer shall install and adjust linkages for controllable and manually adjustable pitch vane axial fans in the field. Field adjustment of the pitch range shall be provided by the fan manufacturer to balance the fan to maximum and minimum conditions. Field adjustment of the adjustable pitch setting shall be provided by the fan manufacturer to balance the fan to the required conditions.
10. The impeller shall be secured to the motor shaft by a key and keyway. Axial location shall be provided by a collar or shoulder on the drive shaft with a retaining washer and screw fitted into a tapped hole in the end of the shaft. The screw shall be locked in position.
11. Provide external grease fittings with extended grease leads for motor lubrication. Motor shall be removable from either end of the fan. Foot mount or "C" face flange mount motors are acceptable.

## 2.6 PLENUM FANS

- A. Provide single width non-overloading centrifugal type, mounted on rigidly built and braced all welded fan pedestals made of structural steel, mounted to square, flat mounting plates, and equipped with lifting lugs.
- B. Provide belt driven type unless noted otherwise.
- C. Wheels shall be 12 bladed air foil shaped to reduce sound and increase efficiency.
- D. Wheel shall be carefully matched to inlet cone to provide precise running tolerances and maximum operating performance and efficiency.
- E. Provide the fan wheel with a completely enclosing protective cage with a removable section large enough to service the fan or drive easily. Cages across the fan plenum access door are not acceptable.
- F. Provide lubrication lines with Zerk fittings, extended to the exterior of the protective fan cage, securely mounted to prevent stress.
- G. Provide removable fan inlet screen.

## 2.7 HIGH-PLUME INDUCTION TYPE LAB FANS

**PAY CAREFUL ATTENTION TO HOW FANS WILL BE SUPPORTED ON ROOF. IF FANS OR PLENUM ARE TO BE SUPPORTED ON STRUCTURE, ENSURE THAT A MINIMUM 3 -FT. CLEARANCE IS MAINTAINED BELOW PLENUM TO ALLOW ROOF MAINTENANCE.**

- A. Provide exhaust fans with induction windbands that discharge air at no less than 3000 FPM at the design air volume.

- B. Fans shall meet the scheduled performance requirements, including system effects from provided plenums. Manufacturer shall be responsible to account for system effects created by backdraft dampers, plenum size/aspect ratio, and connection sizes and locations at the specified connection air volumes.

*ENGINEER MUST SPECIFY THE INDUCTION PERFORMANCE (AMOUNT OF INDUCED AIR VERSUS PRIMARY AIR). EDIT PART C BELOW CAREFULLY. 270 PERCENT IS ABOUT THE MAXIMUM INDUCTION PERCENTAGE CATALOGUED, AND MAY NOT BE POSSIBLE DEPENDING ON THE FAN SELECTION.*

- C. Discharge shall include FRP nozzles with passive central stack that is capable of generating aspiration. The FRP shall be chemically and UV resistant.
- D. Steel entrainment windbands shall provide secondary induction of outside air. Induction shall take place downstream of the fan impeller. Windbands shall discharge 270 percent of the design primary airflow rate, or as scheduled. Manufacturer shall certify primary and discharge (induced plus primary) air volumes, and provide these air volumes and a certification statement with the submittal.

*CONSIDER IF FACTORY TESTING OF INDUCTION FAN IS APPROPRIATE FOR YOUR PROJECT TO VERIFY INDUCTION PERCENTAGE. IF SO, EDIT THE ARTICLE "SOURCE QUALITY CONTROL," SEVERAL PAGES BELOW. WITH THE ADVENT OF ANSI/AMCA STANDARD 260, FACTORY TESTING OF INDUCTION FANS HAS BECOME LESS NECESSARY.*

- E. Impellers shall be mounted to the motor shaft to provide a direct drive, Arrangement No.2, or No.4 type fan. Motors shall be isolated from the primary exhaust air stream and shall be visible and accessible from the fan exterior for inspection and service.
- F. Mixed flow impellers shall consist of a combination of axial/backward curved blades, and shall be of welded steel construction. The impeller shall have non-stall and non-overloading performance characteristics with stable operation at any point on the fan curve.
- G. Stationary discharge guide vane sections shall be provided to increase fan efficiencies.
- H. Vibration isolation shall be limited to rubber-in-shear pad type isolators, unless noted otherwise.
- I. Fan assemblies shall be designed for a minimum wind loading of 100 mph, and for mounting on a conventional roof curb or plenum as indicated, without the need for guy wire supports.
- J. Provide sound attenuators if required to meet specified sound levels. Specified sound power levels shall not be exceeded, including impacts from bypass damper airflow noise. Provide acoustical louvers if required. Sound power levels shall be guaranteed with the attenuator installed on the fan in the specified configuration.

*SELECT ONE OF THE FOLLOWING SOUND ATTENUATOR OPTIONS.*

- K. Provide fan manufacturer's sound attenuator, installed integral as part of exhaust nozzles for each fan.

1. Maximum attenuator air pressure drop shall be 0.1 inch W.C. Provide performance data of fans de-rated for the pressure loss related to attenuator.
  2. Attenuator shall provide attenuation values and fan sound pressure levels as indicated. The published insertion loss values shall be obtained from testing with the attenuator installed in the specified configuration.
  3. Silencer shall be constructed of FRP, aluminum, or 316 stainless steel for both inner and outer liners.
  4. Acoustical media shall be minimum 3 pcf density fiberglass, isolated from the air stream by a Tedlar film, or the attenuator design shall be packless type.
  5. Silencer interior and exterior shall be coated to match fan, including color.
  6. Attenuator shall be self-supporting, equipped with bracing and lifting lugs suitable to support the weight of the attenuator.
  7. Flow direction shall be clearly marked on side of attenuator.
  - 8.
  9. Provide inline sound attenuator with length as indicated.
  10. Maximum air pressure drop shall be 0.1 in. W.C. when installed. Provide performance data of fans de-rated for the pressure loss related to attenuator.
  11. Attenuator shall provide attenuation values and fan sound pressure levels as indicated. The published insertion loss values shall be obtained from testing with the attenuator installed in the specified configuration.
  12. Construct attenuator casing of FRP with minimum 3/16 in. wall thickness or minimum 14 gauge welded galvanized steel. Silencer interior and exterior shall be coated to match fan, including color. Casing shall be of welded construction.
  13. Acoustic media shall be minimum 3 pcf density fiberglass. Media shall be chemically protected from air stream by a Tedlar scrim. Inner surface of media shall be covered with perforated galvanized steel. The leading edge of the perforated metal shall not be exposed to the air stream.
  14. Attenuator shall be bolted to fan and discharge stack with flanges and stainless steel hardware. Attenuator shall be self-supporting, equipped with bracing and lifting lugs suitable to support the weight of the attenuator.
  15. Flow direction shall be clearly marked on side of attenuator.
- L. Fan construction shall be AMCA Spark Class C.
  - M. Fans shall be modular construction and capable of field assembly on roof.
  - N. PTFE gaskets shall be provided at all companion flange joints.
  - O. Fasteners shall be type 316 stainless steel.
  - P. A bolted access door shall be provided for impeller inspection on each fan.
  - Q. Fans and accessories shall have internal drain systems to prevent rainwater from entering building duct system.
  - R. Electric motors shall be TEFC and as specified in Motors section.

**BuildingName**

**The Description of the Project**

P00000000 0000 Issued for: BID

233400 - 14

- S. Provide a NEMA 3R, heavy-duty rated, non-fused disconnect switch mounted and wired to motor. Mount switch adjacent to access door. Disconnect shall include early break contacts for fans driven by variable frequency drives.

**ENGINEER MUST SPECIFY THE REQUIRED FAN COATING. EDIT BELOW CAREFULLY, IN CONSULTATION WITH FAN VENDORS, BASED ON CHEMICALS EXHAUSTED.**

- T. All steel and aluminum surfaces shall be prepared for coating by blasting or chemical etching. Prime coat with zinc rich paint (minimum 70 percent zinc). Topcoat with amine epoxy or polyester coating, non-caulking in sunlight, UV inhibited medium gray color. The minimum DFT of the coating system shall be 6 mils. The coating system shall exceed a 4000-hour ASTM B117 Salt Spray Resistance test.

U. Accessories

1. Inlet mixing plenums shall be provided by the fan manufacturer. Each plenum shall be sized to support weight and performance requirements for all fans indicated. Plenums shall be capable of supporting fans without need for guy wires or supports.
  - a. Plenums shall be double wall construction with structural stiffeners or shall be continuously welded, heavy gauge single wall construction.
  - b. Plenums shall include hinged access doors with heavy duty latches and screens over primary air inlets.
  - c. Plenums shall be coated to match fans.
  - d. Unless noted otherwise, plenums shall be suitable for mounting on roof curbs.
2. Dampers:
  - a. Airfoil type, opposed blade, stainless steel construction.
  - b. Stainless steel damper linkage, rods, bearings, and jamb seals.
  - c. Polymer blade edge seals. Select blade edge seal material to match the chemical resistance of the fan's coating system.
  - d. Damper frames shall be minimum 13 gauge stainless steel.
  - e. Damper linkage shall be exposed blade-mounted type. Linkages concealed in the damper frame are not allowed.
  - f. Damper drive linkage shall be set by the manufacturer and welded or bolted through the shaft to eliminate slippage; set screws shall not be used.
  - g. Leakage shall not exceed 6.0 CFM/sq. ft. at 3 in. WC.
  - h. Damper and actuator shall operate smoothly and without deformation affecting specified performance, at a differential pressure no less than the maximum deadhead (zero flow) pressure the fan is capable of producing.
  - i. Dampers shall be accessible for maintenance. Damper actuators shall be accessible for maintenance from outside the contaminated interior parts of the plenum.
3. Bypass dampers shall be provided with all plenums for mixing outside air with primary exhaust. Provide:

**CHOOSE ONE OF THE BELOW FOR EACH FAN, AND EDIT CAREFULLY.**

- a. Louver/damper combinations, manual locking quadrant. Provide rain hood w/ birdscreen.
- b. Dampers with extended shaft for connection to an actuator. Provide rain hood with birdscreen for each damper.
- 4. Provide isolation (backdraft) dampers at the inlet to each fan.
- 5. Provide damper actuators, capable of properly throttling and tightly closing the dampers.

**CHOOSE PNEUMATIC OR ELECTRIC ACTUATORS. EDIT BELOW CAREFULLY. PNEUMATIC ACTUATORS ARE PREFERRED. IF ELECTRIC, SELECT APPROPRIATE VOLTAGE.**

- a. Damper actuators shall be, spring return and shall be 20 psi pneumatic/24V/110V electric.
- b. Isolation damper actuators shall be factory wired (via transformer when required) to the fan disconnect switch to open when the fan is energized, close via a spring when the fan is de-energized, and open on a loss of normal power.
- c. If the fan is shipped separately from the plenum, all wiring and conduit shall be factory supplied for easy connection in field.
- 6. Provide extended clear plastic, UV resistant motor lube lines. Extend lines to a mounting bracket located on the fan roof base with Zerk fittings for each line.
- 7. Provide a structural mounting pedestal for a portable jib crane as part of each fan roof base, in sufficient quantities to reach all fans.
- 8. Vortex breakers shall be provided on all side inlet and multiple fan plenums.

**PARAGRAPH BELOW IS FOR PERCHLORIC ACID FANS ONLY. DELETE IF N/A FOR YOUR PROJECT. NOTE: ADDITIONAL SPECIFICATION MAY BE REQUIRED FOR FANS ON PERCHLORIC SYSTEMS. DO NOT RELY ON THIS PARAGRAPH ALONE.**

- 9. Inlet spray nozzle(s) shall be mounted at fan inlet to provide complete wash-down capability of fan while in operation. Spray nozzle(s) shall be suitable for water or steam output. Nozzle(s) shall be piped to exterior of fan with threaded end for field connection. Nozzle(s) and all associated piping shall be stainless steel construction.

## 2.8 SMOKE PURGE FANS

**ENGINEER SHOULD CALCULATE ACTUAL TEMPERATURE AND MODIFY THIS SECTION ACCORDINGLY. SEE MICHIGAN MECHANICAL CODE.**

- A. Fans for smoke purge/exhaust applications shall be rated at 500 Deg F for (4) hours continuous operation and 1,000 Deg F for 15 minutes. Fans shall be UL 705 listed (electrical components). If belt driven, fans shall have 2 belts or a minimum of 1.5 times the required number of belts, whichever is greater. Butterfly damper mechanisms shall be UL 793 listed. Motors shall have a minimum service factor of 1.15.

**2.9 KITCHEN EXHAUST FANS**

- A. Fans shall UL 705 listed (electrical components) and UL 762 listed for electrical components and grease removal.
- B. Construct spun aluminum housing of heavy gauge aluminum with a rigid internal support structure.
- C. Fan wheel shall be backward inclined.
- D. Construct drive frame assembly of heavy gauge steel.
- E. Mount motors and drives on vibration isolators, out of the air stream.
- F. Fresh air for motor cooling shall be drawn into the motor through a tube free of contaminants or through a space between the fan shroud and the motor cover.
- G. Mount fan shafts in permanently sealed, lubricated pillow block ball bearings. Bearings shall be sized for a minimum L-10 life in excess of 200,000 hours at maximum fan class operating conditions including belt pull.
- H. Size fan drives for 1.65 times the motor horsepower. Pulleys shall be cast type, keyed and securely attached to the wheel and motor shafts.
- I. Motor pulleys shall be adjustable for final balancing.
- J. Provide a factory-installed disconnect switch, wired from the fan motor to a junction box installed within the motor compartment. Provide a conduit chase through the base to the motor compartment.
- K. Roof-mounted upblast exhaust fans shall have a leak proof housing constructed with a one-piece windband with an integral rolled bead and shall be joined to the curb-cap with a continuously welded seam.
- L. Sidewall mounted exhaust fans shall have a leak proof housing constructed with a one-piece windband with an integral rolled bead. Provide a mounting plate that will be attached and sealed to the wall prior to installing fan.
- M. Provide a drain connection constructed of aluminum to allow for single point drainage of grease, water and other residue. Grease trap shall include the drain connection and shall be constructed of aluminum. Unit shall collect grease and water from fan and extract grease from water for ease of disposal.
- N. When dampers are installed below fan, provide a heavy gauge hinge kit to allow entire fan to tilt away from roof curb for access to dampers. Construct hinge kit with aluminum hinges and hold open cables for field installation.
- O. Provide aluminum wheel coated with a non-stick coating.
- P. Clean out port shall have a hole on the outside of windband and a grease repellent compression rubber fitting, allowing access to entire wheel for cleaning.

- Q. If motor is installed in airstream, extend ball bearing leads through an airtight conduit to a suitably sized conduit box in accordance with NFPA and NEC, mounted on the exterior of the fan casing. External grease fittings with extended grease leads shall be provided for motor lubrication. Motor shall be removable from either end of the fan. Foot mount or "C" face flange mount motors are acceptable.

#### 2.10 SOURCE QUALITY CONTROL

- A. Run test all fans 1 HP and larger at the factory before shipment. Testing shall be conducted at the maximum fan class speed.
- B. Statically and dynamically balance each fan per AMCA procedures. Perform electronic vibration analysis at the maximum fan class speed for all fans over 5 HP.
- C. Unless noted otherwise, the installed maximum allowable RMS velocity at maximum fan class speed measured at each bearing shall not exceed 0.09 inches/sec in vertical, horizontal, and axial directions.
- D. Fans may be field tested after installation by an independent third party. Any fan found to exceed specified vibration limits shall be corrected to perform within those limits without cost to the Owner.

*CONSIDER IF FACTORY TESTING IS APPROPRIATE FOR HIGH-PLUME INDUCTION-TYPE LAB FANS WHEN USED ON THE PROJECT. DELETE BELOW IF THERE IS TO BE NO FACTORY TESTING.*

- E. High-plume Induction-Type Lab Fans: One fan of each size shall be factory tested and certified to have achieved the specified primary and secondary induction air volumes. Provide certified reports. Owner's representative shall be permitted to witness factory testing.

### PART 3 - INSTALLATION

#### 3.1 FAN INSTALLATION

- A. Coordinate the fan arrangement with project conditions prior to ordering the fan.
- B. Receive and inspect fans for defects. All defective or damaged fans shall be replaced at no cost to the Owner.
- C. Openings shall remain protected during storage. Immediately after installation and assembly, all factory protection shall be restored. Unit shall remain protected until just prior to final acceptance by Owner.
- D. Use spreader bars on lifting cables when hoisting fans from lifting lugs to prevent cable damage to housing or components. Rig fans per fan manufacturer's recommendations.

- E. Fans shall be installed as shown on drawings, in accordance with details, approved submittals and the fan Manufacturer's installation requirements and recommendations. Ensure fans are installed to allow easy accessibility for service or removal of fan components.
- F. Provide and install supplemental steel, supports, isolators and hangers necessary to hang or mount fans. Coordinate final location and placement of intermediate steel and ductwork connections in field. Install suspended fans with supports attached to structural members.
- G. Install any associated motors, drives, or other components that have been shipped loose. Fan shall be installed, made fully operation, and tested.
- H. Install flexible inlet and discharge couplings to prevent vibration transmission to ductwork.
- I. Inlet and discharge ductwork shall have a minimum straight run of two (2) fan diameters upstream and downstream of the fan.
- J. Just prior to final acceptance fan shall be thoroughly cleaned of all grease, dirt, and dust, etc. Apply touch-up paint or touch-up coating after final cleaning to repair any damage to the finish.
- K. Provide or coordinate the scope of work associated with the installation of fans as specified in the following sections:
  - 1. Roof curbs
  - 2. Concrete Housekeeping Pads
  - 3. Vibration isolation
  - 4. Sheet Metal accessories
  - 5. Interconnection wiring and conduit from power source to fan connection (starter).
- L. Perform the following tests and inspections prior to fan operation:
  - 1. Verify that shipping, blocking, and bracing are removed.
  - 2. Verify that unit is secure on mountings and supporting devices, and that connections to ducts and electrical components are complete.
  - 3. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
  - 4. Verify that cleaning and adjusting are complete.
  - 5. Inspect fan scroll for debris or water.
  - 6. Remove guards. Align and adjust belt tension, verify that fan wheel and motor rotate freely, and that bearing operation is smooth. Re-install belt guards.
  - 7. Adjust damper linkages for proper damper operation.
  - 8. Verify lubrication of bearings and other moving parts. Use proper bearing venting procedures, in particular at motor bearings. Use only grease type specifically recommended by fan mfr. Do not over-grease. Fill extended grease lines if not already filled, using mfr. recommended grease and proper venting procedures.
  - 9. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
  - 10. Verify proper motor and fan rotation.

11. Remove and replace malfunctioning units and retest as specified above.

M. Temporary Use of Fans

1. Contractor shall thoroughly clean unit of all grease, dirt, and dust, etc. and perform manufacturer's pre-start protocol and commissioning activities just prior to being placed into temporary service.
2. During temporary service, perform all of manufacturer's required routine maintenance procedures. Continuously maintain a log of all such procedures. Store log at unit during temporary use period and include log as part of the final O&M manual.
3. Contractor shall thoroughly clean unit of all grease, dirt, and dust, etc., lubricate bearings, align and tighten belts and perform manufacturer's pre-start protocol and commissioning activities after unit has completed temporary service, and install a new, complete set of filters just prior to final acceptance by Owner.

**3.2 FIELD QUALITY CONTROL**

- A. Each fan shall be field tested. Any deficiencies related to performance, manufacture or installation shall be corrected without cost to Owner.

**3.3 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

SECTION 233600 - AIR TERMINAL UNITS

**END OF CONTENTS TABLE**

DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)  
SECTION 233600 - AIR TERMINAL UNITS

*REVISIONS:*

*6/21/13: MINOR REVISION TO CLARIFY QUALITY ASSURANCE STANDARDS AND TO SPECIFY THAT LINER EROSION RESISTANCE IS TO BE RATED AT 6000 FPM.*

*NOTE THAT THIS SECTION DOES NOT INCLUDE FAN-POWERED TAU'S.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

*CAREFULLY EDIT AND COORDINATE RELATED SECTIONS.*

*RETAIN THE DIVISION 16 ELECTRICAL REFERENCE IN THIS SECTION TO ASSURE THAT ELECTRICAL WORK STANDARDS ARE OBSERVED AND ENFORCED*

- B. Related Sections:
1. Section 230900: Mechanical Systems Controls
  2. Division 26: Electrical.

**1.2 SUMMARY**

- A. Section Includes:
1. Terminal airflow units (TAUs) of the various types, arrangements and sizes as specified in this Section and scheduled on Drawings.
  2. Constant (CAV) and Variable Volume (VAV) Terminal Airflow Units.
  3. Dual Duct Terminal Airflow Units.
  4. Retrofit Terminal Airflow Units.
  5. Terminal Airflow Unit-Mounted Sound Attenuators.
  6. Terminal Airflow Unit Pneumatic Controller and Actuator.
  7. Terminal Airflow Unit-Mounted Reheat Coils.
  8. Airflow-sensing array(s) and dampers on TAUs to be equipped with DDC controls.
  9. Pneumatic damper operator(s) and airflow-sensing array(s) on pneumatic VAV, CAV, and Dual Duct terminal box.

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Controls Contractor shall coordinate with the terminal airflow unit manufacturer to provide a complete operating system.

**1.4 SUBMITTALS**

- A. Product Data: Provide performance data, rated capacities, furnished specialties, sound-power ratings, and accessories for the following.
  - 1. Air terminal units.
  - 2. Liners and adhesives.
  - 3. Sealants and gaskets.
  - 4. Sound attenuators.
  - 5. Pneumatic controllers.
  - 6. Airflow sensing array, damper, pneumatic damper operator.
  - 7. Damper and casing leakage data.
  - 8. Hangers and supports, including methods for duct and building attachment and vibration isolation.
- B. Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."

**1.5 QUALITY ASSURANCE**

***RETAIN PARAGRAPHS A AND B IN EVERY PROJECT SPECIFICATION.***

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

***EDIT THE REFERENCE STANDARDS FOR PROJECT REQUIREMENTS.***

- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
  - 1. AHRI 880: "Performance Rating of Air Terminals." Test in an AHRI certified laboratory. Units shall be AHRI 880 sealed.
  - 2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
  - 3. Insulation/liner:
    - a. UL 723, "UL Standard for Safety Test for Surface Burning Characteristics of Building Materials."
    - b. UL 181 "UL Standard for Safety Factory-Made Air Ducts and Connectors." Limited to mold growth and humidity test and erosion test.
    - c. ASTM C1071 - 05e1 "Standard Specification for Fibrous Glass Duct Lining Insulation (Thermal and Sound Absorbing Material)."
    - d. ASTM E84-10 "Standard Test Method for Surface Burning Characteristics of Building Materials."
    - e. NFPA 90a: "Standard for the Installation of Air-Conditioning and Ventilating Systems."
    - f. NFPA 90b: "Standard for the Installation of Warm Air Heating and Air-Conditioning Systems."

4. Coils: AHRI Standard 410 "Forced-Circulation Air-Cooling and Air-Heating Coils."
5. SMACNA "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
6. ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."

**1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Mark each terminal unit before shipment to the job site with a unique identifier corresponding to its location and function in the building. Identifier nomenclature shall correspond to the Terminal Airflow Unit Detail.

*REVIEW WARRANTY TERM PER PROJECT. LONGER WARRANTY PERIOD MAY BE APPROPRIATE FOR CERTAIN TYPES OF WORK. RETAIN THIS ARTICLE IN EVERY PROJECT SPECIFICATION.*

**1.7 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Terminal Airflow Unit Manufacturers:
  1. Titus.
  2. Krueger.
  3. Metalaire.
  4. Nailor Industries, Inc.
  5. Price Industries.
  6. Tuttle and Bailey.

*COORDINATE THE FOLLOWING REQUIREMENT WITH DRAWINGS.*

- B. Acceptable Pneumatic Controller Manufacturer:
  1. KMC Controls, Inc.

**2.2 ACOUSTIC PERFORMANCE**

- A. Provide acoustic performance, including performance supplemented by sound attenuators, as scheduled on Drawings. Acoustical performance shall be met at all damper positions with 1 inch static pressure at the TAU inlet.

**2.3 FIRE AND SMOKE TEST PERFORMANCE**

- A. Insulation: Maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for insulation and adhesive, when tested according to ASTM E 84.

**2.4 SINGLE AND DUAL DUCT TERMINAL AIRFLOW UNIT (TAU) (CAV AND VAV)**

- A. Provide single duct, variable or constant volume terminal units as scheduled and detailed. Pneumatic controllers shall have the minimum and maximum airflow rates preset at factory with capability of field adjustment.
- B. Provide dual duct, variable or constant volume terminal units as scheduled and detailed. Pneumatic controllers shall have the minimum and maximum airflow rates preset at factory with capability of field adjustment.
  - 1. Construct unit casings of 22 gauge, minimum, galvanized steel sheet.
- C. Damper Assembly: Minimum 20 gauge construction with a mechanical stop to prevent overstroking.
- D. Terminal unit: Mechanically assemble and seal to provide an airtight casing. Casing air leakage shall not exceed 10 cfm at 1 inch w.c. differential pressure.

**WHERE ACOUSTICAL PERFORMANCE IS PARTICULARLY IMPORTANT, SPECIFY THE LINER'S ACOUSTICAL PERFORMANCE.**

- E. Line interior walls of the terminal casing with 1/2 inch minimum, 4 lbs./cu.ft. dual density fiberglass acoustical/thermal insulation with a non-porous, aluminum foil reinforced face sheet covering of the acoustical/thermal liner. Rate liner covering for a maximum air velocity of 6,000 fpm. Wrap and seal exposed foil lining edges from the airstream, and tucked and secured with metal barriers.
- F. Provide a position indicator on the damper shaft marked on the end to verify damper position.
- G. Screw damper blade through the shaft to prevent slippage and include a closed cell foam gasket to ensure minimum leakage.
- H. Damper air leakage shall not exceed 5 cfm at 3.0 inches w.c. differential pressure.
- I. Provide damper pivot with a Celcon or Delrin bearing.
- J. Equip the terminal unit with a multi-axis flow sensor with amplifying pressure pick-up points connected to a center averaging chamber. The chamber shall be designed to provide a differential pressure signal at least 1.5 times the normal unit velocity pressure over the full capacity range of the unit. Pressure sensing pick-ups shall be extended to the outside of the casing and have capped TEEs to permit parallel pressure measurements. A flow curve for field balancing shall be affixed to the terminal unit casing on the controller side. Minimum accuracy shall be 90 percent, regardless of inlet conditions.
- K. Provide pneumatic tubing in accordance with the requirements of the Temperature Controls Section.

**2.5 DUAL DUCT TERMINAL AIRFLOW UNITS**

- A. Units shall be constructed the same as the single duct units, but shall have separate damper assemblies for each airstream and shall include an integral sound attenuator/mixer section.

**2.6 RETROFIT (SLIDE-IN) TERMINAL AIRFLOW UNITS)**

- A. Design the retrofit unit to slide into the side of existing ductwork, with a maximum length of duct opening of 10 inches. Gaskets shall be attached to the orifice plate and mounting plate to provide a tight seal against the inner duct walls. Formed flanges shall provide added duct stiffness at the insertion point and for fastening the terminal to the ductwork with sheet metal screws.
- B. Unit casings shall be constructed of a minimum 22 gauge galvanized steel and shall be configured to mount on either the right or left side of the duct.
- C. Damper assembly construction: Minimum 14 gauge.
- D. Damper shall have blade seals and flexible metal compressible jamb seals. Damper leakage shall not exceed 5 cfm at 3.0 inches w.c. differential pressure
- E. Provide damper shaft position indicator marked on the end to verify damper position.
- F. Provide Celcon or Delrin Damper bearing pivot.
- G. Equip terminal unit with a multi-axis flow sensor with amplifying pressure pick-up points connected to a center averaging chamber. Design the chamber to provide a differential pressure signal at least 1.5 times the normal unit velocity pressure over the full capacity range of the unit. Pressure sensing pick-ups shall be extended to the outside of the casing and have capped TEE's to permit parallel pressure measurements. A flow curve for field balancing shall be affixed to the terminal unit casing on the controller side. Minimum accuracy shall be 90 percent regardless of inlet conditions.

**2.7 TERMINAL AIRFLOW UNIT-MOUNTED SOUND ATTENUATORS**

- A. Provide factory fabricated, integral-type sound attenuators with aluminum foil faced liners. Wrap, tuck and secure exposed foil lining edges with metal brackets. Attenuators shall be one-piece construction using the same materials as the attached terminal airflow unit.
- B. For supply units, install attenuator at the discharge of supply air terminal units, between the terminal air flow unit damper and any air diffusion devices.
- C. For exhaust/return units, install attenuator upstream of terminal airflow unit damper, but downstream of any exhaust/return connections.
- D. Sound attenuator performance shall be as scheduled.

**2.8 TERMINAL AIRFLOW UNIT CONTROLLER AND ACTUATOR**

- A. Pneumatic Controls: Provide controller, damper, damper actuator, linkage, flow sensor and interconnecting pneumatic tubing. Controller operation over an 8-13 psig control signal. Factory-set controller for direct acting control. Mount damper actuator to damper shaft in a normally open damper configuration. Damper actuator linkage shall allow easy conversion to a normally closed damper configuration without removing the actuator. Factory pipe flow sensor and damper actuator to the controller.
  - 1. Provide KMC Controls CSC-3011 pressure independent controller.
- B. DDC Controls: Provide damper and flow sensor. Controls Contractor shall furnish:
  - 1. DDC controller.
  - 2. Electronic damper motor actuator
  - 3. Electronic reheat coil valve actuator (if applicable). DDC controller enclosure (dust cover).

**2.9 TERMINAL AIRFLOW UNIT-MOUNTED REHEAT COILS**

- A. Provide coils by the terminal airflow unit manufacturer as a complete factory-mounted assembly, with capacities and characteristics as scheduled on the Drawings. Provide slip and drive or flanged connections to allow removal and reversal of coils in field.
- B. Coils: Maximum of 10 fins per inch, same side supply and return (steam/condensate) piping connections, enclosed in a sheet metal casing to match the size of the attached terminal airflow unit.
- C. Water Coil: 2-rows, rated for 200 psi working pressure, 250 deg. F, with 3/8 inch copper tubing, minimum wall thickness of 0.016 inch, and mechanically bonded aluminum fins, 1/2 inch or larger solder connectors, and manual air vent on return. Hydrostatically test coils at 250 psi, or at 250 psi air pressure under water. Maximum pressure drop at design flow shall not exceed 10 feet or as scheduled. Hot water shall be equally distributed through all tubes by means of orifices or a header design.

***IF FREEZING CONDITIONS EXIST, SPECIFY DISTRIBUTING TYPE STEAM COILS (TUBE - IN - TUBE). NON-DISTRIBUTING TYPE IS TYPICALLY AVAILABLE WITH OPPOSITE END CONNECTIONS. DISTRIBUTING TYPE ARE TYPICALLY AVAILABLE WITH OPPOSITE OR SAME END CONNECTIONS.***

- D. Steam Coil: Specifically designed for modulating control steam service, non-distributing type, rated for 200 psi working pressure, 250 deg. F, with 3/8 inch copper tubing, minimum wall thickness of 0.020 inch, and mechanically bonded aluminum fins, 1/2 inch or larger threaded, opposite end connections. Hydrostatically test coils at 250 psi or at 250 psi air pressure under water.

- E. Electric Coil: Provide UL listed coils. Set coil in an attenuator section integral with the terminal unit. Recess the element grid a minimum of 5 inches from the unit discharge. Elements shall be derated nickel chrome, supported by ceramic isolators a maximum of 3-1/2 inches apart, staggered for maximum thermal transfer and element life, and balanced to ensure equal output per stage. House the integral control panel in a NEMA 1 enclosure with hinged access door. Provide an integral door interlock-type disconnect switch which will prevent the access door from being opened while power is on. Coil units shall contain a primary automatic thermal cutout, a secondary manual reset thermal cutout, airflow proof switch, and terminal block.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

- A. Review and examine conditions affecting work. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Commissioning: Review and perform required commissioning activities in the pre-construction phases.

**3.2 HANGER AND SUPPORT INSTALLATION**

- A. Comply with applicable SMACNA HVAC Duct Construction Standards and Hanger and Support construction standards, and applicable Division 23 Sections.
- B. Support TAU's independently from adjacent ductwork. Ensure supports do not interfere with accessibility of other equipment, e.g., access to TAU DDC control enclosure. Do not hang TAUs from piping, other ducts or equipment.

**3.3 TERMINAL AIRFLOW UNIT INSTALLATION**

- A. Install TAUs in accordance with manufacturer recommendations, Contract Drawings, and reviewed submittals.
- B. Provide a minimum of 2 duct diameters rigid straight duct upstream of terminal unit with a bell-mouth or shoe-tap to minimize pressure drops.
- C. Label unit according to the applicable detail.
- D. Position terminal air flow unit, unit-mounted controller, reheat coil, and sound attenuators to comply with clearance requirements and for ease of maintenance.

**3.4 REHEAT COIL INSTALLATION**

- A. Install reheat coils per applicable SMACNA Standards.

**3.5 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

**3.6 SYSTEM START-UP**

- A. After start-up and operation of the HVAC system, sensors and controllers shall be cleaned and "blown-out" before final calibration of airflows and controls.

**3.7 ADJUSTING, CLEANING, PROTECTION**

- A. Protect open end of terminal boxes, flow sensors and controllers throughout the entire construction period, until Commissioning and Substantial Completion.

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 234000 - HVAC AIR CLEANING DEVICES**

*4-12-07: REVISED D. KARLE: FILTER FRAME FROM SAME MFG., FILTER FRAME TO WITHSTAND DOUBLE DIRTY FILTER DROP*

*ADDED SUBMITTAL REQUIREMENTS PER MECH TECH TEAM. JULY 29, 08, D. KARLE.*

*REVISED FORMAT AND CONTENT. ADDED MERV-A REQUIREMENTS. 4/2011. D. KARLE AND M. PLATT.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

*RETAIN THE DIVISION 26 ELECTRICAL REFERENCE IN THIS SECTION TO ASSURE THAT ELECTRICAL WORK STANDARDS ARE OBSERVED AND ENFORCED*

- B. Related Sections:

1. Section 019100/019110: Commissioning.
2. Division 26: Electrical.

**1.2 SUMMARY**

- A. Section Includes:

1. Filter holding frames.
2. Pleated filters- MERV 8.
3. Bag filters- MERV 11.
4. Bag filters- MERV 14.
5. HEPA filters (air handler applications only).
6. Gas adsorption filters.
7. Ring Panel Filters.
8. Filter housing.
9. Filter gauges.

**1.3 SUBMITTALS**

- A. Submit the following product data for each unit:

1. Dimensions, performance characteristics, class, details of filter rack construction, maintenance access, and information on all accessories.

1.4 **QUALITY ASSURANCE**

**INCLUDE PARAGRAPHS A AND B IN EVERY SPECIFICATION SECTION.  
EDIT THE REFERENCE STANDARDS FOR PROJECT REQUIREMENTS.**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards:
  - 1. Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
    - a. AHRI 850-Commercial and Industrial Air Filter Equipment.
    - b. ASHRAE 52.1-Gravimetric and dust-spot procedures for Testing Air Cleaning Devices Used in General Ventilation for Removing Particulate Matter.
    - c. ASHRAE 52.2 (including Appendix J) Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size.
    - d. MIL-STD-282-Filter Units, Protective Clothing, Gas-Mask Components, and Related Products; Performance-Test Methods; current edition.
    - e. UL 586-Test Performance of High Efficiency Particulate, Air Filter Units.
    - f. UL 900-Test Performance of Air Filter Units.
    - g. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.
    - h. IES-RP-CC-001 HEPA and ULPA Filters.

1.5 **DELIVERY, STORAGE, AND HANDLING**

- A. All Filters and Accessories
  - 1. Store at least 4 inches above floor on wood pallets or similar devices. Protect from odors, dust, moisture, and other debris while stored on or off the jobsite, and when transporting to the jobsite, by tightly covering with plastic.
- B. HEPA Filters

**EDIT HEPA FILTER REQUIREMENTS BELOW CAREFULLY, OR DELETE ENTIRELY IF PROJECT DOES NOT INCLUDE HEPA FILTERS.**

- 1. Delivery
  - a. Inspect cartons and filters for damage when received at the job site along with an Owner-designated representative.
  - b. Reject cartons with damaged corners, punctures, water damage or not stacked with up arrow in proper position. Do not stack cartons higher than 6 ft. (1.8 meters).
  - c. Open cartons and inspect filter face for sagging pleats and separators, cracks, pinholes or breaks. Check gaskets for position and full adhesion to the frame. Use a 125-watt flood lamp during inspection.
  - d. Do not open filters packed in sealed plastic bags during inspection unless the filter is obviously damaged.
  - e. Do not attempt to repair damaged filters at the job.
- 2. Handling

- a. Handle filters and cartons so pleats remain vertical. Arrow on cartons indicates direction of pleats.
  - b. Handle filters in sealed cartons until installed.
  - c. Do not handle with chains, slings or hooks.
  - d. Do not drop or jar the carton of filter.
  - e. Do not lift filter from carton. Fold carton tops back and invert carton. Withdraw the carton from the filter.
  - f. Lift unpacked filters only by the outer surface of cell frame.
3. Storage
- a. Repack filter after inspection and seal carton.
  - b. Store cartons with pleats in a vertical position.
  - c. Do not stack more than 6 feet high (1.8 meters).

**1.6 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers- Pleated and Bag Filters:
  - 1. Camfil Farr.
  - 2. Purolator.
  - 3. American Air Filter.
  - 4. Flanders Corporation.
  - 5. Eaton Corporation.
  - 6. Tri-Dim Filter Corporation.
- B. Acceptable Manufacturers- HEPA Filters:
  - 1. Flanders Corporation.
  - 2. Camfil Farr.
  - 3. Eaton Corporation.
- C. Acceptable Manufacturers- Gas Adsorption Filters:
  - 1. Flanders Corporation.
  - 2. American Air Filter.
  - 3. Camfil Farr.
  - 4. Flanders/CSC Corporation.
  - 5. Purolator.
- D. Acceptable Manufacturers- Filter Gauges:
  - 1. Dwyer Instruments.
  - 2. Deiterich Standard, Inc.
  - 3. Bacharach, Inc.
  - 4. Moeller Instrument Co., Inc.

**THIS SPECIFICATION SECTION DOES NOT INDICATE WHERE VARIOUS FILTER TYPES SHOULD BE USED. THE TYPE OF FILTERS REQUIRED FOR PARTICULAR PROJECT LOCATIONS MUST BE INDICATED ON DRAWINGS (SCHEDULES PREFERRED) OR IN OTHER SPEC. SECTIONS.**

**2.2 GENERAL**

- A. Base filters and filter rack design on the use of 24-inch by 24-inch filters whenever possible. The use of 12-inch by 24-inch filters to complete rack configurations is acceptable. If 24-inch by 24-inch and 12-inch by 24-inch modules are not possible, use industry standard filter sizes for basis of design.
- B. Provide filters and filter holding frames by the same manufacturer.

**2.3 HOLDING FRAMES**

- A. Provide grid type holding frames, similar to Camfil Farr Type 8 or equivalent, factory fabricated of a minimum of 16 gauge galvanized steel, capable of normal operation at twice the maximum filter drop without deformation and equipped with gaskets and 4 spring type positive sealing fasteners. Fasteners shall be capable of being attached or removed without deforming the gaskets and without the use of tools. Frames shall be capable of supporting filters of different efficiencies and depths by change of fasteners.
  - 1. Unless indicated otherwise, provide grid type (face loading) frame in air handling units.
  - 2. Unless indicated otherwise, provide side slide filter frames for duct applications only, up to a maximum frame size of 24 inches by 24 inches. Sizes above 24 inches by 24 inches shall be face loading type frames.
- B. Holding frames shall, at minimum, withstand double the scheduled dirty filter pressure drop without deformation or air bypass.
- C. Design Frames so that the housing can be stacked on top of the other without deformation.
- D. Completely safe off filter frame to eliminate air from bypassing filters.
- E. Filters shall be inserted and seal from the upstream side of the frame.
- F. Filter frame maximum allowable leakage rate 0.5 percent at 6 inches wc.

**ASSURE FILTERS HAVE THE SPECIFIED MERV-A RATING WHEN REVIEWING SUBMITTALS. MERV-A ASSURES ELECTRO-STATICALLY CHARGED FILTERS CAN NOT BE SUPPLIED WHOSE PERFORMANCE DEGRADES TO A LOWER MERV RATING SOON AFTER INSTALLATION.**

**2.4 FILTERS**

- A. MERV 8 Pleated Filters (30 percent).
  - 1. Filters: 2-inch, medium efficiency, pleated, disposable type as shown on the drawings. Each filter shall consist of a non-woven fabric media, support grid and enclosing frame. The filter shall be UL listed as Class I or Class II.
  - 2. Filter media: cotton and synthetic blend.
    - a. Average dust-spot efficiency of 30 percent to 35 percent and an average arrestance of 90 percent to 92 percent in accordance with ASHRAE 52-1.

- b. Minimum MERV 8 per ASHRAE 52.2 and a MERV-A rating of 8 when tested per Appendix J of ASHRAE 52.2.
3. Effective filter media shall be at least 7.0 sq.ft. media per 1.0 sq.ft. filter face area and shall contain at least 11 pleats per linear foot. Initial resistance at 500 fpm face velocity shall not exceed 0.30 inch wg.
4. Media support shall be a welded wire grid or expanded metal with an effective open area of at least 96 percent. Bond the welded wire grid to the filter media to eliminate the possibility of media oscillation and media pull-away. Form the media support grid in a manner that it affects radial pleat design, allowing total use of filter media.
5. Construct the enclosing frame of a rigid, heavy duty, high wet strength beverage board, with diagonal support members bonded to the air entering and exiting side of each pleat to ensure pleat stability. Bond the inside periphery of the enclosing frame to the filter pack, thus, eliminating the possibility of air bypass.

B. MERV 11 Bag Filters (65 percent)

1. Filter: 22 inches deep, high performance, totally disposable, bag type. Filter UL listed as Class I or Class II.
2. Filter media: High-density, microfine glass fibers.
  - a. Average dust-spot efficiency of 60 percent to 65 percent and an average arrestance greater than 95 percent per ASHRAE 52-1.
  - b. Minimum MERV 11 rating per ASHRAE 52.2 and a MERV-A rating of 11 when tested per Appendix J of ASHRAE 52.2.
3. Filter shall have a minimum of 40 support points per sq.ft.
4. Filter shall have 10 pockets. The initial resistance at 500 fpm face velocity shall not exceed 0.25 inch wg.
5. Form filter pockets by a linear sewing process to maintain the pocket configuration when in use. Seal all stitching points completely with a positive leak-free sealant. Chemically adhere the pockets around the periphery of the galvanized steel retainers. Retainers shall have rolled edges for enhanced pocket support.
6. Filter headers: Constructed of a deep grooved "J" retainer channel of galvanized steel. Closure corner shall be riveted, with mitered joints sealed against air leakage. Filters shall have minimum 7/8 inch headers.

C. MERV 14 Bag Filters (95 percent)

1. Filter: 30-inch-deep, high performance, totally disposable, bag type. The filter shall be UL listed as Class I or Class II.
2. Filter media: High-density, microfine glass fibers.
  - a. Average dust spot efficiency of 90 percent to 95 percent and an average arrestance greater than 98 percent per ASHRAE 52-1.
  - b. Minimum MERV 14 rating per ASHRAE 52.2 and a MERV-A rating of 14 when tested per Appendix J of ASHRAE 52.2.
3. Filter shall have a minimum of 40 support points per sq.ft.
4. Filter shall have 10 pockets and the initial resistance at 500 fpm face velocity shall not exceed 0.50 inch wg.

5. Form filter pockets by a linear sewing process to maintain the pocket configuration when in use. Completely seal all stitching points with a positive leak-free sealant. Chemically adhere the pockets around the periphery of the galvanized steel retainers. Retainers shall have rolled edges for enhanced pocket support.
6. Construct filter headers of a deep grooved "J" retainer channel of galvanized steel. Closure corner shall be riveted, with mitered joints sealed against air leakage. Filters shall have minimum 7/8 inch headers.

**EDIT HEPA FILTER REQUIREMENTS BELOW CAREFULLY, OR DELETE ENTIRELY IF PROJECT DOES NOT INCLUDE HEPA FILTERS. THIS GENERIC HEPA FILTER SPEC MAY NOT BE APPROPRIATE FOR YOUR PROJECT.**

## **2.5 HEPA FILTER (AIR HANDLER APPLICATIONS ONLY)**

- A. Filters shall have a minimum efficiency of 99.97 percent on 0.3 micron particles when tested with thermally generated DOP in accordance with the latest Industry and Military Standards. The media shall be glass paper. Filters shall be factory constructed and assembled of metal frames, corrugated aluminum separators and 100 percent solid resin sealant.
  1. Cell sides: 20 gage galvanized steel with edges sealed and riveted to insure a strong corner joint.
  2. Filter Media: 0.015-inch-thick (0.38 mm thick), plus or minus 0.003 inch (0.08 mm), waterproofed, fire retardant, 100 percent glass fiber construction, assembled in closely pleated panel packs, separated by double-thickness ribbons of filter media on both faces of the panel. Install the media packs with the metal cell sides in a multiple V-bank arrangement sealed on all edges with a thermoset bond.
  3. Provide gasket on each filter, made of neoprene rubber SCE-41, 5-10 durometer, 1/4 inch (6 mm) by 3/4 inch (19 mm) wide.
  4. Filter dimensions: 24 by 24 by 1.5 inches (600 by 600 by 290 mm) (without gaskets).
  5. Provide filter having a nominal rating of 2000 cfm (0.94 cu. m/s) with a maximum initial pressure drop of 1.4 inch water gage (349 Pa) or less, tested in accordance with Mil-Std-282 and IES-CS-1T, and having a minimum efficiency MERV 17 per ASHRAE Standard 52.2. Provide each filter with a UL 586 label as an indication of its fire retardancy. Provide to withstand 250 deg. F (121 deg.C) continuous temperature and plus 100 deg. F (38 deg. C) peaks for a maximum of one hour.
  6. Mark the cell sides of each filter with indelible ink showing the following information:
    - a. Manufacturer's name.
    - b. Style Code.
    - c. Serial Number.
    - d. Efficiency and resistance.
- B. Holding frames shall consist of holding frame section, reinforcing flanges, annular-based dimples and mounting holes, receptacle guides, and removable swing bolt assemblies.

1. Construct the holding frame of not less than 14 gauge galvanized steel and shall be of all welded construction, factory fabricated and assembled. All welds shall be ground and smoothly finished to provide a uniform sealing surface.
  2. Reinforcing flanges shall be an integral part of the holding frame in order to preclude the possibility of deflection of the sealing flange.
  3. Annular-based dimples and mounting holes shall be an integral part of the holding frame to provide ease of installation and mounting, and to preclude the possibility of mounting bolt interference.
  4. Four receptacle guides shall be an integral part of the holding frame and shall be mounted on the two vertical sides of the frame. They shall be designed to align the properly filter when placed into the frame and shall function as fulcrum for the swing bolt assemblies.
  5. Four swing bolt assemblies shall be provided for each holding frame. Swing bolts shall be constructed of 5/16 inch zinc electroplated steel and be provided with equi-bearing clamps and hex nuts in order to affect adequate and uniform pressure against the periphery of the HEPA filter. Hex nuts shall be capable of being torqued to 30 inch/lbs. each, providing for a 50 percent gasket compression. The swing bolt assembly shall be such that it provides for individual sealing of filters.
- C. HEPA Filters shall meet leak free scan test requirements of IES-RP-CC-001 Type A.

*EDIT GAS ADSORPTION FILTER REQUIREMENTS BELOW CAREFULLY, OR DELETE ENTIRELY IF PROJECT DOES NOT INCLUDE GAS ADSORPTION FILTERS. THIS GENERIC GAS ADSORPTION FILTER SPEC MAY NOT BE APPROPRIATE FOR YOUR PROJECT.*

**2.6 GAS ADSORPTION FILTERS**

- A. Gas adsorption filter manufacturer shall provide gas adsorption filter racks.
- B. Gas adsorption filters shall be total-detention type.
- C. Construction
  1. Construct adsorbers of multiple media-filled panels. Panels shall be 1 inch (25mm) thick moisture-resistant corrugated, kraft honeycomb sealed to top and bottom end plates with non-volatile adhesive.
  2. Completely fill Panels with adsorption media held in place by nylon screens.
  3. Top and bottom end plates shall be injection-molded high strength ABS plastic with integral headers.
  4. Assemble the cell with aerodynamically-designed vertical front struts and vertical steel rod supports on the downstream side.
  5. Seal each filter in a polyethylene bag before placing in its shipping carton.
- D. Media

1. Media shall be 50 percent activated carbon and 50 percent potassium permanganate coated activated alumina.
2. Activated carbon media shall be virgin coconut shell base, minimum 60 percent CTC activity by the ASTM D-3467 test method, minimum apparent density of 0.49 g/mL, minimum hardness of 97 by the ASTM D-3802 method and a minimum surface area of 1100m<sup>2</sup>/g by the N<sub>2</sub> BET method.
3. At 2000 CFM (0.94 m<sup>3</sup>/s), the media shall have an airway resistance no greater than 0.50 inch wg (0.12 kPa) and a residence time no less than 0.030 seconds.

## 2.7 RING PANEL FILTER

- A. Construct duct mounted filter racks for animal room exhaust of heat-sealed layers of 2-ply polyester (minimum MERV rating 6, minimum MERV-A rating 6), UL 900 Class 2, over corrosion resistant support frame. Filter shall be overcut. Media shall extend outside frame 1 inch on each side. Initial resistance shall be no more than 0.2 inch wg at 500 fpm.

**DELETE FILTER GAUGE SECTION BELOW IF THE CONTROL DRAWINGS SHOW FILTER GAUGES AT ALL FILTER LOCATIONS.**

## 2.8 FILTER GAUGES

- A. Provide 1 filter gauge for each filter bank. Select the scale so it allows for 1 inch wc greater than the final filter resistance.
- B. Locate static pressure taps in the airstream as recommended by the manufacturer and connect to gauges located on air handling unit casings, or on walls for in-duct filter, as indicated, with 1/4 inch o.d. aluminum or copper tubing.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Install filters, filter frames, filter housings, and filter gauges in accordance with manufacturer's recommendations and approved submittals.
- B. Install filters to ensure easy accessibility for service, removal and replacement of filters.
- C. Do not operate any system without filters.
- D. For any equipment used for temporary ventilation, install a complete set of filters prior to start-up. This set of filters shall be in addition to the final set.
  1. While operating for temporary use, install a complete set of filters of the same quality and efficiency as the specified permanent filters for the project.
  2. Continuously maintain filters and replace when pressure drop exceeds 1 inch wc, or at manufacturer's recommended change-out pressure drop, whichever is lower.
  3. Install a new, complete set of filters just prior to final acceptance by Owner

CONSIDER ADDING REQUIREMENTS FOR SPARE FILTERS HERE, OR IN INDIVIDUAL EQUIPMENT SPEC. SECTIONS. TYPICALLY U-M DOES NOT DESIRE SPARE FILTERS, WITH THE POSSIBLE EXCEPTION OF CERTAIN SPECIALTY FILTERS; IN WHICH CASE CONSULT THE U-M DESIGN MANAGER FOR DIRECTION.

**3.2 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

**END OF SECTION 234000**

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**

SECTION 235100 - BREECHINGS, CHIMNEYS AND STACKS

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 235100 - BREECHINGS, CHIMNEYS AND STACKS**

**REVISIONS:**

**8-99: REVISED TO VBS.DOT TEMPLATE**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. This section specifies double wall metal vents and accessories for gas fired appliances.

**1.3 QUALITY ASSURANCE:**

- A. Welder's Qualifications: All welders shall be certified in accordance with AWS Standard D9.1, Specifications for Welding Sheet Metal.
- B. Codes and Standards:

**SPEC EDITOR: INSTALLATION AND REQUIREMENTS FOR SAFETY OF HEAT PRODUCING APPLIANCES AND THEIR VENTING, INCLUDING CHIMNEYS, IS PRESCRIBED BY BUILDING CODES AND INSTALLATION STANDARDS. STATE AND LOCAL LAWS CONTROL THE ADOPTION OF BUILDING CODES. DETERMINE WHICH EDITION OF A NATIONAL CODE IS ADOPTED BY REFERENCE. FAMILIARITY WITH APPLICABLE BUILDING CODES IS ESSENTIAL BECAUSE OF THE GREAT VARIATION IN LOCAL CODES.**

1. NFPA: Comply with NFPA 211 "Standard for Chimneys, Fireplaces, Vents and Solid Fuel Burning Appliances".
2. UL: Comply with applicable portions of UL safety standards; provide products which have been UL listed and labeled.
3. SMACNA: Comply with SMACNA Low Pressure Duct Standards for fabricated breeching and smokepipe.
4. AWS: Comply with AWS Structural Welding Code for welders' qualifications, welding details, and workmanship standards.

**SPEC EDITOR: ASHRAE EQUIPMENT HANDBOOK, CHAPTER 27, GIVES A COMPLETE LIST OF NATIONAL BUILDING CODES AND NATIONAL STANDARDS WHICH ARE APPLICABLE TO MOST APPLICATIONS.**

5. ASHRAE: Comply with the ASHRAE Equipment Handbook, Chapter 27, for Chimney, Gas Vent, and Fireplace Systems, material requirements and design criteria.

**1.4 ACCEPTABLE MANUFACTURERS:**

1. Selkirk Metalbestos model PS
2. Van Packer Co.
3. AMP Co. model VSI
4. Metal Fab Inc.

**1.5 INSURANCE APPROVAL:**

- A. The entire installation shall be FM approved, Owner's insurance company.

**PART 2 - PRODUCTS**

**2.1 DOUBLE WALL METAL VENTS:**

*SPEC EDITOR: TYPE "B" VENTS ARE USED FOR VENTING GAS (ONLY) APPLIANCES WITH DRAFT HOODS, AND OTHER APPLIANCES LISTED FOR USE WITH TYPE B VENTS. IT HAS BEEN FOUND THAT A NONCOPPER-BEARING ALUMINUM ALLOY OF 99 PERCENT PURITY OR BETTER PROVIDES SATISFACTORY PERFORMANCE IN PREFABRICATED METAL GAS VENT PRODUCTS.*

A. Type B Gas Vents:

1. Description: Double wall gas vents, UL listed for Type B, consisting of an inner pipe of sheet aluminum, and other pipe of galvanized sheet steel.
2. Accessories: UL-labeled tees, elbows, increasers, draft hood connectors, metal cap with bird barrier, adjustable roof flashing, storm collar, support assembly, thimbles, fire stop spacers, and fasteners, fabricated of similar materials and designs as vent pipe straight sections.

*SPEC EDITOR: FOR CHIMNEY SERVICE, TEMPERATURES FROM APPLIANCES BURNING OIL OR SOLID FUELS MAY EXCEED THE MELTING POINT OF ALUMINUM; THEREFORE, STEEL IS REQUIRED. STAINLESS STEELS SUCH AS TYPE 430 OR TYPE 304 GIVE GOOD SERVICE IN RESIDENTIAL CONSTRUCTION AND ARE RECOGNIZED IN UL LISTED PREFABRICATED CHIMNEYS. WHERE MORE CORROSIVE ENVIRONMENTS ARE ANTICIPATED, SUCH AS HIGH SULFUR FUEL OR CHLORIDES FROM SOLID FUELS OR REFUSE, TYPE 316 STAINLESS STEEL OFFERS A GOOD COMPROMISE OF CORROSION RESISTANCE AND MECHANICAL PROPERTIES. IN ADDITION, FORCED DRAFT APPLIANCES REQUIRE POSITIVE LISTED VENTS PRODUCTS.*

B. All Steel, Positive Pressure, Double Wall Vents

1. Double wall stack: The double wall stack shall have an outer jacket of aluminum coated steel .025" thick in 6 inches through 24" diameters and .034" thick for larger diameters. There shall be a minimum 1" air space between the walls. The inner gas carrying pipe shall be type 304 stainless steel for gas and No. 2 fuel oil, type 316 stainless steel for coal, or No. 4 and No. 6 oil or any other solid fuels. The inner liner shall be .035" nominal thickness for all diameters.

2. Inner pipe joints shall be sealed by use of V Bands and RTV Silicone Sealant for flue gas temperatures up to 600 degrees F; above this temperature joints shall be sealed with V Bands and High Temperature Joint Cement as outlined in the installation instructions and supplied by the manufacturer.
3. Stack extending above roof surfaces must terminate as required by local code, or as required in NFPA 211. All parts exposed to the outer atmosphere should be protected by a minimum of one base coat and one finish coat of paint, such as series 4200-4300 Heat Resistant paint manufactured by Rust-O-Leum Corporation, or equivalent. Paint to be supplied and applied by installing contractor.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION OF DOUBLE WALL CONNECTORS, BREECHINGS, AND VENTS:**

- A. Install Type B gas vents in accordance with manufacturer's installation instructions and UL listing. Maintain minimum clearances from combustibles specified in UL listing.
- B. Install all steel, positive pressure, double wall gas vents in accordance with manufacturer's installation instructions and UL listing. Maintain minimum clearances from combustibles specified in UL listing.
- C. Seal joints between sections of positive pressure vents in accordance with manufacturer's installation instructions, and using only sealants recommended by manufacturer.
- D. Support vents at intervals recommended by the manufacturer to support the weight of the vent and all accessories, without exceeding loading of appliances.
- E. Provide a drain section for each boiler in the vertical section of breeching at the boiler to prevent condensed liquids from draining back into the boiler. 1" drain piping is to be run to the nearest floor drain.

#### **3.2 INSTALLATION OF DAMPERS:**

- A. Install barometric and thermostatically operated dampers in accordance with manufacturer's instructions. Locate as close to draft hood collar as possible.

#### **3.3 ADJUSTING AND CLEANING:**

- A. Clean breechings internally during installation, to remove dust and debris. Clean external surfaces to remove welding slag and mill film. Grind welds smooth.

#### **3.4 PROTECTION:**

- A. Temporary Closure: At ends of breechings and chimneys which are not completed or connected to equipment, provide temporary closure which will prevent entrance of dust and debris until installations are completed.

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**

SECTION 235240 - FIRE TUBE BOILERS (STEAM)

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 235240 - FIRE TUBE BOILERS (STEAM)**

**REVISIONS:**

**NOV.9,2004: CONSIDERABLE REVISIONS NOT FOR MASTER SPECIFICATIONS**

**MAR.7,2005: LAST REVISION.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

**SPEC EDITOR: REVISE NUMBER OF BOILERS FOR THE PROJECT**

- A. The work includes furnishing and installing three (3) water back fire tube gas fired packaged boilers with capacities as scheduled on the plans.
- B. Boiler package shall consist of a boiler, boiler fittings, burner equipment, forced draft fan, safety controls and accessories all piped, wired and assembled on a structural steel base.
- C. Each unit shall be a complete package ready for connection of electrical, feed water, steam, blowdown, fuel and venting.

**1.3 QUALITY ASSURANCE:**

- A. Codes and Standards:
1. UL Compliance: The complete boiler burner unit shall be approved and labeled as a unit by Underwriters Laboratories.
  2. NFPA Compliance: Install gas-fired fire tube boilers in accordance with NFPA Code 54 "National Fuel Gas Code".
  3. ASME Compliance: Construct fire tube boilers, receivers, blow down tank, etc. in accordance with ASME Boiler and Pressure Vessel Code, Section IV "Heating Boilers".
  4. UL and NEMA Compliance: Provide fire tube boiler and ancillary electrical components which have been listed and labeled by UL and comply with NEMA standards.
  5. FM Compliance: Provide control devices and control sequences in accordance with requirements of Factory Mutual System (FM).

6. NEC compliance: Provide control panels and assembly and wiring of all devices in accordance with requirements of latest edition of NEC. All control panels shall have a label indicating listing by a nationally recognized testing agency such as UL, ETL or MET.
7. Additionally, safeties for burner controls must comply with latest requirements of applicable township and state codes.
8. Gas train, including pilot gas train, must comply with current IRI requirements and township and state codes.

B. Pressure Vessel Warranty:

1. If, within fifteen (15) years from and after the date of acceptance of the boilers, the tube sheets, furnace and furnace throat, rear combustion chamber, or front and rear flue doors fail under normal use and service, the Company will repair the part or compartment as required for proper operation of the boiler. This also specifically includes all refractory at the front and rear of the boiler.

C. Complete package warranty:

1. The complete package shall be warranted for a period of 12 months from the date of acceptance of the installation by the University. Warranty shall include all labor, materials and associated costs.

**1.4 ACCEPTABLE MANUFACTURERS:**

A. Subject to compliance with the requirements, provide fire tube boilers by one of the following manufacturer(s):

1. Superior Boilers
2. Johnston Boilers
3. Easco Boilers

B. Subject to compliance with other requirements, provide burner manufactured by:

1. Webster Manufacturing Co.

**1.5 COMMISSIONING:**

A. Comply with commissioning as specified in Division 01. The boiler start up engineer and the installing contractor shall cooperate and coordinate their activities with the commissioning engineer.

**SPEC EDITOR: VERIFY WITH UM PROJECT ENGINEER AND EDIT AS REQUIRED.**

**1.6 INSURANCE COMPANY:**

A. The Owner's insurance company is Factory Mutual. The complete boiler and accessory installation shall meet all of the requirements of F.M., whether or not indicated in the plans and specifications, for each device and/or component.

**PART 2 - PRODUCTS**

**2.1 BOILER - GENERAL REQUIREMENTS:**

- A. Each Steam boiler unit shall be AGA-certified, UL-labeled and constructed and tested in accordance with ASME Pressure Vessel Code, Section IV, for maximum working pressure of 15 psig. Each boiler assembly shall be hydrostatically pressure tested for 60 psig ASME working pressure. Each boiler must bear ASME stamp and be inspected under the National Board Rules.
- B. Each steam boiler shall be provided with an ASME listed safety valve set at 15 PSIG and have a discharge capacity equal to or greater than the listed Gross Output of the boiler.

*SPEC EDITOR: REVISE THE FOLLOWING PARAGRAPH FOR EACH PROJECT OR EDIT TO SUIT EXISTING CONDITIONS*

- C. The boiler support frame shall have a maximum width of X'-Y" to allow setting on existing housekeeping pad / or new housekeeping pads as shown on plans.

**2.2 BOILER CONSTRUCTION:**

- A. Boiler shall be four (4) pass water back Scotch Marine type with a front or rear exhaust vent, listed and rated by the American Boiler Manufacturer's Association, Fire tube Section, designed and built to comply with the latest ASME Code rules for fifteen (15) lbs. per sq. inch steam working pressure and be inspected and stamped by an authorized boiler inspector. The boiler shall have not less than 5 sq. ft. of heating surface per boiler horsepower, measured on the fireside (ASME method), a furnace heat release of not more than 142,000 BTU/HR/CFT or as scheduled, whichever is lower, when operating at rating and the rear combustion chamber shall be submerged within the boiler water. The boiler shall have flanged and/or threaded openings for trimmings and external connections; sufficient hand holes and manhole for thorough inspection and cleaning; burner inspection sight ports ant front and rear; gas tight inspection doors; and dial stack thermometer.
- B. The boiler shall be factory insulated with 2" fibrous insulation, covered by a sheet metal jacket, assembled with lock seam joints.

**2.3 BOILER TRIM:**

- A. Boiler trim shall include the following items mounted and piped on boiler combination type water column with primary low water cut-off and pump control, auxiliary (manual reset) low water cut-off switch wired to prevent burner operation if water level falls below safe level, chain operated water gauge, gauge glass drain valve and water column drain valve piped into blow-off header; 6" diameter steam gauge mounted adjacent to water column and fitted with pigtail cock and test tee; main blow-off and surface blow-off valves and the main blow-off valves shall be piped into the blow-off header; bronze feed stop and check valves; ASME safety valve(s) sized to comply with Code Requirements and flue gas thermometer and high limit pressure switch wired to prevent burner operation if pressure exceed a set safe limit.

- B. The boiler shall be furnished with compound pressure vacuum gauge to indicate the system pressure. The compound gauge shall be of rugged guarded type construction and the gauge dial shall be clearly marked and easy to read.

**2.4 BOILER CONTROLS:**

- A. The operating limit pressure control shall be set according to the design requirements of the heating system. The high limit pressure control should be set approximately 2 psig higher than the low limit control setting (15 psig maximum allowable steam boiler pressure).

*SPEC EDITOR: FILL IN DIMENTIONS BELOW, AND REVISE PARAGRAPH TO ACCOMMODATE EACH PROJECT. ENGINEER MUST VERIFY THESE SETTINGS WITH BOILER MANUFACTURER)*

- B. Each boiler shall have at least two independent automatic low water fuel cut-offs, one of which may be combined low water fuel cut off and pump control. One cut-off control shall be set to function ahead of the other. Functioning of the lower of the two cut-off controls shall cause a safety shutdown (lock out) requiring manual reset. The combination low water cut-off and pump control must be located on the boiler so the burner will become de-energized should the boiler water level fall to within \_\_\_\_\_ inches above the lowest visible point in the water gauge glass. The boiler feed pump will become energized with a boiler water level of approximately \_\_\_\_\_ inches above the lowest visible point in the water gauge glass

**2.5 BURNERS:**

- A. The entire fuel burner system and its installation shall conform to the manufacturer's erecting instructions, with applicable codes. The burner fuel shall be natural gas.
- B. Each gas burner shall be a retention ring type, with full flame retention, designed for natural gas with a heating value of 1020 BTU per cubic foot. The burner shall be complete with gas-electric ignition, main gas shut-off cock, characterized main gas pressure regulator, manual test cock, modulating valve, high and low gas pressure switches, dual motorized safety shut-off valves, one with proof of closure normally open vent valve and all other devices as required to satisfy the regulatory requirements specified.

*SPEC EDITOR: REVISE PARAGRAPH FOR EACH PROJECT. REVIEW THE GAS PRESSURE AVAILABLE AND CORRECT AS REQUIRED*

- C. The burner heads shall be designed to insure flame retention, stability and quietness of operation. The gas pressure in the boiler room will be approximately \_\_\_\_\_ (60?) Inches water column at the gas meter outlet, \_\_\_\_\_ (48?) Inches at the inlet to the gas train and the relief valve at the gas company outlet set at 10 lbs. All the gas train components shall be selected for these operating conditions.

- D. The burner shall be full modulation type, equipped with a fuel and airflow control. Burner shall have a turndown capability of 10:1. Please see the schedule for the maximum input to each boiler. Fuel air ratio control shall be achieved by the use of independent servomotors linkage-less control system.
- E. The combustion air fan shall be direct drive forward curve design statically and dynamically balanced. Draft equipment shall include combustion air switch, air intake silencers, air dampers actuated by the modulating motor and electronically interlocked with the modulating fuel valves.
- F. To ensure reliability, repetition and accuracy a gasketed louver box, capable of registering movement of 0.10", is to be installed on each burner. The louver box shall be of a multiple, opposed, blade type. Each of the blades shall incorporate an EPDM seal on the front edge. The inside walls of the box itself shall have a gasketed seal against the edge of the damper blades. The entire assembly shall be capable of attaining air tightness in accordance with DIN 1946/4. The blades shall be coupled outside the frame using permanently attached drive bars with all adjustments being factory set to have zero play. Louver box shall also incorporate in its design, an air inlet silencer which shall limit the noise due to the sound of the combustion air entering for combustion.
- G. Individual Gas Flow Control Valves shall be provided for on each burner. The use of Butterfly type gas valves is prohibited. The Gas Flow Control Valves shall be Honeywell Model: V5197A1003 for firing rates up to 6,300 MBH, V5197A1011 for firing rates up to 16,000 MBH. The appropriate N.P.T. pipe adapters, also manufactured by Honeywell, shall also be furnished. The Individual Servo-Motors shall be attached to the flow control valve in the following manner. The Servo-Motor shall be mounted, on the flow control valve using the adapter coupling and mounting bracket supplied by Fireye. The stems of the Servo-Motors and the stem of the Flow Control Valves shall, in addition to using the adapter coupling above, be permanently attached through the use of roller pins after combustion is set-up in the field.
- H. Burner ring shall be designed, installed and adjusted so that the flame will not impinge on rear wall refractory in firebox.
- I. Burner unit must meet UL, FM, IRI and the latest NFPA requirements.
- J. The burner shall be tuned to achieve maximum firing rate with a noise level of less than 81 Db as measured on the A scale, at 3 feet and shall conform to MIOSHA requirements as well.

**2.6 INTEGRATED BURNER CONTROL SYSTEM:**

- A. Each burner shall be equipped with a Micro-Processor Based Burner Management Flame Safeguard and Parallel Positioning Control System. The control shall fully integrate/provide all the required Flame Safeguard functions and Combustion Control functions into a single module.
- B. The entire burner control system and its components shall be as manufactured by Fireye and the model numbers are as below.

- C. The system shall consist of Fire eye integrated Nexus module.
- D. In addition to providing the standard features as detailed by Fireeye in their literature for the control modules specified, the following optional features shall be provided.
  - 1. Servo positioning motors operating at the same voltage as the controller with torque ratings as selected by the burner manufacturer for proper operation with the gas pressure and air box specified.
  - 2. Steam pressure and gas pressure sensors with full self-checking capability.
  - 3. Remote communications capability using the Protocol Interface specified in section 230900 DDC Controls, and elsewhere in the specifications, provide all the necessary communications module, other hardware and software to enable communication between the Burner Control System and owners PC via the Ethernet.
  - 4. O2 Trim capability utilizing zirconium oxide "in situ" fast response probe. The hardware and software for this function shall be provided under Alternate 1.
- E. Codes and Standards: The Control shall be listed by Underwriters Laboratories carrying US and C designations for UL 372 Primary Safety Controls for Gas and Oil Fired Appliances.
- F. System Hardware
  - 1. Controller; The controller shall provide individual outputs for Burner damper, Ignition, Pilot Valve, Gas Valve , Vent Valve and Auxiliary Relay. In addition provide the manufacturer's standard features as detailed by Fireeye in their literature for the controller.
  - 2. Display; The Display shall provide full text messaging and access to the Profile and Option Parameter Set points. The Display shall be cabinet mounted.
  - 3. Sensors; Pressure sensor shall be provided for Steam Pressure indication and control. The Pressure Sensor shall be Fireeye Model NX1025 for 0-28PSI. Gas Pressure Sensor shall be provided for gas pressure supervision. The Gas Pressure Sensor shall be Fireeye Model NX1020 0 - 4.5 PSI sensing range.
  - 4. Provide auxiliary low pressure and high pressure switches in the gas train, manual reset type, wired to shut the burner off. The switches shall be model C6097 made by Honeywell. Provide a steam high pressure switch in each boiler, manual reset type, wired to shut the burner off. Switch shall be Honeywell model #L404C1147.
  - 5. Servo Motors; Individual Servo Motors shall be supplied for each of the controlled elements, Air and Gas. These shall be Fireeye model NX-series, torque rating to be selected for each project.
  - 6. The wiring base shall provide individual terminal connections for the various inputs and outputs.

7. Expansion Interface; the expansion interface shall provide individual terminal connections for the various inputs and outputs. The expansion interface shall further provide power source and connections for dedicated zirconium oxide in situ probe, when O2 trim system is provided. The expansion interface shall further provide analogue input and output capability for control of a variable speed drives, if they are provided. The expansion interface shall further provide analogue input and output capability for input of external analogue signals and transmission of system variables.
8. Provide Fireye "Nexus Modbus Interface" module in the boiler panel of the 70 boiler HP boiler to map all the three Nexus modules and convert to Modbus protocol. In the same panel provide a E+ series Protocol Interface device as manufactured by Cimetrics to convert the Modbus protocol to BACnet/IP protocol. The University will install an Ethernet outlet next to the boiler control panel and wire the E+ converter to the Ethernet outlet.

**2.7 O2 TRIM SYSTEM :( ALTERNATE 1)**

- A. The O2 values utilized for trim shall be measured by an in situ exhaust gas probe. This shall be a zirconium oxide device.
- B. Reaction time of the O2 trim to changes in O2 level (measured at the device) shall be not greater than 5 seconds.
- C. The O2 Trim Analyzer shall measure and display via the controller display, wet O2, dry CO2, exhaust temperature, combustion efficiency and applied trim action.
- D. The O2 Analyzer shall have no moving parts, pumps or sample lines.
- E. O2 trim system and all of its components shall be by Fireye and shall not be combined with equipment provided by other manufacturers.

**2.8 CONTROL CABINET :**

- A. The burner unit shall have steel NEMA 1 control cabinet with a hinged door locked mounted on the boiler frame and shall incorporate the electronic burner sequencing equipment, main disconnect switch, fused, motor starter, relays and burner switch. All wiring in the panel and to the boiler shall be color coded with numbered terminal strip, numbered wiring and engraved plates. Provide five indicating lights to indicate safe water level, low water alarm, flame safety alarm, ignition and main fuel valve. All wiring in the panel and to the boiler and burner controls shall be completely numerically identified.

- B. The power supply characteristics shall be 440/208/60/3. Control circuit to be 115 volt, 1 phase, supplied from panel mounted control transformer. There will be two independent power supplies from lockable breakers provided to the boiler control panel. One shall be used for normal boiler function and control transformer. The other shall be utilized to power two (2) optional relays, provided with the panel. The first relay, 3PST rated for 10 amps cont, shall be activated whenever the boiler goes under an alarm condition such as flame failure or low water level. The second relay, DPST rated for 10 amps cont, shall be activated whenever the steam header pressure falls below a set pressure. The pressure sensor shall be furnished, installed (by the mechanical contractor) and wired by the electrical contractor as shown in the plans. Identify the relay contacts terminal strip rows in the shop drawings. These relays will be wired to power a red light and a yellow light outside the boiler room.

**SPEC EDITOR: REVISE FOR THE PROJECT. COORDINATE THE POWERING REQUIREMENT WITH THE EE**

- C. Provide a separate NO contact to open the mechanical room combustion air dampers on boiler start up or set the speed of the supply air fan to match the combustion air requirement. Power the damper operator, if used, from the burner control panel.

**2.9 AUXILIARY EQUIPMENT:**

- A. Additional control sequences are indicated in the plans. All of the required optional additional contacts and devices shall be provided to achieve the specified control sequence, even if the required devices are not specifically noted in these specifications.

**2.10 BURNER/BOILER EMISSIONS**

- A. At the time of start up a calibrated electronic flue gas analyzer shall be used. Provide a print out of the analysis to prove compliance with the following requirements.
- B. At low fire, Carbon dioxide shall not exceed 9.50%, oxygen shall not exceed 7.00%, thermal nitrous oxide shall not exceed 75 PPM and no trace of carbon monoxide shall be present.

**FILL IN THE CORRECT EMISSIONS DATA IN THE BELOW PARAGRAPH. BELOW DATA IS SAMPLE ONLY.**

- C. At high fire, Carbon dioxide shall not exceed 8.00%, oxygen shall not exceed 4.5%, thermal nitrous oxide shall not exceed 75 PPM and no trace of carbon monoxide shall be present [vsm1].

**2.11 ELECTRICAL CONTROL PANEL LABELING:**

- A. All control panels provided with burner, boiler or feed water unit shall bear a label from UL, ETL or MET. All wiring including the control wiring shall be installed in a NEC compliant conduit system.

**2.12 VALVES, MOTORS AND OTHER ITEMS SPECIFIED ELSEWHERE:**

- A. All motors shall meet requirements of Section 220513.
- B. All valves shall meet requirements of Section 220523.
- C. Thermometers and gauges shall meet requirements of Section 220519.

**2.13 BOILER DESIGN NOTE:**

- A. The plans shown are based on Superior/Easco/Johnston Boilers and are intended to be schematic and may not be correct in all details (such as the location of all outlets and inlets) to the unit pre-purchased by the University or being provided by this contractor. The Contractor shall review the shop drawing available from the University or his vendor and allow sufficient funds in his base bid for any additional work required to suit the unit being supplied. All equipment shipped loose shall be installed and piped as directed by the manufacturer and/or owner, by this contractor.

**PART 3 - EXECUTION**

**3.1 FACTORY TESTING**

- A. Each complete boiler/burner unit must be fire tested at the manufacturer's plant prior to shipment. Owner has the option to witness the test. Provide at least six weeks' notice. Provide test report for field setup.

**3.2 BOILER EFFICIENCY AND PERFORMANCE GUARANTEE:**

- A. The unit shall operate at minimum of 84.75% overall efficiency, based on higher heating value for natural gas. The following procedure shall be employed for determining the boiler's efficiency. If the indicated efficiency is not achievable, indicate with the bids, achievable efficiency.
- B. Operation of the boiler shall be to establish efficient and stable fuel air ratio over the complete load range. Operation of the unit shall then be continued for testing and demonstration of the certified efficiency at rated capacity. This test is to take place on the factory fire test stand.
- C. The efficiency test shall consist of the accurate measurements and recording of the following listed factors:
  - 1. O2 and combustibles in stack gases
  - 2. Ambient air temperature
  - 3. Feed water temperature
  - 4. Stack temperature
  - 5. Steam pressure
  - 6. Feed water flow
- D. On completion of the test, the following listed heat losses shall be calculated as prescribed under "Heat Loss Efficiency" of the ASME TEST FORM ABBREVIATED EFFICIENCY per Power Test Codes PTC41:
  - 1. Heat loss due to dry gas
  - 2. Heat loss due to moisture in fuel

3. Heat loss due to moisture from combustion of hydrogen
- E. The following data shall be utilized in conjunction with the calculation of the above listed heat losses to determine the certified efficiency.
    1. Analysis of fuel fired
    2. Unaccounted, radiation and convection loss as calculated for the model being tested. Calculated data taken from actual measured test results.
  - F. The test results shall be certified to the customer by the boiler manufacturer in a report which shall include all supporting data and appropriate calculations showing the resulting efficiency. In the event the test does not yield results which are at least as good as the attached required Minimum Efficiency stated above, the customer may refuse shipment of the unit until such time as the boiler manufacturer can demonstrate the required Minimum Efficiency.

### **3.3 MECHANICAL SPACE AND INSTALLATION:**

- A. The equipment shall be installed where shown on the drawings and in accordance with the manufacturer's written instructions.
- B. Field installation of the boiler and boiler feed unit shall be done under the supervision of a trained representative of the boiler manufacturer.
- C. Provide for connection to electrical service, gas service, steam outlet, condensate inlet, vents, etc., for a complete and operating system.
- D. Pipe relief valves, boiler drains, boiler blow downs, etc., to nearest floor drain.
- E. Installation shall be performed by a firm certified by the State of Michigan to install boilers of the type specified.
- F. The installer shall construct a level concrete housekeeping pad for boiler foundation according to boiler manufacturer's erecting instructions and as shown in the plans.
- G. Fill the boiler with water and pressure-test the boiler and system up to the rating of the relief valve. Clean the system per manufacturer's instructions; flush the system to remove all trash and dirt; and refill the system, including inhibitor as specified.
- H. Bleed the gas line in a safe manner and energize the boiler controls.
- I. All equipment, piping, valves and other components shipped loose shall be installed per manufacturer's instruction, whether indicated or not, in these plans and specifications.

**3.4 START UP SERVICE:**

- A. After the boiler installation is completed, a factory trained technician shall supervise starting, boil out and adjusting the initial fire, schooling for the operators in the care and handling of the equipment and 12 months warranty service after initial firing to cover warranty service. Start-up services shall include all labor, materials and associated costs. The boiler manufacturer shall provide a letter stating the technician is factory trained to start-up their boilers.

**3.5 BOIL OUT CHEMICALS:**

- A. The chemicals for periodic regular boiler water treatment will be by owners' chemical treatment contractor, **WATCON; contact Dave Russell, 419-283-4495.** This contractor shall provide initial chemicals, required for flushing and boil out of the boiler and boiler feed water unit. The chemicals shall be provided by WATCON and paid for by this contractor.

**3.6 FIELD TEST:**

- A. Observe the ignition of the pilot and the main burner to make sure they are smooth and complete. Perform combustion efficiency test, provide a report on measured carbon monoxide, carbon dioxide and oxygen and measured efficiency. Check out the safety controls and verify that they are functioning properly. Set the operating controls for the proper pressure.
- B. Submit a blank copy of the proposed start-up report form for review and approval by the Project Engineer at least two (2) weeks before start-up.
- C. Start-up report shall include, but not necessarily be limited to the following:
  - 1. Amperage and air flow on forced draft (combustion air) fan at low and high fire
  - 2. Gas pressures prior to and after regulators
  - 3. Gas pressure through gas train
  - 4. Draft pressure at boiler outlet
  - 5. Combustion efficiency test
  - 6. Safety control check out
  - 7. Operating control check out
- D. Operate the boiler for no less than 2 hours. Provide a written report, through channels and on company letterhead, stating that ignition is proper, safety controls have been checked and operating controls are set and functioning properly. The system is not complete until this report has been received.
- E. When the weather is cold enough for the boiler to be fully loaded perform proof of capacity test and burner modulation test. These tests will have to be performed during the month of December or January.

**3.7 PROOF OF CAPACITY AND MODULATION:**

- A. The maximum capacity, turn down ratio and full modulation from low fire to high fire shall be proven by "clocking the meters".
- B. The amount of gas burnt and the steam generated will be measured by clocking the existing gas meter and the existing flow meter in the boiler feed water line to each boiler. The meters shall be clocked by operating one boiler at a time.
- C. The gas input will be calculated using the following formula:

$$\text{Input in cft/hr} = \frac{\text{CUFT} \times 3600 \times \text{PC1} \times \text{TC1}}{\text{TIME}}$$

Where CUFT is gas used in the measured TIME interval, PC1 is the pressure correction factor (check with Michcon 0.951?), TC1 is temperature correction factor (check with Michcon 1.104?) and TIME is time interval in seconds for which CUFT was measured by reading the meter.

- D. The steam output will be calculated using the following formula:

$$\text{Steam output in PPH} = \frac{\text{FLOW} \times 3600 \times 8.33}{\text{TIME}}$$

Where "FLOW" is the measured feed water volume in gallons per the given "TIME" interval in seconds.

- E. The burner shall function properly at the maximum output, at part loads and at low fire start up demonstrating full modulation.
- F. The commissioner and a representative from the Outlying Boiler Group shall be present during all the testing. Provide at least 7 days' notice prior to scheduling the tests. If the boilers cannot be loaded to the rated capacity, the contractor shall return to perform this work during the winter season; date and time will be scheduled by the Outlying Boiler Group from the University.
- G. If the boilers fail the capacity and or modulation tests, the contractor shall remedy the situation and complete the test successfully within 30 calendar days. If the contractor fails to do so, the university will take whatever remedial actions the university sees necessary. The university will back charge the contractor for all the costs associated with the remedial actions.

SECTION 235300 - HEATING BOILER FEEDWATER AND BLOW-DOWN EQUIPMENT

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 235300 - HEATING BOILER FEEDWATER AND BLOW-DOWN EQUIPMENT**

**REVISIONS:**

**NOV.9,2004: NEW SECTION CREATED FOR THE MASTER SPECIFICATIONS.**

**MAR.11,2005: LAST REVISION.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**SPEC EDITOR: REVISE AS REQUIRED FOR EACH PROJECT**

**1.2 SCOPE OF WORK:**

- A. Provide packaged boiler feed water preheat system, packaged boiler feed water system (no preheat), Deaerator system, blowdown tank and accessories as specified and scheduled.

**1.3 QUALITY ASSURANCE:**

**SPEC EDITOR: DELETE ITEMS NOT IN THE PROJECT**

- A. Codes and Standards:
1. UL Compliance: The complete Deaerator, boiler feed water unit, unit shall be approved and labeled as a unit by Underwriters Laboratories.
  2. ASME Compliance: Construct Deaerator, boiler feed water unit, blow down tank in accordance with ASME Boiler and Pressure Vessel Code, Section IV "Heating Boilers".
  3. UL and NEMA Compliance: Provide all ancillary electrical components which have been listed and labeled by UL and comply with NEMA standards.
  4. FM Compliance: Provide control devices and control sequences in accordance with requirements of Factory Mutual System (FM).
  5. NEC compliance: Provide control panels and assembly and wiring of all devices in accordance with requirements of latest edition of NEC. All control panels shall have a label indicating listing by a nationally recognized testing agency such as UL, ETL or MET.
- B. Pressure Vessel Warranty:
1. If, within fifteen (15) years the tank fails under normal use and service, the manufacturer shall replace tank and the part or component as required for proper operation of the unit.

- C. Complete Package Warranty:
  - 1. The complete package shall be warranted for a period of 12 months from the date of acceptance of the installation by the University.

**1.4 ACCEPTABLE MANUFACTURERS:**

*SPEC EDITOR: ALWAYS SPECIFY ELEVATED TANK AND 212 F PUMPS GOOD 2' NPSH*

- A. Subject to compliance with requirements, provide boiler feed-water system by one of the following manufacturers:
  - 1. ITT Domestic Model CMED
  - 2. Industrial Steam
  - 3. Skidmore
- B. Subject to compliance with requirements, provide blow-down separator by one of the following manufacturers:
  - 1. PENN
  - 2. Industrial Steam
  - 3. Wilson
  - 4. Johnston Boiler
  - 5. Cemline
- C. Subject to compliance with requirements, provide Deaerator by one of the following manufacturers:
  - 1. Sellers Engineering
  - 2. Industrial Steam
  - 3. *add another vendor*

**PART 2 - PRODUCTS**

**2.1 BOILER FEED WATER UNIT (WITHOUT PREHEAT):**

*SPEC EDITOR: REVISE THE NUMBER OF PUMPS FOR EACH PROJECT. BOILER FEED WATER UNIT WITH NO PREHEAT USED IN ALL LOW PRESSURE BOILERS.*

- A. Furnish and install according to drawings and manufacturers' requirements single compartment boiler feed unit as shown on drawings. It shall consist of the following: (1) single compartment steel receiver with (3) three boiler feed pumps, electrical controls and accessories.
- B. The boiler feed receivers shall be of welded ¼ inch steel construction single compartment design, elevated to meet the 2' NPSH requirements of the pumps. The unit shall be factory equipped with the following
  - 1. Make up water assembly consisting of externally adjustable float switch and solenoid valve sized equal to one of the boiler feed pumps
  - 2. Make up valve strainer
  - 3. Three valve bypass for make-up valve
  - 4. Make up valve pressure gauge

5. Manhole for inspection and repairs and Inspection port hand hole
6. Chemical injection quill
7. One gauge glass assembly with shut off valves
8. One dial thermometer
9. One set of lifting eyes
10. Three pumps suction, discharge, strainers, check valves and pressure gauge etc.
11. One low level pump cut off switch and low water level alarm switch.
12. Cast iron basket strainer with bronze screen on condensate inlet location
13. Sampling valve.

C. A magnesium anode shall be mounted in the receiver compartment.

D. The pumps shall be 2' NPSH close coupled vertical design with axial flow impeller that builds positive suction pressure of 5 psig. Provide a cast bronze impeller that is bronze fitted to the cast iron pump housing with a bronze sleeve. The mechanical seal shall be rated for 250F service. Provide isolation valves, check valve and strainers as shown in plans for each pump.

E. The unit manufacturer shall mount and wire a separate NEMA 1 control cabinet with hinged door and grounding lug and include the following:

1. Combination magnetic starters with overload relays and circuit breakers or fused disconnects for each pump.
2. Door interlock.
3. Momentary contact test buttons for each pump.
4. Numbered terminal strip.
5. H-O-A switch with indicating light for each pump.
6. Contacts for ON-OFF signals from boiler control panel. (The pump to run only when the corresponding boiler is operational).
7. Low level alarm.
8. Low water cutoff.
9. Control transformer with secondary fused 115 volts single phase control circuit.
10. Single point power connection.
11. Totalizing run hour meter for each pump.
12. Alarms to be audible and visual with silencing push button. Provide indicating light for each alarm. All indicating lights shall be push to test type.
13. All electrically operated valves shall be powered from the control cabinet.
14. Single point power connection.

F. Control Sequence: Under normal operation the three boiler feed pumps are left in auto mode. The boiler level controllers cycle the respective boiler feed water pump.

## 2.2 PREHEATING TYPE BOILER FEED WATER UNIT:

**SPEC EDITOR: REVISE THE NUMBER OF PUMPS FOR EACH PROJECT. PREHEATING TYPE BOILER FEED WATER UNIT IS REQUIRED ONLY FOR HIGH PRESSURE BOILERS.**

- A. Furnish and install according to drawings and manufacturers' requirements single compartment preheat boiler feed unit as shown on drawings. It shall consist of the following: (1) single compartment steel receiver with (3) three boiler feed pumps, (1) direct injection steam heating assembly, electrical controls and accessories.
- B. The boiler feed receivers shall be of welded ¼ inch steel construction single compartment design, elevated to meet the NPSH requirements of the pumps. The unit shall be factory equipped with the following
1. Steam heater as described below.
  2. Make up water assembly consisting of externally adjustable float switch and solenoid valve sized equal to one of the boiler feed pumps
  3. Make up valve strainer
  4. Three valve bypass for make-up valve
  5. Make up valve pressure gauge
  6. Inspection port hand hole
  7. Chemical injection quill
  8. One gauge glass assembly with shut off valves
  9. One dial thermometer
  10. One set of lifting eyes
  11. Three pumps suction, discharge and pressure relief valves, strainers, check valves and pressure gauge etc.
  12. Three valve bypass with strainer, steam regulating valve, upstream and downstream pressure gauges.
  13. One low level pump cut off switch and alarm
  14. Cast iron basket strainer with bronze screen on condensate inlet location
  15. Sampling valve
- C. A magnesium anode shall be mounted in each receiver compartment.

**SPEC EDITOR: REVISE AS REQUIRED FOR EACH PROJECT**

- D. An injection steam heating assembly shall consist of a double flange mounted injection stainless steel tube, Spence or Hoffman pressure and temperature regulator, wye strainer and pressure gauge. Capacity to heat 5 gpm from 50F to 200F, 9 psig steam at the inlet valve.

**SPEC EDITOR: REVISE AS REQUIRED FOR EACH PROJECT**

- E. The pumps shall be 2' NPSH close coupled vertical design with axial flow impeller that builds positive suction pressure of 5 psig. Provide a cast bronze impeller that is bronze fitted to the cast iron pump housing with a bronze sleeve. The mechanical seal shall be rated for 250F service. Provide isolation valves, check valve and strainers as shown in plans for each pump.
- F. The unit manufacturer shall mount and wire a separate NEMA 2 control cabinet with hinged door and grounding lug and include the following:
1. Combination magnetic starters with overload relays and circuit breakers or fused disconnects for each pump.

2. Door interlock.
  3. Momentary contact test buttons for each pump.
  4. Numbered terminal strip.
  5. H-O-A switch with indicating light for each pump.
  6. Contacts for ON-OFF signals from boiler control panel. (The pumps to run only when anyone of the two boilers are operational).
  7. Low level alarm.
  8. Low water cutoff.
  9. Control transformer with secondary fused 115 volts single phase control circuit.
  10. Single point power connection.
  11. Totalizing run hour meter for each pump.
  12. Alarms to be audible and visual with silencing push button. Provide indicating light for each alarm. All indicating lights shall be push to test type.
  13. All electrically operated valves shall be powered from the control cabinet.
  14. Single point power connection.
- G. Control Sequence: Under normal operation the three boiler feed pumps are left in auto mode. The boiler level controllers cycle the respective boiler feed water pump.

*SPEC EDITOR: THE FOLLOWING IS A COPY OF THE DEAERATOR SPECIFICATIONS USED FOR G G BROWN BOILER REPLACEMENT PROJECT. VERIFY WITH OUTLYING BOILER GROUP WHETHER TRAY AND SPRAY TYPE IS REQUIRED INSTEAD OF THIS.*

**2.3 DEAERATING TYPE BOILER FEED WATER UNIT:**

*SPEC EDITOR: REVISE AS REQUIRED FOR EACH PROJECT*

- A. Furnish and install according to drawings and manufacturers' requirements single compartment pressurized De-aerating boiler feed unit as shown on drawings. The unit shall be nominally rated for 35,000 lbs/hr guaranteed to remove oxygen in the condensate to a level of not more than 0.005 cc/liter. It shall consist of the following: (1) single compartment steel receiver with (3) three boiler feed pumps, (1) direct injection steam heating assembly, (1) de-aerating spray and tray section, electrical controls and accessories. The receiver shall be constructed in accordance with ASME code and 50 psig stamped.
- B. The boiler feed receivers shall be of welded carbon steel construction single compartment design, elevated to meet the NPSH requirements of the pumps. The de-aerator shall be factory equipped with the following
  1. Steam heater as described below.
  2. Spray manifold
  3. Chemical injection quill
  4. One gauge glass assembly
  5. One receiver pressure gauge
  6. One relief valve
  7. One throttling vent valve with orifice plate
  8. One overflow drainer
  9. One dial thermometer

10. One set of lifting eyes
  11. Three pump suction, discharge and automatic (balancing) flow control valves, strainers, check valves and pressure gauge etc.
  12. One steam, strainer, pressure gauge, isolation valves etc.
  13. One low water level switch, low water level auto off and alarm, & high level alarm.
  14. One electric make up valve and make up valve modulating controller.
  15. Manhole.
  16. Plasite 7156 epoxy lining
  17. Internal overflow loop with anti-siphoning orifice
  18. Sampling valve.
  19. One makeup water strainer and pressure gauge
  20. One manual 3 valve bypass for makeup valve.
  21. All of the above (except for the accumulator tank) factory assembled, pre-piped and pre-wired on a floor mounted structural steel base.
- C. A stainless steel de-aerating section with integral stainless steel cascade trays containing a vent condensing spray manifold with stainless steel spray nozzles shall be integral to condensate receiver. A dial thermometer and pressure gauge shall be integral part of the manifold assembly.

**SPEC EDITOR: REVISE AS REQUIRED FOR EACH PROJECT**

- D. The capacity of the make-up valve shall be 20 gpm, at a 20 psig supply pressure.
- E. A magnesium anode shall be mounted in the receiver compartment.

**SPEC EDITOR: REVISE AS REQUIRED FOR EACH PROJECT**

- F. A direct injection steam heating assembly shall consist of a double flange mounted injection tube, electric steam control valve and temperature regulator, wye strainer and pressure gauge. Capacity to heat 70 gpm from 140F to 227F, 9 psig steam at the regulator. Provide a three valve bypass.
- G. The centrifugal boiler feed pumps shall be flange mounted on the receiver suction piping. The pumps shall be 2-stage close coupled vertical design. The first stage shall be a stainless steel axial flow impeller discharging through a stainless steel diffuser to the second stage. The second stage shall be a cast bronze impeller that is bronze fitted to the cast iron pump housing with a renewable bronze wearing ring. The mechanical seal shall be rated for 250F service. Provide isolation valves, check valve and strainers as shown in plans for each pump. Each pump shall be of 2' NPSH design.
- H. The unit manufacturer shall mount and wire a separate NEMA 2 control cabinet for the de-aerator. Cabinet shall have hinged door and grounding lug and include the following:
1. De-aerator
  2. Combination magnetic starters with overload relays and circuit breakers for each pump.
  3. Door interlock.
  4. Momentary contact test buttons for each pump.

5. Numbered terminal strip.
  6. H-O-A switch with indicating light for each pump.
  7. Contacts for ON-OFF signals from boiler control panel. (Each pump to run only when the respective boiler level controller calls for it).
  8. Low level and high level alarms.
  9. Low water cutoff.
  10. Control circuit disconnect switch
  11. Power on light
  12. Control transformer with secondary fused 115 volts, single phase control circuit.
  13. Alarms to be audible and visual with silencing push button. Provide indicating light for each alarm. All indicating lights shall be push to test type.
  14. All electrically operated valves shall be powered from the control cabinet.
  15. Single point power connection.
- I. Control Sequence: The boiler to be run is selected manually and run. While selecting the boiler the corresponding the boiler feed water pump is set in auto mode. The boiler level controller cycles the respective boiler feed water pump. The built in level controller in the de-aerator unit modulates the make-up valve.
- J. The entire unit shall be factory assembled and wired on a 48" high structural steel support. The unit shall be started up and operating personnel trained by a factory authorized field representative.

**2.4 BLOW DOWN SEPARATOR:**

- A. Furnish and install as shown on the drawings a boiler blowdown separator with stainless steel striking plate, minimum 3/8" thickness, at point of inlet impingement.
- B. Separator shall be designed in accordance with ASME code, shall comply with Michigan regulations and shall handle blowdown from the following boilers operating at 60 psig. For sizing purposes assume only two boilers will blow down at any given time. Minimum size as shown in the schedule. If the minimum size shown is inadequate, advise the U of M project engineer.

***SPEC EDITOR: REVISE AS REQUIRED FOR EACH PROJECT***

- |                    |        |
|--------------------|--------|
| 1. Boiler No. LP-1 | 125 HP |
| 2. Boiler No. LP-2 | 125 HP |
| 3. Boiler No. LP-3 | 70 HP  |

- C. Separator shall include the following accessories:
1. Pressure gauge.
  2. After cooler with automatic temperature regulating valve, strainer and bimetal thermometer.
  3. Three angle legs for floor mounting or wall brackets for wall mounting. See plans for requirements.

**2.5 ELECTRICAL CONTROL PANEL LABELING:**

- A. All control panels provided with burner, boiler feed water unit shall bear a label from UL, ETL or MET. All wiring including the control wiring shall be installed in a NEC compliant conduit system.

**2.6 VALVES, MOTORS AND OTHER ITEMS SPECIFIED ELSEWHERE:**

- A. All motors shall meet requirements of Section 220513.
- B. All valves shall meet requirements of Section 220523.
- C. All piping shall meet requirements of Sections 221113 and 232216.
- D. Thermometers and gauges shall meet requirements of Section 220519.
- E. Unit to be field insulated per section 220719.

**PART 3 - EXECUTION**

**3.1 START UP SERVICE:**

- A. After the boiler feed water/ Deaerator unit installation is completed, a factory trained representative shall supervise starting, boil out and adjusting the pump flow rates, schooling for the operators in the care and handling of the equipment and provide warranty service after initial firing.

**3.2 MECHANICAL SPACE AND INSTALLATION:**

- A. The equipment shall be installed where shown on the drawings and in accordance with the manufacturer's written instructions.
- B. Field installation of the boiler feed unit shall be done under the supervision of a trained representative of the unit manufacturer.
- C. Provide for connection to electrical service, steam outlet, condensate inlet, vents, etc., for a complete and operating system.
- D. Pipe relief valves, drains, blow downs, etc., to nearest floor drain.
- E. Installation shall be performed by a firm certified by the State of Michigan to install equipment specified.
- F. The installer shall construct a level concrete housekeeping pad for equipment foundation according to unit manufacturer's erecting instructions and as shown in the plans.
- G. Clean the system per manufacturer's instructions; flush the system to remove all trash and dirt; and refill the system, including inhibitor as specified.
- H. All equipment, piping, valves and other components shipped loose shall be installed per manufacturer's instruction, whether indicated or not, in these plans and specifications.

SECTION 235716 - STEAM-TO-WATER HEAT EXCHANGERS

**END OF CONTENTS TABLE**

**DIVISION 23**

**SECTION 235716 - STEAM-TO-WATER HEAT EXCHANGERS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 019100/019110 - Commissioning
  - 2. Section 232116 - Hydronic Piping Specialties
  - 3. Section 232216 - Steam & Condensate Piping Specialties

**1.2 SUMMARY**

- A. Section Includes
  - 1. Shell and tube, steam-to-hot water, low pressure heat exchangers, components and accessories. Maximum operating steam pressure of 15 PSI.

**1.3 SUBMITTALS:**

- A. Provide product data as follows:
  - 1. Rated capacity, weight with and without liquid, furnished specialties and accessories.
  - 2. Manufacturer's assembly type shop drawings indicating certified dimensions, required clearances (including tube pull clearance), pipe connection types, locations and sizes, component assembly methods, support details, and location and size of all field connections.
  - 3. Certified computerized selections based on scheduled conditions, including leaving water temperature and flow rates and fouling factor allowances.
  - 4. Shipping, rigging, handling, storage, installation, start-up, operation, and maintenance instructions.
  - 5. Certification of compliance with ASME, UL, & ASHRAE fabrication requirements, specified elsewhere in these specifications.

**1.4 QUALITY ASSURANCE:**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.

1. ANSI /ASME SEC VIII Div. 1 Boiler and Pressure Vessel Code for construction and testing.

**ALTHOUGH ATYPICAL, IF THE HEAT EXCHANGER MUST BE DISASSEMBLED TO BE SET IN PLACE, PROVIDE INFORMATION ON THE DRAWINGS AND OTHER CONTRACT DOCUMENTS DESCRIBING DISASSEMBLY/REASSEMBLY REQUIREMENTS.**

**1.5 DELIVERY, STORAGE, AND HANDLING:**

A. Ship heat exchangers with weather-protected wrap for storage outdoors. Protect pipe openings and other sensitive components with heavy plastic or other durable means to ensure unit cleanliness is maintained during shipping and storage.

**1.6 WARRANTY**

A. Provide a complete parts and labor warranty for a minimum of 1 year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers:
1. Bell & Gossett
  2. Taco
  3. Armstrong
  4. Mueller

**2.2 GENERAL**

- A. Provide factory assembled heat exchangers consisting of shell steam and water tube construction. Include the following accessories: relief valve, air vent, and vacuum breaker, of proper size for the heat exchanger.
- B. All accessories listed above shall be provided by the heat exchanger manufacturer.
- C. Tag heat exchanger with mark and design capacity scheduled in the construction documents. Mark all material shipped loose to easily identify it with the corresponding heat exchanger.
- D. Design, materials, manufacturing methods, and factory-testing of the heat exchanger units shall be in conformance with all applicable sections of the ASME code, and shall bear the standard ASME symbol.
- E. Design working pressure and temperature shall be 125 PSIG and 375 deg. F.
- F. Tube bundle shall be removable for maintenance and replacement.
- G. Head material shall be cast iron or steel.

- H. The heat exchanger shall be pressure tested at the factory prior to shipment.
- I. All nozzle connections shall be factory sealed prior to shipment to prevent the entrance of foreign materials.
- J. Flanged pipe connections shall be provided for all sizes 2-1/2" or greater. Flanged or screwed pipe connections shall be provided for all sizes 2" or smaller.

**2.3 SHELL REQUIREMENTS**

- A. Shell material shall be steel.
- B. Steam connection size shall match drawing pipe connection size.

**2.4 TUBE REQUIREMENTS**

- A. Tube bundle shall consist of 3/4 inch copper tubes with a minimum wall thickness of 0.035".
- B. The tube sheet, tie rod, spacers, and baffle material shall be steel.
- C. Water connection size shall limit nozzle velocity to no greater than 8 FPS.
- D. Tube velocity shall be limited to no more than 7.5 FPS.

**2.5 PERFORMANCE REQUIREMENTS**

- A. Refer to schedules on Drawings for performance requirements.
  - 1. Fouling Factor Allowance: water side tubes: 0.00025 h·ft<sup>2</sup>·°F/Btu
  - 2. Fluid type shall be as noted in the drawing schedule and shall be factored into the performance data.

**PART 3 - EXECUTION**

**3.1 EXAMINATION, STORAGE, AND PREPARATION**

- A. Upon delivery, validate integrity of the delivery protection has been maintained, the heat exchanger is undamaged, and all accessory parts were delivered. Reject damaged units. Restore protection. Provide a delivery report indicating unit condition to the Owner's Representative.
- B. Rig units off delivery trucks. Comply with Manufacturer's rigging instructions.
- C. Store units protected from weather, dirt, water, construction debris, and physical damage.
- D. Just before installation, verify that units are undamaged. Provide a pre-installation report indicating unit condition to the Owner's Representative.
- E. Examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and miscellaneous connections to verify actual locations, sizes, and other conditions affecting performance, maintenance, and operations, before equipment installation.

1. Locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and other connections.
- F. Rig units into final locations. Comply with Manufacturer's rigging instructions.

**MAKE THE BELOW ARTICLE PROJECT SPECIFIC, AS REQUIRED.**

**3.2 HEAT EXCHANGER INSTALLATION**

- A. Install units in strict compliance with manufacturer's installation instructions and Related Sections. Maintain manufacturer's recommended clearances for service and maintenance.
- B. Install heat exchangers on support structures to achieve proper steam trap inlet leg height and to allow trap gravity drainage.
- C. Install accessories shipped loose for Contractor installation, including relief valves, vacuum breakers and air vents, in accordance with manufacturer recommendations.
- D. Provide offset pipe connections, or make other provisions, to allow adequate space for tube bundle removal without removal of pipe, components or accessories.
- E. Insulate exchangers with insulation of same type and thickness as the connecting steam piping. Do not insulate or conceal nameplates or ASME stamps.
- F. Provide isolation valves for service and maintenance of each heat exchanger.
- G. Provide temperature and pressure gauges at the water side inlet and outlet of each exchanger, and as detailed.
- H. The heat exchanger shall be bypassed during system clean and flush.
- I. Complete the manufacturer's pre-start checklist and submit to Owner's Representative.

**3.3 COMMISSIONING**

- A. Perform the commissioning activities as outlined in Related Section "Commissioning" and other requirements of the Contract Documents.

**DESIGNER SHOULD UNHIDE THE BELOW TEXT IF THE APPLICATION WARRANTS A U-STAMP.**

2. ANSI/ASME SEC VIII Div. 1 Boiler and Pressure Vessel Code with U-1 stamp.
3. ASHRAE 90.1 Energy Standard for Buildings Except Low Rise Residential Buildings
4. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as  $\leq 0.25\%$  weighted average lead content) (and/or NSF/ANSI-372) and Annex F.
5. U.S Safe Drinking Water Act.

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Ship all components in weather-proof wrap for storage outdoors. Protect nozzle pipe openings with heavy plastic and other durable means to ensure cleanliness and prevent damage during shipping and storage. Maintain protection during installation.

#### **1.6 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

### **PART 2 - PRODUCTS**

#### **2.1 MANUFACTURERS**

- A. Acceptable Manufacturers:
  1. Alpha-Laval
  2. Armstrong
  3. Bell and Gossett
  4. Mueller
  5. Tranter

#### **2.2 PLATE HEAT EXCHANGER**

- A. The heat exchanger shall consist of stainless steel heat transfer plates of corrugated/chevron design, steel end plates and frame, and a metal carrying bar that allows disassembly of the plates for cleaning and seal replacement without disconnecting piping or removing plates. Provide brazed plate type when indicated. Units shall be designed for a minimum 150 PSIG working pressure at 225°F.
- B. Flow through the plates shall be single pass counter flow design.
- C. Heat transfer plates shall be of type 304 or 316 stainless steel with a minimum thickness of 0.40 millimeter, or as required to meet pressure requirements.
- D. Heat transfer plate ports shall be double gasketed to prevent cross contamination of hot and cold side fluids.
- E. Gaskets shall be of a one piece design formulated from nitrile or peroxide cured EPDM rubber for operating temperatures below 180°F, and peroxide cured EPDM for applications above 180°F.

- F. Heat transfer plates shall be grooved to accept the gaskets. The gaskets shall be held in place with gasket clips to minimize movement and to provide a seal. Glued gaskets are not acceptable.

**INDICATE DOUBLE WALL UNITS ON THE SCHEDULE FOR POTABLE WATER APPLICATIONS.**

- G. Double wall units shall include an air space between adjoining heat transfer plates to allow for any leakage to exit to atmosphere and avoid cross contamination.
- H. Heat exchangers used for domestic water service shall be of lead free construction and in compliance with NSF/ANSI-61 and NSF-61 Annex G (and/or NSF/ANSI-372) and Annex F, and the U.S. Safe Drinking Water Act.
- I. Provide OSHA approved splash guard, enclosing exterior of heat transfer plates and gasketed surfaces, to prevent leaks from spraying.
- J. Heat transfer plate carrying bar shall be of carbon steel with zinc chromate finish, aluminum, or stainless steel.

**FOR FREE COOLING APPLICATIONS, SPECIFY THAT THE HEAT EXCHANGER FRAME LENGTH ALLOW PLATES TO BE ADDED IN THE FUTURE TO BOOST CAPACITY 25% BY UN-HIDING THE HIDDEN TEXT IN THE PARAGRAPH BELOW. CONSIDER IF YOUR APPLICATION WARRANTS SPECIFYING ROOM FOR MORE THAN A 25% CAPACITY INCREASE.**

- K. Fixed frame plates, frame, and movable pressure plates shall be corrosion resistant epoxy painted carbon steel. Provide zinc plated carbon steel or stainless steel bolting system ("tie-rods") to compress plate pack. No special tools shall be required to assemble or disassemble the heat exchanger. Provide a frame length that will allow for additional plates to be added to provide a 25 percent increase in exchanger capacity at the scheduled inlet and outlet temperatures.
- L. Connections 2.5 inches and smaller shall be alloy nozzles with NPT threaded ends meeting ASME B1.20.1. Connections 3 inches and larger shall be alloy nozzles with flanged ends meeting ASME B16.5 for steel and stainless-steel flanges, and meeting ASME B16.24 for copper and copper-alloy flanges (provide connections that match the connecting pipe material). Alternatively for connections 3" and above, provide studed ports that allow proper sealing to the same flange types specified for nozzles. Connections shall be integral to the frame or pressure plate; inlet and outlet connections shall be on the same side of the heat exchanger. Maximum velocity through nozzle or studed port shall be 25 feet per second at scheduled flow rates. The heat exchanger connections shall be labeled to indicate fluid type and flow direction.

**DESIGNER SHOULD UNHIDE THE BELOW TEXT IF THE APPLICATION WARRANTS A U-STAMP.**

- M. Unit shall be designed, constructed, and tested in accordance with all applicable ASME Code Rules and shall have a manufacturer's data report for pressure vessels, form No. U-1. Form U-1 shall be furnished to the engineer for the owner upon request. An authorized inspector, holding a National Board commission, certifying that construction conforms to the latest ASME Code for pressure vessels must sign this form. The ASME "U" symbol shall be stamped on the heat exchanger. In addition, each unit shall be registered with the National Board of Boiler and Pressure Vessel Inspectors.
- N. The plate heat exchanger shall be shipped to the site as a completely assembled unit.
- O. Where indicated provide heat exchanger of alternate materials of construction as noted on schedule and drawings.

*THE INSULATION JACKET SPECIFIED BELOW IS APPROPRIATE FOR THE OPERATING RANGE ANTICIPATED TO BE MOST TYPICAL FOR U-M APPLICATIONS (40°F-105°F, I.E. "FREE COOLING") AND TO MIMIC ASHRAE 90.1-2010 ENERGY CODE REQUIREMENTS. IF THE HX IS USED IN AN APPLICATION AT TEMP.S SIGNIFICANTLY HIGHER OR LOWER THAN THIS RANGE, REVISE ACCORDINGLY (FOR APPROPRIATE THICKNESS AND "C" VALUES, ASHRAE 90.1 PIPE INSULATION THICKNESS REQUIREMENTS MAY BE CONSULTED FOR GUIDANCE). IF CONDENSATION IS A CONCERN, DELETE THE BELOW AND REQUIRE FLEXIBLE CLOSED CELL INSULATION, E.G. ARMAFLEX.*

**2.3 HEAT EXCHANGER INSULATION JACKET**

- A. Heat exchanger shall include a 1" thick insulation blanket system with jacket designed specifically to fit the heat exchanger over-all size and nozzle openings. The blanket shall cover both end plates, the entire plate pack (below the plate pack compression bolts) and any nozzle carrying fluid  $\leq 60^\circ\text{F}$  or  $\geq 105^\circ\text{F}$ . The blanket shall be removable by the use of Velcro® or wire tie fasteners. Insulation blanket shall have a maximum conductivity of 0.27 btu inch/h ft<sup>2</sup> °F. The jacket shall be PTFE Teflon impregnated fiberglass cloth.

**2.4 SOURCE QUALITY CONTROL**

- A. The heat exchanger shall be pressure tested at the factory prior to shipment. Provide a report of the results of the pressure test, certified with a signature of an officer of the manufacturer.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

- A. Prior to installation, store units protected from weather, dirt, water, construction debris, and physical damage. Nozzle ends must be sealed water tight at all times to prevent freezing damage. Support stored units at points as required by manufacturer.

- B. Examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting equipment performance, maintenance, and operations. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 INSTALLATION**

- A. Do not lift heat exchanger by nozzle connections.
- B. Install in strict compliance with manufacturer's installation instructions and Related Sections. Maintain manufacturer's recommended clearances for service and maintenance.
- C. Support piping connecting to the heat exchanger fully independent of the heat exchanger connections.
- D. Install isolation valves, pressure gauges and thermometers in piping at each nozzle connection. Install air vents in piping at each top nozzle connection and drains on the bottom connections.
- E. Install insulation after all pressure testing is complete.
- F. During system cleaning and flushing, protect the heat exchanger as described in Related Sections.

### **3.3 TEMPORARY SERVICE**

- A. Start units for temporary use only with the expressed written permission of the Project Manager and in compliance with the requirements of the Contract Documents.
- B. Units shall not be put into temporary service prior to the entire chilled water and condenser water system being flushed and cleaned per Related Section, and after such flushing and cleaning is approved by the Commissioning Authority.
- C. Prior to placement into temporary service perform manufacturer's pre-start protocols.
- D. Commission equipment prior to putting into temporary service to the extent required by the Commissioning Authority. Re-perform all commissioning activities prior to Owner acceptance, even if previously commissioned to prepare for temporary service.

### **3.4 COMMISSIONING**

- A. Perform commissioning activities in accordance with Related Sections.

SECTION 236416 - CENTRIFUGAL WATER CHILLERS

**END OF CONTENTS TABLE**

*MPLE ECONOMIC ANALYSIS FOR DESIGNERS USE AND/OR TO BE COMPLETED BY BIDDERS IS AVAILABLE FOR THIS SPECIFICATION SECTION; SEE THE "STANDARD DETAILS" SECTION OF THE U-M A.E.C. WEBSITE: WWW.UMAEC.UMICH.EDU. AN ECONOMIC ANALYSIS SHOULD TYPICALLY BE PERFORMED TO COMPARE CHILLER ALTERNATIVES.*

*REVISED FORMAT AND CONTENT 04/2011 D. KARLE AND M. PLATT.*

*CHANGED TO INDICATE LINE REACTORS CAN BE USED ON VSD PROVIDED THEY ARE NOT MOUNTED EXTERNAL TO THE DRIVE. D. KARLE/K. BIRRINGER 2-7-12.*

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 236416 - CENTRIFUGAL WATER CHILLERS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

***INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.***

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 220548: Vibration Control
  - 2. Section 019100/019110: Commissioning
  - 3. Division 26: Electrical

**1.2 SUMMARY**

- A. Section Includes
  - 1. Centrifugal chiller(s), both semi-hermetic and open drive types.
  - 2. Centrifugal chiller installation, testing, commissioning, and start-up services.

***TURN ON HIDDEN TEXT AND MAKE THE BELOW PARAGRAPH PROJECT SPECIFIC, IF IT APPLIES TO THE PROJECT.***

- B. The chiller(s) will be prepurchased and assigned to the contractor for installation. Except as otherwise indicated, chiller manufacturer/vendor is responsible for items listed in PART 1 and Part 2 of this specification, installing contractor is responsible for items listed in PART 3.

***THE BELOW ARTICLE (IN HIDDEN TEXT) CONTAINS SAMPLE LANGUAGE FOR CHILLER ALTERNATES. PARAGRAPH "A" IS TYPICALLY USED ONLY IF THE CHILLER IS BEING PREPURCHASED. PARAGRAPH "B" IS USED TO SOLICIT ALTERNATIVE CHILLER SELECTIONS FOR TOTAL COST OF OWNERSHIP (TCO) EVALUATIONS. ONE MEANS OF SOLICITING TCO OPTIONS IS BY PREPURCHASING THE CHILLER(S); THERE ARE OTHER METHODS. THIS ARTICLE COULD ALSO BE USED TO DESCRIBE OTHER ALTERNATES BEING SOLICITED. EDIT THE ARTICLE TO MAKE IT PROJECT SPECIFIC, OR DELETE.***

**1.3 ALTERNATES**

- A. Manufacturers are encouraged to submit deduct alternates for early payment.

- B. In addition to submitting a base bid proposal that complies with this specification and the scheduled performance data, manufacturers are encouraged to submit alternate chiller selections that provide best value/lowest total cost of ownership to the University. Clearly identify each alternate proposal, and highlight how it differs from base bid requirements. Alternative selections should typically be chillers that provide the scheduled capacity but with improved energy performance, while otherwise fully complying to this specification. For each alternative proposed, provide complete submittal data.

**EDIT SUBMITTAL PARAGRAPHS ACCORDING TO BASE BID AND ALTERNATE CONDITIONS.**

**1.4 SUBMITTALS:**

- A. Provide product data as follows:
1. Rated capacity, weight with and without refrigerant charge, furnished specialties and accessories.
  2. Manufacturer's assembly type shop drawings indicating dimensions, required clearances; pipe connection types, locations and sizes; component assembly methods, support and vibration isolator details, marine water box details, and location and size of all field connections.
  3. Impeller speed (RPM), number of bearings, type of bearings, high speed impeller shaft RPM, number of stages, number of sets of inlet guide vanes, type and amount of refrigerant charge (in pounds), and amount of oil required.
  4. "A"-weighted sound pressure level and octave band sound pressure levels in accordance with AHRI Standard 575. Provide sound data in the format recommended by the AHRI Standard 575 Appendix D and E.
  5. Manufacturer's wiring diagrams for interlock and control wiring, clearly identifying required field wiring.
  6. AHRI-550/590 certified computerized selections, adjusted for zero capacity and zero NPLV tolerance. Provide capacity and NPLV performance selections at 100/75/50/25 percent load, with a condenser water temperature of 85°F at 100 percent load; 75°F at 75 percent; 65°F at 50 percent, and 65°F at 25 percent load; at the specified evaporator leaving water temperature and condenser/evaporator water flow rates and fouling factor allowances. Provide complete performance data at all selection points, to include all data required by AHRI-550/590 Minimum Data Requirements for Published Ratings.

**STRIKE THE BELOW PARAGRAPH WHEN AN ECONOMIC ANALYSIS TABLE IS NOT BEING REQUESTED. IF SUCH A TABLE IS BEING REQUESTED, INCLUDE THE BLANK TABLE ON THE DRAWINGS OR AS A PART OF THIS SPECIFICATION.**

7. Manufacturer shall complete and submit one Chiller Economic Analysis Table form for each base and alternate selection.
8. For open motors, provide curve showing motor heat loss versus chiller load.
9. Shipping, handling, and storage instructions.
10. Installation and start-up instructions.

11. Project specific maintenance and operating data, and recommended spare parts list.
12. Certification of compliance with ASME, UL, & ASHRAE fabrication requirements, specified elsewhere in these specifications.
13. Certified factory test results as specified in Part 2.
14. Confirmation that Coefficient of Performance (COP) for centrifugal chiller is not less than prescribed by ASHRAE 90.1.
15. Reports specified in Part 3.

**1.5 QUALITY ASSURANCE:**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
- C. UL, CSA, ETL, or MET label for chiller electrical requirements.
- D. ANSI/ASME SEC VIII Div. 1 Boiler and Pressure Vessel Code for construction and testing.
- E. NFPA 70/NEC 2005
- F. ANSI/NEMA 250 Enclosures for Electrical Equipment (1000 volts maximum).
- G. ANSI/NEMA MG 1 Motors and Generators.
- H. ANSI/ASHRAE 15 Safety Code for Mechanical Refrigeration.
- I. ASHRAE 90.1-2007 Energy Standards for Low Rise Buildings Except Low Rise Residential Buildings
- J. ANSI/AHRI: Standard 550/590 Performance Rating of Water Chilling Packages Using the Vapor Compression Cycle.
- K. ANSI/AHRI 575 Method of Measuring Machinery Sound Within an Equipment Space
- L. ANSI/AHRI 580 Non-Condensable Gas Purge Equipment For Use With Low Pressure Centrifugal Liquid Chillers
- M. ASTM C 534 Specification for Preformed Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.

***IF THE CHILLER MUST BE DISASSEMBLED TO BE SET IN PLACE, PROVIDE INFORMATION ON THE DRAWINGS AND OTHER CONTRACT DOCUMENTS DESCRIBING DISASSEMBLY/REASSEMBLY REQUIREMENTS.***

**1.6 DELIVERY, STORAGE, AND HANDLING:**

- A. Ship the chiller with weather-protected wrap for storage outdoors. Protect control panels, pipe openings, and other sensitive components with heavy plastic or other durable means to ensure unit cleanliness is maintained during shipping and storage.

- B. Provide rigging and installation instructions in advance to allow for planning.

**TURN ON HIDDEN TEXT AND MAKE THE BELOW PARAGRAPH PROJECT SPECIFIC, IF IT APPLIES TO THE PROJECT. SEE RELATED PART 3 ARTICLE.**

- C. The chiller will require disassembly and reassembly to allow movement into final location. The chiller manufacturer shall provide all labor and supervision to disassemble and reassemble the chiller, including any rigging required for these operations. The installing contractor shall provide all rigging to move the chiller to the point of final assembly. The chiller manufacturer shall assemble the unit complete with holding charge, ready for piping and electrical connections.

**1.7 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of 1 year from the date of Substantial Completion. Warranty coverage shall include loss of refrigerant.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers:
  - 1. York International by Johnson Controls
  - 2. Trane Co.

**2.2 CENTRIFUGAL PACKAGED CHILLER**

- A. Provide factory assembled, factory-tested, packaged, water cooled, centrifugal liquid chiller consisting of compressor, starter or variable speed drive as indicated, condenser, evaporator, built in purge system, refrigeration accessories, lifting lugs for servicing and installation, and factory-mounted instrument/direct digital control panel.
- B. Provide chillers with complete oil and refrigerant charge.
- C. Provide chiller vibration isolation.
- D. All components listed above shall be provided by the chiller manufacturer.

**2.3 PERFORMANCE REQUIREMENTS**

- A. Refer to schedules on Drawings for fundamental performance requirements. Also comply with the performance requirements specified in this Section.
  - 1. Fouling Factor Allowance:
    - a. Evaporator tubes:  $0.00010 \text{ h}\cdot\text{ft}^2\cdot\text{°F}/\text{Btu}$
    - b. Condenser tubes:  $0.00025 \text{ h}\cdot\text{ft}^2\cdot\text{°F}/\text{Btu}$

**DO NOT MODIFY TERMINOLOGY (E.G. "NET REFRIGERATION CAPACITY")  
IN BELOW PARAGRAPH, INCLUDING CAPITALIZATION OF WORDS. THESE  
TERMS MATCH DEFINITIONS IN AHRI 550/590.**

- B. Rated in compliance with AHRI-550/590, zero Net Refrigeration Capacity, zero Total Power Input, and zero Energy Efficiency (kW/ton) tolerance.
- C. All chiller selections shall be capable of unloading to 15 percent of design tonnage at 85°F entering condenser water temperature while maintaining surge-free, stable operation.
- D. Maximum self-excited vibration velocity at compressor and motor bearings in the vertical, horizontal and axial directions shall not exceed, in any direction, 0.19 inches per second RMS over the entire chiller operating range.

#### **2.4 COMPRESSOR**

- A. Single or multiple stage compressor, inlet guide vanes or multi stage capacity control guide vanes, shrouded aluminum alloy impellers designed and assembled for no critical speeds within operating range.
- B. The compressor shall be dynamically balanced and overspeed tested to 120 percent of design speed.

#### **2.5 EVAPORATOR AND CONDENSER**

- A. Carbon steel plate shells with carbon steel tube sheets and intermediate tube support sheets as required to prevent tube vibration and to allow replacement from either end of heat exchangers. Provide suitable baffles or distributing plates in condenser tubes to distribute refrigerant discharge gas on tubes evenly. Test refrigerant side under vacuum and test water side at minimum 225 psig.
- B. Tubes shall be seamless copper internally and externally enhanced, individually cleanable and replaceable. Tubes shall be minimum 0.025 inches wall thickness and provide 0.050 inches tube wall thickness at the plain lands contacting the intermediate tube supports and end sheets. Expand ends of tubes in tube sheets with intermediate tube support for tight fit.
- C. Evaporator and condenser water boxes shall be marine type (unless otherwise indicated) of fabricated steel with integral water connections bolted to shell of vessel, with vent and drain connections and hinged water box covers on both ends of the condenser and evaporator. Provide water piping stub outs with welded flanges for flanged connections.
- D. Units with multi-stage compressors shall incorporate an inter-stage flash vessel "economizer." Units with single stage compressor shall have the condenser circuited for liquid sub-cooling and be provided with a thermometer well to monitor the amount of sub-cooling.

- E. Provide service valves and other factory-installed accessories required to facilitate transfer of refrigerant from chiller shell to chiller shell or from chiller to a remote refrigerant storage/recycling system and to sense refrigerant pressure or temperature.

## **2.6 COMPRESSOR CASING AND SHELL FINISHES**

- A. Casing shall be fine grain cast iron with gasket sealed joints.
- B. Factory applied paint, all exposed ferrous metal surfaces on assembled chiller. Minimum one coat of primer, minimum 2 mils dry film thickness (DFT). Final finish with two coats of air dried or baked alkyd enamel metal coating, minimum 4 mils total DFT. Two coats of matching, insulation compatible paint on all factory installed insulation.
- C. Factory applied insulation. 3/4 inch minimum thickness for the evaporator water box, compressor motor, motor barrel, suction elbow and suction cover, 3/8 inch minimum thickness on economizer, 1/2 inch thick pipe insulation on liquid lines and all cold surfaces of chiller capable of forming condensation.
- D. Insulation: Flexible, closed cell elastomeric insulation, meeting requirements of ASTM C534, conductivity of 0.30, water vapor permeability of 0.20. Materials shall have a flame spread index of less than 25 and a smoke-developed index of less than 50 when tested in accordance with ASTM E 84, latest revision.
- E. Before insulating steel surfaces, prepare surfaces for paint and prime and paint as indicated for other painted components.
- F. Seal seams and joints to provide a vapor barrier.
- G. Acceptable product and manufacturer:
  - 1. AP Armaflex by Armacell LLC, or equivalent.

## **2.7 COMPRESSOR LUBRICATION SYSTEM**

- A. Submerged pump and replaceable oil filter; complete with automatic oil heater designed to separate refrigerant from oil, site glass and oil cooler. System shall provide positive pressure lubrication of journals, bearing, and seals (if any), during start-up, operation and coast-down of chiller, including power interruptions.

## **2.8 PRESSURE RELIEF DEVICES**

- A. Comply with ASHRAE 15; provide rupture disc(s) or pressure relief device(s).
- B. Additionally provide spring-loaded relief valve (s) (Trane Rupture-guard or York Vent-guard) to help contain refrigerant charge after an over-pressure event.

**2.9 PURGE SYSTEM (R123 SYSTEMS ONLY)**

- A. Rated, tested, marking and nameplate data; meeting all conformance requirements of AHRI 580. To include purge tank with dryer elements and 115v/60/1 pump out compressor. Rated for no more than 0.0049 lb. of refrigerant per 1 lb. non-condensable at standard room conditions with condensing refrigerant temperatures greater than 80°F.

**2.10 REFRIGERANT FLOW CONTROL DEVICES**

- A. Provide refrigerant flow control devices between evaporator and condenser (and as required elsewhere) to regulate refrigerant flow at volume and pressure required to maintain evaporator liquid refrigerant level sufficient to keep evaporator tubes adequately wetted through full range of chiller operation.

*CHILLERS THAT ARE LOCATED ON SLAB ON GRADE DO NOT TYPICALLY REQUIRE SPRING ISOLATORS TO CONTROL VIBRATION TRANSMISSION TO THE BUILDING STRUCTURE. CONSULT WITH STRUCTURAL ENGINEER/VIBRATION CONSULTANT TO DETERMINE VIBRATION ISOLATION SYSTEM THAT IS REQUIRED. EDIT BELOW ARTICLE ACCORDING TO REQUIRED VIBRATION ISOLATION SYSTEM. BE SURE TO INDICATE ANY SUPPLEMENTAL STEEL REQUIREMENTS ON THE DRAWINGS AND TO INCLUDE THE VIBRATION CONTROL SPECIFICATION IF VIBRATION ISOLATION IS REQUIRED.*

**2.11 VIBRATION ISOLATION**

- A. Chiller manufacturer shall furnish vibration isolators of the type and performance specified in Related Section "Vibration Control." Quantity, location, attachment method, and compatibility with the specific chiller provided shall be the responsibility of the chiller manufacturer.
- B. Spring isolators shall be of the low profile "height saving" arrangement designed to minimize chiller height above finished floor.
- C. When no vibration isolation is specified, provide neoprene pad isolators.

**2.12 COMPRESSOR MOTOR AND ACCESSORIES**

- A. Continuous duty, squirrel cage, induction type, either hermetically sealed, refrigerant cooled or open drive/open drip proof, rated for operation at 460 volts, 3 phase, 60 Hz. Full load operation of the motor shall not exceed nameplate full load current rating or enter into the service factor. The first critical speed shall be above the operating speed. Provide for removal of the stator without breaking the main refrigerant piping connections. Provide RTD's or thermistors, one per phase, to monitor motor winding temperature.
- B. Motors used with variable frequency drives shall be rated inverter duty and comply with NEMA MG-1 Part 31, with minimum insulation Class F and insulation temperature rise rating of Class B.

*SELECT STARTER TYPE OR VARIABLE SPEED DRIVE FROM THE THREE SECTIONS BELOW. DELETE THE OTHER TWO SECTIONS. CONSULT WITH ELECTRICAL ENGINEER AND U-M DESIGN MANAGER TO DETERMINED WHICH STARTER TYPE OR IF A VSD IS APPROPRIATE FOR THE PROJECT. VARIABLE SPEED DRIVES ARE NORMALLY INSTALLED TO IMPROVE PART-LOAD EFFICIENCY. HIGH MAINTENANCE COST OF VSD'S HAS REOPENED THE ARGUMENT FOR CONSIDERING A STARTER IN LIEU OF VSD, ESPECIALLY IN MULTIPLE CHILLER PLANTS.*

**2.13 WYE DELTA STARTER**

- A. Unit mounted and pre-wired, wye-delta, closed-transition, reduced voltage type motor starter mounted in a NEMA 1 enclosure. The enclosure shall include a lockable hinged door with locking type retaining latches able to receive a padlock, and shall be UL labeled 508 compliant. Starter shall include a prewired pilot relay to initiate start sequence from the chiller controller, 4 contactors, motor overload protection and a 3 phase starting resistor/reactor bank.
- B. The startup current draw shall be limited to 33 percent of locked rotor amps (LRA) for an adjustable time of 2 to 15 seconds minimum.

*CONTACT ELECTRICAL ENGINEER AND SPECIFY BELOW THE SHORT CIRCUIT RATING REQUIRED FOR YOUR SPECIFIC PROJECT.*

- C. Starter shall have a 100,000 AIC short circuit withstand rating.
- D. Provide 120 volt control power transformers to power chiller controller, purge system, oil system, and all other auxiliary equipment and controls.
- E. The following motor protection features shall be integrated with the chiller controller:
  - 1. Current phase loss
  - 2. Current phase unbalance
  - 3. Current phase reversal
  - 4. Excessive acceleration time
  - 5. Incomplete starting sequence
  - 6. Over/Under line voltage
  - 7. Motor current overload during start up and running
  - 8. Momentary power loss protection with auto restart
  - 9. Starter contactor fault protection
  - 10. Starter transition failure

**2.14 SOLID STATE STARTER**

- A. Unit mounted and pre-wired solid state type motor starter utilizing silicon controlled rectifiers, mounted in a NEMA 1 enclosure. The enclosure shall include a lockable hinged door with locking type retaining latches able to receive a padlock, and shall be UL labeled 508 compliant. Starter shall include a two-wire control input to initiate start sequence from the chiller controller.

- B. The starter mode shall be closed loop, current limit control and shall provide a smooth acceleration of the motor without current transitions or transients. The following shall be user programmable:
  - 1. Acceleration ramp time, 1 to 30 seconds minimum adjustment range.
  - 2. Motor start current.
  - 3. The starter shall provide transient voltage protection to the SCR's through RC snubbers and MOV's connected line-to-line and line-to-ground. High heat sink temperature protection shall also be provided

**CONTACT ELECTRICAL ENGINEER AND SPECIFY BELOW THE SHORT CIRCUIT RATING REQUIRED FOR YOUR SPECIFIC PROJECT**

- C. Starter shall have a 100,000 AIC short circuit withstand rating.
- D. Provide 120 volt control power transformers to power chiller controller, purge system, oil system, and all other auxiliary equipment and controls
- E. Provide the following motor protection features:
  - 1. Current phase loss
  - 2. Current phase unbalance
  - 3. Current phase reversal
  - 4. Excessive acceleration time
  - 5. Over/Under line voltage
  - 6. Motor current overload during start up and running
  - 7. Momentary power loss protection with auto restart

**2.15 VARIABLE SPEED DRIVE**

- A. Unit mounted and pre-wired variable speed drive to adjust compressor motor speed automatically in conjunction with compressor vane position, to maximize part load efficiency. Drive shall be mounted in a NEMA 1 enclosure and UL labeled 508C
- B. PWM type, utilizing IGBT's with a power factor of 0.96 or higher at all loads and speeds.
- C. Drive efficiency shall be 97 percent or higher at full load and full speed.

**CONTACT ELECTRICAL ENGINEER AND SPECIFY BELOW THE SHORT CIRCUIT RATING REQUIRED FOR YOUR SPECIFIC PROJECT**

- D. Drive shall have a 65,000 AIC short circuit withstand rating.
- E. Drive shall be insensitive to incoming power phase rotation and shall be capable of auto restart after a momentary power loss.
- F. Provide 120 volt control power transformers to power chiller controller, purge system, oil system, and all other auxiliary equipment and controls
- G. Variable speed drive shall include the following features:
  - 1. Over-voltage and-under voltage protection; 3-phase sensing motor over-current protection, single phase protection, and over temperature protection

2. Digital readout at the chiller controller of output frequency, input voltage, 3-phase output current, input kilowatts, and self-diagnostic service parameters. Separate meters for this information will not be acceptable.
3. kW Meter - The unit's input power consumption shall be measured and displayed digitally via the chiller controller. The kW meter accuracy shall be +/- 3 percent of reading.
4. Ammeter - Simultaneous three-phase true RMS digital readout via the chiller controller. Three current transformers shall provide isolated sensing. The ammeter accuracy shall be plus or minus 3 percent of reading.
5. Voltmeter - Simultaneous three-phase true RMS digital readout via the chiller controller. The voltmeter accuracy shall be plus or minus 3 percent of reading.
6. Elapsed Time Meter - Digital readout of the unit's elapsed running time (0 - 876,600 hours, resettable) shall be displayed via the chiller controller.

**HOSPITAL PROJECTS MAY REQUIRE AN "IEEE 519" STUDY THAT ADDRESSES HARMONIC CONCERNS RELATED TO THE ELECTRICAL SYSTEM AS A WHOLE (NOT JUST HARMONIC CONCERNS THAT ARE SPECIFIC TO ANY PARTICULAR PIECE OF EQUIPMENT). AE SHALL DISCUSS THIS POSSIBLE REQUIREMENT WITH THE HOSPITAL'S ASSIGNED DESIGN MANAGER.**

- H. At any VSD operating speed from 20% to 100%, current total harmonic distortion (THD) shall not exceed 100% of the VSD input current waveform, and voltage THD shall not exceed 3% of the VSD input voltage waveform, both as measured at the drive's incoming power connection lugs. Provide UL listed harmonic filter or power conditioner if required to guarantee these limits. Line reactors mounted external to the drive shall not be used. Filter/conditioner shall be unit mounted on the chiller. Manufacturer shall provide all wiring and conduit between filter, variable speed drive and motor.

## **2.16 CHILLER DISCONNECT SWITCH**

**THE ELEVATION OF THE DISCONNECT SWITCH INDICATED BELOW IS EXACTLY PER NATIONAL ELECTRIC CODE REQUIREMENTS AND WILL BE STRICTLY ENFORCED BY THE U-M INSPECTION DEPARTMENT. DURING DESIGN, VERIFY WHAT DISCONNECT HEIGHT IS AVAILABLE AS STANDARD WITH CHLR. MFR. AND MAKE DESIGN PROVISIONS ACCORDINGLY. FOR EXAMPLE, AN ELEVATED SERVICE PLATFORM MAY BE REQUIRED.**

- A. Provide a factory-mounted, prewired, NEMA heavy-duty rated, fused disconnect switch with the starter. The disconnect switch shall be lockable in the "off" position and shall serve as the single point of power connection to the chiller.
- B. Configure the disconnect switch for top or side conduit entry. Provide line side lugs of the long barrel, two hole, compression type. Mechanical lugs are not acceptable.

- C. Mount the disconnect switch to comply with NEC requirements. The distance from the finished floor to the center of disconnect handle grip in its highest position shall not exceed 6 feet 7 inches, inclusive of housekeeping pad and vibration isolator heights.

**2.17 CHILLER CONTROLLER**

- A. Unit mounted pre-wired chiller controller mounted in a NEMA 1 enclosure, labeled by UL, CSA, ETL or MET. All external factory wiring shall be installed to minimize potential damage, and all power wiring, 110V and higher, shall be in a NEC compliant conduit system. Controller shall include an adjustable mounting system such that center of panel may be set at a maximum of 6 feet 6 inches above the finished floor, inclusive of housekeeping pad and vibration isolator heights.
- B. The chiller controller shall automatically adjust compressor pre-rotation vane position, variable speed drive when provided, and other chiller systems to maximize part-load efficiency and to provide capacity control.
  - 1. Capacity modulation shall be maintained within plus or minus 0.5°F of CHW set point, at entering condenser water temperatures as low as 65°F from full load to 15 percent load, without overshoot, hunting, surging, or cycling the machine off.
- C. Provide the chiller controller with the required hardware and software for the following functions.
  - 1. Safeties:
    - a. Compressor starter failure detection
    - b. Compressor start up, shut down sequences
    - c. High compressor discharge temperature
    - d. Surge detection and protection
    - e. High lubricating oil temperature
    - f. Low lubricating oil pressure
    - g. High bearing temperature
    - h. Evaporator and or condenser loss of flow
    - i. High condenser pressure limit and high pressure cut out
    - j. Evaporator low refrigerant temperature limit
    - k. Low evaporator leaving fluid cut out
    - l. Motor current limit, motor current overload
    - m. High motor winding temperatures
    - n. High vacuum operation limit
    - o. Power loss, phase unbalance, phase loss, reverse rotation
    - p. Over/under voltage
    - q. Short cycling protection
  - 2. Front panel display in clear English language and inch/pound units of the following:
    - a. Operating mode run status
    - b. Set point source or reset source
    - c. Password protection security
    - d. Evaporator freeze protection and low limit control data
    - e. Evaporator leaving fluid set point
    - f. Evaporator and condenser flow proof

- g. Calculated chiller capacity (tons)
  - h. Compressor discharge temperature
  - i. Chiller starts and run-time counter
  - j. Entering and leaving evaporator water temperature
  - k. Entering and leaving condenser water temperature
  - l. Saturated condenser temperature and pressure
  - m. Saturated evaporator temperature and pressure
  - n. Bearing or bearing oil temperatures
  - o. Lubricating oil temperature and pressure
  - p. Current limit or demand limit
  - q. Phase voltage and current
  - r. Motor winding temperature
  - s. Power demand (kW) and power factor
  - t. Purge compressor suction temperature (R123 machines only)
  - u. Purge pump out rate (R123 machines only)
  - v. Purge pump out time last or current cycle (R123 machines only)
  - w. Total purge pump out time (R123 machines only)
  - x. Total purge run time (R123 machines only)
3. DDC Control Inputs:
- a. Remote Start/Stop
  - b. Chilled water temperature set point reset
4. Binary Outputs:
- a. Evaporator Pump Relay
  - b. Condenser Pump relay
  - c. Chiller Running Relay
  - d. Alarm Relay (manual reset required)
- D. The controller shall provide an output signal to the Owner's DDC system for controlling condenser water temperature to maximize chiller operating efficiency while maintaining proper refrigerant head pressure at all times. Provide in the chiller controller a 4 to 20 mA or 0 to 10 volt output signal to allow Owner's DDC system to reset condenser water temperature via cooling tower fan speed control and tower bypass valve modulation while maintaining proper chiller refrigerant head pressure.
- E. Provide an ON-OFF-AUTO rocker switch on the front of the controller panel to allow local control or remote control of the start/stop function by Owner's DDC system. When switch is set to ON or OFF positions, the remote start or stop signal from the Owner's DDC shall be ignored. If turning the chiller on or off at the chiller control panel interface accomplishes the same thing, an ON-OFF-AUTO rocker switch is not required.
- F. Provide factory installed and pre-wired proof-of-flow switches that confirm flow thorough the evaporator and condenser to the chiller control panel. Alternatively, provide United Electric Model J21K-14829 differential pressure switches for field installation to prove evaporator and condenser water flows.
- THE BELOW ARTICLE (IN HIDDEN TEXT) CONTAINS SAMPLE LANGUAGE FOR VARIABLE PRIMARY FLOW (VPF) CONTROL. THE ADDITIONAL FEATURES TO PROVIDE ACCURATE CONTROL ON VPF SYSTEMS IS AN OPTION ON CHILLERS AS OF MARCH 2011.**
- G. Variable Primary (Evaporator) Flow Compensation

1. The controller shall provide accurate and stable response to changes in evaporator water flow rate. The control algorithm shall automatically adjust the control gain (and/or other control parameters) to maintain leaving chilled water temperature within +/- 0.5°F of set point at flow rate variations up to 25% change per minute, and within +/- 2°F of set point at flow rate variations up to 50% per minute.
2. Include factory mounted transducers to read differential evaporator water pressure and differential condenser water pressure, and any other necessary parameter.
3. The controller shall display the following additional data:
  - a. Evaporator differential pressure
  - b. Condenser differential pressure
  - c. Evaporator water flow rate
  - d. Condenser water flow rate
  - e. Evaporator capacity (tons)

**IF THE PROJECT INVOLVES THE PURCHASE OF MULTIPLE CHILLERS OF THE SAME TYPE AND SIZE, CONSIDER REVISING THE BELOW TO ONLY REQUIRE A FACTORY TEST ON ONE OF EACH TYPE AND SIZE.**

#### **2.18 SOURCE QUALITY CONTROL**

- A. Chiller shall be factory performance tested in an AHRI certified test facility per AHRI standard 550/590. Factory test instrumentation calibration shall be traceable to the National Institute of Standards And Technology.
  1. Chiller shall be tested at the following load/condenser water temperature conditions, at the specified evaporator leaving water temperature and condenser/evaporator water flow rates and fouling factor allowances:
    - a. No Chiller Economic Analysis Table Requested: 100 percent/85°F, 75 percent/75°F, 50 percent /65°F, 25 percent /65°F, 15 percent/85°F.
    - b. Chiller Economic Analysis Table Requested: At any four loads and conditions indicated in the table, as selected by the Owner, and at 15 percent/85°F.
- B. Factory vibration test to demonstrate compliance to vibration performance requirements.
- C. The Owner's Representative shall be allowed to witness the factory testing. An officer of the manufacturer's company shall certify by signature that the factory tests were performed as specified, the report accurately reflects the test results, and that the chiller met or exceeded all performance requirements. The report shall clearly identify any performance requirements that were not achieved.

**DO NOT MODIFY TERMINOLOGY (E.G. "NET REFRIGERATION CAPACITY") IN BELOW PARAGRAPH, INCLUDING CAPITALIZATION OF WORDS. THESE TERMS MATCH DEFINITIONS IN AHRI 550/590**

- D. The equipment will be accepted by the Owner if the manufacturer's certified test results are provided and the equipment met or exceeded all performance requirements (zero Net Refrigeration Capacity, zero Total Power Input, and zero Energy Efficiency (kW/ton) tolerance).

**PART 3 - EXECUTION**

**3.1 EXAMINATION, STORAGE, AND PREPARATION**

- A. Upon delivery, validate holding charge and that integrity of the delivery protection has been maintained, the chiller is undamaged, and all accessory parts were delivered. Reject damaged chillers. Verify that center of disconnect and chiller control panel height will be a maximum of 6 feet 7 inches above the finished floor, inclusive of housekeeping pad and vibration isolator heights. Restore protection. Provide a delivery report indicating chiller condition to the Owner's Representative.
- B. Rig units off delivery trucks. Comply with Manufacturer's rigging instructions.
- C. Move all refrigerant or oil supplied by the manufacturer to a location next to the chiller and contact the Owner's Representative to inform them of the amount and type of refrigerant and oil delivered.
- D. Store units protected from weather, dirt, water, construction debris, and physical damage. Support stored units at points as required by manufacturer.
- E. Verify during storage that unit refrigerant or nitrogen holding charge levels are being maintained. Record the charge pressure and ambient temperature weekly and provide report to Owner's Representative. Take immediate action under the supervision of the manufacturer to restore any significant reduction in charge pressure level.
- F. Examine chillers before installation. Validate holding charge has been maintained and that the chiller is undamaged. Provide a pre-installation report indicating chiller condition to the Owner's Representative.
- G. Examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting chiller performance, maintenance, and operations before equipment installation.
  - 1. Final chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- H. Rig units into final locations. Comply with Manufacturer's rigging instructions. Conduct a pre-installation conference to review rigging and installation requirements with all parties involved.

**TURN ON HIDDEN TEXT AND MAKE THE BELOW ARTICLE PROJECT SPECIFIC, IF IT APPLIES TO THE PROJECT.**

**3.2 CHILLER ASSEMBLY**

- A. The chiller will require disassembly and reassembly to allow movement into final location. The chiller manufacturer shall provide all labor and supervision to disassemble and reassemble the chiller, including any rigging required for these operations. The installing contractor shall provide all rigging to move the chiller to the point of final assembly. The chiller manufacturer shall assemble the unit complete with holding charge, ready for piping and electrical connections.

**3.3 CHILLER INSTALLATION**

- A. Install the chiller in strict compliance with manufacturer's installation instructions and Related Sections. Maintain manufacturer's recommended clearances for service and maintenance.
- B. Install chiller on support structure or concrete base as indicated. Install the specified vibration isolation, furnished by the chiller manufacturer, in strict compliance with chiller manufacturer's directions.
- C. Provide connection-size ball valves with threaded hose end connections at all water vent and drain connections on the evaporator and condenser, whether indicated on Drawing details or not.
- D. Install relief vent piping in strict accordance with chiller manufacturer's recommendations.
- E. Adjust chiller control panel so that center of panel is set at maximum of 6 feet 7 inches above finished floor, inclusive of housekeeping pad and vibration isolator heights.
- F. Install separate devices furnished by manufacturer and not factory installed.
- G. Repair all damaged insulation to factory equivalent.
- H. Repair scratches to factory equivalent finish, using chiller manufacturer provided paint.
- I. Complete the manufacturer's pre-start checklist and submit it for scheduling of the manufacturer's field startup technician.

**3.4 COMMISSIONING**

- A. Perform the commissioning activities as outlined in Related Section "Commissioning" and other requirements of the Contract Documents.

### 3.5 SYSTEM STARTUP

- A. Manufacturer shall provide a factory-trained representative for the time required to complete start-up, commissioning, and testing each chiller. This service shall be provided on days and at times required to meet the construction schedule and/or project phasing requirements, at the complete discretion of the Owner's representative, without additional charges. There shall be no time limit on this service, but shall be the time required to bring the unit to proper operation. This service must include all necessary written and verbal instructions to U of M operating personnel. The manufacturer's factory-trained representative shall:
1. Verify correct installation and organize, instruct and assist the mechanical contractor's personnel in start-up procedures.
  2. Fill chiller with oil if not factory installed, and charge the chiller with refrigerant.
  3. Verify all pre-start checks. Start-up the chiller, set controller parameters, make field adjustments, refrigerant balance the chiller, verify proper chiller operation. Assist Owners personnel with proper set-up of remote control operation of the chiller. Provide a written report after each visit, prior to leaving.
  4. Participate in the commissioning of the chiller to the extent required by the project Commissioner.
- B. If the initial start-up and machine trim is accomplished under chiller load condition of less than 100 percent load, the manufacturer's representative shall return to the job site and re-adjust the machine during 100 percent load conditions at no additional cost.
- C. The manufacturer representative's written report shall include complete data on all services provided, and document all programmed settings as well as the amount of refrigerant and other fluids installed, both from the factory and in the field during startup.

### 3.6 OWNER TRAINING

- A. Manufacturer's factory-trained representative shall train Owner's maintenance personnel on start-up and shutdown procedures, trouble-shooting, vibration test locations, service schedules, and preventative maintenance procedures, minimum of 8 hours. Review with Owner's personnel, the data contained in the Operating and Maintenance Manuals.
- B. Schedule training with Owner through the Architect/Engineer with at least 7 days prior notice. Training and start up services are separate functions and training shall not be combined with startup services.

**3.7 FIELD QUALITY CONTROL**

- A. Chiller manufacturer shall perform vibration testing. Measure at compressor and motor bearings in the vertical, horizontal and axial directions, to demonstrate compliance with Part 2 vibration performance requirements. Permanently label the location where each vibration measurement was taken with a unique identification number.
- B. Provide report to owner within 1 week of testing. Include diagram of chiller with measurement points labeled to match field labels.
- C. The Chiller manufacturer shall make corrections and retest if it is determined the cause of excess vibration is due to defective equipment. The Installing contractor shall make corrections and pay for a chiller mfr. retest if it is determined the cause of excess vibration is improper installation.

**REVISIONS:**

**3-31-04: SUBSTANTIALLY REVISED AND POSTED TO WEB.**

**04-10-08: HYDRONICS MECH TECH GROUP REVISIONS: ADDED TOWER  
TECH AND EVAPCO. BOTH PRODUCTS ARE UNDER CONSIDERATION AND  
SHOULD ONLY BE USED IF APPROVED BY H&S MECH TECH TEAM. MINOR  
REVISIONS IN OTHER AREAS.**

**06-09-08 APPROVED FOR WEB.**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SCOPE OF WORK:**

- A. Furnish and install the cooling towers specified in this section, and as detailed and scheduled in the drawings.

**1.3 RELATED SECTIONS:**

**SPEC EDITOR: THIS PARAGRAPH CAN BE DELETED IF COOLING TOWER  
IS INCLUDED IN GENERAL CONTRACT.**

- A. Section 220513 - Motors

**1.4 QUALITY ASSURANCE:**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Cooling Tower shall be CTI certified.
- C. Handrails and ladders shall meet OSHA and MIOSHA requirements.

**1.5 COOLING TOWER WARRANTY:**

**SPEC EDITOR: AS IS FOR MARLEY QUADRAFLOW. MODIFY FOR OTHERS.**

- A. The mechanical equipment including the motor must be warranted by the manufacturer against any failure caused by defects in materials and workmanship for at least five years from date of tower shipment. The balance of the cooling tower shall be warranted by the manufacturer for at least one (1) year from start-up, not to exceed 18 months from equipment ship date.

1.6 THERMAL PERFORMANCE WARRANTY:

*SPEC EDITOR: RETAIN FOR ALL PROJECTS UNLESS TESTING IS INCLUDED AS PART OF THE PROJECT).*

- A. The Tower performance will not be verified, by independent tests, initially under this contract. Balancing will be limited to the extent described in section 230593. The owner, at his option, may hire an independent testing agency, during the performance guarantee period of five years, to test the cooling tower in accordance with applicable Cooling Technology Institute (CTI) standards and in the presence of a representative of the cooling tower manufacturer. If the performance does not meet specifications with no damage to any components of the tower, the tower manufacturer shall pay for the test done by the owner per CTI (Cooling Tower Institute) requirements and for the remedial actions required to meet the performance. Thermal performance must be warranted by the manufacturer for at least five (5) years from start-up.

*MOST TOWERS BELOW ARE SPECIFIED AS FM APPROVED. VERIFY THE NEED FOR FM APPROVAL FOR YOUR SPECIFIC PROJECT, AND EDIT THE BELOW ACCORDINGLY. DEPENDING ON TOWER TYPE, SOME MANUFACTURERS MAY NOT BE ABLE TO PROVIDE A FM APPROVED TOWER.*

PART 2 - PRODUCTS

2.1 GENERAL COOLING TOWER REQUIREMENTS

- A. Design structural system for the following live loading in addition to tower dead-loads and operating-loads:
  - 1. Wind Loading: 30 psf on exposed vertical surfaces.

*SPEC EDITOR: DELETE IF NOT WINTERIZED / SELECT APPLICABLE*

- B. Basin Heater: Basin heaters sized by manufacturer to maintain basin water at 40 deg.F (4.4 deg.C) at ambient temperature of -10 deg.F and wind velocity of 15 mph.

*SPEC EDITOR: ONLY ELECTRIC HEATER FOR MARLEY QUADRAFLO*

*SPEC EDITOR: CONSIDER TWO HEATER ELEMENTS IN LARGE COOLING TOWER CELLS IN SINGLE CELL APPLICATION.*

- 1. Steam injection nozzle for each cold water basin for direct injection of steam into basin. Nozzle shall be Penberthy Model NWH steam injection nozzle with line size discharge pipe and all associated fittings required for a complete installation. Nozzles, piping, etc. shall be field installed.

2. Electric basin heater: One 480v or 208v (as scheduled), 3 phase basin heater element per cell, shipped loose to prevent damage during shipment. 480v or 208v (as scheduled), 3 phase contactor, fixed lockable disconnect, circuit breaker, and control transformer in a NEMA 4, 3R if mounted outdoors, NEMA 1 if mounted indoors, electrical panel. Control system shall be wired to a terminal strip allowing Owners Building Management System to energize contactor coil from a remote set of contacts. Manufacturer's standard combination water level and temperature sensor wired to terminal strip.

C. Water Level Control:

1. Float operated water make-up valves, one per cell, unless detailed or scheduled otherwise on the contract drawings. Make-up valves shall be actuated by a 2 piece float/valve rod assembly, with one rod oriented approximately vertically and connected to the float, and the second rod oriented horizontally and connected to the valve. Valve on-off shall be adjustable by adjustment of the vertical rod length. Floats shall be welded copper or polystyrene filled plastic. All castings for the float valves, float rod and keys, etc. shall be bronze construction with a complete non corroding construction assembly.

*SPEC EDITOR: VSD IS ALWAYS REQUIRED.*

- D. Motor: Unless noted otherwise provide TEFC, inverter duty, 1800 rpm, located outside air stream. Refer to 220513 "Motors" for additional requirements

*SPEC EDITOR: VERIFY ACCESS REQUIREMENTS. HANDRAIL AND LADDER NOT AVAILABLE ON QUADRAFLO.*

*SPEC EDITOR: INDICATE IN DRAWINGS LADDER AND HANDRAIL GENERICALLY. HANDRAIL REQUIRED ON TOP OF TOWER FOR EVAPCO.*

- E. Handrails: Unless noted otherwise, provide galvanized steel or aluminum pipe rails of required height above tower. Include knee and toe rails of required diameter and heights, meeting all the OSHA and MIOSHA requirements.

- F. Ladders: Galvanized steel or aluminum ladder, to the access door and to top of cooling tower working surface, meeting OSHA and MIOSHA requirements. If access platforms are not provided then ladders shall extend beyond bottom of the cooling tower to access from roof, but shall not be supported from the roof.

1. Safety Cage: Include safety cage of galvanized steel or aluminum.
2. Provide ladder from roof to top of tower or highest service level.
3. Provide ladder from service platform to top of tower.

*SPEC EDITOR: CONSULT WITH PROJECT DESIGNER, COORDINATE AS TO WHETHER THIS PARAGRAPH SHOULD BE INCLUDED.*

- G. Maximum Permissible Sound Pressure Level: Use 0.0002 microbar as reference. Measure at 50' in several directions, uniformly covering 360 deg. Do not exceed maximum permissible dB level each of the following octave bands:

**SPEC EDITOR: CONTACT REPRESENTATIVE TO FILL IN THE BLANKS.**

63 Hz - ?? dB
125 Hz - ?? dB
250 Hz - ?? dB
500 Hz - ?? dB
1000 Hz - ?? dB
2000 Hz - ?? dB
4000 Hz - ?? dB
8000 Hz - ?? dB

- H. Vibration Control: Coordinate vibration support locations for cooling towers with steel support.

**SPEC EDITOR: CHOOSE TYPE OF COOLING TOWER.**

**2.2 INDUCED DRAFT CROSSFLOW COOLING TOWER:**

**SPEC EDITOR: BASED ON MARLEY NC OR BAC SERIES 3000**

- A. General: Factory fabricated cooling tower, induced draft crossflow type. Cooling tower shall be FM approved.
- B. Casings: 16 gauge G-235 galvanized steel minimum, with hot dipped galvanized steel screws and bolts.
- C. Collecting Basin and Sump: Welded stainless steel. Collecting basin and sump, including lift-out stainless wire strainer with openings smaller than nozzle orifices, and with connections for equalizer piping, drain, overflow and water make-up.
- D. Wetted-Surface Fill: Wave form vertical sheets of PVC having flame spread rating of 5 per ASTM E 84 - 77A.
- E. Drift Eliminators: Limit drift-loss to indicated maximum percentage of 0.005 of total water circulated, with PVC, having flame spread rating of 5 per ASTM E 84 formed integral with the fill.

**SPEC EDITOR: GALVANIZED STEEL IS BAC. INTEGRAL IS MARLEY.**

- F. Louvers: Designed and installed by manufacturer, and of sufficient thickness and rigidity to prevent visible sagging. Provide galvanized steel or PVC integral with fill.
- G. Water Distribution System: Stainless steel, open basin, gravity-flow type with plastic metering orifices; installed by manufacturer to ensure even distribution of water over wetted-surface-fill, unless otherwise indicated on drawings, provide self-draining internal PVC piping from bottom inlet connection to distribution system.
- H. Basin Covers: Galvanized steel or stainless steel sheet removable cover with handles of sufficient construction to permit walking upon, installed by manufacturer to prevent debris from entering basin and to inhibit algae growth by eliminating sunlight.

- I. Air Inlet Screens: Galvanized steel mesh, mounted in removable frames by manufacturer or inert PVC integral to fill.

*SPEC EDITOR: CAN BE OMITTED WITH TOWERS WITH BOTTOM INLET CONNECTIONS. DESIGNER TO INDICATE SEPARATE SHUT-OFF VALVES TO EACH CELL.*

- J. Flow Control Valves: Angle valves for balancing flow to each distribution basin or self-balancing distribution system.

- K. Fans and Drives: Aluminum propeller-fan. Gear-drive including speed reducer with extended oil line and dipstick.

*SPEC EDITOR: COORDINATE WITH ELEC. ENGINEER. SHOW FIELD WIRING TO NEMA 4 JUNCTION BOX WITH RESET BUTTON MOUNTED OUTSIDE OF TOWER. SHOW ON ELECTRICAL DRAWING, REFER TO STANDARD DETAIL.*

- L. Vibration Cutout Switch: Provide switch to de-energize fan motors if excessive vibration occurs due to fan imbalance. If vibration switch is located inside tower, provide remote reset feature wiring. Manufacturer: Metrix #5550.

- M. Fan Guard: Galvanized steel welded steel rod and wire guard

*FOR LARGE TOWERS WHERE THE FAN SPEED REDUCER IS NOT ACCESSIBLE FOR SERVICE FROM THE INTERNAL WALKWAY THAT IS SPECIFIED BELOW, DESIGNER SHOULD SPECIFY A SECONDARY PLATFORM WITH LADDER TO REACH THE SPEED REDUCER, WHEN AVAILABLE FROM THE MANUFACTURERS.*

- N. Access: Large access door at both ends of tower to eliminators and air plenum. Provide with internal walkways that extend the full length of the cooling tower basin, constructed of G-235 galvanized steel with hot dipped galvanized steel screws and bolts.

- O. Cooling tower manufacturer: Marley NC or BAC Series 3000.

### 2.3 INDUCED DRAFT COUNTERFLOW COOLING TOWER:

*SPEC EDITOR: BASED ON EVAPCO AT, UNDER CONSIDERATION ON A PROJECT TO PROJECT BASIS. TO BE APPROVED BY HYDRONICS MECH TECH TEAM.*

- A. General: Factory fabricated cooling tower, induced draft counter flow type. Cooling tower shall be FM approved.

- B. Casings: 16 gauge G-235 galvanized steel minimum, with steel screws.

- C. Collecting Basin and Sump: Welded 304 stainless steel. Collecting basin and sump, including lift-out stainless wire strainer with openings smaller than nozzle orifices and with connections for equalizer piping, drain, overflow and water make-up, as required for specified application.

- D. Wetted-Surface Fill: Wave form vertical sheets of PVC having flame spread rating of 5 per ASTM E 84 - 77a .

- E. Drift Eliminators: Limit drift-loss to the indicated maximum percentage of 0.001 of total water circulated, with PVC, having flame spread rating of 5 per ASTM E 84-81a formed integral with the fill.
- F. Louvers: Designed and installed by manufacturer, and of sufficient thickness and rigidity to prevent visible sagging. Provide drift eliminators for cooling tower to be PVC and mounted horizontally above the water distribution system.
- G. Water Distribution System: Cooling tower to be equipped with a non-corrosive water distribution system consisting of schedule 40 polyvinyl chloride (PVC) header and spray branches, nozzles are to be clog resistant and thread into the PVC header pipe.
- H. Air Inlet Screens: Cooling tower shall be equipped with PVC inlet louvers mounted in removable frames by manufacturer.
- I. Fans and Drives: Aluminum propeller-fan. Gear-drive including speed reducer with extended oil line and dipstick.

**SPEC EDITOR: COORDINATE WITH ELEC. ENGINEER. SHOW FIELD WIRING TO NEMA 4 JUNCTION BOX WITH RESET BUTTON MOUNTED OUTSIDE OF TOWER. SHOW ON ELEC. DRAWING.**

- J. Vibration Cutout Switch: Provide switch to de-energize fan motors if excessive vibration occurs due to fan imbalance. If vibration switch is located inside tower, provide remote reset feature wiring. Manufacturer: Metrix #5550.
- K. Fan Guard: Galvanized steel welded steel rod and wire guard
- L. Access: Cooling tower shall be equipped with fan plenum access. Provide removable access port at end of headers to facilitate cleaning of distribution piping.
- M. Side mounted Working Platform, Handrail & Ladder with Davit: Provide working platform for access to motor and fan plenum with ladder.
- N. Inlet & Outlet connections: Grooved to accept a mechanical coupling device.

**SPEC EDITOR: BOTTOM INLET AVAILABLE IN SPECIFIC TONNAGES. FLANGED CONNECTIONS IS AN OPTION AT ADDITIONAL COST.**

- O. Cooling Tower Manufacturer: Evapco AT series.

#### **2.4 INDUCED DRAFT COUNTERFLOW MODULAR COOLING TOWER**

**SPEC EDITOR: BASED ON TOWER TECH TTXE SERIES MODULAR; UNDER CONSIDERATION ON A PROJECT BY PROJECT BASIS. TO BE APPROVED BY HYDRONICS MECH TECH GROUP**

- A. General: Furnish and install as shown on the plans, a Tower Tech factory-assembled, forced draft, counterflow, modular cooling tower, Model TTXE \_\_\_\_\_. The tower's principal construction shall be of pultruded Fiberglass Reinforced Polyester (FRP) and must have a flame spread rating less than 25 or a flammability coefficient of 94-V0. The module must be capable of operating independently or in combination with future modules.

- B. Tower shell and substructure: (legs) shall be designed to withstand a wind load equivalent to 80 MPH and be able to resist seismic forces classified under Zones 1 and 2.
- C. Casing: The cold water basin and the tower casing shall be constructed of pultruded Fiberglass Reinforced Polyester (FRP) with UV inhibitors. It shall have a minimum thickness of ¼" and a minimum density of 0.07 lb/in cubed. Specially placed reinforcement and a UV veil layer will ensure the structural strength and longevity. Wall panels shall be covered by a five (5) year warranty, excluding cosmetic or superficial damage/wear.
- D. Water Distribution System: Water shall enter the tower through a single inlet comprised of an enclosed, low pressure, non-corrosive Polyvinyl Chloride (PVC) Schedule 40 piping system. Water will be distributed further using Schedule 40 PVC lateral(s). Water shall be uniformly sprayed over the fill media by evenly spaced and sized rotary spray nozzles that are capable of automatically adjusting the size of their exit orifices to accommodate varying water flows. The nozzles shall have a four (4) inch orifice for clog free operation, produce a square pattern, and shall be located no more than three inches above the fill media. The nozzles must operate between a minimum ½ pound of pressure and a maximum 1½ pounds of pressure. The nozzles shall be made of High Density Polyethylene (HDPE) and/or Acrylonitrile Butadiene Styrene copolymer (ABS). Water distribution system shall be covered by a one (1) year warranty.
- E. Perimeter Basin: Tower shell or casing shall have an integral perimeter basin. Its elevated location shall reduce operational pump head requirements. Its high velocity water flow during operation shall prevent accumulation of sediment. Perimeter basin shall be equipped with one inspection port at each corner.
- F. Sump: Tower shall be equipped with a terminally mounted (end wall) outlet sump with a flanged discharge connection for simplified piping. Sump casing shall be manufactured of rotationally molded Polypropylene (PP). Standard equipment shall include a mechanical float valve, flanged overflow/equalization connection, and a corrosion-free, easily removable sump screen. Sump shall be covered by a one (1) year warranty.
- G. Fill & Drift Eliminators: Fill shall be Polyvinyl Chloride (PVC) of cross-fluted design, 10 mil (after forming), impervious to decay, fungus and biological attack. Fill sheets shall be self-spacing, supported on maximum spans of 12". Each fill sheet shall have a microstructure to improve heat transfer. Fill sheets shall be bonded together to give a cross-corrugated pattern by application of glue only to dedicated glue joints. Fill packs made from random application of glue shall not be acceptable. Fill packs or blocks shall be placed in the tower so as to provide the tightest fit possible without damage to the fill. Drift eliminators shall be minimum three-pass Polyvinyl Chloride (PVC) material of cellular design impervious to decay, fungus and biological attack. Drift losses shall not exceed 0.005% of the design circulating flow rate.

- H. Water Collection System: The tower shall utilize a water collection system positioned beneath the fill media and above the air inlet. The water collection system shall collect cold water as it falls from the fill media and channel the cooled water into the tower's elevated perimeter basin permitting the mechanical equipment to be mounted in the cool dry entering air stream beneath the tower. The water collectors shall be made of extruded flame retardant Acrylonitrile Butadiene Styrene copolymer (ABS) material and shall contain an integral damper system that opens mechanically with airflow. The damper system will prevent entry of airborne debris when the fan below it is off. The water collection system shall be covered by a one (1) year warranty.
- I. Motor: The tower shall contain \_\_\_\_ motors at \_\_\_ horsepower per motor for a total installed horsepower of \_\_\_\_\_. The motors shall be Totally Enclosed Air Over (TEAO) with a service factor of 1.15 and must be suitable for 230/460-Volt, 3-phase, 60-Hz service. Motors shall operate at 860-900 RPM and be single-speed, single winding. Maximum brake horsepower shall not exceed the nameplate horsepower at design operating conditions. The motor(s) shall be mounted to a 304 stainless steel sub-structure using 304 stainless steel bolts.
- J. Fans: Fans shall be of an axial, airfoil design positioned within an aerodynamically streamlined fiberglass shroud and installed with a minimum of tip clearance for maximum efficiency. A fan shall have four (4), eight (8), or six (6) blades when powered by a 3, 5, or 7.5 horsepower motor, respectively. Fan blades shall be manufactured of Fiberglass-Reinforced Polypropylene and be pitch-adjustable. Fan hubs shall be manufactured of high strength, low weight aluminum alloy to minimize stress and wear on motor bearings. The cooling tower shall have \_\_\_ direct-drive fans per cell. Both the fan assembly and motor shall be installed outside the tower's hot moist exiting air stream. Towers utilizing gear reducers or belt driven units will not be accepted. A corrosion resistant mesh fan guard to prevent entry of airborne objects into the fan is required.
- K. Cooling Tower Manufacturer: Tower Tech TTXE Series.

**2.5 FIBERGLASS CROSSFLOW COOLING TOWER:**

*SPEC EDITOR: BASED MARLEY QUADRAFLOW.*

*SPEC EDITOR: FIBERGLASS TOWER NOT FM APPROVED. COORDINATE WITH PROJECT FM REQUIREMENTS.*

- A. General: Induced draft cooling tower constructed entirely from fiberglass reinforced polyester with stainless steel fasteners except where specified below.
- B. Casings: Fiberglass Reinforced Polyester (FRP), fabricated and installed by manufacturer to make tower watertight.

*SPEC EDITOR: DESIGNER NEEDS TO PROVIDE SUFFICIENT HEIGHT FOR MAINTENANCE PERSONNEL TO ACCESS HATCH IN CENTER OF TOWER. PROVIDE SUFFICIENT SPACE AROUND ENTIRE PERIMETER OF TOWER TO*

**ALLOW ACCESS TO BASIN COVERS VIA AN EXTERNAL PERIMETER PLATFORM WITH HANDRAILS OR WITH A PORTABLE LADDER.**

- C. Collecting Basin and Sump: FRP. Provide integral type collecting basin and sump with lift-out strainer with openings smaller than nozzle orifices, and with connections for equalizer piping in multiple cell installation, drain, overflow and water make-up. See plans for requirement on make-up valve and backflow preventer.
- D. Wetted-Surface Fill: Wave form vertical sheets of PVC having flame spread rating of 5 per ASTM E 84 - 81A.
- E. Drift Eliminators: Limit drift-loss to the indicated maximum percentage of 0.005 of total water circulated, with PVC plastic, having flame spread rating of 5 per ASTM E 84.
- F. Louvers: Designed and installed by manufacturer, and of sufficient thickness and rigidity to prevent visible sagging: PVC, integral with fill.
- G. Water Distribution System: FRP basin with polypropylene nozzles shall provide full coverage of the fill by gravity flow.
- H. Basin Covers: Provide removable cover with handles, installed by manufacturer to prevent debris from entering basin and to inhibit algae growth by eliminating sunlight. Made of FRP.
- I. Air Inlet Screens: Stainless steel mesh, mounted in removable frames by manufacturer.
- J. Fans and Drives: Aluminum propeller-fan of adjustable-pitch type. Provide gear-drive including speed reducer with extended oil line and dipstick.

**SPEC EDITOR: COORDINATE WITH ELEC. ENGINEER. SHOW FIELD WIRING TO NEMA 4 JUNCTION BOX WITH RESET BUTTON MOUNTED OUTSIDE OF TOWER. SHOW ON ELEC. DRAWING.**

- K. Vibration Cutout Switch: Provide switch to de-energize fan motors if excessive vibration occurs due to fan imbalance. Vibration switch shall be Metrix model #550. If vibration switch is located inside tower, provide remote reset feature with required wiring.
- L. Fan Guard: Stainless steel welded steel rod and wire guard
- M. Cooling tower manufacturer: Marley Quadraflow

**2.6 FORCED DRAFT COOLING TOWERS:**

**SPEC EDITOR: BASED ON BAC SERIES V AND MARLEY**

**SPEC EDITOR: PROVIDE ADEQUATE SPACE FOR FAN SHAFT REMOVAL.**

- A. General: Forced draft cooling tower with vertical discharge and side intake. Cooling tower shall be FM approved.
- B. Casings: Galvanized steel fabricated and installed by manufacturer to make tower watertight.
- C. Fan/Pan Section: The combination Pan/Fan section shall be constructed with galvanized steel. The fans and motors shall be located in the dry air stream.

- D. Surface Section: Removable from the Pan/Fan section to facilitate rigging. Provide serpentine PVC wet deck surface with individually supported fill sheets installed no closer than ¾" to one another, and galvanized casing steel panels.
- E. Eliminators: Eliminators shall be steel galvanized and shall limit drift losses to 0.002% of total water circulated.
- F. Water Distribution System: One of the following materials designed and installed by manufacturer to ensure even distribution of water over wetted-surface-fill.
  - 1. Schedule 40 PVC pipe header and removable schedule 40 PVC pipe branches.
  - 2. Nozzles: Provide removable plastic or brass.
  - 3. Pressure Drop: Maximum pressure drop of 5 psi.
- G. Air Inlet Screens: Galvanized steel mesh , mounted in removable frames by manufacturer:
- H. Fans and Drives: Provide forward curved centrifugal fans with galvanized steel blades and V-belt drive with sheave sized for rated air flow.
- I. Fan Bearings: Self-aligning ball bearings; include external extended grease lines, and fittings. Installed by manufacturer.
- J. Water Distribution System: Water shall enter the tower through a single inlet comprised of an enclosed, low pressure, non-corrosive Polyvinyl Chloride (PVC) Schedule 40 piping system. Water will be distributed further using Schedule 40 PVC lateral(s). Water shall be uniformly sprayed over the fill media by evenly spaced and sized rotary spray nozzles that are capable of automatically adjusting the size of their exit orifices to accommodate varying water flows. The nozzles shall have a four (4) inch orifice for clog free operation, produce a square pattern, and shall be located no more than three inches above the fill media. The nozzles must operate between a minimum ½ pound of pressure and a maximum 1½ pounds of pressure. The nozzles shall be made of High Density Polyethylene (HDPE) and/or Acrylonitrile Butadiene Styrene copolymer (ABS). Water distribution system shall be covered by a one (1) year warranty.
- K. Cooling tower manufacturers: Marley, Baltimore Air Coil, Evapco.

**PART 3 - EXECUTION**

**3.1 STORAGE:**

- A. Store tower and materials off ground until unit is placed. Follow manufacturer's requirements for support.
- B. Perform all maintenance as required by manufacturer during storage until unit is turned over to owner Provide documentation on date and type of maintenance preformed.

### 3.2 INSTALLATION:

- A. Any and all items shipped loose with the tower, such as rails, float valves fan shroud, walkways, ladder, motor, motor mount and any item required for proper operation of tower, shall be assembled and installed per manufacturer's requirements.
- B. Access: Provide access and service space around and over cooling towers as indicated, but in no case less than that recommended by manufacturer.
- C. Support: Install floor-mounted units on 4" high reinforced concrete pad, 4" larger on each side than cooling tower base. Cast anchor bolt inserts into pad.

*SPEC EDITOR: STEEL SUPPORT PAINTING BY ARCH. TRADES.*

- D. Support: Install roof-mounted units on structural steel mechanical equipment supports as shown in the drawings. Anchor cooling tower to supports with removable fasteners. Verify support configuration against tower shop drawing prior to tower delivery.

*SPEC EDITOR: DO NOT PLACE TOWER DIRECTLY ON VIBRATION ISOLATORS. CONFIRM WITH MANUFACTURER REQUIREMENTS FOR SECONDARY STEEL.*

- E. Placement: Mount unit on vibration isolators. Install gaskets or sealants between cooling tower cells. Level units to tolerance of 1/8" in 10'-0", in both directions.
- F. Condenser Water Piping: Provide flanged or union connections to cooling tower, with flexible pipe connections if tower is mounted on vibration isolators. Pitch lines so water will drain into sump. Connect inlets to cooling tower with shutoff valve, and balancing valve (if 2 or more inlets). Connect outlets with shutoff valves.

*SPEC EDITOR: MAKE SURE THIS IS DETAILED ON DRAWING.*

- G. Make-up and Water Piping: Provide flanged or union connections to cooling tower, with flexible pipe connections if tower is mounted on vibration isolators. Pitch lines so water will drain into sump.(Engineer to verify need for backflow preventer.)
- H. Drain Piping: Connect drain and overflow to cooling tower as indicated, full size of connection on cooling tower.
- I. Electrical Wiring: Install electrical devices furnished by manufacturer but shipped loose. Furnish copy of manufacturer's wiring diagram submittal to Electrical Installer.
- J. Final Alignment: Factory trained technician shall verify and align if necessary the drive system prior to start-up, within 0.004".

### 3.3 ADJUSTING AND CLEANING:

- A. Start-up: Check, test and startup by manufacturer's technical representative, including final adjustments to blades and drives. Comply with manufacturer's instructions for filling and start-up of operation, but not less than the following:

1. Verify lubrication of rotating parts; lubricate as needed.
2. Verify fan rotation direction.
3. Verify that motor amperage is in accordance with manufacturer's data.
4. Balance water flow to each tower and to each inlet for multiple inlet towers.
5. Adjust water level control for proper operating level.
6. Balance equalizer lines between multiple towers (if any).

B. Commissioning:

1. Manufacturer's representative shall attend pre-field assembly meeting to verify, in writing, that all tower parts have been shipped without damage and to instruct installing contractor on proper assembly.
2. Manufacturer's representative shall attend initial tower startup to verify, in writing, that the tower is properly assembled and fastened, the flow to the hot basins is properly balanced, the float valve operates properly, the fans operate properly through the entire speed range and the fan motors are drawing the proper amperage and verify operation & setting of vibration switch.

**SPEC EDITOR: ADD FOR BASIN ELECTRICAL HEATER**

3. Manufacturer representative shall verify in writing that each heater element draws the proper amperage and shuts off on low water level

**3.4 CLOSEOUT PROCEDURES:**

- A. Provide services of manufacturer's technical representative for one 8-hour day to instruct Owner's personnel in operation and maintenance of factory-fabricated cooling towers.
  1. Schedule training with Owner, provide at least 7-day notice to Contractor and Engineer of training date.

SECTION 237213 - Rotary Air-to-Air Energy Recovery Wheels

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 237213 - ROTARY AIR-TO-AIR ENERGY RECOVERY WHEELS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including Standard General Conditions, Supplemental General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, including the Related Sections listed below, apply to this Section.

*IN 1 AND 2 BELOW, SELECT PROPER SPEC SECTION NUMBER BY PROJECT. DELETE SUSTAINABLE DESIGN / LEED IF NOT APPLICABLE TO PROJECT.*

- B. Related Sections:

1. Section 018113: Sustainable Design Requirements.
2. Section 019100/019110: Facilities Commissioning
3. Section 220500: Common Work Results for Mechanical
4. Section 220513: Motors
5. Section 237323: Custom Air Handling Units
6. Section 237324: Semi Custom Air Handling Units
7. Section 230900: Mechanical Systems Controls
8. Section 230593: Testing, Adjusting and Balancing
9. Division 26: Electrical

**1.2 SUMMARY**

- A. Products specified in this section include the following:
1. Desiccant coated rotary air-to-air heat exchangers for the recovery of sensible and latent energy.
  2. Rotary air-to-air heat exchangers for the recovery of sensible energy.

**1.3 SUBMITTALS**

- A. Product Data: For each energy recovery wheel indicated, provide the following:
1. Complete performance data including all data required by AHRI 1060 at both Standard and Application conditions and data validating all specified and scheduled performance requirements.
  2. Motor ratings, manufacturer, electrical characteristics, and motor accessories.
  3. Belt, gear reducer, coupling, and tensioner data.
  4. Materials, gages and anti-corrosion finish data.
- B. Shop Drawings:
1. Project specific drawings with dimensions of each wheel assembly.

- C. Submit certification by a qualified independent organization documenting sensible and latent efficiencies per ASHRAE 84-78P and AHRI 1060.
- D. Submit cross-contamination certification reports from a credible testing agency.
- E. Submit antimicrobial agent performance certification report (when a antimicrobial coating is specified) from a credible testing agency, verifying that antimicrobial coating will be effective in this application.
- F. Installation, operation, and maintenance manuals.

**1.4 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  - 1. AHRI 1060 - Performance Rating for Air-to-Air Exchangers for Energy Recovery Ventilation Equipment
  - 2. ASHRAE 62.1 - Ventilation for Acceptable Indoor Air Quality
  - 3. ASHRAE 84 - Method of Testing Air-to-Air Heat/Energy Exchangers
  - 4. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems
  - 5. ASTM E84 - Standard Test Method of Surface Burning Characteristics of Building Materials
  - 6. NFPA 70 - National Electric Code.
  - 7. AFBMA 9 - Load Ratings and Fatigue Life for Ball Bearings.
  - 8. NEMA MG-1 - National Electrical Manufacturers Association Motor Standards.
  - 9. SMACNA - HVAC Duct Construction Standards- Metal and Flexible

**1.5 DELIVERY, STORAGE AND HANDLING**

- A. Ship all components in weather-proof wrap for storage outdoors. Protect wheels, housings, control panels, and any other sensitive components with heavy plastic or other durable means to ensure cleanliness and prevent damage during shipping and storage. Maintain protection during installation.

**1.6 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of **ten** years from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers:
1. Semco
  2. Desiccant Rotor International
  3. Thermotech Enterprises Inc.

**2.2 ENTHALPY ENERGY RECOVERY WHEELS**

- A. General

*THIS SPECIFICATION IS WRITTEN ASSUMING THE ENERGY RECOVERY WHEEL WILL BE INSTALLED IN AN AIR HANDLER/ENERGY RECOVERY UNIT, AND THEREFORE ACCESS DOORS WILL BE PROVIDED ON ALL FOUR SIDES OF THE WHEEL PER THE SPECIFICATION FOR THAT EQUIPMENT. IF THE WHEEL IS TO BE INSTALLED IN DUCTWORK, THE DESIGNER MUST DESIGNATE ACCESS DOORS OR PANELS UPSTREAM AND DOWNSTREAM OF BOTH SIDES OF THE WHEEL TO PERMIT ACCESS.*

1. The recovery wheel assembly shall be furnished in an air handler casing. Recovery wheel casing construction and performance shall match that of the associated air handler/energy recovery unit of which the recovery wheel is a component.
2. Recovery wheel manufacturer shall provide a complete sequence of operation to allow the Owner's Direct Digital Control System to provide proper recovery wheel control. The sequence shall include how motors speed is to be adjusted to optimize heat recovery, summer/winter change-over, economizer mode, and defrost control.

*IF THE RECOVERY WHEEL IS TO BE USED IN A LABORATORY OR CRITICAL APPLICATION, CONSULT WITH THE U-M DESIGN MANAGER TO DETERMINE IF TESTING OF THE RECOVERY WHEEL PRIOR TO SHIPMENT AT AN INDEPENDENT TESTING AGENCY, IN PARTICULAR FOR LEAKAGE BETWEEN THE EXHAUST AND SUPPLY AIR STREAMS (I.E. VERIFICATION OF EXHAUST AIR TRANSFER RATIO) IS JUSTIFIED. IF SO, SPECIFY SUCH TESTING BELOW. TESTING IS EXPENSIVE AND HAS A SIGNIFICANT LEAD TIME.*

*AHRI CERTIFICATION IS GIVEN IN HIDDEN TEXT BELOW BECAUSE SEMCO AND THERMOTECH ARE CURRENTLY IN THE PROCESS OF OBTAINING AHRI CERTIFICATION. REPORTEDLY AS OF DEC. 2012 ONLY DRI HAS AHRI CERTIFICATION. THE DESIGNER SHOULD CONSIDER IF THE PROJECT TYPE MANDATES THAT ONLY AHRI CERTIFIED WHEELS BE USED. ONCE ALL MFR.S ARE AHRI CERTIFIED THE TEXT BELOW SHOULD BE CHANGED TO VISIBLE TEXT.*

- B. Performance

1. The recovery wheel shall bear the AHRI Certification Seal.
2. The recovery wheel shall meet NFPA 90A requirements for flame spread and smoke generation when tested per ASTM E84.

3. The manufacturer shall guarantee that the performance requirements stated below and scheduled on the project drawings will be met by the recovery wheel as installed at the project site, when tested per ASHRAE Standard 84 and AHRI STANDARD 1060. The manufacturer similarly guarantees all Application Ratings submitted for review. The Owner reserves the right to field verify that the performance requirements and Application Ratings were met by testing in accordance with ASHRAE Standard 84/AHRI STANDARD 1060, utilizing an independent testing agency. The Owner has exclusive right to select the testing agency. Recovery wheels found deficient of any performance requirement shall be corrected and retested by the manufacturer (utilizing the testing agency that performed the original tests) without additional cost to the Owner until all the requirements are achieved.
4. The Exhaust Air Transfer Ratio (EATR) shall be less than 0.04 percent at the scheduled air flow and pressure conditions. The purge volume required to achieve this EATR shall not exceed the purge volume indicated by the scheduled air flows.

**THE BELOW PARAGRAPH REQUIRES THAT LESS THAN 10% LEAKAGE OCCUR FROM THE EXHAUST TO THE SUPPLY SIDE OF THE RECOVERY WHEEL WITH THE PURGE SET TO ZERO. ASHRAE 62.1-2010 PERMITS UP TO 10% LEAKAGE OF AIR THAT IT DEFINES AS CLASS 2, FOR EXAMPLE TOILET EXHAUST. THIS ALLOWS THE RECOVERY WHEEL TO BE USED IN CLASS 2 AIR WITHOUT THE NEED FOR PURGE AIR, WHICH WASTES ENERGY AND REQUIRES THAT THE SUPPLY FAN TO BE OVERSIZED. HOWEVER, THE DESIGNER NEEDS TO WEIGH ANY DISADVANTAGES THAT MAY OCCUR IF THE PURGE SECTOR IS SET TO ZERO. FOR LOW RISK APPLICATIONS INVOLVING CLASS 2 AIR, DESIGNERS SHOULD STRONGLY CONSIDER SPECIFYING THAT THE PURGE BE SET TO ZERO. ALSO NOTE THAT THE WORDING BELOW "RECIRCULATION FROM LEAKAGE, CARRYOVER, OR TRANSFER FROM THE EXHAUST SIDE SHALL NOT EXCEED 10.0 PERCENT OF THE OUTDOOR INTAKE FLOW" IS TAKEN FROM ASHRAE 62.1 AND SHOULD NOT BE MODIFIED INDISCRIMINATELY.**

5. With the adjustable purge sector set to zero degrees (zero purge), recirculation from leakage, carryover, or transfer from the exhaust side shall not exceed 10.0 percent of the outdoor intake flow at a differential pressure between the supply and exhaust/return air streams at the recovery wheel location of up to 12 inches water column.

C. Rotor Media:

**FOR CORROSIVE SERVICE A MORE ROBUST COATING THAN MFR.'S STANDARD ANTI-CORROSION COATING MAY BE APPROPRIATE. CONTACT MFR. FOR OPTIONS.**

1. The heat transfer substrate shall be constructed of aluminum formed into a honeycomb media structure. Non-metallic substrates made from paper, plastic, synthetic or glass fiber media are not acceptable.
2. The substrate surfaces shall have an anti-corrosion coating.
3. The faces of the recovery wheel shall be sealed with a two part acid resistant coating that limits surface oxidation.
4. Dry particles up to 800 microns shall pass freely through the media.

5. The media shall be cleanable with low-pressure steam (less than 5 PSI), hot water or light detergent, without degrading the sensible or latent recovery capabilities of the energy recovery wheel system.
6. Desiccant coating:
  - a. All substrate surfaces shall be coated with a non-migrating solid absorbent desiccant layer prior to being formed into the honeycomb.
  - b. The desiccant coating shall be applied to the surfaces of the aluminum substrate and the two faces of the energy recovery wheel.
  - c. The desiccant shall be an inorganic 3Å molecular sieve type certified by the manufacturer to have an internal pore diameter distribution which limits adsorption to materials not larger than the critical diameter of a water molecule (2.8 Å).
  - d. The desiccant shall be a "Balanced Sieve" type that provides equal sensible and latent heat transfer.
  - e. An independent test from a credible test laboratory shall document that the desiccant material utilized does not transfer pollutants typically encountered in the indoor air environment.

*THE BELOW SAMPLE LANGUAGE (IN HIDDEN TEXT) FOR AN ANTIMICROBIAL AGENT MAY BE APPROPRIATE FOR HOSPITAL AND OTHER CRITICAL APPLICATIONS. IF REQUIRED, VERIFY WITH WHEEL MFR.S EXACTLY WHAT CAN BE SUPPLIED, THEN REVISE THE BELOW AFTER UN-HIDING THE TEXT.*

- f. The media shall be treated with an antimicrobial agent, tested and certified by an independent testing agency for effective antimicrobial action and bacteria-static properties in an energy recovery wheel (or functionally equivalent) application. .

D. Rotor Assembly

*FOR CORROSIVE SERVICE A MORE ROBUST COATING THAN MFR.'S STANDARD ANTI-CORROSION COATING MAY BE APPROPRIATE. CONTACT MFR. FOR OPTIONS.*

1. Rotor media shall be supported in a spoked rotor-wheel system constructed of an extruded aluminum ring and extruded aluminum spokes and welded construction. All rotor assembly surfaces shall be coated with an anti-corrosion coating.
2. The rotor media shall be provided in segments to allow for field erection or replacement of one section of media at a time by removal from the rotor face. Provide as many segments as necessary to allow the media segment to be removed through the air handler/energy recovery unit rotor section access door. No external pullers or other special tools shall be required for field assembly or replacement of the media segments. Media segments shall be compressed in place independent of other segments and shall not be secured with adhesives or silicone.

3. The rotor shall be supported by tapered roller bearings in pillow block housings. The bearings shall be selected to provide a minimum L-10 life of 200,000 hours. It shall be possible to replace the bearings without removing the rotor or rotor shaft. Shaft journals shall be machined to proper tolerance as specified by the bearing manufacturer. The Shaft shall be machined to provide a shoulder against the bearings to eliminate any lateral movement of the rotor due to axial bearing loads. Provide easily accessible grease fittings.
4. The rotor structural support framework shall be minimum G90 galvanized tubular steel with welded construction, suitably braced for rigging and operation to assure all performance requirements are achieved.
5. The deflection of the entire rotor assembly, as measured at the outer radius, shall not exceed 1/32" at the scheduled maximum rotor air pressure drop and at the maximum pressure difference between the exhaust/return and the supply side of the recovery unit.
6. Provide a field adjustable purge sector, factory set. Mark the factory set purge sector position.
7. Rotor seals shall be non-contact minimum 4-pass labyrinth type, secured and field adjustable via an aluminum retainer or stainless steel clips, adjustable by means of slots and bolts, and factory set to within 0.05 inch of the rotor surface. The seal system shall withstand a pressure difference up to 12 in. w.c. without damage, deflection or causing excessive air leakage.

E. Rotor Drive System

1. Provide motor, speed reducer, and dual V-belts riding in a groove in the rotor rim to eliminate side-to-side movements and slippage.
2. Speed reducer shall be grease lubricated with a flexible elastomeric input coupling allowing easy motor separation and for absorption of shock and vibration.
3. Motors shall be inverter duty rated and comply to Related Section "Motors".
4. Locate the motor and gear reducer in the supply air stream in an easily accessible location.
5. Drive system, except belts, shall be parts and labor warranted for 90,000 hours of operation.

**2.3 SENSIBLE ENERGY RECOVERY WHEELS**

- A. Provide sensible energy recovery wheels matching all the requirements specified for Enthalpy Energy Recovery wheels with the exception that desiccant coating shall not be provided.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

- A. Store units protected from weather, dirt, water, and construction debris, and per manufacturer's recommendations.

### 3.2 INSTALLATION

- A. Install Energy Recovery Wheel assemblies in strict compliance with manufacturer's installation instructions and Related Sections. Maintain manufacturer's recommended clearances for service and maintenance.
- B. Rig units with spreader bars and at adequate lifting points to prevent twisting and bending of the recovery wheel assembly.
- C. Verify the orientation of the purge sector relative to the direction of the supply air stream.
- D. Install rigid card board of plywood over both wheel faces to prevent media damage. Maintain this protection until the point the wheel is started for testing.
- E. Install a complete set of filters of the same quality and efficiency as the specified permanent filters for the project, if the system into which the recovery wheel is installed is to be run for temporary service. Continuously maintain all filters and replace when pressure drop exceeds 1 inch w.c., or at manufacturer's recommended change-out pressure drop, whichever is lower.
- F. The Test and Balance Contractor shall verify purge volumes and adjust the purge sector, if required, to achieve the required purge volumes. Before adjusting the purge sector consult with the wheel manufacturer for adjustment instructions.

### 3.3 START-UP

- A. Provide a qualified service technician from the Manufacturer's staff to perform recovery wheel start-up, prior to any temporary use. Coordinate start-up of recovery wheel to occur in conjunction with air handler/energy recovery unit start-up. The manufacturer's service technician shall perform the following tasks:
  - 1. Verify correct installation of recovery wheel.
  - 2. Grease bearings, verify motor direction and adjust belt tension if required.
  - 3. Adjust recovery wheel seals.
  - 4. Caulk all energy wheel components at locations recommended by the wheel manufacturer.
  - 5. Verify purge volumes and adjust purge to achieve the required purge volumes, in cooperation with the Test and Balance contractor.
  - 6. Perform any other manufacturer's recommended prestart activities.
  - 7. Start-up wheel and verify proper operation.
  - 8. Before leaving premises, provide the Owner's representative a start-up report certifying that all start-up activities were completed and that the energy recovery wheel operates properly.

### 3.4 COMMISSIONING

- A. Perform Commissioning activities per Related Sections above.

**3.5 TRAINING**

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.
- B. Train Owner's maintenance personnel on start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures, minimum of 1 hour or 30 minutes per unit if multiple units were supplied. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel. Training shall include belt and rotor seal adjustment, bearing greasing, motor, belt and bearing replacement, media removal, media cleaning methods, and a description of purge sector operation and what position the purge sector should be set at for the project's particular application.
- C. Schedule training with Owner with at least seven (7) days prior notice. Training and start up services are separate functions - training shall not be combined with startup services.

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
SECTION 237323 - CUSTOM AIR HANDLING UNITS

**END OF CONTENTS TABLE**

DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)  
SECTION 237323 - CUSTOM AIR HANDLING UNITS

REVISED TO REQUIRE CERTAIN PRODUCT DATA W/SUBMITTALS, AND TO ALLOW A SMOOTH FLOOR ILO A CHECKER PLATE FLOOR, ALL PER MECH TECH TEAM. D. KARLE, 7/29/08.

ADDED SPECIFICATION FOR HINGED PRIMARY RACK. MINOR IMPROVEMENTS TO ELECTRICAL AND TEMPERATURE CONTROL WIRING SECTION BY K. BIRINGER AND D. KARLE, ALL 07/01/09.

REVISED TO ELIMINATE SEALTITE AND FIBERGLASS LIGHT FIXTURES DUE TO NEC CODE CHANGE. CLARIFIED FILTER REQUIREMENTS DURING TEMPORARY USE (3.1.J.) D. KARLE FOR MECH TECH TEAM, 3/26/10.

GENERAL IMPROVEMENT OF CONTENT ARRANGEMENT AND REVISION TO NEW FORMAT, MARCH 2011.

CORRECTED FORMATTING ERROR THAT HAD MADE SOUND TRANSMISSION LOSS DATA IN ARTICLE 2.5 APPLY TO EXTERIOR UNITS ONLY. D. KARLE 1-25-13.

AIR ENTERPRISES AND VENTROL ADDED AS APPROVED 3/26/13, PER HVAC MTT.

REVISED TO ALLOW THINNER ALUMINUM GAUGE FOR ALUMINUM FOAM PANELS PER MTT 7/11/13.

**PART 1 - GENERAL**

REVISE CAREFULLY IF SPECIFICATION IS TO BE USED FOR PREPURCHASE; TO SPECIFY WHO PROVIDES FILTERS FOR THE AIR HANDLER IF IT WILL BE USED FOR TEMPORARY SERVICE. IT IS SUGGESTED THAT THE AIR HANDLER SUPPLIER PROVIDE ONE SET OF FILTERS, AND THE MECHANICAL CONTRACTOR RUNNING THE UNIT DURING TEMPORARY SERVICE PROVIDE THE ADDITIONAL FILTER SETS, SINCE IT IS UNKNOWN HOW MAY FILTER SETS WILL BE REQUIRED DURING TEMPORARY OPERATION. THIS SECTION SPECIFIES FILTERS SUPPLIED IN THIS MANNER (PER PART 2, MFR. SUPPLIES FILTERS WITH UNIT. PER PART 3, UNIT MUST BE TURNED OVER WITH NEW FILTERS).

THIS SPEC CANNOT BE USED STAND-ALONE FOR AIR HANDLERS! THE RELATED SPEC SECTIONS LISTED IN PART 1 MUST BE INCLUDED IN THE PROJECT SPEC BOOK TO PROVIDE THE COMPLETE REQUIREMENTS. HOWEVER, INFO IN THIS SECTION IS COMPLEMENTARY TO THOSE RELATED SECTIONS; THEREFORE DO NOT DELETE, FOR EXAMPLE INFO IN THIS SECTION REGARDING COILS, DRAIN PANS, FILTERS, ETC.

**1.1 RELATED DOCUMENTS**

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 220500: Common Work Results for Mechanical.
  - 2. Section 220513: Motors.
  - 3. Section 220548: Vibration Control
  - 4. Section 238216: Coils and Drain Pans
  - 5. Section 233400: Fans
  - 6. Section 234000: HVAC Air Cleaning Devices.
  - 7. Section 233300: Air Duct Accessories and RGDs
  - 8. Section 230900: Mechanical Systems Control
  - 9. Section 230593: Testing, Adjusting, and Balancing.
  - 10. Division 26: Electrical.

## **1.2 SUMMARY**

- A. Section Includes:
  - 1. Custom built-up supply and return/exhaust air handling units.
  - 2. Factory and field testing of custom air handling units.

## **1.3 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
  - 1. ANSI/AHRI Standard 430. Performance Rating of Central Station Air-Handling Units.
  - 2. AHRI Standard 260- Sound Rating of Ducted Air Moving and Conditioning Equipment.
  - 3. NFPA 70 National Electric Code.
  - 4. NFPA 90A: Standard for the Installation of Air-Conditioning and Ventilating Systems

## **1.4 DELIVERY, STORAGE, AND HANDLING**

- A. Manufacturer shall provide shipping protection to insure that the interior and exterior of each unit is completely protected from dirt or weather. Duct and pipe openings shall be covered with sealed sheet metal, plastic or other durable means to ensure unit cleanliness is maintained.
- B. Support coil headers independently during transport to prevent potential damage from vibration.
- C. Restrain fans and other components to prevent damage during shipping.

**1.5 ADMINISTRATIVE REQUIREMENTS**

- A. Provide a qualified service technician from the Manufacturer's staff to supervise installation and reconnection of unit sections and to perform start-up, testing and training as detailed in part 3.

**1.6 SUBMITTALS**

- A. Submit the following product data for approval, for each unit:
  - 1. Overall unit dimensions, weight, and center of gravity.
  - 2. Ductwork connections including sizes, locations, and methods of connecting to mating ductwork.
  - 3. Piping connections including size, material types, and dimensioned locations for each service.
  - 4. Detail methods of sealing inner and outer walls at locations of pipe penetrations.
  - 5. Locations and sizes of access doors.
  - 6. Details of access door handles, latching mechanisms, hinges, and vision panels.
  - 7. Locations of interior light fixtures and light switches.
  - 8. Locations of electric power convenience receptacles.
  - 9. Dimensions, weights and centers of gravity for each section when units will be shipped in multiple sections.
  - 10. Cabinet material, metal thickness, finishes, insulation and accessories.
  - 11. Details of vibration isolation bases including selections for vibration isolation springs.
  - 12. Details of fan discharge flexible duct connector where required.
  - 13. Details of motor and belt guards.
  - 14. Motor ratings, electrical characteristics, and motor accessories.
  - 15. Sound power data for the entire air-handling unit for each octave band at the following locations: At unit inlet, at unit discharge, and transmitted sound.
  - 16. Factory testing procedure.
  - 17. Factory test results.
  - 18. Field test results.

*REVISE WARRANTY PER PROJECT. LONGER WARRANTY PERIOD MAY BE APPROPRIATE FOR CERTAIN TYPES OF WORK. INCLUDE THIS ARTICLE IN EVERY SPECIFICATION SECTION.*

**1.7 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers:
  - 1. Buffalo Air Handling.

2. TMI Custom Air Systems.
3. Governair LLC.
4. Mafna Air Conditioning, Inc.
5. Air Flow Equipment.
6. Air Enterprises
7. Ventrol

**2.2 GENERAL**

- A. Provide factory fabricated, double-wall air handling units with components and equipment as scheduled and detailed on Drawings.
- B. Components shall be fabricated in major sections at the Manufacturer's factory and shall carry the Manufacturer's nameplate. Sections, after having framework completely installed on their base structures, shall be final assembled at factory into one-piece for testing and to ensure that sections will fit together properly when reassembled in the field.
- C. Provide units of height, width, and length indicated, and that comply with project weight and spatial limitations.
  1. Weight, spatial, and dimensional limitations shall also apply to individual sections, including to facilitate unit rigging and installation.
- D. Provide a minimum of four lifting lugs per separately shipped section, of adequate strength to allow rigging without damage.
- E. Manufacturer shall supply gasketing, sealant, and installation instructions.
- F. Manufacturer shall provide touch-up paint(s) for use after field assembly.
- G. Touch up all galvanized surfaces damaged from welding or other fabrication operations with zinc rich paint, minimum 65 percent metallic zinc by weight.

**2.3 COMPONENTS- GENERAL REQUIREMENTS**

- A. Provide all components integral to the air handling unit including, but not limited to, the following. These components shall comply with Related Sections and any additional requirements of this Section.

***EDIT THESE ITEMS FOR EACH PROJECT***

1. Motors
2. Vibration Isolation
3. Coils and Drain Pans
4. Fans and Accessories
5. Air Filters
6. Sheet Metal Accessories
7. Dampers (as specified in Controls section)
8. Energy Recovery Wheels/Heat Exchangers
9. Sound Attenuators

**2.4 MANUFACTURING**

- A. Casings shall be manufactured only after panel components (structural members, facing sheets and insulation) have been thoroughly cleaned of mill grease, dirt and oxidation.
  - 1. Interior and exterior of panel system shall be thoroughly protected from contamination from the manufacturing process through start-up procedures and acceptance.
  - 2. Internal components (fans, coils, air filter frames, equipment and piping) shall arrive from their respective manufacturing facilities free of grease and dirt.
- B. In general, products such as sealants and gaskets, used within the unit, shall be non-petroleum based products, with no outgassing characteristics.
- C. Equip, prepare, identify and match-mark individual shipping sections so that field reassembly and installation can be performed without reworking, interchanging, adjusting, springing, drilling new bolt holes, etc. All supplemental supplies necessary to assemble the unit shall be provided by the Manufacturer.

**2.5 UNIT HOUSING**

- A. Performance
  - 1. Maximum U-Value: 0.07
    - a. Minimum insulation density (fiber glass): 3 lbs/sq. ft.
  - 2. Under normal operating conditions there shall be no condensation on the exterior at 100 deg F db/74 deg F wb ambient.
  - 3. Maximum deflection of walls shall be L/250 at plus or minus 10 in. w.c. (L = span in inches.).
  - 4. Maximum deflection of roof and floor shall be L/250 at design loading. (L = span in inches).
    - a. Minimum floor design load: 150 lbs/sq. ft.
    - b. Minimum roof design load: 75 lbs/sq. ft. plus snow load for exterior unit.
  - 5. Outdoor design conditions
    - a. Minimum wind load: 120 mph.
    - b. Minimum snow load: 50 lbs/sq. ft., or per applicable codes, whichever is greater.

*REVISE SOUND TRANSMISSION LOSS DATA BELOW AS NECESSARY TO MEET PROJECT PERFORMANCE REQUIREMENTS, THE BELOW IS A GENERAL GUIDELINE. ALSO FILL IN 64 AND 8000 HZ OCTAVE BANDS WHEN THESE FREQUENCIES ARE IMPORTANT TO PROJECT PERFORMANCE REQUIREMENTS.*

6. Minimum sound transmission loss

Octave Band (Hz)	DB Reduction
--64	XX
--125	30
--250	42
--500	40
--1000	46
--2000	53
--4000	52
--8000	XX

B. Construction

1. Materials
  - a. Exterior of unit: Galvanized steel (G-90), aluminum, or stainless steel
  - b. Interior of unit: Solid galvanized steel (G-90) or aluminum
2. Minimum Panel Thickness: 4 inches. Minimum 2-inch panel construction with a foam insulation core that meets all the requirements of this specification, including sound transmission loss, is also permitted. Foam insulation shall be UL Class 1 rated.
3. Minimum Gauge: The following are minimum gauges. Heavier gauges may be required to meet the performance deflections and/or sound transmission loss specified, or to allow for proper welding:
  - a. Roof interior and exterior: steel 16 ga. or aluminum 0.09" (0.040" aluminum for foam core insulated panels).
  - b. Wall interior and exterior: steel 16 ga. or aluminum 0.09" (0.040" aluminum for foam core insulated panels).
  - c. Floor interior: steel 10 gauge smooth or 1/8" checker plate or aluminum 1/8" checker plate.
  - d. Floor exterior (bottom/underliner): steel 20 gauge or aluminum 0.063" (0.040" aluminum for foam core insulated panels).
  - e. Partition walls: steel 16 ga. or aluminum 0.09" (0.040" aluminum for foam core insulated panels)
  - f. Safing at cooling coils: stainless steel 18 ga. or aluminum 0.071".
  - g. Safing all other: steel 18 ga. or aluminum 0.071".
4. Openings and penetrations
  - a. On any piping subject to sweating, including condensate drains, piping penetrations shall be sleeved.
    - 1) Sleeve shall extend fully from interior to exterior of unit.
    - 2) Sleeve shall be continuously welded or seamless, rolled (round), and sealed airtight to unit.
    - 3) Provide rubber grommet or similar mechanical seal on unit interior and exterior to seal between sleeve and piping.
  - b. All non-sweating piping or conduit penetrations shall be sealed airtight with rubber grommet or similar mechanical seal.
  - c. At openings, cover exposed edges of insulation with structural steel angles and seal edges.
  - d. Protect exposed fastener ends with plastic caps.
  - e. Floor penetrations shall incorporate a minimum 1 in. high waterproof dam fabricated of steel angle iron or equivalent, seal welded to floor.
  - f. For units located outside, no penetrations shall be made through the roof.
5. For units located outside, slope roof to prevent standing water.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 237323 - - 6

6. Unit shipping sections shall be fabricated to have air and water tight connections. Seals between sections shall consist of 1/4 in. thick by minimum 1-1/2 in. wide neoprene gaskets and continuous caulking on contact surfaces.

C. Floor/Base Frame

1. Floor shall be continuously welded between mating sections and along wall edges to form a watertight surface. Watertight floor shall not be used as part of a coil drain pan system. Provide sleeves for any piping penetrating the unit; if through the floor, continuously weld to waterproof the floor.
2. Floor shall be min. 4 in. thick, insulated with 3-lb./cu. ft. density fiberglass (or 4 in. of U.L. Class 1 foam insulation of equivalent or better R-value), sealed airtight in place by solid galvanized or aluminum underliner.
3. Fabricate base frame of welded structural steel or aluminum members as required to accommodate drain outlet height requirements for proper drain pan trapping, and around the entire unit and under major internal equipment such that all components are completely supported by the factory installed base frame.

D. Ductwork Connections

1. Provide flanged connections with flanges extending a minimum of 2 in. past the outside wall of the unit.
2. For fans discharging directly at the unit casing, provide flexible duct connector internal to the unit.

E. Paint

1. Prior to assembly, prime coat all non-galvanized ferrous metal parts with two coats of lead-free prime paint.
  - a. Quick-drying, rust-inhibitive, alkyd-based primer; total dry film thickness of not less than 1.3 mils.
  - b. Paint: Benjamin Moore IronClad Alkyd Low Luster Metal and Wood Enamel C163, or equivalent.
2. For interior units, finish paint the same surfaces with two coats of enamel paint of a different color.
  - a. Low-luster (eggshell), acrylic-latex, interior enamel; total dry film thickness of not less than 2.6 mils.
  - b. Paint: Benjamin Moore Super Spec Latex Eggshell Enamel 274 or equivalent.
3. For exterior units, finish paint the same surfaces with two coats of enamel paint of a different color.
  - a. Semi-gloss, alkyd, exterior enamel; total dry film thickness of not less than 2.6 mils.
  - b. Paint: Benjamin Moore IronClad Alkyd Low Luster Metal and Wood Enamel 163 or equivalent.
4. Prepare surfaces per paint manufacturer's recommendations before painting.

F. Sealants:

1. Provide sealant that is non-toxic, including outgassing during curing period.
2. Sealant shall be warranted to maintain the leak-test performance for 25 years.

G. Access Doors and Panels

1. Access doors and panels shall be of same construction as unit housing, including insulation.
2. Doors shall be minimum 24 in. wide. Provide doors that are the full height of the unit, maximum 6' high.
3. Each access door and panel shall be equipped with continuous gaskets and shall fit in the door frame in a manner to guarantee the same leakage criteria as the unit casing.
4. Each access door shall be mounted with stainless steel or cast aluminum hinges and hardware. Provide a minimum of two cast aluminum handles per door, operable from either side.
5. Access doors in positive pressure sections shall open inward. Access doors in negative pressure sections shall open outward.
6. Each door shall contain a non-fogging thermal window of double pane safety glass. Coordinate height of window with housekeeping pads, base frame and isolators to ensure that location is at approximate eye level when standing outside of unit. Each window shall be a minimum 12 in. by 12 in., properly sealed to prevent condensation and to operate safely against positive or negative pressure.
7. Each access door shall have a built-in static pressure probe port.
  - a. Ventlock Model 699 by Ventfabrics, Inc.
8. Removable access panels shall be provided in unit sections where components contained are larger than door opening and where access to components for cleaning and maintenance is required.

H. Outside and exhaust air openings

1. Outside air and exhaust openings shall be furnished with 25 mesh, galvanized steel or aluminum bird screen. Rain hood velocities shall not exceed 1,000 FPM.

**SELECT BELOW IN COORDINATION WITH ARCHITECTURAL SPECIFICATIONS. ENSURE LOUVERS ARE NOT SPECIFIED IN ARCHITECTURAL DIVISIONS. DELETE THIS PARAGRAPH IF LOUVERS ARE SPECIFIED BY THE ARCHITECT.**

I. Louvers

1. Provide louvers as shown and scheduled on Drawings. Louver airstream shall not entrain water or snow.
2. Louvers shall be self-draining.

**2.6 COMPONENTS**

**MIXING OF OUTSIDE AIR AND RETURN AIR STREAMS SHOULD OCCUR OUTSIDE THE AIR HANDLER. AVOID MIXING BOXES WHICH ALMOST ALWAYS RESULT IN STRATIFICATION (FREEZE STAT TRIPPING) PROBLEMS.**

A. Mixing Box Section

1. The outside and return airstreams shall be directed into each other in a mixing box by parallel blade damper assemblies oriented to facilitate mixing of the airstreams.
2. Outside and exhaust air openings shall not be on the same side of the unit in order to minimize recirculation, if air is exhausted at the unit.

B. Dampers

1. Provide dampers as specified in Related Section Mechanical Systems Controls.
2. In addition to the requirements in Mechanical Systems Controls, dampers designated as smoke dampers shall be labeled in accordance with the latest editions of UL 555S.

C. Filters

1. Provide filters and filter gauges of types as shown and scheduled on Drawings and as specified in Related Section.
2. Provide hinged primary filter frames where indicated, complying to the following:
  - a. Primary filters shall be mounted on vertically hinged non-racking frames that are completely independent of the secondary filter frame. Frames shall swing away from the secondary filter frame in a door-like manner to allow secondary filter removal without removing the primary filters.
  - b. Provide multiple hinged frames. Primary filter frames shall be no wider than 2 ft. Frames shall swing out on an arc of 90 degrees, or to the degree required to allow the secondary filters to be easily removed, whichever is greater.
  - c. Frame hinges shall be continuous piano type.
  - d. The primary filter frames shall be supported by galvanized structural steel support members. Arrange frame and support system relative to the secondary filters to provide a gap long enough to allow accurate measurement of static pressure between the two filter types with a static pressure tap.
  - e. Frames shall be gasketed on all four sides. Provide spring type tension fasteners and latching system to lock and seal the hinged frames to the support members. Lock system shall be operable without tools.
  - f. Primary filter frame and support system shall meet or exceed all of the performance requirements of the Related Section "Air Filters." Provide all accessories required by that section.

**BLENDERS ARE NOT PREFERRED. MIXING OF OUTSIDE AIR AND RETURN AIR STREAMS SHOULD OCCUR OUTSIDE THE AIR HANDLER TO AVOID THE NEED FOR BLENTERS WHICH HAVE GENERALLY PROVEN TO BE INEFFECTIVE. SEE RELATED DESIGN GUIDELINE. IF BLENTERS MUST BE USED, CHANGE BELOW HIDDEN TEXT TO VISIBLE TEXT.**

D. Blender Assembly

1. Blender assemblies shall be welded, rigid, vibration and deflection free, and adjustable; designed to impart a counter-rotational mixing to the air stream, producing a minimum standard deviation through a plane parallel with the blenders between entering air streams.
2. Mixing performance: Constant from 500 fpm to 2500 fpm blender velocity.
3. Minimum mixing effectiveness: 80 percent and plus or minus 5 deg F standard deviation when mixing 30 percent outdoor air and 70 percent return air at 50 degrees F inlet temperature differential. Capable of acceptable performance throughout entire operating range of unit, including system turndown.
4. Acceptable Manufacturers:
  - a. RM Products
  - b. Blender Products, Inc.

**THE FOLLOWING SPECIFICATION FOR AN AIR TO AIR HEAT EXCHANGER (IN HIDDEN TEXT) IS PROVIDED FOR CONVENIENCE AND SHALL BE EDITED TO BE PROJECT SPECIFIC. "TURN ON" THIS TEXT IF REQUIRED.**

E. Air-to-Air Heat Exchanger Section

1. Minimum capacities shall be as scheduled on the Drawings.
2. Heat exchanger shall be furnished as an integral part of the overall air-handling unit.
3. Heat exchanger shall be a cross-flow, fixed-plate exchanger with a diamond-shaped cross section. Plates shall be fabricated of aluminum and formed with profiles that maximize heat transfer and minimize pressure loss. Frames shall be constructed of galvanized steel and/or aluminum. Configuration shall allow for access and cleaning of each of the air pathways.
4. Furnish the heat exchanger with bypass dampers and a bypass air pathway to allow for the automatic prevention of frost formation on the plates. Provide dampers as specified in the Related Section "Mechanical Systems Controls".
5. Casing for the heat exchanger shall be constructed to the standards indicated elsewhere in this section for the overall air-handling unit. Provide baffle plates to seal and separate the two air streams from each other. Provide condensate drain pan(s) in compliance with Related Section, beneath the heat exchanger media.
6. Provide the air handling unit a total of 4 access sections at the inlet and discharge of each air path. Each access section shall be furnished with an access door.

F. Coils and drain pans

- a. Provide preheat, energy recovery, heating, cooling coils and associated drain pans as shown and scheduled on Drawings and as specified in Related Sections.
- b. Provide drain pans and drain connections for the following sections: cooling coils, humidifiers, and energy-recovery coils or wheels.
- c. All coil assemblies shall be safed on top and bottom and at all coil splits.

- d. Drain pans shall be sloped in a minimum of 2 planes to eliminate standing water and shall be stainless steel construction. Drain pans shall be constructed of adequate downstream length to collect any condensate that blows off the coil at air velocities up to the design air flow rate or 500 FPM, whichever is greater.
- e. Insulate drains pans, including intermediate drain pans, to prevent sweating.

**COILS MUST BE REMOVABLE VIA COIL TRACKS OR TROLLEY BEAMS. UM'S PREFERENCE IS COIL TRACKS SINCE IT IS DIFFICULT TO REMOVE THE TOP COIL IN A STACK WITH TROLLEY BEAMS. THEREFORE TROLLEY BEAMS ARE NOT MENTIONED BELOW. IF YOUR APPLICATION REQUIRES TROLLEY BEAMS, EDIT THE BELOW SECTION ACCORDINGLY.**

- f. Each coil section shall be removable without disruption to other unit components or coils. Fasten coil assemblies with bolts or screws; per manufacturer's recommendations, (welds or rivets are not acceptable). Provide coil tracks in assembly frame for removal of coil assemblies from housing.
- g. Provide an individual access panel for each (stacked) coil section, to allow removal of a coil section without disrupting operation of coil sections located above or below the section being serviced. Example: a 3 coil high by 2 coil wide assembly shall have 3 access panels provided per side, for a total of 6.
- h. Extend coil connections, vents and drains to the outside of the air handling unit casing to allow field connections.
- i. Label coil inlet, outlet, vent and drain piping connections with labels applied outside the casing.

**DIFFUSER PLATES ARE NOT PREFERRED. IT IS THE ENGINEER'S RESPONSIBILITY TO CONSIDER POSSIBLE STRATIFICATION ISSUES. USE DIFFUSER PLATE ONLY WHEN OTHER SOLUTIONS ARE NOT ACCEPTABLE.**

G. Diffuser Plate

- 1. If air velocity across the cooling coil varies by more than 15 percent, provide a perforated, aluminum, sectionally-removable diffuser plate immediately upstream of the cooling coil section (plus or minus 6 in.). Diffuser plate shall completely cover cooling coil section and shall be rigid, vibration, and deflection free.

**THIS SECTION SPECIFIES BACKWARD OR AIR FOIL STYLE FANS WHICH ARE PREFERRED IN MOST CASES. HOWEVER ON SOME SMALL AIR HANDLERS A FORWARD CURVED FAN MAY BE A MORE APPROPRIATE CHOICE, IN WHICH CASE EDIT THE BELOW. ALSO CONSIDER H.2 BELOW: SAFETY CAGES MAY NOT BE NECESSARY OR PRACTICAL FOR SMALL UNITS.**

H. Fans and Accessories

- 1. Provide fans and accessories as shown and scheduled on Drawings and as specified in Related Section. Fans shall be backward inclined or air foil type.

2. When plenum/plug type fans are furnished provide a galvanized steel safety cage that entirely surrounds the fan wheel. Provide hinged or bolt-off sections large enough to allow bearing, motor, and belt replacement or service. Provide a safety cage of bolted panel construction that allows the cage to be easily disassembled and reassembled.

I. Trolley Beams

1. Provide fan sections with trolley beams where shown on the Drawings. Design and fabricate the unit structural members and housing to support the weight of the trolley beam fully loaded with the weight of the fan motor, trolley hoist, and chain. Trolley beams shall be centered on access doors or on removable component access panels, which shall be centered on fan motor or component. Beams shall be mounted to the ceiling and shall extend continuously from interior wall to interior wall. Trolley hoists and chain shall be provided "by others" in the future as needed.

J. Sound Attenuators

1. Provide sound attenuators where shown integral to air handling unit, as scheduled on Drawings and as specified in Related Section.

*AIR HANDLERS ARE NOT SPECIFIED TO BE EQUIPPED WITH DISCONNECTS. DISCONNECTS ARE NOT TYPICALLY REQUIRED FOR FANS DRIVEN BY VFDS; SEE DESIGN GUIDELINE 220514 FOR MORE INFO. FOR FANS NOT DRIVEN BY VFDS, REQUIRE THE ELECTRICAL ENGINEER TO INDICATE A DISCONNECT. DISCONNECTS SHALL BE MOUNTED OUTSIDE FAN CASINGS.*

**2.7 ELECTRICAL AND TEMPERATURE CONTROL WIRING**

1. Provide a junction box on the outside of the fan section casing for single point connection of external power wiring to each unit fan motor.
2. Provide EMT metal conduits and wiring between the junction boxes and the motor(s). Final connections to motors shall be 1/2 in. minimum flexible metal conduit with steel fittings.
3. For each unit section that has an access door, provide 120V 4-ft. dual tube fluorescent light fixture(s) consisting of industrial type metal fixture with 10 percent up-light, full depth end plates with wire guard, electronic ballast, T-8 lamps, and secured with a minimum of four fasteners. Similar to Lithonia type AF.
4. Provide a light switch with red pilot light adjacent to the latch side of the door for each lighted section. Pilot light shall be "on" when associated light fixture is "on". Provide one weatherproof, GFCI duplex convenience receptacle mounted centrally on the outside of unit, on the side with the most doors.

5. Provide a junction box on the outside of the unit for single point connection of external power wiring to the unit's lights and receptacle. Provide EMT conduit and wiring between the junction box, switches, associated lights and receptacle. Provide flexible conduit "whips" with wiring at section splits, for reconnection of the lighting circuit by the Electrical Contractor after sections are assembled.
6. Provide all electrical components in accordance with NFPA 70 (NEC) and Division 26 requirements. Indoor electrical enclosures shall be rated NEMA 1. Outdoor electrical enclosures shall be rated NEMA 3R.
7. Power and temperature control wiring shall be run in conduit.
  - a. Run power and control wire in separate conduits.

**2.8 SOURCE QUALITY CONTROL**

- A. Assemble and factory test each unit prior to shipping. Correct deficiencies in unit performance at the factory prior to shipping. University representatives shall witness testing and shall be notified of factory testing dates at least four (4) weeks in advance. Associated travel expenses for witnessing tests shall be paid for by the University.
- B. Submit proposed test procedure to the University representative for approval, detailing methods, equipment, and techniques to be employed for each specific test. Equipment will not be considered approved until written approval of testing procedures is attained. Testing must also be in accordance with Quality Assurance Standards section.
- C. At the conclusion of factory testing, a formal written report of results shall be submitted to the University Representative for approval.
- D. Factory test each air handling unit as follows:
  1. Verify that the airflow rate is within the range of 100 percent to 110 percent of scheduled CFM requirements when operating at scheduled design total static pressure.
  2. Airflow measuring devices shall be installed in ducts returning to or leaving the unit. These devices shall be installed per manufacturer's recommendations. External static pressure to the unit shall be simulated using a combination of ducts and dampers and must be equal to or greater than the scheduled external static pressure. Tests shall prove design airflow and static capability of the assembled unit.
  3. Perform leakage tests to validate that the unit casing leakage is less than 1/2 percent of the scheduled design airflow (CFM) at 10 in. w.c.
    - a. Positive Pressure Test: Duct openings in the positive pressure section shall be sealed. The CFM of the test fan shall be read using an approved airflow measuring device. When the static pressure developed by the test fan reaches 10 in., the fan CFM shall be read and this CFM shall be considered the casing leakage.

- b. Negative Pressure Test: Duct openings in the negative pressure section shall be sealed. The CFM of the test fan shall be read using an approved airflow measuring device. When the static pressure developed by the test fan reaches 10 in., the fan CFM shall be read and this CFM shall be considered the casing leakage.
- 4. Both the leakage and the airflow tests shall meet the required acceptance criterion without the use of temporary sealant at any permanent panel joints. Temporary sealing methods identical to those applied in field shall be used at the shipping splits to simulate "as installed" conditions.
- 5. Sound Test: System sound levels shall be measured at eight (8) octave bands at the scheduled design operating conditions. Airborne sound levels at openings shall be read in the test ductwork 5 ft. from openings. Transmitted sound levels shall be read 5 ft. from outside of fan sections or components, on all sides and on top.
  - a. Readings shall be taken at all outside, return, exhaust and supply air openings.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Use spreader bars with lifting cables and hoist sections from lifting lugs, to prevent cable damage to sections.
- B. Rig individual sections under direct supervision of Unit Manufacturer's Representative.
- C. Install on concrete housekeeping pad. Coordinate final pad size and location in field.
- D. When indicated, install units on steel supports. Coordinate final location and placement of steel supports and ductwork connections in field.
- E. Secure the unit to the housekeeping pad or steel supports with suitable anchors bolted through the unit's base rail. Prior to anchoring, level unit in all directions with stainless steel shims.
- F. Shipping splits requiring field reconnection shall be made under the direct supervision of unit Manufacturer's Representative. Provide labor to reconnect utilities, piping, conduits and sheet metal sections of the unit. Openings to ductwork and piping shall remain protected and covered until unit assembly. Immediately after unit assembly, restore all factory protection. Maintain protection after assembly until just prior to final acceptance by Owner.
- G. Make piping and duct connections, install filters and unit accessories, and complete all work required to place the unit into service.

*MFR. START-UP SERVICE IS NOT GENERALLY NECESSARY EXCEPT FOR UNITS OF NEW DESIGN OR OF PARTICULAR COMPLEXITY. THEREFORE, THE PARAGRAPH BELOW SHOULD NORMALLY BE DELETED. IF START-UP*

*SERVICES ARE REQUIRED, PROVIDE EXPANDED DETAIL REGARDING WHAT IS TO BE PERFORMED BY THE MFR.'S TECHNICIAN.*

**3.2 START-UP**

- A. Provide a qualified service technician from the Manufacturer's staff to perform unit start-up. This start-up service shall be provided prior to commissioning activities, and prior to any temporary use.

**3.3 TEMPORARY USE OF AIR HANDLING UNITS**

- A. Thoroughly clean unit of all grease, dirt, dust, etc.
- B. Prior to placement into temporary service:
  - 1. Perform manufacturer's pre-start protocol.
  - 2. Perform commissioning activities.
- C. Perform all manufacturer's required routine maintenance procedures during temporary service. Continuously maintain a log of such procedures. Store log at unit during temporary use period and include log as part of the final O&M manual.
- D. While operating the air handler for temporary use, install a complete set of filters in the air handling unit of the same quality and efficiency as the specified permanent filters for the project.

*BELOW PARAGRAPH REQUIRES MINIMUM MERV 8 FILTERS TO PROTECT DUCT WORK DURING CONSTRUCTION, WHICH MATCHES LEED REQUIREMENTS AND IS RECOMMENDED FOR NON-LEED PROJECTS AS WELL.*

*SOME SPECIALTY INSTALLATIONS (E.G. CLEAN ROOM OR CLEAN-ROOM-LIKE SPACES) MAY REQUIRE THAT TEMPORARY DUCTWORK FILTERS BE EQUIVALENT TO SECONDARY FILTER PERFORMANCE. IF THAT IS THE CASE, REVISE BELOW ACCORDINGLY.*

- E. Provide temporary filters, minimum MERV 8, to protect all ductwork and building contents when unit is operated during construction. Filters shall have an equal or better performance rating than primary filters specified for permanent use in order to prevent construction dirt infiltration into the air handling unit systems.
- F. Continuously maintain all filters and replace when pressure drop exceeds 1 inch w.c., or at manufacturer's recommended change-out pressure drop, whichever is lower.

**3.4 FIELD QUALITY CONTROL**

- A. Units shall undergo air and water balance and vibration testing per Related Section Testing, Adjusting and Balancing.
- B. Each unit shall be field tested. Deficiencies related to manufacture or installation shall be corrected without cost to Owner.

1. The unit Manufacturer shall correct and pay for the repair of deficiencies found during testing, except for leaks found at unit section joints, which shall be the responsibility of the Contractor to repair.

**BE AWARE THAT THE MANUFACTURER WILL HAVE PROVIDED A UNIT THAT PASSED THE FOLLOWING TEST PROCEDURE IN THE FACTORY. ASSUMING THE UNIT IS ACCEPTED ON SITE BY THE CONTRACTOR WITH NO SHIPPING DAMAGE, RESPONSIBILITY FOR ANY DEFICIENCIES FOUND DURING FIELD TESTING WILL LIKELY FALL TO THE INSTALLING CONTRACTOR.**

2. Perform leakage tests after reassembly of unit sections to validate that the unit casing leakage is less than 1/2 percent of the scheduled design air flow (CFM) at 10 in. w.c.
  - a. Positive Pressure Test: Duct openings in the positive pressure section shall be sealed. The CFM of the test fan shall be read using an approved airflow measuring device. When the static pressure developed by the test fan reaches 10 in., the fan CFM shall be read and this CFM shall be considered the casing leakage.
  - b. Negative Pressure Test: Duct openings in the negative pressure section shall be sealed. The CFM of the test fan shall be read using an approved airflow measuring device. When the static pressure developed by the test fan reaches 10 in., the fan CFM shall be read and this CFM shall be considered the casing leakage.
  - c. At the conclusion of field tests, a formal written report of results shall be submitted to the University Representative for approval.

**INCLUDE THIS ARTICLE IN EVERY SPECIFICATION SECTION.**

### **3.5 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

### **3.6 ADJUSTING, CLEANING, PROTECTION**

- A. After unit has completed any temporary service and just prior to final acceptance by Owner, contractor shall:
  1. Thoroughly clean unit of all grease, dirt, dust, etc., lubricate bearings, align and tighten belts, and perform manufacturer's pre-start protocol
  2. Install a new, complete set of filters.
  3. Perform all commissioning activities, even if previously performed to ready for temporary service.
  4. Touch up damaged galvanized surfaces with zinc rich paint, minimum 65 percent metallic zinc by weight.
  5. Touch up damaged painted surfaces with manufacturer provided touch-up paint.

**MFR. TRAINING SERVICE IS NOT GENERALLY NECESSARY EXCEPT FOR UNITS OF NEW DESIGN OR OF PARTICULAR COMPLEXITY. THEREFORE, THE PARAGRAPHS BELOW SHOULD NORMALLY BE DELETED. IF TRAINING**

**SERVICES ARE REQUIRED, PROVIDE EXPANDED DETAIL REGARDING WHAT IS TO BE COVERED DURING TRAINING. .**

**3.7 OWNER TRAINING**

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.
- B. Train Owner's maintenance personnel on start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures, minimum of 2 hours or 1 hour per unit if multiple units were supplied. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel.
- C. Schedule training with Owner through the Project Construction Manager with at least seven (7) days prior notice. Training and start up services are separate functions - training shall not be combined with startup services.

SECTION 237324 - SEMI-CUSTOM AIR HANDLING UNITS

**END OF CONTENTS TABLE**

DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)  
SECTION 237324 - SEMI-CUSTOM AIR HANDLING UNITS

REVISED NAME FROM "MODULAR" TO "SEMI-CUSTOM" AIR HANDLING UNITS AT THE REQUEST OF THE HVAC/CONTROLS GROUP. D. KARLE 4/14/08.

REVISED TO REQUIRE CERTAIN PRODUCT DATA W/SUBMITTALS, AND AIR-TO-AIR HX SPEC., ALL PER MECH TECH TEAM. D. KARLE, 7/29/08.

MINOR IMPROVEMENTS TO ELECTRICAL AND TEMPERATURE CONTROL WIRING SECTION BY K. BIRRINGER AND D. KARLE, 7/1/09

REMOVED REFERENCE TO AHRI 410, WHICH IS COVERED IN 238216. D. KARLE FOR MECH TECH TEAM 9/11/09.

REVISED TO ELIMINATE SEALTITE AND FIBERGLASS LIGHT FIXTURES DUE TO NEC CODE CHANGE. CLARIFIED FILTER REQUIREMENTS DURING TEMPORARY USE. D. KARLE FOR MECH TECH TEAM, 3/26/10.

GENERAL IMPROVEMENT OF CONTENT ARRANGEMENT AND REVISION TO NEW FORMAT, MARCH 2011.

THERMAL CORP AND VENTROL ADDED AS APPROVED 3/26/13, PER HVAC MTT.

**PART 1 - GENERAL**

AIR HANDLERS COVERED BY THIS SPECIFICATION ARE NON-CUSTOM TYPE FOR LIGHT TO MEDIUM DUTY USE.

REVISE CAREFULLY IF SPECIFICATION IS TO BE USED FOR PREPURCHASE; TO SPECIFY WHO PROVIDES FILTERS FOR THE AIR HANDLER IF IT WILL BE USED FOR TEMPORARY SERVICE. IT IS SUGGESTED THAT THE AIR HANDLER SUPPLIER PROVIDE ONE SET OF FILTERS, AND THE MECHANICAL CONTRACTOR RUNNING THE UNIT DURING TEMPORARY SERVICE PROVIDE THE ADDITIONAL FILTER SETS, SINCE IT IS UNKNOWN HOW MAY FILTER SETS WILL BE REQUIRED DURING TEMPORARY OPERATION. THIS SECTION SPECIFIES FILTERS SUPPLIED IN THIS MANNER (PER PART 2, MFR. SUPPLIES FILTERS WITH UNIT. PER PART 3, UNIT MUST BE TURNED OVER WITH NEW FILTERS).

THIS SPEC CANNOT BE USED STAND-ALONE FOR AIR HANDLERS! THE RELATED SPEC SECTIONS LISTED IN PART 1 MUST BE INCLUDED IN THE PROJECT SPEC BOOK TO PROVIDE THE COMPLETE REQUIREMENTS. HOWEVER, INFO IN THIS SECTION IS COMPLEMENTARY TO THOSE RELATED SECTIONS; THEREFORE DO NOT DELETE, FOR EXAMPLE INFO IN THIS SECTION REGARDING COILS, DRAIN PANS, FILTERS, ETC.

**1.1 RELATED DOCUMENTS**

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 220500: Common Work Results for Mechanical.
  - 2. Section 220513: Motors.
  - 3. Section 220548: Vibration Control
  - 4. Section 238216: Coils and Drain Pans
  - 5. Section 233400: Fans
  - 6. Section 234000: HVAC Air Cleaning Devices
  - 7. Section 233300: Air Duct Accessories and RGDs
  - 8. Section 230900: Mechanical Systems Control
  - 9. Section 230593: Testing, Adjusting, and Balancing.
  - 10. Division 26: Electrical.

## **1.2 SUMMARY**

- A. Section Includes:
  - 1. Air handling units of semi-custom construction consisting of modular sections.

## **1.3 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
  - 1. ANSI/AHRI Standard 430. Performance Rating of Central Station Air-Handling Units.
  - 2. AHRI Standard 260- Sound Rating of Ducted Air Moving and Conditioning Equipment.
  - 3. NFPA 70 National Electric Code.
  - 4. NFPA 90A: Standard for the Installation of Air-Conditioning and Ventilating Systems

## **1.4 DELIVERY, STORAGE, AND HANDLING**

- A. Manufacturer shall provide shipping protection to insure that the interior and exterior of each unit is completely protected from dirt or weather. Duct and pipe openings shall be covered with sealed sheet metal, plastic or other durable means to ensure unit cleanliness is maintained.
- B. Support coil headers independently during transport to prevent potential damage from vibration.
- C. Restrain fans and other components to prevent damage during shipping.

**1.5 SUBMITTALS**

- A. For each unit, submit for approval, the following product data:
  - 1. Overall unit dimensions, weight, and center of gravity.
  - 2. Ductwork connections including sizes, locations, and methods of connecting to mating ductwork.
  - 3. Piping connections including size, material types, and dimensioned locations for each service.
  - 4. Detail methods of sealing inner and outer walls at locations of pipe penetrations.
  - 5. Locations and sizes of access doors.
  - 6. Details of access door handles, latching mechanisms, hinges, and vision panels.
  - 7. Locations of interior light fixtures and light switches.
  - 8. Locations of electric power convenience receptacles.
  - 9. Dimensions, weights and centers of gravity for each section when units will be shipped in multiple sections.
  - 10. Cabinet material, metal thickness, finishes, insulation and accessories.
  - 11. Details of vibration isolation bases including selections for vibration isolation springs.
  - 12. Details of fan discharge flexible duct connector where required.
  - 13. Details of motor and belt guards.
  - 14. Motor mfg., ratings, electrical characteristics, and motor accessories.
  - 15. Sound power level data per AHRI Standard 260.

*REVISE WARRANTY PER PROJECT. LONGER WARRANTY PERIOD MAY BE APPROPRIATE FOR CERTAIN TYPES OF WORK. INCLUDE THIS ARTICLE IN EVERY SPECIFICATION SECTION.*

**1.6 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers:
  - 1. Buffalo Air Handling.
  - 2. TMI Custom Air Systems.
  - 3. Governair LLC.
  - 4. Mafna Air Conditioning, Inc.
  - 5. Air Flow Equipment.
  - 6. Trane.
  - 7. McQuay.
  - 8. Thermal Corporation
  - 9. Ventrol

**2.2 GENERAL**

- A. Provide factory fabricated, double-wall air handling units with components and equipment as scheduled and detailed on Drawings.
- B. Components shall be fabricated in major sections at the Manufacturer's factory and shall carry the Manufacturer's nameplate.
- C. Provide units of height, width, and length indicated, and that comply with project weight and spatial limitations.
  - 1. Weight, spatial, and dimensional limitations shall also apply to individual sections, including facilitate unit rigging and installation.
- D. Provide a minimum of four lifting lugs per separately shipped section, of adequate strength to allow rigging without damage.
- E. Manufacturer shall supply gasketing, sealant, and installation instructions.
- F. Manufacturer shall provide touch-up paint(s) for use after field assembly.
- G. Touch up all galvanized surfaces damaged from welding or other fabrication operations with zinc rich paint, minimum 65 percent metallic zinc by weight.

**2.3 COMPONENTS- GENERAL REQUIREMENTS**

- A. Provide all components integral to the air handling unit including, but not limited to, the following. These components shall comply with Related Sections and any additional requirements of this Section.

*EDIT THESE ITEMS FOR EACH PROJECT*

- 1. Motors
- 2. Vibration Isolation
- 3. Coils and Drain Pans
- 4. Fans and Accessories
- 5. Air Filters
- 6. Sheet Metal Accessories
- 7. Dampers (as specified in Controls section)
- 8. Energy Recovery Wheels/Heat Exchangers
- 9. Sound Attenuators

**2.4 MANUFACTURING**

- A. Casings shall be manufactured only after panel components (structural members, facing sheets and insulation) have been thoroughly cleaned of mill grease, dirt and oxidation.
  - 1. Interior and exterior of panel system shall be thoroughly protected from contamination from the manufacturing process through start-up procedures and acceptance.
  - 2. Internal components (fans, coils, air filter frames, equipment and piping) shall arrive from their respective manufacturing facilities free of grease and dirt.

- B. In general, products such as sealants and gaskets, used within the unit, shall be non-petroleum based products, with no outgassing characteristics.
- C. Equip, prepare, identify and match-mark individual shipping sections so that field reassembly and installation can be performed without reworking, interchanging, adjusting, springing, drilling new bolt holes, etc. All supplemental supplies necessary to assemble the unit shall be provided by the Manufacturer.

**2.5 UNIT HOUSING**

- A. Maximum Casing Leakage (inclusive of all components):
  - 1. Shall not exceed 1 percent of the scheduled design air flow at 6 in. wg positive or 4 in. wg negative static pressure, or:
  - 2. 1 percent of the scheduled design air flow at the scheduled casing pressure ratings, when such ratings are scheduled.
- B. Construction
  - 1. The unit shall be constructed of modules with a complete frame with removable side and bottom panels. Frame-less construction with removable panels for coil and fan access may also be supplied. For either type construction, removal of panels shall not affect the structural integrity of the unit.
  - 2. The unit shall be equipped with a base rail or similar support structure so that the bottom of the unit does not rest directly on the housekeeping pad or floor. The base rail/supports shall be designed to allow the unit to be leveled with shims and anchored to the pad or floor.
  - 3. Minimum wall panel thickness shall be 2 in.

*IF CONDITIONS WARRANT, SELECT THE SPECIFIC CASING MATERIAL BY EDITING B.4, OTHERWISE THE MFG. MAY PROVIDE ANY OF THE 3 LISTED.*

  - 4. Interior and exterior casing shall be G-90 galvanized steel, aluminum, stainless steel, or as scheduled.
  - 5. The casing shall be able to withstand up to 6 in. wg positive or 4 in. wg negative static pressure, or as scheduled.
  - 6. Maximum deflection of walls, floors, and roof shall be L/250 (L = span in inches.), under the following conditions:
    - a. Wall deflection maximums are at 6 in. wg positive or 4 in. wg negative static pressure, or at scheduled pressures. .
    - b. Floor deflection maximum: 150 lbs. /sq. ft.
    - c. Roof deflection maximum: 75 lbs/sq. ft. plus snow load
  - 7. Outdoor design conditions:
    - a. Minimum wind load: 120 mph.
    - b. Minimum snow load: 50 lbs/sq ft or per code, whichever is greater.
  - 8. Modules shall be factory-insulated. Insulate walls, roof, and entire bottom, including below drain pans. Insulation and insulation adhesive shall comply with NFPA-90A requirements for flame spread and smoke generation and be rated UL Class 1. Insulation adhesive shall be UL-listed.

**SELECT EITHER SOLID (B.9) OR PERFORATED (B.10) INNER WALL.  
AVOID PERFORATED WALLS WHENEVER POSSIBLE.**

9. Module panels shall be of double-wall construction to facilitate cleaning of the unit interior. The interior wall shall be solid. Fiberglass insulation shall be 3 lbs./cu.ft. density. Insulation thermal resistance R shall be a minimum of 8.33 ft<sup>2</sup>·h·°F/Btu.
10. Module panels shall be of double wall construction, fabricated from solid wall at cooling coils and humidifiers with the balance of the inner wall perforated to enhance acoustical performance. Foam insulation shall not be used behind perforated panels. Configure perforation spacing and hole size to prevent insulation breakaway, flake off, or delamination when tested at 9,000 fpm, in accordance with UL Standard 181. Thermal resistance R shall be 8.33 ft<sup>2</sup>·h·°F/Btu.

C. Ductwork Connections

1. Provide flanged connections with flanges extending a minimum of 2 in. past the outside wall of the unit.

D. Roof

1. For units located inside, roof performance shall match all panel performance requirements.
2. For units located outside, no penetrations shall be made through roof. Slope roof to prevent standing water.

E. Paint

1. Prior to assembly, paint all non-galvanized ferrous metal parts with two coats of lead-free rust-inhibitive, alkyd-based primer paint.
2. For exterior units, paint exterior surfaces with two coats of alkyd exterior enamel paint. Properly prepare all surfaces prior to painting according to paint manufacturer's instructions.

F. Access Doors and Panels

1. Access doors and panels shall be of same construction as unit housing, including insulation.
2. Doors shall be minimum 18 in. wide, 24 in. wide is preferred, or widths as indicated on drawings. Provide doors that are the full height of the unit, maximum 6ft. high.
3. Each access door and panel shall be equipped with continuous gaskets and shall fit in the door frame in a manner to guarantee the unit's specified leakage criteria.
4. Hinges and hardware shall be galvanized, stainless steel or aluminum. Outdoor unit hardware shall be stainless steel, or aluminum. At least 2 handles per door, operable from either side, shall be provided.
5. Access doors in positive pressure sections shall open inward. Access doors in negative pressure sections shall open outward.

**STRIKE THE FOLLOWING IF DOOR WINDOWS ARE NOT TO BE PROVIDED.**

6. Unless otherwise noted, each door shall contain a safety glass window. Provide double pane non-fogging thermal windows downstream of cooling coils, single or double pane non-fogging type elsewhere. Each window shall be a minimum 6 in. by 6 in. properly sealed to prevent leakage and condensation, and be able to operate safely against the unit's positive and negative pressure capabilities.
7. Removable access panels shall be provided in unit sections where components contained are larger than the respective access module door opening.

G. Outside and exhaust air openings

1. Outside air and exhaust openings shall be furnished with 25 mesh, galvanized bird screen. Rain hood velocities shall not exceed 1000 FPM.

**2.6 COMPONENTS**

*SELECT LOUVERS IN COORDINATION WITH ARCHITECT. ENSURE LOUVERS ARE NOT ALREADY SPECIFIED IN ARCH DIVISIONS. DELETE THE PARAGRAPH BELOW IF LOUVERS ARE SPECIFIED BY THE ARCHITECT.*

A. Louvers

1. Provide louvers as shown and scheduled on drawings. Louver airstream shall not entrain water or snow.
2. Louvers shall be self-draining.

*MIXING OF OUTSIDE AIR AND RETURN AIR STREAMS SHOULD OCCUR OUTSIDE THE AIR HANDLER. AVOID MIXING BOXES WHICH ALMOST ALWAYS RESULT IN STRATIFICATION (FREEZE STAT TRIPPING) PROBLEMS.*

B. Mixing Box Section

1. The outside and return airstreams shall be directed into each other in a mixing box by parallel blade damper assemblies oriented to facilitate mixing of the airstreams.

C. Face and Bypass Modules

1. Face and bypass modules shall be provided as shown on the drawings.
2. Bypass shall be the external type, routed to a factory fabricated opening located downstream of all coils. The pressure drop through the bypass shall be equal to the pressure drop through the coils.
3. Dampers shall be opposed blade at the coil and either opposed or parallel blade at the bypass. Dampers shall be mechanically linked together.
4. Damper construction shall be per the Related Section.

D. Dampers

1. Provide dampers as specified in Related Section Mechanical Systems Controls.
2. In addition to the requirements in Mechanical Systems Controls, dampers designated as smoke dampers shall be labeled in accordance with the latest editions of UL 555S.

E. Sound Attenuators

1. Provide sound attenuators where shown integral to air handling unit, as scheduled on Drawings and as specified in Related Section.

F. Filters

1. Provide filters and filter gauges of types as shown and scheduled on drawings and as specified in Related Section.

**BLENDERS ARE NOT PREFERRED. MIXING OF OUTSIDE AIR AND RETURN AIR STREAMS SHOULD OCCUR OUTSIDE THE AIR HANDLER TO AVOID THE NEED FOR BLENDEES WHICH HAVE GENERALLY PROVEN TO BE INEFFECTIVE.**

G. Blender Assembly

1. Blender assemblies shall be welded, rigid, vibration and deflection free, and adjustable; designed to impart a counter-rotational mixing to the air stream, producing a minimum standard deviation through a plane parallel with the blenders between entering air streams.
2. Mixing performance: Constant from 500 fpm to 2,500 fpm blender velocity.
3. Minimum mixing effectiveness: 80percent and +/- 5 deg F standard deviation when mixing 30percent outdoor air/70percent return air at 50 deg F inlet temperature differential. Capable of acceptable performance throughout entire operating range of unit, including system turndown.
4. Blender material shall be the same as the casing interior material.
5. Acceptable Manufacturers:
  - a. RM Products
  - b. Blender Products, Inc.

**THE FOLLOWING SPECIFICATION FOR AN AIR TO AIR HEAT EXCHANGER (IN HIDDEN TEXT) IS PROVIDED FOR CONVENIENCE AND SHALL BE EDITED TO BE PROJECT SPECIFIC. "TURN ON" THIS TEXT IF REQUIRED.**

H. Air-to-Air Heat Exchanger Section

1. Minimum capacities shall be as scheduled on the Drawings.
2. Heat exchanger shall be furnished as an integral part of the overall air-handling unit.
3. Heat exchanger shall be a cross-flow, fixed-plate exchanger with a diamond-shaped cross section. Plates shall be fabricated of aluminum and formed with profiles that maximize heat transfer and minimize pressure loss. Frames shall be constructed of galvanized steel and/or aluminum. Configuration shall allow for access and cleaning of each of the air pathways.
4. Furnish the heat exchanger with bypass dampers and a bypass air pathway to allow for the automatic prevention of frost formation on the plates. Provide dampers as specified in the Related Section "Mechanical Systems Controls".

5. Casing for the heat exchanger shall be constructed to the standards indicated elsewhere in this section for the overall air-handling unit. Provide baffle plates to seal and separate the two air streams from each other. Provide condensate drain pan(s) in compliance with Related Section, beneath the heat exchanger media.
6. Provide the air handling unit a total of 4 access sections at the inlet and discharge of each air path. Each access section shall be furnished with an access door.

I. Coils and drain pans

1. Provide preheat, energy recovery, heating, cooling coils and associated drain pans as shown and scheduled on Drawings and as specified in Related Sections.
2. Provide drain pans and drain connections for the following sections: cooling coils, humidifiers, and energy-recovery coils or wheels.
3. All coil assemblies shall be safed on top and bottom and at all coil splits.
4. Drain pans shall be sloped in a minimum of 2 planes to eliminate standing water and shall be stainless steel construction. Drain pans shall be constructed of adequate downstream length to collect any condensate that blows off the coil at air velocities up to the design air flow rate or 500 FPM, whichever is greater.
5. Insulate drains pans, including intermediate drain pans, to prevent sweating.
6. All coil assemblies shall be removable without disruption to other unit components or coils. Fasten coil assemblies with bolts or screws per manufacturer's recommendations (welds or rivets are not acceptable).
7. Extend coil connections, vents and drains to the outside of the air handling unit casing to allow field connections.
8. Label coil inlet, outlet, vent and drain piping connections with labels applied outside the casing.

J. Diffuser Modules:

1. A diffuser module shall be provided immediately downstream of the fan module on blow through units. The diffuser shall provide equal air distribution to components immediately downstream of the diffuser. Diffusers shall be made of G90 galvanized steel, stainless steel, or aluminum.

**THIS SECTION SPECIFIES BACKWARD OR AIR FOIL STYLE FANS WHICH ARE PREFERRED IN MOST CASES. HOWEVER ON SOME SMALL AIR HANDLERS A FORWARD CURVED FAN MAY BE A MORE APPROPRIATE CHOICE, IN WHICH CASE EDIT THE BELOW.**

K. Fans and Accessories

1. Provide fans and accessories as shown and scheduled on drawings and as specified in Related Section. Fans shall be backward inclined or air foil type.

2. When plenum/plug type fans are furnished provide a galvanized steel safety cage that entirely surrounds the fan wheel. Provide hinged or bolt-off sections large enough to allow bearing, motor, and belt replacement and service. Provide a safety cage of bolted panel construction that allows the cage to be easily disassembled and reassembled.
3. Isolate the fan from the unit casing by flexible duct connection(s) and a spring isolation base

**THIS SECTION REQUIRES ACCESS SECTIONS BE PROVIDED TO ALLOW BOTH UP AND DOWNSTREAM ACCESS TO EVERY MODULE COMPONENT. THE DESIGNER MUST ACCOMMODATE THESE ACCESS SECTIONS WHEN FITTING UNITS INTO THE AVAILABLE SPACE.**

- L. Access/Inspection Sections: Modules shall include an access section complete with a double-wall door. Access sections shall be provided to allow up and down stream access to every module component.

**CONSIDER MOISTURE ELIMINATORS WHEN LESS THAN IDEAL CONDITIONS EXIST AT OUTSIDE AIR INTAKES OR HUMIDIFIERS.**

- M. Moisture Eliminator Module

1. A module consisting of a vertically mounted, maintenance-free moisture eliminator shall be provided. The moisture eliminator shall consist of "sine-wave" fins or stainless steel mesh for effective moisture removal.
2. Moisture eliminators shall be made of stainless steel or aluminum, of rigid construction, and be vibration and deflection free.

**AIR HANDLERS ARE NOT SPECIFIED TO BE EQUIPPED WITH DISCONNECTS. DISCONNECTS ARE NOT TYPICALLY REQUIRED FOR FANS DRIVEN BY VFDS; SEE DESIGN GUIDELINE 220514 FOR MORE INFO. FOR FANS NOT DRIVEN BY VFD'S, REQUIRE THE ELECTRICAL ENGINEER TO INDICATE A DISCONNECT. DISCONNECTS SHALL BE MOUNTED OUTSIDE FAN CASINGS.**

- N. Electrical and Temperature Control Wiring

1. Provide a junction box on the outside of the fan section casing for single point connection of external power wiring to each unit fan motor.
2. Provide EMT and flexible metal conduits and wiring between the junction boxes and the motor(s). Final connections to motors shall be 1/2" minimum flexible metal conduit with steel fittings.
3. For each unit section that has an access door, provide a 120V compact fluorescent light fixture complete with vapor-tight globe, aluminum globe guard, and rough service lamp. For units wider and taller than 6ft., provide for each section a 4ft. dual tube fluorescent light consisting of industrial type metal fixture with 10percent up-light, full depth end plates with wire guard, electronic ballast, T-8 lamps, and secured with a minimum of four fasteners. Similar to Lithonia type AF.

4. Provide a light switch with red pilot light adjacent to the latch side of the fan door to control all of the unit's lights. Pilot light shall be "on" when associated light fixture is "on."
5. Provide a junction box on the outside of the unit for single point connection of external power wiring to the unit's lights. Provide EMT conduit and wiring between the junction box, switch, and associated lights. Provide flexible conduit "whips" with wiring at section splits, for reconnection of the lighting circuit by the Electrical Contractor after sections are assembled.
6. Provide all electrical components in accordance with NFPA 70 (NEC) and Division 26 requirements. Indoor electrical enclosures shall be rated NEMA 1. Electrical enclosures located outdoors shall have a NEMA 3R rating.
7. All electrical and temperature control wiring shall be run in conduit.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Use spreader bars with lifting cables and hoist sections from lifting lugs, to prevent cable damage to sections.
- B. Install on concrete housekeeping pad. Coordinate final pad size and location in field
- C. When indicated, install units on steel supports. Coordinate final location and placement of steel supports and ductwork connections in field
- D. Secure the unit to the floor or housekeeping pad with suitable anchors bolted through the unit's base rail or support feet. Prior to anchoring, level unit in all directions with stainless steel shims.
- E. Openings to ductwork and piping shall remain protected and covered until just prior to connection of utilities, or unit assembly. Immediately after unit assembly, restore all factory protection. Maintain protection after assembly until just prior to final acceptance by Owner.
- F. Make piping and duct connections, install filters and unit accessories, and complete all work required to place the unit into service

#### **3.2 TEMPORARY USE OF AIR HANDLING UNITS**

- A. Thoroughly clean unit of all grease, dirt, dust, etc.
- B. Prior to placement into temporary service:
  1. Perform manufacturer's pre-start protocol.
  2. Perform commissioning activities.

- C. Perform all manufacturer's required routine maintenance procedures during temporary service. Continuously maintain a log of such procedures. Store log at unit during temporary use period and include log as part of the final O&M manual.
- D. While operating the air handler for temporary use, install a complete set of filters in the air handling unit of the same quality and efficiency as the specified permanent filters for the project.

**BELOW PARAGRAPH REQUIRES MINIMUM MERV 8 FILTERS TO PROTECT DUCT WORK DURING CONSTRUCTION, WHICH MATCHES LEED REQUIREMENTS AND IS RECOMMENDED FOR NON-LEED PROJECTS AS WELL.**

**SOME SPECIALTY INSTALLATIONS (E.G. CLEAN ROOM OR CLEAN-ROOM-LIKE SPACES) MAY REQUIRE THAT TEMPORARY DUCTWORK FILTERS BE EQUIVALENT TO SECONDARY FILTER PERFORMANCE. IF THAT IS THE CASE, REVISE BELOW ACCORDINGLY.**

- E. Provide temporary filters, minimum MERV 8, to protect all ductwork and building contents when unit is operated during construction. Filters shall have an equal or better performance rating than primary filters specified for permanent use in order to prevent construction dirt infiltration into the air handling unit systems.
- F. Continuously maintain all filters and replace when pressure drop exceeds 1 inch w.c., or at manufacturer's recommended change-out pressure drop, whichever is lower.

### **3.3 FIELD QUALITY CONTROL**

- A. Units shall undergo air and water balance and vibration testing per Related Section Testing, Adjusting and Balancing.

### **3.4 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

### **3.5 ADJUSTING, CLEANING, PROTECTION**

- A. After unit has completed any temporary service and just prior to final acceptance by Owner, contractor shall:
  - 1. Thoroughly clean unit of all grease, dirt, dust, etc., lubricate bearings, align and tighten belts, and perform manufacturer's pre-start protocol
  - 2. Install a new, complete set of filters.
  - 3. Perform all commissioning activities, even if previously performed to ready for temporary service.
  - 4. Touch up damaged galvanized surfaces with zinc rich paint, minimum 65 percent metallic zinc by weight.
  - 5. Touch up damaged painted surfaces with manufacturer provided touch-up paint.

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
SECTION 238216 - COILS AND DRAIN PANS

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 238216 - COILS AND DRAIN PANS**

*04/2011 - REVISED FORMAT AND TECHNICAL CONTENT - D. KARLE AND  
M. PLATT.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

**1.2 SUMMARY**

- A. Section Includes:
1. Coils and drain pans for all purposes, unless specified in other specification sections as part of a manufactured unit or assembly.

**1.3 SUBMITTALS**

- A. Submit the following product data for approval, for each unit.:
1. Certified coil-performance ratings with all system operating conditions indicated.
  2. Coil performance data substantiated by computer generated output data.
  3. Coil materials of construction including headers, frames, and coil tracks, number of rows, fin spacing, fin types, and any heat transfer enhancements.
  4. Details of coil supports for stacked coils.
  5. Details and materials of cooling coil condensate collection drain pans and drain piping.
  6. Coil anti-corrosion coating material data sheets.

**1.4 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
1. AHRI Standard 410 Forced-Circulation Air Cooling and Air Heating Coils.
  2. ANSI/ASHRAE Standard 62.1 Ventilation for Acceptable Indoor Air Quality.

**1.5 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers:
  - 1. Trane, a business of Ingersoll Rand.
  - 2. York by Johnson Controls.
  - 3. McQuay International.
  - 4. Aerofin.
  - 5. Marlo DRS Technologies, Inc.
  - 6. Coil Replacement Co.
  - 7. Heatcraft Worldwide Refrigeration.
  - 8. USA Coil & Air.

**2.2 GENERAL COIL INFORMATION**

- A. Coil Tubes: Copper, minimum 5/8 in. diameter, minimum 0.035 in. tube wall thickness.
- B. Coil Fins: Aluminum, plate type, minimum 0.0095 in. thickness.
- C. Coil Header and Connection Materials: Seamless copper with extruded tube holes to permit expansion and contraction without creating undue stress or strain. Copper connections.
- D. Coil Configuration: A maximum of 6 rows and a maximum of 10 fins per in.
- E. Brazed joints.
- F. Fins shall consist of corrugated aluminum plates with full fin collars for accurate spacing and maximum fin/tube contact. Fins shall have no openings punched on them to accumulate lint or dirt. Tubes mechanically expanded into fins to provide a continuous primary to secondary compression bond over the entire finned length for maximum heat transfer rates. Tubes that have been expanded through use of hydraulic methods are not acceptable.
- G. Casing and Tube Supports: Construct with bolt holes for mounting at approximately 8-in. centers. Minimum 16 gauge, reinforced flange type, constructed to support the coil properly without sagging, racking, or stressing coil tubes. Provide heavier gauge casings and additional reinforcement where required to properly support stacked coils.
- H. Coil manufacturer shall select the coil based on the most efficient coil circuiting. All coil circuits shall be of equal pressure drop. All coils shall be counter-flow configuration. Coils shall achieve uniform leaving air temperature across entire coil face. Use of internal restrictive devices to obtain turbulent flow is not acceptable. Coil performance shall be substantiated by computer generated output data.

- I. Circuit coils to facilitate air venting and draining when installed level and plumb, and for service without removing individual plugs from each tube. Provide coils with same end connections, unless indicated otherwise. Provide vent and drain connections on the coil header.
- J. Provide a foam strip seal located between casing channels and fins along top and bottom to prevent air bypass and water carryover.
- K. Factory label inlet, outlet, vent, and drain connections.
- L. Coil inlet, outlet, vent, and drain connections shall not penetrate drain pans. Configure coil and mounting arrangement accordingly.
- M. Provide anti-corrosion coating for coils mounted in corrosive air streams, such as those mounted in lab exhaust heat recovery systems. Provide a coating type that will protect against the specific corrosives in the air stream. Coil coating subject to Owner and Engineer review, approval, or modification.

### 2.3 WATER COILS

- A. Hot Water Coil Casings: Galvanized steel.
- B. Chilled Water Coil Casings: Stainless steel.
- C. Face velocities across chilled water coils shall not exceed 500 FPM.
- D. Connection Type:
  - 1. Sizes up to and including 2 in.: Soldered, screwed, or flanged type. Give consideration to equipment installation conditions when selecting connection type.
  - 2. Sizes greater than 2 in.: Flanged connections.
- E. Water Coil working pressure and temperature: 200 psig/220 deg. F.

### 2.4 DIRECT EXPANSION COILS

- A. Face velocities across DX coils shall not exceed 500 FPM.
- B. Dehydrate and seal with a dry nitrogen charge before shipment.
- C. Evaporator coil connections: Male sweat type.
- D. Liquid piping connections: Brass.
- E. Suction piping connections: Copper.
- F. Use interlaced tube configuration in VAV applications.
- G. Direct expansion coil working pressure: 300 psig.

### 2.5 STEAM COILS

**NON-DISTRIBUTING TYPE STEAM COILS SHOULD ONLY BE USED FOR APPLICATIONS WELL ABOVE FREEZING AND ARE NOT SPECIFIED HERE. THEY ALSO CAN SUFFER FROM POOR CONTROLLABILITY IN LARGER SIZES. NOT GENERALLY RECOMMENDED EXCEPT FOR SMALL ABOVE-FREEZING TERMINAL UNIT TYPE APPLICATIONS.**

*FOR ANY HORIZONTAL TUBE STEAM COIL LONGER THAN 108" FINNED LENGTH, DISTRIBUTING TYPE ARE STRONGLY RECOMMENDED WITH SUPPLY CONNECTIONS AT BOTH ENDS OF THE COIL, TO ASSURE EVEN HEATING ACROSS THE COIL FACE.*

- A. One row, steam distributing tube-in-tube type, with 1-in. diameter outside tubes and 5/8-in. diameter inside tubes; same or opposite end connections as required. Uniform leaving-air distribution temperature with maximum 4 deg. F temperature difference between leaving air from any lengthwise quadrant of coil area (based on nine or more equal area temperature readings in any given quadrant) and average leaving air temperature over entire coil face area. Die-form distributor tubes. Orifices shall discharge steam in the direction of condensate flow. Tubes shall be located concentrically within condensing tubes with corrosion resistant support clips. Provide steam deflectors opposite the supply connection, to prevent impingement of steam into tubes in connection area.

*VERTICAL TUBE STEAM COILS FOR 100% OUTSIDE AIR APPLICATIONS (SPECIFIED BELOW) ARE LESS PRONE TO FREEZING AND ARE STRONGLY RECOMMENDED FOR SUCH APPLICATIONS FOR LARGE (> 48" LONG) COILS. HOWEVER DESIGNER MUST ASSURE THAT ADEQUATE VERTICAL SPACE IS AVAILABLE TO PROVIDE PROPER STEAM TRAP INLET HEIGHT. ALSO ASSURE SPACE IS ADEQUATE FOR STEAM CONNECTION TO THE COIL. A COMPROMISE OPTION IS HORIZONTAL 1" O.D. DISTRIBUTING TUBE TYPE WITH SUPPLY CONNECTIONS AT BOTH ENDS OF THE COIL.*

- 1. 100 percent outside air steam coils with finned length greater than 48 inches: Provide vertical tubes; 1-in. diameter outside tubes and 5/8-in. diameter inside tubes.
- B. Steam coil working pressure and temperature: 100 psig/400 deg. F.

## **2.6 DRAIN PANS**

- A. Provide a drain pan under each cooling coil, and where indicated. Provide intermediate drain pans at each level of stacked coils. Drain pans shall capture all condensate from coil assembly; including pipe header, pipe return bends, upstream run-off, and downstream carryover.
- B. Drain Pan Construction: 304 stainless steel, self-supporting, sloped in two directions minimum, leak-tight with welded seams. Design, fabricate and install to prevent standing water.
- C. For coils mounted in 100 percent outside air units, insulate the bottom of intermediate drains pans with 3/8-in.-thick flexible closed cell elastomeric insulation, with the upstream edge protected by a stainless steel angle.
- D. Provide rigidly supported, leak tight copper downcomer drains from each intermediate pan to pan below.

*TWO OPTIONS EXIST FOR BOTTOM PAN - ABOVE FLOOR OR DEPRESSED-IN-FLOOR. ABOVE FLOOR OPTION IS PREFERRED DUE TO EASE OF CONSTRUCTION, VERIFICATION AND EVENTUAL REPLACEMENT, AND HIGHER DRAIN OUTLET. HOWEVER ABOVE FLOOR OPTION WILL TYPICALLY INCREASE UNIT HEIGHT BY 3 TO 6 INCHES. CHOOSE BETWEEN FOLLOWING OPTIONS CAREFULLY.*

- E. Above Floor Bottom Pan: Minimum 16 gauge construction. Insulate between pan and floor with 1/2 in. thick flexible closed cell elastomeric insulation. Provide threaded outlet at pan low point.
- F. Depressed-in-floor Bottom Pan: Minimum 16 gauge construction, maximum deflection 1/250 at 150 lbs./sq.ft. load.
  - 1. Insulate below pan as part of the floor insulation system. Provide waterproof seal between pan and floor deck.
  - 2. Provide threaded outlet at pan low point.
- G. Flexible Closed Cell Elastomeric Drain Pan Insulation: Armacell-Armaflex or equivalent. Composite flame spread / smoke density not to exceed 25/50. Fully adhere to the pan bottom with insulation manufacturer's recommended adhesive.

**2.7 SOURCE QUALITY CONTROL**

- A. Factory test all coils.
- B. Proof test all water and steam coils to 300-psig minimum, and leak test to 200 psig, minimum.
- C. Proof test all direct expansion coils to 450 psig minimum, and leak test to 300 psig, minimum.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Install coil assemblies in accordance with details, other specifications sections, approved submittals, and the coil manufacturer's installation requirements and recommendations.
- B. Install coils level and plumb.
- C. Use fin combs to restore bent fins to upright condition.
- D. Block (safe) gaps around coil casings to prevent air flow bypass. Use sheet metal matching the coil casing material, secured with sheet metal screws. Close minor gaps with gasketing and sealants. All safing to match adjacent construction.
- E. Clean coils using materials and methods recommended by manufacturers, to remove dust and debris

**3.2 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

**END OF SECTION 238216**

Ann Arbor, MI 48109-1002

Phone: 734-764-3414

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

Fax: 734-936-3334

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**

SECTION 238219 - FLOOR MOUNTED FAN COIL UNITS (UN-DUCTED)

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 238219 - FLOOR MOUNTED FAN COIL UNITS (UN-DUCTED)**

**REVISIONS:**

*FIRST EDITION MAY 2010, AEC MECH TECH TEAMS - HVAC/CONTROLS GROUP. DEVELOPED BASED ON THE NORTH QUAD RESIDENCE HALL FAN COIL SPECIFICATION. GENERALLY INTENDED FOR SMALL (< 1/2 HP) VERTICAL FAN COILS MOUNTED INSIDE THE ROOM WITH CHW AND HEATING COILS. COULD BE ADAPTED FOR OTHER TYPE IN-ROOM FAN COILS.*

*FAN COIL ROOM CONTROLLER (I.E. THERMOSTAT) AND CONTROL VALVES ARE SPECIFIED IN SECTION 230900 MECHANICAL SYSTEMS CONTROLS, AND NOT IN THIS SECTION. THIS SECTION COVERS ONLY THE FAN COIL CONTROL TRANSFORMER AND RELAY PACK.*

*NEW FORMAT DRAFT NOVEMBER 15, 2010. MANUFACTURERS UPDATED, FORMAT AND ORGANIZATION REVISED.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

*CAREFULLY VERIFY, EDIT AND COORDINATE RELATED SECTIONS.*

- B. Related Work Specified Elsewhere: Examine Drawings and other sections of the Specifications for requirements that affect and specify work under this section, in particular the following:
1. Section 221113: Piping Materials and Methods.
  2. Section 220523: Valves.
  3. Section 220513: Motors.
  4. Section 220719: Mechanical Systems Insulation.
  5. Section 232116: Hydronic Piping Specialties.
  6. Section 230900: Mechanical Systems Controls.
  7. Division 26: Electrical.

**1.2 SUMMARY**

- A. Section Includes
1. Floor-mounted fan-coil units, with controls provided in part or in entirety by the fan coil manufacturer, as specified.

*REVISE THE ALTERNATES REQUIREMENTS AND THE CORRESPONDING INFORMATION IN PART 1 AND PART 2 BASED ON PROJECT REQUIREMENTS. IF THERE ARE NO BID ALTERNATES, INDICATE*

*"NONE." CONSIDER SPECIFYING ECM MOTORS AS AN ALTERNATE. CONSIDER SPECIFYING WELDED, RADIUSED CORNERS ON FRONT AND SIDE EDGES OF TOP AS AN ALTERNATE. WELDED EDGES RESULT IN A MUCH MORE ATTRACTIVE AND DURABLE CABINET AND ARE PREFERRED BY U-M HOUSING.*

**1.3 ALTERNATES**

- A. Bid Alternate No. 1: Furnish fan-coil units with pre-assembled hydronic piping package. Tubing, valves, fittings, instrumentation, supports and insulation as specified herein and as indicated on the Drawings.
  - 1. Piping package shall be shipped from the manufacturer's factory connected to coil(s), secured and protected from damage during shipment.
  - 2. Piping package shall include the required control valves. Control valves shall be as specified in Section "Mechanical Systems Controls."

**1.4 COORDINATION**

- A. Coordinate dimensions and arrangement of fan coils with building elements including windowsill height, floor finish, pipe entry location, and wall construction.

*REVISE SUBMITTALS AS REQUIRED. SAMPLE PARAGRAPHS UNDER 1.5 REQUIRE DELIVERY OF A SAMPLE FAN COIL WITH THE BID, AND IS WRITTEN ASSUMING THE FAN COILS WILL BE PREPURCHASED, AND THAT A PREPIPED FAN COIL WILL BE CONSIDERED AS AN ALTERNATE. SAMPLE UNIT SUBMITTAL IS HIGHLY RECOMMENDED FOR PROJECTS WITH A LARGE QUANTITY OF FAN COILS.*

**1.5 SUBMITTALS**

- A. Submit the following product data for approval:
  - 1. Heating and cooling coil total and sensible heat transfer capacity, entering and leaving water temperatures, water flow rate, water pressure drop, and air pressure drop.
  - 2. Details of equipment assemblies indicating dimensions, weights, required clearances, component locations, and location and size of each field connection. Include cabinet construction details: panel gauge, removal method for access panel, cabinet mounting method, and filter and fan motor removal method.
  - 3. Details of motor including type, manufacturer and electrical characteristics.
  - 4. Wiring Diagrams: Power, disconnect switch, controls, transformer and three-speed fan control relays.
  - 5. Control transformer-sizing calculations.
  - 6. Detailed information on fan control relay board.
  - 7. Octave band and A-weighted sound power data for each unit type at fan coil rated capacity, tested per AHRI Standard 350.
  - 8. Evidence of UL or ETL listing and labeling.

- B. Equipment schedule with the following information for each unit type:
  - 1. Quantity of each type.
  - 2. Equipment tag.
  - 3. Model number.
  - 4. Manufacturer's size designation.
  - 5. Configuration (2-pipe or 4-pipe).
  - 6. Number of coils, number of rows for each coil, fin spacing for each coil, airflow rate and motor watts at each fan speed.
- C. Maintenance schedules and repair part numbers and manufacturer of motors, coils, integral controls, relay board, control transformer, and air filters.
- D. Warranty Documentation: Submit warranty documentation according to requirements of Contract Documents.
- E. Detailed schedule with each fan coil tagged by room number, indicating unit style, heating and cooling capacity, left- or right-hand piping configuration, and 2-way or 3-way control valves.

*THE FOLLOWING PARAGRAPHS SPECIFY CONDITIONS WHEN THE FAN COILS ARE PREPURCHASED, AND THAT A PREPIPED FAN COIL WILL BE CONSIDERED AS AN ALTERNATE. REQUIRE THAT A SAMPLE FAN COIL UNIT BE DELIVERED WITH THE BID AND IS WRITTEN ASSUMING. SAMPLE UNIT IS HIGHLY RECOMMENDED FOR PROJECTS WITH LARGE QUANTITIES OF FAN COILS.*

- F. Samples: Submit sample fan coil unit with bid: One unit, Type FCU-XX, pre-piped, with factory-applied color finish, and factory-installed piping package:
  - 1. Sample unit shall comply with these specifications in all respects.
  - 2. Configure piping for 2-way control valves with 3/4 inch nominal control valve body size.
  - 3. Provide Sample unit pre-piped with piping accessories and control valves, arranged per the drawing details. See "Factory-Provided and Installed Hydronic Piping Package" in Part 2.
  - 4. Piping shall be 3/4 inch nominal size. Pipe unit for 4-pipe configuration.
  - 5. Configure sample unit to allow the fan to operate at all three speeds after temporary power is provided.

**1.6 DELIVERY, STORAGE AND HANDLING**

- A. Mark each fan coil cabinet back with the scheduled room location.
- B. Mark the fan coil room locations on the outside of the shipping box.
- C. Support piping to prevent damage to pipe and coil headers during shipping.
- D. Restrain fans and other components to prevent damage during shipping.

- E. Ship each unit wrapped in a heavy plastic bag, packed in a corrugated cardboard shipping box.

*REVISE MAINTENANCE MATERIAL SUBMITTALS TO SUIT PROJECT REQUIREMENTS. FILTERS AND TOUCH-UP PAINT ARE GENERALLY NOT REQUIRED FOR SMALL PROJECTS. REVIEW PART 3 REGARDING TEMPORARY USE OF FAN COILS DURING CONSTRUCTION AND FINAL FAN COIL TURN-OVER TO OWNER AND THE REQUIREMENTS FOR EXTRA FILTERS. REVISE TOOLS IN PARA. D BASED ON THE QTY. OF FAN COILS. CONSIDER LISTING OTHER SPARE PARTS THAT MIGHT BE UNIQUE TO THE FAN COIL.*

**1.7 EXTRA STOCK MATERIALS**

- A. Furnish extra materials described below that match installed products. Package with protective covering for storage. Affix labels describing contents.
- B. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Fan-Coil-Unit Filters: Furnish start-up filter (installed in the shipped unit) and one spare filter for each filter installed.
  - 2. Touch-up paint: 48 fluid ounces total for each cabinet color, in spray cans.
  - 3. Tool or bit to remove the tamper-proof fasteners: total quantity of twenty.
- C. Extra materials, excluding start-up filters, are for the Owner's use, not for Contractor's use, during construction.
- D. Provide units built, tested, and installed in compliance with the latest edition of the following quality assurance standards, unless noted otherwise:
  - 1. ANSI/AHRI 350 Sound Rating of Non-Ducted Indoor Air-Conditioning Equipment.
  - 2. ANSI/AHRI Standard 440: Performance Rating of Room Fan-Coils.
  - 3. NFPA 70- National Electric Code.
  - 4. NFPA 90A Installation of Air-Conditioning and Ventilating Systems.
  - 5. ANSI/ASHRAE 62.1 Section 5 (Systems and Equipment) and Section 7 (Construction and Start-up).
  - 6. ANSI/ASHRAE 90.1-2007 Energy Standards for Low Rise Buildings Except Low Rise Residential Buildings.
  - 7. ASTM C916 - Standard Specification for Adhesives for Duct Thermal Insulation.
  - 8. ASTM C411 Standard Test Method for Hot-Surface Performance of High-Temperature Thermal Insulation
  - 9. ASTM C612 Standard Specification for Mineral Fiber Block and Board Thermal Insulation.
  - 10. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials
  - 11. ASTM A653 Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process

12. Fan coils shall be Underwriters Laboratories (UL) or Intertek (ETL) listed.

*REVISE WARRANTY PER PROJECT. TWO-YEAR WARRANTY MAY BE APPROPRIATE WHEN PURCHASING LARGE QUANTITIES OF FAN COILS.*

- E. Promptly remedy any Work not in accordance with the Contract Documents, within a one-year period from the date of Substantial Completion, according to the Standard General Conditions and Supplemental General Conditions.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Subject to compliance with all requirements, provide products from one of the following manufacturers:
  1. Airtherm, Westfield, MA.
  2. Enviro-Tec by Johnson Controls, Largo, FL.
  3. International Environmental Corporation, Oklahoma City, OK.
  4. Rittling, Buffalo, NY.

*VERIFY THE REQUIRED PROJECT SPECIFIC DIMENSIONS FOR THE FAN COILS AND SCHEDULE OR SPECIFY ACCORDINGLY. MANUFACTURER'S STANDARD HEIGHT UNITS MAY NOT FIT PROPERLY UNDER EXISTING WINDOWS/WINDOW SILLS.*

*LIST FAN COIL SOUND POWER LEVELS IN THE FAN COIL SCHEDULE OR IN THE SPECIFICATIONS. BE PARTICULARLY CAUTIOUS FOR FAN COILS USED IN SLEEPING QUARTERS.*

### **2.2 MANUFACTURED FAN COIL UNITS**

- A. Factory fabricated Fan Coil Units: Built, tested, and rated in accordance with the Quality Assurance Standards referenced in this Section.
  1. Mark the room location on the fan coil cabinet back.
- B. Capacities: As indicated in the equipment schedules.
- C. Dimensions: Maximum allowable dimensions as indicated on the Drawings. Maximum allowable height shall include the height of the leveling legs when adjusted to their minimum extension position.

### **2.3 FAN COIL UNIT CONSTRUCTION**

- A. Chassis:
  1. Construction: Heavy gauge, minimum G60 galvanized or A40 galvanized steel. Construct to eliminate racking.
  2. Provide a minimum of four leveling legs with minimum 1-inch adjustment.

3. Provide framing members with a minimum of two 7/16 inch diameter minimum, wall-mounting holes and two floor-mounting holes. Provide additional holes if required for safe and secure mounting. Mounting holes to permit bolting to the wall and the floor with lag screws.

B. Cabinet: Steel with baked-enamel or powder coat finish.

1. Tops: Steel, 18 gauge minimum thickness.
2. Front and sides of cabinet: Steel, 16 gauge minimum thickness.

**NOTE THAT THE PARAGRAPH BELOW IS FOR AN EXTERNAL (REMOTE) THERMOSTAT FOR THE FAN COIL. REVISE WHEN THE PROJECT REQUIRES A FAN COIL WITH DOORS TO ACCESS A FAN SPEED SWITCH OR THERMOSTAT CONTROL.**

3. Cabinet tops: Sloped, seamless and continuous without access doors for temperature controls, fan speed switches, and other controls.
4. Outlet grille: Pencil-proof and stamped into the top with all grille edges recessed into the casing and not projecting out of the casing.
5. Cabinets and front panels shall have all edges turned over and all burrs removed. The finished product shall have no sharp edges.
6. Front panel: Removable, with channel-formed edges and insulation on the entire interior face of the panel, and secured with tamper-resistant cam fasteners. Fasteners designed with a hexagonal socket for use with a common hex-head tool (allen wrench) shall not be acceptable.
7. Extend the front access panel for the full width of the fan coil cabinet, included the piping pocket extension and electrical pocket.
8. Provide an extension on the piping side of the cabinet unit. Extension shall result in an overall inside width of the piping pocket of not less than 17 inches. Extension shall be continuous with the front, top, sides, and bottom of the cabinet and shall not have an "add-on" configuration. Provide a cutout in the cabinet end to allow connecting piping to be routed into the piping pocket.
9. Provide an electrical equipment pocket, on the side opposite of the piping pocket, with a minimum clear inside width of 8 inches.
10. Base or legs: Form all vertical surfaces of solid sheet metal, including sides facing the air stream (facing the return air/air filter opening); open construction is not permissible.
11. Apply insulation in the entire cabinet on the interior faces including the end pockets, sides, front, and top panel away from the coil section. Apply insulation to interior cabinet surfaces to insulate the conditioned air stream and to prevent sweating. Do not insulate chilled water/dual temperature piping inside the cabinet. Secure Insulation to cabinet with water-based, non-out-gassing adhesive providing 100 percent coverage of the cabinet interior surfaces.

- C. Finished Surfaces: Clean, phosphatize, and coat with a factory baked-on or powder-coat primer, and separately applied baked or powder coated finish paint. Final color shall be as selected from the manufacturer's standard color palette.
- D. Insulation: Coil and Cabinet: minimum 1/2-inch-thick closed-cell elastomeric foam complying with the following:
  - 1. ASTM C 411 Standard Test.
  - 2. Attach with adhesive complying with ASTM C 916.
  - 3. Fire-Hazard classification, insulation and adhesive combined: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
  - 4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- E. Drain Pans: Fabricate drain pans and drain connections to comply with ASHRAE 62.1.
  - 1. Main drain pan (pan immediately below coil): Stainless steel, insulated.
  - 2. Auxiliary drain pan: Insulated molded plastic or stainless steel with threaded drain connection. Pan shall receive condensate from main drain pan. Provide large enough to capture condensate dripping from all chilled water and dual temperature piping located inside the fan coil cabinet.
    - a. Note: Do not insulate chilled water/dual temperature piping inside the cabinet.
- F. Filters: Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2
  - 1. Disposable Type 1 inch pleated cotton-polyester media: 90 percent arrestance and 7 MERV.
  - 2. Replaceable through return air opening without removing access panel.

**2.4 HYDRONIC COILS**

- A. Hydronic Coils: Copper tube, minimum 0.025 inch wall thickness, with mechanically bonded aluminum fins, maximum of 12 fins per inch, copper headers and copper connections; rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 degrees F.
  - 1. Factory test all coils as specified in the Source Quality Control article.
  - 2. Include manual air vent and drain connections accessible from the pipe access chase end of unit.
  - 3. Chilled water and dual-temperature water coil casings, tracks, baffles, and supports shall be of stainless steel construction.
  - 4. Provide coil piping connections extended into the piping pocket.

**2.5 FAN AND MOTOR BOARD ASSEMBLY (BLOWER DECK):**

- A. Fan(s) and motor(s): Mount on a common, rigid, sheet metal panel, fully insulated and removable as an assembly for ease of maintenance. Assembly shall be removable and replaceable through the front access panel and shall not require the removal of side panels.
- B. Fan: Forward curved, double width, centrifugal; directly connected to motor. Galvanized steel or aluminum wheels; galvanized-steel fan scrolls.
- C. Motor: Three speed, single phase, permanent split capacitor (PSC) type with permanently lubricated bearings. Provide motor with resilient mounting and built-in overload protection with automatic reset.
- D. Wiring termination: Pre-wire motor to power/relay board with quick-disconnect plug connection.
- E. The maximum allowable fan and motor RMS velocity at the maximum fan speed shall not exceed 0.15 in. /sec. in the horizontal, vertical and axial directions. Fans may be field tested after installation by an independent third party. The manufacturer, without cost to the Owner, shall correct any fan/motor found to exceed these vibration limits.

*NOTE THAT THE FOLLOWING ARTICLE IS WRITTEN FOR AN EXTERNAL (REMOTE) THERMOSTAT (ROOM CONTROLLER) USED FOR THE FAN COIL, SUPPLIED BY THE CONTROLS CONTRACTOR. EDIT AS REQUIRED IF PROJECT REQUIRES DIFFERENT CONTROLS,*

**2.6 FAN COIL CONTROLS AND ELECTRICAL CONNECTIONS**

- A. Control devices and operational sequences are specified in Section "Mechanical System Control" and the Sequence of Operation indicated on the control drawings. Provide pre-wired controls that achieve the operational sequences and that are compatible with the remote thermostat (room controller) specified in Related Section "Mechanical Systems Control." Remote thermostat will be provided and wired to the fan coil by the controls contractor.
- B. Provide a three-speed fan relay control board pre-wired to the fan, and with connections for the low voltage remote thermostat. Coordinate with controls contractor and assure control relay board is compatible with remote thermostat. Relays shall be silent in operation.
- C. Provide 120/24 volt control transformer inside a separate protective cover, or with fully guarded wiring connections. Control transformer shall be a discrete device, not part of a circuit or relay board. Size transformer for control valve(s), thermostat, and fan relays, plus 20 percent of maximum load. Transformer shall be appropriately fused on both the line side and the load side.
- D. Mount all electrical devices secured to the chassis inside the chassis pocket opposite the piping pocket.

- E. Completely factory pre-wire disconnect switch, motor(s), control transformer, and relay board. Isolate all high voltage (120V) wiring from low voltage (24V) wiring via separate junction boxes and wireways.
  - 1. Provide 120V disconnect switch mounted on a junction box adequately sized to allow external "single point" high voltage power connection to the fan coil unit. Configure disconnect wiring to turn off all high and low voltage power in the fan coil.
  - 2. Provide a thermostat junction box to allow "single point" connection of thermostat wiring. Terminate control valve (when control valves provided by fan coil manufacturer), control transformer, and relay board wiring in the thermostat junction box. Provide a junction box of adequate size to allow controls contractor to terminate all thermostat connections, and control valve wiring when control valves are not provided by fan coil manufacturer, inside the box with wire nuts.
- F. Provide a project specific wiring diagram affixed to the inside of each fan coil cabinet.
- G. All electrical work shall comply with applicable Related Documents, Electrical Sections and Quality Assurance Standards.

**2.7 FAN COIL UNIT WITH HYDRONIC PIPING PACKAGE - BASE BID AND ALTERNATE WORK**

*REVISE BELOW DEPENDING ON PROJECT REQUIREMENTS. FILL IN BID ALTERNATE NUMBER IN PARAGRAPH B OR EDIT, AS APPLICABLE:*

- A. Base Bid Work: Factory-Provided and Installed Hydronic Piping Package is not provided.
  - 1. Provide coil piping connections protected with plastic end caps, ready for field connection.
  - 2. Provide threaded brass plugs in coil header air vent and drain connections.
- B. Alternate Work: Complete pre-assembled hydronic piping package under Bid Alternate No. X.
  - 1. Configure piping as indicated in the piping details.
  - 2. Tubing: Seamless copper tubing, Type L, soldered joints.
  - 3. Provide piping components including piping, valves, fittings, joints, instrumentation, as specified in Related Specification Sections. Do not provide components or products from component manufacturers that are not specified and listed in the Contract Documents.
  - 4. Include control valves as described in Related Specification Section. Valves shall be of pipe size and 2-way or 3-way configuration as indicated for specific fan coils. Engineer shall select Control valve Cv during submittal process. At the discretion of the Engineer, smaller valve body size may be selected at that time.
  - 5. Do not insulate chilled water and dual temperature piping. Arrange piping completely above the auxiliary drain pan as described under Drain Pans paragraph.

6. Insulate hot water piping. Insulate any chilled water and dual temperature piping that cannot be located above the auxiliary drain pan.
7. Insulate with closed cell elastomeric insulation per Related Specification Sections.
8. Install piping to allow access to all piping components (drain connections, unions, etc.), arranged so that it is possible to remove the control valve body and actuator without removing any other component.
9. Provide adequate and easily removable pipe hangers. Hangers shall rigidly support the pre-assembled piping package from the fan coil chassis, preventing damage during shipping and operation. Provide plastic coated hangers to prevent galvanic corrosion between hanger and piping components.
10. Provide plastic end caps on the field connection points.

## 2.8 SOURCE QUALITY CONTROL

- A. Factory test all coils with a minimum of 350 psig air pressure while submerged under water.
- B. Assemble and factory test each unit prior to shipping. Pressure test coils and piping packages for leaks. Cycle controls and operate fan at all speeds to check for proper operation. Correct all deficiencies prior to shipping.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine areas to receive fan-coil units for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine rough-in construction for piping and electrical connections to verify actual locations before fan-coil-unit installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install fan coil units level and plumb. Adjust leveling legs individually to the minimum height required to level units. Do not use leveling legs to align coil connections with field piping - adjust field piping instead.
- B. Bolt unit to blocking in wall after leveling. Bolt units to floor if inadequate wall support exists in the wall. Do not use toggle bolts or dry-wall anchors. Install bolts in every fan coil mounting hole.
- C. Install fan coil units to comply with Quality Assurance Standards and manufacturer's installation instructions.

### **3.3 CONNECTIONS AND INSULATION**

- A. General piping installation requirements are specified in Related Work Specification Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Install as follows:
  - 1. Connect hydronic and condensate drain piping to the unit.
  - 2. Install piping to allow access to all piping components (drain connections, unions, etc.), arranged so that it is possible to remove the control valve body and actuator without removing any other component.
  - 3. Provide adequate and easily removable pipe hangers to rigidly support piping within the fan coil. Provide plastic coated hangers to prevent galvanic corrosion between hanger and piping components.
  - 4. Arrange chilled water and dual temperature piping so that it is installed completely above the auxiliary drain pan, to capture any condensate dripping from the piping.
- B. Insulate condensate drain and hot water piping with closed cell elastomeric insulation per Related Specification Sections. Insulate any chilled water and dual temperature piping that cannot be located above the auxiliary drain pan.
  - 1. Insulate piping all the way to coil headers and drain pan connection.
  - 2. If fan coil unit is provided with pre-assembled hydronic piping package under the Alternate Work, provide insulated piping, as described in the Part 2 article. Insulate all field installed piping as described above.
- C. Connect wiring and ground equipment according to electrical requirements indicated in the Related Specification Sections.

### **3.4 CLEANING AND PROTECTING**

- A. Protect units from damage, scratching, dirt and debris immediately after installation as follows:
  - 1. Wrap or cover entire cabinet with heavy plastic. Completely cover return air inlet. Secure plastic in place with tape.
  - 2. Cover entire cabinet with heavy cardboard secured in place. Utilize fan coil shipping box when possible. Mark top with large letters stating, "FRAGILE - DO NOT STAND."
  - 3. Use only tape that will not mar finishes. Clean and remove all tape and adhesive residue prior to starting units.
  - 4. Remove all protective materials immediately prior to starting each unit. Do not uncover any unit before all drywall taping and sanding has been completed in that area.

### **3.5 TEMPORARY USE PRIOR TO OCCUPANCY**

- A. Start fan coil units for temporary use only with the express written permission of the Owner and compliance with all requirements of the Contract Documents.
- B. Complete all drywall taping, sanding and finishing in an area prior to any early use of fan coil units serving that area.

- C. Prior to starting each unit, remove front access cover and vacuum complete unit including coils, fan scrolls, drain pans, access sections, chassis, and cabinet.
- D. Perform manufacturer's pre-start protocol and commissioning activities immediately prior to placing into temporary service.
- E. Tape foam filter material over entire discharge grille.
- F. Install a complete set of temporary filters in the fan-coil unit equal to the quality and efficiency of the specified permanent filters. If the fan coil unit was equipped with pre-installed filters, they may be used for temporary service. Provide factory new, clean filters in units at final turn over to the Owner.
- G. During temporary service, perform all manufacturer's recommended and required routine maintenance procedures, including filter replacement at regular intervals, as required. Continuously maintain a log of all such procedures completed. Store log at unit during temporary use period and include log as part of the final Operation and Maintenance Manual.

### 3.6 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
  1. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
  2. Test unit operation with thermostat in all modes of operation.
  3. Verify that drain pans collect all condensate and are properly sloped to drain so that no condensate is retained in the pans.
  4. Remove and replace malfunctioning units and retest as specified above.

**ENGINEER SHALL VERIFY THAT THE MECHANICAL SYSTEMS CONTROLS SPECIFICATION DESCRIBES CONTROLS START-UP FOR FAN COIL UNITS.**

- B. Coordinate controls start-up for fan coil units with the Mechanical Systems Controls Specifications.

### 3.7 COMMISSIONING

- A. Perform complete functional testing as required by the Commissioning Agent.
- B. Perform manufacturer's pre-start protocol and commissioning activities after unit has completed temporary service.

### 3.8 FINAL TURN-OVER TO OWNER

- A. Immediately prior to Substantial Completion, re-clean all fan-coil units. Remove front access cover and vacuum complete unit including coils, fan scrolls, drain pans, access sections, chassis, and cabinet. Clean and remove all tape and adhesive residue from cabinet.
- B. Straighten coil fins with a fin comb.

- C. Sand, prime coat, and touch-up all scratches with color-matched, factory-supplied touch-up paint. Where touch-up painting does not match adjacent, unblemished finish in either color or texture, field paint the entire cabinet surface exposed to view with factory-provided spray paint.
- D. After final cleaning and painting, install a new, clean set of air filters in each unit if units were used for Temporary Use.

**REVISE TO COORDINATE WITH PART 1 SUBMITTALS IF SPARE FILTERS ARE REQUIRED.**

- E. Provide spare filters to Owner.

**3.9 OWNER TRAINING**

- A. In cooperation with the Commissioning Agent, train Owner's personnel on basic fan-coil unit maintenance by demonstrating the following: location of control devices, removal of access panel, filter replacement, relay replacement, and motor replacement.

**END OF SECTION 238219**

BuildingName  
The Description of the Project  
P00000000 0000

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
SECTION 238220 - HORIZONTAL FAN COIL UNITS

**END OF CONTENTS TABLE**

DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)  
SECTION 238220 - HORIZONTAL FAN COIL UNITS

*NEW SECTION: JUNE 2011.*

*FAN COILS IN THIS SPECIFICATION ARE LIMITED TO SINGLE PHASE UNITS OF LESS THAN 1/2 HP WITH DIRECT DRIVE FANS. COMPARED TO BLOWER COILS, FAN COILS TYPICALLY PROVIDE RELATIVELY LOW FAN STATIC PRESSURE AND ARE DESIGNED TO ACCOMMODATE MINIMAL OR NO ATTACHED DUCTWORK.*

*HORIZONTAL FAN COILS ARE AVAILABLE IN NUMEROUS CONFIGURATIONS AND WITH MULTIPLE OPTIONS; THIS SPECIFICATION IS THEREFORE NECESSARILY OUTLINE IN NATURE. EDIT SECTION CAREFULLY TO MAKE IT PROJECT SPECIFIC. SPECIFICATIONS FOR MFR. PROVIDED CONTROLS INCLUDING 3 SPEED FAN CONTROL (RELAY BOARD), FACTORY PIPING PACKAGES, DX COILS, CABINETS FOR FINISHED SPACE USE, AND INTEGRAL GRILLES/REGISTERS/DIFFUSERS ARE NOT INCLUDED AND MUST BE ADDED IF REQUIRED. U-M SPECIFICATION 238219 "FLOOR MOUNTED FAN COIL UNITS UNDUCTED" IS A GOOD RESOURCE FOR CONTROL SPEC.S AND OTHER SPEC. LANGUAGE THAT MAY BE USEFUL WHEN SPECIFYING HORIZONTAL FAN COILS.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

*SPEC EDITOR: CAREFULLY VERIFY, EDIT AND COORDINATE RELATED SECTIONS.*

- B. Related Sections:

1. Section 2220513: Motors.
2. Section 220719: Mechanical Systems Insulation.
3. Division 26: Electrical.

**1.2 SUMMARY**

- A. Section Includes:

1. Horizontal fan-coil units with motors less than 1/2 HP, direct drive fans, and hydronic coils. Controls provided in part or in entirety by the fan coil manufacturer, as specified.

### 1.3 COORDINATION

- A. Coordinate dimensions and arrangement of fan coils with building elements including to maintain all maintenance clearances. Pay special attention to required electrical clearance.

### 1.4 SUBMITTALS

- A. Submit the following product data for approval:
  - 1. Heating and cooling coil total and sensible heat transfer capacity, entering and leaving water temperatures, water flow rate, water pressure drop, and air pressure drop.
  - 2. Piping connections including size, material types, and dimensioned locations for each service.
  - 3. Ductwork connections including sizes, locations, and methods of connections to mating ductwork.
  - 4. Locations of electric power connections.
  - 5. Details of equipment assemblies indicating dimensions, weights, required clearances, component locations, and location and size of each field connection. Include cabinet construction details: panel gauge, removal method for access panel, cabinet mounting method, and filter and fan motor removal method.
  - 6. Details of motor including type, manufacturer and electrical characteristics.
  - 7. Octave band and A-weighted sound power data for each unit type at fan coil rated capacity, tested per AHRI Standard 350.
  - 8. Evidence of UL or ETL listing and labeling.

**SPEC EDITOR: UNHIDE THE BELOW HIDDEN TEXT IF DISCONNECT SWITCH, CONTROLS, TRANSFORMER, OR 3 SPEED FAN RELAY BOARD ARE TO BE PROVIDED BY THE FAN COIL MFR.**

  - 9. Wiring Diagrams: Power, disconnect switch, controls, transformer and three-speed fan control relays.
  - 10. Control transformer-sizing calculations.
  - 11. Detailed information on fan control relay board.
- B. Equipment schedule with the following information for each unit type:
  - 1. Equipment tag.
  - 2. Room number of thermostat location.
  - 3. Model number.
  - 4. Manufacturer's size designation.
  - 5. Configuration (2-pipe or 4-pipe).
  - 6. Number of coils, number of rows for each coil, fin spacing for each coil.
  - 7. Heating and cooling capacity.
  - 8. Airflow rate and motor watts at each fan speed.
- C. Maintenance schedules and repair part numbers and manufacturer of motors, coils, integral controls, relay board, control transformer, and air filters.

**1.5 DELIVERY, STORAGE AND HANDLING**

- A. Mark each fan coil cabinet with the room number where it is scheduled to be installed.
- B. Mark each fan coil shipping box with the room number where it is scheduled to be installed.
- C. Support piping to prevent damage to pipe and coil headers during shipping.
- D. Restrain fans and other components to prevent damage during shipping.
- E. Ship each unit wrapped in a heavy plastic bag, packed in a corrugated cardboard shipping box.

**1.6 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  - 1. ANSI/AHRI 350 Sound Rating of Non-Ducted Indoor Air-Conditioning Equipment.
  - 2. ANSI/AHRI Standard 440: Performance Rating of Room Fan-Coils.
  - 3. NFPA 70- National Electric Code.
  - 4. NFPA 90A Installation of Air-Conditioning and Ventilating Systems.
  - 5. ANSI/ASHRAE 62.1 Section 5 (Systems and Equipment) and Section 7 (Construction and Start-up).
  - 6. ANSI/ASHRAE 90.1-2007 Energy Standards for Low Rise Buildings Except Low Rise Residential Buildings.
  - 7. ASTM C916 - Standard Specification for Adhesives for Duct Thermal Insulation.
  - 8. ASTM C411 Standard Test Method for Hot-Surface Performance of High-Temperature Thermal Insulation.
  - 9. ASTM C612 Standard Specification for Mineral Fiber Block and Board Thermal Insulation.
  - 10. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials.
  - 11. ASTM A653 Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
  - 12. Units shall be Underwriters Laboratories (UL) or Intertek (ETL) listed.

**1.7 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers:
  - 1. Airtherm.
  - 2. Enviro-Tec by Johnson Controls.
  - 3. International Environmental Corporation.
  - 4. McQuay International.
  - 5. Trane.
  - 6. Zehnder Rittling.

*VERIFY THE REQUIRED PROJECT SPECIFIC DIMENSIONS FOR THE FAN COILS AND SCHEDULE OR SPECIFY ACCORDINGLY. MANUFACTURER'S STANDARD SIZE UNITS MAY NOT FIT PROPERLY IN EXISTING FACILITIES.*

*LIST FAN COIL SOUND POWER LEVELS IN THE FAN COIL SCHEDULE OR IN THE SPECIFICATIONS. BE PARTICULARLY CAUTIOUS FOR FAN COILS USED IN SOUND SENSITIVE AREAS.*

*THIS SPECIFICATION ASSUMES NONE OF THE FAN COIL CONTROLS ARE PROVIDED BY THE FAN COIL MFR. IF ANY CONTROLS ARE TO BE PROVIDED BY THE MFR.(3-SPEED RELAY BOARD, CONTROL TRANSFORMER, ETC.), EDIT THIS SPECIFICATION TO INCLUDE THOSE REQUIREMENTS. U-M SPECIFICATION 238219 "FLOOR MOUNTED FAN COIL UNITS UNDUCTED" IS A GOOD RESOURCE FOR CONTROL SPEC.S THAT MAY BE USEFUL WHEN SPECIFYING HORIZONTAL FAN COILS.*

**2.2 FAN COIL UNIT CONSTRUCTION**

- A. Dimensions: Maximum allowable dimensions as indicated on the Drawings.
- B. Casing Construction:
  - 1. Construction: Minimum 18 gauge, G60 galvanized or A40 galvanized steel or as scheduled. Construct to eliminate racking.
  - 2. Access panels shall be fully insulated and attached with fasteners on at least two opposite sides. No coil or drain piping or electrical connections shall pass through any access panel.
  - 3. One inch duct collars if connected to ductwork.
- C. Insulation: Exterior panels and access panels: Foil faced minimum 1-inch-thick, 1-1/2 lb density fiberglass fire resistant insulation complying with the following:
  - 1. ASTM C 411 Standard Test.
  - 2. Attach with adhesive complying with ASTM C 916.
  - 3. Fire-Hazard classification, insulation and adhesive combined: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
  - 4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

### 2.3 HYDRONIC COILS

- A. Hydronic Coils: Copper tube, minimum 0.025 inch wall thickness, with mechanically bonded aluminum fins, maximum of 12 fins per inch, copper headers and copper connections; rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 degrees F.
1. Factory test all coils as specified in the Source Quality Control article.
  2. Include manual air vent and drain connections.
  3. Chilled water and dual-temperature water coil casings, tracks, baffles, and supports shall be of stainless steel construction.

### 2.4 DRAIN PANS

- A. Condensate Drain Pan: Fabricate drain pans and drain connections to comply with ASHRAE 62.1.
1. Drain pan: Stainless steel, insulated.
    - a. Located under cooling coil allowing the drain pan to be fully inspected and cleaned.
    - b. Slope to drain completely dry upon fan coil shutdown.

*SPEC EDITOR: SELECT BELOW, ONE OF THE FOUR CODE REQUIRED METHODS OF PROTECTING AGAINST PRIMARY DRAIN PAN FAILURE AND SHOW DRAIN TERMINATION POINTS ON THE DRAWINGS. DELETE THE OTHER THREE OPTIONS.*

2. Overflow drain pan connection: shall be on the same side and at a higher elevation than the primary drain pan connection.
3. Water-level detection device conforming to UL 508, factory wired to shut off the equipment prior to drain pan overflow. With auxiliary contact to simultaneously signal owner's Building Automation System.
4. Auxiliary drain pan with drain connection.
5. Auxiliary drain pan with capped or no drain connection, with water-level detection device conforming to UL 508, factory wired to shut off the equipment prior to auxiliary drain pan overflow. With auxiliary contact to simultaneously signal owner's Building Automation System.

### 2.5 FILTERS

- A. Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2
1. Disposable Type: 2-inch pleated cotton-polyester media: 90 percent arrestance and a MERV A rating of 8 (or as scheduled) when tested per Appendix J of ASHRAE 52.2.

*SPEC EDITOR: SELECT BELOW, DIRECTION OF FILTER REMOVAL. WHEN SELECTING, CONSIDER THE OBSTRUCTIONS TO FILTER REMOVAL AT THE FAN COIL MOUNTING LOCATION.*

2. Provide filters that are removable horizontally from the casing.
3. Provide filters that are removable vertically from the casing.

*SPEC EDITOR: FAN COILS ARE RARELY BELT DRIVEN. IF YOUR PROJECT REQUIRES BELT DRIVE, STRONGLY CONSIDER USING THE BLOWER COIL SPEC. OTHERWISE, EDIT BELOW TO INCLUDE SPEC FOR BELT DRIVE AND REVISE THE MOTOR TYPE.*

**2.6 FAN AND MOTOR:**

- A. Fan: Forward curved, double width, centrifugal, direct drive fan(s) mounted on removable fan deck or with easily removable fan and motor. Galvanized steel or aluminum wheels; galvanized-steel fan scrolls.
- B. Motor Wiring: Terminate wiring in a junction box, external to the unit casing for a single point connection.
- C. Provide a project specific wiring diagram affixed to the inside of each fan coil cabinet.

*SPEC EDITOR: SELECT EITHER 3 SPEED PSC OR ECM MOTORS, BELOW.*

*SPEC EDITOR: ECM MOTORS AUTOMATICALLY ADJUST TO VARYING LOAD/STATIC PRESSURE (E.G. FILTER LOADING). SPEED IS TYPICALLY FACTORY SET BUT CAN BE RESET IN FIELD. ECM MOTORS ARE MORE ENERGY EFFICIENT AND ARE CLAIMED TO LAST LONGER THAN PSC MOTORS. THOUGH ECM MOTORS ARE GENERALLY PREFERRED, CAUTION MUST BE UTILIZED WHEN USING LARGE QUANTITIES OF SINGLE PHASE ECM MOTORS ON 3 PHASE CIRCUITS SINCE ECM GENERATED HARMONICS COULD OVERHEAT NEUTRAL CONDUCTORS, CONNECTORS, AND TRANSFORMERS. FOR HOSPITAL AND OTHER PROJECTS, ECM MOTOR LOCATION MUST BE CONSIDERED RELATIVE TO SENSITIVE ELECTRONIC EQUIPMENT, DUE TO POSSIBLE INTERFERENCE BY ECM GENERATED HARMONICS.*

- D. Motor: In compliance with Related Section "Motors", permanent split capacitor (PSC) type, 3 speed/3 tap, sleeve bearings.
- E. Motor: In compliance with Related Section "Motors", electronically commutated motor (ECM). Designed for use with a single phase electrical input. Motor to be complete with and operated by a single phase integrated speed controller/inverter, speed adjustable manually or via external 0-10 VDC signal, built-in soft start/speed ramps, with permanently lubricated ball bearings.

**2.7 SOURCE QUALITY CONTROL**

- A. Factory test all coils with a minimum of 350 psig air pressure while submerged under water.
- B. Assemble and factory test each unit prior to shipping. Pressure test coils and piping packages for leaks. Cycle controls and operate fan at all speeds to check for proper operation. Correct all deficiencies prior to shipping.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

- A. Examine areas to receive fan-coil units for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine rough-in construction for piping and electrical connections to verify actual locations before fan-coil-unit installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION**

- A. Install fan coil units level and plumb and to comply with Quality Assurance Standards and manufacturer's installation instructions.

*SPEC EDITOR: REGARDING THE BELOW PARAGRAPH: BE SURE TO SHOW OVERFLOW DRAIN ROUTED TO A CONSPICUOUS TERMINATION POINT, IF AN OVERFLOW DRAIN IS BEING USED.*

**3.3 CONNECTIONS**

- A. General piping installation requirements are specified in Related Documents Specification Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Connect hydronic, condensate drain, and overflow drain piping to the unit.

**3.4 TEMPORARY USE PRIOR TO OCCUPANCY**

- A. Start units for temporary use only with the express written permission of the Owner and compliance with all requirements of the Contract Documents.
- B. Complete all drywall taping, sanding and finishing in an area prior to any early use of units serving that area.
- C. Thoroughly clean unit of all grease, dirt, dust, etc.
- D. Prior to placement into temporary service:
  - 1. Perform manufacturer's pre-start protocol.
  - 2. Perform commissioning activities.
- E. Install a complete set of temporary filters in the unit equal to the quality and efficiency of the specified permanent filters. If the unit was equipped with pre-installed filters, they may be used for temporary service. Provide factory new, clean filters in units at final turn over to the Owner.
- F. During temporary service, perform all manufacturer's recommended and required routine maintenance procedures, including filter replacement at regular intervals, as required. Continuously maintain a log of all such procedures completed. Store log at unit during temporary use period and include log as part of the final Operation and Maintenance Manual.

**3.5 FIELD QUALITY CONTROL**

- A. Perform the following field tests and inspections and prepare test reports:
  - 1. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
  - 2. Test unit operation with thermostat in all modes of operation.
  - 3. Verify that drain pans collect all condensate and are properly sloped to drain so that no condensate is retained in the pans.
  - 4. Remove and replace malfunctioning units and retest as specified above.

**3.6 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 01 Section titled Commissioning and other requirements of the Contract Documents.

**3.7 CLOSEOUT ACTIVITIES**

- A. Perform all commissioning activities, even if previously performed to ready for temporary use.
- B. After unit has completed final commissioning and just prior to final acceptance by Owner:
  - 1. Thoroughly clean unit of all grease, dirt, dust, etc., lubricate bearings, align and tighten belts.
  - 2. Install a new, complete set of filters.
  - 3. Touch up damaged galvanized surfaces with zinc rich paint, minimum 65 percent metallic zinc by weight. Touch up damaged painted surfaces with manufacturer provided touch-up paint.

**3.8 OWNER TRAINING**

- A. In cooperation with the Commissioning Agent, train Owner's personnel on basic fan-coil unit maintenance by demonstrating the following: location of control devices, removal of access panels, filter replacement, and motor replacement.

**END OF SECTION 238220**

BuildingName  
The Description of the Project  
P00000000 0000

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**

SECTION 238221 - BLOWER COIL UNITS

**END OF CONTENTS TABLE**

*REVISION: JUNE 2011.*

*BLOWER COILS FOR THE PURPOSES OF THIS SPECIFICATION ARE UNITS OF GREATER THAN 1/2 HP (AND THEREFORE NORMALLY HAVE THREE PHASE MOTORS) USUALLY WITH BELT DRIVE FANS. BLOWER COILS TYPICALLY PROVIDE HIGHER AIR FLOWS AND FAN STATIC PRESSURES THAN ARE AVAILABLE FROM FAN COIL UNITS, IN A COMPACT PACKAGE. UPPER CFM LIMIT FOR STANDARD UNITS IS TYPICALLY 3000-4000 CFM.*

*BLOWER COILS ARE AVAILABLE IN NUMEROUS CONFIGURATIONS AND WITH MULTIPLE OPTIONS; THIS SPECIFICATION IS THEREFORE NECESSARILY OUTLINE IN NATURE. EDIT SECTION CAREFULLY TO MAKE IT PROJECT SPECIFIC. SPECIFICATIONS FOR MFR. PROVIDED CONTROLS, FACTORY PIPING PACKAGES, DX COILS, CABINETS FOR FINISHED SPACE USE, AND INTEGRAL GRILLES/REGISTERS/DIFFUSERS ARE NOT INCLUDED, AND MUST BE ADDED IF REQUIRED. U-M SPECIFICATION 238219 "FLOOR MOUNTED FAN COIL UNITS UNDUCTED" IS A GOOD RESOURCE FOR CONTROL SPEC.S AND OTHER SPEC. LANGUAGE WHICH MAY BE USEFUL WHEN SPECIFYING BLOWER COIL UNITS.*

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 238221 - BLOWER COIL UNITS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

*CAREFULLY VERIFY, EDIT AND COORDINATE RELATED SECTIONS.*

- B. Related Sections:
1. Section 220513: Motors.
  2. Section 220719: Mechanical Systems Insulation.
  3. Division 26: Electrical.

**1.2 SUMMARY**

- A. Section Includes:
1. Horizontal and vertical blower coil units with motors 1/2 HP and greater, and hydronic coils.

**1.3 COORDINATION**

- A. Coordinate dimensions and arrangement of blower coils with building elements including to maintain all maintenance clearances. Pay special attention to required electrical clearance.

**1.4 SUBMITTALS**

- A. Submit the following product data for approval:
1. Heating and cooling coil total and sensible heat transfer capacity, entering and leaving water temperatures, water flow rate, water pressure drop, and air pressure drop.
  2. Piping connections including size, material types, and dimensioned locations for each service.
  3. Ductwork connections including sizes, locations, and methods of connections to mating ductwork.
  4. Locations of electric power connections.
  5. Details of equipment assemblies indicating dimensions, weights, required clearances, component locations, and location and size of each field connection. Include cabinet construction details: panel gauge, removal method for access panel, cabinet mounting method, and filter and fan motor removal method.
  6. Details of motor including type, manufacturer and electrical characteristics.

7. Octave band and A-weighted sound power data for each unit type at fan coil rated capacity, tested per AHRI Standard 350.
8. Evidence of UL or ETL listing and labeling.

**UNHIDE THE BELOW HIDDEN TEXT IF DISCONNECT SWITCH, CONTROLS, TRANSFORMER, OR 3 SPEED FAN RELAY BOARD ARE TO BE PROVIDED BY THE FAN COIL MFR.**

9. Wiring Diagrams: Power, disconnect switch, controls, transformer and three-speed fan control relays.
  10. Control transformer-sizing calculations.
  11. Detailed information on fan control relay board.
- B. Equipment schedule with the following information for each unit type:
1. Equipment tag.
  2. Room number of thermostat location.
  3. Model number.
  4. Manufacturer's size designation.
  5. Configuration (2-pipe or 4-pipe).
  6. Number of coils, number of rows per coil, fin spacing for each coil.
  7. Heating and cooling capacity.
  8. Airflow rate and motor watts at each fan speed.
- C. Maintenance schedules and repair part numbers and manufacturer of motors, coils, integral controls, relay board, control transformer, and air filters.

#### **1.5 DELIVERY, STORAGE AND HANDLING**

- A. Mark each blower coil cabinet with the room number where it is scheduled to be installed.
- B. Mark each blower coil shipping box with the room number where it is scheduled to be installed.
- C. Support piping to prevent damage to pipe and coil headers during shipping.
- D. Restrain fans and other components to prevent damage during shipping.
- E. Shipping protection shall be provided by Manufacturer to insure that the interior and exterior of each unit is completely protected from dirt or weather. Duct and pipe openings must be covered with sealed sheet metal, plastic or other durable means to ensure unit cleanliness is maintained.

#### **1.6 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.

1. ANSI/AHRI 350 Sound Rating of Non-Ducted Indoor Air-Conditioning Equipment.
2. ANSI/AHRI Standard 440: Performance Rating of Room Fan-Coils.
3. NFPA 70- National Electric Code.
4. NFPA 90A Installation of Air-Conditioning and Ventilating Systems.
5. ANSI/ASHRAE 62.1 Section 5 (Systems and Equipment) and Section 7 (Construction and Start-up).
6. ANSI/ASHRAE 90.1-2007 Energy Standards for Low Rise Buildings Except Low Rise Residential Buildings.
7. ASTM C916 - Standard Specification for Adhesives for Duct Thermal Insulation.
8. ASTM C411 Standard Test Method for Hot-Surface Performance of High-Temperature Thermal Insulation
9. ASTM C612 Standard Specification for Mineral Fiber Block and Board Thermal Insulation.
10. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials
11. ASTM A653 Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
12. Units shall be Underwriters Laboratories (UL) or Intertek (ETL) listed.

**1.7 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers:
  1. Airtherm.
  2. Enviro-Tec by Johnson Controls.
  3. International Environmental Corporation.
  4. McQuay International.
  5. Trane.

*VERIFY THE REQUIRED PROJECT SPECIFIC DIMENSIONS FOR THE BLOWER COILS AND SCHEDULE OR SPECIFY ACCORDINGLY. MANUFACTURER'S STANDARD HEIGHT UNITS MAY NOT FIT PROPERLY IN EXISTING FACILITIES.*

*LIST BLOWER COIL SOUND POWER LEVELS IN THE BLOWER COIL SCHEDULE OR IN THE SPECIFICATIONS. BE PARTICULARLY CAUTIOUS FOR BLOWER COILS USED IN SOUND SENSITIVE AREAS.*

*THIS SPECIFICATION ASSUMES NONE OF THE BLOWER COIL CONTROLS ARE PROVIDED BY THE BLOWER COIL MFR. IF ANY CONTROLS ARE TO BE PROVIDED BY THE MFR. (DISCONNECTS, CONTROL TRANSFORMER, ETC.), EDIT THIS SPECIFICATION TO INCLUDE THOSE REQUIREMENTS. U-M SPECIFICATION 238219 "FLOOR MOUNTED FAN COIL UNITS*

**UNDUCTED" IS A GOOD RESOURCE FOR CONTROL SPEC.S WHICH MAY BE USEFUL WHEN SPECIFYING BLOWER COIL CONTROLS.**

## **2.2 BLOWER COIL UNIT CONSTRUCTION**

- A. Dimensions: Maximum allowable dimensions as indicated on the Drawings.
- B. Casing Construction:
  - 1. Construction: Minimum 18 gauge, G60 galvanized or A40 galvanized steel or as scheduled. Construct to eliminate racking.
  - 2. Access panels shall be fully insulated and attached with fasteners on at least two opposite sides. No coil or drain piping or electrical connections shall pass through any access panel.
  - 3. One inch duct collars if connected to ductwork.
- C. Insulation: Exterior panels and access panels: Foil faced minimum 1-inch-thick, 1-1/2 lb density fiberglass fire resistant insulation complying with the following:
  - 1. ASTM C 411 Standard Test.
  - 2. Attach with adhesive complying with ASTM C 916.
  - 3. Fire-Hazard classification, insulation and adhesive combined: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
  - 4. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

## **2.3 HYDRONIC COILS**

- A. Hydronic Coils: Copper tube, minimum 0.025 inch wall thickness, with mechanically bonded aluminum fins, maximum of 12 fins per inch, copper headers and copper connections; rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 degrees F.
  - 1. Factory test all coils as specified in the Source Quality Control article.
  - 2. Include manual air vent and drain connections.
  - 3. Chilled water and dual-temperature water coil casings, tracks, baffles, and supports shall be of stainless steel construction.

## **2.4 DRAIN PANS**

- A. Condensate Drain Pan: Fabricate drain pans and drain connections to comply with ASHRAE 62.1.
  - 1. Drain pan: Stainless steel, insulated.
    - a. Locate under cooling coil allowing the drain pan to be fully inspected and cleaned.
    - b. Slope to drain completely dry upon fan coil shutdown.

**SELECT BELOW, ONE OF THE FOUR CODE REQUIRED METHODS OF PROTECTING AGAINST PRIMARY DRAIN PAN FAILURE AND SHOW DRAIN**

**TERMINATION POINTS ON THE DRAWINGS. DELETE THE OTHER THREE OPTIONS.**

2. Overflow drain pan connection: shall be on the same side and at a higher elevation than the primary drain pan connection.
3. Water-level detection device conforming to UL 508, factory wired to shut off the equipment prior to drain pan overflow. With auxiliary contact to simultaneously signal owner's Building Automation System.
4. Auxiliary drain pan with drain connection.
5. Auxiliary drain pan with capped or no drain connection, with a water-level detection device conforming to UL 508, factory wired to shut off the equipment prior to auxiliary drain pan overflow. With auxiliary contact to simultaneously signal owner's Building Automation System.

## **2.5 FILTERS**

- A. Minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
  1. Disposable Type: 2 inch pleated cotton-polyester media: 90 percent arrestance and MERV A rating of 8 (or as scheduled) when tested per Appendix J of ASHRAE 52.2.

**SELECT BELOW, DIRECTION OF FILTER REMOVAL. WHEN SELECTING, CONSIDER THE OBSTRUCTIONS TO FILTER REMOVAL AT THE BLOWER COIL MOUNTING LOCATION.**

2. Provide filters that are removable horizontally from the casing.
3. Provide filters that are removable vertically from the casing.

**IF MIXING DAMPERS ARE REQUIRED, INDICATE SUCH ON THE CONTRACT DRAWINGS.**

## **2.6 INLET DAMPER MIXING SECTION**

- A. Provide when indicated on Drawings.
- B. The outside and return airstreams shall be directed into each other in a mixing box by parallel blade damper assemblies oriented to facilitate mixing of the airstreams.
  1. Section shall be constructed of minimum 18 gauge galvanized steel.
  2. Two, steel, low leak parallel blade dampers in a heavy-gauge steel frame with extruded vinyl blade seals and flexible metal jamb seals.
  3. Provide extended drive rod for externally mounted actuator connection.
  4. Provide access panels for access to the section's internal components.

**INDICATE THE FAN TYPE (FC, BI, INLET TYPE, ETC.) ON THE DRAWING SCHEDULES, OR ADD BELOW. FC IS TYPICAL. IF FAN IS DIRECT DRIVE, CONSIDER USING THE FAN COIL SPEC, OTHERWISE EDIT THE BELOW.**

*BELOW SECTION WILL ALLOW THE BLOWER COIL MFR. TO PROVIDE THEIR STANDARD QUALITY FANS AND DRIVES. FOR PROJECTS WITH LARGE QUANTITIES OF BLOWER COILS, CONSIDER EDITING THE BELOW TO SPECIFY HIGHER QUALITY FANS AND DRIVES. U-M SPEC SECTION 233400 "FANS " IS A RESOURCE FOR HIGH QUALITY FAN/DRIVE SPEC. LANGUAGE.*

**2.7 FAN AND MOTOR:**

- A. Fan: Galvanized steel or aluminum wheels; galvanized-steel fan scrolls. Adjustable speed belt drive with motor mounted on an adjustable steel base plate.
- B. Motor: Provide motors in compliance with Related Section "Motors".
- C. Motor Wiring: Terminate wiring in a junction box, external to the unit casing.

**2.8 SOURCE QUALITY CONTROL**

- A. Factory test all coils with a minimum of 350 psig air pressure while submerged under water.
- B. Assemble and factory test each unit prior to shipping. Cycle controls and operate fan at all speeds to check for proper operation. Correct all deficiencies prior to shipping.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

- A. Examine areas to receive blower-coil units for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine rough-in construction for piping and electrical connections to verify actual locations before blower-coil-unit installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION**

- A. Install blower coil units level and plumb and to comply with Quality Assurance Standards and manufacturer's installation instructions.

*REGARDING THE BELOW PARAGRAPH: BE SURE TO SHOW OVERFLOW DRAIN ROUTED TO A CONSPICUOUS TERMINATION POINT, IF AN OVERFLOW DRAIN IS BEING USED.*

**3.3 CONNECTIONS**

- A. General piping installation requirements are specified in other Related Documents Specification Sections. Drawings indicate general arrangement of piping, fittings, and specialties. Connect hydronic, condensate drain, and overflow drain piping to the unit.

**3.4 TEMPORARY USE PRIOR TO OCCUPANCY**

- A. Start units for temporary use only with the express written permission of the Owner and compliance with all requirements of the Contract Documents.
- B. Complete all drywall taping, sanding and finishing in an area prior to any early use of units serving that area.
- C. Thoroughly clean unit of all grease, dirt, dust, etc.
- D. Prior to placement into temporary service:
  - 1. Perform manufacturer's pre-start protocol.
  - 2. Perform commissioning activities.
- E. Install a complete set of temporary filters in the unit equal to the quality and efficiency of the specified permanent filters. If the unit was equipped with pre-installed filters, they may be used for temporary service. Provide factory new, clean filters in units at final turn over to the Owner.
- F. During temporary service, perform all manufacturer's recommended and required routine maintenance procedures, including filter replacement at regular intervals, as required. Continuously maintain a log of all such procedures completed. Store log at unit during temporary use period and include log as part of the final Operation and Maintenance Manual.

**3.5 FIELD QUALITY CONTROL**

- A. Perform the following field tests and inspections and prepare test reports:
  - 1. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
  - 2. Test unit operation with thermostat in all modes of operation.
  - 3. Verify that drain pans collect all condensate and are properly sloped to drain so that no condensate is retained in the pans.
  - 4. Remove and replace malfunctioning units and retest as specified above.

**3.6 COMMISSIONING**

- A. Perform the commissioning activities as outlined in the Division 1 Section titled Commissioning and other requirements of the Contract Documents.

**3.7 CLOSEOUT ACTIVITIES**

- A. Perform all commissioning activities, even if previously performed to ready for temporary use.
- B. After unit has completed final commissioning and just prior to final acceptance by Owner:
  - 1. Thoroughly clean unit of all grease, dirt, dust, etc., lubricate bearings, align and tighten belts.
  - 2. Install a new, complete set of filters.
  - 3. Touch up damaged galvanized surfaces with zinc rich paint, minimum 65 percent metallic zinc by weight. Touch up damaged painted surfaces with manufacturer provided touch-up paint

**3.8 OWNER TRAINING**

- A. In cooperation with the Commissioning Agent, train Owner's personnel on basic blower-coil unit maintenance by demonstrating the following: location of control devices, removal of access panels, filter replacement, and motor replacement.

**SPECIFICATION DIVISION 23**

NUMBER            SECTION DESCRIPTION

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
SECTION 238413 - STEAM HUMIDIFIERS

**END OF CONTENTS TABLE**

**DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)**  
**SECTION 238413 - STEAM HUMIDIFIERS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

*SPEC EDITOR: IN 1 AND 2 BELOW, SELECT PROPER SPEC SECTION NUMBER BY PROJECT. DELETE SUSTAINABLE DESIGN / LEED IF NOT APPLICABLE TO PROJECT. DELETE COMMISSIONING IF NOT APPLICABLE TO PROJECT.*

- B. Related Sections:

1. Section 018113: Sustainable Design Requirements.
2. Section 019110/019100: Commissioning
3. Section 220500: Common Work Results for Mechanical
4. Section 221113: Piping Materials and Methods
5. Section 220523: Valves
6. Section 220553: Mechanical Identification
7. Section 220719: Mechanical Systems Insulation
8. Section 221119: Domestic Water Piping Specialties
9. Section 232216: Steam and Condensate Piping Specialties
10. Section 230900: Mechanical Systems Controls
11. Division 26: Electrical

**1.2 SUMMARY**

- A. Products specified in this section include the following:

1. Jacketed Steam Humidifiers
2. Steam Injection Dispersion Panels
3. Self-contained Electric Humidifiers
4. Condensate Drain Coolers

**1.3 SUBMITTALS**

- A. Product Data: Include catalog illustrations, model, rated capacities, performance, weights, dimensions, component sizes, rough-in requirements, piping and wiring diagrams and details, materials of construction, accessories, operating and maintenance clearance requirements. Wiring diagrams shall be project specific, and differentiate between factory wiring and field wiring. Include shop drawings and fabrication drawings for equipment indicating piping connections, power and utility requirements, rigging, installation and support details and instructions. Include written sequence of operations for all controls.

- B. Provide information for the following:

1. At conditions specific to the project:
  - a. Non-wetting (absorption) distance, assuming air downstream of the humidifier is 90% R.H. at 52°F
  - b. Air pressure drop across the humidifier array
  - c. For steam injection dispersion panels, required orientation of tubes in the duct.
2. Strainers and steam traps
3. Humidifier actuator and temperature switch
4. Room and duct transmitters and proof of air flow switch
5. Electrode type self-contained Electric humidifiers:
  - a. Published cylinder life based on incoming water conductivity
  - b. Published replacement pricing
6. Condensate drain cooler
7. Installation, operation, and maintenance manuals

#### **1.4 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  1. Underwriters Laboratories

#### **1.5 DELIVERY, STORAGE AND HANDLING**

- A. Ship all components in weather-proof wrap for storage outdoors. Protect control panels, pipe openings, and other sensitive components with heavy plastic or other durable means to ensure cleanliness and prevent damage during shipping and storage. Maintain protection during installation.

#### **1.6 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

### **PART 2 - PRODUCTS**

#### **2.1 ACCEPTABLE MANUFACTURERS**

- A. Basis of Design and model numbers (where provided) are Dri-Steem. Subject to compliance with all requirements and matching the features of the Basis of Design and model numbers, provide products from any of the below manufacturers.
  1. Armstrong
  2. Spirax Sarco
  3. Nortec
  4. Hermidifier
  5. Dri-Steem

*SPEC EDITOR: INSTALLATION REQUIREMENTS ARE SPECIFIC FOR EACH TYPE HUMIDIFIER, PARTICULARLY FOR STEAM INJECTION DISPERSION PANELS. CAREFULLY REVIEW MANUFACTURER'S LITERATURE TO ASSURE THAT THE TYPE YOU ARE SELECTING WILL WORK PROPERLY UNDER YOUR PROJECT CONDITIONS. MAKE SURE TO PROVIDE A DETAIL ON THE PROJECT DRAWINGS INDICATING INSTALLATION REQUIREMENTS SPECIFIC TO THE HUMIDIFIER(S) SELECTED.*

*SPEC EDITOR: BE SURE TO INDICATE THE REQUIRED NON-WETTING (ABSORPTION) DISTANCE FOR EACH HUMIDIFIER AND THE DUCT AIR PRESSURE DROP ON THE HUMIDIFIER SCHEDULE (PREFERRED) OR IN THIS SPECIFICATION. IT IS ALWAYS PREFERRED TO USE CENTRALLY GENERATED STEAM WHEN AVAILABLE. DISCUSS SPECIAL SITUATIONS THAT MAY REQUIRE USE OF STEAM TO STEAM ("CLEAN STEAM") HUMIDIFIERS OR GAS FIRED HUMIDIFIERS WITH THE DESIGN MANAGER.*

## 2.2 JACKETED STEAM HUMIDIFIERS

- A. Steam separator type that discharges dry steam into the air stream through a steam jacketed dispersion tube or manifolded dispersion tubes. Humidifiers shall be complete with Y-type steam supply strainer, modulating steam control valve, condensate temperature switch and steam traps; all provided by the humidifier manufacturer. Provide manifolded multiple dispersion tube type when required to meet the capacity requirements or the conditions at the mounting location, including the indicated non-wetting (absorption) distance. All components shall be rated for a minimum 100 PSIG steam working pressure.
- B. The humidifier shall provide absorption characteristics that preclude wetting on any in-duct surfaces within the indicated absorption distance downstream of the humidifier while maintaining conditions of 90% (maximum) relative humidity at a minimum temperature of 52°F in the duct air stream.
- C. Unless indicated otherwise, the air pressure loss across the humidifier array shall not exceed 0.10" W.C. at a duct air velocity of 1200 FPM.
- D. Provide type 304 stainless steel dispersion tubes, manifold and separator.
- E. Dispersion tubes shall be surrounded by a steam jacket and shall span the width of duct.

*SPEC EDITOR: A PNEUMATICALLY ACTUATED CONTROL VALVE IS SPECIFIED. IF CHANGED TO ELECTRIC ACTUATION, THE SPECIFICATION FOR THE PNEUMATIC CONDENSATE TEMPERATURE SWITCH MUST BE EDITED AS WELL.*

- F. Provide bronze or stainless steel, fail closed, pneumatic steam control valve for operation with a modulating 3-15 PSI control air signal, minimum 13:1 rangeability and ANSI Class 5 Shutoff.
- G. Provide a pneumatic condensate temperature switch for interlocking with control valve. Switch shall be normally closed and shall prevent steam flow to dispersion tubes upon cold start or flooded condensate line.

- H. Steam traps shall be per Related Section, sized and provided by the humidifier manufacturer. Provide F & T or thermostatic traps that allow modulating steam control valve service.

*SPEC EDITOR: DESIGNER SHOULD INDICATE IN THE HUMIDIFIER SCHEDULE IF THE HUMIDIFIER STEAM SUPPLY IS GENERATED BY RO/DI WATER*

- I. Provide Type 316 stainless steel dispersion tubes, manifold, separator, and interconnecting piping; and stainless steel strainers, control valve and traps when fed by clean steam (steam generated with RO/DI water).

*SPEC EDITOR: THE REQUIREMENT FOR INSULATED TUBES IS CARRIED AS HIDDEN TEXT BELOW. DESIGNER SHOULD EVALUATE THE ENERGY PENALTY FROM INCREASED AIR PRESSURE DROP CAUSED BY INSULATED TUBES VERSUS THE ENERGY SAVED. THE ENERGY CODE REQUIRES THAT JACKET STEAM AUTOMATICALLY TURNS OFF WHEN HUMIDIFICATION IS NOT REQUIRED. THIS GENERALLY NEGATES MUCH OF THE BENEFIT OF INSULATED DISPERSION TUBES. DESIGNER SHOULD CONSIDER IF EACH HUMIDIFIER REQUIRES A JACKET STEAM CONTROL VALVE OR IF THE STEAM SUPPLY TO MULTIPLE JACKETS CAN BE TURNED OFF BY A COMMON CONTROL VALVE. A COMMON VALVE MAY BE POSSIBLE IF THE HUMIDIFIERS OPERATE AT THE SAME TIME SUPPLYING ZONES WITH THE SAME SETPOINT. ZONES WITH A UNIQUE SETPOINT SHOULD HAVE THEIR OWN JACKET STEAM CONTROL VALVE. NOTE THAT JACKET STEAM CONTROL VALVES SHOULD GENERALLY BE OPERATED BASED ON AN ACTUAL CALL FOR HUMIDITY, AS OPPOSED TO ON A SEASONAL BASIS.*

- J. Dispersion tubes shall be insulated with 1/2" fiberglass, enclosed in a stainless steel wrapper.

### 2.3 STEAM INJECTION DISPERSION PANELS

*SPEC EDITOR: FOR INSTALLATION IN AHU'S OR DUCTS AND WHERE AVAILABLE ABSORPTION DISTANCE IS VERY SMALL, 3' OR LESS.*

*SPEC EDITOR: WHEN ABSORPTION DISTANCES PERMIT, JACKETED TYPE HUMIDIFIERS, SPECIFIED IN THE ARTICLE ABOVE, ARE PREFERRED OVER STEAM INJECTION DISPERSION PANELS DUE TO LOWER INITIAL COST AND HIGHER RELIABILITY.*

*SPEC EDITOR: BASIS OF DESIGN FOR THIS SPEC IS DRI-STEEM LV/LH (TYPE A) AND DRISTEEM XV (TYPE B). LV OR LH CAN BE USED WITH PRESSURIZED OR NON-PRESSURIZED STEAM, CONDENSATE MUST DRAIN BY GRAVITY. XV CAN ONLY BE USED WITH PRESSURIZED STEAM, BUT CAN LIFT CONDENSATE. EDIT SPEC TO SELECT REQUIRED TYPE.*

*SPEC EDITOR: TYPE A HUMIDIFIER MUST BE MOUNTED HIGH ENOUGH TO ALLOW GRAVITY DRAINING OF CONDENSATE AND REQUIRES A DEEP PLUMBING TRAP (7"-10" DEEP) FOR CONDENSATE DISPOSAL, THEREFORE MAKE SURE MOUNTING LOCATION IS HIGH ENOUGH TO ACCOMMODATE SUCH A TRAP. TYPE B MAY BE SPECIFIED WHEN THE MOUNTING LOCATION IS TOO LOW TO ACCOMMODATE TYPE A, PROVIDED PRESSURIZED STEAM IS AVAILABLE.*

**SPEC EDITOR: BE SURE TO SCHEDULE THE NON-WETTING (ABSORPTION) DISTANCE AND THE DISPERSION PANEL DUCT AIR PRESSURE DROP ON THE HUMIDIFIER DRAWING SCHEDULE.**

A. Ultra-sorb LV/HV Multi-tube style - TYPE A:

1. Multi-tube non-jacketed style humidifier for use with pressurized or non-pressurized steam and gravity draining of condensate. Each panel shall consist of a steam supply header/separator, a condensate collection header and a bank of closely spaced steam dispersion tubes spanning the distance between the two headers. Stainless steel construction. Humidifiers shall be complete with Y-type steam supply strainer, modulating steam control valve, condensate temperature switch and steam traps; all provided by the humidifier manufacturer. All components shall be rated for a minimum 100 PSIG steam working pressure.
2. Each steam tube outlet shall contain an orifice sized for its required steam capacity. The humidifier shall provide absorption characteristics that preclude wetting on any in-duct surfaces within the indicated absorption distance downstream of the humidifier while maintaining conditions of 90% (maximum) relative humidity at a minimum temperature of 52°F in the duct air stream.
3. Unless indicated otherwise, the air pressure loss across the humidifier array shall not exceed 0.10" W.C. at a duct air velocity of 1200 FPM.
4. Provide horizontally or vertically oriented tubes as required for the specific location, considering the steam pressure available at that location.
5. Each packaged humidifier panel assembly of tubes and headers shall be contained within a galvanized metal casing to allow convenient duct mounting or to facilitate the stacking of and/or the end-to-end mounting of multiple panels in ducts or air handler casings. Provide multiple panels and all related accessories for the panels and installation, in order to achieve the specified capacities.
6. Provide type 304 stainless steel tubes and headers. All joints shall be heli-arc welded.
7. Provide bronze or stainless steel, fail closed, pneumatic steam control valve for operation with a modulating 3-15 PSI control air signal, minimum 13:1 rangeability and ANSI Class 5 Shutoff.

**SPEC EDITOR: DESIGNER SHOULD INDICATE IN THE HUMIDIFIER SCHEDULE IF THE HUMIDIFIER STEAM SUPPLY IS GENERATED BY RO/DI WATER**

8. Provide Type 316 stainless steel humidifier construction and stainless steel strainer and control valve when fed by clean steam (steam generated with RO/DI water).

**SPEC EDITOR: THE REQUIREMENT FOR INSULATED TUBES IS CARRIED AS HIDDEN TEXT BELOW. ENGINEER MUST EVALUATE IF HIGH-EFFICIENCY INSULATED TUBES ARE COST EFFECTIVE AND APPROPRIATE FOR THE PROJECT.**

9. High-efficiency insulated tubes shall be used to substantially reduce dispersion-generated condensate and airstream heat gain. Tube insulation shall be 1/8" thick polyvinylidene fluoride insulation (PVDF).

B. Ultra-sorb XV Multi-tube Style - TYPE B:

1. Multi-tube non-jacketed style humidifier for use with pressurized steam, with integral heat exchanger to provide for condensate lifting. Each panel shall consist of a steam supply header/separator, a condensate collection header and a bank of closely spaced steam dispersion tubes spanning the distance between the two headers. Stainless steel construction. Humidifiers shall be complete with Y-type steam supply strainer, modulating steam control valve, condensate temperature switch and steam traps; all provided by the humidifier manufacturer. All components shall be rated for a minimum 100 PSIG steam working pressure.
2. Each steam tube outlet shall contain an orifice sized for its required steam capacity. The humidifier shall provide absorption characteristics that preclude wetting on any in-duct surfaces within the indicated absorption distance downstream of the humidifier while maintaining conditions of 90% (maximum) relative humidity at a minimum temperature of 52°F in the duct air stream
3. Unless indicated otherwise, air pressure loss across humidifier panel shall not exceed 0.10" W.C. at a duct air velocity of 1200 FPM.
4. Provide horizontally or vertically oriented tubes as required for the specific location, considering available steam pressure at that location.
5. Each packaged humidifier panel assembly of tubes and headers shall be contained within a galvanized metal casing to allow convenient duct mounting or to facilitate the stacking of and/or the end-to-end mounting of multiple panels in ducts or air handler casings. Provide multiple panels and all related accessories for the panels and installation, in order to achieve the specified capacities.
6. Provide type 304 stainless steel tubes and headers. All joints shall be heli-arc welded.

***SPEC EDITOR: A PNEUMATICALLY ACTUATED CONTROL VALVE IS SPECIFIED. IF CHANGED TO ELECTRIC ACTUATION, THE SPECIFICATION FOR THE PNEUMATIC CONDENSATE TEMPERATURE SWITCH MUST BE EDITED AS WELL.***

7. Provide bronze or stainless steel, fail closed, pneumatic steam control valve for operation with a modulating 3-15 PSI control air signal, minimum 13:1 rangeability and ANSI Class 5 Shutoff.
8. Provide a pneumatic condensate temperature switch for interlocking with control valve. Switch shall be normally closed and shall prevent steam flow to dispersion tubes upon cold start or flooded condensate line.
9. Provide an integral steam heat exchanger with steam trap arranged to vaporize dispersion-tube-generated steam condensate and return pressurized condensate to a condensate return main.

*SPEC EDITOR: THE REQUIREMENT FOR INSULATED TUBES IS CARRIED AS HIDDEN TEXT BELOW. ENGINEER MUST EVALUATE IF HIGH-EFFICIENCY INSULATED TUBES ARE COST EFFECTIVE AND APPROPRIATE FOR THE PROJECT*

10. High-efficiency insulated tubes shall be used to substantially reduce dispersion-generated condensate and airstream heat gain. Tube insulation shall be 1/8" thick polyvinylidene fluoride insulation (PVDF).

#### **2.4 SELF-CONTAINED ELECTRIC HUMIDIFIERS**

- A. Packaged wall mounted self-contained U.L. listed electric humidification unit providing all required steam generation equipment and controls, to provide atmospheric pressure steam generation. Provide either Steam Injection Distribution Panels for steam injection into ducts, or Blower Pack for direct space applications, as indicated.

*SPEC EDITOR: SELECT EITHER ELECTRODE TYPE OR RESISTANCE HEATING ELEMENT TYPE, DELETE TYPE NOT USED. MAKE SURE SPEC OR DRAWINGS ALSO INDICATE THE REQUIRED STEAM INJECTION SYSTEM FOR USE WITH THE ELECTRIC HUMIDIFIER: EITHER STEAM INJECTION DISTRIBUTION PANELS OR BLOWER PACK.*

*SPEC EDITOR: ELECTRODE TYPE MUST USE TAP WATER, NOT RO/DI WATER. PLASTIC STEAM CYLINDERS ARE DISPOSABLE AND NEED TO BE CHANGED REGULARLY; EVEN WITH DISPOSABLE CYLINDERS THIS TYPE IS LESS RELIABLE THAN RESISTANCE TYPE SINCE DRAINS AND DRAIN VALVES CAN PLUG. ACCURACY OF CONTROL IS +/- 5%, NOT RECOMMENDED WHERE HIGH ACCURACY CONTROL IS DESIRED.*

*SPEC EDITOR: RESISTANCE HEATING ELEMENT TYPE USES RO/DI WATER AND PROVIDES BETTER CONTROL ACCURACY THAN ELECTRODE TYPE, TYPICALLY +/- 3% OR BETTER. CYLINDERS DO NOT NEED TO BE REPLACED; MORE RELIABLE THAN ELECTRODE TYPE WHEN RO/DI FEED WATER IS USED. CAPABLE OF OPERATION WITH TAP WATER (IF SPECIFIED THAT WAY, NOT SPECIFIED THAT WAY BELOW) BUT WILL RAPIDLY FOUL. CITY OF ANN ARBOR WATER CONDUCTIVITY WAS 500-700 MICRO-MHOS (UMHOS) (RECORDED DURING FY 2010-2011).*

- B. Furnish electrode heating element type humidifier capable of boiling water at the required capacity with a minimum conductivity of 125 umho (micro-mho).
  1. Replaceable plastic steam cylinder.
  2. Controller shall monitor water conductivity and automatically drain and flush unit to reduce solids build-up and optimize humidifier performance.
  3. Published cylinder life based on incoming water conductivity.
  4. Published replacement pricing.
  5. Pre-notification of automatic shutdown at end of cylinder life
  6. Power to the heating elements shall be controlled through the actuation of contactors and solid state relays, to provide a control accuracy of +/- 5% RH or better.

- C. Furnish resistance heating element type humidifier capable of boiling water at the required capacity using reverse osmosis or de-ionized water (conductivity of 50 umho (micro-mho) or less).
  - 1. Serviceable stainless steel steam cylinder.
  - 2. Controller shall automatically drain and flush unit to reduce solids build-up and optimize humidifier performance.
  - 3. Corrosion resistant heating elements.
  - 4. Water level control shall be provided by float switch or float valve located in a portion of the tank segregated from the main steam generating portion of the tank.
  - 5. Power to the heating elements shall be controlled through the actuation of contactors and solid state relays, to provide a control accuracy of +/- 3% RH or better.
- D. Over temperature safety switch to prevent heating element failure.
- E. Water make-up system with inlet strainer, solenoid valve with flow regulator, and fill tee or cup with built-in air gap to prevent back siphoning
- F. Solenoid operated automatic drain valve.
- G. Bottom drain outlet. Large perforated strainer at drain outlet to prevent blockage of drain valve or drain lines
- H. A system on/off switch with power indicator light, external to the humidifier enclosure.
- I. Enclosure to be minimum 18 gauge steel and powder-coat painted to prevent against corrosion. The electrical and steam generating compartments shall be separate, but contained within the same cabinet to minimize field wiring. The cylinder access door shall be lockable with a key. A door interlock switch shall prevent humidifier operation when the access door is open.

**SPEC EDITOR: DELETE BLOWER PACK PARAGRAPH BELOW IF A BLOWER PACK IS NOT REQUIRED. BLOWER PACKS ARE AVAILABLE THAT PRODUCE NO VISIBLE STREAM TRAIL, BUT TYPICALLY ONLY FOR LOW STEAMING CAPACITY HUMIDIFIERS. IF NO VISIBLE STEAM TRAIL IS DESIRED, MODIFY THE BELOW TO REQUIRE THAT FEATURE, AFTER VERIFYING THAT THE HUMIDIFIER MANUFACTURER CAN PROVIDE SUCH A BLOWER PACK FOR YOUR REQUIRED STEAM OUTPUT.**

- J. Provide a fan blower pack to disperse steam directly into the room air. Blower pack shall be 120 VAC and shall be capable of being mounted integral to the top of the humidification unit, or remotely via interconnecting piping. Provide an air flow proving switch to prevent humidification when the blower fan is off.
- K. Controls
  - 1. Provide a UL listed and labeled microcomputer based controller with the following capabilities:
    - a. Control of humidity to within +/- 3% RH (resistance heating element type humidifiers) or +/- 5% RH of set point (electrode heating element type humidifiers).
    - b. Proportional/integral/derivative (PID) algorithms for humidifier control.

- c. Integral 24 VDC power supply of adequate size to power controllers and all axillary devices (humidity transmitters, etc.)
- d. LCD or LED display and integral controller keypad to allow adjustment of all humidifier settings, programming of alarms and viewing of alarm history.
- e. High water sensor circuitry to prevent over filling.
- f. Integral drain water tempering feature. Drain water shall be automatically cooled to below 140°F before entering the drain.
  - 1) If unit cannot provide this feature, provide an external condensate drain cooler.
- g. Automatic drain and flush feature to reduce the concentration of conductive ions in the water and reduce mineral build-up.
- h. Automatic off-season shut-down [user adjustable, factory default set after 3 days of "no call"] to completely drain the tank(s) and automatically restart unit on call for humidity.
- i. External fan control: controller shall have the ability to cycle an external steam dispersion fan on and off in conjunction with a call for humidification.
- j. Fan control off-delay feature. When the humidifier unit controls an external fan, fan "off" is time delayed after steam output stops.
- k. A dry contact rated 10 amps at 24 VDC, which can be programmed to energize when any humidifier alarm condition occurs.
- l. Password protection. Controller adjustment shall only be enabled after a password is entered. It shall be possible to disable the password protection feature.
- m. For duct mounted humidifiers, controller shall limit duct humidity downstream of the humidifier to a user adjustable set point by modulating humidifier output, and prevent humidifier operation if duct air flow is not present.
- n. For space mounted humidifiers, controller shall prevent humidifier operation if air flow is not present at the blower pack fan.
- o. The controller shall monitor and display the following conditions, minimum:
  - 1) Space relative humidity
  - 2) Space relative humidity set point
  - 3) Space dew point
  - 4) Space dew point set point
  - 5) Duct relative humidity
  - 6) Duct high relative humidity limit set point
  - 7) Air flow status
  - 8) Tank temperature
  - 9) Tank level
  - 10) All units shall be displayed in inch-pounds.
- 2. Controller shall accept two wire 4-20mA input signals for space humidity, duct humidity, and room temperature.
- 3. Provide the following auxiliary devices for use with the humidifier controller:
  - a. 4-20 mA room humidity transmitter

- b. 4-20 mA duct relative humidity transmitter (duct mounted humidifiers only)
  - c. Air flow proving switch
  - d. Auxiliary devices shall comply with Related Section Mechanical Systems Control, and be compatible with the humidifier controller.
4. Controller shall be capable of operation in ambient conditions of 32°F to 140°F and a humidity range of 5% to 95%, non-condensing.
  5. The controller shall hold its software in non-volatile memory. On-line field modified data entries shall be stored in flash memory to prevent accidental loss of data due to power loss, voltage surge or spike. In the event of a complete power outage, all field and factory settings shall remain stored and shall automatically be restored when power is restored

**SPEC EDITOR: THE BELOW FEATURE (IN HIDDEN TEXT ) IS NOT AVAILABLE ON ALL BRANDS OR MODELS WITHIN A BRAND. IF YOUR PROJECT REQUIRES THIS FEATURE, RESEARCH AND SPECIFY SPECIFIC MFR.S AND MODELS THAT CAN PROVIDE IT.**

6. Provide humidifier set point reset based on window glass temperature, to prevent condensation on windows. Provide control algorithm and 4-20 mA temperature transmitter with a RTD designed to be mounted on a window surface.

## **2.5 CONDENSATE DRAIN COOLER**

- A. Provide a stainless steel drain cooler for condensate water being discharged. Provide a unit of size and volume adequate for handling the expected discharge from the humidification system.
- B. Drain cooler shall include a self-actuated thermostatically controlled water valve to control mixing.
- C. Drain cooler shall be capable of metering a sufficient amount of cold water into the mixing chamber to temper 212°F (100°C) water to a 140°F (60°C) max. discharge temperature
- D. Cooler dimensions must allow gravity flow of condensate to the waste discharge point based on the height of the humidifier's condensate discharge connection.
- E. Provide all mounting components and hardware required to properly support the drain cooler, independent of the humidifier unit.
- F. Provide a vacuum breaker in the unit to prevent backflow into the potable water systems.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION AND PREPARATION**

- A. Store units protected from weather, dirt, water, and construction debris.

- B. Examine roughing-in for equipment support, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting equipment performance, maintenance, and operations. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install in strict compliance with manufacturer's installation instructions and Related Sections. Maintain manufacturer's recommended clearances for service and maintenance.
- B. Route steam line to humidifier by connecting to top of steam main (either straight up or at 45 degrees (preferred)). Provide a steam trap upstream of the humidifier if the top of steam main could not be tapped or if the distance between the steam main and the humidifier exceeds ten feet.
- C. Install separate devices furnished by manufacturer and not factory installed, including but not limited to control valve, steam traps, and temperature switch.
- D. Provide and install any manufacturer's accessory devices necessary or recommended to meet the particular needs of the humidifier installation.
- E. Install condensate drain coolers where indicated or required.
- F. Install to provide a minimum of ten feet of straight, unobstructed (no filters, turning vanes, etc.) duct downstream from the humidifier, unless a shorter non-wetting (absorption) distance upstream of such obstructions is indicated on the reviewed/approved submittal.
- G. Direction of steam injection relative to air flow is dependent on humidifier features and duct orientation. Review manufacturer's installation instructions carefully and install accordingly.
- H. Seal all duct penetrations made as a result of humidifier installation. Use sealant appropriate for service.

**SPEC EDITOR: DELETE THE INSTALLATION INSTRUCTIONS FOR HUMIDIFIER TYPES THAT ARE NOT USED ON THE PROJECT.**

- I. Jacketed Steam Humidifiers
  - 1. Install the humidifier's discharge steam trap to allow the condensate piping to drain by gravity. Do not lift condensate piping downstream of this steam trap.
- J. Steam Injection Dispersion Panels
  - 1. Dispersion panels are typically designed for a specific duct orientation (either horizontal or vertically oriented duct). Verify that the dispersion panel supplied is the correct model for the duct orientation at the humidifier mounting location.
  - 2. Rotate tubes to the correct orientation to inject steam into the air stream, typically perpendicular to the air stream.
  - 3. Install all required p-traps. Do not lift condensate discharging from p-traps

*SPEC EDITOR: WHEN SELF CONTAINED ELECTRIC HUMIDIFIERS ARE USED, PROVIDE A DETAIL ON THE DRAWINGS INDICATING THE REQUIRED PIPING CONNECTIONS. HUMIDIFIER DRAINS MUST BE ROUTED TO A BUILDING FLOOR DRAIN VIA AN AIR GAP. THIS AIR GAP WILL BE A SOURCE OF FLASH STEAM AND SHOULD BE INSTALLED AT LOCATIONS WHERE THE FLASH STEAM WILL NOT CAUSE DAMAGE. INDICATE THE ROUTE OF THE STEAM VAPOR PIPING AND INDICATE IF HOSE OR PIPING IS TO BE UTILIZED. REVIEW MANUFACTURERS LITERATURE AND ASSURE VAPOR PIPING CAN BE INSTALLED TO MEET REQUIRED PITCH AND DRAINAGE REQUIREMENTS.*

*SPEC EDITOR: WHEN A FAN BLOWER PACK IS USED, THE DESIGNER MUST INDICATE A MOUNTING LOCATION THAT WILL PREVENT CONDENSATION OF THE VAPOR TRAIL ONTO ROOM SURFACES.*

K. Self-Contained Electric Humidifiers

1. Mount humidifier and accessories at locations indicated on the drawings, maintaining manufacturers recommended service clearances.
2. Connect power to the humidifier. Comply with Division 26 requirements.
3. Install water supply and drain piping to each unit in compliance with manufacturer's recommendations, including pipe sizes.
  - a. Install an isolation valve, water hammer arrestor, and a strainer in the supply piping to the humidifier. Install the strainer between the isolation valve and the humidifier.
  - b. When plastic pipe is used for water supply piping, provide a minimum of 3 feet of stainless steel tubing for the last 3 feet of the supply piping before connecting to the unit.
  - c. Install unions at each supply and drain connection.
  - d. Install traps in supply and drain piping as recommended by the unit manufacturer.
  - e. All drain piping shall be type L copper pipe. When humidifiers are not installed in mechanical rooms or similar spaces that are typically inaccessible to occupants, insulate the tank/flush drain with ½" thick insulation per Related Section. Overflow drains do not require insulation.
4. Connect drain piping via an air gap fitting to the building drain. Prior to connecting to building drain, install a condensate drain cooler for units that are not equipped with an integral drain water tempering feature.
5. Install steam vapor hose or piping, as indicated, between steam dispersion device and humidifier.
  - a. Piping material shall be per Related Section.
  - b. When piping is used, install a union at the humidifier to allow humidifier removal.
  - c. Electrically ground the piping. Bond the ground to the humidifier cabinet ground.
  - d. When hose is used, use approved hose, fittings, and clamps obtained from the humidifier manufacturer.
  - e. Pitch steam vapor hose or piping to allow condensate to drain back into the humidifier.

- f. Install steam condensate drains where required. Route such drains back to the humidifier tank fill connection in lieu of to a building drain where possible and when permitted by humidifier manufacturer.
  - 1) Where routed to building drains, provide condensate cooler and route drain through cooler before connection to building drain.
- g. Insulate hose/piping per Related Section.
- 6. Install steam dispersion devices.
- 7. Install the fan blower pack when utilized.
  - a. Mount blower pack to prevent the discharged steam from condensing on nearby surfaces.
  - b. Install power to blower pack in compliance with Division 26 requirements.
  - c. When mounted remote from the humidifier, install steam vapor hose or piping between humidifier and blower pack, pitched to allow condensate to drain back to humidifier. Install drain piping, complying with the same requirements indicated above for the humidifier drain piping.
- 8. Install separate devices furnished by manufacturer and not factory installed, including but not limited to, room humidity transmitter, proof of air flow switch, duct high limit humidity transmitter, and control wiring between fan blower pack and humidifier.
  - a. Install wiring in conformance with Related Section (Mechanical Systems Controls), utilizing approved contractors listed in that section.
- 9. Program the humidifier controller.

### **3.3 STARTUP**

- A. Adhere to manufacturer's start-up instructions.
- B. Assure that actuators operate freely, close off steam tightly (no leaking steam discharges into the duct or space), and that the stem packing is not leaking. Verify proper steam trap operation.
- C. For dispersion panel types, check dispersion tubes for leaks at slip couplings while steam is being injected into the duct or space; repair any leaks.
- D. When provided as part of the humidifier package, verify that the air flow proving switch and duct high limit humidistat operate properly. Prime any p-traps and verify the operation of temperature switches, float switches, and similar devices specified or provided, prior to putting humidifier into operation.
- E. For self-contained electric humidifiers, adjust all control parameters as directed by the Commissioner and as appropriate for the project, and place into service. For projects without a Commissioner, consult the project engineer for direction regarding control parameter settings. Record all settings and include in the O&M manual.

### **3.4 COMMISSIONING**

- A. Perform Commissioning activities per Related Sections above.

*SPEC EDITOR: TRAINING IS TYPICALLY ONLY REQUIRED FOR SELF  
CONTAINED ELECTRIC HUMIDIFIERS, FOR OTHER TYPES DELETE THE  
ARTICLE BELOW.*

**3.5 TRAINING**

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.
- B. Train Owner's maintenance personnel on equipment operation, start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel. Training shall occur separate from startup activities.
  - 1. Provide 2 hours of training minimum.

**SPECIFICATION DIVISION 26**

NUMBER            SECTION DESCRIPTION

**DIVISION 26 ELECTRICAL**

SECTION 260500 - COMMON WORK RESULTS FOR ELECTRICAL

**END OF CONTENTS TABLE**

**DIVISION 26 ELECTRICAL**

**SECTION 260500 - COMMON WORK RESULTS FOR ELECTRICAL**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

***INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.***

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

***IN 1 BELOW, SELECT PROPER COMMISSIONING SPEC SECTION NUMBER  
APPLICABLE TO THE PROJECT.***

- B. Related Sections:

1. Section 019100/019110 - Commissioning
2. Section 017823 - Operation and Maintenance Manual
3. Section 260513 - Medium, Low & Control Voltage Cables
4. Section 260526 - Grounding and Bonding for Electrical
5. Section 260533 - Electrical Materials and Methods

**1.2 SUMMARY**

- A. Provide all equipment, materials, labor and services necessary to furnish, install, test and turn over to the Owner the following electrical work as required by these specifications and as shown on the drawings, including all shop drawings, test reports, record drawings, operations and maintenance manuals, Owner training and incidental items necessary to complete the project in every respect.
- B. Participate in project coordination, scheduling and commissioning activities as specified in Division 01.

**1.3 REFERENCES**

- A. Provide equipment and materials that conform to the applicable standards of the following organizations:
1. American National Standards Institute (ANSI).
  2. Institute of Electrical and Electronic Engineers (IEEE).
  3. National Electrical Manufacturers Association (NEMA).
  4. National Fire Protection Association (NFPA).
  5. Telecommunications Industry Organization/Electronic Industries Alliance (TIA/EIA)
- B. All materials and equipment shall be listed and labeled by Underwriters Laboratories (UL), Electrical Testing Laboratories (ETL), MET Laboratories (MET), or the Canadian Standards Association (CSA).

C. Install equipment and materials in compliance with the following:

1. Michigan Electrical Code (MEC).
2. Michigan Building Code (MBC).
3. Michigan Mechanical Code (MMC).
4. Michigan Plumbing Code (MPC).
5. Americans with Disabilities Act (ADA).
6. State of Michigan DLEG Bureau of Fire Services.
7. Owner's Inspection Authorities.
8. Manufacturers' instructions.

#### 1.4 DESIGN DOCUMENTS

- A. Contact the Owner's Representative about design questions and discrepancies between design documents before performing the work.
- B. Notify the Owner's Representative if existing code violations are uncovered that are not addressed in the design documents.

#### 1.5 SUBMITTALS

- A. Submit for approval copies of shop drawings and product literature for the following equipment. Submittals shall include adequate information to prove that the systems, equipment and materials comply with the contract documents. Each copy of the submittals shall be marked to indicate the specific models, sizes, types and options being provided. Submittals not so marked will be rejected.

**DELETE ITEMS NOT PART OF THE PROJECT. ADD ITEMS AS NECESSARY.**

1. Primary Equipment and Unit Substations.
  2. Generator and Uninterruptible Power Supply Systems.
  3. Distribution Transformers.
  4. Power Distribution, Lighting, and Receptacle Panels.
  5. Motor Control Centers, Starters and Motor Controls.
  6. Disconnect and Safety Switches.
  7. Lighting Contactors.
  8. Capacitors.
  9. Bus Ducts and Bus Duct Plugs.
  10. Wiring Devices.
  11. Transient Voltage Surge Suppressor Devices.
  12. Lighting Fixtures.
  13. Lighting Control Systems, Dimmer Systems and Switches.
  14. Timers and Time Switches.
  15. Fire Alarm Systems.
  16. Clocks and Clock Systems.
  17. Security and Card Access Control Systems.
  18. Sound Reinforcement Systems.
  19. Intercom and Public Address Systems.
  20. Closed Circuit TV Systems.
  21. Manholes and Duct Bank Spacers.
  22. Cable Trays.
  23. Conduits and Fittings.
  24. Cables, Wires and Terminations.
  25. Grounding Connections.
- B. Participate in the coordination drawing process and submit coordination drawings for approval in accordance with Division 01.

**1.6 RECORD DOCUMENTS**

- A. Submit record drawings in electronic format (AutoCAD or Microstation) for approval as specified in Division 01. Show the locations of equipment, light fixtures, switches, receptacles and junction boxes, riser information, the sizes of conduits and conductors, circuit numbers, and deviations from the design. Dimension the locations of buried, embedded and concealed primary and feeder conduits from permanent building features.

**1.7 OPERATIONS AND MAINTENANCE MANUALS**

- A. Submit for approval copies of operations and maintenance manuals as specified in Division 01 and the other Division 26, 27 and 28 sections. Each copy of the manuals shall be marked to indicate the specific models, sizes, types and options of the systems and equipment that were provided. Manuals not so marked will be rejected.

**1.8 QUALITY ASSURANCE**

- A. Electrical work shall be performed by licensed Journeyman or registered Apprentice Electricians. The number of Apprentices on a project shall not exceed the number of Journeymen. Electricians shall carry a copy of their license or registration while working on The Owner's projects.
- B. Contact the Owner's Code Inspection Department (734-764-2457) before starting the project to arrange for periodic inspections. Normal inspections will be performed at no cost to the Contractor, but the costs for repeat re-inspections of rejected work may be deducted from the Contractor's final payment.

**1.9 SHIPPING, HANDLING AND STORAGE**

- A. For deliveries of equipment to the Owner, notify the Owner's Representative of the deliveries 3 working days in advance. Deliveries shall occur on normal workdays between 8:00 AM and 2:00 PM. Deliveries that arrive without adequate notice may be rejected.
- B. Provide unloading and storage for Owner furnished equipment that is shipped to the project site.
- C. Pick up, transport and unload at the project site Owner furnished equipment that is stored in the Owner's warehouses.
- D. Provide packaging Waste management in accordance with Division 1.

**1.10 WARRANTY**

- A. Guarantee work for a period of one year from the date of the Owner's final acceptance of the project (Substantial Completion). A manufacturer's warranty beginning upon equipment receipt or startup shall be extended to one year from final project acceptance. A manufacturer's warranty in excess of one year shall remain in effect for its entire time period.

**PART 2 - PRODUCTS (NOT APPLICABLE)**

**PART 3 - EXECUTION**

**3.1 SUBSTITUTIONS**

- A. Provide equipment and materials from the manufacturers specified. Substitutions for specified products are acceptable only if proposed and approved in writing at the time of bid.

**3.2 TEMPORARY SERVICE**

*DELETE NEXT SENTENCE IF THE PROJECT IS PAYING FOR THE ELECTRICITY. DELETE PARAGRAPH 1 BELOW IF THE UNIVERSITY IS PAYING FOR THE ELECTRICITY)*

- A. Provide, maintain and remove all temporary lighting and power required to complete the project. If used reasonably, the Owner will pay for the electricity consumed.
  - 1. Provide an Owner approved watthour meter and box. Coordinate with the Plant High Voltage Shop (734 764-9445) and submit a Utilities Services Request for circuit energization.
- B. Provide ground fault protection on temporary feeders rated 200 amps and larger.
- C. Temporary feeders shall be limited to the following types:
  - 1. Conductors installed in raceways.
  - 2. NEC Type MC cable.
  - 3. Multi-conductor cable with an overall outer jacket (where inaccessible to the public and not subject to damage or abuse).
  - 4. NEC recognized hard usage cord or extra hard usage cord (where inaccessible to the public and not subject to damage or abuse).
- D. Install and support temporary wiring in accordance with the NEC requirements for permanent wiring.
- E. Label temporary power feeders every 25 feet maximum.
- F. Temporary wiring may either be copper or aluminum.

**3.3 ELECTRICAL COORDINATION**

- A. Participate in the project scheduling and coordination drawing activities specified in Division 01 of the project specifications.
- B. Coordinate power interruptions with the other disciplines in accordance with Division 01. Notify the Owner's Representative of power interruptions 3 working days in advance. Maintain power to all loads outside of the work area.
- C. Coordinate with the Plant Operations Call Center 10 working days in advance at (734) 647-2059:
  - 1. Before performing any work affecting primary power distribution circuits, unit substations or outdoor lighting.

2. Before performing any work affecting engine-generators, automatic transfer switches or variable speed drives.
  3. Before performing any work affecting fire alarm, security or card access control systems.
  4. Before performing any work affecting telecommunications ducts, manholes, rooms or circuits.
  5. Before performing any work affecting roofs.
- D. Notify OSEH at (734) 647-1143 before starting up engine-generators.

### **3.4 DEMOLITION**

- A. Protect adjacent building services and materials indicated to remain. Install and maintain barriers to keep dirt, dust and noise from being transmitted to adjacent areas. Remove protection and barriers after demolition is completed.
- B. Remove all equipment and materials designated for demolition as follows:
1. Power wiring - remove back to the source or to the first junction box where the circuit continues on to remaining loads.
  2. Telecommunications wiring - remove from conduits and J-hooks back to cable trays or to the outer walls of the building entrance (BE) room or telecommunications rooms (TRs).
    - a. Cut and label wire ends "Abandoned" when abandoning sections of wires in cable trays and at BE and TR outer walls. Do not remove telecommunications wiring from cable trays, the BE or the TRs.
    - b. Coordinate for the Telecommunications Installation Contractor to remove abandoned wiring from cable trays and inside the BE and TRs.
  3. Conduits and boxes in walls and above permanent ceilings - abandon in place. Install blank cover plates on boxes.
  4. Conduits through floors and walls, and boxes in floors - remove completely. Patch and paint penetrations to match existing.
  5. Exposed and accessible conduits, wireways and boxes - remove completely. Patch and paint surfaces to match existing, and plug unused panel and junction box holes.
  6. Lighting fixtures and electrical equipment - remove and dispose of completely (unless designated for relocation).

### **3.5 LAMP AND BALLAST RECYCLING**

- A. Recycle tubular fluorescent, compact fluorescent, HID, LED, induction and cold cathode lamps removed during demolition or replaced during construction. These six types of lamps shall not be disposed of as solid waste.

1. Package unbroken tubular fluorescent lamps in their original cardboard boxes, or contact OSEH Hazardous Materials Management at (734) 647-1142 and arrange to pick up U-lamp, 60 lamp, 100 lamp or 250 lamp boxes at the North Campus Transfer Facility located at 1655 Dean Road. Package unbroken compact fluorescent, HID, LED, induction and cold cathode lamps in appropriately sized corrugated cardboard boxes.
    - a. Use separate boxes for each type and physical size of lamp. Do not mix lamp types or sizes in the same box.
    - b. Fill the boxes as completely as possible.
  2. Obtain Universal Waste Labels from OSEH. Fill out and attach one label to each box.
    - a. Enter the building name, quantity of lamps, and the accumulation start date (date the box started to be filled).
    - b. Mark the appropriate check box to indicate the type and length of lamps.
  3. Tape the boxes closed on all sides.
  4. Sweep up any broken lamps and seal them in a heavy plastic bag. Place the plastic bag in a corrugated cardboard box and tape the box closed on all sides. Label the box to indicate the type and quantity of broken lamps inside. Notify OSEH of the broken lamps.
  5. Contact OSEH at (734) 647-3120 and arrange to deliver the sealed and labeled boxes to the storage area at the Campus Safety Services Building located at 1239 Kipke Drive. Take care to avoid breaking the lamps. Position the boxes on their sides during transport. Do not stack anything on top of the boxes.
  6. If lamps inside a box become broken, seal the entire box in a heavy plastic bag. Copy the Universal Waste Label information onto a new label and attach the new label to the outside of the plastic bag.
  7. Place the boxes into the designated storage area. Position the boxes on their sides so that the labels are forward and visible. Do not stack the boxes more than three high (two high for 250 lamp boxes). OSEH will recycle the lamps at no cost to the Contractor.
- B. Recycle fluorescent, HID and cold cathode lighting ballasts removed during demolition. Recycle LED and induction lighting drivers removed during demolition. Lighting ballasts and drivers shall not be disposed of as solid waste.
1. Contact OSEH Hazardous Materials Management at (734) 763-4568 and arrange to pick up DOT approved 30 gallon steel drums and 5 gallon pails at the North Campus Transfer Facility located at 1655 Dean Road.
  2. Place the drums in an accessible location and on a hard surface so that OSEH can use a drum cart to pick them up later. Lawns, dirt piles, gravel drives, muddy areas and basements without elevators are not considered accessible locations.
  3. Wearing rubber gloves, deposit any leaking ballasts into the 5 gallon pails for separate handling. When finished, deposit the rubber gloves into the 5 gallon pails.

4. Deposit the non-leaking ballasts and drivers into the 30 gallon drums. Leave enough space at the top of the drums for installation of lids.
5. Obtain Universal Waste Labels from OSEH. Fill out and attach one label to each 5 gallon pail and each 30 gallon drum. Enter the building name, quantity of ballasts and drivers, and the accumulation start date (date the pail or drum started to be filled).
6. Contact OSEH at least 3 working days in advance to request pick-up of the pails and drums. OSEH will pick up and recycle the ballasts and drivers at no cost to the Contractor.
7. Do not deposit ballasts from other projects or any other refuse in the drums. All costs for disposing of foreign items found in the drums will be deducted from the Contractor's final payment.

**3.6 RELOCATION**

- A. Carefully remove, clean and restore items designated for relocation to a "like new" condition, and store them for reuse.

**3.7 SALVAGE**

- A. Equipment and materials removed during demolition, unless noted otherwise, shall become the property of the contractor with due consideration for all such removed equipment included in the bid price.

**3.8 CLEANUP**

- A. Remove and legally dispose of demolished items, rubbish and debris from the construction site daily, and at the completion of the work. Failure to do so may result in the cleanup being performed by others and all costs thereof being deducted from the Contractor's final payment.

**3.9 EQUIPMENT PROTECTION**

- A. Protect equipment and materials during shipment, storage and construction against damage and contamination.
- B. Items that become damaged or contaminated shall be restored to a "like new" condition or replaced at the Contractor's expense.

**3.10 WORK PERFORMANCE**

- A. Locate equipment as close as practical to the locations shown on the drawings. Should field conditions prevent the installation of equipment or materials as indicated on the drawings, make any deviations only with the prior approval of the Owner's Representative.
- B. Install and connect new work to existing work neatly and carefully. Existing work that is disturbed shall be repaired or replaced as necessary to restore it to its prior condition.

- C. Coordinate work with the other trades to ensure completion consistent with the project schedule. Do not unduly delay the startup, testing or turnover of project systems.
- D. Coordinate work with the other trades to ensure the NEC-required dedicated spaces above and working spaces around electrical equipment is provided, and to ensure access to equipment requiring calibration or maintenance. Working space and access shall be sufficient for an adult to perform maintenance safely without straddling or removing obstructions. Work that encroaches on working space or that impedes maintenance shall be relocated at the Contractor's expense.
- E. Coordinate work with the other trades to provide access doors to maintainable electrical equipment (including lighting fixture remote ballasts) located behind walls or above permanent ceilings.
- F. Prior to core drilling concrete floors, test for the presence of electrical conduits. Use an impulse induction type scanner capable of detecting both metallic conduits and copper wires in PVC conduits. Tracers that scan for energized cables or that scan for injected high frequency signals are not acceptable. Notify the Owner's Inspection Department prior to all tests. Prior to core drilling, arrange for the Owner's Representative to notify building occupants of the potential for an unscheduled power outage. Conduits damaged during core drilling shall be restored immediately at the Contractor's expense.

**3.11 EQUIPMENT AND WIRING IDENTIFICATION AND COLOR CODING**

- A. Provide nameplates indicating equipment names or numbers and power sources as specified in Section 260533.
- B. Paint fire alarm system and temperature controls system junction boxes and covers as specified in Section 260533.
- C. Mark junction box covers with the panel and breaker numbers of the circuits contained within as specified in Section 260533.
- D. Provide Arc-Flash labels at all substations, switchboards, panelboards, motor control devices, and other power equipment as specified in Section 260533.
- E. Color code and identify wiring in accordance with Section 260513.

**3.12 FIELD QUALITY CONTROL**

- A. Arrange for testing and commissioning of electrical systems, equipment and materials prior to final acceptance of the work. Acceptance tests and commissioning shall be performed as specified in Division 01 and the other Division 26, 27 and 28 sections, and in applicable codes, standards and manufacturers' instructions.
- B. Provide all test equipment, materials and labor necessary to perform the tests, and coordinate with the other trades for necessary services, such as scaffolding and the uncoupling of motors.
- C. Notify the Owner's Representative 3 working days in advance of tests. The Owner shall witness the tests unless the Owner's Representative waives such witnessing in writing.

- D. Notify manufacturers sufficiently in advance of tests for which the manufacturers should be present.
- E. Replace any equipment or materials found to be defective or found to be of lesser quality than that specified or shown on the drawings.
- F. Provide written test reports, signed and dated, for all tests prior to acceptance of the electrical equipment by the Owner.
- G. Provide the training specified in each specification section.

NUMBER            SECTION DESCRIPTION

**DIVISION 26 ELECTRICAL**

SECTION 260513 - MEDIUM, LOW AND CONTROL VOLTAGE CABLES

**END OF CONTENTS TABLE**

**DIVISION 26 ELECTRICAL**

**SECTION 260513 - MEDIUM, LOW AND CONTROL VOLTAGE CABLES**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

*VERIFY ALL RATINGS, DIMENSIONS AND REQUIREMENTS SPECIFIED TO BE AS SHOWN ON THE DRAWINGS ARE CLEARLY SHOWN ON THE DRAWINGS.*

*IN 2 BELOW, SELECT PROPER COMMISSIONING SPEC SECTION NUMBER APPLICABLE TO THE PROJECT.*

- B. Related Sections:

1. Section 017823 - Operation and Maintenance Manual
2. Section 019100/019110 - Commissioning
3. Section 260526 - Grounding and Bonding for Electrical
4. Section 260533 - Electrical Materials and Methods
5. Section 260800 - Electrical Acceptance Tests

**1.2 SUMMARY**

*EDIT THE SUMMARY TO MAKE IT PROJECT SPECIFIC.*

- A. Furnish, install, terminate, splice (where permitted), test and label electrical cables and wires as shown.
1. Unless shown otherwise on the drawings, medium voltage cables, splices, terminations and labels will be provided by the U-M Plant High Voltage Shop.
  2. Unless shown otherwise on the drawings, telecommunications voice and data cables, terminations and labels will be provided by others.

**1.3 REFERENCES**

- A. Cables shall comply with the latest versions of the following codes and standards as applicable.
1. ANSI/NEMA WC 74/ICEA S-93-639, "5-46 kV Shielded Power Cable for Use in Transmission and Distribution of Electric Energy".
  2. ANSI/NEMA WC 70/ICEA S-95-658, "Power Cables Rated 2000 Volts or Less for the Distribution of Electrical Energy".
  3. Michigan Electrical Code (MEC) which invokes NFPA 72, the National Electrical Code (NEC).

**1.4 SUBMITTALS**

- A. Medium Voltage Cables, Terminations, Splices and Labels: Submit for approval product literature identifying the following:
  - 1. Manufacturers' names, catalog numbers and illustrations.
  - 2. Weights and overall diameters.
  - 3. Conductor AWG sizes, materials, dimensions and stranding.
  - 4. Insulation NEC Type letters, materials, thicknesses, voltage ratings, temperature ratings, dry or wet location ratings and percent insulation levels.
  - 5. Shield types, materials, thicknesses and percent coverage.
  - 6. Jacket materials and thicknesses.
  - 7. Surface markings including special ratings, characteristics, approved uses and NRTL listings.
  - 8. Maximum allowable pulling tensions and side wall pressures.
  - 9. Minimum pulling and training bend radii.
  - 10. Lubrication requirements and lubricant compatibilities.
  - 11. Cold weather pulling limitations.
  - 12. Cable reel dimensions and weights.
  
- B. Cables 600 Volts and Below: Submit for approval product literature identifying the following (as applicable to each cable type):
  - 1. Manufacturers' names and catalog numbers.
  - 2. Conductor AWG sizes, materials, dimensions and stranding.
  - 3. Insulation NEC type letters, materials, voltage ratings, temperature ratings and dry or wet location ratings.
  - 4. Shield types, materials, thicknesses and percent coverage.
  - 5. Jacket materials and colors.
  - 6. Metallic sheath types and materials.
  - 7. Surface markings indicating special characteristics, special ratings, approved uses and UL listings.
  - 8. Crimp-type terminals for aluminum feeder cables (if permitted).
  
- C. Test Reports:
  - 1. Factory quality control test reports (medium voltage cables only).
  - 2. Written test reports, signed and dated, for specified field tests prior to acceptance of the cables by the Owner.

**1.5 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
  
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards, latest editions, unless noted otherwise.
  - 1. Cables: Applicable ANSI, ICEA, IEEE and NEMA standards.
  - 2. Cables, Terminations, Splices and Accessories: Listed, labeled and marked for intended use by Underwriters Laboratories (UL), Electrical Testing Laboratories (ETL), MET Laboratories (MET), or the Canadian Standards Association (CSA).

**1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Shipping and Handling Requirements: Store materials raised off the floor on pallets and protected with coverings to prevent damage due to weather and construction activities. Store in areas that prevent damage due to freezing and extreme temperatures or sunlight. Seal cable ends from absorption of water. Protect materials from damage, dirt and debris at all times.

**1.7 WARRANTY**

- A. Provide a complete warranty for materials and labor for a minimum of one year from the date of Substantial Completion. A manufacturer's warranty in excess of one year shall remain in effect for its entire time period.

**PART 2 - PRODUCTS**

**2.1 CABLE (MEDIUM VOLTAGE)**

- A. Medium voltage cable shall be single conductor stranded copper, with ethylene propylene rubber (EPR) insulation rated 15kV, 105 degrees C, 133 percent insulation level, a 5-mil thick minimum tape shield with 12-1/2 percent minimum overlap, and a polyvinyl chloride (PVC) jacket approved for use in cable trays. The cable shall be suitable for use on a 13.2 kV, 3-phase, 3-wire, ungrounded, system. General Cable, Kerite, Okonite, or Prysmian.

**2.2 CABLE (600 VOLTS AND BELOW)**

- A. Secondary distribution and power cables for indoor use and for above ground outdoor use shall be single conductor stranded copper, No. 12 AWG minimum, with NEC Type THHN insulation rated 90 degrees C in dry and damp locations, 600 volts, color coded as specified. Aetna Wire and Cable, Alan Wire, American Insulated Wire, Cerro Wire, Encore, General Cable, Republic Wire, Rockbestos-Surprenant, Service Wire, Southwire or United Copper Industries.

*IF ALUMINUM FEEDER CABLES ARE PERMITTED, PROVIDE AN ALUMINUM CABLE AND CONDUIT SIZING CHART. PROVIDE U-M STANDARD DETAIL 26051301. IDENTIFY CIRCUITS WHERE ALUMINUM FEEDER CABLES ARE PROHIBITED BY THE EQUIPMENT MANUFACTURERS, SUCH AS FOR CHILLER AND ELEVATOR FEEDERS.*

Where the drawings permit, indoor secondary feeder cables only may be single conductor stranded, Type AA-8000 Series aluminum, No. 1 AWG minimum, with NEC Types THHN or XHHW-2 insulation rated 90 degrees C, 600 volts, color coded as specified. Aetna Wire and Cable, Alan Wire, American Insulated Wire, Cerro Wire, Encore, General Cable, Republic Wire, Rockbestos-Surprenant, Service Wire, or Southwire. Terminations shall be Burndy or Thomas & Betts.

- 1. Aluminum cables may be used for indoor feeder circuits only, not for branch circuits or outdoor circuits.
- 2. Size conduits and device enclosure wiring gutters for the larger diameters and bend radii of aluminum cables.

3. Pre-train Electricians in aluminum cable preparation and termination.
  4. Terminate cables using crimp-type terminals in accordance with U-M Standard Detail 26051301. The die and crimp numbers shall be clearly visible after the lugs are crimped. Burndy or Thomas & Betts.
  5. Identify where aluminum conductor cables were installed on the project as-built drawings.
- B. Lighting cable for indoor use and for above ground outdoor use shall be single conductor stranded copper, No. 12 AWG minimum, with NEC Type THHN insulation rated 90 degrees C in dry and damp locations, 600 volts, color coded as specified. Aetna Wire and Cable, Alan Wire, American Insulated Wire, Cerro Wire, Encore, General Cable, Republic Wire, Rockbestos-Surprenant, Service Wire, Southwire or United Copper Industries.
  - C. Secondary distribution, power and lighting cable for underground use in conduit shall be single conductor stranded copper, No. 12 AWG minimum, with NEC Type XHHW insulation rated 90 degrees C in dry locations and 75 degrees C in wet locations, 600 volts, color coded as specified. Aetna Wire and Cable, Alan Wire, American Insulated Wire, Cerro Wire, Encore, General Cable, Republic Wire, Rockbestos-Surprenant, Service Wire, Southwire or United Copper Industries.
  - D. Control cable shall be single conductor stranded copper No. 14 AWG minimum, with NEC Type THHN insulation rated 90 degrees C in dry and damp locations, 600 volts, color coded as specified. Aetna Wire and Cable, Alan Wire, American Insulated Wire, Cerro Wire, Encore, General Cable, Republic Wire, Rockbestos-Surprenant, Service Wire, Southwire or United Copper Industries.
  - E. Instrumentation, telecommunications, fire alarm, security, card access control, audio/visual and other special systems wire shall be in accordance with system manufacturer's recommendations, but shall not be less than 20 AWG. Conductors shall be stranded copper unless manufacturer's instructions require the use of solid conductor. Conductors or jackets shall be color coded as specified.
  - F. Manufactured wiring systems shall consist of multiple solid or stranded copper conductors as specified above, an insulated grounding conductor, a corrugated aluminum or galvanized steel jacket, and locking-type connectors from the same manufacturer and product line as the mating fixture connectors. Conductors shall be color coded as specified.
  - G. Type MC cable for power and lighting use shall consist of multiple stranded copper conductors as specified above, an insulated grounding conductor and a corrugated aluminum or galvanized steel jacket. Conductors shall be color coded as specified. AFC, Encore, Kaf-Tech, Rockbestos-Surprenant, Service Wire, Southwire or United Copper Industries.

- H. Type MC cable for fire alarm system use shall consist of multiple solid or stranded copper conductors sized in accordance with the fire alarm system manufacturer's instructions, with NEC Type THHN insulation rated 90 degrees C in dry and damp locations, 600 volts, an insulated grounding conductor and a corrugated aluminum or galvanized steel jacket. Cable shall be plenum rated. Conductors and jacket shall be color coded as specified. AFC, Encore, Kaf-Tech, Rockbestos-Surprenant, Service Wire, Southwire or United Copper Industries.
- I. Type MI mineral-insulated cable shall be nickel-clad copper conductor, magnesium oxide insulated and copper alloy sheathed, rated 600 volts, with either factory installed terminations or field termination kits from the same manufacturer as the cable. Cable shall be UL labeled as 2 hour fire rated. Pentair Pyrotenax only.
- J. Grounding electrode conductors and equipment grounding conductors shall be single conductor stranded copper, No. 12 AWG minimum, bare where shown or with NEC Type THHN insulation rated 90 degrees C in dry and damp locations, 600 volts, color coded as specified.

**PART 3 - EXECUTION**

**3.1 INSTALLATION REQUIREMENTS**

- A. Install cables and wires in raceways, except low voltage control, instrumentation, telecommunications, fire alarm, security, audio/visual and other power limited circuit wiring may be installed in J-hooks where shown on the drawings.
- B. Use cable lubricant when pulling medium voltage cables and secondary feeder cables. Avoid exceeding manufacturer's recommendations on pulling tensions, sidewall pressures and cable bend radii.
- C. Route cables in J-hooks, manufactured wiring systems and Type MC cable parallel to or perpendicular to building lines, and in a neat and workmanlike manner. Coil the excess and support independently of the ceiling grid system.
- D. Terminate Type MC cable with steel set screw connectors that have integral insulating bushings. Self-locking, twist-in type connectors are not acceptable.
- E. Install Type MI and other 2-hour fire rated cable in strict accordance with manufacturer's instructions on pulling, bending, raceways, additional supports, protection from moisture, and installation of field termination kits.
- F. Segregate wiring of different voltage levels. Except as follows, circuits operating at different voltages shall not share raceways.
  - 1. Power wiring to rooftop motors and rooftop receptacles may be routed together.
  - 2. Power and control wiring between variable speed drives and motor disconnect switches may be routed together.
  - 3. Class 1 power limited cables may share the same cable tray.

- G. Splice power cables with solderless compression butt splices or ring lugs. Terminate power cables including motor leads with solderless compression ring lugs. Splice branch circuit wiring, lighting wiring, and control and instrumentation wiring with wire nut connectors. Terminate control and instrumentation wiring with solderless compression ring or spade lugs. Compression splices and lugs shall be crimped with tools specifically designed for the terminations being crimped. Compression splices and lugs used with aluminum feeder cables shall be identified as accepting aluminum cables.
- H. If no color coding system exists for each indicated system function and voltage, color code circuits as follows:
1. Three Phase Power Over 600 Volts:
    - Phase X (A): Black
    - Phase Y (B): Red
    - Phase Z (C): Blue
  2. Three Phase Power 480/277 Volts:
    - Phase X (A): Brown
    - Phase Y (B): Orange
    - Phase Z (C): Yellow
    - Neutral: Gray
    - Ground: Green
  3. Three Phase Power 208/120 Volts:
    - Phase X (A): Black
    - Phase Y (B): Red
    - Phase Z (C): Blue
    - Neutral: White
    - Ground: Green
  4. Single Phase Power 240/120 Volts:
    - Phase X (A): Black
    - Phase Y (B): Red
    - Neutral: White
    - Ground: Green
  5. Fire Alarm Wiring:
    - Addressable Initiating Device: #18 Shielded Twisted Pair (STP) Red with Black Stripe.
    - Horn, Horn/Strobe or Controlled Output Positive (+) 24 VDC: #14 Stranded Red.
    - Horn, Horn/Strobe or Controlled Output Negative (-) 24 VDC: #14 Stranded Black.
    - Horn, Horn/Strobe or Controlled Output MC Cable Jacket (if MC cable is used): Red.
    - Speakers: #18 STP Red.
    - Clear Strobe Light Positive (+): #14 Stranded Yellow.
    - Clear Strobe Light Negative (-): #14 Stranded Blue.
    - Clear Strobe Light MC Cable Jacket (if MC cable is used): Red with Blue Stripe.
    - Amber Strobe Light Positive (+): #14 Stranded Yellow with Black Stripe.
    - Amber Strobe Light Negative (-): #14 Stranded Blue with Black Stripe.
    - Amber Strobe Light MC Cable Jacket (if MC cable is used): Red with Yellow Stripe.
    - NOTE: When clear and amber strobe lights are addressable and require only one pair of wires, color code the wires

and MC cable jacket as specified for the clear strobe light.

Panel Communications: #18 STP Red with Black Stripe.

Fireman's Telephone: #18 STP Red with Yellow Stripe.

6. Synchronized Clock Wiring:
  - Line: Black
  - Neutral: White
  - Clock Correction: Red
7. Control wires to light fixtures for light dimming shall be:
  - Hot control wire: Black with white stripe
  - Neutral control wire: White with Black stripe
8. Less Than 120 Volts: Use Industry Standard Methods

I. For University Hospital projects, color code circuits as follows:

1. Three Phase Power Over 600 Volts:
  - Phase X (A): Black
  - Phase Y (B): Red
  - Phase Z (C): Blue
2. Three Phase Power 480/277 Volts:
  - Phase X (A): Red
  - Phase Y (B): Blue
  - Phase Z (C): Black
  - Neutral: Gray
  - Ground: Green
3. Three Phase Power 208/120 Volts:
  - Phase X (A): Yellow
  - Phase Y (B): Orange
  - Phase Z (C): Brown
  - Neutral: White
  - Ground: Green
4. Control wires to light fixtures for light dimming shall be:
  - Hot control wire: Black with White Stripe
  - Neutral control wire: White with Black Stripe
5. Less Than 120 Volts: Use Industry Standard Methods

J. Provide home runs of No. 10 AWG wire for 20 amp branch circuits that exceed 150' in length.

K. Ground the shields of shielded instrumentation and control cables at one end only. The shields at the other end shall be insulated from ground.

L. Provide identification tags on all cables and conductors terminated in panels.

### 3.2 FIELD QUALITY CONTROL

A. Prior to any testing, perform visual inspections to verify the following:

1. Conductor and jacket color coding is correct.
2. Labeling is correct.
3. Electrical terminations have been properly tightened.
4. The cables are ready to be tested.

- B. Perform a continuity test, 2,500-volt DC Megger test, a DC high potential test, and a second 2,500-volt DC Megger test on medium voltage cables. The high potential test shall be performed at 45kV for new cable and at 30kV when new cable has been spliced to existing cable. Submit a test report.
- C. Perform a continuity check and a 1,000 volt DC Megger test on 600 volt power cables No. 4 AWG and larger.
  - 1. The Megger test shall be performed between each pair of conductors and from each conductor to ground.
  - 2. The Megger test shall be performed for 15 seconds or until the insulation resistance value stabilizes.
  - 3. The insulation resistance between conductors and from each conductor to ground shall be 100 megohms minimum in one minute or less. In addition, the lowest insulation resistance value shall not differ from the highest resistance value by more than 20 percent. But if the lowest value is above 1,000 megohms, the 20% balance requirement may be waived.
- D. Perform a continuity check on control and instrumentation wiring.

**3.3 COMMISSIONING**

- A. Perform commissioning activities in accordance with Related Sections.

SECTION 260526 - GROUNDING AND BONDING FOR ELECTRICAL

**END OF CONTENTS TABLE**

**DIVISION 26 ELECTRICAL**

**SECTION 260526 - GROUNDING AND BONDING FOR ELECTRICAL**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

*IN 1 AND 2 BELOW, DELETE SUSTAINABLE DESIGN IF NOT APPLICABLE TO THE PROJECT. SELECT PROPER COMMISSIONING SPEC SECTION NUMBER APPLICABLE TO THE PROJECT.*

- B. Related Sections:

1. Section 018113 - Sustainable Design Requirements
2. Section 019100/019110 - Commissioning
3. Section 017823 - Operation and Maintenance Manual
4. Section 260513 - Medium, Low & Control Voltage Cables
5. Section 260533 - Electrical Materials and Methods
6. Section 260800 - Electrical Acceptance Tests

**1.2 SUMMARY**

- A. Provide grounding for all systems and equipment.

**1.3 GROUNDING SYSTEM REQUIREMENTS**

- A. Each ground rod shall have a maximum resistance to ground of 10 ohms before connection to the other ground rods. If reading is above 10-ohms, drive one extension. Further testing of that individual rod is not needed

*FILL IN THE APPROPRIATE RESISTANCE VALUE BELOW. SPECIFY 2 OHMS FOR PRIMARY SERVICES OR 5 OHMS FOR SECONDARY SERVICES.*

- B. The total grounding system with all connections completed shall have a maximum resistance to ground of \_\_\_\_\_ ohms.

**1.4 CONNECTION REQUIREMENTS**

- A. Provide exothermic weld type, or Burndy Hyground, ground connections for concealed, underground, and concrete encased ground connections, for ground connections to structural steel, connections between sections of the main ground bus and all connections to the substation room ground bus bars.
- B. Exposed ground connections (except connections to structural steel and substation room ground bus bars) may be made with copper or bronze compression ground fittings or bolted compression ring lugs.

- C. Provide exothermic weld type, or Burndy Hyground ground connections for splices and taps of grounding conductors No. 8 AWG and larger. Exposed splices and taps shall be taped.

**PART 2 - PRODUCTS**

**2.1 GROUND RODS**

- A. Unless shown otherwise, ground rods shall be 3/4" diameter by 10' long, copper clad steel. Ground rods shall be capable of being extended when additional length is required.

**2.2 GROUNDING CONDUCTORS**

- A. Grounding conductors for direct burial underground, for encasement in concrete, and for grounding of unit substations shall be No. 4/0 AWG minimum, bare, stranded copper.
- B. Grounding conductors for general use shall be stranded, copper conductor, sized in accordance with the NEC unless shown otherwise on the drawings, and insulated with green NEC Type THHN insulation rated 90 degrees C, 600 volts.

**2.3 GROUND CONNECTIONS**

- A. Ground connections shall be Burndy Hyground, Cadweld, Thermo-weld or Thomas & Betts Blackburn only.

**PART 3 - EXECUTION**

**3.1 INSTALLATION REQUIREMENTS**

- A. Ground duct banks and manholes in accordance with Specification Section 260543.
- B. Ground the shields of medium voltage primary cables in accordance with Specification Section 261000, and the shields of shielded instrumentation and control cable in accordance with Specification Section 260513.
- C. Provide bare copper grounding conductors from duct banks, manholes, unit substations, primary switches, transformers, switchgear, panelboards, motor control centers and control panels to the building grounding system. Equipment rated above 480 volts or 600 amps shall be grounded by a minimum of two independent grounding conductors.
- D. Bond transformer, UPS system, central battery/inverter system, emergency generator, and separately derived electrical system neutrals to the building grounding system.
- E. Ground motors rated 460 volts and below by motor feeder equipment grounding conductors. Stranded copper grounding conductors connected to building steel shall also bond motors rated over 460 volts.

- F. Provide green insulated equipment grounding conductors in all service, feeder, and branch circuits for connection of load devices to the power source ground. Raceways shall not be used as equipment grounding conductors.
  - 1. Equipment grounding conductors shall not be daisy-chained.
  - 2. Bond equipment-grounding conductors in boxes and enclosures where the grounding conductors are terminated or spliced.
- G. Bond conduits, cable trays, wireways, surface raceways, boxes, and enclosures together, and to the building grounding system. Provide bonding bushings and bonding jumpers to bond conduits where they enter a box or enclosure.
- H. Ground the lightning protection system with separate ground rods. The building grounding system ground rods shall not be used. After completion of both systems, the lightning protection system shall be bonded to the building grounding system.
- I. Protect separately routed grounding conductors subject to damage or physical abuse by Schedule 40 PVC nonmetallic conduits. Grounding conductors shall not be routed in metallic conduits except when routed with phase conductors.

**3.2 FIELD QUALITY CONTROL**

- A. Test the grounding in accordance with Specification Section 260800, and submit a test report.
- B. When the total grounding system fails its test by having a higher resistance to ground than specified in Section 260800, contact the Project Electrical Engineer for corrective action.

**3.3 COMMISSIONING**

- A. Perform commissioning activities in accordance with Related Sections.

**DIVISION 26 ELECTRICAL**  
**SECTION 260533 - ELECTRICAL MATERIALS AND METHODS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 260513 - Medium, Low & Control Voltage Cables
  - 2. Section 260526 - Grounding and Bonding for Electrical

**1.2 SUMMARY**

- A. Provide conduits, cable trays, surface raceways, boxes, fittings, and supports to form a complete, coordinated, and continuously grounded raceway system.

**1.3 CONDUIT REQUIREMENTS**

- A. Conduits indoors in general areas shall be electrical metallic tubing (EMT) with steel set screw fittings.
- B. Conduits indoors in hazardous areas, encased in concrete floor slabs or subjected to water, physical damage or abuse shall be galvanized rigid steel (RS) or intermediate metal conduit (IMC) with cast or malleable iron threaded fittings and bushings.
- C. Conduits indoors for primary power distribution circuits or for fire pump feeders shall be galvanized rigid steel or intermediate metal conduit with cast or malleable iron threaded fittings and bushings. Where the conduits are routed through the building, they shall be encased in 2 inches of concrete.
- D. Conduits outdoors shall be galvanized rigid steel or intermediate metal conduit with cast or malleable iron threaded fittings and bushings.
- E. Conduits encased in concrete underground shall be Type DB PVC with matching fittings.
- F. Conduits direct buried underground shall be Schedule 40 PVC with matching fittings.
- G. Conduits in parking structures, steam tunnels and near or in cooling towers shall be fiberglass-reinforced epoxy or Schedule 80 PVC with matching fittings. Exceptions to this requirement are tunnel segments inside building (i.e., mechanical rooms), or in heated rooms of parking structures. In these cases EMT may be used

- H. Final connections to recessed lighting fixtures and under-counter lights shall be 1/2" minimum flexible metallic conduit, manufactured wiring systems, or Type MC cable.
  - 1. Manufactured wiring systems shall only be used above accessible ceilings.
  - 2. Terminate Type MC cable with steel set screw connectors that have integral insulating bushings. Self-locking, twist-in type fittings are not acceptable.
- I. Final connections to motors, transformers and equipment subject to vibration or removal for maintenance shall be 1/2" minimum liquid tight flexible metallic conduit with steel liquid tight fittings. Transformer connections may be non-liquid tight flexible metallic conduit in electrical rooms only.
- J. Connections to recessed power receptacles, and light switches, in areas with accessible ceilings:
  - 1. In new partitions and walls, the final connections may be made with Type MC cable. Type MC cable, shall:
    - a. Be run to a box immediately above the accessible ceiling. The box size shall not exceed 4-11/16" square.
    - b. Conduit shall be used for the entire run, from this junction box, to the power source, load (lights), etc.
    - c. No more than three circuits may be run through any given junction box.
    - d. Secure the Type MC cables in the wall cavity.
    - e. Type MC cables shall be as short as possible.
  - 2. In existing partitions and walls where the surface is not being otherwise opened up, the final connections to new devices may be made using flexible metallic conduit or Type MC cable.
- K. Connections to other recessed devices, (including communication outlet boxes, junction or pull boxes, etc.) shall be with standard conduit of the type appropriate for the wall construction.

**1.4 CABLE TRAY REQUIREMENTS**

- A. Power cable trays shall be aluminum ladder type of the sizes shown on the drawings.
- B. Telecommunications cable trays shall be aluminum ladder type or zinc plated steel wire mesh type of the sizes shown on the drawings.
- C. Center spline telecommunications cable tray may only be used where shown.
- D. Changes in cable tray direction or elevation shall be made using standard fittings from the same manufacturer as the cable tray.
- E. Barriers shall be installed in cable trays where shown to separate circuits of different voltage levels.

**1.5 SURFACE RACEWAY REQUIREMENTS**

- A. When conduits in finished areas cannot be concealed in walls or above ceilings, surface raceways may be used where shown. Boxes and fittings shall match and be from the same manufacturer as the raceways.

**1.6 J-HOOKS**

- A. Subject to the cable manufacturer's installation requirements, low voltage cables may be installed using J-hooks in rooms above accessible ceilings and in unfinished open ceiling areas. Do not use J-hooks in corridors, in finished open ceiling areas, above inaccessible ceilings or as a substitute for cable trays. Bridle rings shall not be used.

**1.7 BOX REQUIREMENTS**

- A. Provide sheet steel outlet boxes, extensions, and plaster rings for EMT, flexible metal conduit, and Type MC cable.
- B. Provide cast or malleable iron outlet boxes and covers for galvanized rigid steel conduits, intermediate metal conduits, and liquid tight flexible metal conduits.
- C. Boxes shall be sized for all conductors and devices to be contained within. Box extensions shall not be used to correct for undersized boxes. A single extension may be used as follows only if all free conductors extend at least 3 inches outside of the extension opening.
  - 1. On boxes being flush mounted in masonry walls.
  - 2. On existing boxes in walls that are being furred out.
  - 3. On existing boxes for connecting to an existing circuit.
  - 4. On fire alarm, security and clock system boxes where required by the system manufacturer's instructions.
- D. Plaster rings shall not be considered box extensions, but their capacities may be included in box fill calculations.

**1.8 SUPPORT REQUIREMENTS**

- A. Surface mounted equipment shall be secured to steel channels. The channels shall be attached with toggle bolts to hollow tile, block or similar surfaces, and attached with screws or bolts and expansion shields to solid masonry or concrete.

**PART 2 - PRODUCTS**

**2.1 CONDUITS**

- A. Electrical metallic tubing shall be thin wall steel tubing, electro-galvanized or hot dipped galvanized inside and outside. Fittings and bushings shall be galvanized steel set screw type with two screws per connection for sizes over 2".
- B. Galvanized rigid steel conduit and intermediate metal conduit shall be hot dipped galvanized inside and outside, in 10' lengths and threaded on both ends. Fittings and bushings shall be cast or malleable iron, and hot dipped galvanized inside and outside.
- C. PVC conduit and fittings shall be Type DB for encasement in concrete, Schedule 40 for direct burial, concealed and exposed work, and schedule 80 in parking structures. Fittings shall be of the same type and from the same manufacturer as the conduit. PVC conduit shall be UL Labeled for 90 degrees C cables. Cantex, Carlon, or National Pipe & Plastic.

- D. Fiberglass reinforced epoxy conduit shall be standard wall, iron pipe size, sunlight resistant, gray color, with matching push-fit fittings. FRE or Champion.
- E. Flexible metallic conduit shall be galvanized steel or aluminum. Fittings shall be of steel with cadmium or galvanized finish. Fittings shall be machine screw clamp type, single or two-piece. Self-locking, twist-in type fittings are not acceptable.
- F. Liquid tight flexible metallic conduit shall consist of a flexible, galvanized steel core, a continuous copper ground strip and a polyvinyl chloride jacket. Fittings shall be steel liquid tight grounding type from the same manufacturer as the conduit.

**2.2 CABLE TRAYS**

- A. Ladder type cable tray shall be aluminum, of the widths shown, with 4" rail height, 13/16" minimum rung width, and 9" maximum rung spacing. The tray with a 10' span shall be capable of sustaining a working load of 145 pounds per lineal foot with a load deflection of 1.0" when tested in accordance with NEMA VE 1. B-Line, Chalfant, Cope, Globetray, Husky, Legrand Cablofil, MonoSystems, or Thomas & Betts.
- B. Wire mesh cable tray shall be of high strength steel rods meeting the mechanical properties of ASTM A510, of the widths shown, and with a 4" load depth minimum. Cable tray shall be constructed of wires configured in a 2" x 4" grid pattern with wires welded at intersection points. The ends of the wire grid shall be bent up to form the sides of the tray. Cut ends at the top and end rails shall be free of sharp edges to prevent damage to the cables and injury to installers. The tray shall be zinc electro-plated or zinc galvanized after forming and welding. The tray with a 8' span shall be capable of sustaining a working load of 32 pounds minimum per lineal foot with a load deflection of 1.2" when tested in accordance with NEMA VE 1. B-Line, Chalfant, Legrand Cablofil, or MonoSystems only.
- C. Center spline cable tray shall be aluminum, of the width shown, with top mounted rungs, 3" load depth, 13/16" minimum rung width, and 9" maximum rung spacing. The tray with a 10' span shall be capable of sustaining a working load of 145 pounds per lineal foot with a load deflection of 1.0" when tested in accordance with NEMA VE1. B-Line, Legrand Cablofil, MonoSystems, or Thomas & Betts only.
- D. Tray fittings including horizontal and vertical bends, tees, crosses, reducers, splice plates, expansion joints and cable roll-outs shall be from the same manufacturer and of the same product line as the tray. Ladder and center spline tray bends, tees, crosses and reducers shall have a 13/16" minimum rung width, a 9" maximum rung spacing, and a 12" minimum bend radius.
- E. Tray fasteners shall be galvanized or zinc plated steel.

**2.3 SURFACE RACEWAYS**

- A. Where surface raceways are called for on the drawings, or when conduits in finished areas cannot be concealed in walls or above ceilings, provide surface raceways. Raceway boxes and fittings shall match and be from the same manufacturer as the surface raceway.
- B. Surface raceways shall consist of a base and cover, shall be sized for the number of conductors contained within, and shall be complete with all boxes, connectors, fittings, bushings, dividers and mounting hardware. For internal or external elbows, corners, or tees, provide raceway with 1-1/4" full-capacity bend radius.
- C. Surface raceways shall be 600 volt rated and in compliance with the applicable paragraphs of NEC Article 352.
- D. Surface raceways shall be non-flammable and UL labeled under UL 5 or UL 5A (as applicable).
- E. The completed surface raceway system shall be vandal resistant.
- F. Surface raceways shall accept receptacles, cover plates, telephone/data jacks and other standard wiring devices as specified elsewhere or shown on the drawings.
- G. Cover plates used for wiring devices and telephone/data jacks shall be of the overlapping type and shall therefore cover the cut ends of the raceway cover.

***SELECT THE REQUIRED COLOR AND DELETE THE OTHER COLORS. MATCH EXISTING COLOR WHEN ADDING TO EXISTING DEVICES.***

- H. Surface raceways shall be white (ivory, brown, gray) in color, have a scuff resistant finish, and be paintable. All components exposed to view shall be of the same color and shade.
- I. Barriers shall be provided when necessary to separate conductors of different voltages or services.

***SELECT THE REQUIRED MATERIAL AND DELETE UNNEEDED REQUIREMENTS.***

- J. Surface raceways shall be steel (plastic) as noted below:
  - 1. Metallic
    - a. Metallic raceways shall be of .040" thick (minimum) zinc plated or galvanized steel.
    - b. The acceptable levels of quality are as provided by:
      - 1) Wiremold 500 Series and 700 Series for smaller single channel raceway applications,
      - 2) Wiremold 3000 Series for larger single channel raceway applications, and
      - 3) Wiremold 4000 Series for larger multi-channel raceway applications.
    - c. Manufacturers include Hubbell, MonoSystems, Thomas and Betts, or Wiremold.
  - 2. Plastic
    - a. Plastic raceways shall be of a material meeting all of the requirements of UL 5A, (including flammability, resistivity, structural strength, etc.).
    - b. The acceptable levels of quality are as provided by:

- 1) Panduit Series LDS5 and LDS7, Carlon Series 30 or Wiremold Series PN05 or PN10 for raceway applications when surface raceway replaces conduit in finished areas.
  - 2) Panduit LD Series, Carlon Series 30 or Wiremold Series PN05 for smaller single channel raceway applications.
  - 3) Panduit Type T-70, Carlon Premiere or Wiremold Type 40N2 for larger single or multi-channel raceway applications.
  - 4) Panduit Twin 70, Carlon Prestige or Wiremold Type 60N2 for larger multi-channel raceway applications.
- c. Manufacturers include Carlon, Hubbell, MonoSystems, Panduit or Wiremold.

#### 2.4 J-HOOKS

- A. J-hooks shall be zinc electro-plated steel or plastic, UL Listed for use in plenum spaces, with a minimum of a 3/4 inch wide cable support area, and rated for use with Categories 5e and 6 UTP, fire alarm, security, temperature controls and similar low voltage cables. J-hooks shall include a retaining means for closing the hook so the cables do not fall out.

#### 2.5 BOXES

- A. Boxes for fixtures, outlets, switches, equipment connections and wire pulling shall be
1. Cast or formed from carbon steel sheets of commercial grade steel not less than 14-gauge,
  2. One-piece construction, zinc, or cadmium plated,
  3. Tapped for mounting plates and covers as required.
- B. Pull and junction boxes shall be
1. Fabricated from galvanized or painted code gauge cold rolled carbon steel sheets.
  2. Welded construction with flat removable covers fastened to the box with machine screws.
  3. Seams and joints shall be closed and reinforced with flanges formed of the same material from which the box is constructed or by continuous welding which will provide equivalent strength to flange construction.
  4. Preferably not provided with 'knockouts'.
- C. Box covers shall be fastened in place by machine screws or hinges and latches. Self-tapping or sheet metal fasteners are not acceptable.

#### 2.6 SUPPORTS

- A. Hangers and brackets shall be made of steel pipe, channel iron, angle iron or prefabricated steel channel. Prefabricated steel channel shall be by B-Line, Hilti, Powerstrut, or Unistrut.
- B. Anchors shall be lead shield anchors or plastic expansion anchors for small loads, and expansion or epoxy anchors for large loads. Powder-driven anchors shall not be used.

## 2.7 NAMEPLATES, LABELS AND DIRECTORIES

- A. Equipment nameplates shall be engraved .125 inch (1/8") thick laminated plastic, white, with black letters. The engraved letters shall be at least one quarter inch (1/4") high.
- B. Arc flash hazard warning labels shall be 3" by 5" minimum, white with a yellow, orange or red stripe header and black font, of ultraviolet and weather-resistant nylon, and adhesive backed.
- C. Receptacle and light switch plates shall be labeled using clear adhesive backed nylon or Mylar tape with black text permanently laminated to the tape.
- D. Panel directories shall be typed on supplied card stock with panel, or card stock similar in thickness and material as those supplied with the panels. Install supplied clear plastic cover, or one of like material.

## PART 3 - EXECUTION

### 3.1 CONDUITS

- A. Size conduits in accordance with the NEC, but not less than the sizes shown on the drawings. Minimum power and control conduit size shall be 1/2". Minimum telecommunications conduit size shall be 1".
- B. Install concealed and exposed conduits and cable trays parallel to or at right angles to building lines. Conduits shall not be embedded in concrete slabs except where specifically shown. Install surface raceways as close to room corners or trim features as possible to make the surface raceways less obvious. Where conduits are routed over beams and under corrugated decking, conduits shall be offset 3" below the decking to avoid damage from future decking penetrations.
- C. Make directional changes in primary power distribution conduits above ground with sweeps and long radius elbows, and underground with 20' minimum radius bends.
- D. Conceal conduits wherever possible and practical. When conduits cannot be concealed in finished areas, use surface raceways with matching boxes from the same manufacturer as the raceways.
- E. Metal conduits, fittings, enclosures and raceways shall be mechanically joined together in a firm assembly to form a continuous electrical conductor providing effective electrical grounding continuity.
- F. Provide expansion fittings between adjacent buildings, at building expansion joints and in straight runs at the intervals specified in the manufacturer's instructions.
- G. Conduits entering panels located outdoors, in parking structures, in steam tunnels and on cooling towers shall enter from the sides, back, or bottom. Conduits shall not enter from the top.
- H. Separate raceways from un-insulated steam pipes, hot water pipes, and other hot surfaces by a minimum of 4" horizontally or 12" vertically. Separate raceways from ventilation ducts and insulated pipes so that they do not come into contact with each other.

- I. Low voltage signal circuits shall be separated or shielded from power circuits to prevent the induction of noise into the signal circuits.
- J. EMT entering sheet metal enclosures and outlet boxes shall be secured in place by a connector with a locknut. Rigid conduit shall be secured with locknut inside and outside and a bushing. Sufficient thread on the connector or conduit shall extend into the enclosure so that the bushing will butt tight into the connector or conduit. Bushings shall not be used as jamb nuts or in lieu of locknuts.
- K. Flexible metallic conduit to motors and similar equipment shall not exceed 3'-0" in length, and shall have adequate slack to absorb the maximum vibration. Flexible conduit connections to lighting fixtures shall not exceed 6'-0" in length.

### **3.2 CABLE TRAYS**

- A. Install cable trays in accordance with NEMA VE 2. Install trays parallel to or at right angles to building lines. Provide a minimum of 12" working space above and 12" working space along one side for cable installation.
- B. Support cable trays with trapeze hangers spaced 10' maximum on center for ladder trays and 8' on center maximum for wire mesh trays. Center hung supports are not allowed
- C. After cable installation, firestop cable tray penetrations in fire rated walls with intumescent fire protective bags, bricks or sealant in accordance with the appropriate UL approved system.

### **3.3 SURFACE RACEWAYS**

- A. Install surface raceways parallel or perpendicular to building lines.
- B. Locate surface raceways as close to room corners or vertical breaks in mid wall as is possible.
- C. Provide vertical surface raceways to feed cables from junction boxes above the ceiling to horizontal surface raceways. Exposed vertical conduits are not acceptable.

### **3.4 J-HOOKS**

- A. Install cables in J-hooks as follows.
  - 1. Install cables parallel or perpendicular to building lines.
  - 2. Space J-hooks in accordance with the cable manufacturers' instructions, but not more than 5 feet apart and not more than 3 feet from both sides of a change in direction.
  - 3. Maintain a minimum separation of 2" from lighting ballasts, transformers, motors, power circuits and similar equipment.
  - 4. Anchor J-hooks to walls or suspend J-hooks using 1/4-inch minimum diameter threaded rod hangers. Do not support J-hooks from ceiling or equipment hangers. J-hooks shall not impede removal of accessible ceiling tiles.
  - 5. Load J-hooks to no more than the maximum fill stated in the J-hook manufacturer's instructions.

6. Cables shall not sag more than 12 inches between J-hooks and shall not impede access to equipment requiring maintenance.
  7. Cables in open areas shall be a minimum of 10 feet A.F.F. and a maximum of 16 feet A.F.F.
  8. Cables above accessible ceilings shall not touch the ceiling grid or tiles.
  9. Cables shall be protected from physical damage.
  10. Cables shall be completely accessible for replacement. Cables hidden above ductwork or other obstructions, and cables so high they cannot be reached safely while standing on a ladder shall be replaced with cables in new J-hooks located in a more accessible location.
- B. Provide conduit sleeves for cables penetrating walls. If cables in J-hooks penetrate a corridor wall from a room, and the distance from the corridor wall to the corridor cable tray is more than 18 inches, provide conduit stubs through the wall to the cable tray.
  - C. Contain cables inside J-hooks in accordance with the J-hook manufacturer's instructions so cables do not fall out, but so existing cables can be pulled out and new cables can be pulled in. Cables shall not be strapped to the J-hooks. Bond the conduit stubs to the cable tray.
  - D. Provide separate J-hooks for each cable system. Cables from one system shall not use the J-hooks of another system.
  - E. Color code J-hooks to indicate the system of the cables they contain:
    1. Telecommunications - silver or gray
    2. Fire alarm - red.
    3. Temperature controls - blue.
    4. Laboratory controls - white.
    5. Security & card access control - orange.
    6. Audio/visual - yellow.

### 3.5 MOUNTING HEIGHTS

- A. Except where shown otherwise, install equipment and devices at the following heights:
  1. Receptacles (Wall Mount): 18" A.F.F. to center
  2. Receptacles (Above Counter): 44" A.F.F. to center
  3. Receptacles (Unfinished Area): 44" A.F.F. to center
  4. Surface Raceway Receptacle Strips: 42" A.F.F. to bottom
  5. Light Switches: 44" A.F.F. to center
  6. Telephone Outlets (Wall Phone): 44" A.F.F. to center
  7. Telephone/Data Outlets: 18" A.F.F. to center
  8. Clocks: 88" A.F.F. to bottom
  9. Exit Signs: 88" A.F.F. to bottom
  10. Emergency Light Wall Packs: 88" A.F.F. to bottom
  11. Fire Alarm Pull Stations: 44" A.F.F. to center
  12. Fire Alarm Horn/Strobes and Speaker/Strobes: Entire strobe lens at a uniform height between 80" A.F.F. and 96" A.F.F.
  13. Card Readers (Wall Mount): 42" A.F.F. to center
  14. Card Readers (Pedestal Mount): 36" A.F.F. to center
  15. Door Actuator Pushbutton (Wall and Pedestal Mount): 36" A.F.F. to center

16. Card Reader and Door Actuator Pushbutton (Stacked Vertically):  
Card Reader 42" A.F.F. to center and Pushbutton 36" A.F.F. to center
17. Security System Controls: 44" A.F.F. to center
18. Thermostats/HVAC Controls: 44" A.F.F. to center
19. Electrical Panels: 72" A.F.F. to top
20. Safety Switches/Motor Starters/Variable Frequency Drives: 72" A.F.F. to top (except top of handle shall not exceed 78" A.F.F.)
21. Motor Control Pushbuttons: 60" A.F.F. to center

### **3.6 SUPPORTS**

- A. Provide 4" thick concrete housekeeping pads for floor-mounted equipment.
- B. Support all electrical items independently of supports provided by the other trades.
- C. Support conduits and boxes using steel conduit straps or 1/4-inch minimum diameter threaded rod hangers. Suspended ceiling hangers or hanger wire shall not be used.
- D. Support cable trays with support brackets or 3/8" diameter minimum threaded rod hangers at intervals not exceeding 10'-0" for ladder cable trays and 8'-0" for wire mesh cable trays. Additional supports shall be provided at tray fittings.
- E. Hangers shall be of sufficient strength that their deflection at mid span does not exceed 1/240 of the hanger span length after the cables are installed.
- F. Route flexible metallic conduit, manufactured wiring systems and Type MC cable parallel to or perpendicular to building lines, and in a neat and workmanlike manner. Coil the excess and support independently of the ceiling grid system.

### **3.7 PENETRATIONS, SLEEVES AND FIRE SEALS**

- A. Cut floor and wall penetrations neatly and to the minimum size required for installation of the equipment and raceways.
- B. Provide galvanized steel pipe sleeves for all conduits penetrating floors, exterior walls and roofs.
  1. Extend floor sleeves above the floor a minimum of 2 inches.
  2. Embed sleeves in new concrete or step-core concrete and grout sleeves into existing concrete with epoxy grout.
  3. Seal floor sleeves using fire-sealing systems approved by a Nationally Recognized Testing Laboratory.
  4. Seal exterior wall and roof penetrations water tight.
- C. Patch both sides of wall penetrations cut for electrical equipment and raceways to seal against the passage of air, sound and fire.
  1. Seal cable tray penetrations in fire rated walls using fire sealant bags approved by a Nationally Recognized Testing Laboratory.
  2. Seal conduit penetrations in fire rated walls using fire-sealing caulk approved by a Nationally Recognized Testing Laboratory.

3. Seal conduit penetrations in non-rated walls using masonry materials that match the wall construction.
4. Fire seal between recessed outlet boxes located on opposite sides of a fire rated wall if the box openings are over 16 square inches and the boxes are less than 24 inches apart.

### **3.8 EXPANSION FITTINGS**

- A. Provide expansion fittings at all building expansion joints. Expansion fittings shall be bonded to the raceway on both sides.
- B. Provide expansion fittings, in accordance with manufacture recommendations, in all areas subject to swings in temperature of more than 15 degrees C.
- C. Install expansion fittings in all locations were expected expansion difference is 1/4", or more, between boxes.

### **3.9 IDENTIFICATION**

- A. Provide nameplates and labels in accordance with Article 2.7.
  1. Laminated plastic labels shall be mechanically secured in place with sheet metal screws and/or bolts and nuts.
  2. Labels shall be neatly centered. Place labels in like positions on similar equipment.
- B. Color code wiring in accordance with Section 260513.
- C. Color code junction boxes and box covers of emergency and fire alarm circuits with red paint. Color code junction boxes and box covers of temperature control circuits with blue paint.
- D. Mark junction box covers in indelible ink with the panel and breaker numbers of the circuits contained within.
- E. Provide generic "Warning - Arc Flash Hazard" labels on equipment with an arc flash incident energy level exceeding 1.2 calories/square centimeter and likely to require examination, adjustment, servicing or maintenance while energized. This includes but is not limited to automatic transfer switches, switchboards, panelboards, transformers, storage batteries, battery chargers, inverters, control panels, variable speed drives, motor controllers, circuit breakers and disconnect switches. Provide labels for the line and load sides of fused disconnect switches and circuit breakers 800 amps and above, and for the primary and secondary sides of transformers.
  1. Contractor-provided labels are not required on primary switchgear or unit substations. U-M Plant Operations will provide device-specific labels on this equipment.
  2. Contractor-provided labels are not required on equipment that is factory labeled by the manufacturer.
  3. Center the labels horizontally and vertically on the outsides of panel doors, covers, etc. to ensure they are visible to maintenance personnel before the equipment is opened up.

### **3.10 FIELD QUALITY CONTROL**

- A. Perform visual inspections to verify the following:

1. The equipment is properly installed and anchored.
2. The equipment is free from damage and defects.
3. Electrical terminations have been properly tightened.
4. The equipment has been thoroughly cleaned inside and outside.
5. The equipment is properly labeled and labels are correct.

**SPECIFICATION DIVISION 26**

NUMBER            SECTION DESCRIPTION

**DIVISION 26 ELECTRICAL**

SECTION 260543 - UNDERGROUND SERVICES FOR ELECTRICAL SYSTEMS

**END OF CONTENTS TABLE**

**DIVISION 26 ELECTRICAL**

**SECTION 260543 - UNDERGROUND SERVICES FOR ELECTRICAL SYSTEMS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.
- B. Related Sections:
  - 1. Section 260513 - Medium, Low & Control Voltage Cables
  - 2. Section 260526 - Grounding and Bonding for Electrical
  - 3. Section 260533 - Electrical Materials and Methods

**1.2 SUMMARY**

- A. Provide concrete encased duct banks with manholes and pullholes for medium voltage primary cables and telecommunications/data cables. Provide direct buried ducts and handholes for secondary power cables and site lighting cables.

**1.3 DUCT BANK REQUIREMENTS**

- A. Ducts for concrete encased duct banks shall be Type DB PVC conduits with matching fittings except where galvanized rigid steel conduits and fittings are shown.
- B. Ducts for direct burial underground shall be Schedule 40 PVC with matching fittings.

**1.4 MANHOLE REQUIREMENTS**

- A. Manholes shall be precast or cast in place reinforced concrete. Primary manholes shall have inside dimensions of 10' wide by 10' long by 7' high. Communications manholes shall have inside dimensions of 6' wide by 12' long by 7' high.
- B. Manholes shall include a cast iron frame with cover, a hot dipped galvanized steel ladder, hot dipped galvanized pulling eyes embedded in the concrete walls opposite each duct entrance and in the floor beneath the cover, and a sealed indentation for use of a portable pump, offset to one side to clear pulling iron.
- C. Primary manholes shall contain a minimum of 2 vertical stanchions on each wall. The stanchions shall be Underground Devices CR-36.
- D. Primary manholes shall contain cable racks for routing cables between the duct openings. The racks shall be Underground Devices with 20" arms.

- E. Telecommunications manholes shall include: 14-"47 Hole" racks, 7 on each long wall, 16-"B" brackets, 4 in each corner, and 24-"S" brackets in side walls.

**PART 2 - PRODUCTS**

**2.1 DUCTS**

- A. PVC conduit and fittings for encasement in concrete shall be Type DB, UL Labeled for 90 degrees C cables. Carlon or Cantex.
- B. PVC conduit and fittings for direct burial, concealed and exposed use shall be Schedule 40, UL Labeled for 90°C cables. Carlon or Cantex.
- C. Galvanized rigid steel conduit shall be hot dipped galvanized inside and outside, in 10' lengths threaded on both ends. Allied, Republic Steel, Triangle PWC, Wheatland or Western Tube.
- D. Steel Casing pipe shall be non-spiral pipe and have a minimum yield strength of 35,000 psi. All joints shall be made leak-proof using full penetration, continuous welds. Welds shall be ground smooth outside and inside (except 22" diameter and less) to prevent conflict with the soil or pipe placement. Steel pipe shall meet the requirements of ASTM A53, Type E or S, Grade B.
  - 1. The following information shall be clearly marked on each length of pipe:
    - a. The pipe designation and class (e.g., A53, Type S, Grade B).
    - b. The name or trademark of the manufacturer.
    - c. Identification of the manufacturing plant.
    - d.
  - 2. All pipe furnished shall be subject to inspection on arrival at the job site. The purpose of the inspection shall be to cull and reject pipe that, independent of physical tests specified under the standard specifications designated herein, fails to conform to the requirements of these specifications.
  - 3.
  - 4. 3. Rejected pipe shall be plainly marked by the Inspector and immediately removed from the site of the work by the Contractor, without cost to The University of Michigan.

**2.2 MARKER STRIP**

- A. Marker strip shall be red plastic, 6" wide, and labeled to indicate type of service. Brady or Seaton.

**PART 3 - EXECUTION**

**3.1 DUCT BANK INSTALLATION REQUIREMENTS**

- A. Concrete encased and direct buried ducts (except site lighting ducts) shall be 4" minimum.

- B. Duct banks shall be supported on undisturbed soil or on piers extending down to undisturbed soil.
- C. Changes in duct bank direction shall be made with 10' minimum radius bends for telecommunications, and 20' minimum radius bends for power. Manufactured sweeps are preferred.
- D. Duct banks shall be sloped downward toward manholes and away from buildings a minimum of 6" per 100'. Duct banks shall not contain traps where water may accumulate.
- E. End bells shall be installed on primary duct ends where the ducts enter the manholes and buildings. End bells shall be firmly embedded in and flush with the inside surface of the wall.
- F. Pull a solid mandrel and a stiff bristled brush through each duct to clean them and insure the absence of kinks and flat spots. A minimum 3-1/4" diameter by 5" minimum long mandrel shall be used for 4" conduit and a minimum 4" diameter by 6" minimum long mandrel shall be used for 5" diameter conduit. The mandrel pull shall be witnessed by the Owner's Representative.
- G. Direct buried a 3" thick minimum concrete cover shall protect ducts over the entire length and width of the duct bank.
- H. Duct banks shall be marked with a 6" wide red plastic marker strip placed in the backfill approximately 12" above the entire length of the duct bank.
- I. All ducts installed by this project shall contain measuring-type pull tape, Greenlee No. 435 or similar. The tape shall be waterproof polyester or nylon, printed with length measurements every foot to indicate the length of the duct, and have a minimum breaking strength of 130 lbs. A minimum of 60" of excess is required at both ends.

### **3.2 MANHOLE INSTALLATION REQUIREMENTS**

- A. Manholes shall be accessible by trucks, cable reel trailers and other cable pulling equipment.
- B. Underground ducts shall be permanently identified in the manholes and at both ends with numbered tags. Tagging requirements shall be obtained from the Owner's Electric Shop through the Owner's Representative.

### **3.3 GROUNDING**

- A. Primary duct banks shall be grounded with a No. 4/0 AWG bare stranded copper ground wire that is run within the duct bank and is bonded and grounded at both ends. Conduit shall not be used as the ground conductor.

- B. Primary manholes shall be grounded with four ¾" diameter by 10' long ground rods, one driven inside or outside of the manhole at each corner. Connect the ground rods with a No. 4/0 AWG bare, stranded copper ground wire loop. A No. 2 AWG bare stranded copper pigtail from the ground wire loop shall be used to bond together and ground the manhole cover frame, ladder support bracket, concrete inserts, metallic cable racks, duct bank ground conductors, and the shields of any primary cables that are spliced in the manhole.

**3.4 FIELD QUALITY CONTROL**

- A. The University shall assign an agent to coordinate Quality Control associated with activities as outlined throughout Part 3, "Execution".
- B. Contractor shall assist with establishing the order, timing, and duration of the activities requiring Quality Control for inclusion in the Project Schedule.
- C. The electrical equipment and construction to be observed by the Quality Control Agent include the following:
  - 1. Manholes
  - 2. Spacers
  - 3. Grounding
  - 4. Bell Ends
  - 5. Concrete Pours
- D. Provide the Quality Control Agent with reports, lists, forms, plans and drawings described throughout Part 3, "Execution".
- E. During the Shop Drawing Submittal Process, submit one set of the Shop Drawings to the Quality Control Agent for Review. Return to the Quality Control Agent one set of the A/E reviewed and stamped Shop Drawings.
- F. Correct the incomplete and non-conforming items that are identified by the Quality Control Agent.

NUMBER            SECTION DESCRIPTION

**DIVISION 26 ELECTRICAL**

SECTION 260800 - ELECTRICAL ACCEPTANCE TESTS

**END OF CONTENTS TABLE**

**DIVISION 26 ELECTRICAL**  
**SECTION 260800 - ELECTRICAL ACCEPTANCE TESTS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

*IN 1 BELOW, SELECT PROPER COMMISSIONING SPEC SECTION NUMBER  
APPLICABLE TO THE PROJECT.*

- B. Related Sections:
1. Section 019100/019110 - Commissioning
  2. Section 017823 - Operation and Maintenance Manual

**1.2 TESTS**

- A. Perform the visual inspections, manual operations and tests on systems and equipment as described in Part 3, "Execution".
- B. Tests shall be performed and documented by an independent testing agency.

**1.3 TEST REPORTS**

- A. Provide written test reports, signed and dated, for all tests prior to acceptance of the tested equipment by the Owner. Test reports on Megger, dielectric absorption and high potential tests shall include the ambient temperature and relative humidity existing at the time of the tests.

**PART 2 - PRODUCTS (NOT APPLICABLE)**

**PART 3 - EXECUTION**

**3.1 VISUAL INSPECTIONS**

- A. Prior to any testing, perform visual inspections to verify the following:
1. The equipment is properly installed and anchored.
  2. The equipment is free from damage and defects.
  3. Shipping blocks and restraints have been removed.
  4. Electrical terminations have been properly tightened.
  5. The equipment has been properly aligned.
  6. The equipment has been properly lubricated.

7. The ventilation louvers are open and unobstructed.
8. The equipment has been thoroughly cleaned inside and outside.
9. The equipment is properly labeled and labels are correct.
10. The equipment is ready to be tested.

### **3.2 MANUAL OPERATION**

- A. Prior to any testing, mechanical devices shall be exercised or rotated manually to verify that they operate properly and freely.

### **3.3 PRIMARY CABLE TESTS**

- A. Perform a continuity test, 2,500-volt DC Megger test, a DC high potential test, and a second 2,500-volt DC Megger test on primary cables. The high potential test shall be performed at 45kV for new cable and at 30kV when new cable has been spliced to existing cable.

### **3.4 POWER CABLE TESTS**

- A. Perform a continuity check and a 1,000 volt DC Megger test on 600 volt power cables No. 4 AWG and larger.
  1. The Megger test shall be performed between each pair of conductors and from each conductor to ground.
  2. The Megger test shall be performed for 15 seconds or until the insulation resistance value stabilizes.
  3. The insulation resistance between conductors and from each conductor to ground shall be 100 megohms minimum in one minute or less. In addition, the lowest insulation resistance value shall not differ from the highest resistance value by more than 20 percent. But if the lowest value is above 1,000 megohms, the 20% balance requirement may be waived.

### **3.5 CONTROL CABLE TESTS**

- A. Perform a continuity check on control and instrumentation wiring.

### **3.6 ENGINE-GENERATOR SYSTEM TESTS**

- A. Perform a continuity check and 1,000 volt DC Megger test on the generator windings, generator circuit breaker, power circuit portions of the automatic transfer switch, and interconnecting power circuit wiring.
- B. Perform a continuity check on the control wiring.
- C. Calibrate the metering and time delay relays.
- D. Perform the normal start-up testing recommended by the engine-generator manufacturer.
- E. Perform a load bank test of overall system with a load bank rated at 100% preferred for a period of at least 120 minutes.

1. Open normal power to transfer switch and observe proper operation of engine-generator and automatic transfer switch (throwing over to emergency power), noting engine-generator start, time delays and other appropriate variables.
  2. Close normal power and observe proper transfer back to normal and proper shutdown of engine-generator, again noting time delays and other appropriate variables.
  3. Operate maintenance bypass switch to insure proper labeling and operation in all modes
- F. Test operation of all generator control and alarm connections to the Automatic Transfer Switches, remote annunciator(s), the Fire Command Center, the fire alarm system, the BAS system, and accessories under all conditions.

### **3.7 PRIMARY SWITCH TESTS**

- A. Perform a continuity check, 2,500-volt DC Megger test, and a DC high potential test on primary switches. DC high potential tests shall be performed at 37kV on new and existing primary switches.

### **3.8 SUBSTATION TRANSFORMER TESTS**

- A. Perform a DC Megger test and a turns-ratio test on unit substation transformers. The DC Megger test shall be performed at 2,500 volts on coils rated over 600 volts, and at 1,000 volts on coils rated 600 volts and below. The turns-ratio test shall be performed on each tap.
- B. Verify proper setting and operation of the fan control panel to insure it and the fans are operable and functional. Temperature-test the probes in each winding.

### **3.9 SECONDARY SWITCHGEAR TESTS**

- A. Perform a continuity check and 1,000 volt DC Megger test on buses, and on main and feeder breakers.
- B. Perform a primary current injection test and a 'Ducter' (contact resistance) test on main breakers.
- C. Perform a 1,000-volt DC Megger test and a turns-ratio test on CT's and PT's.
- D. Calibrate the metering.

### **3.10 SERVICE, DISTRIBUTION AND MOTOR CONTROL EQUIPMENT TESTS**

- A. Verify proper phasing of power circuits.
- B. Perform a 1,000-volt Megger test on buses, motor starters and disconnect switches. This test may be combined with the power cable Megger test by testing the equipment and terminated cables together.
- C. Perform a continuity check on control circuits and control panel internal wiring.
- D. Perform an operational test on the controls and alarms.

- E. Perform a continuity check and a 1,000-volt DC Megger test on 3 phase distribution and isolation transformers.

**3.11 MOTOR TESTS**

- A. Perform a 1,000-volt Megger test on 460 volt, 3 phase motors, and a 500 volt Megger test on 200 volt, 3 phase motors.
- B. "Bump" motors to verify proper direction of rotation.
- C. Run motors and check for vibration.

**3.12 GROUNDING TESTS**

- A. Measure the resistance to ground of each ground rod before connection to the other ground rods. The resistance shall not exceed 10 ohms.
- B. Measure the resistance to ground of the total ground system with all connections completed. The resistance shall not exceed 2 ohms for primary services or 5 ohms for secondary services.
- C. Tests of the resistance to ground shall be made using either the three point method or the fall-of-potential method.
- D. Perform a continuity check from equipment ground bus bars and ground lugs to the ground system.

**3.13 FIRE ALARM SYSTEMS**

- A. Perform testing in accordance with NFPA 72.

**3.14 HEAT TRACING CABLES AND MATS**

- A. Perform a continuity check, 500-volt DC Megger test and an operational test on heat tracing circuits prior to insulation of the pipe or tank. Verify proper current draw and heating of the heat tracing.
- B. Perform an operational test on the alarms as applicable.

**3.15 COMMISSIONING**

- A. Perform Commissioning activities per Related Sections above.

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

*IN 1 AND 2 BELOW, DELETE SUSTAINABLE DESIGN IF NOT APPLICABLE TO THE PROJECT. SELECT PROPER COMMISSIONING SPEC SECTION NUMBER APPLICABLE TO THE PROJECT.*

- B. Related Sections:

1. Section 018113 - Sustainable Design Requirements
2. Section 019100/019110 - Commissioning
3. Section 017823 - Operation and Maintenance Manual
4. Section 260513 - Medium, Low & Control Voltage Cables
5. Section 260526 - Grounding and Bonding for Electrical
6. Section 260533 - Electrical Materials and Methods
7. Section 260800 - Electrical Acceptance Tests

**1.2 PHASING**

- A. The Owner's primary system phase rotation is A-B-C.
- B. Phase new installations X-Y-Z (or A-B-C) from top to bottom, front to back and left to right when viewed from the front. Phase existing installations to match the existing.

**1.3 SPLICES AND TERMINATIONS**

- A. The Owner's Electric Shop primary crew shall install medium voltage primary cable splices. Coordinate installation through the Owner's Representative. Splices shall be made with Raychem Type HVS heat shrink splice kits only. Connectors for straight splicing shall be of the two way, solderless, compression type.
- B. Medium voltage primary cable terminations shall be made with Raychem Type HVT heat shrink termination kits or 3M Company Quick Term cold shrink termination kits. Lugs for terminations shall be of the two-hole, solderless, compression type.

**PART 2 - PRODUCTS (NOT APPLICABLE)**

**PART 3 - EXECUTION**

**3.1 INSTALLATION REQUIREMENTS**

- A. Pull primary cables in lengths not exceeding 500 feet. Avoid exceeding manufacturer's recommendations on pulling tension, sidewall pressures and cable bend radii. Train cables passing through manholes neatly in the same relative positions as in the duct bank, without crossing each other, and support them by porcelain insulators from the manhole cable racks.
- B. Ground the shields of primary cables at both ends. When primary cables are spliced in manholes, bond the cable shields at the splices to the manhole ground system.
- C. Identify the cable phases at all primary cable terminations. Identify phases in 1-1/2" high minimum letters painted on the cable supports or potheads wherever possible. When painting is not possible, identify phases in 1/2" high minimum letters on tags permanently attached to the cables.

**3.2 FIELD QUALITY CONTROL**

- A. Perform testing in accordance with Specification Section 260800, and submit a test report.

**3.3 COMMISSIONING**

- A. Perform Commissioning activities per Related Sections above.

**END OF SECTION 261000**

**SPECIFICATION DIVISION 26**

NUMBER            SECTION DESCRIPTION

**DIVISION 26 ELECTRICAL**

SECTION 261100 - UNIT SUBSTATIONS

**END OF CONTENTS TABLE**

**DIVISION 26 ELECTRICAL**  
**SECTION 261100 - UNIT SUBSTATIONS**

*DELETE AND/OR ADD INFORMATION IN THIS SECTION TO MAKE IT PROJECT SPECIFIC. HIDDEN TEXT DIRECTIONS INDICATE SOME BUT NOT ALL OF THE REQUIRED EDITING. DELETE THE HIDDEN TEXT DIRECTIONS BEFORE PRINTING FOR PUBLICATION.*

*VERIFY THE U-M STANDARD DETAIL SHOWING THE SUBSTATION ONE LINE IS ADDED TO PROJECT DRAWINGS. REVERSE THIS DETAIL END-TO-END WHEN NECESSARY TO MATCH THE ACTUAL FIELD ORIENTATION. EDIT THIS DETAIL TO MATCH THE FEATURES SPECIFIED BELOW.*

*VERIFY ALL RATINGS, DIMENSIONS AND REQUIREMENTS SPECIFIED TO BE AS SHOWN ON THE DRAWINGS ARE CLEARLY SHOWN ON THE DRAWINGS.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

*IN 2 BELOW, SELECT PROPER COMMISSIONING SPEC SECTION NUMBER APPLICABLE TO THE PROJECT. IF SUBSTATION IS BEING PRE-PURCHASED, DELETE ITEMS 2, 3, 4, 5 & 6. RETAIN ITEM 1.*

- B. Related Sections:

1. Section 017823 - Operation and Maintenance Manual
2. Section 019100/019110 - Commissioning
3. Section 260513 - Medium, Low & Control Voltage Cables
4. Section 260526 - Grounding and Bonding for Electrical
5. Section 260533 - Electrical Materials and Methods
6. Section 260800 - Electrical Acceptance Tests

**1.2 SUMMARY**

- A. Provide an indoor, metal enclosed, unit substation assembly, configured as single-ended or double-ended as shown on the drawings, and consisting of primary section(s), transformer section(s), and secondary voltage distribution section(s).
- B. The substation and its major assemblies shall be designed and shipped in sections to accommodate the restricted size and configuration of the delivery route through the building, and the size of the substation room.

**INCLUDE THE FOLLOWING THREE PARAGRAPHS IF THE UNIT SUBSTATION IS PRE-PURCHASED BY THE UNIVERSITY. IF NOT BEING PRE-PURCHASED, DELETE THESE PARAGRAPHS.**

**INSERT DATE AND PROJECT ADDRESS BELOW IF PARAGRAPH IS RETAINED**

- C. Deliver the unit substation, in one coordinated shipment, to the installing Contractor at the project site, on or before the week of \_\_\_\_\_. The project site is at \_\_\_\_\_, Ann Arbor MI 48109-2080.
- D. Coordinate final delivery date, time, and other details with installing Contractor (to be named) at least 3 business days in advance of delivery date. Under Manufacturer's supervision, the installing Contractor will unload, move into position, and install the overall unit substation.

**DELETE PARAGRAPH BELOW IF BREAKDOWN IS NOT REQUIRED ON A PARTICULAR PROJECT**

- E. Provide supervision for the "breakdown" and "re-assembly" of the transformer section as needed to allow installation into the building.
- F. Before energization, provide a final inspection, testing, and written certification from the equipment supplier.
- G. Assist with substation start-up and commissioning activities.
- H. Provide a one-year minimum warranty from the date of acceptance by the University.

**INCLUDE PARAGRAPH BELOW FOR THE PURCHASE OF UNIT SUBSTATION WITH SIZE, SHIPPING SPLIT OR OTHER PHYSICAL RESTRICTIONS. INSERT DRAWING NUMBERS AND TITLES FOR THOSE DRAWINGS ACCOMPANYING THE SPEC. OMIT THIS PARAGRAPH IF NO DRAWINGS ARE TO ACCOMPANY THE SPEC.**

- I. The attached drawings are an integral part of these specifications. Carefully note the physical size of the unit, as well as shipping split and other physical restrictions noted on these drawings. Attached drawings include:
  - 1. Drawing \_\_\_\_\_
  - 2. Drawing \_\_\_\_\_
  - 3. Drawing \_\_\_\_\_
  - 4. etc..

**1.3 RELATED SECTIONS**

- A. The drawings and the general provisions of the contract, including the current edition of the University of Michigan Standard General Conditions, apply to this section.
- B. The applicable requirements of the Division 01 and other Division 26 specification sections apply to this section.

**1.4 REFERENCES**

- A. The unit substation shall comply with the following codes and standards as applicable:

1. MV Load Interrupter Switchgear: ANSI C37.20.3 and 20.4, ANSI C37.22, NEMA SG-5, and NEMA SG-6.
  2. Secondary Substation Transformers: 10 CFR Part 431, ANSI C57, IEEE 100, NEMA 201 and 210, and UL 1562.
  3. LV Metal-Enclosed Switchgear Assemblies: ANSI-C37.20, NEMA SG-5, and UL 1558.
  4. Low-Voltage Power Circuit Breakers: ANSI-C37.13, NEMA SG-3.
  5. Circuit Breaker Trip Devices: ANSI-C37.17.
  6. National Electrical Code (NEC): NFPA 70.
- B. Where differences exist between various Codes and Standards, the ANSI and IEEE Standards shall govern.
- C. Each of the three main sections of the substation (primary switch section, transformer section, and secondary distribution section) shall be UL listed and shall bear a UL label.
- D. The secondary distribution section shall be labeled as suitable for use as service equipment unless the One Line Diagram defines the primary loop switches or primary transformer disconnect switch as the service equipment.

#### **1.5 SUBMITTALS**

- A. Submit for approval the following shop drawings and product literature. Shop drawings shall contain title blocks identifying the University's project name and the University's full project number. Submittals shall be marked to indicate the specific models, sizes, types and options being provided. Submittals not so marked will be rejected.
1. Dimensioned substation plan and elevations with dimensions of the installation clearances, working clearances, conduit entry points, and base mounting points. Identify the substation front and the shipping sections.
  2. Size, weight, and movement restrictions for shipping sections. Affirm that shipping sections meet noted building size and movement restrictions.
  3. One line diagram including normal and fault ratings, phase rotations, and major component locations.
  4. Bill of material with Manufacturers' names and model numbers for major components.
  5. Enclosure details including paint color.
  6. Primary switch section submittals including:
    - a. Dimensioned plan and elevations with bus and switch dimensions, switch handle dimensions, and phase and ground bus terminal locations and barriers.
    - b. One line diagram with bus, switch and fuse ratings, and interlock provisions.
    - c. Compartment details including front door and rear panel descriptions, sheet metal gauge, and painting details.
    - d. Terminal locations and details for phase and ground connections.
    - e. Phase-to-phase clearances and phase-to-ground clearances.
    - f. Bus bar details, connection methods, and materials.
    - g. Insulator and barrier details and materials.
    - h. Fuse and fuse holder descriptions.

- i. Fuse time-current characteristic curves.
  - j. Nameplate engraving.
7. Transformer section submittals including:
- a. Dimensioned plan and elevations with tap, control power transformer, temperature monitor, fan and control power connection point locations, and phase, neutral and ground connection locations.
  - b. Enclosure details including removable panel descriptions, louver locations, control wiring routing, sheet metal gauge, and painting details.
  - c. Terminal locations and details for phase, neutral, and ground connections.
  - d. Coil conductor materials and construction.
  - e. Insulation materials.
  - f. Test data sheets for similar transformers with test data on load losses, no-load losses, and sound level.
  - g. Temperature control system description, including details on the control power transformer, fans, temperature monitor, temperature alarms, hinged panel for the monitor, and control power connection points.
  - h. Schematic and connection diagrams for the temperature control system.
  - i. Full size copy of the nameplate.
  - j. Coil-to-bus/line connection materials, supports, and details.
  - k. Bus bar and line termination connection and support details.
8. Secondary voltage distribution section submittals containing:
- a. Dimensioned plan and elevations with circuit breaker, control power transformer, and metering device locations, and phase, neutral, and ground bus terminal locations.
  - b. One line diagram with bus, circuit breaker, trip unit, metering device and fuse quantities and ratings, and interlock provisions.
  - c. Compartment details including front door and rear panel descriptions, sheet metal gauge, painting details, mimic bus details, and breaker lifting device description.
  - d. Terminal locations and details for phase, neutral, and ground connections.
  - e. Phase-to-phase clearances and phase-to-ground clearances.
  - f. Bus bar connection and support details and bus materials.
  - g. Insulator and barrier details and materials.
  - h. Circuit breaker, trip unit, and current sensor descriptions.
  - i. Trip unit time-current characteristic curves.
  - j. Secondary metering description, including details on the current transformers, potential transformers, ammeter, voltmeter, watt-hour meter, and meter switches.
  - k. Schematic and connection diagrams for the secondary metering systems.
  - l. Nameplate engraving.

- B. Prior to acceptance of the substation by the University, submit for approval, copies of installation, operation, and maintenance manuals for the following equipment:
  - 1. Primary switches.
  - 2. Primary fuses.
  - 3. Transformer.
  - 4. Transformer temperature monitor, fans, and alarms.
  - 5. Circuit breakers and breaker lifting device.
  - 6. Circuit breaker trip units.
  - 7. Control power transformer.
  - 8. Electrical metering devices.

**1.6 SHIPPING, HANDLING, AND STORAGE**

- A. Protect the substation from weather and moisture condensation at all times.

*DELETE PARAGRAPH BELOW IF UNIT SUBSTATION IS BEING PRE-PURCHASED BY THE UNIVERSITY.*

- B. Provide temporary electric heaters in the transformer in accordance with Manufacturer's instructions until the substation is energized.

*INCLUDE PARAGRAPHS C-I BELOW IF UNIT SUBSTATION IS BEING PRE-PURCHASED BY THE UNIVERSITY. IF NOT BEING PRE-PURCHASED, DELETE THESE PARAGRAPHS.*

- C. Notify the University and University's installing Contractor (to be named) at least 3 working days in advance of delivery.
- D. Arrange for delivery of the substation at the noted site. The University's installing Contractor will unload, move, and install the unit substation under Manufacturer's direction.

*ENGINEER TO EDIT THE REQUIREMENTS BELOW AS APPLICABLE TO THE PARTICULAR BUILDING AND ROUTING PATH. INSERT THE DIMENSIONS BELOW (LENGTH X WIDTH) FOR THE ACCESS WAY BEING USED.*

- E. The transformer shall be constructed so it can be broken down in the field, if necessary, so it can be lowered through the access hatch, which measures \_\_\_\_\_ x \_\_\_\_\_ clear.
- F. The Manufacturer shall provide field service technicians, who will supervise the breakdown of the transformer, i.e. removing the enclosure and the secondary bus from the transformer assembly.
- G. The same technicians shall supervise the reassembly of the transformer at the final installation site.
- H. Ensure that all necessary extra bracing and tools required are in place, so, if necessary, the primary switches and secondary sections can be transported within the building, with their rear panel located at the bottom of transporting assembly.
- I. MANUFACTURER WARRANTIES OR CERTIFICATIONS SHALL NOT BE VOIDED BY THE DISASSEMBLY AND REASSEMBLY OF THE TRANSFORMER AND SWITCHGEAR SECTIONS.

**1.7 EXTRA MATERIALS**

- A. Deliver to the Owner the following extra materials matching the products installed, packaged with protective covering for storage, and identified with labels clearly describing the contents.

**INSERT THE QUANTITY OF SPARE FUSES NEEDED IN ITEM 1 BELOW; SELECT THREE FOR SINGLE ENDED UNIT OR SIX FOR DOUBLE ENDED UNIT.**

- 1. Spare Fuses: Provide \_\_\_\_\_ for each size of:
  - a. Fused primary switch power fuses.
  - b. Potential circuit fuses.
  - c. Control power fuses.
- 2. Spare Indicating Lights/Lenses: Six of each type installed.
- 3. Spare Kirk Keys: Two for each Kirk Key interlock.
- 4. Touch Up Paint: Three half pint containers or three spray cans of paint matching enclosure exterior finish.
- 5. Contact Lubricant: One container.

**1.8 QUALITY ASSURANCE**

- A. Perform standard industry tests on the substation prior to shipping.
- B. Provide copies of written test reports, signed and dated, for all factory and prototype tests.
- C. Provide a product certification, signed and dated by the substation Manufacturer, certifying that the substation complies with the specifications except as approved by the University in writing.

**1.9 WARRANTY**

- A. Guarantee work (parts and labor) for a period of one year from the date of the Owner's final acceptance of the project, Substantial Completion. A manufacturer's warranty beginning upon equipment receipt or startup shall be extended to one year from final project acceptance. A manufacturer's warranty in excess of one year shall remain in effect for its entire time period.
  - 1. Refer to Specification Section 011400 "Work Restrictions" for the Substantial Completion date.

**PART 2 - PRODUCTS**

**2.1 UNIT SUBSTATION ASSEMBLY**

- A. The following unit assemblers are approved when they use the components specified elsewhere in this specification:
  - 1. Eaton
  - 2. General Electric
  - 3. Square D by Schneider Electric

- B. The listing of specific assemblers does not imply acceptance of their products that do not meet the specified ratings, features, and functions. Manufacturers listed are not relieved from meeting these specifications in their entirety.
- C. The unit substation shall be a front and rear accessible structure suitable for indoor installation, consisting of primary section(s), transformer section(s), and secondary voltage distribution section(s).
  - 1. The sections shall be constructed to allow for straightforward field assembly into a single structure.
  - 2. The sections shall be constructed of steel frames and heavy gauge steel panels sized to maintain required alignments and clearances at all times. The sections shall also be sufficiently rigid to restrict deformation from external forces and weights that may be applied during maintenance activities.
  - 3. The sections shall be capable of withstanding the lifting, skidding, jacking or rolling (in any direction) actions needed to install the equipment. Factory-installed lifting eyes shall be provided on each section.
  - 4. The assembly shall have provisions for anchoring to steel leveling channels embedded in a concrete housekeeping pad.
- D. The substation shall be a front-aligned structure. Any variations in section depth shall be reflected on the rear side of the substation.

**ENGINEER TO VERIFY OVERALL DIMENSIONS FOR THE PROJECT. INSERT THE MAXIMUM ALLOWABLE DIMENSION BELOW.**

- E. The overall length of the assembly (HV switches, transformer section and secondary voltage distribution section) shall not exceed \_\_\_\_\_ feet.
- F. Buses and terminations shall be:
  - 1. Phased X-Y-Z (or A-B-C) from top to bottom, front to back, and left to right when viewed from the front.
  - 2. Bus bars, flexible connectors, jumpers, and terminations shall be copper.
  - 3. Bus bars, flexible connectors, jumpers, and terminations (except transformer winding terminals) shall be silver-plated before final assembly and shall be connected using two bolts minimum at each bus joint and insulator. Bolted connections shall use hex head bolts and split lock washers made of stainless steel or Grade 5 steel with clear zinc finish.
    - a. The NEMA specified minimum current-carrying cross sectional area of the bus shall not be compromised by the holes needed to make bus connections.
    - b. The overlap on bus connections shall be sufficient to ensure at least one bolt diameter distance from edge of bolt hole to edge of bus.
- G. Phase-to-phase and phase-to-ground clearances within the substation shall reflect the specified BIL ratings.

- H. Primary (medium voltage) insulators shall be porcelain or cycloaliphatic epoxy, sized to withstand the noted BIL and fault currents. When sizing the insulators, assume full load conditions and an ambient temperature of up to 40 degrees Celsius. The supports shall provide ANSI minimum creep distances between phases and ground.
- I. Secondary (low voltage) insulators shall be porcelain, cycloaliphatic epoxy, or of high strength, moisture, track, and fire resistant glass polyester. Insulators shall be sized to withstand the noted BIL and fault currents, and rated for the maximum temperatures that would occur under design load and fault current conditions and an ambient temperature of up to 40 degrees Celsius.
- J. Where glass polyester insulators are used, the cut edges shall be sealed to prevent moisture absorption.
- K. Barriers shall be provided to enclose openings where electrical connections pass from one section to another.
- L. Ventilation louvers shall be provided to dissipate the heat generated within each section. The louvers shall be located and guarded to minimize accidental contact with live parts.
- M. The sections shall be painted with Manufacturer's standard gray finish that meets the applicable standards of UL and ANSI.
- N. The unit substation shall include a continuous 1/4" by 2", hard-drawn copper ground bus bar extending the full length across the entire unit substation bottom. In each section, (primary switch, transformer, and secondary distribution), the ground bus bar shall include a Burndy HyGround compression grounding lug suitable for a #4/0 AWG equipment grounding conductor. The ground bus bar shall be drilled and tapped at regular intervals for feeder and branch circuit grounding conductor terminals.
- O. The substation shall include engraved metal or laminated plastic nameplates on the front of each section indicating ratings of equipment and Manufacturer's shop order number for the equipment. The nameplates shall consist of black letters at least 1/4" high on a white background. The nameplates shall be affixed with machine screws.
- P. The substation shall include 1/2-inch wide minimum red acrylic mimic bus affixed with machine screws. Mimic bus shall indicate switches, transformers, circuit breakers, fuses, TVSS units, terminations, fire pump tap, and similar devices.
- Q. All lugs within the substation shall be of the long barrel, two-hole compression type. Mechanical lugs shall not be accepted.

## **2.2 PRIMARY SWITCH SECTION(S)**

- A. Subject to compliance with these specifications, provide products from the following Manufacturers:
  - 1. Eaton
  - 2. Powercon
  - 3. Square D by Schneider Electric

- B. Each primary switch section shall consist of two metal enclosed, non-fused, load break, primary loop switches as shown on the drawings, and a metal enclosed, fused, load-break, transformer disconnect switch.
- C. Ratings
1. Design Voltage: 15 kV, suitable for use on a 13.2 kV grounded system.
  2. Continuous Current and Interrupting Current: 600 amperes rms.
  3. Momentary Short Circuit Current and Fault Closing Current: 61,000 amperes asymmetrical at the system voltage, with system impedance X/R ratio of 15.
  4. Short Time (2 second) Current: 38,000 amperes symmetrical.
  5. Basic Impulse Level: 95 kV.
  6. Fuse Interrupting Capacity: 50,000 amperes symmetrical at the system voltage with a system impedance X/R ratio of 15.
- D. Bus and Compartment Requirements
1. The phase bus bars shall be routed across the top of the compartments to eliminate unnecessary transition sections.
  2. The loop switches shall be arranged for top or bottom entry of the primary cables.
  3. The primary cable terminations shall be located on bus 'run-backs', near the vertical center of the compartments. A minimum of 30" of straight space shall exist above and below the terminations to facilitate installation of stress cones and to prevent bending of the primary cables to less than the minimum cable bend radius.
  4. Provide side to side insulated cable supports above and below the 'run back' bus and connection points to relieve strain on the cable terminations.
  5. Two-hole, long barrel, compression type lug terminals shall be provided in each loop switch to accept single conductor, 350 kcmil, copper, shielded cable with 15 kV, 133 percent EPR insulation.
  6. The fused switch shall be cable-connected to the transformer section. Provide two-hole, long barrel, compression type lugs in the fused switch to accept the transformer primary connections.
  7. The switch compartments shall be NEMA 1 rated.
  8. The switch compartments shall contain hinged front doors for access to the switches and fuses, interlocked with the switch handles, and secured by three point latches. The hinges shall be concealed. The doors shall open a minimum of 90 degrees. The latch handles shall include provisions for padlocking in the closed position.
  9. The switch compartments shall contain hinged rear doors for access to the rear cable termination areas. Rear doors shall be secured to the compartment frames with hex head machine screws.
  10. In the loop switches, provide heavy-duty grounding bails to accommodate portable grounding equipment.

11. In the loop switches, provide full height and width insulating barriers between the incoming cables section of the switch in the rear, and the energized switch and bus components toward the front portion of the switch. The primary cable terminations shall be the only energized components exposed to the rear of the compartments.
12. The bus shall be insulated or totally enclosed by barriers, and shall not be accessible normally from either the front or the rear of the switch.
13. Provide an 8" x 16" minimum high-impact viewing window on the front door of each switch that permits full viewing of the position of all three switch blades. The window shall be affixed with metal through-bolts or brackets, and shall not be more than 62" above the finished floor.

**FOR FRONT-ONLY ACCESSIBLE SWITCHES, THE DESIGN CONSULTANT SHALL COORDINATE AND REVISE THE FOLLOWING PARAGRAPH WITH UM HIGH VOLTAGE AS NEEDED.**

14. Provide a viewing window on the rear door of each loop switch to allow viewing of fault indicators on primary cables (fault indicators provided by Owner). The window shall be affixed approximately 18" above the bus run backs if the cable is top entry or 18" below if the cable is bottom entry.
15. Provide a hinged grounded metal barrier bolted closed in front of every switch to prevent inadvertent contact with any live part, yet allow for a full-view inspection on the switch blade position.
16. Provide green OPEN and red CLOSED switch position indicators with the words "Open" and "Closed".
17. The primary switch shall be removable as a complete operational component.

E. Load Break Switches

1. The switches shall be fused or non-fused as shown on the drawings, gang operated, 3-pole, and 2-position.
2. The switches shall be bottom hinged.
3. In the fused switch, the fuses shall be de-energized when the switch is open. With the loop switches, it is realized that the blade may in some cases be energized even in the open position.
4. Switch blade materials shall be copper.
5. The switch mechanisms shall be quick make, quick break, and stored-energy type, providing quick operation independent of handle speed.
6. The switch mechanisms shall be direct coupled. Chain or cable drives are not acceptable, except if supplied as a complete unit (switch, operator, and enclosure) from Powercon ONLY.
7. Glass polyester phase barriers shall be provided for the full length of the switches and fuses for each pole. The barriers shall be easily removable, and shall allow for visual inspection of the switches and fuses with the barriers in place.
8. The switches and operators shall be rigidly supported entirely from the interior framework of the compartments.

9. The external manual operating handles shall include lock open and lock closed padlocking provisions for multiple padlocks. The handles shall not project more than 6 inches in front of the substation when the switches are in the open or closed position.
10. The fuses shall be located for easy removal and replacement from the front.
11. The fuses shall be separated from the switch and bus components by the minimum clearances specified by the fuse Manufacturer.
12. Mechanical interlocks shall prevent the opening of the compartment doors unless the switches are open, and to prevent the closing of the switches if the compartment doors are open.
13. Provide switch handle position switches within each switch for remote indication. Wire the position switches to a terminal block in the secondary section control cubicle.
14. A Kirk Key interlock shall prevent the opening or closing of the fused switch unless the secondary main breaker is open. The interlock shall be arranged so that the same key required for fused switch operation is held captive at the secondary main breaker unless the breaker is in the open position.

F. Primary Fuses

1. Primary fuses shall be of the current limiting type.
2. Fuses shall be Mersen (formerly Ferraz Shawmut) Type CL-14, GE Type EJO-1, or Eaton Type 15CLE.
3. The University and Engineer-of-Record will specify the required "E" rating of the fuses after review of the TCC curves submitted with the shop drawings.
4. After the University and Engineer-of-Record specify the fuse "E" rating, the substation Manufacturer shall confirm that the E rating specified is consistent with the coordination of the substation main and feeder circuit breakers as well as utility and fire pump disconnects, that the momentary and interrupting ratings of the substation are within acceptable limits, and that the fuses will operate within the damage curve of the supplied transformer.
5. Provide a metal or laminated plastic nameplate on the front door of the fused switch indicating the fuse type, fuse rating and the identification number of the time-current curve.
  - a. Provide a storage rack sized for storing 3 spare fuses in their original cartons inside the fused switch rear door.
  - b. If clearances cannot be maintained with fuse storage, then furnish a wall cabinet for installation by the Contractor.

**2.3 TRANSFORMER SECTION(S)**

- A. Subject to compliance with these specifications, and the special shipping and installation requirements noted in Part 1 of these Specifications, provide products from the following Manufacturers:

1. Asea Brown Boveri
2. Eaton

3. General Electric
4. MGM
5. Olsun
6. Square D by Schneider Electric

B. Each transformer section shall consist of a dry-type transformer with fans, temperature controls and any transitions required to connect to the substation primary and secondary sections.

**INSERT APPROPRIATE RATINGS BELOW.**

C. Ratings

1. Type: Air self-cooled and fan cooled, ventilated, dry-type.
  - a. Capacity: \_\_\_\_/\_\_\_\_/\_\_\_\_ kVA, AA/AA/FA.
  - b. Phase: 3.
  - c. Frequency: 60 Hertz.
  - d. Primary Voltage: 13.2 kV, delta connected.
  - e. Secondary Voltage: \_\_\_\_/\_\_\_\_ volts, 4 wire, wye connected, solidly grounded.
  - f. Withstand Rating: Suitable for a maximum available primary fault of 750 mVA with a system impedance X/R ratio of 15.
2. Insulation Class: 220 degrees C.
3. Insulation Temperature Rise: 115 degrees C maximum rise above a 40 degrees C maximum ambient. The transformer shall be capable of carrying a minimum of 15 percent continuous overload without exceeding a 150 degrees C rise in a 40 degrees C maximum ambient.
4. Insulation Basic Impulse Level:
  - a. 95 kV BIL on the 13.2 kV primary
  - b. 10 kV BIL on the secondary
5. Impedance: 5.75 percent (from 5.32 to 6.18 percent) on the base rating of the transformer.
6. Efficiency: In accordance with Federal requirements for energy efficient transformers contained in 10 CFR Part 431.
7. Sound level: 3 dBA below NEMA standard when tested in accordance with NEMA TR-1.
8. Harmonic Rating: None.

D. Core Requirements

1. The core shall be constructed with three or four legs.
2. The core shall consist of high grade, grain oriented, non-aging, high permeability silicon steel laminations with progressively stepped, rigidly clamped joints.
3. The core's magnetic flux density shall be well below the saturation point.
4. The core shall be grounded by use of a removable flexible ground strap between the core and ground bus.

E. Coil Requirements

1. The coils shall be copper. Inter-phase connections shall be copper.
2. The coils shall be wound with the secondary winding inside the primary winding.
3. Ventilating ducts shall provide proper cooling under all load conditions.

F. Assembly Requirements

1. The coils shall be rigidly clamped to the core to prevent movement during short circuit conditions.
2. The assembled core and coils shall be vacuum pressure impregnated (VPI) polyester, with clean insulating varnish, and then baked. Coils containing debris baked into the varnish are not acceptable.
3. The core and coils shall be mounted on vibration isolators to mechanically isolate them from the frame and enclosure for sound reasons. These isolators shall also electrically isolate the core and coils for testing purposes.

G. Taps

1. Provide five full capacity, 2.5 percent taps on the primary winding, two below and two above the nominal voltage tap of 13.2 kV.
2. Jumper cables between taps shall be supported to prevent whipping during a fault.

H. Primary and Secondary Connections

1. The primary connections shall be of the flexible cable type. These primary connections shall be supported and shall pass through the primary switch/transformer barrier through smooth grommets, insulated bushings.
2. The secondary connections shall be of the braced bus bar type, equipped with flexible straps for vibration isolation.
3. The primary connections shall accept a minimum of two-bolts and the secondary connections shall accept a minimum of four bolts.

I. Cooling Fans

1. Cooling fans shall be of the propeller type, direct drive, with 120 VAC, single phase, TEFC motors. The motor circuits shall be fused or thermally protected.
2. Power for the fans and controls shall come from a control power transformer in the secondary distribution section.
3. The transformer temperature shall be monitored and the cooling fans shall be controlled by a Qualitrol, Cimco, or Eaton TC-100 temperature monitor.
  - a. The temperature monitor shall be rated 120 volts and mounted flush on the front of the transformer, approximately 54" above the finished floor.
  - b. The temperature monitor shall be mounted on a hinged front plate of a flush mounted box. The electrical connections shall be accessible and the monitor shall be removable without de-energizing the transformer.
  - c. Wiring to the temperature monitor shall be routed and supported independently of the transformer enclosure so that enclosure panels can be removed without affecting the wiring.
  - d. The temperature monitor shall include three hot spot temperature sensors, one for each transformer phase.

- e. The temperature monitor shall start the fans at a temperature of 100 degrees C. It shall initiate an audible alarm, close an "alarm" contact and illuminate a red alarm LED at 135 degrees C. It shall close a breaker "trip" contact and illuminate a second red alarm LED at 175 degrees C. The temperature set points shall be adjustable. The contacts shall be Form C and wired out to a terminal strip inside the temperature monitor box and are to be left for future use.
  - f. The temperature monitor shall include an LED or LCD display to allow reading of the hot spot temperature in each phase, and the highest temperature seen on each phase since the last reset. A reset button shall be provided to reset the maximum readings.
  - g. The temperature monitor shall include LED's indicating "power on" and "fans running".
  - h. The temperature monitor shall include an RS-485 data port for future connection to a remote monitor.
  - i. The temperature monitor shall include a Hand - Auto control switch connected in parallel with the temperature monitor fan control contacts.
  - j. Power for the temperature monitor shall come from the control power transformer located within the secondary section.
  - k. Provide sufficient wire coiled up to extend between the temperature monitor and the control power transformer.
- J. A metal nameplate conforming to NEMA standards shall be mounted on the front of the transformer.

#### 2.4 SECONDARY VOLTAGE DISTRIBUTION SECTION

- A. Subject to compliance with these specifications, provide products from the following Manufacturers:
- 1. Eaton
  - 2. General Electric
  - 3. Square D by Schneider Electric
- USE PARAGRAPH B FOR INDOOR SINGLE-ENDED UNIT SUBSTATIONS. USE PARAGRAPH C FOR INDOOR DOUBLE-ENDED UNIT SUBSTATIONS.**
- B. Single-ended unit substation secondary distribution section shall consist of two or more metal enclosed vertical stacks housing a main circuit breaker, feeder circuit breakers and circuit breaker spaces (as shown on the drawings), a control power transformer, a secondary metering compartment including CTs and PTs, and accessories.
- C. Double-ended unit substation secondary distribution section shall consist of four or more metal enclosed vertical stacks housing two main circuit breakers, tie circuit breakers, feeder circuit breakers and circuit breaker spaces (as shown on the drawings), circuit breaker controls, two control power transformers with transfer switch, two secondary metering compartments including CTs and PTs, and accessories.

**DELETE THE NEXT PARAGRAPH IF A FIRE PUMP TAP SECTION IS NOT REQUIRED.**

- D. If required, provide a fire pump bus tap vertical section between the transformer section and secondary main breaker section. The fire pump tap section shall be completely barriered from the transformer and secondary sections and shall not contain any equipment except metering CTs and PTs. The CTs shall be located ahead of the fire pump bus tap. The section shall comply with all requirements of NEC Articles 230 and 695.

**INSERT APPROPRIATE RATINGS BELOW.**

E. Ratings

- 1. Voltage: \_\_\_\_/\_\_\_\_ volts, 4-wire, wye connected.
- 2. Current: \_\_\_\_\_ amps.
- 3. Phase: 3.
- 4. Frequency: 60 Hertz.
- 5. Insulation Basic Impulse Level: 10 kV BIL.
- 6. Bus Bracing: The assembly shall be rated to withstand mechanical forces exerted during short-circuit conditions when connected directly to a power source having available fault current \_\_\_\_,\_\_\_\_ amperes symmetrical at rated voltage. The bus system shall have a minimum ANSI 4-cycle short-circuit withstand rating of 100,000 amperes symmetrical.
- 7. Circuit breakers shall have a minimum symmetrical interrupting capacity of \_\_\_\_, \_\_\_\_ amperes.
- 8. To ensure a fully selective system, circuit breakers shall have 30 cycle short-time withstand ratings equal to their symmetrical interrupting ratings as follows regardless of whether equipped with instantaneous trip protection or not:
  - a. For 800-2000 AF frame size, short time rating shall equal symmetrical rating up through 65,000 amperes.

**REVISE THE FOLLOWING PARAGRAPHS B AND C IF THE MODELED SHORT TIME RATINGS INDICATE THAT A SMALLER RATING IS ACCEPTABLE.**

- b. For 3200 AF frame size, short time rating shall equal symmetrical rating up through 85,000 amperes.
- c. For greater than 3200 AF frame size, short time rating shall equal symmetrical rating up through 100,000 amperes.

F. Bus and Compartment Requirements

- 1. Neutral bus shall be rated at 100 percent of the ampacity of the phase buses. The neutral bus shall be isolated from ground and the enclosure. The neutral bus shall be equipped with compression lugs for terminating circuit neutral conductors.
- 2. Blank compartments are not permitted. Spaces shall be fully bused, fitted with neutral current sensors rated to match the breaker frame sizes, and ready to accept future circuit breakers.
- 3. Provide a rear compartment barrier between the cable compartment and the main bus to protect against inadvertent contact with main or vertical bus bars
- 4. Provide a metal barrier full height and depth between adjacent vertical structures in the cable compartment.

**REVISE THE FOLLOWING PARAGRAPH IF SOME OR ALL OF THE FEEDERS WILL ENTER FROM THE BOTTOM.**

5. Compartments shall be arranged for top entry of the secondary cables, and shall include adequate space and support members for installing and supporting the feeder cables.
6. Circuit breaker compartments shall include hinged front doors secured by thumbscrews, three point latches or single quarter-turn latches.
7. Enclosure shall include removable top and rear panels. The panels shall be secured to the compartment frames with hex head machine screws.

G. Circuit Breakers

1. Circuit breakers shall be individually mounted, draw out, metal enclosed, stored energy type, quick-make and quick-break air circuit breakers.

**RETAIN THE FOLLOWING PARAGRAPH FOR DOUBLE-ENDED UNITS. DELETE FOR SINGLE-ENDED UNITS.**

2. Tie breaker(s) shall be identical to the main breakers and shall be capable of being exchanged with either main breaker.

**REVISE THE FOLLOWING PARAGRAPH IF SOME OR ALL OF THE FEEDER BREAKERS ARE TO BE ELECTRICALLY OPERATED. FOR DOUBLE-ENDED UNITS, BEGIN THE PARAGRAPH WITH "THE MAIN AND TIE BREAKERS SHALL..." .**

3. Main breaker(s) shall be electrically operated and charged. The feeder breakers shall be manually operated and charged.
4. Electrically operated breakers shall use a dedicated and removable charging motor that is included with the substation.
5. Electrically operated breakers shall be equipped with open and close push buttons and position indicating lights.
6. Breakers shall be equipped with removable arcing contacts and operation counters.
7. Breakers shall be rated for 100 percent continuous duty, with frame and trip ratings as shown on the drawings.
8. Breakers shall be capable of being manually racked into three positions; "connected", "test", and "disconnected". The breaker frames shall be grounded in all positions.
9. The circuit breaker door design shall be such that the following functions may be performed without the need to open the circuit breaker door: lever circuit breaker between positions, operate manual charging system, close and open circuit breaker, examine and adjust trip unit, and read circuit breaker rating nameplate.
10. A breaker shall be tripped open and the stored energy in the breaker mechanism shall be discharged as the breaker is moved into the disconnected position.
11. Breaker compartments shall be dead-front. Shutters shall close automatically as a breaker is racked into the test or disconnected position. Control contacts shall be 'made' when breaker is in test or connected positions.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 261100 - - 16

*FOR THE MAIN AND TIE BREAKERS IN DOUBLE-ENDED SUBSTATIONS, EDIT THE FOLLOWING PARAGRAPH TO ADD ISOLATED CONTACTS FOR REMOTE MONITORING OF THE MAIN AND TIE POSITIONS.*

12. Breakers shall have a minimum of two spare "Form C", isolated contacts brought out to an accessible terminal strip in the compartment. The contacts shall be rated 120 volts, 10 amperes, 60 Hz.
13. Each breaker shall be equipped with three phase current sensors, neutral current sensor, and a microprocessor-based trip unit.
  - a. Current sensors shall be rated to match the frame sizes of the breakers, except current sensors for breakers with trip ratings less than 50 percent of their frame sizes shall match the breaker trip ratings.
  - b. Current sensors shall be rated for 100 percent continuous duty.

*DELETE THE FOLLOWING PARAGRAPH IF BREAKER SHUNT-TRIP IS NOT REQUIRED. IF SHUNT TRIP IS REQUIRED, MODIFY THE SHUNT TRIP DEVICE VOLTAGE RATING IF NECESSARY.*

14. Where shown on the drawings, breakers shall be equipped with a shunt-trip device. The shunt trip device shall be a hinged armature device rated for operation at 120 volts AC. The shunt trip wiring shall be terminated on an accessible terminal strip in the breaker compartment.
15. Breakers shall be capable of being padlocked in the "open" position.
16. A Kirk Key interlock shall be provided to prevent the operation of the fused primary switch unless the main breaker is open.

*DELETE THE FOLLOWING PARAGRAPH IF SECTION 2.4.I "CIRCUIT BREAKER CONTROLS" IS REQUIRED BY SPECIFIC PROJECT PARAMETERS.*

17. A Kirk Key interlock shall be provided to prevent operation of the tie breaker unless one of the main breakers is open.

H. Solid State Trip Units

1. Solid-state trip units shall be provided on all secondary main and feeder breakers. Units shall be rated as indicated on the drawings. Trip units shall be true RMS sensing. Trip units shall be magnitude and time adjustable, and shall include local and remote indication of the cause of a trip.
2. Trip units shall allow adjustment without breaker trip. Using the test kit to inject a signal to test a breaker can cause the breaker to trip.
3. Trip units shall be rated for 100 percent continuous duty.
4. Trip units shall provide the following ranges and functions as a minimum:
  - a. Long time (L) current settings of at least 50-100 percent of the current sensor rating, divided into seven or more steps, and time delays of at least 2-22 seconds, at 600 percent of the long time current setting, divided into seven or more steps.

- b. Short time (S) current settings of at least 250-1000 percent of the long time current setting, divided into seven or more steps, and time delays of at least .1-.5 seconds, divided into seven or more steps, to include "flat response" and "I<sup>2</sup>T response" characteristics.
  - c. Instantaneous (I) settings of at least 200-1000 percent of current sensor rating. The instantaneous setting shall be provided on the feeder circuit breakers only. If it is provided on the main breaker, it shall be capable of being defeated.
  - d. Ground fault (G) current settings of 25-100 percent of current sensor rating, with a 1200 ampere maximum, divided in seven or more steps, with ground fault time delay settings of at least .1-.5 seconds, divided into five or more steps, to include "flat response" and "I<sup>2</sup>T response" characteristics.
5. Additional functions:
- a. Trip units shall provide the ability to field-select either instantaneous, short time pick-up and delay, or both instantaneous and short time protective functions.
  - b. Trip units shall provide integral metering functions including an integral keypad and back-lit graphical display capable of displaying:
    - 1) voltage
    - 2) amperage
    - 3) power factor
    - 4) frequency
    - 5) watts
    - 6) volt-amperes
    - 7) crest factor
    - 8) ampere demand
    - 9) watt demand
    - 10) voltage and current unbalance
    - 11) fault current levels phase-phase, phase-neutral, and phase-ground
    - 12) time-stamped event logs
    - 13) trip logs
  - c. Trip units shall be equipped to provide alarms based on primary over-current, ground over-current, over ampere demand, over kW, over kW demand, over kVAR, over kVA, and phase sequence. The alarms shall have separate adjustable pick-up and delay settings.
  - d. Trip units shall be equipped to provide selective alarm and breaker tripping functions based on neutral over-current, current unbalance, under/over-voltage, voltage unbalance, and under/over-frequency.
  - e. Trip units shall be equipped to provide digital harmonic sampling capability through at least the 13<sup>th</sup> harmonic.

- f. The main and tie circuit breaker trip unit(s) only shall include technology to reduce arc flash incident energy during maintenance activities. This technology shall reduce the trip unit instantaneous or short time trip value, arc flash incident level, and Personal Protection Equipment (PPE) level when enabled. This technology shall not compromise breaker phase protection even when enabled. When this technology is enabled and disabled, the recalibration of trip unit phase protection shall be accomplished without opening the circuit breaker door and exposing operators to energized parts.
  - 1) This technology shall reduce the arc flash incident energy during maintenance activities to a magnitude requiring PPE of Level 4 or less.
  - 2) This technology shall be enabled via a key lock switch located on the breaker trip unit or above the breaker door. An LED shall provide confirmation of protection.
- 6. Trip units shall have open protocol communication features (Modbus/TCP) including remote monitoring of power metering functions, remote open/close control of electrically operated breakers via communications, remote trip unit configuration, and remote alarming based on metered values.
- 7. Power for operating trip units shall be obtained from within the circuit breaker assembly itself, or by a separate control circuit connected to the secondary bus ahead of the secondary main breaker. The solid-state trip units shall have non-volatile memory to maintain all settings, trip indications, and fault data during a power outage. Batteries should not be required to maintain the memory. If batteries are required, the battery shall be capable of replacement without taking the breaker out of service.

**INCLUDE THE FOLLOWING ARTICLE (CIRCUIT BREAKER CONTROLS) FOR DOUBLE-ENDED UNITS ONLY IF REQUIRED BY SPECIFIC PROJECT PARAMETERS. DELETE FOR SINGLE-ENDED UNITS.**

I. Circuit Breaker Controls

- 1. For double-ended substations, provide main and tie circuit breaker controls to automatically or manually transfer one or both secondary main buses to the opposite power source. When transferring or retransferring an energized bus to the opposite power source, the transfer shall be closed-transition.
  - a. Provide a switch for selecting between "Automatic" or "Manual" Transfer.
  - b. Provide a switch for selecting between "Automatic" or "Manual" Retransfer.
  - c. Provide sensors to detect low voltage on any phase of either secondary bus. The low voltage setpoint shall be field adjustable between 80% and 100% of nominal.

- d. Provide time delays to control the timing of breaker operation. Transfer time delays shall be field adjustable between 0 and 60 seconds. Retransfer time delays shall be field adjustable between 10 and 600 seconds. The time that the breakers may be in closed transition shall be field adjustable between 5 and 30 cycles.
  - e. Upon a voltage drop on any phase of one side of the secondary bus, and after a time delay, the appropriate main breaker shall open and the tie breaker shall close. The low voltage setpoint shall be field adjustable between 80% and 100% of nominal, and the time delay shall be field adjustable between 0 and 30 seconds.
2. In the Automatic Transfer mode with both main breakers closed and the tie breaker open, a low voltage at one main breaker shall cause that main breaker to open and the tie breaker to close. If both main breakers experience a low voltage, no action shall be taken.
  3. In the Automatic Transfer mode with one main and the tie breaker closed and the other main breaker open, a low voltage at the closed main breaker shall cause that main breaker to open and the open main breaker to close. If both main breakers experience a low voltage, no action shall be taken.
  4. In the Automatic Retransfer mode with one main and the tie breaker closed and the other main breaker open, a return to nominal voltage at the open main breaker shall cause that open main breaker to close and the tie breaker to open.
  5. In the Manual Transfer and Manual Retransfer modes, breaker operation shall be manual only, except that the closing of all three breakers shall cause the tie breaker to open automatically after the closed transition time delay.

J. Control Power Transformer

**FOR DOUBLE-ENDED UNITS, BEGIN THE PARAGRAPH WITH "PROVIDE TWO CONTROL POWER TRANSFORMERS WITH..."**

1. Provide a control power transformer with primary and secondary fusing to supply power needed by the transformer temperature monitor, cooling fans, electrically operated breakers, and other equipment needing 120 volt control power. Place the transformer and fusing in a secondary compartment.

**INCLUDE THE THREE FOLLOWING SUBPARAGRAPHS FOR DOUBLE-ENDED UNITS. DELETE FOR SINGLE-ENDED UNITS.**

- a. Locate the transformers and fusing in cubicles.
  - b. Connect one transformer ahead of each main breaker.
  - c. Provide a control power transfer circuit that automatically transfers the control circuit from one control power transformer to the other.
2. Provide a terminal block for the wiring connecting the control power transformer to the transformer temperature monitor and cooling fans.
  3. Size the control power transformer to 125 percent of the anticipated maximum load (include the load of known future equipment when sizing).
  4. 208/120-volt substations do not need dedicated control power transformers, but the circuit shall be fused regardless.

K. Secondary Metering

1. Metering equipment shall be mounted so the top of meters (or switches) is no greater than 66 inches above finished floor.
2. Instrument Transformers

**FOR DOUBLE-ENDED UNITS, BEGIN THE PARAGRAPH WITH "PROVIDE THREE POTENTIAL TRANSFORMERS ON EACH SECONDARY MAIN BUS WITH..."**.

- a. Provide three potential transformers with a secondary voltage of 120 volts, a mechanical rating equal to the momentary rating of the circuit breakers, and an ANSI accuracy class of 0.3.
- b. Potential transformer leads shall contain current limiting fuses. The fuses shall be accessible so that they can be maintained without shutting down the substation. 208/120 volt substations do not need potential transformers, but shall be fused regardless.

**FOR DOUBLE-ENDED UNITS, BEGIN THE PARAGRAPH WITH "PROVIDE THREE CURRENT TRANSFORMERS ON EACH SECONDARY MAIN BUS WITH..."**.

- c. Provide three current transformers with a ratio that is equal to one-half of bus rating, a 5 ampere secondary, a service rating of 2.0, and an ANSI accuracy class of 0.3 or better. The current transformers shall be sized to carry, at rated accuracy, 133 percent of the burden of all equipment connected to them. The minimum burden rating shall be B0.5 (12.5 VA). Current transformers shall be capable of sustained primary current levels of 200 percent of nameplate rating.
  - d. Locate the current transformers between the transformer section and main breaker to include measurement of fire pump tap current. Locate shorting terminal blocks adjacent to their current transformers.
    - 1) Current transformers shall be installed so that their nameplates are readable.
    - 2) Current transformer secondary leads shall first be connected to conveniently accessible shorting terminal blocks located adjacent to the CTs before connecting to any other devices. Shorting screws with provisions for storage shall be provided.
3. Ammeter and Voltmeter
    - a. The meters shall be 4.5 inch diameter or 6 inch square, flush or semi-flush, with 1 percent accuracy, anti-parallax 250 degree scales, and external zero adjustment.
    - b. The ammeter shall have a maximum reading equal to twice the rating of the current transformers and the full scale reading shall be equal to 10 Amps.
    - c. The voltmeter shall have a maximum reading of 240-volts on a 208-volt secondary, or 600-volts on a 480-volt secondary.
  4. Instrument Switches
    - a. Instrument switches shall be of the rotary type with an "off" position between each "phase" position.
    - b. The voltmeter switch shall permit the reading of all phase-to-phase and phase-to-neutral voltages.

- c. The ammeter switch shall permit the reading of all phase currents, and shall maintain current transformer secondary circuits closed at all times.
  - d. The switches shall be mounted under their associated meter, and they shall include appropriate escutcheon plates.
5. Kilowatt-Hour Meter:
- a. The kilowatt-hour meter shall be a transformer rated (minimum Class 10) polyphase electronic meter, ION8650 series as manufactured by Schneider Electric, complete with kWh energy and kW demand monitoring, drawout case, Ethernet port (10/100Base-T), RS-485 port, infrared port, 4 digital outputs, 3 digital inputs, 32MB memory, password protected; Schneider Electric catalog #M8650C4C0H6E1B0A.

**DELETE THE FOLLOWING PARAGRAPH IF FEEDER BREAKER SUB-METERING IS NOT REQUIRED.**

6. Kilowatt-Hour Sub-Meter:
- a. Provide kilowatt-hour sub-meters for individual feeder breakers as shown on the drawings.
    - 1) Kilowatt-hour sub-meters shall be the same as the main kilowatt-hour meter. Ammeters, voltmeters and instrument switches are not required.
    - 2) Voltage signals shall be obtained from the main potential transformers.
    - 3) Current signals shall be obtained from separate current transformers located at the feeder cable connections. Provide three current transformers with a ratio equal to one-half the feeder breaker frame size, a 5 ampere secondary, a service rating of 2.0, an ANSI accuracy class of 0.3 or better, and a minimum burden rating of B0.5.
    - 4) Current transformer secondary leads shall first be connected to conveniently accessible shorting terminal blocks located adjacent to the CTs before connecting to any other devices. Shorting screws with provisions for storage shall be provided.
  - b. Sub-meters shall be mounted adjacent to the main kilowatt-hour meter or in a remote panel suitable for Contractor mounting on a wall 60" above the finished floor.
7. Provide small wiring, fuse blocks and terminal blocks within the switchgear as required. Control components mounted within the assembly shall be suitably marked for identification corresponding to the appropriate designations on Manufacturer's wiring diagrams.
8. Provide front access to all circuit breaker secondary connection points for ease of trouble shooting and connection to external field connections without the need of removing the circuit breaker for access.
9. Provide a front or rear accessible, isolated vertical wireway for routing of factory and field wiring. Wireway covers shall be secured by thumbscrews, three point latches or single quarter-turn latches. Factory provisions shall be made for securing field wiring without the need for adhesive wire anchors.

10. All control wire shall be Type SIS. Wire bundles shall be secured with nylon ties and anchored to the assembly with the use of pre-punched wire lances or nylon non-adhesive anchors. Adhesive anchors shall not be used.
  11. Control wires leaving the switchgear shall be provided with terminal blocks with suitable numbering strips and provisions for #10 AWG field connections. Each control wire shall be marked with its origin zone, wire name and destination zone over the entire length of the wire using a UV-cured ink process.
  12. Provide wire markers at each end of all control wiring. Plug-in terminal blocks shall be provided for all shipping split wires. Terminal connections to remote devices or sources shall be front accessible via doors above each circuit breaker or a wire trough in the cable compartment.
- L. Engraved laminated plastic nameplates shall be provided for breakers, the metering compartment, meters, instrument switches, fuse blocks, control power transformer, PT's, and CT's.
- M. The following accessories shall be provided:
1. A top mounted, manually operated, breaker-lifting device including mounting rails.
  2. For NEMA 3R rated exterior unit substations with non walk-in enclosure, a portable breaker lifting device capable of working from the floor between any nearby obstructions and housekeeping pads.
  3. Circuit breaker test plug and cable(s) as needed to test the breakers.
  4. Meter test plug.
  5. Circuit breaker trip unit test device.

**PART 3 - EXECUTION**

*FOR ANYONE UNFAMILIAR WITH THE PRE-PURCHASE SPEC, THIS DOCUMENT GOES TO A MANUFACTURER, AND NOT TO A CONTRACTOR. AS SUCH, PART 3 SHOULD REMAIN BECAUSE IT INFORMS THE MANUFACTURER THAT THEIR RESPONSIBILITY DOES NOT END WITH THE DELIVERY OF THE SUBSTATION; THEY HAVE OBLIGATIONS TO FULFIL AT THE TIME OF INSTALLATION.*

**3.1 INSTALLATION**

*USE PARAGRAPHS A, B & C IF THE SUBSTATION IS PRE-PURCHASED IF NOT BEING PRE-PURCHASED, DELETE THESE PARAGRAPHS.*

- A. Installation and final testing of this unit substation shall be done under a separate contract, by the installing Contractor.
- B. All necessary hardware to secure the assembly in place shall be provided by the installing Contractor.
- C. The installing Contractor shall install all equipment per the Manufacturer's recommendations and the contract drawings.

*DELETE PARAGRAPHS D-I IF THE SUBSTATION IS PRE-PURCHASED.*

- D. Install all equipment per the Manufacturer's recommendations and per contract drawings.
- E. Provide a 4-inch thick minimum concrete housekeeping pad with 1" chamfered edge for the substation. Size and shape the pad in accordance with the approved substation shop drawings. Pad shall not extend more than four inches beyond the substation footprint. Pad shall be level to within 1/8 inch per three feet or in accordance with Manufacturer's recommendations.
- F. Anchor the unit substation to the concrete housekeeping pad using concrete anchors.
- G. Install fuses and set the temperature monitor, and circuit breaker trip units in accordance with the short circuit and coordination studies, the Owner's directions, and the Manufacturer's instructions.
- H. Provide temporary heaters in accordance with the Manufacturer's instructions until the substation is energized.
- I. The substation sections shall be installed and checked in accordance with the Manufacturer's recommendations. This shall include, but not be limited to:
  1. Checking to ensure that the pad location is level to within 1/8 inch per three feet of distance in any direction.
  2. Checking to ensure that all bus bars are torqued to the Manufacturer's recommendations.
  3. Assembling all shipping sections, removing all shipping braces, and connecting all shipping split mechanical and electrical connections.
  4. Measuring and recording Megger readings phase-to-phase, phase-to-ground, and neutral-to-ground (four-wire systems only).
  5. Inspecting and installing all circuit breakers in their proper compartments.
- J. Adjust taps to deliver appropriate secondary voltage.
- K. Confirm operation of circuit breakers using primary current injection method.
- L. Measure primary and secondary voltages for proper tap settings.
- M. Megger primary and secondary windings.
- N. Assist the University's Plant High Voltage Shop and Commissioning Authority with substation testing, start-up, and commissioning activities.
- O. For each kilowatt-hour meter, provide a dedicated one-inch conduit with nylon pull string from the substation to the nearest voice/data cable tray or Telecommunication Room.
- P. For switch handle position switches, provide a dedicated one-inch conduit with nylon pull string from the substation to the nearest voice/data cable tray or Telecommunication Room.

**3.2 FIELD QUALITY CONTROL**

- A. The substation's Manufacturer shall provide the services of a qualified factory-trained Manufacturer's representative to assist the installing Contractor in the installation and start-up of the equipment specified under this section for a period of two working days.
- B. The substation's Manufacturer shall provide to the Owner a line item cost for each additional day of the factory-trained Manufacturer's representative services that may be required, for up to a total of seven days.
- C. The Manufacturer's Representative shall provide technical direction and assistance to the contractor in general assembly of the equipment, connections, and adjustments. The Manufacturer's Representative shall provide testing of the assembly and components.
- D. The Manufacturer shall provide to the installing contractor three copies of the Manufacturer's field start-up report and written certification that the equipment has been installed and assembled per Manufacturer's direction and is approved for energization.

***DELETE PARAGRAPHS E-P IF THE SUBSTATION IS PRE-PURCHASED.***

- E. Provide the visual inspections, manual operations, and tests on systems and equipment described below. Tests shall be performed and documented by an independent testing agency.
- F. Provide written test reports, signed and dated, for all tests prior to acceptance of the unit substation by the Owner. Test reports on Megger (insulation resistance), dielectric absorption, high potential and ducter (contact resistance) tests shall include the ambient temperature and relative humidity existing at the time of the tests.
- G. Prior to any testing, perform visual inspections to verify the following:
  - 1. The equipment is completely and properly installed.
  - 2. The equipment is free from damage and defects.
  - 3. Shipping blocks and restraints have been removed.
  - 4. Electrical terminations have been properly tightened.
  - 5. The equipment has been properly aligned.
  - 6. The equipment has been properly lubricated.
  - 7. The ventilation louvers are open and unobstructed.
  - 8. The equipment is ready to be tested.
- H. Prior to any testing, exercise mechanical devices to verify they operate properly and freely.
- I. Prior to any testing, verify that all circuit breaker trip units are set in accordance with the approved short circuit and coordination studies.
- J. Perform a continuity check, 2,500-volt DC Megger test, and a DC high potential test on primary switches. DC high potential tests shall be performed at 37kV on new and existing primary switches.

- K. Perform a DC Megger test and a turns-ratio test on unit substation transformers. The DC Megger test shall be performed at 2,500 volts on coils rated over 600 volts, and at 1,000 volts on coils rated 600 volts and below. The turns-ratio test shall be performed on each tap.
- L. Verify proper setting and operation of the fan control panel to ensure it and the fans are operable and functional. Temperature-test the probes in each winding.
- M. Perform a continuity check and 1,000 volt DC Megger test on the secondary switchgear buses and on the main and feeder breakers.
- N. Perform a primary current injection test and a ducster (contact resistance) test on all breakers.
- O. Perform a 1,000-volt DC Megger test and a turns-ratio test on CT's and PT's.
- P. Calibrate the metering.

**DELETE 3.3 IF SUBSTATION IS BEING PRE-PURCHASED.**

### 3.3 COMMISSIONING

- A. Perform Commissioning activities per Related Sections above.

### 3.4 TRAINING

**DELETE PARAGRAPH A IF THE SUBSTATION IS PRE-PURCHASED BY THE UNIVERSITY.**

- A. Provide a qualified service technician from the Manufacturer's staff to conduct two training sessions.

**DELETE PARAGRAPH B WHEN THE SUBSTATION IS PROVIDED BY THE CONTRACTOR.**

- B. A Manufacturer's qualified representative shall conduct two training sessions. **These services have been purchased under the substation's pre-purchase agreement, by the University.**
- C. The installing Contractor shall arrange and coordinate the two training sessions, for up to fifteen Owner's Representatives. Each session shall last four hours and shall be conducted during normal workdays at a jobsite location determined by the owner. These training sessions shall take place BEFORE the start-up of the new substation.
- D. Coordinate the training session topic(s) with the Owner's Representatives a minimum of two weeks prior to the session. Training topics may include basic substation maintenance and operation or may include detailed training on any of the substation components.

**SPECIFICATION DIVISION 26**

NUMBER            SECTION DESCRIPTION

**DIVISION 26 ELECTRICAL**

SECTION 261102 - INSTALLATION OF PRE-PURCHASED UNIT SUBSTATIONS

**END OF CONTENTS TABLE**

**DIVISION 26 ELECTRICAL**

**SECTION 261102 - INSTALLATION OF PRE-PURCHASED UNIT SUBSTATIONS**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. The University of Michigan will pre-purchase an indoor, metal-clad, unit substation assembly consisting of primary voltage switch, transformer, and secondary voltage switchgear sections. The unit substation assembly shall be received, handled and properly stored, as needed and installed, tested and activated by this Contractor.

**1.2 RELATED SECTIONS**

- A. The drawings and the general provisions of the contract, including the current edition of the University of Michigan Standard General Conditions, apply to this section.
- B. The applicable requirements of the Division 1 and other Division 26 specification sections apply to this section.

**PART 2 - PRODUCTS**

**2.1 INSTALLATION HARDWARE**

- A. All necessary hardware to secure the assembly in place shall be provided by the installing Contractor.

**PART 3 - EXECUTION**

**3.1 FIELD QUALITY CONTROL**

- A. The substation's Manufacturer is providing the services of a qualified factory-trained Manufacturer's representative to assist the installing Contractor in the installation and start-up of the equipment specified under this section for a period of two (2) working days.
- B. The substation's Manufacturer has provided to the Owner a line item cost for each additional day of the factory-trained Manufacturer's representative services that may be required, for up to a total of seven (7) days.
- C. The Manufacturer's representative shall provide technical direction and assistance to the contractor in general assembly of the equipment, connections and adjustments, and testing of the assembly and components contained herein.
- D. The installing Contractor shall provide three (3) copies of the Manufacturer's field start-up report.

### 3.2 INSTALLATION

- A. Accept delivery of new unit substation and, if necessary, store unit in a heated, secure building.
- B. Co-ordinate with the Owner's Representative for an independent inspection of the delivered substation assemblies. The University will hire and pay an independent agency to inspect the delivered substation sections and to verify that all specifications and drawing requirement of the pre-purchase package have been met.
- C. The same independent agency will perform the overall commissioning of the installed substation and all their services will be paid by the University. The installing contractor shall coordinate and facilitate the commissioning tasks.

*EDIT AND/OR REMOVE PARAGRAPH, IF BREAK-DOWN IS NOT REQUIRED IN A PARTICULAR PROJECT.*

- D. Under the direction of Manufacturer's field representative, break down the unit substation's transformer by removing the enclosure and the secondary bus from the transformer assembly. This is necessary to clear the existing low clearance of \_\_\_\_\_ inches vertically inside the building.

*EDIT AND/OR REMOVE PARAGRAPH IF BREAK-DOWN IS NOT REQUIRED IN YOUR PARTICULAR PROJECT.*

- E. The Manufacturer's field representative shall supervise the reassembly of the transformer at the final installation site.

*EDIT AND/OR REMOVE PARAGRAPH IF TILTING OR LOW POINTS ARE NOT REQUIRED OR ARE NOT RELEVANT IN YOUR PARTICULAR PROJECT.*

- F. Ensure that all necessary extra bracing and tools required are in place, so that the primary switches and secondary sections can be transported tilted as necessary, so they can pass under the low point of the travel path of \_\_\_\_\_ inches within the building.
- G. Remove secondary breakers from their compartments, before transporting secondary sections to the substation room.
- H. Re-install secondary breakers in their compartments, after installing secondary sections to the substation room.

*EDIT AND/OR REMOVE PARAGRAPH IF THERE IS NO ROUTING DRAWING REQUIRED IN YOUR PARTICULAR PROJECT.*

- I. Consult Drawings regarding the proposed routing of the unit substation.
- J. The Contractor shall install all equipment per the Manufacturer's recommendations and per contract drawings.

- K. Provide a 4 inch thick minimum concrete housekeeping pad for the substation. Size and shape the pad in accordance with the approved substation shop drawings. Pad shall not extend more than four (4) inches beyond the substation footprint. Pad shall include embedded steel leveling channels that are level to within 1/8 inch per three (3) feet. Leveling channels shall have a 1/8 inch reveal above the top of the concrete. The quantity, size and locations of leveling channels shall be in accordance with Manufacturer's recommendations.
- L. Anchor the unit substation to the concrete housekeeping pad using concrete anchors.
- M. Install fuses, set the temperature monitor, and circuit breaker trip units in accordance with the short circuit and coordination studies, the Owner's directions, and the Manufacturer's instructions.
- N. Provide temporary heaters in accordance with the Manufacturer's instructions until the substation is energized.
- O. Arrange for testing and setting of the unit substation devices in accordance with these specifications, applicable codes and standards, and Manufacturer's instructions. The University will supply breaker settings and transformer primary fuse size.
- P. The substation sections shall be installed and checked in accordance with the Manufacturer's recommendations. This shall include but not limited to:
  - 1. Checking to ensure that the pad location is level to within 1/8 inch per three feet of distance in any direction.
  - 2. Checking to ensure that all bus bars are torqued to the Manufacturer's recommendations.
  - 3. Assembling all shipping sections, removing all shipping braces and connecting all shipping split mechanical and electrical connections.
  - 4. Measuring and recording Megger readings phase-to-phase, phase-to-ground, and neutral-to-ground (four wire systems only).
  - 5. Inspecting and installing all circuit breakers in their proper compartments.
- Q. Adjust taps to deliver appropriate secondary voltage.
- R. Confirm operation using primary current injection method.
- S. Measure primary and secondary voltages for proper tap settings.
- T. Megger primary and secondary windings.
- U. Assist the University's Plant High Voltage Shop and Commissioning Authority with substation testing, start-up and commissioning activities.

### 3.3 MANUFACTURER'S CERTIFICATION

- A. A qualified factory-trained Manufacturer's representative shall certify in writing that the equipment has been installed, adjusted and tested in accordance with the Manufacturer's recommendations. **These services have been purchased under the substation's pre-purchase agreement, by the University.**

- B. Provide three (3) copies of the Manufacturer's representative's certification.

**3.4 TRAINING**

- A. A Manufacturer's qualified representative shall conduct two training sessions. **These services have been purchased under the substation's pre-purchase agreement, by the University.**
- B. The installing Contractor shall arrange and coordinate the two training sessions, for up to fifteen (15) Owner's Representatives. Each session shall last 4 hours and shall be conducted during normal workdays at a jobsite location determined by the owner. These training sessions shall take place BEFORE the start-up of the new substation.
  - 1. One training program shall be of the "start-up" type and shall include instructions on the assembly, including primary equipment, transformer, and secondary equipment. All circuit breakers, protective devices and other major components shall be included.
  - 2. A second training program shall be focused on the maintenance of the unit substation, including primary equipment, transformer, and secondary equipment. All circuit breakers, protective devices and other major components shall be included.

**3.5 PRIOR TO SHIPPING**

- A. Approximately 7 days prior to shipment of the unit substation components, the local representative of the manufacturer shall meet with the U-M design manager (electrical engineer), as well as other designated U-M stakeholders at the U-M A&E office complex. The purpose of the meeting will be to participate in a conference telephone call to the factories where the substation components are being assembled. The local representative shall coordinate with the factories to ensure that an authorized and qualified factory representative is available (at all sites) who will be able to discuss in detail the U-M assembly. Items such as shop drawing comments, etc. shall be discussed and verified during the telephone conference calls. Under no circumstance may the components be shipped prior to the telephone verifications.

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

***INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.***

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

***VERIFY ALL RATINGS, DIMENSIONS AND REQUIREMENTS SPECIFIED TO  
BE AS SHOWN ON THE DRAWINGS ARE CLEARLY SHOWN ON THE DRAWINGS.***

***IN 1 BELOW, SELECT PROPER COMMISSIONING SPEC SECTION NUMBER  
APPLICABLE TO THE PROJECT.***

- B. Related Sections:

1. Section 019100/019110 - Commissioning
2. Section 017823 - Operation and Maintenance Manual
3. Section 260513 - Medium, Low & Control Voltage Cables
4. Section 260526 - Grounding and Bonding for Electrical
5. Section 260533 - Electrical Materials and Methods
6. Section 260800 - Electrical Acceptance Tests

**PART 2 - PRODUCTS**

**2.1 POWER AND DISTRIBUTION PANELBOARDS - FUSIBLE SWITCH TYPE**

- A. Power and distribution panelboards shall be of the voltage and amperage shown, 3 phase, 4 wire, 200,000 amps AIC, dead front, fusible switch type, with main fused switch or main lugs only as shown, copper bus, fully rated neutral and ground bars, NEMA Type 1 enclosure and surface trim. Provide switches and Class R dual element fuses as shown. Eaton Pow-R-Line 4F, GE Spectra, Siemens P4 or P5, or Square D QMB.

1. Blank switch positions shall be fully bused and ready to accept future switches.
2. Bus and switch terminals shall be identified as accepting copper and aluminum cables.
3. Enclosure shall be sized to provide adequate conduit knockout space and gutter wire bending space for future conduits and cables. When aluminum feeder cables are being used, oversize the enclosure for aluminum cables. Enclosures that are too small to accommodate future conduits and cables or aluminum cables (when used) shall be replaced at the Contractor's expense.

4. Door shall have concealed hinge, flush handle, lock, with 2 keys and panel directory frame. All panel locks shall be keyed alike.

## **2.2 POWER AND DISTRIBUTION PANELBOARDS - CIRCUIT BREAKER TYPE**

- A. Power and distribution panelboards shall be of the voltage and amperage shown, 3 phase, 4 wire, 50,000 amps AIC minimum, dead front, circuit breaker type, with main circuit breaker or main lugs only as shown, copper bus, fully rated neutral and ground bars, NEMA Type 1 enclosure and surface trim. Provide circuit breakers as shown. Eaton Pow-R-Line 4B, GE Spectra, Siemens P4 or P5, or Square D I-Line.
  1. Blank circuit breaker spaces shall be fully bused and ready to accept future circuit breakers.
  2. Bus and circuit breaker terminals shall be identified as accepting copper and aluminum cables.
  3. Enclosure shall be sized to provide adequate conduit knockout space and gutter wire bending space for future conduits and cables. When aluminum feeder cables are being used, oversize the enclosure for aluminum cables. Enclosures that are too small to accommodate future conduits and cables or aluminum cables (when used) shall be replaced at the Contractor's expense.
  4. Door shall have concealed hinge, flush handle, lock with 2 keys, and panel directory frame. All panel locks shall be keyed alike.

## **2.3 LIGHTING AND RECEPTACLE PANELS**

- A. Lighting and receptacle panels shall be of the voltage, amperage and number of positions shown, 3 phase, 4 wire, 22,000 amps AIC minimum unless shown otherwise, circuit breaker type, with main circuit breaker or main lugs only as shown, copper bus, fully rated neutral and ground bars, NEMA Type 1 enclosure and surface or flush trim as shown. In main circuit breaker panels, the main circuit breaker shall be separate from and not mounted in feeder breaker positions. Load center type panels are not acceptable. Provide circuit breakers as shown. Eaton Pow-R-Line 1 or 2, GE A series, Siemens P1 or P2, or Square D NF or NQOD.
  1. Bus and circuit breaker terminals shall be identified as accepting copper and aluminum cables.
  2. Enclosure shall be sized to provide adequate conduit knockout space and wire bending space for future conduits and cables. When aluminum feeder cables are being used, oversize the enclosure for aluminum cables. Enclosures that are too small to accommodate future conduits and cables or aluminum cables (when used) shall be replaced at the Contractor's expense.

3. Front cover shall be factory manufactured, UL/NRTL listed, one-piece, hinged "door-in-door" type with: Interior hinged door with hand-operated latch or latches as required to provide access to circuit breaker operating handles only; not energized parts. Outer hinged door to provide access to the entire closure including the dead front and all wiring gutters. Outer door shall be kept securely closed with factory bolts, screws, clips or other fasteners to the panel box, requiring a tool for entry; hand operated latches are not acceptable. Both inner and outdoor doors shall open left to right. Include one-piece, removable, inner dead front cover, independent of the panelboard cover. Door shall have concealed hinge, flush handle, lock with 2 keys and panel directory frame. All panel locks shall be keyed alike.

#### **2.4 CIRCUIT BREAKERS**

- A. Circuit breakers shall be molded case, bolt-on, quick make and quick break, thermal-magnetic type with trip indication, and shall be from the same manufacturer as the panel in which they are installed. Circuit breaker terminals shall be identified as accepting copper and aluminum cables. Eaton, GE, Siemens or Square D.
  1. Circuit breakers for power and distribution panelboards shall have a minimum interrupting rating of 35,000 amps RMS at 240 volts AC or 25,000 amps RMS at 480 volts AC.
  2. Circuit breakers for lighting and receptacle panelboards shall have a minimum interrupting rating of 22,000 amps RMS at 240 volts AC or 25,000 amps RMS at 480 volts AC.
  3. Circuit breakers used for switching fluorescent lighting or for protecting air conditioning compressors shall be so listed.
  4. Circuit breakers used for feeding electrical heat tracing shall include ground fault equipment protection rated to trip at 30 ma.

#### **2.5 DISTRIBUTION TRANSFORMERS**

- A. Distribution transformers shall be 480-208Y/120 volts, of the kVA and K rating shown, dry type, with copper or aluminum windings, a 220 degrees C insulation system, and designed for a maximum temperature rise at full load of 115 degrees C above a 40 degrees C ambient. Terminals shall be identified as accepting copper and aluminum cables. Transformers shall have a sound rating 3 dB below NEMA standard (42 dB for 10-50 kVA, 47 dB for 51-150 kVA, 52 dB for 151-300 kVA and 57 dB for 301-500 kVA rated transformers), and shall be equipped with four taps, two 2-1/2 percent above and two 2-1/2 percent below nominal. Acme, Cutler Hammer/Westinghouse, GE, Hevi-Duty, MGM, Olsun, Siemens, or Square D.

#### **2.6 FUSES**

- A. Fuses for general use shall be rated 250 or 600 volts as required, Class R, dual element type with a 200,000 amp AIC interrupting rating. Bussmann, Gould Shawmut or Littelfuse.

**PART 3 - PART 3 EXECUTION**

**3.1 INSTALLATION**

- A. Provide No. 10 AWG wire to NEMA Type 6-20R receptacles serving freezers, window air conditioners or other large appliances.
- B. Where shown on the drawings, provide a separate neutral conductor for each single-phase branch circuit. The neutrals of these single-phase circuits shall not be shared or daisy-chained.
- C. Color code circuit breakers and disconnect switches of fire alarm systems and emergency circuits with red paint. Provide lock-on clips on the circuit breaker handles.
- D. Provide nameplates in accordance with Section 260500.
- E. Provide a detailed typed directory for all new and modified panelboards.

**3.2 FIELD QUALITY CONTROL**

- A. Prior to any testing, perform visual inspections to verify the following:
  - 1. The equipment is properly installed and anchored.
  - 2. The equipment is free from damage and defects.
  - 3. Electrical terminations have been properly tightened.
  - 4. The ventilation louvers are open and unobstructed.
  - 5. The equipment has been thoroughly cleaned inside and outside.
  - 6. The equipment is properly labeled and labels are correct.
  - 7. The equipment is ready to be tested.
- B. Perform the following testing and submit a test report.
  - 1. Verify proper phasing of power circuits.
  - 2. Perform a 1,000-volt Megger test on buses and disconnect switches. This test may be combined with the power cable Megger test by testing the equipment and terminated cables together.
  - 3. Perform a continuity check on control circuits and control panel internal wiring.
  - 4. Perform an operational test on the controls and alarms.
  - 5. Perform a continuity check and a 1,000-volt DC Megger test on 3 phase distribution and isolation transformers.

**3.3 COMMISSIONING**

- A. Perform Commissioning activities per Related Sections above.

**END OF SECTION 262000**

**DIVISION 26 ELECTRICAL**

SECTION 262726 - WIRING DEVICES

**END OF CONTENTS TABLE**

**DIVISION 26 ELECTRICAL**  
**SECTION 262726 - WIRING DEVICES**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

***INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.***

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

***IN 2 BELOW, SELECT PROPER COMMISSIONING SPEC SECTION NUMBER  
APPLICABLE TO THE PROJECT.***

- B. Related Sections:
1. Section 017823 - Operation and Maintenance Manual
  2. Section 019100/019110 - Commissioning
  3. Section 260513 - Medium, Low & Control Voltage Cables
  4. Section 260526 - Grounding and Bonding for Electrical
  5. Section 260533 - Electrical Materials and Methods
  6. Section 260800 - Electrical Acceptance Tests

**1.1 SUMMARY**

- A. Section Includes:
1. Lighting switches and occupancy sensors.
  2. Receptacles.
  3. Device cover plates.
  4. Receptacle strips and power poles.
  5. Floor boxes and floor poke-through devices.
  6. Pin and sleeve connectors.

**1.2 SUBMITTALS**

- A. Product Data: Include manufacturers, catalog illustrations, models, rated capacities, dimensions, rough-in requirements, wiring diagrams and materials of construction. Wiring diagrams shall be project specific and differentiate between factory wiring and field wiring. Include written sequences of operation for all controls.
- B. Installation, Operation and Maintenance Manuals

**1.3 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards, latest editions, of all NEMA and UL standards applicable to each type of wiring device.

**1.4 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

*CHANGE DEVICE COLORS WHEN NECESSARY TO MATCH EXISTING DEVICES.*

**2.1 TOGGLE SWITCHES**

- A. Toggle switches shall be rated 120/277 volts, 20-amperes, single-pole, double-pole, 3-way or 4-way as shown, heavy duty, back and side wired, with white handles. Arrow Hart (Cooper), Bryant, Hubbell, Leviton or Pass & Seymour.

**2.2 DIMMER SWITCHES**

- A. Dimmer switches shall be rated for the types of lamps being controlled, 1000 watts minimum, specification grade, heavy duty, with white slider or knob and radio noise filter, and suitable for use in a single gang box. Leviton, Lithonia or Lutron.

**2.3 OCCUPANCY SENSORS**

*SHOW OCCUPANCY SENSOR TYPES, LOCATIONS AND AIMING ON PLAN DRAWINGS. PROVIDE SEPARATION BETWEEN OCCUPANCY SENSORS AND SOURCES OF AIR CURRENTS PER MANUFACTURERS INSTRUCTIONS.*

- A. Wall mounted occupancy sensors shall be rated 600 watts minimum, 180 degrees coverage minimum, 300 sq. ft. coverage minimum, infrared type, heavy duty, white color, with SCR power switching devices, adjustable range or sensitivity, adjustable time delay between 5-30 minutes minimum, adjustable setting of manual or auto "on", integral manual override switches, and suitable for mounting in single gang wall mounted boxes. Sensors with triac power switching devices are not acceptable. Hubbell, Leviton, Lutron, Sensorswitch, Tork or Wattstopper.
- B. Ceiling mounted occupancy sensors shall be rated 1000 watts minimum, 180-360 degrees coverage as required, 1000 sq. ft. coverage minimum, infrared type, heavy duty, white color, with SCR power switching devices, adjustable range or sensitivity, adjustable time delay between 5-30 minutes minimum, adjustable setting of manual or auto "on", and suitable for mounting in ceiling mounted boxes. Sensors shall utilize a low voltage power supply and control circuits, and be interlocked with the switch circuit for local control. Sensors with triac power switching devices are not acceptable. Hubbell, Leviton, Lutron, Sensorswitch, Tork or Wattstopper.

**DELETE EITHER C OR D BELOW. DUAL TECH MICROPHONIC/PIR OCCUPANCY SENSORS ARE PREFERRED DUE TO LESS SENSITIVITY TO AIR CURRENTS AND LESS POSSIBILITY OF HEARING AID INTERFERENCE.**

- C. Dual technology microphonic/PIR occupancy sensors shall be rated 1000 watts minimum, 180-360 degrees coverage as required, 1000 sq. ft. coverage minimum, and combination microphonic/infrared type. The microphonic component shall be acoustically passive and "listen" for sounds indicating occupant motion. The overall occupancy sensor shall be heavy duty, white color, with SCR power switching devices, adjustable range or sensitivity, adjustable time delay between 5-30 minutes minimum, adjustable setting of manual or auto "on", and suitable for mounting in ceiling or wall mounted boxes. Sensors shall utilize low voltage power supply and control circuits and be interlocked with the switch circuit for local control. Sensors with triac power switching devices are not acceptable. Sensorswitch.
- D. Dual technology ultrasonic/PIR occupancy sensors shall be rated 1000 watts minimum, 180-360 degrees coverage as required, 1000 sq. ft. minimum coverage, and combination ultrasonic/infrared type. The ultrasonic component shall operate at 32 kHz minimum and be compatible with hearing aids. The overall occupancy sensor shall be heavy duty, white color, with SCR power switching devices, adjustable range or sensitivity, adjustable time delay between 5-30 minutes minimum, adjustable setting of manual or auto "on", and suitable for mounting in ceiling or wall mounted boxes. Sensors shall utilize low voltage power supply and control circuits and be interlocked with the switch circuit for local control. Sensors with triac power switching devices are not acceptable. Hubbell, Leviton, Lutron, Tork or Wattstopper.

**2.4 DUPLEX RECEPTACLES**

- A. Duplex receptacles shall be rated 125 volts, 20 amps, 2-pole, 3-wire, NEMA Type 5-20R, heavy duty, back and side wired, grounding type with nylon or Lexan bodies. Except where shown otherwise, normal power receptacles shall have white faces, emergency power receptacles shall have red faces, and "special power" receptacles shall have gray faces. Arrow-Hart (Cooper), Bryant or Hubbell 5362, or Leviton or Pass & Seymour 5362A.

**2.5 GFCI AND AFCI DUPLEX RECEPTACLES**

- A. Ground-fault circuit interrupter (GFCI) and arc-fault circuit interrupter (AFCI) duplex receptacles shall be rated 125 volts, 20 amps, 2 pole, 3 wire straight blade type with nylon or Lexan bodies and white faces. GFCI receptacles shall trip when ground currents exceed 5 ma, and shall trip in 25 milliseconds maximum. AFCI receptacles shall recognize characteristics unique to an arcing fault and trip when an arc fault is detected. Receptacles shall have an interrupting rating of 2000 amps and shall lock out (off) when the protection system fails. Arrow Hart (Cooper), Bryant, Hubbell, Leviton or Pass & Seymour.

**2.6 TVSS AND TAMPER-RESISTANT DUPLEX RECEPTACLES**

- A. TVSS and tamper-resistant duplex receptacles shall be rated 125 volts, 20 amps, 2-pole, 3-wire straight blade type with nylon or Lexan bodies and white faces. TVSS receptacles shall clamp at 330 volts or less, and shall have visual indication of the failure of their protective circuitry. Tamper-resistant receptacles shall require the simultaneous insertion of both line and neutral plug blades before power is applied to the receptacle contacts. Arrow Hart (Cooper), Bryant, Hubbell, Leviton or Pass & Seymour.

**2.7 USB CHARGER DUPLEX RECEPTACLES**

- A. USB charger duplex receptacles shall be rated 125 volts, 20 amps, with two 2 pole, 3 wire, tamper-resistant receptacles and two USB Type A charger ports. Receptacles shall be NEMA Type 5-20R, heavy duty, back and side wired or pigtail wired, grounding type with nylon or Lexan bodies and white faces. USB ports shall be 5 volts DC, 3.1 amps minimum combined total, compatible with USB Type 2.0 and 3.0 devices. Arrow Hart (Cooper), Bryant, Hubbell, Leviton or Pass & Seymour.

**2.8 SPECIAL PLUGS AND RECEPTACLES**

- A. Special plugs and receptacles including twist-lock devices shall be of the voltage, amperage, number of poles, number of wires, configuration, and NEMA Type shown, heavy duty, with nylon or Lexan bodies and white or gray faces. Arrow-Hart (Cooper), Bryant, Hubbell, Leviton or Pass & Semour. Provide the required quantity of mating plugs when shown on the drawings.

**2.9 DEVICE COVER PLATES**

- A. Except where unique cover plates are required (wall box dimmers, occupancy sensors, surface raceways, etc.), cover plates for devices shall be of high quality Type 302 stainless steel unless otherwise indicated.

**2.10 RECEPTACLE STRIPS**

- A. Surface mounted receptacle strips shall consist of white color surface wireways containing matching receptacles of the types shown. Receptacles shall be heavy duty, specification grade, and shall be grounded by a separate green ground conductor. The receptacles shall be spaced and circuited as shown.

**2.11 POWER POLES**

- A. Power poles shall be white color painted steel unless shown otherwise, with an internal barrier to separate power wiring from telecommunications wiring. Poles shall utilize a Velcro pad at the bottom for attachment to carpeting or tile, and an adjustable T-bar assembly with trim plate for attachment to the ceiling. Receptacles shall be rated 125 volts, 20 amps, 2-pole, 3-wire, NEMA Type 5-20R, heavy duty, white color, and shall be grounded by a separate green ground conductor. Hubbell, Steelcase or Wiremold.

*COORDINATE WITH THE ARCHITECT AND OWNER'S REPRESENTATIVE REGARDING SIZE, COVER TYPE AND FINISH. EDIT ACCORDINGLY.*

**2.12 FLOOR BOXES**

- A. Floor boxes shall be of the flush, multi-service type, UL listed for fire resistance. Boxes shall be of stamped, galvanized steel, fully adjustable, with a minimum capacity of 80 [50, 30] cubic inches, split into 2 [3] compartments of equal capacity by removable partitions. Boxes shall include polycarbonate [brass] gasketed and watertight covers with integral carpet flanges, dual locking flip lids on the power side and four concentric breakouts on the telecommunications side. FSR, Hubbell, or Wiremold.

*COORDINATE WITH THE ARCHITECT AND OWNER'S REPRESENTATIVE REGARDING COVER TYPE AND FINISH.*

**2.13 FLOOR POKE-THROUGH DEVICES**

- A. Floor poke-through devices shall be of the flush type, with two duplex 20A power receptacles and two telecom outlets. Unit shall include two blank inserts for unused telecom openings and the "Communication Adapter" for connecting two ½" conduits to the assembly. Flange shall be of brushed brass finish. Unit shall be UL listed for fire resistance. Wiremold RC9 Series or Hubbell PT9 Series.

**2.14 PIN AND SLEEVE CONNECTORS**

- A. Pin and sleeve connectors shall comply with IEC Standard 309. They shall consist of nylon housings with integral locking rings and cord grips that are color coded by voltage. Pins and sleeves shall be sized, arranged and keyed to prevent incorrect assembly. Pins or sleeves shall be staggered so that the ground conductor mates first, the neutral conductor mates second, and the energized conductors mate last. Provide integral safety switch interlocks where shown. Crouse-Hinds, Hubbell, Leviton or Pass & Seymour.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Provide hospital-grade receptacles in patient care areas.
- B. Except where necessary to match existing receptacles, install receptacles with their ground slots below or to the left of the line and neutral slots.
- C. Provide No. 10 AWG wire to NEMA Type 6-20R receptacles serving freezers, window air conditioners or other large appliances.
- D. Provide a separate neutral conductor for each single phase of a multiwire branch circuit. The neutrals of multiwire branch circuits shall not be shared or daisy-chained.
- E. Receptacles installed in surface raceways being fed by multiple circuits, shall have adjacent receptacles from alternate circuits.

- F. Provide GFCI receptacles or GFCI-protected branch circuits for new and existing 120 volt duplex receptacles located outdoors, in garages, on rooftops, in toilet rooms, in unfinished basements, in kitchens, and within 6 feet of water sources including sinks, cup sinks, fume hood sinks, faucets and hose bibs. Provide GFCI receptacles for water coolers and vending machines. Standard receptacles protected by an upstream GFCI receptacle or a GFCI circuit breaker are not acceptable.
- G. Provide AFCI receptacles or AFCI-protected branch circuits for new and existing 120 volt duplex receptacles located in dwelling unit common rooms, dining rooms, living rooms, bedrooms, closets, hallways and similar rooms or areas. Standard receptacles protected by an upstream AFCI receptacle are acceptable only when shown on the drawings.
- H. Provide tamper resistant receptacles for new and existing 120 volt duplex receptacles located in dwelling units, guest rooms, guest suites and child care facilities.
- I. Provide waterproof enclosures for receptacles located outdoors or when designated "waterproof" in special indoor applications. Enclosures shall remain watertight even while in use. Cantex, Carlon, Leviton or TayMac Corporation.
- J. Provide a nametag on each cover plate of new and existing light switches and receptacles identifying the panel and circuit number feeding the device. Trace the existing circuits using an electronic circuit tracer if necessary. Nametags shall consist of black text permanently laminated to adhesive backed clear nylon or Mylar tape. Brother P-Touch. Embossed plastic tape labels are not acceptable.
- K. Color code junction boxes and box covers of emergency circuits with red paint.
- L. Mark junction box covers in indelible ink with the panel and breaker numbers of the circuits contained within.
- M. Set occupancy sensors as follows:
  1. Classrooms, labs: Set for "auto on" and timer for 20-30 minutes.
  2. Offices: Set for "manual on" and timer for 20-30 minutes.
  3. Storage rooms, janitor closets, telecommunication rooms, copy rooms, kitchenettes: Set for "auto on" and timer for 5 minutes.
  4. Toilet rooms and locker rooms: Set for "auto on" and timer for 10 minutes.
  5. Corridors: Set timer for 20-30 minutes.

**3.2 FIELD QUALITY CONTROL**

- A. Perform testing in accordance with Specification Section 260800 and submit a test report.

**3.3 COMMISSIONING**

- A. Perform commissioning activities in accordance with Related Sections.

- A. Install the following equipment furnished by others.
1. Variable speed drives and variable speed motor controllers.
  2. Motor controls that are shipped loose with packaged mechanical systems.
- B. Provide the following equipment as shown.
1. Motor starters
  2. Motor control centers (MCC's)
  3. Disconnect switches
  4. Motor control devices
  5. Power factor correction capacitors

**1.3 REFERENCES**

- A. Provide motor controls in conformance with NEMA Standard ICS 2, "Standards for Industrial Control Devices, Controllers and Assemblies."
- B. Provide MCC's in conformance with UL Standard 845, "Motor Control Centers."

- C. Install MCC's in accordance with NEMA Standard ICS 2.3, "Instructions for the Handling, Installation, Operation, and Maintenance of MCC's".

**1.4 SUBMITTALS**

- A. Submit shop drawings for each MCC including dimensioned plans and elevations and component lists. Show ratings, including short time and short-circuit current ratings, and horizontal and vertical bus ampacities.
- B. Submit schedule of features, characteristics, ratings, and factory settings of individual MCC units.
- C. Submit interconnecting wiring diagrams of individual MCC units pertinent to the class and type specified for the MCC.
- D. Submit schematic diagram of each type of controller unit indicated.

**1.5 MOTOR CONTROL REQUIREMENTS**

- A. Motor starters and MCC's shall include motor short circuit and overload protection, and a motor disconnecting means as shown.
- B. Reduced voltage or soft starters shall be provided for motors over 100 horsepower as shown.

**1.6 POWER FACTOR CORRECTION CAPACITORS**

- A. Provide power factor correction capacitors for constant speed motors 50 horsepower and above. For two speed motors, provide capacitors for the low speed winding only.
  - 1. Do not provide power factor correction capacitors for motors controlled by variable speed drives, variable speed motor controllers, or electronic soft starters.
  - 2. Size capacitors to correct their motor full load power factors to at least 90 percent but not more than 96 percent.

**PART 2 - PRODUCTS**

**2.1 MEDIUM VOLTAGE MOTOR STARTERS**

**INSERT CODE GAUGE NEMA TYPE 1, NEMA TYPE 3R OR OTHER ENCLOSURE TYPE IN THE BLANKS BELOW AS APPLICABLE.**

- A. Medium voltage motor starters shall be rated 5kV, of the fused disconnect switch, vacuum breaker contactor type, with 3 motor feeder CT's and overload relays, "hand-off-auto" selector switch, red "run" pilot light, 120 volt fused control transformer, 2 N.O. and 2 N.C. auxiliary contacts, and code gauge NEMA Type 1 enclosure indoors or a NEMA Type 3R enclosure outdoors. Terminals shall be identified as accepting copper and aluminum cables. Allen-Bradley, Eaton, GE, Siemens or Square D. Provide current limiting, medium voltage fuses sized in accordance with the motor nameplates.

## 2.2 COMBINATION MOTOR STARTERS

*MODIFY PARAGRAPH BELOW TO INDICATE NUMBER AND TYPES OF CONTACTS REQUIRED.*

- A. Combination motor starters shall be of the voltage and NEMA type shown, horsepower rated for the motors shown, 3 pole, fusible disconnect switch type, with "hand-off-auto" selector switch, red "run" pilot light, 120 volt control transformer with 3 amp maximum fuses, 2 N.O. and 2 N.C. auxiliary contacts, and a NEMA Type 1 enclosure indoors or a NEMA Type 3R enclosure outdoors. Terminals shall be identified as accepting copper and aluminum cables. Provide fuse rejection kits, Class R dual element fuses and overload heaters sized in accordance with the motor nameplate. Allen-Bradley, Eaton, GE, Siemens or Square D.

## 2.3 MANUAL MOTOR STARTERS

- A. Manual motor starters shall be of the voltage shown, horsepower rated for the motors shown, single-pole, double-pole or three-pole as shown, single throw, toggle operated. Terminals shall be identified as accepting copper and aluminum cables. Provide a red "run" pilot light, motor overload heater(s), padlock provision and a NEMA Type 1 enclosure indoors or a NEMA Type 3R enclosure outdoors. Allen-Bradley, Eaton, GE, Siemens or Square D.

## 2.4 MOTOR CONTROL CENTERS

- A. Manufacturers: Subject to compliance with requirements, provide products by Allen-Bradley, Eaton, General Electric, Siemens, or Square D.
- B. Wiring Classification: Class I, Type A, as defined in NEMA ICS 2. Bus and switch terminals shall be identified as accepting copper and aluminum cables.
- C. Enclosure: Freestanding modular steel cabinets, NEMA Type 1.
- D. Compartments: Modular, with individual doors with concealed hinges and quick-captive screw fasteners.
- E. Interchangeability: Construct compartments so it is possible to remove units without opening adjacent doors, disconnecting adjacent compartments, or disturbing the operation of other units in the control center. Units requiring the same size compartment shall be interchangeable, and compartments shall be constructed to permit ready rearrangement of units.
- F. Wiring Gutters: Provide each vertical section of structure with horizontal and vertical wiring gutters for wiring to each unit compartment in each section. When aluminum feeder cables are being used, oversize the wiring gutters for aluminum cables. Provide supports to hold wiring rigidly in place.
- G. Short-Circuit Current Rating for Each Section shall be 22,000-amperes rms, symmetrical amperes.

- H. Bus Ampacity Ratings: Confirm ampere ratings 600 amperes for horizontal and 300 amperes for the vertical main buses. Install bus and bus accessories, as needed, to install additional starters in the future in locations currently marked (or shown) as 'spaces'.
- I. Horizontal Bus Arrangement: Extend main phase and ground buses with same capacity the entire length of the MCC, with provision for future extension at select either one end or both ends both ends by means of bolt holes and captive bus splice sections or approved equivalent.
- J. Short-Circuit Withstand Rating: Same as short-circuit current rating of section.
- K. Motor Controller Units: Combination controller units as specified in "Combination Starters" above; of types and with features, ratings, and circuit assignments as indicated. Provide units with full-voltage, across-the-line, magnetic controllers up to and including Size 3 installed on drawout mountings with connectors that automatically line up and connect with vertical section buses while being racked into their normal energized positions. Units shall have short-circuit current ratings, equal to or greater than, the short-circuit current rating of the MCC section.
- L. Overcurrent Protective Devices: Provide types of devices with features, ratings, and circuit assignments indicated, as specified in "Combination Starters" above. Individual feeder tap units through 225 ampere rating shall be installed on drawout mountings with connectors that automatically line up and connect with vertical section buses while being racked into their normal energized positions.
- M. Spaces and Blank Units: Compartments fully bussed and equipped with guide rails or equivalent, ready for insertion of drawout units.
- N. Spare Units: Provide type, sizes, and ratings as indicated, and install in compartments indicated "spare."
- O. Identification Products: Provide nameplates as specified in Section 260500, "Basic Electrical Materials and Methods."
- P. Finishes: Manufacturer's standard finish suitable for the environment in which installed.

## 2.5 DISCONNECT SWITCHES

- A. Disconnect switches shall be of the voltage and amperage shown, horsepower rated for motor applications, fusible or non-fusible as shown, 3 pole, NEMA Type HD heavy duty, in a NEMA Type 1 enclosure indoors or NEMA Type 3R enclosure outdoors. Terminals shall be identified as accepting copper and aluminum cables. Provide fuse rejection kits and Class R dual element fuses in fusible disconnect switches. Provide early break auxiliary contacts in motor disconnect switches used with variable frequency drives. Disconnect switches shall be lockable in the open and closed positions. Allen-Bradley, Eaton, GE, Siemens or Square D.

## 2.6 MOTOR CONTROL CIRCUIT DEVICES

- A. Motor control circuit devices shall be heavy duty, rated for operation at 120 volts AC, and contained in a NEMA Type 1 enclosure indoors or a NEMA Type 3R enclosure outdoors. Pilot lights shall be "push-to-test" transformer type. Allen-Bradley, Eaton, GE, Siemens or Square D.

## 2.7 POWER FACTOR CORRECTION CAPACITORS

- A. Power factor correction capacitors shall be unitized with metallized electrodes, polypropylene dielectric, biodegradable fluid, pressure activated circuit interrupters, and shall be self-healing. Capacitors shall be equipped with discharge resistors, replaceable current limiting fuses, and blown fuse indicators. Terminals shall be identified as accepting copper and aluminum cables. Eaton, General Electric, Myron Zucker, Siemens, Square D.
  - 1. When MCC's are provided, locate the power factor correction capacitors within the MCC structures.
  - 2. Label each capacitor as "Power Factor Correction Capacitor" and indicate the load served and the capacitor KVA rating.

## PART 3 - EXECUTION

### 3.1 INSTALLATION REQUIREMENTS

- A. Anchor MCC assemblies to steel channel sills arranged and sized in accordance with manufacturer's recommendations. Attach by tack welding or bolting. Level and grout sills flush with MCC mounting surfaces. Provide 4-inch high concrete housekeeping pads where indicated.
- B. Tighten MCC bus joint bolts and electrical connector and terminal bolts in accordance with manufacturer's installation instructions and torque-tightening values. Where manufacturer's torque values are not stated, use those specified in UL 486A and UL 486B.
- C. Motor starter hand-off-auto switches shall be wired so that in the "hand" position, the motor runs independently of automatic start/stop controls. Only the safety and modulating controls shall remain active. In the "auto" position, all start/stop controls shall be active.
- D. High temperature detectors (firestats), smoke detectors, low temperature detectors (freezestats), flow switches and other safety controls shall be energized and operational whenever the equipment they protect is operating.
- E. Motor starters shall be wired so that the motors automatically restart after a power disruption. Time delay relays shall be provided for large pumps and fans so that they can coast down before restarting after a momentary outage, and to prevent all of the large motors from restarting simultaneously.
- F. Motor controls installed below piping or in areas with fire protection sprinklers shall be protected by drip shields.

- G. Connect power factor correction capacitors between the motor starter contacts and the overload relays.

**3.2 FIELD QUALITY CONTROL**

- A. Prior to any testing, perform visual inspections to verify the following:
  - 1. The equipment is properly installed and anchored.
  - 2. The equipment is free from damage and defects.
  - 3. Shipping blocks and restraints have been removed.
  - 4. Electrical terminations have been properly tightened.
  - 5. The equipment has been properly aligned.
  - 6. The equipment has been properly lubricated.
  - 7. The ventilation louvers are open and unobstructed.
  - 8. The equipment has been thoroughly cleaned inside and outside.
  - 9. The equipment is properly labeled and labels are correct.
  - 10. The equipment is ready to be tested.
- B. Perform the following testing and submit a test report.
  - 1. Verify proper phasing of power circuits.
  - 2. Perform a 1,000-volt Megger test on buses, motor starters and disconnect switches. This test may be combined with the power cable Megger test by testing the equipment and terminated cables together.
  - 3. Perform a continuity check on motor control circuits and control panel internal wiring.
  - 4. Perform an operational test on the controls and alarms.

**3.3 COMMISSIONING**

- A. Perform Commissioning activities per Related Sections above.

*DELETE THE FOLLOWING SECTION UNLESS THE PROJECT INCLUDES UNUSUAL MOTOR CONTROLS UNFAMILIAR TO MAINTENANCE ELECTRICIANS.*

**3.4 TRAINING**

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.

*REVISE THE TRAINING REQUIREMENTS BELOW TO BE PROJECT SPECIFIC. SAMPLE TRAINING LANGUAGE IS PROVIDED, EDIT TO SUIT PRODUCT OR SYSTEM, INCLUDING DURATION. TRAINING IS NOT REQUIRED UNLESS THE PRODUCT OR SYSTEM IS COMPLEX, UNIQUE, OR NEW TO THE U-M PLANT MAINTENANCE DEPARTMENT. BECAUSE OF THE COST INVOLVED IN TRAINING DO NOT INDISCRIMINATELY SPECIFY TRAINING*

- B. Train Owner's maintenance personnel on equipment operation, start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel. Training shall occur separate from startup activities. Provide 2 hours of training minimum.

**SPECIFICATION DIVISION 26**

NUMBER            SECTION DESCRIPTION

**DIVISION 26 ELECTRICAL**

SECTION 263000 - ENGINE-GENERATOR SYSTEM

**END OF CONTENTS TABLE**

**DIVISION 26 ELECTRICAL**  
**SECTION 263000 - ENGINE-GENERATOR SYSTEM**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

*IN 2 BELOW, SELECT PROPER COMMISSIONING SPEC SECTION NUMBER.  
DELETE 3 IF NO FIRE PUMP CONNECTIONS ARE INVOLVED.*

- B. Related Sections:

1. Section 017823 - Operation and Maintenance Manual
2. Section 019100/019110 - Commissioning
3. Section 213113 - Fire Pumps
4. Section 231123 - Facility Natural Gas Piping
5. Section 235100 - Breechings, Chimneys and Stacks
6. Section 260513 - Medium, Low & Control Voltage Cables
7. Section 260526 - Grounding and Bonding for Electrical
8. Section 260533 - Electrical Materials and Methods
9. Section 260800 - Electrical Acceptance Tests

*SHOW THE GENERATOR RATINGS, AUTOMATIC TRANSFER SWITCH RATINGS AND TYPES (OPEN TRANSITION, CLOSED TRANSITION OR SOFT LOADING), CONTROL CIRCUITS AND ALARMS ON THE ONE LINE, RISER AND SCHEMATIC DIAGRAMS.*

**1.2 SUMMARY**

- A. Section Includes:

*EDIT TO MAKE PARAGRAPHS PROJECT-SPECIFIC.*

1. Packaged natural gas fueled engine-generator sets for emergency and/or standby power supply, rated as defined below and as shown on the Drawings.
2. Open transition, closed transition and/or soft-loading automatic transfer switches (ATSS) with full maintenance bypasses, rated as defined below and as shown on the Drawings.
3. Accessories as defined below.

- B. Work Not Included:

*EDIT TO MAKE PARAGRAPHS PROJECT-SPECIFIC.*

1. Natural gas piping from the utility gas regulator including a gas line isolation valve at the engine-generator, except the gas strainer, secondary regulator, gas pressure gauge and solenoid valve shall be provided with the engine-generator.
2. Exhaust system from the engine silencer to its discharge point, except the rain cap shall be provided with the engine-generator.

### 1.3 SUBMITTALS

- A. Manufacturer name and model number of major components.
- B. Shop Drawings including overall plan and elevation of major components with dimensions. Indicate the required installation and maintenance access clearances, conduit entry points, and cable termination point details.
- C. Details for weatherproof enclosure including maintenance access details and dimensions, fluid check and drain details and acoustic performance details.
- D. Battery and charger details, model numbers and interconnection details.
- E. Remote annunciator panels, points monitored, wiring requirements, and spare contacts available to other monitoring systems.
- F. Size, weight, and movement restrictions of shipping sections.
- G. Diagrams and data noting normal load, sustainable fault current during faults downstream, and emergency ratings of the system.
  1. Generator impedance data.
  2. Generator thermal damage curve.
  3. Generator breaker time-current characteristic curves.
- H. Computer simulations showing the anticipated voltage and frequency dips during the specified step loading sequence.
- I. Fuel supply flow requirements including volumetric flow rate and pressure to achieve 100 percent full load in the specified time.
- J. Projected sound level of system measured at 7 meters (23 feet) in front of the radiator. Include the load bank's sound contribution if a load bank is adjacent to the generator.
- K. Exhaust gas temperatures at full load.
- L. Complete wiring diagrams specific to this project, including control wiring between the engine-generator, automatic transfer switches, load bank, remote start and stop switches, remote annunciators, ATS position indicating lights and outputs to the Building Automation System.
- M. Automatic Transfer Switches
  1. Manufacturer and model
  2. Overall physical sizes, weights, environmental constraints.
  3. Voltage ratings, ampere ratings, number of poles.
  4. Full power schematic including maintenance bypass assembly.
  5. Affirmation that ATS is UL listed for this application.
- N. Certified reports of source quality control and factory tests prior to engine-generator delivery.

1. Certification of engine compliance to the current Environmental Protection Agency (EPA) emissions standards.
  2. Certifications of compliance with NFPA 110 for a Level 1 system, and with UL 2200.
  3. Certification of compliance with transient and voltage dip responses and steady state voltage and frequency stability.
  4. Test reports, signed and dated, for all factory and prototype tests.
- O. Installation, Operation and Maintenance (O&M) manuals per Related Sections.
- P. Commissioning reports and documentation per Related Sections.
- Q. Warranty Documentation.

**1.4 DELIVERY, STORAGE AND HANDLING**

- A. Protect the engine-generator, automatic transfer switches and accessories from the weather, moisture condensation, dirt and debris at all times. Do not stage equipment on the ground.
- B. Deliver engine-generator, automatic transfer switches and accessories adequately packaged for lifting, skidding, or rolling into final position, according to manufacturer's instructions.

**1.5 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, factory certified and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  1. EPA emissions standards for stationary internal combustion engines.
  2. IEEE C2, "National Electrical Safety Code".
  3. IEEE Standard 446, "IEEE Recommended Practice for Emergency and Standby Power Systems for Commercial and Industrial Applications".
  4. NEMA Standard ICS 10, "AC Automatic Transfer Switches".
  5. NEMA Standard MG 1, "Motors and Generators".
  6. NFPA 70, "National Electrical Code".
  7. NFPA 110, "Emergency and Standby Power Systems".
  8. UL 1008, "Standard for Automatic Transfer Switches".
  9. UL 2200, "Standard for Stationary Engine Generator Assemblies".
- C. Perform manufacturer's standard quality assurance testing on the engine-generator system prior to shipping.

**1.6 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

1. Return a call for service within 24 hours, and provide a repair person on site within 48 hours after the call.

**PART 2 - PRODUCTS**

*EDIT 2.1 TO MAKE IT PROJECT-SPECIFIC.*

**2.1 MANUFACTURERS**

- A. Engine-Generator Manufacturers: Subject to compliance with all requirements, provide generators from one of the following manufacturers:
  1. Caterpillar.
  2. Cummins Power Generation.
  3. Generac Industrial Power (up through 300 kW).
  4. Kohler Co.
- B. Open and Closed Transition Automatic Transfer Switch Manufacturers: Subject to compliance with all requirements, provide ATSS from one of the following manufacturers:
  1. ASCO.
  2. Cummins.
  3. Eaton.
  4. GE Zenith.
  5. Kohler.
- C. Soft Loading Automatic Transfer Switch Manufacturers: Subject to compliance with all requirements, provide ATSS from one of the following manufacturers:
  1. ASCO.
  2. Eaton.
  3. Kohler.

*DELETE PARAGRAPH D IF LOAD BANK IS NOT REQUIRED.*

- D. Load Bank Manufacturers: Subject to compliance with all requirements, provide load banks from one of the following manufacturers:
  1. Avtron.
  2. Sephco.
  3. Simplex.

**2.2 ENGINE-GENERATOR ASSEMBLY**

- A. The system including all components shall be NFPA 110 Level 1 compliant, UL 2200 labeled, and rated for operation in a Seismic Category B area at an elevation up to 1,000 feet above sea level.

*EDIT B TO SPECIFY GENERATOR STEP LOADING SEQUENCE. LIST THE STEPS, LOADS IN EACH STEP, AND RELATIVE PRIORITY OF EACH STEP.*

- B. The system shall be rated to provide power in four steps while complying with the specified transient and steady state voltage and frequency requirements:

1. 20 kW emergency power in 10 seconds to life safety loads and high rise elevators.
2. 150 kW required standby power in 30 seconds to mechanical system motor loads.
3. 100 kW required standby power in 45 seconds to fire pump.
4. 100 kW optional standby power in 60 seconds to laboratory equipment including computer servers and freezers.

**EDIT FOR PROJECT CONDITIONS. SELECT ONE OF THE FOLLOWING TWO GENERATOR ENCLOSURE PARAGRAPHS.**

- C. Configure the engine-generator for outdoor installation in an enclosure. Outdoor temperatures range from minus 22 degrees F to 104 degrees F (minus 30 degrees to 40 degrees C), with condensing conditions, rain, snow or ice all being possible.
- D. Configure the engine-generator for indoor installation in a room supplied with combustion and ventilation air directly from the outside. Outdoor air temperatures range from minus 22 degrees F to 104 degrees F (minus 30 degrees to 40 degrees C) and humidity may be condensing.
- E. Mount the engine-generator with vibration isolators on a welded steel base, to permit suitable mounting on any level surface.
- F. Provide engraved metal or laminated plastic nameplates indicating ratings of equipment and Manufacturer's shop order number for the equipment. Laminated plastic nameplates shall consist of black letters at least 1/4" high on a white background. The nameplates shall be affixed with machine screws.

**2.3 ENGINE**

- A. Provide a natural gas fueled, liquid cooled, naturally or blower aspirated engine of 4-cycle design, sized as required to meet the specified generator kW output continuous rating.
- B. The engine shall be factory certified as compliant with the current EPA emissions standards. When the engine is not factory certified as compliant with EPA emissions standards, provide an EPA compliant capable engine. Provide the services of an independent testing agency to perform the first field certification.
- C. Provide controls to allow emergency load pickup in 10 seconds or less, with recovery time of less than 3.5 seconds, a voltage dip of less than 39.5%, and a frequency dip of less than 1.5 Hz.
- D. The engine-generator shall produce full rated output at a gas pressure of 10"-20" inches of water column.
- E. Provide a unit mounted radiator, fan, engine-driven coolant pump, and closed coolant recovery system with the following.
  1. Coolant solution of 50 percent ethylene-glycol antifreeze and 50 percent water.
  2. A sight glass in which the coolant level can easily be observed.
  3. A reclamation bottle to contain coolant overflow.

4. Coolant fill and oil fill drain points that are easily accessible for maintenance without the use of a pump and hoses.
  5. A radiator designed to allow safe full load operation in minus 22 degrees to 104 degree F ambient temperature conditions.
  6. A duct flange on the radiator outlet.
  7. A fan guard for personnel safety.
- F. Provide an intake air filter with replaceable element.
1. Provide an electronic isochronous governor with speed sensing to maintain generator output frequency within 0.5 percent from no load to full load during steady state conditions, and within 5 percent during a 50 percent step load increase or decrease.
- G. When required to achieve full rated output at 104 degrees F ambient air temperature, provide an aftercooler to cool the combustion air. The aftercooler shall be equipped with the same accessories as the radiator.
- H. Provide a starter battery system to serve the engine-generator and automatic transfer switches, including:
1. Lead acid storage batteries, battery rack and all cables and connections. Size the battery for the range of ambient conditions and to meet the power requirements of the engine-generator and automatic transfer switches after eight cyclic attempts to start the engine.
  2. A remotely mounted battery charger with a solid state voltage regulator in a separate enclosure suitable for wall mounting near the batteries.
  3. Remote 2-wire starting utilizing a solenoid shift electric starter.
- I. Provide an engine-driven positive displacement lube oil pump to supply full pressure lubrication. Provide a replaceable, easily accessible oil filter with internal bypass.
- J. Provide an engine fuel system designed for operation on natural gas having a BTU content of 1000 BTU per cubic foot. Include a gas strainer, secondary gas regulator, gas pressure gauge downstream of the regulator, gas solenoid valve, flexible gas line, and all necessary piping, installed at the point of manufacturing, and terminating at a single pipe opening external to the mounting base.
- K. Provide sensing elements for oil pressure, coolant temperature, coolant level, overcrank, and overspeed. Connect these sensors to the control panel using a wiring harness with wire numbering at each end of the harness for easy identification. Provide each connection with a molded rubber boot to protect the connection from corrosion. Provide all wiring in flexible conduit with wiring and conduit rated for the application.

**EDIT THE VOLTAGE OF JACKET HEATER TO MATCH ELECTRICAL SYSTEM DESIGN.**

- L. Provide an engine mounted, thermostatically controlled, 208 Volt or 120 Volt, single phase, coolant jacket heater to aid in quick starting.

**EDIT THE DBA VALUE TO MATCH THE SOUND STUDY. SEE DG 263000.**

- M. Provide a silencer rated for a minimum sound attenuation of 35 dB when measured 7 meters from its discharge opening. Mount the silencer and connect to the exhaust stack using a flexible, seamless, stainless steel exhaust connection. Provide a hinged, flapper style rain cap. A stack termination that deflects exhaust horizontally, including an inverted cone style cap is not acceptable. Properly size all components to assure operation without excessive backpressure.
- N. Silencer shall be selected and sized by engine manufacturer and designed with an exhaust piping system that will not exceed manufacturer's engine backflow pressures.
- O. Provide a catalytic converter when necessary to meet EPA emissions standards. The catalytic converter may be separate from or integral to the silencer. It shall include a hatch or port for changing of the catalyst.
- P. Provide a manual blow-down ball valve no more than 78 inches above the floor in a pipe tapped into the low point of the exhaust system. Pipe the discharge to a bucket on the floor.

**2.4 GENERATOR**

- A. Provide a 4-pole, 3-phase, 4-wire, ungrounded wye, brushless 60 Hz alternator with a 2/3 pitch and fully linked amortisseur windings, rated as indicated on the Drawings. Mount and directly connect the generator to the engine shaft to ensure permanent alignment. Extend all phase and neutral leads into a connection panel.
- B. Generator shall include an integral brushless permanent magnet exciter.
- C. Generator and exciter shall have Class H insulation rated for a temperature rise of 105 degrees C over a 40 degrees C ambient.
- D. Provide a solid-state voltage regulator, separate from the exciter, to control output voltage within 1.0 percent from no load to full load during steady state conditions, and within 20 percent during a 50 percent step load increase or decrease. Upon a 50 percent step load increase, the voltage shall recover to steady state within 3.0 seconds.
  - 1. If a heavy load dips the output frequency, the voltage regulator shall have a voltage droop of 4 volts/hertz to maximize motor starting capability. The frequency at which the droop operation begins shall be adjustable, allowing the generator to be properly matched to the load characteristics and ensuring optimum system performance.
  - 2. Provide a limiting circuit in the voltage regulator to prevent output voltage surges in excess of 110 percent of rated voltage during generator set operation.

3. Provide capability of the voltage regulator to shut down on a loss of the sensing signal, to prevent an overvoltage condition from occurring. A voltage regulator that can go into a full field condition is unacceptable.
  4. Provide LED lights on the voltage regulator to indicate proper sensing and operation.
  5. Provide a minimum of plus or minus 10 percent voltage adjustment from the rated value.
  6. At no load the generator's harmonic content measured line to line or line to neutral shall not exceed 5 percent total and 3 percent for any single harmonic. The Telephone Influence Factor as determined according to NEMA MG 1 shall not exceed 50 percent.
  7. For a 3 phase bolted fault at the output terminals, the generator shall produce a minimum of 250 percent of rated full load current for not less than 10 seconds, with no damage to the engine-generator.
- E. Provide a connection panel that is an integral part of the generator to allow the Contractor a convenient location to make electrical output connections. Panel shall be NEMA 1. The panel shall include phase and isolated neutral connection bars suitable to accept Owner's 2 hole compression lugs. Provide a NEMA standard 2 hole compression lug sized for No 4/0 AWG cable for bonding of the engine-generator.
- F. Provide UL listed, 100 percent rated, generator main circuit breakers with adjustable long time, short time and instantaneous trip settings, rated as shown on the drawings. A system utilizing a manual reset generator field circuit breaker with current transformer is not acceptable. Locate the circuit breakers in the generator connection panel. Provide barriers between emergency and standby power circuit breakers.

**DELETE THE NEXT PARAGRAPH IF THE SYSTEM DOES NOT INCLUDE A  
SOFT LOADING AUTOMATIC TRANSFER SWITCH.**

- G. Provide a DC-operated shunt trip coil on each generator main circuit breaker, with coils rated at the engine starter battery system voltage. Mounting level shall be accessible from adjacent grade.

## **2.5 CONTROLS**

- A. Provide an NFPA 110 Level 1 compliant engine-generator control panel in a NEMA 1 enclosure, shock mounted to the engine-generator set by the manufacturer. The top of the panel shall be no more than 78 inches above the finished floor.
- B. Provide a fused low voltage control circuit to power the controls.
- C. Provide the following analog or digital indicators and controls as required by NFPA 110 for a Level 1 system. The AC voltmeter, AC ammeter and frequency meter shall be three separate indicators, not part of a scrollable digital display.
1. AC voltmeter.
  2. AC ammeter.
  3. Frequency meter.

4. Voltmeter and ammeter phase-selector switches.
  5. DC voltmeter (battery charging voltage).
  6. Generator voltage adjustment.
  7. Engine cool-down timer.
  8. Non-resettable engine run-time meter.
  9. Engine coolant temperature gauge.
  10. Engine lubricating-oil pressure gauge.
  11. Complete engine start-stop control, which starts the engine upon a contact closure and stops the engine upon a contact opening.
  12. Cyclic cranking limiter to open the starting circuit after eight attempts if the engine has not started within that time.
  13. 3-position RUN/OFF/AUTOMATIC selector switch. The engine-generator annunciator shall monitor this switch and provide a "Generator Trouble" alarm when the switch is not in AUTOMATIC.
  14. "Generator Running" and "Generator Trouble" output contacts for connection to the Building Automation System DDC panel.
- D. Provide a solid state annunciator complying with NFPA 110 on the control panel, complete with individual alarm lights, a common audible alarm with reset switch, and one common "Generator Trouble" output contact indicating the following engine and generator conditions:
1. Engine-generator system providing power.
  2. Overcrank shutdown.
  3. High coolant temperature shutdown.
  4. Low lube oil pressure shutdown.
  5. Overspeed shutdown.
  6. Loss of coolant shutdown.
  7. Overvoltage shutdown.
  8. Low coolant temperature alarm.
  9. High coolant temperature pre-alarm.
  10. Low coolant level pre-alarm.
  11. High battery voltage alarm.
  12. Low battery voltage alarm.
  13. Battery charger failure.
  14. Control switch not in Automatic alarm.
  15. Lamp test.
- E. Provide a remote manual stop station with a red mushroom head pushbutton and a clear plastic hinged cover in accordance with NFPA 110. The stop station shall be waterproof and suitable for wall mounting outdoors. Locate stop station remotely from the engine generator control panel and the engine generator enclosure where directed by the Owner.

## 2.6 ENGINE-GENERATOR ACCESSORIES

*DELETE A FOR AN INDOOR INSTALLATION. OUTDOORS, EDIT A.1 BY DELETING THE FLOOR REQUIREMENT IF THE ENGINE-GENERATOR WILL SIT ON A CONCRETE HOUSEKEEPING PAD.*

- A. Provide a weather-tight protective enclosure for the engine-generator set as follows:

1. Provide a heavy gauge steel enclosure constructed with corner posts. Provide a solid steel floor. Coat the enclosure with electrostatic applied zinc and finish with baked enamel paint on all interior and exterior surfaces.

*EDIT OR DELETE A.2 TO COMPLY WITH THE SOUND STUDY. DELETE THE FLOOR REQUIREMENT IF THE ENGINE-GENERATOR WILL SIT ON A CONCRETE HOUSEKEEPING PAD.*

2. Provide a sound attenuating type enclosure including louvers, with sound insulated walls, roof, floor and doors, which achieves a maximum of 70 dBA at 7 meters.
3. Provide bird screens and filters arranged to permit air circulation while excluding exterior dust, birds, rodents and the insertion of foreign objects.
4. Locate the silencer and catalytic converter inside the enclosure.
5. Provide large, easily opened doors on the enclosure to allow access to the engine, generator, radiator and aftercooler caps, all normally accessed maintenance points including oil and coolant fill, drain and filter points, and the control panel. Provide each door with stainless steel lockable hardware with identical keys. Padlocks are not acceptable.
6. Construct the enclosure of sufficient structural integrity to resist deformation and denting by people climbing on it and rugged enough to be vandal resistant. Comply with the Michigan Building Code requirements for wind loads.

*DELETE 7 ON UNITS 300 KW OR LESS.*

7. Provide the enclosure with 120 Volt dust and moisture resistant, low temperature, interior fluorescent lighting, a light switch, and two 120 Volt GFCI duplex receptacles.

*DELETE B IF A GENERATOR-BACKED 208Y/120 VOLT RECEPTACLE PANEL IS AVAILABLE NEAR BY.*

- B. Provide a 208Y/120 Volt, 60 amp minimum, 3 phase, main lugs only load center panel with circuit breakers to feed the battery charger, coolant jacket heater, motorized ventilation dampers, lights and receptacles. Mount the load center panel where shown on the Drawings.
- C. Provide a remote annunciator panel to monitor alarm and trouble conditions at the engine-generator, batteries, and battery charger. The annunciator shall be in a NEMA 1 enclosure suitable for flush or surface mounting on a wall.
  1. Provide an "Engine-generator providing power" alarm light in the annunciator.
  2. Provide the same alarm lights contained on the engine-generator control panel annunciator.

## 2.7 AUTOMATIC TRANSFER SWITCHES

*EDIT A TO MAKE IT PROJECT SPECIFIC. STATE EACH ATS VOLTAGE RATING, CURRENT RATING AND NUMBER OF POLES ON THE DRAWINGS.*

- A. Provide open-transition, closed-transition and/or soft-loading automatic transfer switches (ATSS) with full maintenance manual bypass isolation, UL 1008 listed, rated and with the number of poles indicated on the Drawings.
1. Open-transition ATSS shall perform an open transition (break-before-make) transfer from the normal to the emergency source and a break-before-make re-transfer back to the normal source. A sync-check relay shall normally delay re-transfer (when both sources are available) until both sources are close to being in synchronization.
    - a. Open-transition ATSS only shall provide a re-transfer pre-signal to elevators operating on emergency power.
    - b. The pre-signal shall be a dry contact closure at an adjustable time of 1 to 10 seconds before re-transfer.
  2. Closed-transition ATSS shall perform a closed-transition (make-before-break) transfer from the normal to the emergency source and a closed transition re-transfer back to the normal source, thus eliminating a momentary interruption of power to the loads. A sync-check relay shall normally delay transfer and re-transfer (when both sources are available) until both sources are close to being in synchronization.
  3. Soft-loading ATSS shall provide the same modes of operation as the closed-transition ATSS and include paralleling and protective control equipment to permit the following additional modes:
    - a. Soft Load Transfer Mode: Allows the ATS load to be completely isolated from the utility using a programmed soft load transfer / re-transfer sequence to or from the engine-generator.
    - b. Maintained Parallel Base Load: Establishes and maintains a safe parallel connection of the engine-generator with the normal source until a local or remote signal terminates this condition. The engine-generator shall operate at the base load level set by the Owner on the control panel.
    - c. In the event either source connected to the load becomes unacceptable while in any operating mode, the soft load ATS shall automatically isolate the emergency and normal sources and revert to operation as an open transition ATS.

**INSERT THE WORST CASE ATS 1.5 OR 3 CYCLE CLOSE ON AND WITHSTAND RMS SYMMETRICAL SHORT CIRCUIT CURRENT RATING REQUIRED BASED UPON USING ANY UPSTREAM CIRCUIT BREAKERS.**

- B. ATSS shall be rated to close on and withstand, and UL 1008 tested and labeled with a 1.5 or 3 cycle rating of [insert] amps minimum RMS symmetrical short circuit current when used with any upstream circuit breakers. ATSS not UL 1008 tested and labeled with 1.5 or 3 cycle ratings, or that have series or specific upstream breaker ratings only, are not acceptable.
- C. Four pole ATSS shall include fully rated, overlapping neutral contacts. The normal power and emergency power neutrals shall only be connected together during transfer and re-transfer operations, and only for 100 milliseconds or less.

- D. ATSS shall contain readily accessible terminal blocks for connection of external wiring.
- E. ATSS shall include a full maintenance bypass and isolation switch section to allow either the normal or the emergency source to directly feed the load while totally isolating all components in the automatic transfer switch compartment from power except from the 120 Volt control power.
  - 1. Bypass isolation switches shall be rated the same as the automatic transfer switches.
  - 2. Bypass isolation switches shall include closed transition (make before break) contacts to avoid power interruptions during transfer and re-transfer.
  - 3. Provide manual operators with operating handles capable of being used without opening the enclosure door.
- F. ATSS shall be electrically operated and mechanically held with a solenoid operated, momentarily energized electrical operator.
- G. ATSS shall be positively locked and unaffected by momentary outages, so that contact pressure is maintained at a constant value.
- H. Main switch contacts shall be of silver composition. ATSS rated 600 amperes and above shall have front removable and replaceable contacts, and main contacts shall be protected by separate arcing contacts.
- I. Inspection of contacts shall be possible from the front without disassembly of operating linkages and without disconnection of power conductors.
- J. ATSS shall be housed in NEMA 1 enclosures with a hinged front door secured by a latch. The door shall open a minimum of 90 degrees. The latch handle shall include provisions for locking in the closed position.
- K. Provide a control panel with sensing and control logic directed by a built-in microprocessor.
  - 1. Mount the control panel on the front door of the ATS enclosure. Connect the control panel to the transfer switch with an interconnecting wiring harness. Include a keyed disconnect plug with the harness to enable the control panel to be disconnected from the transfer switch for maintenance.
  - 2. Provide sensing and control logic on printed circuit boards. Provide industrial grade plug-in type interfacing relays with dust covers.
  - 3. Provide monitoring of voltage of each phase of the normal and emergency sources. Provide voltage sensing with pickup voltage adjustable from 85 percent to 100 percent of nominal dropout, adjustable from 75 percent to 98 percent of pickup setting, and independent frequency sensing with pickup adjustable from 90 percent to 100 percent of nominal.
  - 4. Provide a repetitive accuracy of all settings within plus or minus 2 percent over an operating temperature range of minus 22 degrees F to 104 degrees F.
  - 5. Provide voltage and frequency settings that are field programmable in 1 percent increments.

6. Provide a time delay on transfer to emergency power, adjustable from 0 to 5 minutes for controlled timing of transfer of loads to emergency.
7. Provide a time delay on re-transfer to normal power, adjustable from 0 to 30 minutes. Provide an automatic bypass of this time delay if the emergency source fails and the normal source is acceptable.
8. Provide momentary-type test switches to simulate a normal source failure.
9. Provide terminals for two remote controlling contacts; one that signals the ATS to transfer to emergency and the other to inhibit transfer to emergency and/or re-transfer to normal.
10. Provide auxiliary contacts rated 10 amps, 250 VAC, consisting of two contacts that are closed when the ATS is connected to the normal source and two contacts that are closed when the ATS is connected to the emergency source. Wire these contacts to terminals for connection to external wiring.
11. Provide indicating lights for the presence of normal power and presence of emergency power; one showing ATS is connected to the normal source (green) and another to indicate when the ATS is connected to the emergency source (red).

L. Provide one ATS with a system exerciser for automatic exercising and testing of the engine-generator and ATSs. Include the following features.

1. An engine start time clock capable of being programmed for time of day, day of the week, week of the month, months of the year, and duration of the exercising.
2. Time clock shall automatically adjust, resetting itself for changes between Standard Time and Daylight Savings Time.
3. Controls to enable and disable the transfer of the ATSs during engine exercising.

**EDIT THIS ARTICLE PER DESIGN GUIDELINE SBA-J FOR A HIGH RISE BUILDING OR A BUILDING WITH SMOKE CONTROLS IF THE BUILDING HAS MULTIPLE GENERATORS. DELETE THIS ARTICLE IF THE BUILDING IS NOT A HIGH RISE AND IF IT DOES NOT HAVE SMOKE CONTROLS.**

M. Provide engine-generator and ATS manual start and transfer features for installation in the Fire Command Center as required by the Michigan Building Code.

1. Provide one two-position, "Auto-Run" selector switch with one contact per ATS to manually initiate an engine-generator start and ATS transfer. In the "Auto" position, each ATS shall be in normal stand-by mode. In the "Run" position, each ATS shall simulate a loss of normal power. This shall cause each ATS to start the generator(s) and transfer to generator power when its generator is ready.
2. Provide a green "normal power" and a red "generator power" indicating light for each ATS to indicate the position of the ATS. Label each pair of lights to indicate the generator and ATS equipment numbers and the types of loads connected to the ATS.

**DELETE 3 WHEN EXISTING ATSS ARE BEING CONNECTED TO THE SYSTEM.**

3. In lieu of providing one "Auto-Run" selector switch and multiple green and red indicating lights, one ATS remote annunciator may be provided. The annunciator shall be from the same manufacturer as the ATSS. It shall include means to manually start the engine-generator and transfer all ATSS, and a green "normal power" and a red "generator power" position indicating light for each ATS.

*DELETE THIS ARTICLE IF NOT APPLICABLE. IF A LOAD BANK IS TO BE PROVIDED, SHOW ON THE PLAN DRAWINGS THE DIRECTION OF EXHAUST AIR FLOW.*

## **2.8 LOAD BANK**

- A. Provide a self-contained resistive load bank suitable for permanent installation outdoors. The load bank shall be rated for 100 percent of generator output at unity power factor, and shall include the following:

1. A weather protective, thermostatically controlled heated housing for contactors and other control components.
2. A heavy-duty blower with integral blower motor.

*EDIT 3 TO INDICATE THE DIRECTION OF AIR EXHAUST.*

3. Fixed louvers on exhaust openings capable of exhausting air upward as shown on the Drawings.
4. Corrosion resistant chromium alloy wire resistors.
5. Branch circuit fusing on all load steps.
6. 480V - 120V control power transformer.
7. Load dump circuit to disconnect the load bank automatically upon loss of normal utility power.
8. Remote control panel integral to the load bank enclosure and including the following:
  - a. Control power on-off switch.
  - b. Control power light.
  - c. Blower power light.
  - d. Air failure light.
  - e. Master load on-off switch.
  - f. Load step on-off switches.
  - g. Digital multi-function meter displaying instantaneous voltage, current, power or frequency for all 3 phases.

*DELETE THIS ARTICLE IF LOAD BANK IS BEING PROVIDED.*

## **2.9 LOAD CONNECTION BOX**

- A. Provide a generator output circuit breaker or generator bus tap located in a connection box for connection of cables to a portable load bank. Size the circuit breaker or bus tap for 100 percent full load current of the generator. Box shall have a grommeted opening sized for the cables and a cover capable of being closed while the cables are connected.

**2.10 SOURCE QUALITY CONTROL**

- A. Before shipment of the equipment, factory test the engine-generator under rated load and power factor for performance and proper functioning of controls and interfacing circuits. Tests shall include:
  - 1. Proper operation of controls, indicators and safety shutdowns.
  - 2. Single step load pick-up per NFPA 110.
  - 3. Compliance with the specified transient and steady state voltage and frequency requirements.
  - 4. Provide a certified factory test report.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Maintain Code and manufacturer defined working clearance around the generator and automatic transfer switches.

*SHOW ON THE PLAN DRAWINGS THE ORIENTATION OF ENGINE-GENERATOR.*

- B. Install engine-generator on grillage or concrete housekeeping pad as shown with sound isolation pads or springs between mounting surface and generator.
- C. Install and orient exhaust pipe rain flapper cap with hinge toward the southwest.
- D. Set timers, overcurrent protective devices, and other items needing to be set in accordance with the design documents and manufacturer's directions.

**3.2 CONNECTIONS TO REMOTE EQUIPMENT**

*DELETE ITEMS THAT DO NOT APPLY.*

- A. Install the following remote equipment where shown on the Drawings and connect them with wire in conduit to the engine-generator system.
  - 1. Engine-generator emergency stop station.
  - 2. Engine-generator remote annunciator.
  - 3. Engine-generator remote "auto-run" switch and ATS status indicators in Fire Command Center.
  - 4. Load bank.
- B. Provide control circuits from the ATSS and fire pump controller to start the engine-generator.
- C. Provide control circuits from the engine-generator and ATSS to BAS to provide "generator running", "generator trouble", and ATS "on generator power" alarms.
- D. Provide control circuits from the soft-loading ATS to its normal power and generator power feeder breaker shunt trip coils. Utilize engine-generator starter battery power to energize the coils.

- E. Provide 120 Volt control and miscellaneous power to engine-generator and automatic transfer switch auxiliaries to insure proper operation. Update panel directories and install labels indicating the sources on the auxiliary equipment.

### **3.3 SYSTEM STARTUP**

- A. Coordinate with the Plant Operations Call Center at (734) 647-2059 before starting up or testing engine-generators or automatic transfer switches.
- B. Notify OSEH at (734) 647-1143 before starting up engine-generators.
- C. Prior to any testing, perform visual inspections to verify the following:
  - 1. The equipment is completely and properly installed.
  - 2. The equipment is free from damage and defects.
  - 3. Shipping blocks and restraints have been removed.
  - 4. Electrical terminations have been properly tightened.
  - 5. The equipment has been properly aligned.
  - 6. The equipment has been properly lubricated.
  - 7. The ventilation louvers are open and unobstructed.
  - 8. The equipment is ready to be tested.
- D. Perform a continuity check and 1,000 Volt DC Megger test on the generator windings, generator circuit breakers, power circuit portions of the automatic transfer switch, and interconnecting power circuit wiring.
- E. Perform a continuity check on the control wiring.
- F. Calibrate the metering and time delay relays.
- G. Provide a factory-trained technician to check and perform an initial startup of the engine-generator and automatic transfer switches.
- H. The manufacturer's representative shall provide a certificate in writing that the equipment installation and operation meets their requirements and the project design criteria.

### **3.4 ENGINE-GENERATOR SYSTEM FIELD TESTING**

- A. Perform a load bank test of the overall system using a resistive load bank or soft-loading automatic transfer switch rated at 100 percent of generator full load for at least 120 minutes.
- B. Test the completed engine-generator system in accordance with NFPA 110 and Manufacturer's written instructions.
  - 1. Open normal power to each automatic transfer switch and observe proper operation of engine-generator and automatic transfer switch (throwing over to emergency power), noting engine-generator start, time delays and other appropriate variables.
  - 2. Restore normal power and observe proper transfer back to normal power and proper shutdown of engine-generator, again noting time delays and other appropriate variables.

3. Operate maintenance bypass switch to ensure proper operation in all modes.
  4. Demonstrate each automatic transfer switch in each mode of operation.
  5. Demonstrate the automatic test function.
- C. Test the operation of engine-generator control and alarm connections to the automatic transfer switches, remote annunciator, Fire Command Center, BAS system and accessories under all operating conditions.

*DELETE D IF THE ENGINE-GENERATOR BEING PROVIDED IS FACTORY CERTIFIED AS COMPLIANT WITH EPA EMISSIONS STANDARDS.*

- D. When the engine is not factory certified as compliant with EPA emissions standards, make all modifications and adjustments necessary to obtain field certification.

### 3.5 COMMISSIONING

- A. Perform the commissioning activities per Related Sections.

### 3.6 TRAINING

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.

*REVISE TRAINING REQUIREMENTS IN THE ARTICLE BELOW TO BE PROJECT SPECIFIC. SAMPLE TRAINING LANGUAGE IS PROVIDED, EDIT TO SUIT PRODUCT OR SYSTEM, INCLUDING DURATION. TRAINING IS NOT REQUIRED UNLESS THE PRODUCT OR SYSTEM IS COMPLEX, UNIQUE, OR NEW TO THE U-M PLANT MAINTENANCE DEPARTMENT. BECAUSE OF THE COST INVOLVED IN TRAINING DO NOT INDISCRIMINATELY SPECIFY TRAINING*

- B. Provide the Owner's personnel with training on equipment operation, start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures of the engine-generator, automatic transfer switches and accessories. Do not conduct training until after start up and commissioning is completed. Provide training documents and the approved Operations and Maintenance manuals to the Owner at least two weeks prior to the training to allow sufficient time for review.
1. Provide a minimum of 4 hours of training on the engine-generator.
  2. Provide a minimum of 4 hours of training on the automatic transfer switches.

SECTION 265100 - INTERIOR LIGHTING

**END OF CONTENTS TABLE**

**DIVISION 26 ELECTRICAL**  
**SECTION 265100 - INTERIOR LIGHTING**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

*IN 2 BELOW, SELECT PROPER COMMISSIONING SPEC SECTION NUMBER  
APPLICABLE TO THE PROJECT.*

- B. Related Sections:
1. Section 017823 - Operation and Maintenance Manual
  2. Section 019100/019110 - Commissioning
  3. Section 260513 - Medium, Low & Control Voltage Cables
  4. Section 260526 - Grounding and Bonding for Electrical
  5. Section 260533 - Electrical Materials and Methods
  6. Section 260800 - Electrical Acceptance Tests

**PART 2 - PRODUCTS**

**2.1 LIGHTING FIXTURES**

- A. Lighting fixtures shall be of specification grade and listed or labeled by Underwriters Laboratories (UL) or other approved Nationally Recognized Testing Laboratory. Provide lighting fixtures in accordance with the Fixture Schedule.
- B. Recessed lighting fixtures shall be thermally protected.
- C. LED fixtures shall comply with UL Standard 8750, with IES Standards LM-79 and LM-80, and shall have a parts and labor warranty of 5 years minimum on the fixtures and components.
1. User serviceable LED lamps and drivers shall be replaceable from the room side.
  2. Dimmable LED fixtures shall have either a 0-10 volt, 3-wire dimming driver, or a two-step (50%-100%) line voltage, two switch controlled dimming driver.

## 2.2 LAMPS

- A. Except where T-5 lamps are shown in the Fixture Schedule, tubular fluorescent lamps shall be T-8, straight tube, rapid start, multi-phosphor type with a medium bi-pin base, average rated life of 24,000 hours, 3000 initial lumens and 2820 mean lumens. T-8 and T-5 lamps shall have a correlated color temperature of 3500 degrees K and a CRI of 85 minimum. Lamps shall be designed to pass the Federal TCLP test in effect at the time of manufacture. U-tube lamps shall not be used. GE Ecolux, Osram/Sylvania Ecologic, or Philips Alto only.
- B. Compact fluorescent lamps shall be 4 pin, 13 watt minimum with a color temperature of 3500 degrees K, a CRI of 80 minimum, end-of-life protection, and suitable for use with electronic ballasts. Self-ballasted compact fluorescent lamps are not acceptable except for retrofitting existing incandescent fixtures. Osram/Sylvania, GE or Philips only.
- C. Induction lamps, LED lamps and LED fixtures with non-replaceable lamps shall have a color temperature of 3500 degrees K and a CRI of 80 minimum.
- D. Retrofit LED lamps shall comply with NEMA SSL 4.
- E. High intensity discharge (H.I.D.) lamps shall conform to their applicable ANSI codes.
- F. Incandescent lamps shall be rated 120 volts and shall have a life of 2000 hours minimum. Standard "A" Type lamps shall be inside frosted.

## 2.3 BALLASTS AND DRIVERS

- A. Except where indicated otherwise, fluorescent fixtures with multiple T-8 or T-5 lamps shall have two ballasts or a two-step (50%-100%) dimming ballast to accommodate dual switching. Fluorescent fixtures with multiple compact fluorescent lamps may have one ballast.
- B. Fluorescent ballasts shall be of the electronic, programmed rapid start, series circuited, and completely solid state. Ballasts shall be rated for the specific lamps they are supplying, shall have a maximum crest factor of 1.6, a maximum current total harmonic distortion of 10 percent, a minimum starting temperature of 0 degrees F, and a sound rating of "A". Ballasts for T-8 and T-5 lamps shall be Osram/Sylvania Quicktronic Professional, Advance Optanium, or Universal Accustart only. Ballasts for compact fluorescent lamps shall be the fixture manufacturer's standard electronic type.
- C. Fluorescent dimming ballasts shall be electronic, comply with the other requirements for electronic ballasts, be capable of smoothly and consistently dimming the lamps from full output to 10 percent or less output, and maintain a cathode voltage between 3 to 4 volts. A low voltage slide switch that is compatible with the ballast shall control light level. Osram/Sylvania Quicktronic, Lightolier or Lutron only.

- D. LED drivers shall be electronic, labeled as compliant with radio frequency interference (RFI) requirements of FCC Title 47 Part 15, comply with NEMA SSL 1, have a sound rating of "A" and be rated for a THD of less than 20 percent at all input voltages.
- E. Dimmable LED drivers shall be capable of dimming without LED strobing or flicker across their full dimming range.
- F. H.I.D. ballasts shall conform to their applicable ANSI codes. H.I.D. ballasts for use indoors in finished areas shall be of the quietest type available or shall be mounted remote from the fixtures.
- G. Ballasts and drivers shall be rated for the ambient temperatures in which they are located. Outdoor fixtures shall be equipped with ballasts or drivers rated for reliable starting to -20 degrees F. Indoor fixtures located in areas with direct sunlight or above normal ambient temperatures shall have ballasts or drivers rated at 65 degrees C minimum.
- H. Individually fused ballasts and drivers shall have their fuses accessible from outside of the fixture chassis.
- I. Induction lamp drivers shall be electronic and comply with radio frequency interference (RFI) requirements of FCC Title 47 Part 15 and be rated for a total harmonic distortion (THD) of less than 20 percent at all input voltages.

**2.4 EMERGENCY LIGHTING**

- A. Emergency lighting shall consist of normal lighting fixtures with generator or battery-inverter system backup, emergency lighting fixtures with individual battery backup, or sealed beam emergency lighting units in accordance with the Fixture Schedule.
  - 1. Battery-backed fluorescent emergency lighting fixtures shall consist of a fluorescent fixture with one or more lamps connected either to a battery pack and charger mounted remote from the fixture, or to an emergency power ballast mounted internal to the fixture. Minimum light output shall be 1100 lumens. The battery shall be nickel cadmium and sized for a minimum of 90 minutes of fixture operation. The charger shall be solid state and provide overload, short circuit, brownout and low battery voltage protection. The battery and charger shall include self-diagnostic and self-exercising circuitry to exercise and test itself for 5 minutes every month and for 30 minutes every 6 months. The fixture shall include a test/monitor module with LED status indicating lights mounted so as to be visible to the public. The fixture shall not contain an audible alarm.
    - a. Remote mounted battery packs and chargers: Chloride, Dual-Lite, Emergi-Lite, Exide Lightguard, Lightalarms, Lithonia or Sure-Lites.
    - b. Emergency power ballasts: Bodine or Lithonia

2. Battery-backed LED emergency lighting fixtures shall consist of a normal LED fixture with some or all of the LEDs connected to a battery and charger. The battery shall be nickel cadmium and sized for a minimum of 90 minutes of fixture operation. The charger shall be solid state and provide overload, short circuit, brownout and low battery voltage protection. The battery and charger shall include self-diagnostic and self-exercising circuitry to exercise and test itself for 5 minutes every month and for 30 minutes every 6 months. The fixture shall include a test/monitor module with LED status indicating lights mounted so as to be visible to the public. The fixture shall not contain an audible alarm.
3. Sealed beam emergency lighting units shall consist of sealed beam LED lamps connected to an internally mounted battery and charger. The battery shall be nickel cadmium and sized for a minimum of 90 minutes of battery operation. The charger shall solid state and provide overload, short circuit, brownout and low battery voltage protection. The unit shall be suitable for wall or ceiling mounting as required. It shall include self-diagnostic and self-exercising circuitry to exercise and test itself for 5 minutes every month and for 30 minutes every 6 months. The unit shall include a test/monitor module with LED status indicating lights mounted so as to be visible to the public. The unit shall not contain an audible alarm.

## 2.5 EXIT SIGNS

- A. Exit signs shall be of the LED type. Fluorescent, electro luminescent light panel or self-powered luminous signs shall not be used. Chloride, Dual-Lite, Emergi-Lite, Exide Lightguard, Lightalarms, Lithonia, LSI Industries, Morelite, Prescolite or Sure-Lites.
  1. LED's shall be wired in parallel to prevent multi-lamp failure, and shall be concealed within the sign by a clear panel and red optical diffuser. Power consumption shall not exceed 2 watts per face.
  2. Exit signs shall have white die cast aluminum or polycarbonate housings with universal mounting brackets; brushed aluminum stencil faces with red letters and multi-directional knockout arrows.
  3. Exit signs shall be provided with emergency battery packs and battery chargers when required. Batteries shall be maintenance free nickel cadmium, and shall be mounted within the signs.

**PART 3 - EXECUTION**

**3.1 INSTALLATION REQUIREMENTS**

- A. Support recessed troffers independently of the ceiling grid system by using two safety wires minimum on diagonally opposite corners of the fixtures. Support recessed downlights by using safety wires or by rigidly attaching the fixtures to the building structure or ceiling grid system. Removable T-bar clips shall not be used to attach fixtures to the ceiling grid system.
- B. Install fixtures level, with no gaps between adjacent fixtures or between fixtures and surrounding surfaces. Lenses, reflectors and trims of fixtures shall be properly and uniformly aligned.
- C. Where fixtures are shown with dual switches, control all inner lamps with one switch and all outer lamps with the other switch. Where dimming or occupancy sensor-controlled fixtures are shown, control the fixtures in accordance with the appropriate wiring diagram or manufacturer's instructions.
- D. Connect night light fixtures and emergency lighting fixtures to the hot (unswitched) side of lighting circuits.
- E. Provide an individual feed with ground conductor from a junction box to each lighting fixture. Lighting fixtures shall not be daisy-chained.
- F. Drops to recessed fixtures may be flexible metallic conduit, or manufactured wiring systems may be used where accessible. Fixtures shall be provided with sufficient length to permit removal and lowering of the fixtures 12" below the ceiling.
- G. Provide green grounding conductors back to the panel ground for lighting circuits. Raceways shall not be used as grounding conductors.
- H. Fixtures shall have their exterior labels removed and shall be thoroughly cleaned. Burned out lamps shall be replaced.
- I. Locate emergency lighting remote battery packs and remote test/monitor modules identically so their status indicating lights are visible to the public and they form a straight line when viewed from the end of the corridor or room. Where a suspended ceiling exists, center the status indicating lights in adjacent ceiling tiles.
- J. Mount sealed beam emergency lighting units where shown and aim their lamps to light the egress path as uniformly as possible.
- K. When emergency lighting fixtures contain audible alarms, disable the alarms in accordance with manufacturer's instructions.

**3.2 FIELD QUALITY CONTROL**

- A. A visual inspection shall be performed to verify cleanliness and alignment of the fixtures. Misalignment and light leaks shall be corrected, and rattles due to ventilation system vibration shall be eliminated.
- B. An operational test shall be performed to verify that all fixtures light properly, and are switched according to the drawings.

**3.3 COMMISSIONING**

- A. Perform Commissioning activities per Related Sections above.

*DELETE THE FOLLOWING SECTION UNLESS THE PROJECT INCLUDES UNUSUAL LIGHTING UNFAMILIAR TO MAINTENANCE ELECTRICIANS.*

**3.4 TRAINING**

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.

*REVISE TRAINING REQUIREMENTS IN THE ARTICLE BELOW TO BE PROJECT SPECIFIC. SAMPLE TRAINING LANGUAGE IS PROVIDED, EDIT TO SUIT PRODUCT OR SYSTEM, INCLUDING DURATION. TRAINING IS NOT REQUIRED UNLESS THE PRODUCT OR SYSTEM IS COMPLEX, UNIQUE, OR NEW TO THE U-M PLANT MAINTENANCE DEPARTMENT. BECAUSE OF THE COST INVOLVED IN TRAINING DO NOT INDISCRIMINATELY SPECIFY TRAINING*

- B. Train Owner's maintenance personnel on equipment operation, start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel. Training shall occur separate from startup activities.
  - 1. Provide 2 hours of onsite training minimum.

**1.2 SUMMARY**

*VERIFY THE LIGHTING DRAWINGS CONTAIN ALL APPLICABLE LIGHTING  
FIXTURE SCHEDULES AND STANDARD DETAILS.*

- A. Section Includes:
1. Provide all equipment and materials required for pedestrian (security), street and parking lot outdoor lighting as shown on the Drawings.
- B. When indicated by the Contract Documents that the Owner is furnishing fixtures, poles, lamps, and standard anchor bolts, contact the Owner's Outside Lighting Shop at 734-647-2049 or 734-355-9396 to pick up the Owner furnished items from the North Campus warehouse on Baxter Road.
- C. See the fixture schedules and details on the drawings for information on the fixtures, poles and accessories to use.

**1.3 ADMINISTRATIVE REQUIREMENTS**

- A. Contact MISS DIG at 800-482-7171 or 811 before performing any excavation work.
- B. Provide barricades around open holes and trenches. Provide temporary bridges over trenches cut through major sidewalk routes. Major sidewalk routes shall not be closed to pedestrian traffic.

- C. Contact the Owner's Electrical Inspectors 734-764-2457 for inspections before backfilling excavations and before energizing circuits.
- D. Until completion of new outdoor lighting, maintain the Owner and Detroit Edison's existing outdoor lighting. Coordinate with the Owner's Outside Lighting Shop at 734-647-2049 or 734-355-9396 for maintenance and repairs to existing lighting.

**1.4 SUBMITTALS**

- A. Lighting equipment specifications and manufacturer cut sheets, including:
  - 1. Luminaire types, descriptions, dimensions, optics, materials, finishes and photometric data.
  - 2. Pole and/or mounting support descriptions, dimensions, materials and finishes.
  - 3. Lamp type for each luminaire, and lamp wattage, color temperature, color rendering index, and related life.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
- C. Submit marked up "as built" drawings showing the actual locations of lighting poles, sleeves and junction boxes, circuit numbers for all loads, and all deviations from the design. Dimension the locations of sleeve ends, conduits, and junction boxes from a permanent building or landscape feature.

**1.5 QUALITY ASSURANCE**

***INCLUDE PARAGRAPHS A AND B IN EVERY SPECIFICATION SECTION.  
EDIT THE REFERENCE STANDARDS FOR PROJECT REQUIREMENTS.***

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  - 1. IEEE C2, National Electrical Safety Code.
  - 2. NFPA 70; National Electrical Code.
  - 3. MDOT Standard Specifications for Construction.
  - 4. AASHTO, American Association of State Highway and Transportation Officials
  - 5. Aluminum Association Standards.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

**1.6 WARRANTY**

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 PEDESTRIAN LIGHTING**

A. Fixtures

1. Fixtures shall be Philips Lumec "New Westminster" (NW) Series only.
2. Fixtures shall be of the round globe type, suitable for mounting singly or in multiples on round, tapered aluminum poles.
3. Globes shall be 20-inch diameter and made of clear acrylic with a partially obscure, non-diffusing finish.
4. The lower half of each globe shall be guarded by a cast aluminum, 6-spoke basket that supports a 2-inch-wide horizontal aluminum band around the luminous center of the globe.
5. Fixtures shall be equipped with a round, spun aluminum reflector, porcelain medium base lamp socket with spring loaded center contact, and high power factor, copper wound, multi-tap, CWA ballast. Ballast shall be capable of starting at minus 20 degrees F. Socket and ballast shall be wired with a polarized quick disconnect plug to permit removal for maintenance.
6. Fixtures shall be equipped with a vertical burning, 100-watt, 3200 degrees K, coated metal-halide, lamps, having a nominal output of 9,000 lumens and a nominal life of 40,000 hours. Lamps shall be Venture MHL-100W/U/ED17/PS/740 only.

B. Poles

1. Poles shall be of the round, tapered, aluminum type. Pole height shall be in accordance with the Lighting Fixture Schedule.
2. Poles shall be of one-piece construction with a 0.120 inch minimum wall thickness, a 5-inch diameter at the base and a 4-inch diameter maximum at the top. Any longitudinal welds shall be ground flush and unnoticeable.
3. Poles shall include a base plate 5/8 inch minimum thick. The base plate shall be continuously welded both top and bottom (or inside and outside) to the pole base.
4. Pole base plates shall have four slots suitable for installing over four 3/4 inch diameter anchor bolts set in a 9-1/2- inch- diameter bolt circle pattern.
5. Poles shall include a reinforced 2-inch by 4-1/2-inch hand hole located in the base. The hand hole shall include an internal ground lug and a gasketed cover plate that is firmly held in place by two tamper resistant screws.
6. Poles shall be mechanically cleaned and painted with a black polyester powder coat outside to match the light fixtures.
7. Each pole shall include a one-piece, decorative, cast aluminum base bolt cover painted to match the pole.

8. The poles shall be from the same supplier as the lighting fixtures.
- C. Anchor bolts for pedestrian lighting fixtures shall be 3/4 inch diameter by 20 inches long with a 3 inch "L", fully hot dip galvanized steel having a yield strength of 36,000 psi, each with two zinc plated flat washers and hex nuts.
- D. Column and wall mounted fixture bases shall be fabricated from aluminum pipes and plates in accordance with the drawings, and shall be painted to match the lighting fixtures.

## 2.2 STREET AND PARKING LOT LIGHTING

### A. Fixtures

1. Fixtures shall be Lithonia KSF2 Series only. Fixtures shall be of the low profile, sharp cutoff, shoebox type with horizontal 250-watt metal halide lamps, suitable for mounting singly or in doubles on round, tapered, aluminum poles. Unless noted otherwise, the fixtures shall have Type III light distribution.
2. Fixture housings shall be rectangular, nominally 20 inches long by 15 inches wide by 7 inches deep, of one-piece die cast aluminum construction with continuously welded seams.
3. Fixture door frames shall be cast or extruded aluminum with stainless steel hinge pins and quick release latches; 0.25 inch thick minimum clear tempered glass lens and weatherproof silicone rubber or EPR gasket.
4. Fixtures shall be equipped with a formed, specular, anodized aluminum reflector, position oriented porcelain mogul base lamp socket with spring loaded center contact, and high power factor, copper wound, multi-tap, CWA ballast. Ballast shall be capable of starting at minus 20 degrees F. Socket and ballast shall be wired with a polarized quick disconnect plug to permit removal for maintenance.
5. Fixtures shall be equipped with a horizontal burning, position oriented, 250-watt, 3200 degrees K, coated metal halide, lamps having a nominal output of 21,000 lumens and a nominal life of 10,000 hours. Lamps shall be Osram/Sylvania MS250/3K/HOR.
6. Fixture external surfaces shall be mechanically cleaned and finish painted with a black polyester powder coat.
7. Fixtures shall mount to poles with rectangular, extruded aluminum arms nominally 9 inches long.
8. Except where shown otherwise, fixtures shall be provided with a photocell for on-off control. Photocells shall be mounted on the top of the housing.
9. Fixtures shall be UL 1572 Listed as suitable for wet locations.

### B. Poles

1. Provide tapered aluminum poles as follows:
  - a. For 12 foot tall poles, Valmont Model 1108-30506T4L only.
  - b. For 20 foot tall poles, Valmont Model 1908-40705T4 only.
  - c. For 25 foot tall poles, Valmont Model 2408-45806T4 only.
  - d. For 30 foot tall poles, Valmont Model 2908-45808T4 only.

2. Poles shall be of the round, tapered, aluminum type. Poles shall be of seamless, one-piece construction with a uniform taper of approximately 0.14 inches per foot from base to top. The poles shall be of the heights shown on the plan drawings.
  3. Poles shall be 6063 alloy aluminum, 0.250 inches thick, and heat treated to achieve a T6 temper, having a yield strength of 50,000 psi minimum and an ultimate tensile strength of 65,000 psi minimum.
  4. Poles shall be rated for a continuous wind of 80 MPH plus a gust factor of 1.3 per AASHTO, an Effective Projected Area (EPA) of 20.0 minimum, and a fixture load of 400 pounds minimum.
  5. Poles shall include a base plate of A356 alloy aluminum, 1 inch minimum thick, and heat treated to achieve a T6 temper, having a minimum yield strength of 36,000 psi. Base plate shall be continuously welded both top and bottom (or inside and outside) to the base of the pole.
  6. Pole base plates shall have four slots suitable for installing over four 1-inch- diameter anchor bolts set in an 11-inch- diameter bolt circle pattern.
  7. Poles shall include a reinforced 4-inch by 6-inch hand hole located in the base. The hand hole shall include an internal ground lug and a gasketed cover plate that is firmly held in place by two tamper resistant screws.
  8. Poles shall be mechanically cleaned, and either plastic resin coated or polyester powder coated inside over their entire length. Poles shall be painted with a black polyester powder coat outside to match the specified light fixtures.
  9. Each pole shall be provided with a 5/16 inch-18 tapped provision for a ground connector.
- C. Anchor bolts for street and parking lot lighting shall be 1 inch diameter by 42 inches long with a 4 inch "L", fully hot dipped galvanized steel having a yield strength of 36,000 psi. Each bolt shall be provided with two zinc plated flat washers and two galvanized hex nuts.
- D. Provide Valmont Nut Cover, "Dart Square - 2T" Model only, made of A356 alloy aluminum and finished to match the pole. The nut cover shall be a single unit, installed in two pieces, covering all four nuts and the base plate. Pieces shall be held together and anchored to the pole base with stainless steel set screws.

### 2.3 BANNER ARMS

- A. Banner arms shall be provided by the banner supplier and are not the responsibility of the pole supplier.
- B. Banner arms shall be 6061 cast aluminum, heat treated to a T6 temper, welded to the arm base plate. Banner arm length (banner width) shall be 24 inches maximum for pedestrian light poles and 30 inches maximum for street light poles as indicated in the University Banner Guidelines.
  1. Top banner arms for pedestrian light poles shall be Valmont "BannerSaver" Model, break-away type with self-restoring feature. The break-away/self-restoring hardware, shall be welded directly to the arm base plate.

2. Top banner arms for street light poles shall be either Valmont non-break-away type or Valmont "BannerSaver" Model, break-away type with self-restoring feature. The non-break-away arm, or the break-away/self-restoring hardware, shall be welded directly to the arm base plate.
3. Bottom banner arms for all poles shall be Valmont "BannerSaver" Model, break away type with self-restoring feature. The breakaway/self-restoring hardware shall be welded directly to the base plate.
4. Banner Arm base plates shall be anchored to the poles with adjustable aluminum compression straps or aluminum clamps, finished to match the poles. Arms and straps/clamps shall be removable without any damage to the pole or to its finish. Drilling of any holes for banner arm or hardware attachment is not allowed.
5. End caps for banner arms shall be A356 alloy aluminum, standard type, attached to the arm per manufacturer's standards.
6. Mounting heights of the bottom arms shall be 13 feet clear above the pole base on street light poles, and 6 feet 8 inches minimum clear above grade on pedestrian light poles.

#### **2.4 CONCRETE**

- A. Concrete for lighting pole and emergency telephone kiosk bases shall be 6 bag, minimum mix, with aggregate not exceeding 3/4 inch, 3000 psi minimum compressive strength after 28 days, air content minimum 5 percent and maximum 7 percent.

#### **2.5 RACEWAYS**

- A. Conduits indoor, in general areas shall be electrical metallic tubing (EMT) with steel set screw fittings.
- B. Conduits outdoors (except where galvanized rigid steel is shown on the drawings) shall be Schedule 40 PVC with matching fittings, UL Labeled for use with 90 degrees C cables. Acceptable Manufacturers:
  1. Cantex.
  2. Carlon
  3. National Pipe & Plastic.
- C. Sleeves for underground outdoor lighting and irrigation installations shall be 6" Schedule 40 PVC, UL Labeled for use with 90 degrees C cables. Acceptable Manufacturers:
  1. Cantex.
  2. Carlon.
  3. National Pipe & Plastic.
- D. Junction boxes shall be pre-cast polymer concrete or polymer foam, heavy duty rated, one size larger than required by the NEC, bottomless, with a single piece cover engraved "UM Outside Lighting" and attached with pentahead stainless steel bolts. Provide metal barriers in junction boxes containing circuits of two different voltages or containing both power and telephone circuits. Acceptable Manufacturers:

1. Carson-Brooks.
2. CDR Systems.
3. Quazite.

E. Marking tape shall be plastic, vinyl, or Mylar, 6 inches wide, red for electrical power circuits and orange for telephone circuits, and labeled to indicate the type of circuit buried below.

## **2.6 WIRING**

- A. Wire and cable for general indoor use shall be single conductor stranded copper; with Type THHN insulation rated 90 degrees C, 600 volts.
- B. Wire for use outdoors shall be single conductor stranded copper; with Type XHHW insulation rated 90 degrees C in dry locations and 75 degrees C in wet locations, 600 volts.

## **2.7 TERMINATIONS**

- A. Connectors for splicing and terminating lighting conductors in junction boxes shall be Homac 3 RAB4 or RAB6 "Flood Seals" only.
- B. Connectors for terminating lighting conductors in poles shall be Utilco SLC4-01-L terminal blocks with Utilco No. R6131 boots or Polaris IPL Series terminal blocks only.
- C. Connectors for terminating lighting conductors in column and wall mounted fixture bases only shall be copper split bolt connectors with full tin plating. Blackburn 1HPW for No. 3 AWG wire and 4HPW for No. 6 or No.8 AWG ground wire.

## **2.8 FUSING**

- A. Fuse holders for lighting fixtures shall be Bussmann TRON No. HEB-AA in-line, waterproof fuse holders rated 300 volts and 30 amps.
- B. Fuses for lighting fixtures (unless shown otherwise on the drawings) shall be Bussmann No. KTK-5, rated 5 amps.

## **2.9 CONTROLS**

- A. Lighting contactors shall be of the voltage and amperage shown, 3 pole, fused disconnect switch type, electrically held, with a hand-off-auto switch and a 120 volt control power transformer. Lighting contactors located indoors shall be installed in NEMA 1 enclosures, and lighting contactors located outdoors shall be installed in NEMA 3R stainless steel enclosures with pad lockable doors. Square D Class 8903 only.
- B. Timers for lighting contactor control (only when Building Automation System DDC control is not available) shall be electronic astronomical type, with at least one Form C contact rated 120 volts, 10 amps. Timer shall automatically adjust for changing sunrise and sunset times, have a battery backup sized for 24 hours minimum, and shall be mounted in a NEMA 1 surface mounted box. Paragon EC71ST or Tork DZS100.

## 2.10 CIRCUIT REQUIREMENTS

- A. Unless shown otherwise on the drawings, provide circuits as follows:
  - 1. Feed parking lot lighting, pedestrian lighting, street lighting, emergency telephone kiosks, illuminated signs, and parking lot electric gates and meters all from separate circuits.
  - 2. Feed pedestrian lighting on opposite sides of a street or sidewalk from separate circuits.
  - 3. Feed pedestrian, street, and parking lot lighting at 277 volts from a 480Y/277 volt, three-phase circuit. Feed emergency telephone kiosks, illuminated signs and parking lot electric gates and meters at 120 volts.
  - 4. Pedestrian and street lighting circuits shall consist of four No.4 AWG conductors plus a No. 8 AWG ground conductor in a 1-1/4" conduit.
  - 5. Emergency telephone kiosk, illuminated sign and parking lot electric gate and meter power circuits shall consist of two No. 8 AWG and one No.12 AWG ground conductors in a 1-1/2 inch conduit.
  - 6. Telecommunications conduits to emergency telephone kiosks and parking lot electric gates and meters shall be 1 inch minimum and shall include a nylon pull string.
- B. Provide a means for expanding the outdoor lighting circuits. Stub out a spare 1-1/4-inch conduit from each pole base indicated by "STUB SPARE C" on the plan drawings.

## 2.11 CONTROL REQUIREMENTS

- A. Switch the outdoor lighting with lighting contactors where shown. Lighting contactors shall be controlled by normally closed contacts of a Building Automation System DDC control panel (the preferred option whenever DDC is available), or a 24-hour timer, or a photocell (when DDC is not available). The control circuit shall be wired to energize the lighting upon a failure of the DDC control panel, timer, or photocell. Contact the Owner's Utilities Department (734-647-0962) to coordinate connection to a DDC control panel.
- B. Where specified in the Lighting Fixture Schedule, provide a photocell on top of each fixture housing.

## PART 3 - EXECUTION

### 3.1 EXAMINATION AND PREPARATION

- A. Remove existing conduits and pole bases completely when demolishing existing lighting. Direct buried wiring may be abandoned in place, unless shown otherwise.
- B. Where sidewalk sections must be removed for installation of outdoor lighting, remove the sidewalk sections completely from joint to joint.

- C. Where asphalt must be removed for installation of outdoor lighting, saw cut the asphalt in two, straight, parallel lines, with clean edges.

**3.2 EXCAVATION AND BACKFILL**

- A. Excavate and maintain trenches according to applicable Safety and Code requirements. Protect existing features.
- B. Backfill excavated trenches in accordance with the drawings. Excavated materials may be used to backfill the trench only if the backfill is sand or suitable soil that conforms to Section 312000 Earth Moving backfill material requirements, that is free of rocks and debris over 3/4 inch. . Dispose of unsuitable material, clay or rocky excavated material, and replace with MDOT Class II sand.
- C. Mark sleeves and conduits for their entire length with a marking tape buried 12 inches above the top of the sleeve or conduit.
- D. Backfill excavated trenches in 6-inch layers and mechanically compact to 98 percent compaction.
- E. Backfill and mechanically compact holes left by demolished pole bases with MDOT Class II sand or clean dirt to a depth of 6 inches below grade. Backfill the last 6 inches with topsoil. Reseed holes in lawn areas.

**3.3 SLEEVE INSTALLATION**

- A. Sleeves shall be buried at a minimum depth of 24 inches to their top. Sleeves shall extend a minimum of 12 inches beyond the pavement they pass under.
- B. Sleeves shall be taped closed at both ends with duct tape.
- C. Sleeve ends shall be marked with steel stakes, pipes or conduits that are 3 feet long minimum, driven vertically down at the sleeve ends to a depth of 6 inches below grade to their top.
- D. Where lighting and irrigation sleeves are installed adjacent to each other, maintain a minimum of 2 feet between them.

**3.4 CONDUIT INSTALLATION**

- A. Conduit bends shall not be smaller than the radius of standard manufactured elbows (7-1/4 inches bend radius for 1-1/4 inches conduit).
- B. Install conduits parallel to or at right angles to building lines and site features.
- C. Locate underground conduits as close to curbs and sidewalks as possible to avoid interference with future landscaping.
- D. Where conduits cannot be installed at a minimum depth of 24 inches, install rigid steel conduits or pour concrete over the conduits in accordance with the NEC.

**3.5 JUNCTION BOX INSTALLATION**

- A. Keep the number of junction boxes to a minimum. Make splices in pole bases wherever possible.
- B. Locate junction boxes in mulched areas wherever possible. The top of the junction box shall be level with the existing grade.
- C. Install junction boxes on a base of pea gravel or MDOT Class II sand at least 1-foot deep.

**3.6 FIXTURE AND POLE INSTALLATION**

- A. Locate fixture bases on centerlines where centerlines are shown on the plan drawings. Install fixtures shown on the plan drawings in a straight line.
- B. Lubricate anchor bolt threads with an anti-seize compound.
- C. Align pole with hand hole away from the sidewalk.
- D. Install poles using 2 flat washers and 2 hex head nuts on each anchor bolt so that poles can be leveled. Poles shall be plumb. The center band of pedestrian lighting fixtures shall be level.
- E. Align pedestrian lighting fixtures so that one spoke of the globe basket is perpendicular to the street, sidewalk or wall.
- F. Provide adequate slack in the pole conductors so that the conductors can be pulled out of the handhole for maintenance.

**3.7 GROUNDING**

- A. Provide a ½ inch minimum diameter copper clad ground rod, 8-inch minimum length, for each light fixture pole.
- B. Provide exothermic weld type ground connections or acorn clamps for concealed, underground and concrete encased ground connections and for splices and taps of ground conductors.
- C. Provide No. 10 AWG green insulated grounding conductors in lighting fixture poles.

**3.8 CONCRETE WORK**

- A. Install light pole and emergency telephone kiosk concrete bases according to details. Provide specified concrete mix.
- B. Exposed portions of light pole and emergency telephone kiosk concrete bases shall be free of voids and honeycombs.
- C. Provide a uniform, 1-inch, 45-degree chamfer on all light pole and emergency telephone kiosk concrete bases.

**3.9 ADJUSTING, CLEANING, PROTECTION**

- A. Restore concrete sidewalks and asphalt in accordance with the applicable Division 02 and 03 Sections.
- B. Restore lawn areas to Owner's satisfaction, according to the Lawn Repair Section and the Contract Documents.

**3.10 FIELD QUALITY CONTROL**

- A. Outdoor Lighting Work will be inspected by Owner. Contact the U-M Code Inspection Department at 734-764-2457 before pouring concrete, backfilling excavations, and energizing circuits to arrange for inspections.

**3.11 COMMISSIONING**

- A. Perform commissioning activities per Related Sections.

*DELETE THE FOLLOWING SECTION UNLESS THE PROJECT INCLUDES UNUSUAL LIGHTING UNFAMILIAR TO MAINTENANCE ELECTRICIANS.*

**3.12 TRAINING**

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.

*REVISE TRAINING REQUIREMENTS IN THE ARTICLE BELOW TO BE PROJECT SPECIFIC. SAMPLE TRAINING LANGUAGE IS PROVIDED, EDIT TO SUIT PRODUCT OR SYSTEM, INCLUDING DURATION. TRAINING IS NOT REQUIRED UNLESS THE PRODUCT OR SYSTEM IS COMPLEX, UNIQUE, OR NEW TO THE U-M PLANT MAINTENANCE DEPARTMENT. BECAUSE OF THE COST INVOLVED IN TRAINING DO NOT INDISCRIMINATELY SPECIFY TRAINING*

- B. Train Owner's maintenance personnel on equipment operation, trouble-shooting, servicing and preventative maintenance procedures. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel.

- 1. Provide training of 1 hour minimum.

**SPECIFICATION DIVISION 27**

NUMBER            SECTION DESCRIPTION

**DIVISION 27 COMMUNICATIONS**

SECTION 272000 - VOICE AND DATA COMMUNICATIONS

**END OF CONTENTS TABLE**

**DIVISION 27 COMMUNICATIONS**  
**SECTION 272000 - VOICE AND DATA COMMUNICATIONS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

*IN B.2 BELOW, SELECT PROPER COMMISSIONING SPEC SECTION NUMBER  
APPLICABLE TO THE PROJECT.*

- B. Related Sections:

1. Section 017823 - Operation and Maintenance Manuals.
2. Section 019100/019110 - Commissioning.
3. Section 260513 - Medium, Low & Control Voltage Cables.
4. Section 260526 - Grounding and Bonding for Electrical.
5. Section 260533 - Electrical Materials and Methods.
6. Section 260543 - Underground Services for Electrical Systems.

**1.2 SCOPE OF WORK**

- A. Section Includes:

1. Communications underground ducts, manholes, cable trays, conduits, floor sleeves, J-hooks, surface raceways, outlet boxes and cable pull strings as shown on the drawings.
2. Lighting, power and grounding in Building Entrance (BE) rooms and Telecommunications Rooms (TRs) as shown.

- B. Work Not Included:

1. Communications backboards, equipment racks, equipment, cable ladders, cable managers, cables, terminations, jacks and outlet cover plates will be provided by others.

**1.3 DEFINITIONS**

- A. The Building Entrance room (BE) is the main termination point for interconnecting cables external to the building with cables internal to the building. In addition, the BE may house communications equipment and electronic equipment of other systems. A BE may also serve as a combination BE and TR and serve local telecommunication work outlets.
- B. Telecommunications Rooms (TRs) are distribution and termination rooms that serve the telecommunication work outlets in the immediate area. TRs may house communications equipment and electronic equipment of other systems.

**1.4 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers referenced in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  - 1. ANSI/TIA/EIA-568-C Commercial Building Standards for Telecommunications Cabling Standards.
  - 2. ANSI/TIA/EIA-569-C Commercial Building Standards for Telecommunications Pathways and Spaces.
  - 3. ANSI/TIA/EIA-607-B Commercial Building Grounding and Bonding Requirements for Telecommunications.

**BELOW IS U-M STANDARD WARRANTY LANGUAGE. ALL WARRANTIES ARE TO START FROM THE DATE OF SUBSTANTIAL COMPLETION. DO NOT USE TERMS LIKE "UPON OWNER ACCEPTANCE" OR "18 MONTHS FROM SHIPMENT OR 1 YEAR FROM STARTUP, WHICHEVER OCCURS FIRST", ETC.**

**1.5 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

- A. Communications pathways, lighting, power and grounding shall be in accordance with the Related Sections.
- B. Equipment rack power strips shall be 125 volt, 20 amp, 3 wire, single circuit type with 10 NEMA 5-20R single receptacle outlets on 6" centers, Wiremold #V24GB506.

**PART 3 - EXECUTION**

**3.1 RACEWAY INSTALLATION REQUIREMENTS**

**VERIFY THE MINIMUM CONDUIT SIZE TO FEED OUTLET BOXES. SOME OWNERS MAY WANT A DIFFERENT MINIMUM SIZE. IF SO, CHANGE THE BELOW SIZES ACCORDINGLY, BUT THE 1-1/4" TO A SURFACE RACEWAY SHALL REMAIN UNCHANGED.**

- A. Minimum conduit size shall be 1" for serving one outlet box. Daisy chaining of outlet boxes is unacceptable. Instead, multiple outlets may be served from an appropriately sized junction box. The conduit feeding the junction box shall be sized as follows:
  - 1. 1-1/4" for serving two outlet boxes.
  - 2. 1-1/2" for serving three outlet boxes.
  - 3. 1-1/4" for serving up to three outlets in a surface raceway.

- B. Communications ducts and conduits entering the building from the outside shall transition to galvanized rigid steel conduit or intermediate metal conduit at the building wall, and shall continue as galvanized rigid steel conduit or intermediate metal conduit until entering the BE room or TR. Maximum conduit length to meet Code shall be 50'. Notify the Project Manager if this length is exceeded.
- C. Riser conduits and sleeves connecting BE rooms and TRs shall be 4". Install conduits and sleeves as close as possible to the walls, at the locations shown. Stub up floor conduits and sleeves 4" AFF. Stub wall conduits and sleeves 4" into the room, and cable trays 6" into the room.
- D. When conduits are needed to bypass a large interference in a cable tray run, the cross sectional area of the conduits shall equal or exceed the cross sectional area of the cable tray. These bypass conduits shall have sweeps and bends as noted below, and shall be braced well to allow pulling of communication cables.
- E. Conduit bends and offsets shall be made with sweeps or manufactured elbows. Conduits shall not have more than the equivalent of 2 ninety-degree bends between pull points. Pull boxes shall not be used to make directional changes. Provide pull boxes in straight sections of conduit only.
- F. Provide insulated bushings on both ends of conduits.
- G. Provide double gang sheet metal outlet boxes 2-1/8" deep, and provide double gang plaster rings.
- H. Bond the entire raceway system together and connect it to the ground system.
- I. Provide nylon pull strings in conduits and sleeves. Label pull strings with room number and wall (N, S, E, or W) of the outlet.

### 3.2 BE ROOM AND TR REQUIREMENTS

- A. Provide ceiling-hung lighting with a wall switch at the door.
- B. Provide power to HVAC equipment.

**COORDINATE WITH ITSComm AND EDIT THE CIRCUIT REQUIREMENTS ACCORDINGLY.**

- C. Provide dedicated 120 volt, 20 ampere circuits to duplex receptacles 48" AFF and 10' apart on the plywood backboards. Plywood backboards are by others.
- D. Provide dedicated 120 volt, 30 ampere circuits to NEMA L5-30R receptacles and provide dedicated 120 volt, 20 ampere circuits to power strips on the telecom equipment racks. See Standard Detail 27200003.
- E. In rooms with DAS equipment plywood backboards, provide two dedicated 120 volt, 20 ampere circuits to quad receptacles on each DAS backboard.
- F. Provide one 120 volt, 20 ampere normal power circuit to a duplex receptacle on the wall near the door.
- G. Coordinate all receptacle locations with ITSComm.

- H. Provide a 1" wide x 12" long x 1/4" thick copper ground bus bar where shown. Connect it to the unit substation room ground bus bar and to the ground bus bars in the receptacle panels feeding the telecom room receptacles. Ground cables shall be No. 6 AWG green insulated, stranded, copper. The resistance to building ground shall be 1 ohm maximum.

**3.3 COMMISSIONING**

- A. Perform Commissioning activities per Related Sections above.

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

- B. Related Sections:

*IN 1 AND 2 BELOW, DELETE SUSTAINABLE DESIGN IF NOT APPLICABLE TO THE PROJECT. SELECT PROPER COMMISSIONING SPEC SECTION NUMBER APPLICABLE TO THE PROJECT.*

- C. Related Sections:

1. Section 018113 - Sustainable Design Requirements
2. Section 019100/019110 - Commissioning
3. Section 017823 - Operation and Maintenance Manual
4. Section 260513 - Medium, Low & Control Voltage Cables
5. Section 260526 - Grounding and Bonding for Electrical
6. Section 260533 - Electrical Materials and Methods
7. Section 260800 - Electrical Acceptance Tests

**1.2 SUMMARY**

- A. Provide all equipment, materials, labor and services necessary to furnish, install, test and turn over to the Owner the following electrical work as required by these specifications and as shown on the drawings.

1. GPS Wireless Clocks
2. GPS Signal Transmitters

- B. Participate in project coordination and scheduling activities when required by Division 01 and in project commissioning activities when required by Section 019100/01910.

**1.3 SUBMITTALS**

- A. Product Data Sheets.
- B. Installation, Operation and Maintenance Manuals.
- C. Warranty Documentation.

**1.4 QUALITY ASSURANCE**

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
  - 1. Reference Standards: UL.

**1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver clocks adequately packaged to prevent damage during shipment, staging and installation.
- B. Protect clocks during shipping and while onsite from the weather, moisture condensation, dirt and debris at all times. Store clocks raised up on pallets or other supports until ready for installation.

**1.6 WARRANTY**

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers: Primex Wireless Inc.

**2.2 CLOCKS**

**REVISE THE FOLLOWING PARAGRAPHS TO MAKE THEM PROJECT SPECIFIC.**

**VERIFY WITH ENGINEER THAT DRAWINGS DIFFERENTIATE 120 VOLT POWERED FROM BATTERY POWERED, SINGLE FACE FROM DOUBLE FACE.**

- A. Clocks shall be single face wall mounted or double face edge mounted, 120 volt powered or battery powered, GPS signal synchronized, wireless, analog clocks as indicated on Drawings.
- B. Clocks shall be 12.5 inch nominal diameter with white face, black polycarbonate frame, polycarbonate lens, standard black numerals, and sweep second hand.
- C. Clocks shall include a GPS signal receiver to synchronize wirelessly with GPS time at least every two hours, and shall include an internal oscillator to maintain time within plus or minus 0.2 seconds between synchronizations. Clocks shall maintain accurate time despite the temporary loss of GPS signal. Clocks shall automatically adjust for Daylight Savings Time.

- D. Single face, 120 volt powered clocks shall surface mount to the wall over a NEMA 5-20R simplex receptacle in a single-gang, flush mounted outlet box. Clock shall mount with a clock lock hanger which requires a sequence of movements to install and remove the clock.
  - 1. Acceptable Manufacturer: Primex Model 14306.
- E. Double face, 120 volt powered clocks shall mount edgewise to the wall with a bracket that completely covers a NEMA 5-20R simplex receptacle in a single-gang, flush mounted outlet box.
  - 1. Acceptable Manufacturer: Primex Model 14330.
- F. Single face, battery powered clocks shall surface mount to the wall over a clock lock hanger which requires a sequence of movements to install and remove the clock.
  - 1. Acceptable Manufacturer: Primex Model 14155.

**2.3 GPS SIGNAL TRANSMITTERS**

- A. GPS wireless signal transmitters shall receive and rebroadcast GPS signals throughout the building.
- B. GPS wireless signal transmitters shall be 120 volt powered, have an internal antenna, and produce a 1 watt GPS signal output compatible with the GPS clocks.
  - 1. Acceptable Manufacturer: Primex Model 14000.

**PART 3 - EXECUTION**

**3.1 EXAMINATION AND PREPARATION**

- A. Examine areas, substrates, and conditions, for compliance with requirements for installation and other conditions affecting performance of the units.
- B. Proceed with installation only after unsatisfactory conditions have been corrected. Commencement of the work constitutes acceptance of the existing conditions.

**3.2 INSTALLATION**

- A. Install clocks at the locations and heights shown on the drawings.
- B. Install clocks plumb, level and tight against the wall using the clock-lock hanging method and suitable fasteners as recommended by the clock manufacturer. Initiate clock operation in accordance with manufacturer's instructions.
- C. Assemble GPS signal transmitter and install where shown on the drawings. Plug transmitter into adjacent receptacle and initiate transmitter operation in accordance with manufacturer's instructions.

**3.3 FIELD QUALITY CONTROL**

- A. Test units prior to putting into service to the extent required by the Manufacturer and the Commissioning Authority.

**3.4 TEMPORARY SERVICE**

- A. Start units for temporary use only with the expressed written permission of the Project Manager and in compliance with all requirements of the Contract Documents.
- B. Test units prior to putting into temporary service to the extent required by the Manufacturer and the Commissioning Authority.
- C. Perform all required routine maintenance procedures during temporary service.

**3.5 STARTUP**

- A. Conduct final inspection and testing of equipment and systems according to the manufacturer's requirements, and verify the system meets the project design criteria.
- B. Thoroughly clean units of all grease, dirt, dust, etc.

**3.6 COMMISSIONING**

- A. Perform Commissioning activities per Related Sections above.

5. Section 260526 - Grounding and Bonding for Electrical
6. Section 260533 - Electrical Materials and Methods
7. Section 260800 - Electrical Acceptance Tests

**1.2 SUMMARY**

- A. This section refers to new work and work that will be performed to modify existing systems. The Security Contractor shall provide all equipment, materials, labor, and services necessary to furnish, install, connect, activate, and test a complete Access Control and Monitoring System. All materials, equipment fabrication, installation, and tests shall conform with applicable Codes and authorities having jurisdiction. Access Control and Monitoring System shall include but is not limited to the following:

1. Provide a complete Access Control and Monitoring System. A Complete system is defined as all conduit, raceways, junction boxes, cables, card readers, controllers, alarm contacts, and programming needed to achieve a complete and functional system connected to the existing University central system. Also included are all required power supplies, power filtering, mounts, housings, equipment stands, and interfaces to existing equipment.
2. The Access Control and Monitoring System shall be an expansion of the existing University of Michigan campus wide Software House system. Work includes adding system panels, card readers and associated access control devices in locations identified on Drawings.
3. Provide all 120VAC power wiring, low voltage work to the system and all necessary components.

4. Coordinate system requirements with the University of Michigan's project management team.
5. Establish system communication with the Access Control System Server and panels via the Owner's LAN/WAN network.
6. Provide system administrative support throughout the installation process to meet the specific needs of the project scope of work.
7. Furnish and any install required interface relays, materials, and cabling to the fire alarm control panel.
8. Coordinate with the Owner's Representative and the U-M key office to provide installation, testing, adjustment, and initial programming for all equipment.
9. Provide written documentation and instructions for system as installed.

### **1.3 RELATED SECTIONS**

- A. Section 281300 articles including but not limited to:
  1. References
  2. Quality Assurance
  3. Submittals
  4. Warranty
  5. Record Documents
  6. Commissioning / Acceptance Testing
  7. Training

### **1.4 QUALITY ASSURANCE**

- A. Pre-programming conference: Prior to programming new doors in Owner's existing access control systems, conduct conference at Project Site to be attended by Owner's Representative, security contractor, Architect, and representatives from Owner's key office.
- B. Qualified Installers:
  1. Siemens (Mike Atzenhofer, 734 456-3800)
  2. Cabling Concepts (Tim Grady, 248 363-4200)
  3. TTI (John Rademaker, 586 864-1110)
  4. SimplexGrinnell (John Keith, 248 427-5050)
  5. Electronic Security Systems, Inc. (Steven Maniaci, 586 756-8400)
  6. Johnson Controls

## **PART 2 - PRODUCTS**

### **2.1 ACCESS CONTROL PRODUCTS**

- A. System Specifications

1. Manufacturer's catalog and system numbers of equipment listed in this specification indicate type, quality, and functions of the equipment required, and represent the minimum acceptable standards. Provide all compatible parts for the submitted system. The Access Control system work shall integrate with Owner's existing SoftwareHouse C-Cure 800 system.

## 2.2 ACCESS CONTROL EQUIPMENT

- A. Access Control panels shall be SoftwareHouse I-Star Pro Series only. Access Control panels shall include, at a minimum, the following:
  1. I/O boards, and power supplies for DC locks with battery back-up sufficient to maintain full operation of monitoring junctions for a minimum of 4 hours, plus a minimum of 25 lock activations in the event of power failure.
  2. Interfacing relays between Access Controller Panel (ACP) outputs and locks being controlled. Diode noise suppression shall be used on all relay coils and electric lock coils.
  3. Sufficient input boards to accept all monitored points on the Access Control System and sufficient output boards to accept all outputs on the Access Control System. All input and output boards shall include 20% extra points for future connections to the system.
  4. Reed tamper switches.
  5. Output contacts that open on AC power failure and low battery conditions from power supplies. Low battery monitoring must be unique to each power supply.
- B. Card Readers
  1. Provide one reader at each new card reader access control door opening noted on Drawings:

**SELECT ONE OF THE FOLLOWING. COORDINATE SELECTION WITH DESIGN MANAGER.**

- a. Multi-technology reader: SoftwareHouse - RM2L-4000-UM.
  2. Mount readers on shallow depth double gang electrical boxes.
  3. Provide manufacturer's standard thermostatically controlled heater for exterior installations powered from power supply located at access control panel assembly.
  4. Provide reed tamper switch.
- C. Door Monitor Switch
    1. Provide low voltage magnetic position sensor with SPDT switch. Utilize recessed door monitors wherever possible.
      - a. Recessed door monitors: ABS plastic enclosure. Provide GE/Sentrol 1078 series switch.
      - b. Surface mounted door monitor: Anodized alloy housing with stainless steel armored cable. Provide GE/Sentrol 2500 series switch.
      - c. Overhead door monitor: Heavy duty anodized aluminum housing with stainless steel armored cable. Provide GE/Sentrol 2202 series switch.
      - d. Connect Door Switch Monitor (DSM) to the RM/Reader input number 1.

- D. Access Control Cards
  - 1. Existing University of Michigan identification cards will be utilized. NIC.
- E. Request-to-Exit (RTE) Motion Sensors
  - 1. Request to exit motion sensors: Bosch DS-150 series or equal by Software House. Light gray or black color to match adjacent finishes.
  - 2. Relay output will be connected to the RM/Reader input number.
  - 3. Power for RTE from the power supply at the panel.
  - 4. Mount device on ceiling or door frame. Exact location will depend on existing conditions and required coverage area. Unless noted otherwise on Drawings, conceal wireways and junction box.
- F. Power Supplies and accessories
  - 1. Power supplies at panel assembly:
    - a. Lock / heater power: Provide 24VDC power supplies for all electrically controlled door locks and reader heating elements. (Lock power will be wired back to the power source at the panel. Do not use the RM/Reader output relay for the electric locking device.) Power supplies to permit simultaneous continuous-duty activation of all door locks and reader heating elements, with an additional minimum 30% capacity on each supply. Provide battery back-up sufficient for 25 activations for all DC locks. A single power supply may be used for two doors when the power supply is located near both doors.
      - 1) Manufacturer: Securitron BPS-24-10.
      - 2) At existing panel assemblies modified to connect new doors but maintain existing capacity, provide additional power supply capacity to serve new doors.
    - b. Access control panel power: Provide battery backed power supply.
      - 1) Securitron AQM20/16 SoftwareHouse approved power supply.
    - c. Reader heat: Provide low voltage power supplies for all reader heating elements.
      - 1) Securitron BACS-12-20
    - d.
  - 2. Power Supplies at EL-type doors:
    - a. Provide manufacturer's standard battery backed power supply for EL-type exit device used.
    - b. Locate power supply in accessible location, concealed from view within manufacturer's recommended distance.
    - c. In locations where two EL-type devices are within close proximity, provide single power supply to serve both doors.
    - d. Coordinate location with requirements of Division 08 for Doors.
  - 3. Accessories: If necessary, provide interfacing relays between Access Control Panel (ACP) and electric locks being controlled. Install noise suppression diodes on all locks as close as possible to the lock and at the control relay coil.

## **PART 3 - EXECUTION**

### **3.1 SYSTEM INTERRUPTIONS**

- A. Coordinate with the U-M Fire Protection Shop (734-647-2046) and UMHHC Facility Command Center (734-936-4000) before performing any work affecting an existing fire alarm system. Operating, programming, modifying or impairing an existing system without approval of the U-M Fire Protection Shop and UMHHC Facility Command Center is strictly prohibited.
- B. Coordinate with the U-M Key Office (734-764-3481) before performing any work affecting existing electrically controlled doors, existing control panels, or other access control components.
- C. Coordinate door hardware installation with panel work, system programming, Owner's Representative and Owner's key office such that each door is fully operational with 24 hours of hardware modifications.

### **3.2 PROGRAMMING**

- A. Special coordination is required with the U-M Key Office regarding programming requirements. Meet with Owner representatives and submit proposed labels for all input and output points for review and comment. Software labels shall be consistent between various integrated systems. Refer to 281600.
- B. Program automatic door unlock, time specifications, and access levels as directed by the Owner.

### **3.3 INSTALLATION**

- A. All electrical power work, conduit work and wire pulling shall be by licensed electricians, and all card reader installation and interconnection work shall be Tyco SoftwareHouse CCure 800 certified technicians
- B. Provide all wiring in conduit in accordance with Sections 260533 and 260513, and Manufacturer's instructions.
- C. Method and routing of any exposed raceways and/or wiring shall be approved by the owner prior to installation.
- D. Wiring shall be grouped and harnessed to facilitate access to all equipment, as well as maintenance and replacement of equipment.
- E. All cable shall be labeled at origin and termination, referencing to a master legend schedule shown on submittal drawings. Labeling and any splice locations shall be noted on Record Drawings.

### **3.4 WIRE AND CABLE PRODUCTS**

- A. Wire and Cable Specifications
  - 1. Security Contractor shall follow the manufacturers' recommendation for cabling or the minimum requirements of the Specifications, whichever provides for the most stringent requirements.

2. Cables are to be shielded as necessary to preclude any outside noise or interference from entering the cable and degrading system performance. All cables shall be U.L. Listed, and appropriate for the application.
3. Coordinate with the Owner's IT department connections to off-site monitoring.
4. Cables run underground, under slab, or in slab shall be installed in conduit and rated for direct-burial application. Cables exposed to weather shall be rated for that use.
5. Mixing of low voltage cables with Telephone/Data cables will not be permitted.
6. All cables shall be run in unbroken lengths of 1000 feet or less. No coaxial or power cables less than 1000 feet shall be spliced. When cable cannot be run in unbroken lengths due to cable spool limitations, coax splices shall be made in junction boxes with crimp-type BNC connectors, power cable splices shall be made using solder and tape. For coaxial cable the center conductor tip shall be a crimp-on style; the ferrule shall be a hexagonal crimp with a minimum ferrule length of 3/8 inch. All splices and junction boxes shall be clearly marked on the "As-Built" Record Drawings.
7. The use of all screw type connectors i.e. snap caps, wire nuts, and the "twist and tape" method are prohibited.
8. All 24VAC power cabling shall be of stranded construction. Terminal strips and fork spade lugs shall be utilized for all terminations.
9. Wiring shall be grouped, bundled, harnessed and dressed neatly to facilitate access to all equipment, as well as maintenance and replacement of equipment.
10. All cable shall be labeled at origin and termination, referencing to a master legend schedule as shown on "As-Built" Record Drawings. Labeling and any splice locations shall be noted on "As-Built" Record Drawings. All labels shall be done using machine generated cable tags in the "flagged" position. Hand written labels are not acceptable.

### 3.5 COMMISSIONING

- A. Perform Commissioning activities per Related Sections above.

### 3.6 TRAINING

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.

**REVISE TRAINING REQUIREMENTS IN THE ARTICLE BELOW TO BE PROJECT SPECIFIC. SAMPLE TRAINING LANGUAGE IS PROVIDED, EDIT TO SUIT PRODUCT OR SYSTEM, INCLUDING DURATION. TRAINING IS NOT REQUIRED UNLESS THE PRODUCT OR SYSTEM IS COMPLEX, UNIQUE, OR NEW TO THE U-M PLANT MAINTENANCE DEPARTMENT. BECAUSE OF THE COST INVOLVED IN TRAINING DO NOT INDISCRIMINATELY SPECIFY TRAINING**

- B. Train Owner's maintenance personnel on equipment operation, start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel. Training shall occur separate from startup activities.
  - 1. Provide 2 hours of training minimum.

**DIVISION 28 ELECTRONIC SAFETY AND SECURITY**  
SECTION 281600 - SECURITY SYSTEMS

**END OF CONTENTS TABLE**

**DIVISION 28 ELECTRONIC SAFETY AND SECURITY**  
**SECTION 281600 - SECURITY SYSTEMS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.  
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

*IN 1 AND 2 BELOW, DELETE SUSTAINABLE DESIGN IF NOT APPLICABLE TO THE PROJECT. SELECT PROPER COMMISSIONING SPEC SECTION NUMBER APPLICABLE TO THE PROJECT.*

- B. Related Sections:

1. Section 018113 - Sustainable Design Requirements
2. Section 019100/019110 - Commissioning
3. Section 017823 - Operation and Maintenance Manual
4. Section 260513 - Medium, Low & Control Voltage Cables
5. Section 260526 - Grounding and Bonding for Electrical
6. Section 260533 - Electrical Materials and Methods
7. Section 260800 - Electrical Acceptance Tests

**1.2 SUMMARY**

- A. This Specification contains a combination of prescriptive and performance requirements. The Contractor is responsible for fully implementing the functions described in the Specifications and shown on the Drawings. This will require the Contractor to perform substantial work selecting system components, integrating system functions, and integrating new components with the existing campus wide security system and with equipment provided and installed by other Sections.
- B. Security Contractor shall provide all materials, equipment, fabrication, installation and tests in compliance with applicable Codes and Authorities Having Jurisdiction.
- C. Provide all necessary components of an Access Control and Monitoring System (ACMS) as described in the Specifications and as indicated on the Drawings.
- D. Provide a complete system which is defined as all labor and materials required to complete the Work described herein and as indicated on the Drawings. Security Contractor shall provide all hardware, and programming for installation, connection and operation of the new equipment required to provide a fully functional system that integrates with the existing Campus Wide Security System.

- E. Products, equipment, materials, systems, assemblies, and accessories as specified herein define the minimum standards. Documents do not undertake to show or list every item to be provided. Items not shown or listed but are clearly necessary for proper installation, operation and functioning of the equipment and systems shall be provided, installed, tested and certified at no additional cost to the owner.
- F. Provide installation, testing, adjustment, configuration and initial programming for all equipment and systems.
- G. Provide training to the Owner's Representatives in the overall system layout, operation, and programming. Training will consist of review of on-site review of O&M manuals and record drawings.
- H. Provide any interface relays, materials, enclosures, cabling, programming and testing required to interface Access Control
- I. Provide any interface relays, materials, enclosures, cabling, programming and testing that may be required to interface with the Fire Alarm Control Panel (FACP).

### **1.3 RELATED SECTIONS**

- A. The drawings and the general provisions of the contract, including the current edition of the University of Michigan Standard General Conditions, apply to this section.
- B. The applicable requirements of the Division 01
- C. Applicable Division 28 specification sections as follows:
  - 1. Section 260500: "Basic Electrical Requirements"
  - 2. Section 260533: "Basic Electrical Materials and Methods"
  - 3. Section 260513: "Cables and Wiring"
  - 4. Section 262726: "Wiring Devices"
  - 5. Section 262000: "Service and Secondary Distribution"
  - 6. Section 260526: "Grounding"
  - 7. Section 281300: "Access Control and Monitoring Systems"
  - 8. Section 260800: "Electrical Acceptance Tests"

### **1.4 SECURITY CONTRACTOR REQUIREMENTS**

- A. The Security Contractor shall be responsible for coordinating the installation of all building electronic security devices specified in referenced Sections. Security Contractor shall meet the following minimum qualifications:
  - 1. Possess all applicable Contractors' licenses.
  - 2. Provide supervision by a person who has successfully installed similar systems by the same equipment manufacturers at three locations.
- B. Perform all work in accordance with acknowledged industry and professional standards and practices, existing building conditions, and as specified herein.

- C. Maintain a competent supervisor and supporting technical personnel, acceptable to the Owner, during the entire installation. A personnel change of the supervisor during the Project shall not be acceptable without prior written approval from the Owner's Representative.
- D. Provide all required cables, cable support materials, conduit, backboxes, connectors, mounting hardware and trim materials for a completely functional/operational system.
- E. Provide 120VAC power, conduit, and wiring per Division 26 requirements from existing power panels as directed by Owner.
- F. Coordinate with the Owner's Representatives regarding connection of the new system components to the Owner's Campus Security System via the Owner's LAN and WAN networks. IP addresses and or DHCP naming conventions will be provided by Owner.

#### **1.5 REFERENCES**

- A. Published specifications, standards, tests, codes, or recommended standards of trade, industry, or governmental organizations apply to work in these Sections, including:
  - 1. ADA - Americans with Disabilities Act
  - 2. ASCII - American Standard Code for Information Interchange
  - 3. ASTM - American Society for Testing and Materials
  - 4. EIA - Electronic Industry Association
  - 5. IBC - International Building Code
  - 6. NEMA - National Electrical Manufacturers' Association
  - 7. NFPA - National Fire Protection Association with University of Michigan amendments
  - 8. NEC - National Electrical Code
  - 9. UL - Underwriters Laboratories, Inc.
  - 10. UL 294 - Access Control Systems,
  - 11. UL 1076 - Proprietary Burglar Alarm Systems,
  - 12. UL 1037 - Anti Theft Alarms and Devices
- B. Electronic devices radiating "RF" energy shall comply with Federal Communication Commission regulations, particularly Part 15, and shall meet minimum Class "B". Provide FCC certificate numbers indicating that products have been approved by the FCC.

#### **1.6 QUALITY ASSURANCE**

- A. Where applicable, all equipment supplied by the Contractor shall be UL listed or listed by some other nationally recognized testing laboratory approved by the Owner.
- B. All equipment and accessories to be the product of a manufacturer regularly engaged in its manufacture.
- C. All items of a given type shall be the products of the same manufacturer.
- D. All items shall be of the latest technology; no discontinued models or products are acceptable.
- E. No 'beta' products will be accepted.

- F. Security Contractor shall be capable of performing service or maintenance work on the specified systems. Security Contractor's lead technician shall be factory-certified by the security system(s) manufacturer(s).
- G. Security Contractor must be a SoftwareHouse authorized reseller. Security Contractor shall have installed the system bid for this project in at least two projects of similar size and scope.
- H. The Security Contractor shall maintain a local office staffed with factory trained technicians and adequately equipped to provide preventative and emergency service.
- I. Security Contractor shall possess all required licenses and permits.
- J. The Manufacturer, or their Authorized Representative, shall confirm that within 100 miles of the Project site there is an established agency which: Stocks a full complement of parts. Offers service during normal working hours as well as (24 hour/7 days a week) emergency service on all equipment to be furnished. Will supply parts and service without delay and at reasonable cost.
- K. In the event of a discrepancy between the Specifications and the Drawings, whichever is more stringent or calls for the highest quantity or quality of materials has precedence. Specifications and Drawings are complementary and what is required by one is as binding as if required by all.

#### **1.7 SUBMITTALS**

- A. Submittals shall be provided for review and acceptance by the Owner's Representative prior to commencement of the work.
- B. All security system submittals shall be complete and in a similar format for ease of review. The Owner reserves the right to reject any submittals determined to be incomplete.
- C. The Security Contractor should not consider the Owner's review of submittals to be exhaustive or complete in every detail. Approval of submittals, including substitutions, indicates only the acceptance of intent to comply with the general design or method of construction and quality as specified. The functional requirements, operations, arrangements, and quantities must comply with the Contract Documents unless changes are specifically approved in writing. Submittal approval does not relieve the Security Contractor of responsibility for errors or omissions in dimensions, details, and sizes or for coordinating items with actual building conditions.
- D. Work provided without approved submittals is done at the Security Contractor's risk and may be changed at no cost to the Owner.
- E. Equipment Submittals shall include:
  - 1. Bill of Material for all new equipment.
  - 2. Manufacturer's name, brand name, and catalog number with UL listing identified.

3. Written approval from each manufacturer affirming that Security Contractor is certified and approved for systems installation and service for all systems in this Section.
4. Service information, including address of nearest representative
5. Note: When a cut sheet is supplied that shows multiple items, clearly identify the specified parts being used including any optional items.

F. Installation Submittals shall include:

1. To scale drawings in AutoCAD DWG format.
2. Elevation and mounting details showing all modules and components.
3. Point-to-point, and termination drawings for all work showing all devices and each conductor identified. "Typical" drawings will not be accepted.
4. Battery calculations for all batteries.
5. Voltage-drop calculations are required for all lock circuits.

G. Programming Submittals shall include

1. Device names and descriptions,
2. Complete written sequence of operations for all functions of the system.

**1.8 PRODUCT DELIVERY, STORAGE AND HANDLING**

- A. Replace, at no expense to Owner, equipment and material damaged during storage and installation as directed by the Owner's representative.
- B. Products delivered to the job site shall be protected from water, dust, dirt, and foreign matter. All equipment shall be protected from water, dents, bumps, and scratching.

**1.9 WARRANTY**

- A. Security Contractor and manufacturer guarantee installation, equipment, and all parts and labor for one year from written notification of acceptance. Security Contractor is required to submit a Service Level Agreement for the performance of warranty work, including response time, exceptions to warranty coverage, and the process to initiate warranty service call(s).
- B. All warranty and service work shall be performed by personnel who have been trained and certified by equipment manufacturers and are experienced in the operation and maintenance of the installed systems.
- C. The following Service Level Agreement identifies the expectations to be included in project.
  1. Service Hours: Normal hours for service are Monday through Friday, 8:00 a.m. to 5:00 p.m., excluding recognized national holidays. Service calls commencing within these time frames, through to completion of the service call, will not be considered after-hours calls and will not be subject to premium rates.

2. Response Time - Normal Service: Service requests will be transmitted to the Security Contractor both by phone and e-mail. Service requests will be tagged as either Normal or Emergency. Normal requests for service transmitted to the Security Contractor prior to 10:00 a.m. Monday through Friday will be responded to by an on-site technician the same business day. Normal requests transmitted to the vendor after 10:00 a.m. will be responded to by an on-site technician by 12:00 p.m. the following business day.
  3. Response Time - Emergency Service: Emergency service requests will be responded to by an on-site technician within 4 hours, regardless of the time of day transmitted or the day of week. Emergency service calls will be reimbursed to the Security Contractor at an additional fifty percent (50%) of his standard service rate.
  4. Service Expectation: The Owner expects the Security Contractor to respond with a technician suitably trained and equipped to return the system to complete operation during the duration of the service call. Dispatching additional personnel, delivery of additional parts or return calls to correct the originally identified problem will not expose the Owner to additional charges. The service team will not leave the Owner's site without either returning the system to full operation or providing a documented acceptable explanation as to why the call cannot be completed. Technicians remaining on-site to complete calls after 5:00 p.m. will not expose the Owner to premium time charges.
  5. Warranty service shall include the replacement of all parts and or components as required to restore normal system operation. In the event that system parts or components must be removed for repair the Security Contractor shall furnish and install temporary parts and or components as required to keep the system fully operational.
- D. Owner's Responsibilities: Owner will allow unhindered access for the service technicians to areas where they will perform their work, and will promptly provide escorts if technicians need to work in areas where an Owner escort is required. Owner will provide power and telephone access for the technician to operate test equipment and power tools, and to allow the technician to communicate with their office or equipment manufacturers.
- E. The Owner reserves the right to expand or add to the system during the warranty period using firm(s) other than the Security Contractor for such expansion without affecting the Security Contractor's responsibilities, provided that the expansion is done by a firm which is an authorized dealer or agent for the equipment or system being expanded.
- F. Provide written notice to the Owner documenting any work performed during the warranty period.

## **PART 2 - PRODUCTS**

### **2.1 SECURITY SYSTEMS PRODUCTS**

- A. Refer to individual security system Sections for product details.

## **PART 3 - EXECUTION**

### **3.1 REQUIREMENTS**

- A. Coordinate all work including schedule and integration of work with other trades.
- B. Coordinate work with Owner's Representatives for all network connections.
- C. All systems shall be complete and operational in all respects.
- D. Provide installation of all wiring, raceway, conduit, and approved wireways for Division 28 work. Provide connection of power to security systems as required.
- E. Wiring in wet or damp locations, including all underground conduits, shall be rated for wet applications.
- F. Security Contractor shall consult manufacturer's recommendations for cabling and conduit and use whichever is greater in size, quality, quantity, gauge, shielding and number of conductors at no additional cost to the Owner. All cables will be provided by the Security Contractor.
- G. All security equipment in public areas shall be installed utilizing tamper proof mounting hardware. Provide a minimum of 2 driver bits or hand tools for each type of security fastener to the Owner. The standard type of security screw shall be a star configuration with a security center piece.
- H. Cables are to be protected from excessive tension, abrasion, or damaging bends or kinks during installation. Care shall be taken not to bend, crush or kink cables.
- I. Cables shall be combed straight and formed in a neat and orderly manner. Tie wraps are to be used for cable management, not support. Use tie wraps of the appropriate size and type. Do not over-tighten tie wraps.
- J. Provide service loops at each termination point so devices can be dismantled for service and inspection.
- K. Provide bracing for all equipment, including equipment racks and consoles.
- L. Refer to individual security system Sections for additional installation requirements.

### **3.2 RECORD DOCUMENTS**

- A. As Built Drawings
  - 1. Maintain a complete set of prints of Contract Drawings of the work forming a part of the security systems. As work is installed, carefully draw on prints, in colored pencil, actual location of work including depth of underground runs, if any, with dimensions from permanent structures. Wiring diagrams and details shall be included.

2. Upon completion of the Project, transfer this information to reproducible Drawings and updated CAD (AutoCAD DWG files) disks, and submit to the Owner, along with hand marked field record set.
3. The Security Contractor shall provide three bound sets of drawings and two CDRoms with all AutoCAD drawing files and corresponding PDF files.
4. Record Drawings shall include:
  - a. Complete wiring diagrams for all components, including cable types and quantities, routings, floor plans indicating device locations, room numbers, conduit sizes.
  - b. Complete elevation, mounting, and point-to-point and termination drawings for all devices. "Typical" drawings will not be accepted.
  - c. A Master Legend/Spreadsheet on the drawings that identifies all devices, device location on the drawings, wire label verbiage, panel termination points and detail numbers. Each spreadsheet will be specific to the control panel. The legend/spreadsheet will also be place in each control panel for service support and termination assistance. For work in existing panels, provide information noted above for all additions and modifications.
  - d. A complete written sequence of operations for all functions as installed and programmed for each system.
  - e. A complete list of all equipment installed organized by building.

B. Operations and Maintenance Manuals

1. Provide operations and maintenance manuals Division 01 requirements and as follows
2. Operations:
  - a. The operations section shall contain complete guidance and procedures for operation of the system and each subsystem including all required actions at each operator position, step by step instructions for system start-up and execution of all system functions and commands.
  - b. Operation section shall include the following information:
    - 1) Detailed descriptions including step by step procedures for initialization, recovery and re start for each system.
    - 2) Complete operational descriptions for each system including all functions and features.
    - 3) Detailed descriptions for all programming and data base entry functions including step by step procedures, screen illustrations and flow charts.
    - 4) Copies of manufacturer operation manuals and instructions.
3. Maintenance
  - a. The maintenance section shall contain complete guidance and procedures for routine maintenance of the system and each subsystem including manufacturer recommendations for preventative maintenance.

- b. Maintenance section shall include the following information:
  - 1) The names, addresses and contact information for each manufacturer, local manufacturer representative and all subcontractors that performed work or furnished material for the project.
  - 2) Detailed descriptions of all user performed maintenance on all system components including inspection, periodic preventative maintenance, fault diagnosis and replacement of all modules.
  - 3) A summary of all TCP/IP addresses used and which system component they are associated with.
  - 4) Manufacturer data specification sheets for each piece of equipment, device and system.
  - 5) Manufacturer service and installation manuals for each piece of equipment, device and system.
  - 6) Manufacturer warranty certificates.
  - 7) Reduced copy of as built drawings.

### 3.3 COMMISSIONING/ACCEPTANCE TESTING

- A. Perform Commissioning activities per Related Sections above.
- B. There are two distinct types of tests for which the Security Contractor is responsible:
  - 1. The first type is the Pre-Functional Performance Test. These tests ensure that all equipment, wiring, and systems are installed in accordance with the Specifications, Drawings, and manufacturers' requirements.
  - 2. The second type of test is the Substantial Completion Test. These tests ensure that all equipment and systems operate in accordance with design intent. These are dynamic tests, and test the systems through all possible modes of operation.
- C. Perform systems tests using personnel who have attended a manufacturer's training school for installation and testing of the systems as described above. Perform testing with the test instruments as required by the manufacturer; testing by means other than the manufacturer's procedures will not be acceptable unless agreed to by the Owner's Representative.
- D. Upon completion of the installation of the security systems, the Contractor shall submit to the Owner Pre-Functional Performance Test reports including, but not limited to, the following information:
  - 1. A complete list of all equipment installed, including serial numbers of major components.
  - 2. Certification that all equipment is properly installed and functional, and it conforms with Contract Specifications and Drawings.
  - 3. Test reports of all new and existing inputs and outputs, devices, and equipment.
  - 4. Test technician's name, company, and dates of test.

- E. Following review of the Pre-Functional Performance Test report by the University of Michigan project team, the Contractor shall schedule a substantial completion test with the University of Michigan projects team. A Substantial Completion Test shall include performance tests of each device, switch, control unit, power supply, battery standby unit, monitor panel, controller, and all other equipment and material required by the Contract. Tests will only be conducted at completed buildings, partial testing of buildings will not be performed by the University of Michigan project team. Owner will provide testing document.
- F. At a minimum, perform tests to demonstrate that:
  - 1. All systems are free from grounding and open circuits.
  - 2. Each alarm-initiating device consistently functions as specified and produces the specified alarm actions.
  - 3. An abnormal condition of any circuit or device required to be electrically supervised will result in activating the specified trouble or tamper alarm signal.
  - 4. Doors lock and unlock at programmed times and allow access upon activation from a valid card.
  - 5. The system is operable under specified trouble conditions.
  - 6. All software functions properly as specified, and all equipment is fully programmed. The Security Contractor shall be responsible for programming system English-language descriptors as specified by the Owner's representative.
  - 7. System Record Drawings correspond with actual installation.
- G. Final commissioning by Owner is required for final acceptance. Final commissioning is to be scheduled simultaneous with punch list.
- H. If retesting is required due to Security Contractor equipment failure, incorrect programming, omission, or error, the Security Contractor shall correct the problem, retest, and state in writing the system is ready for the Owner to witness a demonstration.

### 3.4 TRAINING

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.

*REVISE TRAINING REQUIREMENTS IN THE ARTICLE BELOW TO BE PROJECT SPECIFIC. SAMPLE TRAINING LANGUAGE IS PROVIDED, EDIT TO SUIT PRODUCT OR SYSTEM, INCLUDING DURATION. TRAINING IS NOT REQUIRED UNLESS THE PRODUCT OR SYSTEM IS COMPLEX, UNIQUE, OR NEW TO THE U-M PLANT MAINTENANCE DEPARTMENT. BECAUSE OF THE COST INVOLVED IN TRAINING DO NOT INDISCRIMINATELY SPECIFY TRAINING*

- B. Train Owner's maintenance personnel on equipment operation, start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel. Training shall occur separate from startup activities.
  - 1. Provide 2 hours of training minimum.

END OF SECTION 281600

The Description of the Project  
P00000000 0000

ARCHITECTURE & ENGINEERING  
326 East Hoover, Mail Stop B  
Ann Arbor, MI 48109-1002  
Phone: 734-764-3414  
Fax: 734-936-3334

**SPECIFICATION DIVISION 28**

NUMBER            SECTION DESCRIPTION

**DIVISION 28 ELECTRONIC SAFETY AND SECURITY**

SECTION 283100 - FIRE DETECTION AND ALARM SYSTEM

**END OF CONTENTS TABLE**

**DIVISION 28 ELECTRONIC SAFETY AND SECURITY**  
**SECTION 283100 - FIRE DETECTION AND ALARM SYSTEM**

*DELETE FROM AND ADD TO THIS SECTION TO MAKE IT PROJECT SPECIFIC. HIDDEN TEXT DIRECTIONS INDICATE SOME BUT NOT ALL OF THE REQUIRED EDITING. DELETE THE HIDDEN TEXT DIRECTIONS BEFORE PRINTING FOR PUBLICATION.*

*VERIFY THE TYPES, QUANTITIES AND LOCATIONS OF FIRE ALARM COMPONENTS SHOWN ON PLAN DRAWINGS MATCH THE SYSTEM DESIGN REQUIREMENTS BELOW.*

**PART 1 - GENERAL**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

**1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

*IN 2 BELOW, SELECT PROPER COMMISSIONING SPEC SECTION NUMBER APPLICABLE TO THE PROJECT OR DELETE IF Cx IS NOT REQUIRED.*

- B. Related Sections:

1. Section 017823 - Operation and Maintenance Manual
2. Section 019100/019110 - Commissioning
3. Section 260513 - Medium, Low & Control Voltage Cables
4. Section 260526 - Grounding and Bonding for Electrical
5. Section 260533 - Electrical Materials and Methods
6. Section 260800 - Electrical Acceptance Tests

**1.2 SUMMARY**

- A. Provide all equipment, devices, appliances, wiring, and materials necessary for a complete and expandable fire detection and alarm system which adheres to applicable codes, standards, and University of Michigan requirements.
- B. Coordinate with and provide submittals to the Michigan Bureau of Fire Services, Ann Arbor Fire Department, U-M Fire Marshal, and FM Global as required.

*IF THE BUILDING WILL REMAIN OCCUPIED DURING THIS WORK, INCLUDE THE FOLLOWING PARAGRAPH.*

- C. Maintain the existing fire alarm system in service while the new work is installed, tested and made operational.

*ON FIRE ALARM RENOVATION PROJECTS, DELETE ALL OF 1.2.D AND THE NON-APPLICABLE PARAGRAPHS OF 1.2.E.*

- D. Provide a new fire alarm system with the following features:

1. A main fire alarm control panel (FACP).
2. Node and notification appliance circuit (NAC) panels.
3. Automatic and manual initiating devices.
4. Audible and visual notification appliances.
5. Control inputs and outputs to ventilation systems.
6. Control outputs to each elevator controller to initiate elevator recall.
7. Status monitoring of fire pump controllers, sprinkler flow switches, and sprinkler valve tamper switches.
8. Alarm, supervisory, trouble, fire pump running and maintenance alert outputs to the MOSCAD alarm transmitter.
9. Raceways, junction boxes, wiring and accessories as shown on the drawings and as required for a complete and operable system.
10. System programming in accordance with the system's sequence of operation.

**ON PROJECTS PROVIDING A NEW FIRE ALARM SYSTEM, DELETE ALL OF 1.2.E.**

- E. Renovate the existing fire alarm system by providing the following as appropriate for the project's scope:
1. A pre-renovation test of the existing system to document the condition of the system before it is changed.
  2. A main fire alarm control panel (FACP).
  3. Node and notification appliance circuit (NAC) panels.
  4. Automatic and manual initiating devices.
  5. Audible and visual notification appliances.
  6. Control inputs and outputs to ventilation systems.
  7. Control outputs to each elevator controller to initiate elevator recall.
  8. Status monitoring of fire pump controllers, sprinkler flow switches, and sprinkler valve tamper switches.
  9. Alarm, supervisory, trouble, fire pump running and maintenance alert outputs to the MOSCAD alarm transmitter.
  10. Raceways, junction boxes, wiring and accessories as shown on the drawings and as required for a complete and operable system.
  11. System programming as required to incorporate changes to the system's sequence of operation.

**EDIT 1.2.F AND G TO MAKE THEM PROJECT-SPECIFIC.**

- F. Provide the following additional work where shown on the drawings:
1. Remote annunciators.
  2. A smoke control system control panel.
  3. Status monitoring of other building life safety systems.
  4. Control outputs to automatically control smoke control system equipment.
  5. Status lights indicating the current status of smoke control system equipment.
  6. Control switches to manually override the automatic control outputs to smoke control system equipment.
  7. Control outputs to interrupt power to electrically operated access control door hardware devices.
  8. Non-battery backed power to door hold-open devices.
  9. Emergency voice/alarm communications.
  10. Building-wide mass notification system.

11. Remote microphone cabinets.
12. Fire Department telephone communications.

G. The following work is not included unless shown otherwise:

1. Smoke and heat detectors that actuate a fire suppression system.
2. Electrically operated door hardware devices.
3. Power to electrically operated door hardware devices.
4. Door hold-open devices.

### 1.3 RELATED SECTIONS

- A. The drawings and the general provisions of the contract, including the current edition of the University of Michigan Standard General Conditions, apply to this section.
- B. The applicable requirements of the other Division 28 specification sections, including the following, apply to this section.
  1. Section 260533, "Basic Electrical Materials and Methods".
  2. Section 260513, "Cables and Wires".
  3. Section 262000, "Service and Secondary Distribution".
  4. Section 260526, "Grounding".
  5. Section 260800, "Electrical Acceptance Tests".

### 1.4 REFERENCES

- A. Comply with the current versions of the following codes and standards as applicable:
  1. ANSI/IEEE C2, "National Electrical Safety Code".
  2. MBC, "Michigan Building Code".
  3. MEC, "Michigan Electrical Code".
  4. "Michigan Elevator Code"
  5. MMC, "Michigan Mechanical Code".
  6. "Michigan Rehabilitation Code".
  7. "Michigan Residential Code".
  8. NFPA 13, "Standard for the Installation of Sprinkler Systems".
  9. NFPA 20, "Standard for the Installation of Centrifugal Fire Pumps".
  10. NFPA 72, "National Fire Alarm Code", clarified as follows:
    - a. Smoke and heat detectors shall not be required above suspended ceilings.
    - b. Horns or speakers shall not be installed in elevator machine rooms. Horns, speakers, or strobes shall not be installed in elevator cars.
    - c. Fire alarm system shall not shut down power to the elevators upon sprinkler water flow.
    - d. Optional smoke detectors in rooms with beam pockets shall be spaced as shown on the plan drawings.
  11. NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems".
  12. UL 217, "Single and Multiple Station Smoke Detectors".
  13. UL 268, "Smoke Detectors for Fire Protective Signaling Systems".
  14. UL 268A, "Smoke Detectors for Duct Applications".
  15. UL 464, "Audible Signal Appliances".
  16. UL 521, "Heat Detectors for Fire Protective Signaling Systems".
  17. UL 864, "Control Units for Fire Protective Signaling Systems"

- 18. UL 1480, "Speakers for Fire Protective Signaling Systems".
- 19. UL 1971, "Signaling Devices for the Hearing Impaired".
- B. For classroom, in-patient medical, and Housing projects, comply with the applicable sections of NFPA 101, "Life Safety Code" as adopted and amended by the Michigan Bureau of Fire Services.
- C. For systems that provide partial evacuation or relocation of occupants rather than full evacuation, comply with the NFPA 72 requirements related to survivability from attack by fire.
  - 1. Designate each notification appliance circuit to serve no more than one notification zone.
  - 2. Protect power supply and notification appliance circuits from fire until they enter the notification zone they serve.
  - 3. Monitor the integrity of audible and visual notification appliance power supplies, audio generators, amplifiers and circuits.
  - 4. Monitor the integrity of Fire Department telephone communications circuits.

**1.5 SYSTEM DESIGN REQUIREMENTS**

- A. The system shall be device addressable and power limited.
- B. Provide a fire alarm control panel with the following:
  - 1. Digital display.
  - 2. Multiple pushbutton keypad.
  - 3. LED status indicating lights.
  - 4. Audible status signals.
  - 5. Output relays.
  - 6. Battery charger and batteries.
  - 7. RS-232 communications card.
- C. Evaluate and document the appropriate signaling line circuit class designation.
  - 1. In general, provide Class B signaling line circuits except where an applicable code requires a different circuit class.
  - 2. Provide sufficient spare capacity on each signaling line circuit for an additional 25 percent of initiating and control devices.
- D. Evaluate and document the appropriate notification appliance circuit class designation.
  - 1. In general, provide Class B notification appliance circuits except where an applicable code requires a different circuit class.
  - 2. Size the control panel power supplies, amplifiers, and batteries for 25 percent spare capacity calculated with 40 ma horn loads, 1 watt speaker loads, and 150 ma strobe light loads.
  - 3. Provide sufficient spare capacity on each notification appliance circuit for an additional 25 percent of notification appliances.
- E. The system shall supervise the following circuits and components:
  - 1. Initiating device circuits.
  - 2. Signaling line circuits.
  - 3. Notification appliance circuits.

4. Addressable initiating and control devices.
  5. Control output wiring.
  6. Auxiliary control switches.
  7. System node panels, NAC panels, remote annunciators, and remote microphone panels.
  8. Primary power supply.
  9. Secondary power supply.
- F. The system shall be capable of being programmed by the Owner on site to accommodate expansion or sequence of operation changes.
- G. Provide 120 volts AC primary power to the system from a dedicated emergency power branch circuit.
- H. Provide a control panel battery charger capable of fully charging a 200 amp-hour battery within 24 hours.
- I. Provide sufficient secondary power battery capacity to operate the entire system (except the door hold-open devices) upon the loss of primary power for a period of 24 hours in a normal supervisory mode followed by 5 minutes of evacuation alarm operation.
1. When emergency voice/alarm communications is provided, provide sufficient battery capacity for 24 hours of operation in a normal supervisory mode followed by 15 minutes of voice/alarm operation.
  2. The system shall automatically transfer to and from the secondary power batteries upon an interruption of primary power without initiating a nuisance alarm.
  3. The system shall delay initiating a trouble condition for two seconds upon a transfer to or from primary power to avoid nuisance trouble conditions during emergency generator testing.
- J. Provide smoke and heat detectors as required by code and as shown, including the following.
1. Provide smoke detectors in each elevator lobby, in each elevator machine/control room, and at the top of each elevator shaft to initiate elevator recall.
  2. Provide two heat detectors, one in front and one behind, each unit substation transformer.
  3. Provide a smoke detector in each mechanical, electrical, telecommunications, trash collection, and recycling room.
  4. Provide smoke detectors in residence hall corridors, each sleeping room, and immediately outside each sleeping room that is located within a suite or apartment.
  5. Provide duct smoke detectors where required by code. When not in plain view or when more than 10 feet above the floor, provide duct detector remote alarm indicators and test switches mounted in plain view at 48 inches above the floor.

**FOR THE FOLLOWING, IN RENOVATIONS IN WHICH THE ROOM USAGES WILL REMAIN THE SAME, THE DESIGNER SHALL METER AND DOCUMENT THE EXISTING MAXIMUM AMBIENT SOUND LEVEL OF EACH SPACE. REFER TO NFPA 72, 18.4.1.3 AND A.18.4.1.3.**

- K. Provide sufficient audible notification appliances to achieve a sound level of 15 dBA above ambient sound level, but not less than 60 dBA nor more than 110 dBA in all occupiable spaces. The sound level in mechanical rooms shall be not less than 90 dBA, and in sleeping rooms shall be not less than 75 dBA measured at pillow level. The sound shall be a three-pulse temporal pattern evacuation tone.
1. In rodent rooms, the sound shall be a slow whoop or warble with a peak frequency below 500 Hz.
  2. Do not provide horns or speakers in exit stair enclosures.
  3. Do not provide horns or speakers in elevator machine rooms or in elevator cars.
  4. Provide a speaker in each sleeping room and a sounder base in each sleeping room smoke detector. The speaker shall provide the general alarm and the sounder base shall alarm upon smoke within the room.
- L. Provide visual notification appliances in accordance with the intensity and spacing requirements of NFPA 72.

**THE DESIGNER SHALL INCLUDE ROOM NAMES ON THE PLAN DRAWINGS AND SHALL DIFFERENTIATE BETWEEN SINGLE PERSON AND MULTI-PERSON OFFICES.**

1. Provide strobes in all public areas including multi-person offices.
2. Do not provide strobes in exit stair enclosures or in animal rooms.
3. Combine horns or speakers with strobes when both are required at the same location.
4. Synchronize strobes when more than two appliances are in any point of view and are less than 55 feet apart.
5. Provide strobes in elevator machine rooms. Do not provide strobes in elevator cars.
6. Provide strobes in accessible sleeping rooms and in living spaces of accessible suites or apartments.
7. Provide strobes in mechanical rooms and other areas that have an average ambient noise level exceeding 95 dBA.

**DELETE THE FOLLOWING PARAGRAPH IF NOT APPLICABLE.**

- M. Provide a waterproof horn/strobe or speaker/strobe with waterproof back box on the exterior of the building between 8 and 12 feet above each fire department connection. Audible sound shall be 90 dBA minimum at 10' and visual intensity shall be 110 candelas. Program this device to alarm upon sprinkler system water flow only, and to cease operation upon termination of water flow.
- N. Provide individually addressable monitor modules to monitor non-addressable initiating devices and status contacts of other systems.
1. Monitor modules shall use Class B initiating device circuits to monitor the initiating devices and status contacts.

**FOR THE FOLLOWING, THE DESIGNER SHALL IDENTIFY THE MAKE AND MODEL OF THE EXISTING FIRE ALARM CONTROL PANEL AND THEN CONSULT WITH THE MANUFACTURER TO DETERMINE WHETHER A CROSS-TIE WITH SIMULTANEOUS RESET IS FEASIBLE. DETERMINE AND DOCUMENT REQUIRED PROGRAMMING AND HARDWARE REVISIONS.**

2. When interconnecting with an existing fire alarm system control panel, provide monitor modules as required.
    - a. New and existing control panels shall function as a single system.
    - b. All control panels shall be capable of being reset simultaneously from a single location.
- O. Provide panel auxiliary relay contacts and individually addressable control module contacts, including the required panel control logic programming, to interface with control circuits of other systems and equipment.
1. Provide normally closed duct smoke detector contacts to shut down ventilation systems.
  2. Provide three control module output contacts for each elevator to control elevator recall.
  3. Provide normally closed auxiliary relay or control module contacts to release electrically held door locks and door hold-opens, and to disable electrically operated door proximity sensors.
  4. When interconnecting with an existing fire alarm system control panel, provide control modules as required.
    - a. New and existing control panels shall function as a single system.
    - b. All control panels shall be capable of being reset simultaneously from a single location.
- P. Provide a smoke control system panel.
1. Provide normally open auxiliary relay or control module contacts to automatically control smoke control system equipment.
  2. Provide smoke control panel On/Off/Auto switches with "On" and "Off" or "Open" and "Closed" LED indicators for overriding the normally open contacts that control smoke control system equipment.
    - a. In the Auto position, the contacts shall operate in accordance with the fire alarm system program. In the Off position, the contacts shall remain open. In the On position, the contacts shall close to test the controlled equipment.
    - b. The LED indicators shall indicate the status of the controlled equipment in accordance with the MMC.
    - c. Turning any switch out of the Auto position shall initiate a system trouble condition.
- Q. Assign each initiating device and control module a unique device address. Label each device with its unique address using a clear adhesive backed nylon or Mylar tape with black text. Install the label on the base of any device with a removable or replaceable head.
- R. Develop a custom location label for each initiating device and control module that describes the type, floor, room number and exact location of the device.
1. If the device is in a corridor or similar large space, state device is by Room XXX.
  2. If room numbers are not available, provide compass directions and references to unique building features.

- S. Provide transient voltage surge suppression for the system.

**1.6 SYSTEM PERFORMANCE REQUIREMENTS**

- A. Under normal conditions, the control panel digital display shall display a "SYSTEM NORMAL" message and the current time and date.
- B. Should an abnormal condition be detected, the appropriate alarm, supervisory, or trouble panel LED shall flash and the appropriate panel audible signal shall sound.
- C. The appropriate panel alarm, supervisory, trouble, or supervisory maintenance alert output relay contact shall close and send a signal through the MOSCAD alarm transmitter to the Division of Public Safety and Security (DPSS).
- D. The fire alarm control panel shall manage all input and output signals through software programming and hardware configuration. In addition to managing and supervising the fire alarm devices, the control panel shall be configured to trigger a supervisory condition when the fire pump runs.
- E. The panel shall display the following information relative to the abnormal condition:
  - 1. Custom location label (40 characters minimum).
  - 2. Type of initiating device.
  - 3. Type of abnormal condition (alarm, supervisory or trouble).
- F. If the abnormal condition is an alarm, the following actions shall occur:
  - 1. Audible notification appliances shall sound throughout the building.
  - 2. Visible notification appliances shall flash throughout the building.
  - 3. Control outputs to mechanical systems and elevator controllers shall perform their programmed functions.
  - 4. Control outputs shall interrupt power to electrically operated door hardware devices.
  - 5. Power to door hold-open devices shall de-energize.
- G. Pressing the appropriate Acknowledge pushbutton shall acknowledge the alarm, supervisory or trouble condition unless the system is in the silence inhibit mode. Once acknowledged, the appropriate LED shall latch on and the panel audible signal shall be silenced.
- H. If the abnormal condition is an alarm, pressing the Silence pushbutton shall silence the audible notification appliances and stop the visual notification appliances from flashing.
- I. Upon a subsequent abnormal condition from another device, the appropriate panel LED shall flash, the panel audible signal shall again pulse and the panel display shall show the new abnormal condition.
- J. After all of the points have been acknowledged and silenced, the LED's shall glow steady and the panel audible signals shall be silenced. The total number of alarms, supervisory, and trouble conditions shall be displayed along with a prompt to review each list chronologically. The end of the list shall be indicated.

- K. Pressing the System Reset pushbutton shall return the system to its normal state if the abnormal conditions have been remedied.
  - 1. The display shall step the user through the reset process with simple English language messages. Messages including "IN PROCESS", "RESET COMPLETED", and "SYSTEM NORMAL" shall provide operator assurance of the sequential steps as they occur.
  - 2. The ventilation system motors shall restart sequentially.
  - 3. The outputs to control circuits of other systems and equipment shall return to normal.
  - 4. When interconnecting with an existing fire alarm system control panel, resetting shall not require the simultaneous operation of reset pushbuttons or switches on multiple control panels, or the disconnection of wiring.
- L. Should an abnormal condition continue to exist, the system shall remain in an abnormal state. The system control relays shall not reset. The panel LED's shall remain on. The display shall indicate the total number of alarm, supervisory and trouble conditions present in the system along with a prompting to review the points. These points shall not require acknowledgment if they were previously acknowledged.
- M. Should a trouble condition continue to exist, the trouble audible signal shall resound at preprogrammed time intervals to act as a reminder that the fire alarm system is not 100 percent operational. Both the time interval and the trouble audible signal shall be programmable to suit the Owner's application.
- N. Should the Alarm Silence Inhibit function be active, the System Reset pushbutton shall be ignored and a "RESET INHIBITED" message shall be displayed for a short time to indicate that action was not taken. For operator assurance, a "RESET NO LONGER INHIBITED" message shall be displayed when the inhibit function times out.

**1.7 ITEMIZED QUOTATION**

- A. Submit with your bid an itemized cost breakdown listing all major component costs, labor costs (including subcontractor labor and material costs), and engineering costs, for base bid and for each alternate, for the entire fire alarm system scope of work. When requested, provide an itemized breakdown to the Owner post-bid for review and approval.

**1.8 SUBMITTALS**

- A. Submit for approval copies of the following shop drawings and product literature. Shop drawings shall contain title blocks identifying the project name and number. Submittals shall be marked to indicate the specific models, sizes, types, and options being provided. Submittals not so marked and incomplete submittals will be rejected.
  - 1. Plan drawings showing the locations (with room names and numbers) of the system components, including any adjustments in the quantities and locations of initiating devices and notification appliances to meet code requirements.
  - 2. Riser diagram showing system components, interconnecting wiring and connections to other building systems and equipment.

3. Wiring diagrams showing manufacturer and field connections at component terminals, complete with conductor color codes and wire numbers.
4. System configuration list showing inputs, outputs, device addresses and custom location labels, device configurations and program logic.
5. Bill of materials.
6. Catalog pages showing system components.
7. System battery sizing calculations.
8. Power supply, amplifier and circuit sizing calculations.
9. Door hold-open power supply sizing calculations.

**ON FIRE ALARM RENOVATION PROJECTS, DELETE ALL OF 1.9.**

#### **1.9 EXTRA MATERIALS**

- A. Provide to the Owner the following extra materials matching the products installed, packaged in protective coverings for storage, and identified with labels clearly describing the contents. Provide 1 percent of the installed amount of each with a minimum of one of each.
  1. Fuses: Each size and type used in the system.
  2. Manual Pull Stations.
  3. Detector Bases.
  4. Detector Heads: Each type used in the system.
  5. Addressable Monitor and Control Modules: Each type used in the system.
  6. Notification Appliances: Each size and type used in the system.
  7. Output Relays.
- B. Provide one data cable for connecting a lap top computer to the fire alarm control panel's RS-232 communications card so that the Owner can perform panel programming.

#### **1.10 RECORD DOCUMENTS**

- A. Submit four copies of record drawings showing the locations of fire alarm panels, devices and appliances, the locations of end-of-line resistors and junction boxes, the addresses of addressable devices, the tap settings of audible notification appliances, the intensity ratings of visual notification appliances, the sizes of conduits and conductors, circuit numbers, and deviations from the design.
- B. Submit four printed copies of the final system configuration list showing inputs, outputs, addresses, custom location labels, device configurations, and program logic.
- C. Provide an electronic file storage device (USB drive, SD card, etc.) containing the following final system software:
  1. The master program generic to the model of system being provided.
  2. The building specific program containing the unique information for the system being provided.
  3. A software license and the system passwords required by the Owner to perform programming changes.

**1.11 OPERATIONS AND MAINTENANCE MANUALS**

- A. Submit for approval four copies of operations and maintenance manuals for the specified system and equipment prior to startup. The manuals shall be the same manuals used by the Manufacturer's field service technicians. The manuals shall be marked to indicate the specific models, sizes, types and options that were provided. Manuals not so marked will be rejected.

**1.12 QUALITY ASSURANCE**

- A. The fire alarm system shall be the standard product of a single fire alarm system manufacturer who has been producing this type of equipment for at least 10 years, and has a fully equipped service organization within 150 miles of the Owner. Each component shall display the manufacturer's name.
- B. Each fire alarm system component shall be listed under the appropriate standard of Underwriters Laboratories and shall bear a UL label.
- C. The fire alarm system shall be UL labeled as a system and approved by FM Global.

***DELETE ALL PARTS OF PARAGRAPH D IF NOT APPLICABLE.***

- D. For classroom, in-patient medical, and Housing projects, the fire alarm system shall also be approved by the State of Michigan Bureau of Fire Services.
  - 1. Submit shop drawings to the Michigan Bureau of Fire Services for approval.
  - 2. Arrange for a Michigan Bureau of Fire Services Inspector to inspect the system installation and testing.
  - 3. Submit to the Owner a copy of the FS-12A Form submitted to the Michigan Bureau of Fire Services.
- E. The fire alarm system shall comply with the requirements of the National Fire Alarm Code, the Owner's Inspection Authorities and with the Manufacturer's instructions.

**1.13 WARRANTY**

- A. Provide a complete parts and labor warranty for twelve months from the date of final acceptance of the system by the Owner.
- B. Provide a telephone response to Owner's questions within 4 hours and on-site assistance within 24 hours.
- C. Permit Owner's Fire Alarm Technicians to perform temporary bypasses and emergency repairs on the system without voiding the warranty.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers and Models:
  - 1. EST Model EST-3, represented by Riverside Integrated Systems.
  - 2. Honeywell Model XLS3000.
  - 3. SimplexGrinnell Model 4100 Series.

**2.2 SYSTEM COMMUNICATIONS**

- A. The fire alarm control panel shall communicate with each addressable initiating and control device individually via shielded twisted pair signaling line circuits. EST SIGA-Loop or SimplexGrinnell MAPNET II or IDNET.
- B. Each signaling line circuit shall be capable of accessing up to 127/250 addressable devices.
- C. Each signaling line circuit shall allow up to 10,000 feet of wire length to the furthest addressable device.
- D. Communications shall use a broadcast polling protocol to allow t-tapping of the circuit except where Class A wiring is required. T-taps shall be limited to 64 per loop.
- E. Communications shall be completely digital and shall include parity data bit error checking routines for address codes and check sum routines for the data transmission protocol.
- F. Each device shall be uniquely identified by a device address.
- G. There shall be no limit to the number of initiating devices which may be activated simultaneously.
- H. Each device shall be individually annunciated at the panel. Annunciation shall include the following conditions for each device.
  - 1. Alarm, supervisory or trouble condition.
  - 2. Open, short or ground.
  - 3. Device failure or incorrect device installed.

*PER NFPA 72, 21.3.2, IN BUILDINGS WITHOUT A FIRE ALARM SYSTEM (I.E. PARKING DECK), INITIATING DEVICES USED FOR ELEVATOR RECALL SHALL BE CONNECTED TO A FIRE ALARM CONTROL UNIT DESIGNATED AS "ELEVATOR RECALL CONTROL AND SUPERVISORY CONTROL UNIT." THIS SHALL BE IDENTIFIED ON THE FIRE ALARM CONTROL UNIT AND ON THE RECORD DRAWINGS.*

**2.3 FIRE ALARM CONTROL PANEL**

- A. The fire alarm control panel shall be modular with solid state, microprocessor based electronics.
- B. The panel shall display only those primary controls and displays essential to operation during a fire alarm condition.
- C. The panel shall include a LCD digital display, with a minimum of 80 characters.

1. The display shall be backlit for enhanced readability. It shall not be lit during an AC power failure unless an alarm condition occurs or there is keypad activity.
  2. The display shall support both upper and lower case letters. Lower case letters shall be used for soft key titles and for prompting the user. Uppercase letters shall be used for system status information. A cursor shall be visible when entering information.
- D. A panel audible signal shall sound during alarm, supervisory, or trouble conditions. This audible signal shall sound differently during each condition to distinguish one condition from another. The audible signal shall also sound differently during each key press to provide audible feedback (chirp) indicating that the key has been pressed properly.
- E. The system program shall be stored in a non-volatile flash EPROM memory within the panel. Loss of primary and secondary power shall not erase the program stored in memory.
1. The program shall be capable of selective input/output control functions.
  2. The program shall enable initiating devices to be individually configured on site to provide either alarm and trouble, supervisory and trouble, alarm only, supervisory only, trouble only, current limited alarm, no alarm, normally closed device monitoring, a non-latching circuit or an alarm verification circuit.
  3. The program shall enable initiating devices to be disabled or enabled individually.
- F. The panel or the field devices shall determine the alarm decision for each detector by comparing the detector value to stored values.
1. The panel shall automatically maintain a constant smoke obscuration sensitivity in percent of smoke obscuration format for each detector.
  2. The panel shall maintain a moving average of each smoke detector's smoke chamber value to automatically compensate for dust and dirty conditions that could affect detection operation.
  3. The smoke obscuration sensitivity shall be adjustable to within 0.3 percent of either limit of the UL window (0.5 percent to 4.0 percent) to compensate for any environment.
  4. When a detector's average value reaches a predetermined value, a "MAINTENANCE ALERT" condition shall be audibly and visually indicated at the panel. The LED on the detector base shall glow steady giving a visible indication at the detector location. If a dirty detector is left unattended and its average value increases to a second predetermined value, a "TROUBLE" condition shall be indicated at the panel. To prevent nuisance alarms, these dirty conditions shall in no way decrease the amount of smoke obscuration necessary for system activation.

5. The panel shall continuously perform an automatic self-test routine on each detector which shall functionally check detector electronics and ensure the accuracy of the obscuration values being transmitted to the panel. Any detector that fails this test shall indicate a "SELF TEST ABNORMAL" or "TROUBLE" condition at the panel.
6. Each detector shall be scanned by the panel for its type identification to prevent inadvertent substitution of another detector type. The panel shall operate with the installed device but shall initiate a "WRONG DEVICE" or "TROUBLE" condition until the proper type is installed or the programmed detector type is changed.
7. An operator at the panel, having a proper access level, shall have the ability to manually access the following information for each detector.
  - a. Device type.
  - b. Device status.
  - c. Present average value.
  - d. Peak detection values.
  - e. Present sensitivity selected.
  - f. Detector range (normal, dirty, etc.).
8. An operator at the panel, having a proper access level, shall have the ability to perform the following for each detector:
  - a. Enable or disable the point.
  - b. Clear peak detection values.
  - c. Clear verification tally.
  - d. Control a detector's relay driver output.
9. The panel shall be programmable to automatically change the sensitivity settings of each detector based on time-of-day and day-of-week (for example, to be more sensitive during unoccupied periods and less sensitive during occupied periods). There shall be seven sensitivity settings available for each detector.
10. The panel shall be programmable for a pre-alarm or two-stage function. This function allows an indication to occur when, for example, a detector with a 3 percent set point reaches a threshold of 1.5 percent smoke obscuration.
11. Smoke detectors shall be provided with the ability for alarm verification. When in alarm verification mode, only a verified alarm shall initiate the alarm sequence operation.
  - a. The activation of a smoke detector shall initiate an alarm verification operation whereby the panel resets the activated detector and waits for a second alarm activation. If, within an adjustable time delay, a second alarm is reported from the same or any other smoke detector, the system shall process the alarm. If no second alarm occurs within the time delay, the system shall resume normal operation.
  - b. The alarm verification shall operate only on smoke detector alarms. Other activated initiating devices shall be processed immediately. The alarm verification operation shall be selectable by device.
  - c. The panel shall have the capability to display the number of times a device has gone into a verification mode.

- d. Detectors in alarm verification mode shall have the ability of being divided into different groups whereby any two activations from a group shall cause the panel to follow its programmed alarm sequence.
- G. The panel shall have four pass code controlled access levels. Pass codes shall be entered using the panel key pad.
- 1. To maintain security when entering a pass code, the digits entered shall not be displayed.
  - 2. When a correct pass code is entered, an "ACCESS GRANTED" message shall be displayed. The access level shall be in effect until the keypad is inactive for 10 minutes or the operator logs out.
  - 3. Should an invalid code be entered, the operator shall be notified with a message and shall be allowed up to two more chances to enter a valid code. After three unsuccessful tries, an "ACCESS DENIED" message shall be displayed.
  - 4. Access to a level shall only allow the operator to perform actions within that level and actions of lower levels, not actions of higher levels.
  - 5. Access levels shall be associated with the following functions:
    - a. Alarm silence.
    - b. System reset.
    - c. Set time and date.
    - d. On/Off/Auto control selection.
    - e. Manual control.
    - f. Disable and enable circuits and devices.
    - g. Clear historical logs.
    - h. Walk test.
    - i. Change alarm verification.
    - j. Change detector sensitivity.
    - k. Function keys.
  - 6. An access level shall also be associated with acknowledge keys. If the operator presses an Acknowledge key with insufficient access, an error message shall be displayed. The points on the log shall scroll with each key press, but the points shall not be acknowledged.
- H. The panel shall have the ability to store a minimum of 300 events in an alarm log plus a minimum of 300 events in a separate trouble log. These events shall be stored in a battery protected random access memory. Real time and date shall accompany history event recordings.
- I. The panel shall supervise subordinate module LED's for burnout or disarrangement. Should a problem occur, the panel shall display the module and LED location numbers to facilitate location of that LED.
- J. The panel shall have function keys programmed as follows for disabling and enabling circuits or groups of devices for maintenance or testing purposes. While circuits or devices are disabled, the panel shall indicate "TROUBLE".

***DELETE THE FUNCTION KEYS THAT DON'T APPLY TO THIS PROJECT. DO NOT RENUMBER THE REMAINING FUNCTION KEYS.***

- 1. F1: Disable smoke detectors by floor.
- 2. F2: Disable duct smoke detectors.
- 3. F3: Disable sprinkler system flow switches.
- 4. F4: Disable horns/strobes or speakers/strobes by floor.

5. F5: Disable beam detectors.
6. F6: Disable smoke detector sounder bases.
7. F7: Disable hood suppression systems.
8. F8: Disable elevator recall.

- K. The system shall be capable of being walk tested by one person.
1. The activation of an initiating device under test shall be silently logged as an alarm or supervisory condition in the historical log. The panel shall automatically reset itself after logging the abnormal condition.
  2. The momentary disconnection of an initiating device or notification appliance shall be silently logged as a trouble condition in the historical log. The panel shall automatically reset itself after logging the trouble condition.
  3. The walk test sequence shall have the ability to activate the notification appliances for a maximum of 2 seconds upon the activation of an initiating device under test. If this option is selected, any momentary opening of the initiating device circuit or a notification appliance circuit shall cause the notification appliances to sound for 4 seconds to indicate the trouble condition.
  4. Should the walk test mode be on for an inappropriate amount of time, the panel shall automatically revert to normal mode.
  5. Should an abnormal condition occur from an active point not in walk test mode, the system shall perform its standard programmed alarm, supervisory or trouble sequences.
- L. The panel enclosure shall be equipped with opaque door panels and locks providing security from tampering.

#### **2.4 NODE AND NAC PANELS**

- A. Node and NAC panels shall be modular with solid state, microprocessor based electronics, operator interfaces, power supplies, audio generators, amplifiers, battery chargers and batteries as required. All components shall be supervised.

#### **2.5 BATTERIES**

- A. Batteries shall be lead calcium and supervised so that a failure produces a "TROUBLE" signal.

#### **2.6 REMOTE ANNUNCIATOR**

- A. The remote annunciator shall duplicate the backlit LCD display; the alarm acknowledge, supervisory acknowledge, trouble acknowledge, alarm silence, and system reset pushbuttons; the alarm, supervisory, and trouble audible signals; the alarm, supervisory, trouble, and power "on" LED's; and the programmable function keys of the fire alarm control panel. A key "enable" switch or door lock, keyed to match the fire alarm control panel door lock, shall permit activating or deactivating the controls.

- B. A remote microphone shall be included when the fire alarm system includes emergency voice/alarm communications, along with the same pushbuttons as the fire alarm control panel for selecting pre-recorded voice messages, and the same controls to choose total building or selected areas communications.

**2.7 ADDRESSABLE SPOT DETECTOR BASES**

- A. Spot detector mounting bases shall be individually addressable, suitable for two wire operation, with a twist-lock head locking feature a DIP switch or electronic addressing means, and an LED that provides power "on", alarm and trouble indications. The bases shall be listed for ceiling and wall mounting. Removal of the detector head shall cause a trouble condition at the panel.
- B. Where shown, the bases shall include an auxiliary relay that is controlled from the panel.
- C. In sleeping rooms, the base shall include a piezoelectric sounder that is controlled from the panel.

**ADD TAMPER-RESISTANT CAGES TO SPOT DETECTORS LOCATED IN HOUSING FACILITY RESIDENT CORRIDORS AND IN ATHLETIC FACILITY PUBLIC AND ATHLETE SPACES.**

- D. In corridors outside of sleeping rooms, the base with its head shall be protected by a vandal-resistant cage.
- E. In corridors, locker rooms and meeting rooms of athletic facilities, the base with its head shall be protected by a vandal-resistant cage.
- F. When bases are not in plain view, bases shall be connected to remote alarm indicators mounted in plain view at 48 inches above the floor.

**2.8 MULTISENSOR SMOKE DETECTOR HEADS**

- A. Multi-sensor type smoke detector heads shall include sampling and reference ionization chambers with a single radioactive source, a photoelectric sensor and a programmable heat detector. The detectors shall support at least four levels of sensitivity selectable at the panel and 360 degree smoke entry.

**2.9 PHOTOELECTRIC SMOKE DETECTOR HEADS**

- A. Photoelectric type smoke detector heads shall include a pulsed LED light source and a silicon photodiode receiver, at least seven levels of sensitivity selectable at the panel, an integral insect screen and 360 degree smoke entry. This type of detector shall be installed in all duct detectors.

**2.10 HEAT DETECTOR HEADS**

- A. Heat detector heads shall include combination rate-of-rise and rate compensated fixed temperature sensing, two levels of rate-of-rise sensitivity selectable at the panel, and an independent 135 degrees F fixed temperature set point. Heat detector heads shall be self-restoring.

- B. Heat detector heads for steam tunnels, cage wash areas and dish machine areas shall have a 135 degrees F fixed temperature set point and shall be self-restoring.

**2.11 DUCT DETECTORS**

- A. Duct detectors shall be individually addressable and consist of a housing, sampling tubes, a baffle and a detachable detector head. Duct detectors shall include an alarm LED, a local test switch, and an auxiliary SPDT relay for ventilation system control. Duct detectors shall be resettable by actuating the panel reset pushbutton. The sampling tubes shall be capable of being cleaned through the housing cover.
- B. The detector heads shall be photoelectric as specified above, but shall be capable of accepting ionization detector heads.
- C. When not in plain view, duct detectors shall include remote alarm indicators and test switches mounted in plain view at 48 inches above the floor.

**2.12 BEAM DETECTORS**

- A. Photoelectric projected beam detectors shall be individually addressable and consist of separate transmitter and receiver units capable of long range coverage of up to 350 feet. Beam detectors shall include alarm and trouble dry auxiliary contacts, and normal, alarm and trouble LED status indicators. Beam detectors shall include internal bore sights, automatic calibration, six sensitivity settings, automatic compensation for temperature and lens contamination, and a trouble indication upon either a total obscuration or an obscuration of 50 percent of the alarm set point. Beam detectors shall be suitable for four wire operation utilizing 24 volt DC power from the panel, and resettable by actuating the panel reset pushbutton.

**2.13 MANUAL PULL STATIONS**

***CHANGE LEXAN TO METAL AND ADD CLEAR PLASTIC TAMPER-RESISTANT COVERS TO MANUAL PULL STATIONS IN HOUSING FACILITY RESIDENT CORRIDORS AND IN ATHLETIC FACILITY PUBLIC AND ATHLETE SPACES.***

- A. Manual pull stations shall be individually addressable, suitable for two wire operation, with a high impact red Lexan body and raised white lettering. Stations shall include an ADA compliant single action operating mechanism with a mechanical latch to hold an operated station open until reset.
- B. Reset shall be accomplished through use of a key common to the panel or a small flat-blade screwdriver. Stations which use allen wrenches or special tools to reset are not acceptable. The point of reset shall be front accessible so stations with tamper-resistant covers can be reset easily.

**2.14 MONITOR MODULES**

- A. Monitor modules for individual two wire contact monitoring shall be individually addressable, suitable for two wire operation, with a DIP switch or electronic addressing means, and a programmable latch feature for monitoring momentary contacts. Monitor modules shall monitor a single normally open dry contact using a Class B, Style B, initiating device circuit.
- B. Monitor modules for zone or four wire device monitoring shall be individually addressable, suitable for four wire operation utilizing 24 volt DC power from the panel, and with a DIP switch or electronic addressing means. Zone monitor modules shall monitor multiple normally open dry contacts using a Class B, Style B, two wire initiating device circuit, or monitor a four wire device using a Class B, Style D, four wire initiating device circuit.

**2.15 CONTROL MODULES**

- A. Control modules shall be individually addressable with DIP switches or electronic addressing means. Control modules shall provide either one normally open and one normally closed contact or a Form C contact per digital output. Control modules may have more than one digital output per module if each output has a unique address. Contacts shall be rated 0.5 amps at 120 volts AC or 2 amps at 28 volts DC resistive and shall be controlled by the panel.

**2.16 HORNS**

- A. Horns shall be electronic, rated 24 volts DC, with a piezoelectric driver set to produce a three-pulse temporal pattern evacuation tone with a sound level of 101 dBA at 10 feet, a red, semi-flush body capable of wall or ceiling mounting.

*DELETE THE FOLLOWING PARAGRAPH IF NOT APPLICABLE.*

- B. Horns in rodent rooms shall be set to generate a slow whoop or warble sound with a peak frequency below 500 Hz. Horns shall be of heavy-duty industrial construction and shall be UL listed for indoor and outdoor applications. EST Model 5530MD-24AW only.

**2.17 SPEAKERS**

- A. Speakers shall be rated 125 to 12,000 Hertz, include four taps rated at from 1/4 to 2 watts, produce a sound level of 82 dBA at 10 feet when set at the 1/2 watt tap, and with a semi-flush body capable of wall or ceiling mounting..
- B. Speakers for locations with high ambient noise may be high efficiency horns rated 500 to 6,000 Hertz minimum, 10 watts minimum, include four or more taps, produce a sound level of 106 dBA minimum at 1 meter when set at the 1 watt tap, and be capable of wall or ceiling mounting.

**2.18 STROBES**

- A. Strobes shall be rated 15, 30, 60, 75, 110, or 177 candela as shown for proper illuminance, with a 1 Hertz flash rate, Xenon flash tube, white body, clear Lexan lens with red "FIRE" or international fire symbol lettering, capable of being synchronized, and capable of wall or ceiling mounting.

**2.19 COMBINATION HORN/STROBES AND SPEAKER/STROBES**

- A. Combination horn/strobes and speaker/strobes shall consist of the horns, speakers and strobes specified above, but combined on a single mounting plate. Combination units used outdoors and in wet areas shall be waterproof and mounted to waterproof back boxes.

**2.20 DOOR HOLD-OPEN POWER SUPPLY**

- A. The door hold-open power supply shall produce 24 volts DC of sufficient amperage to provide 0.4 amps of current to every door hold-open device being controlled. The power supply shall be supervised and capable of withstanding the inrush current that will occur when the door hold-open devices are energized.
- B. The output of the power supply shall be distributed by individually fused circuits. Fuse each circuit at 5 amps.
- C. The power supply shall release the held open doors upon a fire alarm or an AC power failure.

**2.21 EMERGENCY VOICE/ALARM COMMUNICATIONS**

- A. Emergency voice/alarm communications shall include audio control modules for evacuation tone and voice message generation, controls to choose total building or selected areas communications, audio amplifiers, a local microphone, and a remote microphone at each remote annunciator. All of the components except for the remote microphones shall be located in or adjacent to the fire alarm control panel.
- B. The audio control module default mode shall provide for automatic total building fire alarm evacuation. The evacuation tone shall consist of a three-pulse temporal pattern followed by a pre-recorded fire alarm voice message. At the end of each voice message, the evacuation tone shall resume. The evacuation tone and voice message shall sound alternately until the alarm silence pushbutton at the fire alarm control panel or remote annunciator has been pressed. Audio tones and voice messages shall be digitally transmitted between nodes.
- C. The audio control modules shall provide for manual total building or selected area live voice communications. Upon keying of the local or a remote microphone, a three second continuous alert tone shall sound over the speakers indicating a live voice message will occur.
- D. The evacuation and alert tones shall be digitally generated by programmable software so that changes can be made without component rewiring. The pre-recorded voice messages shall be stored digitally in non-volatile EPROM memory.

**DELETE THE FOLLOWING PARAGRAPH IF NOT APPLICABLE.**

- E. The evacuation tone for rodent rooms only shall be produced by a separate audio control module and amplifier that generate a slow whoop or warble sound with a peak frequency below the hearing range of rodents (i.e. 500 Hz).
- F. Audio amplifiers shall have a frequency response of 125 Hz to 12,000 Hz minimum.
- G. Microphones shall be of a hand-held, push-to-talk, noise-canceling type with a frequency range of 200 Hz to 4000 Hz and a self-winding five foot coiled cable. An LED shall indicate the microphone push-to-talk pushbutton has been pressed and the speaker circuits are ready for transmission.
- H. Remote microphones shall be enclosed in remote annunciator cabinets with lockable doors.
  - 1. Remote microphones shall duplicate the manual voice transmission capability of the local microphone at the fire alarm control panel. The fire alarm control panel microphone shall have priority over any remote microphones.
  - 2. The remote microphone cabinets shall include controls for total building or selected areas communications.
- I. Should a Fire Department telephone communication system be provided, the telephones system shall be capable of being patched to the emergency voice/alarm communications system and controlled at the fire command center.

**2.22 FIRE DEPARTMENT TELEPHONE COMMUNICATIONS**

- A. Fire Department telephone communications shall consist of a minimum of eight dedicated communications circuits between a fire command center communications panel and remotely located emergency telephone jacks, a master telephone handset and five pluggable telephone handsets.
- B. The communications panel shall include a master telephone controller for processing of two-way communications. This module shall include a circuit selector switch and "Call" and "Trouble" LED indicators for each circuit, an audible device for call and trouble signaling, a trouble silence switch with ring-back, and an LED trouble indicator. Circuit supervision modules shall be included to electrically supervise for shorts, opens, and grounds of circuit wiring.
- C. The system shall be capable of handling single or simultaneous conversations with all telephones connected into the system. The circuits shall be so designed to prevent static, hum, or other interferences to clear, intelligible two-way conversations. The communications shall be transported digitally between devices.

- D. The act of plugging a handset into an emergency telephone jack shall cause the appropriate circuit indicator LED to flash and a distinctive audible device to sound at the communications panel. The subsequent picking up of the master telephone and selection of the proper circuit shall silence the pulsing sound, cause the circuit indicator LED to latch on, and couple the remote telephone to the master telephone. Two or more telephones shall be capable of being connected into an active conversation at the discretion of the operator.
- E. Attempting to use a subsequent telephone on the same circuit shall not cause the pulsing sound to activate if any two-way communications are already established. Any new circuits activated shall, however, cause their circuit indicator LED's to flash until acknowledged.
- F. Unplugging the handsets in use and returning the related circuit selector switches to the normal position shall cause the restoration of normal supervisory functions. If any remote telephone remains plugged in, the appropriate circuit indicator LED shall flash and the pulsing sound shall resume at the communications panel.
- G. The master telephone handset shall be recessed within a protective enclosure at the communications panel.
- H. A single line circuit shall be provided to a jack in each stairwell at each floor, in each elevator car, in each elevator lobby, at each area of refuge, at the emergency generator location and at the fire pump location. Emergency telephone jacks shall be mounted on a stainless steel single gang plate engraved with the words "Fire Emergency Telephone".
- I. Furnish an emergency telephone jack for installation in each elevator car. Wiring from the elevator controls to each elevator car and installation of the jacks will be provided by the elevator contractor.
- J. Provide five pluggable emergency telephone handsets with self-winding five foot cords within a storage cabinet mounted at the fire command center. Key the cabinet to match the fire alarm control panel.

**2.23 ADD ALTERNATE FOR BUILDING-WIDE MASS NOTIFICATION**

*WHEN THE PROJECT SCOPE INCLUDES AN ADD ALTERNATE FOR BUILDING-WIDE MASS NOTIFICATION, INCLUDE THIS LANGUAGE. ADD A SUMMARY OF THIS LANGUAGE AS A GENERAL NOTE ON THE FIRE ALARM DRAWINGS.*

- A. If the Add Alternate is accepted, add any necessary equipment, initiating devices, notification appliances, conduit, wiring, programming, and appurtenances to the base fire alarm system scope of work to incorporate building-wide mass notification into the fire alarm system.
  - 1. Comply fully with National Fire Alarm Code NFPA 72 emergency communications systems requirements including Annex and Supplement requirements.
  - 2. The system and its components shall be UL listed.

3. Provide speakers for audible notification appliances in lieu of horns if the base fire alarm system scope of work specifies horns. Provide sufficient speakers to meet NFPA 72 voice intelligibility requirements.
4. Provide combination amber lens (for alert) and clear lens (for fire alarm) strobe lights for visual notification appliances in lieu of providing the base bid clear lens (for fire alarm) strobe lights.
5. Provide the following additional features in the main fire alarm control panel and in each remote fire alarm annunciator panel.
  - a. Emergency voice/alarm communications and a microphone for DPSS and OSEH Fire Marshal use if not required by the base bid scope of work.
  - b. The ability to generate a building-wide three second continuous alert tone. This alert tone shall be significantly different from the fire alarm system's three-pulse temporal pattern evacuation tone.
  - c. A minimum of 8 pushbuttons to initiate the amber alert strobe lights and the building-wide evacuation or alert tone followed by a unique pre-recorded voice message.
    - 1) Actuation of any pushbutton shall override any fire alarm notification and instead initiate the amber alert strobe lights and the building-wide evacuation or alert tone over the fire alarm system speakers. The associated pre-recorded voice message shall alternate with the tone.
    - 2) Alarm and supervisory signals shall be sent through MOSCAD to DPSS.
    - 3) At any time during the alert, actuation of any microphone shall permit building-wide live voice announcements to be made. If at any time a remote annunciator panel microphone is keyed simultaneously with the main fire alarm control panel microphone, the main fire alarm control panel microphone shall have priority.
    - 4) The strobe lights shall continue to flash and the tone and pre-recorded voice message shall continue to sound until the fire alarm system is reset.
  - d. The tone and pre-recorded voice message shall be as follows for each pushbutton:
    - 1) Alert tone alternating with "Your attention please - A tornado warning has been issued. Take shelter in this building now. Remain calm and do not run. Take shelter now."
    - 2) Alert tone alternating with "Your attention please - An armed intruder has been reported in this area. Lockdown now."
    - 3) Alert tone alternating with "Your attention please - An active shooter has been reported in this area. Lockdown now."
    - 4) Evacuation tone alternating with "Your attention please - An emergency has occurred. Evacuate the building now. Remain calm and do not run. Evacuate now."

**BuildingName**

**The Description of the Project**

**P00000000 0000 Issued for: BID 283100 - - 23**

- 5) Alert tone alternating with "Your attention please - An emergency has occurred. Please remain in place until further notice. Please remain where you are."
  - 6) Alert tone alternating with "Your attention please - This is an all clear. The emergency has been resolved. Resume normal operations."
  - 7) Alert tone alternating with "Your attention please - This is a test of the building mass notification system. This is only a test."
  - 8) (Spare for project-specific use.)
6. Provide a remote microphone cabinet with microphone for Facility Manager use at the location shown on the drawings. The cabinet shall include the following features:
- a. Provide a minimum of 8 pushbuttons. These pushbuttons shall be identical to those in the main fire alarm panel and in each remote fire alarm annunciator panel. Each pushbutton shall be capable of initiating the building-wide evacuation or alert tone followed by the same unique pre-recorded voice message.
    - 1) Actuation of any pushbutton shall override any fire alarm notification and instead initiate the amber alert strobe lights and the building-wide tone over the fire alarm system speakers. The associated pre-recorded voice message shall alternate with the tone.
    - 2) Alarm and supervisory signals shall be sent through MOSCAD to DPSS.
    - 3) At any time during the alert, actuation of the facility manager's microphone shall permit building-wide live voice announcements to be made. If at any time the facility manager's microphone is keyed simultaneously with the main fire alarm control panel or any remote fire alarm annunciator panel microphone, the fire alarm panel microphone(s) shall have priority.
    - 4) The strobe lights shall continue to flash and the tone and pre-recorded voice message shall continue to sound until the fire alarm system is reset.
  - b. Provide a uniquely keyed cabinet door lock and special facility manager keys so a fire alarm panel key or a special facility manager key can access this cabinet, but a facility manager's key cannot access the other fire alarm panels.
7. Provide the capability inside the main fire alarm control panel to add a future interface module or circuit card. This interface shall permit DPSS to actuate the amber alert strobe lights, actuate the building-wide evacuation or alert tone, actuate any of the pre-recorded voice messages, and make live voice announcements from a head end device located at one or more DPSS remote locations. This capability shall include:
- a. Physical space inside the fire alarm control panel.
  - b. Power supply capacity.
  - c. Battery capacity.
  - d. Means to plug the interface into the fire alarm control panel circuitry.
8. Provide system interconnecting raceways, wiring and routing in compliance with the system "survivability" requirements contained in NFPA 72.

**BuildingName**

**The Description of the Project**

**P00000000 0000 Issued for: BID 283100 - - 24**

**PART 3 - EXECUTION**

**3.1 SYSTEM INTERRUPTIONS**

- A. Coordinate with the U-M Fire Protection Shop (734-647-2046) before performing any work affecting an existing fire alarm system. Operating, programming, modifying, or impairing an existing system without approval of the U-M Fire Protection Shop is strictly prohibited.
- B. When renovating a fire alarm system, test the system to document its condition before changes are made. Maintain operation of fire alarm system devices outside of the work area.
- C. When replacing a fire alarm system, maintain operation of the existing system until acceptance of the new system. If operation of the existing system cannot be maintained and the building is occupied, provide a 24 hour/day fire watch until the new system is accepted.
  - 1. Notify the U-M Fire Protection Shop (734-647-2046), the U-M DPSS (734-763-1131), the U-M Fire Marshal (734-647-1143) and the Michigan Bureau of Fire Services (if applicable) when a fire watch is being performed.
  - 2. Perform the fire watch in accordance with U-M Fire Marshal and Michigan Bureau of Fire Services requirements.
- D. Coordinate with the U-M Key Office (734-764-3481) before performing any work affecting existing electrically controlled doors.

**3.2 INSTALLATION**

*FOR NEW FIRE ALARM PROJECTS, SELECT ONE OF THE FOLLOWING THREE PARAGRAPHS (A, B OR C) AS DIRECTED BY THE PROJECT MANAGER. FOR FIRE ALARM RENOVATION PROJECTS, SELECT THE PARAGRAPH THAT MATCHES THE EXISTING INSTALLATION.*

- A. Provide wiring in conduit in accordance with Sections 260533 and 260513, and Manufacturer's instructions.
- B. Provide wiring in conduit or provide fire alarm-rated MC cables in accordance with Sections 260533 and 260513, and Manufacturer's instructions.
- C. Provide wiring and raceways as follows and in accordance with Sections 260533 and 260513 and Manufacturer's instructions.
  - 1. Concealed in walls, exposed on walls up to 8' AFF, and above non-accessible ceilings - provide wiring in conduit.
  - 2. Above accessible ceilings and above 8' AFF in unfinished spaces - provide open wiring in J-hooks. Provide conduit sleeves where open wiring penetrates walls and floors.
- D. For systems that provide partial evacuation or relocation of occupants rather than full evacuation, protect power supply and notification appliance circuits from attack by fire until they enter the notification zone they serve. Provide 2-hour rated cable assemblies or protect circuits in 2-hour rated shafts, enclosures or sprinklered stairwells in accordance with Sections 260533 and 260513.

- E. Circuits may be T-tapped only where shown on the manufacturer's wiring diagrams.
- F. Provide waterproof back boxes with gaskets for devices and appliances installed outdoors or in wet or wash-down areas.
- G. Paint fire alarm junction boxes, covers and fittings red or provide red conduit throughout, except fire alarm raceways exposed in finished areas may be painted to match wall color.
- H. Modifications to fire alarm control panels, node panels, NAC panels and remote annunciator panels shall be made by a Manufacturer's Representative.
- I. Final connections to the fire alarm system components and system programming shall be performed by Fire Alarm Technicians with NICET Level II or higher certification.
- J. Label fire alarm panels with the room numbers, electrical panel numbers, and circuit breaker numbers feeding them.
- K. Paint the handles of circuit breakers feeding fire alarm panels red, and install handle locks.
- L. Smoke and heat detectors shall not be installed until after construction clean-up is completed.
  - 1. When renovating an existing system, remove and store existing detectors during construction activities.
  - 2. Detectors installed prior to construction clean-up shall be cleaned by the manufacturer or replaced.

**3.3 TESTING**

- A. Demonstrate complete operation of the fire alarm system in accordance with NFPA 72, NFPA 101 (classroom, in-patient medical, and Housing projects only), the Michigan Building Code, and Manufacturer's instructions. Notify the Owner's Representative 3 working days in advance of the test.
  - 1. The test shall be witnessed by a U-M Fire Marshal, a U-M Electrical Inspector, and the U-M Fire Protection Shop.
  - 2. Especially on fire alarm renovation projects, the U-M Fire Protection Shop may participate in or direct the testing activities.
  - 3. On classroom, in-patient medical, and Housing projects, also include an Inspector from the Michigan Bureau of Fire Services.
- B. Submit a signed and dated NFPA 72 test report to the Electrical Inspector prior to acceptance of the fire alarm system by the Owner.
- C. On classroom, in-patient medical, and Housing projects, also submit a signed and dated FS-12A Form to the Michigan Bureau of Fire Services.

**3.4 COMMISSIONING**

- A. Perform Commissioning activities per Related Sections above.

### 3.5 TRAINING

- A. Provide the Owner's Fire Alarm Technicians with classroom training on the operation and maintenance of this model of system. This training shall be by the Manufacturer and shall be the same training as given to the Manufacturer's field service technicians. The University will pay the travel costs to the Manufacturer's training site. If the Owner's Technicians have already received operations and maintenance training from the manufacturer on this model of system, this training requirement will be waived.
- B. Provide the Owner's Fire Alarm Technicians with classroom training on the programming of this model of system. This training shall be by the Manufacturer and shall be the same training given to the Manufacturer's field service technicians. The University will pay the travel costs to the Manufacturer's training site. If the Owner's Technicians have already received programming training on this model of system, this training requirement will be waived.
- C. Train the Owner's Fire Alarm Technicians on unfamiliar components installed in this system.
- D. Walk the Owner's Fire Alarm Technicians through the building and identify the locations of fire alarm devices hidden from plain view.

*DELETE THE FOLLOWING TWO PARAGRAPHS WHEN EMERGENCY VOICE/ALARM COMMUNICATIONS IS NOT INCLUDED.*

- E. Train DPSS, Housing Security if applicable, and the U-M Fire Marshal on the basic operation of the system, including how to acknowledge audible notification appliances after an alarm.
- F. Train DPSS, Housing Security if applicable, and the U-M Fire Marshal on how to override the smoke control systems, on how to use the emergency voice/alarm communications, and on how to use the Fire Department telephone communications systems. Invite representatives from the Ann Arbor Fire Department to this training.
- G. Train the Facility Manager on how to use the emergency voice/alarm communications system, and how to use the mass notification system if provided.

SECTION 283102 - FIRE DETECTION AND ALARM SYSTEM (HOSPITAL PROJECTS)

**END OF CONTENTS TABLE**

**DIVISION 28 ELECTRONIC SAFETY AND SECURITY**  
**SECTION 283102 - FIRE DETECTION AND ALARM SYSTEM (HOSPITAL PROJECTS)**

*DELETE FROM AND ADD TO THIS SECTION TO MAKE IT PROJECT SPECIFIC. HIDDEN TEXT DIRECTIONS INDICATE SOME BUT NOT ALL OF THE REQUIRED EDITING. DELETE THE HIDDEN TEXT DIRECTIONS BEFORE PRINTING FOR PUBLICATION.*

*VERIFY THE TYPES, QUANTITIES AND LOCATIONS OF FIRE ALARM COMPONENTS SHOWN ON PLAN DRAWINGS COMPLY WITH THE SYSTEM DESIGN REQUIREMENTS BELOW. REFER TO THE UMHC DESIGN GUIDELINES FOR SPECIAL REQUIREMENTS THAT MAY NEED TO BE ADDED.*

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

*IN 2 BELOW, SELECT PROPER COMMISSIONING SPEC SECTION NUMBER APPLICABLE TO THE PROJECT OR DELETE IF Cx IS NOT REQUIRED.*

- B. Related Sections:

1. Section 017823 - Operation and Maintenance Manual
2. Section 019100/019110 - Commissioning
3. Section 260513 - Medium, Low & Control Voltage Cables
4. Section 260526 - Grounding and Bonding for Electrical
5. Section 260533 - Electrical Materials and Methods
6. Section 260800 - Electrical Acceptance Tests

**1.2 SUMMARY**

*DUPLICATE PARAGRAPH 1.2.A IN THE GENERAL NOTES ON THE FIRST SHEET OF THE ELECTRICAL DRAWINGS.*

- A. The project delivery method for fire detection and alarm systems shall be by design-build. This specification section and accompanying drawings establish the minimum requirements and boundary for the design-build scope of work. Provide all equipment, devices, appliances, wiring and materials necessary for a complete and expandable system which adheres to applicable codes, standards and University of Michigan requirements.
1. The quantities, locations, types, conditions and manufacture of existing fire alarm equipment, devices and appliances shown are for information only and shall be field verified.

2. The quantities, locations and types of new fire alarm equipment, devices and appliances shown are minimum requirements. Provide all additional equipment, devices, appliances, materials and labor required to meet applicable codes.
3. Coordinate with and provide submittals to the Michigan Bureau of Fire Services, Ann Arbor Fire Department, U-M Fire Marshal and FM Global as required. Coordinate room occupancy and space utilization with the building's Facility Manager.

*IF THE BUILDING WILL REMAIN OCCUPIED DURING THIS WORK, INCLUDE THE FOLLOWING PARAGRAPH.*

4. Maintain the existing fire alarm system in service while the new work is installed, tested and made operational.

*ON FIRE ALARM RENOVATION PROJECTS, DELETE ALL OF 1.2.B AND THE NON-APPLICABLE PARAGRAPHS OF 1.2.C.*

B. Provide a new fire alarm system with the following features:

1. A main fire alarm control panel (FACP).
2. Node and notification appliance circuit (NAC) panels.
3. Automatic and manual initiating devices.
4. Audible and visual notification appliances.
5. Control inputs and outputs to ventilation systems.
6. Status monitoring of fire pump controllers, sprinkler flow switches, and sprinkler valve tamper switches.
7. Alarm, supervisory, trouble, fire pump running and maintenance alerts outputs including addresses and locations of initiating devices to the University of Michigan Hospitals and Health Centers (UMHHC) Facility Command Center (UHFCC) located in University Hospital Building Room 1A203.
8. Remote alarm silence and remote emergency voice/alarm communications capability from the UHFCC.
9. Raceways, junction boxes, wiring and accessories as shown on the drawings and as required for a complete and operable system.
10. System programming in accordance with the system's sequence of operation.
11. System programming and testing required for the system to communicate with the operator interfaces in UHFCC.

*ON PROJECTS PROVIDING A NEW FIRE ALARM SYSTEM, DELETE ALL OF 1.2.C.*

C. Renovate the existing fire alarm system by providing the following:

1. A pre-renovation test of the existing system to document the condition of the system before it is changed.
2. A main fire alarm control panel (FACP).
3. Node and notification appliance circuit (NAC) panels.
4. Automatic and manual initiating devices.
5. Audible and visual notification appliances.
6. Control inputs and outputs to ventilation systems.
7. Status monitoring of fire pump controllers, sprinkler flow switches, and sprinkler valve tamper switches.

8. Alarm, supervisory, trouble, fire pump running and maintenance alerts outputs including addresses and locations of initiating devices to the University of Michigan Hospitals and Health Centers (UMHHC) Facility Command Center (UHFCC) located in University Hospital Building Room 1A203.
9. Remote alarm silence and remote emergency voice/alarm communications capability from the UHFCC.
10. Raceways, junction boxes, wiring and accessories as shown on the drawings and as required for a complete and operable system.
11. System programming as required to incorporate changes to the system's sequence of operation.

**EDIT 1.2.D AND E TO MAKE THEM PROJECT-SPECIFIC.**

- D. Provide the following additional work where shown on the drawings:
  1. Remote annunciators.
  2. Control outputs to smoke control system devices.
  3. Status lights indicating the current status of smoke control system devices.
  4. Auxiliary controls to manually override the control outputs to smoke control system devices.
  5. Control outputs to interrupt power to electrically operated access control door hardware devices.
  6. Non-battery backed power to door hold-open devices.
  7. Emergency voice/alarm communications.
  8. Remote microphone cabinets.
  9. Fire Department telephone communications.
- E. The following work is not included unless shown otherwise:
  1. Smoke and heat detectors that initiate an elevator recall.
  2. Smoke and heat detectors that actuate a fire suppression system.
  3. Electrically operated door hardware devices.
  4. Power to electrically operated door hardware devices.
  5. Door hold-open devices.

**1.3 RELATED SECTIONS**

- A. The drawings and the general provisions of the contract, including the current edition of the University of Michigan Standard General Conditions, apply to this section.
- B. The applicable requirements of the other Division 26 specification sections, including the following, apply to this section.
  1. Section 260500, "Basic Electrical Materials and Methods".
  2. Section 260513, "Cables and Wires".
  3. Section 262700, "Service and Secondary Distribution".
  4. Section 260526, "Grounding".
  5. Section 260800, "Electrical Acceptance Tests".

**1.4 REFERENCES**

- A. Comply with the current versions of the following codes and standards as applicable:
  1. ANSI/IEEE C2, "National Electrical Safety Code".

2. MBC, "Michigan Building Code".
  3. MEC, "Michigan Electrical Code".
  4. MMC, "Michigan Mechanical Code".
  5. "Michigan Rehabilitation Code".
  6. "Michigan Residential Code".
  7. NFPA 13, "Standard for the Installation of Sprinkler Systems".
  8. NFPA 20, "Standard for the Installation of Centrifugal Fire Pumps".
  9. NFPA 72, "National Fire Alarm Code", except as follows:
    - a. Smoke detectors that initiate an elevator recall shall not be connected to the fire alarm system.
    - b. Smoke and heat detectors shall not be required above suspended ceilings.
    - c. Horns or speakers shall not be installed in elevator machine rooms. Horns shall not be installed in elevator cars.
    - d. Fire alarm system shall not shut down power to the elevators.
    - e. Optional smoke detectors in rooms with beam pockets should be spaced as shown on the plan drawings.
  10. NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems".
  11. UL 217, "Single and Multiple Station Smoke Detectors".
  12. UL 268, "Smoke Detectors for Fire Protective Signaling Systems".
  13. UL 268A, "Smoke Detectors for Duct Applications".
  14. UL 464, "Audible Signal Appliances".
  15. UL 521, "Heat Detectors for Fire Protective Signaling Systems".
  16. UL 864, "Control Units for Fire Protective Signaling Systems".
  17. UL 1480, "Speakers for Fire Protective Signaling Systems".
  18. UL 1971, "Signaling Devices for the Hearing Impaired".
- B. For classroom, in-patient medical and Housing projects, comply with the applicable sections of NFPA 101, "Life Safety Code" as adopted and amended by the Michigan Bureau of Fire Services.
- C. For systems that provide partial evacuation or relocation of occupants rather than full evacuation, comply with the NFPA 72 requirements related to survivability from attack by fire.
1. Designate each notification appliance circuit to serve no more than one notification zone.
  2. Protect power supply and notification appliance circuits from fire until they enter the notification zone they serve.
  3. Monitor the integrity of audible and visual notification appliance power supplies, audio generators, amplifiers and circuits.
  4. Monitor the integrity of Fire Department telephone communications circuits.

#### 1.5 SYSTEM DESIGN REQUIREMENTS

- A. The system shall be power limited.
- B. Provide a fire alarm control panel with the following:
  1. Digital display.

2. Multiple pushbutton keypad.
  3. LED status indicating lights.
  4. Audible status signals.
  5. Output relays.
  6. Battery charger and batteries.
  7. RS-232 communications card.
- C. Provide Class B, Style 3, signaling line circuits.
1. Provide sufficient spare capacity on each signaling line circuit for an additional 25 percent of initiating and control devices.
- D. Provide Class B, Style Y, notification appliance circuits.
1. Size the control panel power supplies, amplifiers and batteries for 25 percent spare capacity calculated with 40 ma horn loads, 1 watt speaker loads and 150 ma strobe light loads.
  2. Provide sufficient spare capacity on each notification appliance circuit for an additional 25 percent of notification appliances.
- E. The system shall supervise the following circuits and components:
1. Initiating device circuits.
  2. Signaling line circuits.
  3. Notification appliance circuits.
  4. Addressable initiating and control devices.
  5. Control output wiring.
  6. Auxiliary control switches.
  7. System node panels, NAC panels, remote annunciators and remote microphone panels.
  8. Primary power supply.
  9. Secondary power supply.
- F. The system shall be capable of being programmed by the Owner on site to accommodate expansion or sequence of operation changes.
- G. Provide 120 volts AC primary power to the system from a dedicated emergency power branch circuit.
- H. Provide a control panel battery charger capable of fully charging a 200 amp-hour battery within 24 hours.
- I. Provide sufficient secondary power battery capacity to operate the entire system (except the door hold-open devices) upon the loss of primary power for a period of 24 hours in a normal supervisory mode followed by 5 minutes of evacuation alarm operation.
1. When emergency voice/alarm communications is provided, provide sufficient battery capacity for 24 hours of operation in a normal supervisory mode followed by 15 minutes of voice/alarm operation.
  2. The system shall automatically transfer to and from the secondary power batteries upon an interruption of primary power without initiating a nuisance alarm.
  3. The system shall delay initiating a trouble condition for two seconds upon a transfer to or from primary power to avoid nuisance trouble conditions during emergency generator testing.

- J. Provide smoke and heat detectors as required by code and as shown, including the following.
1. Provide smoke detectors in each elevator lobby and in each elevator machine room to duplicate the elevator recall detectors provided as part of the elevator system. Do not provide smoke or heat detectors in elevator shafts.
  2. Provide two heat detectors, one in front and one behind, each unit substation transformer.
  3. Provide smoke detectors in each mechanical, electrical, telecommunications, trash collection and recycling room.
  4. Provide smoke detectors in residence hall corridors, each sleeping room, and immediately outside each sleeping room located within a suite or apartment.
  5. Provide duct smoke detectors where required by code. When not in plain view or more than 10 feet above the floor, provide duct detector remote alarm indicators and test switches mounted in plain view at 48 inches above the floor.
- K. Provide sufficient audible notification appliances to achieve a sound level of 15 dBA above ambient sound level, but not less than 60 dBA nor more than 110 dBA. The sound level in mechanical rooms shall be not less than 90 dBA, and in sleeping rooms shall be not less than 75 dBA measured at pillow level. The sound shall be a temporal code three slow whoop or pulsed evacuation signal.
1. In rodent rooms, the sound shall be a slow whoop or warble with a peak frequency below 500 Hz.
  2. Do not provide horns or speakers in exit stair enclosures.
  3. Do not provide horns or speakers in elevator machine rooms or in elevator cars.
  4. Provide a speaker in each sleeping room and a sounder base in each sleeping room smoke detector. The speaker shall provide the general alarm and the sounder base shall alarm upon smoke in the room.
- L. Provide visual notification appliances in accordance with the intensity and spacing requirements of NFPA 72.
1. Provide strobes in all public areas including multi-person offices, but not in exit stair enclosures and animal rooms.
  2. Combine horns or speakers with strobes when both are required at the same location.
  3. Synchronize strobes when more than two appliances are in any point of view and are less than 55 feet apart.
  4. Provide strobes in elevator machine rooms.
  5. Provide strobes in accessible sleeping rooms and in living spaces of accessible suites or apartments.
  6. Provide strobes in mechanical rooms and other areas that have an average ambient noise level exceeding 60 dBA.

**DELETE THE FOLLOWING PARAGRAPH IF NOT APPLICABLE.**

- M. Provide a waterproof horn/strobe or speaker/strobe with waterproof back box on the exterior of the building between 8 and 12 feet above the fire department connection. Audible sound shall be 90 dBA minimum at 10' and visual intensity shall be 110 candela. Program this device to alarm upon sprinkler system water flow only, and to cease operation upon termination of water flow.

- N. Provide individually addressable monitor modules to monitor non-addressable initiating devices and status contacts of other systems.
  - 1. Monitor modules shall use Class B, Style B initiating device circuits to monitor the initiating devices and status contacts.
  - 2. When interconnecting with an existing fire alarm system control panel, provide monitor modules as required so new and existing control panels function as a single system.
- O. Provide panel auxiliary relay contacts and individually addressable control module contacts to interface with control circuits of other systems and equipment.
  - 1. Provide normally closed duct smoke detector contacts to shut down ventilation systems.
  - 2. Provide normally open auxiliary relay or control module contacts to start smoke control systems.
  - 3. Provide normally closed auxiliary relay or control module contacts to release electrically held door locks and door hold-opens, and to disable electrically operated door proximity sensors.
  - 4. When interconnecting with an existing fire alarm system control panel, provide control modules as required so new and existing control panels function as a single system.
- P. Provide control panel On/Off/Auto switches with "On" and "Off" or "Open" and "Closed" LED indicators for overriding the normally open contacts that start smoke control systems.
  - 1. In the Auto position, the contacts shall operate in accordance with the fire alarm system program. In the Off position, the contacts shall remain open. In the On position, the contacts shall close to test the controlled equipment.
  - 2. The LED indicators shall indicate the status of the controlled equipment in accordance with the MMC.
  - 3. Turning any switch out of the Auto position shall initiate a system trouble condition.
- Q. Assign each initiating device a unique device address.
- R. Develop a custom location label for each initiating device that describes the type, floor, room number and exact location of the device.
  - 1. If the device is in a corridor or similar large space, state device is by Room (NAME/NUMBER).
  - 2. If room numbers are not available, provide compass directions and references to unique building features.
- S. Provide transient voltage surge suppression for the system.

**1.6 SYSTEM PERFORMANCE REQUIREMENTS**

- A. Under normal conditions, the control panel digital display shall display a "SYSTEM NORMAL" message and the current time and date.
- B. Should an abnormal condition be detected, the appropriate alarm, supervisory, or trouble panel LED shall flash and the appropriate panel audible signal shall sound.

- C. The appropriate panel alarm, supervisory, trouble or supervisory maintenance alert outputs including addresses and locations of initiating devices shall be sent via fiber-optic cable (by others) for viewing at the University Hospital Facility Command Center (UHFCC).
- D. The fire alarm control panel shall manage all input and output signals through software programming and hardware configuration. In addition to managing and supervising the fire alarm devices, the control panel shall be configured to trigger an alarm when the fire pump runs.
- E. The panel shall display the following information relative to the abnormal condition:
  - 1. Custom location label (40 characters minimum).
  - 2. Type of initiating device.
  - 3. Type of abnormal condition (alarm, supervisory or trouble).
- F. If the abnormal condition is an alarm, the following actions shall occur:
  - 1. Audible notification appliances shall sound throughout the building.
  - 2. Visible notification appliances shall flash throughout the building.
  - 3. Control outputs to mechanical systems shall perform their programmed functions.
  - 4. Control outputs shall interrupt power to electrically operated door hardware devices.
  - 5. Power to door hold-open devices shall de-energize.
- G. Pressing the appropriate Acknowledge pushbutton shall acknowledge the alarm, supervisory or trouble condition unless the system is in the silence inhibit mode. Once acknowledged, the appropriate LED shall latch on and the panel audible signal shall be silenced.
- H. If the abnormal condition is an alarm, pressing the Silence pushbutton shall silence the audible notification appliances and stop the visual notification appliances from flashing.
- I. In addition to the Acknowledge and Silence pushbuttons available on the fire alarm control panel, the fire alarm system head end equipment in the UHFCC shall be capable of acknowledging and silencing the system remotely.
- J. Upon a subsequent abnormal condition from another device, the appropriate panel LED shall flash, the panel audible signal shall again pulse and the panel display shall show the new abnormal condition.
- K. After all of the points have been acknowledged and silenced, the LED's shall glow steady and the panel audible signals shall be silenced. The total number of alarms, supervisory, and trouble conditions shall be displayed along with a prompt to review each list chronologically. The end of the list shall be indicated.
- L. Pressing the System Reset pushbutton shall return the system to its normal state if the abnormal conditions have been remedied.

1. The display shall step the user through the reset process with simple English language messages. Messages including "IN PROCESS", "RESET COMPLETED", and "SYSTEM NORMAL" shall provide operator assurance of the sequential steps as they occur.
  2. The ventilation system motors shall restart sequentially.
  3. The outputs to control circuits of other systems and equipment shall return to normal.
  4. When interconnecting with an existing fire alarm system control panel, resetting shall not require the simultaneous operation of reset pushbuttons or switches on multiple control panels, or the disconnection of wiring.
- M. Should an abnormal condition continue to exist, the system shall remain in an abnormal state. The system control relays shall not reset. The panel LED's shall remain on. The display shall indicate the total number of alarm, supervisory and trouble conditions present in the system along with a prompting to review the points. These points shall not require acknowledgment if they were previously acknowledged.
- N. Should a trouble condition continue to exist, the trouble audible signal shall resound at preprogrammed time intervals to act as a reminder that the fire alarm system is not 100 percent operational. Both the time interval and the trouble audible signal shall be programmable to suit the Owner's application.
- O. Should the Alarm Silence Inhibit function be active, the System Reset pushbutton shall be ignored and a "RESET INHIBITED" message shall be displayed for a short time to indicate that action was not taken. For operator assurance, a "RESET NO LONGER INHIBITED" message shall be displayed when the inhibit function times out.

#### 1.7 ITEMIZED QUOTATION

- A. Submit with your bid an itemized cost breakdown listing all major component costs, labor costs (including subcontractor labor and material costs), and engineering costs, for base bid and for each alternate, for the entire fire alarm system scope of work. When requested, provide an itemized breakdown to the Owner post-bid for review and approval.

#### 1.8 SUBMITTALS

- A. Submit for approval copies of the following shop drawings and product literature. Shop drawings shall contain title blocks identifying the project name and number. Submittals shall be marked to indicate the specific models, sizes, types and options being provided. Submittals not so marked and incomplete submittals will be rejected.
1. Plan drawings showing the locations (with room numbers) of the system components, including any adjustments in the quantities and locations of initiating devices and notification appliances to meet code requirements.
  2. Riser diagram showing system components, interconnecting wiring and connections to other building systems and equipment.

3. Wiring diagrams showing manufacturer and field connections at component terminals, complete with conductor color codes and wire numbers.
4. System configuration list showing inputs, outputs, device addresses and custom location labels, device configurations and program logic.
5. Bill of materials.
6. Catalog pages showing system components.
7. System battery sizing calculations.
8. Power supply, amplifier and circuit sizing calculations.
9. Door hold-open power supply sizing calculations.

*ON FIRE ALARM RENOVATION PROJECTS, DELETE ALL OF 1.9.*

#### **1.9 EXTRA MATERIALS**

- A. Provide to the Owner the following extra materials matching the products installed, packaged in protective coverings for storage, and identified with labels clearly describing the contents. Provide 1 percent of the installed amount of each with a minimum of one of each.
  1. Fuses: Each size and type used in the system.
  2. Manual Pull Stations.
  3. Detector Bases.
  4. Detector Heads: Each type used in the system.
  5. Addressable Monitor and Control Modules: Each type used in the system.
  6. Notification Appliances: Each size and type used in the system.
  7. Output Relays.
- B. Provide one data cable for connecting a lap top computer to the fire alarm control panel's RS-232 communications card so that the Owner can perform panel programming.

#### **1.10 RECORD DOCUMENTS**

- A. Submit four copies of record drawings showing the locations of fire alarm devices and appliances, the locations of end-of-line resistors and junction boxes, the addresses of addressable devices, the tap settings of audible notification appliances, the intensity ratings of visual notification appliances, the sizes of conduits and conductors, circuit numbers, and deviations from the design.
- B. Submit four printed copies of the final system configuration list showing inputs, outputs, addresses, custom location labels, device configurations and program logic.
- C. Submit electronic, Windows based files with the following final system software:
  1. The master program generic to the model of system being provided.
  2. The building specific program containing the unique information for the system being provided.
  3. A software license and the system passwords required by the Owner to perform programming changes.

**1.11 OPERATIONS AND MAINTENANCE MANUALS**

- A. Submit for approval four copies of operations and maintenance manuals for the specified system and equipment prior to startup. The manuals shall be the same manuals used by the Manufacturer's field service technicians. The manuals shall be marked to indicate the specific models, sizes, types and options that were provided. Manuals not so marked will be rejected.

**1.12 QUALITY ASSURANCE**

- A. The fire alarm system shall be the standard product of a single fire alarm system manufacturer who has been producing this type of equipment for at least 10 years, and has a fully equipped service organization within 150 miles of the Owner. Each component shall display the manufacturer's name.
- B. Each fire alarm system component shall be listed under the appropriate standard of Underwriters Laboratories and shall bear a UL label.
- C. The fire alarm system shall be UL labeled as a system and approved by FM Global.

*DELETE THE FOLLOWING PARAGRAPH IF NOT APPLICABLE.*

- D. For classroom, in-patient medical and Housing projects, the fire alarm system shall also be approved by the State of Michigan Bureau of Fire Services.
  - 1. Submit shop drawings to the Michigan Bureau of Fire Services for approval.
  - 2. Arrange for a Michigan Bureau of Fire Services Inspector to inspect the system installation and testing.
  - 3. Submit to the Owner a copy of the FS-12A Form submitted to the Michigan Bureau of Fire Services.
- E. The fire alarm system shall comply with the requirements of the National Fire Alarm Code, the Owner's Inspection Authorities and with the Manufacturer's instructions.

**1.13 WARRANTY**

- A. Provide a complete parts and labor warranty for twelve months from the date of final acceptance of the system by the Owner.
- B. Provide a telephone response to Owner's questions within 4 hours and on-site assistance within 24 hours.
- C. Permit Owner's Fire Alarm Technicians to perform temporary bypasses and emergency repairs on the system without voiding the warranty.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Acceptable Manufacturers and Models:
  - 1. EST Model EST-3 represented by Riverside Integrated Systems.
  - 2. Honeywell Model XLS3000.
  - 3. SimplexGrinnell Model 4100 Series.

**2.2 SYSTEM COMMUNICATIONS**

- A. The fire alarm control panel shall communicate with each addressable initiating and control device individually via shielded twisted pair signaling line circuits. EST SIGA-Loop, Honeywell Eclipse or FlashScan, or SimplexGrinnell MAPNET II or IDNET.
- B. Each signaling line circuit shall be capable of accessing up to 127/250 addressable devices.
- C. Each signaling line circuit shall allow up to 10,000 feet of wire length to the furthest addressable device.
- D. Communications shall use a broadcast polling protocol to allow tapping of the circuit except where Class A wiring is required. T-taps shall be limited to 64 per loop.
- E. Communications shall be completely digital and shall include parity data bit error checking routines for address codes and check sum routines for the data transmission protocol.
- F. Each device shall be uniquely identified by a device address.
- G. There shall be no limit to the number of initiating devices which may be activated simultaneously.
- H. Each device shall be individually annunciated at the panel. Annunciation shall include the following conditions for each device.
- I. Alarm, supervisory or trouble condition.
  - 1. Open, short or ground.
  - 2. Device failure or incorrect device installed.

**2.3 FIRE ALARM CONTROL PANEL**

- A. The fire alarm control panel shall be modular with solid state, microprocessor based electronics. EST 3, Honeywell XLS3000, or SimplexGrinnell 4100 Series.
- B. The panel shall display only those primary controls and displays essential to operation during a fire alarm condition.
- C. The panel shall include a LCD digital display, with a minimum of 80 characters.
  - 1. The display shall be backlit for enhanced readability. It shall not be lit during an AC power failure unless an alarm condition occurs or there is keypad activity.

2. The display shall support both upper and lower case letters. Lower case letters shall be used for soft key titles and for prompting the user. Uppercase letters shall be used for system status information. A cursor shall be visible when entering information.
- D. A panel audible signal shall sound during alarm, supervisory or trouble conditions. This audible signal shall sound differently during each condition to distinguish one condition from another. The audible signal shall also sound differently during each key press to provide audible feedback (chirp) indicating that the key has been pressed properly.
- E. The system program shall be stored in a non-volatile flash EPROM memory within the panel. Loss of primary and secondary power shall not erase the program stored in memory.
1. The program shall be capable of selective input/output control functions based upon AND'ing, OR'ing, NOT'ing, timing and special coded operations.
  2. The program shall enable initiating devices to be individually configured on site to provide either alarm and trouble, supervisory and trouble, alarm only, supervisory only, trouble only, current limited alarm, no alarm, normally closed device monitoring, a non-latching circuit or an alarm verification circuit.
  3. The program shall enable initiating devices to be disabled or enabled individually.
- F. The panel or the field devices shall determine the alarm decision for each detector by comparing the detector value to stored values.
1. The panel shall automatically maintain a constant smoke obscuration sensitivity in percent of smoke obscuration format for each detector.
  2. The panel shall maintain a moving average of each smoke detector's smoke chamber value to automatically compensate for dust and dirty conditions that could affect detection operation.
  3. The smoke obscuration sensitivity shall be adjustable to within 0.3 percent of either limit of the UL window (0.5 percent to 4.0 percent) to compensate for any environment.
  4. When a detector's average value reaches a predetermined value, a "MAINTENANCE ALERT" condition shall be audibly and visually indicated at the panel. The LED on the detector base shall glow steady giving a visible indication at the detector location. If a dirty detector is left unattended and its average value increases to a second predetermined value, a "TROUBLE" condition shall be indicated at the panel. To prevent nuisance alarms, these dirty conditions shall in no way decrease the amount of smoke obscuration necessary for system activation.
  5. The panel shall continuously perform an automatic self-test routine on each detector which shall functionally check detector electronics and ensure the accuracy of the obscuration values being transmitted to the panel. Any detector that fails this test shall indicate a "SELF TEST ABNORMAL" or "TROUBLE" condition at the panel.

6. Each detector shall be scanned by the panel for its type identification to prevent inadvertent substitution of another detector type. The panel shall operate with the installed device but shall initiate a "WRONG DEVICE" or "TROUBLE" condition until the proper type is installed or the programmed detector type is changed.
  7. An operator at the panel, having a proper access level, shall have the ability to manually access the following information for each detector.
    - a. Device type.
    - b. Device status.
    - c. Present average value.
    - d. Peak detection values.
    - e. Present sensitivity selected.
    - f. Detector range (normal, dirty, etc.).
  8. An operator at the panel, having a proper access level, shall have the ability to perform the following for each detector:
    - a. Enable or disable the point.
    - b. Clear peak detection values.
    - c. Clear verification tally.
    - d. Control a detector's relay driver output.
  9. The panel shall be programmable to automatically change the sensitivity settings of each detector based on time-of-day and day-of-week (for example, to be more sensitive during unoccupied periods and less sensitive during occupied periods). There shall be seven sensitivity settings available for each detector.
  10. The panel shall be programmable for a pre-alarm or two-stage function. This function allows an indication to occur when, for example, a detector with a 3 percent set point reaches a threshold of 1.5 percent smoke obscuration.
  11. Smoke detectors shall be provided with the ability for alarm verification. When in alarm verification mode, only a verified alarm shall initiate the alarm sequence operation.
    - a. The activation of a smoke detector shall initiate an alarm verification operation whereby the panel resets the activated detector and waits for a second alarm activation. If, within an adjustable time delay, a second alarm is reported from the same or any other smoke detector, the system shall process the alarm. If no second alarm occurs within the time delay, the system shall resume normal operation.
    - b. The alarm verification shall operate only on smoke detector alarms. Other activated initiating devices shall be processed immediately. The alarm verification operation shall be selectable by device.
    - c. The panel shall have the capability to display the number of times a device has gone into a verification mode.
    - d. Detectors in alarm verification mode shall have the ability of being divided into different groups whereby any two activations from a group shall cause the panel to follow its programmed alarm sequence.
- G. The panel shall have four pass code controlled access levels. Pass codes shall be entered using the panel key pad.
1. To maintain security when entering a pass code, the digits entered shall not be displayed.

2. When a correct pass code is entered, an "ACCESS GRANTED" message shall be displayed. The access level shall be in effect until the keypad is inactive for 10 minutes or the operator logs out.
  3. Should an invalid code be entered, the operator shall be notified with a message and shall be allowed up to two more chances to enter a valid code. After three unsuccessful tries, an "ACCESS DENIED" message shall be displayed.
  4. Access to a level shall only allow the operator to perform actions within that level and actions of lower levels, not actions of higher levels.
  5. Access levels shall be associated with the following functions:
    - a. Alarm silence.
    - b. System reset.
    - c. Set time and date.
    - d. On/Off/Auto control selection.
    - e. Manual control.
    - f. Disable and enable circuits and devices.
    - g. Clear historical logs.
    - h. Walk test.
    - i. Change alarm verification.
    - j. Change detector sensitivity.
    - k. Function keys.
  6. An access level shall also be associated with acknowledge keys. If the operator presses an Acknowledge key with insufficient access, an error message shall be displayed. The points on the log shall scroll with each key press, but the points shall not be acknowledged.
- H. The panel shall have the ability to store a minimum of 300 events in an alarm log plus a minimum of 300 events in a separate trouble log. These events shall be stored in a battery protected random access memory. Real time and date shall accompany history event recordings.
- I. The panel shall supervise subordinate module LED's for burnout or disarrangement. Should a problem occur, the panel shall display the module and LED location numbers to facilitate location of that LED.
- J. The panel shall have function keys programmed as follows for disabling and enabling circuits or groups of devices for maintenance or testing purposes. While circuits or devices are disabled, the panel shall indicate "TROUBLE".

**DELETE THE FUNCTION KEYS THAT DON'T APPLY TO THIS PROJECT. DO NOT RENUMBER THE REMAINING FUNCTION KEYS.**

1. F1: Disable smoke detectors by floor.
  2. F2: Disable duct smoke detectors.
  3. F3: Disable sprinkler system flow switches.
  4. F4: Disable horns/strobes or speakers/strobes by floor.
  5. F5: Disable beam detectors.
  6. F6: Disable smoke detector sounder bases.
  7. F7: Disable hood suppression systems.
- K. The system shall be capable of being walk tested by one person.

1. The activation of an initiating device under test shall be silently logged as an alarm or supervisory condition in the historical log. The panel shall automatically reset itself after logging the abnormal condition.
  2. The momentary disconnection of an initiating device or notification appliance shall be silently logged as a trouble condition in the historical log. The panel shall automatically reset itself after logging the trouble condition.
  3. The walk test sequence shall have the ability to activate the notification appliances for a maximum of 2 seconds upon the activation of an initiating device under test. If this option is selected, any momentary opening of the initiating device circuit or a notification appliance circuit shall cause the notification appliances to sound for 4 seconds to indicate the trouble condition.
  4. Should the walk test mode be on for an inappropriate amount of time, the panel shall automatically revert to normal mode.
  5. Should an abnormal condition occur from an active point not in walk test mode, the system shall perform its standard programmed alarm, supervisory or trouble sequences.
- L. The panel enclosure shall be equipped with locks and transparent door panels providing freedom from tampering yet allowing full view of the various lights and controls.

#### **2.4 NODE AND NAC PANELS**

- A. Node and NAC panels shall be modular with solid state, microprocessor based electronics, operator interfaces, power supplies, audio generators, amplifiers, battery chargers and batteries as required. All components shall be supervised. EST 3, Honeywell XLS3000, or SimplexGrinnell V4100.

#### **2.5 BATTERIES**

- A. Batteries shall be lead calcium and supervised so that a failure produces a "TROUBLE" signal.

#### **2.6 REMOTE ANNUNCIATOR**

- A. The remote annunciator shall duplicate the backlit LCD display; the alarm acknowledge, supervisory acknowledge, trouble acknowledge, alarm silence, and system reset pushbuttons; the alarm, supervisory, and trouble audible signals; the alarm, supervisory, trouble, and power "on" LED's; and the programmable function keys of the fire alarm control panel. A key "enable" switch or door lock, keyed to match the fire alarm control panel door lock, shall permit activating or deactivating the controls. EST 3-ANN, Honeywell XLS-NCA, or SimplexGrinnell 4603-9101.
- B. A remote microphone shall be included when the fire alarm system includes emergency voice/alarm communications, along with the same pushbuttons as the fire alarm control panel for selecting pre-recorded voice messages, and the same controls to choose total building or selected areas communications.

**2.7 ADDRESSABLE SPOT DETECTOR BASES**

- A. Spot detector mounting bases shall be individually addressable, suitable for two wire operation, with a twist-lock head locking feature a DIP switch or electronic addressing means, and an LED that provides power "on", alarm and trouble indications. The bases shall be listed for ceiling and wall mounting. Removal of the detector head shall cause a trouble condition at the panel. EST SIGA-SB, Honeywell 14507371-001, or SimplexGrinnell 4098-9792.
- B. Where shown, the bases shall include an auxiliary relay that is controlled from the panel. EST SIGA-RB, Honeywell B244RB, or SimplexGrinnell 4098-9791 base with 2098-9737 relay.
- C. In sleeping rooms, the base shall include a piezoelectric sounder that is controlled from the panel. EST SIGA-AB4, Honeywell B501BHT, or SimplexGrinnell 4098-9794.
- D. When bases are not in plain view, bases shall be connected to remote alarm indicators mounted in plain view at 48 inches above the floor.

**2.8 MULTISENSOR SMOKE DETECTOR HEADS**

- A. Multi-sensor type smoke detector heads shall include sampling and reference ionization chambers with a single radioactive source, a photoelectric sensor and a programmable heat detector. The detectors shall support at least four levels of sensitivity selectable at the panel and 360 degree smoke entry. EST SIGA-IPHS, Honeywell TC806B1084, or SimplexGrinnell 4098-9754.

**2.9 PHOTOELECTRIC SMOKE DETECTOR HEADS**

- A. Photoelectric type smoke detector heads shall include a pulsed LED light source and a silicon photodiode receiver, at least seven levels of sensitivity selectable at the panel, an integral insect screen and 360 degree smoke entry. This type of detector shall be installed in all duct detectors. EST SIGA-PS or SIGA-SD, Honeywell TC806B1076, or SimplexGrinnell 4098-9714.

**2.10 HEAT DETECTOR HEADS**

- A. Heat detector heads shall include combination rate-of-rise and rate compensated fixed temperature sensing, two levels of rate-of-rise sensitivity selectable at the panel, and an independent 135 degrees F fixed temperature set point. Heat detector heads shall be self-restoring. EST SIGA-HRS, Honeywell TC808B1066, or SimplexGrinnell 4098-9733.
- B. Heat detector heads for steam tunnels, cage wash areas and dish machine areas shall have a 135 degrees F fixed temperature set point and shall be self-restoring. EST SIGA-HFS, Honeywell TC808B1041 or SimplexGrinnell 4098-9733.

**2.11 DUCT DETECTORS**

- A. Duct detectors shall be individually addressable and consist of a housing, sampling tubes, a baffle and a detachable detector head. Duct detectors shall include an alarm LED, a local test switch, and an auxiliary SPDT relay for ventilation system control. Duct detectors shall be resettable by actuating the panel reset pushbutton. The sampling tubes shall be capable of being cleaned through the housing cover. EST SIGA-SD DH100ACLP, Honeywell TC806D1056, SimplexGrinnell 4098-9756, or System Sensor BK-DH100ACLP.
- B. The detector heads shall be photoelectric as specified above, but shall be capable of accepting ionization detector heads.
- C. When not in plain view, duct detectors shall include remote alarm indicators and test switches mounted in plain view at 48 inches above the floor.

**2.12 BEAM DETECTORS**

- A. Photoelectric projected beam detectors shall be individually addressable and consist of separate transmitter and receiver units capable of long range coverage of up to 350 feet. Beam detectors shall include alarm and trouble dry auxiliary contacts, and normal, alarm and trouble LED status indicators. Beam detectors shall include internal bore sights, automatic calibration, six sensitivity settings, automatic compensation for temperature and lens contamination, and a trouble indication upon either a total obscuration or an obscuration of 50 percent of the alarm set point. Beam detectors shall be suitable for four wire operation utilizing 24 volt DC power from the panel, and resettable by actuating the panel reset pushbutton. EST EC50R, Honeywell TC847A1004, or SimplexGrinnell Fire Ray Series.

**2.13 MANUAL PULL STATIONS**

- A. Manual pull stations shall be individually addressable, suitable for two wire operation, with a high impact red Lexan body and raised white lettering. Stations shall include an ADA compliant single action operating mechanism with a mechanical latch to hold an operated station open until reset. EST SIGA-270, Honeywell S464G1007, or SimplexGrinnell 4099-9001.
- B. Reset shall be accomplished through use of a key common to the panel or a small flat-blade screwdriver. Stations which use allen wrenches or special tools to reset are not acceptable. The point of reset shall be front accessible so stations with tamper-resistant covers can be reset easily.

**2.14 MONITOR MODULES**

- A. Monitor modules for individual two wire contact monitoring shall be individually addressable, suitable for two wire operation, with a DIP switch or electronic addressing means, and a programmable latch feature for monitoring momentary contacts. Monitor modules shall monitor a single normally open dry contact using a Class B, Style B, initiating device circuit. EST SIGA-CT1 or SIGA-CT2, Honeywell TC809A1059, or SimplexGrinnell 4090-9001.
- B. Monitor modules for zone or four wire device monitoring shall be individually addressable, suitable for four wire operation utilizing 24 volt DC power from the panel, and with a DIP switch or electronic addressing means. Zone monitor modules shall monitor multiple normally open dry contacts using a Class B, Style B, two wire initiating device circuit, or monitor a four wire device using a Class B, Style D, four wire initiating device circuit. EST SIGA-UM, Honeywell TC809, or SimplexGrinnell 2190-9156 or 4090-9101.

**2.15 CONTROL MODULES**

- A. Control modules shall be individually addressable, with a DIP switch or electronic addressing means. Control modules shall provide a Form C contact rated .5 amps at 120 volts AC or 2 amps at 28 volts DC resistive that are controlled by the panel. EST SIGA-CR, Honeywell TC801N1013, or SimplexGrinnell 4090-9002.

**2.16 HORNS**

- A. Horns shall be electronic, rated 24 volts DC, with a piezoelectric driver set to produce a slow whoop sound level of 101 dBA at 10 feet, with a red, semi-flush body capable of wall or ceiling mounting. EST 757-1A or Genesis Series, Honeywell HR, or SimplexGrinnell 4901-9820.

**DELETE THE FOLLOWING PARAGRAPH IF NOT APPLICABLE.**

- B. Horns in rodent rooms shall be set to generate a slow whoop or warble sound with a peak frequency below 500 Hz. Horns shall be of heavy-duty industrial construction and shall be UL listed for indoor and outdoor applications. EST Model 5530MD-24AW.

**2.17 SPEAKERS**

- A. Speakers shall be rated 125 to 12,000 Hertz, include four taps rated at from 1/4 to 2 watts, produce a sound level of 82 dBA at 10 feet when set at the 1/2 watt tap, and with a semi-flush body capable of wall or ceiling mounting. EST 757-1A-S25W or Genesis Series, Honeywell SP, or SimplexGrinnell 4902-9703 (wall mount) or 4902-9721 (ceiling mount).
- B. Speakers for locations with high ambient noise may be high efficiency horns rated 500 to 6,000 Hertz minimum, 10 watts minimum, include four or more taps, produce a sound level of 106 dBA minimum at 1 meter when set at the 1 watt tap, and be capable of wall or ceiling mounting. EST/GE HPSA15, Honeywell/GE HPSA15, or SimplexGrinnell EA0012 ABS.

**2.18 STROBES**

- A. Strobes shall be rated 15, 30, 60, 75, 110 or 177 candela as shown for proper illuminance, with a 1 Hertz flash rate, Xenon flash tube, white body, clear Lexan lens with red "FIRE" or international fire symbol lettering, capable of being synchronized, and capable of wall or ceiling mounting. EST Genesis Series, Honeywell SR/SCR, or SimplexGrinnell 4906 Series.

**2.19 COMBINATION HORN/STROBES AND SPEAKER/STROBES**

- A. Combination horn/strobes and speaker/strobes shall consist of the horns, speakers and strobes specified above, but combined on a single mounting plate. Combination units used outdoors and in wet areas shall be waterproof and mounted to waterproof back boxes. EST Genesis Series, Honeywell SpectrAlert Advance Series, or SimplexGrinnell 4906 Series.

**2.20 DOOR HOLD-OPEN POWER SUPPLY**

- A. The door hold-open power supply shall produce 24 volts DC of sufficient amperage to provide 0.4 amps of current to every door hold-open device being controlled. The power supply shall be supervised and capable of withstanding the inrush current that will occur when the door hold-open devices are energized.
- B. The output of the power supply shall be distributed by individually fused circuits. Fuse each circuit at 5 amps.
- C. The power supply shall release the held open doors upon a fire alarm or an AC power failure.

**2.21 EMERGENCY VOICE/ALARM COMMUNICATIONS**

- A. Emergency voice/alarm communications shall include audio control modules for alarm tone and voice message generation, a minimum of six pushbuttons for selecting pre-recorded voice messages, controls to choose total building or selected areas communications, audio amplifiers, a local microphone, and remote microphones in remote annunciators and cabinets. All of the components except for the remote microphones shall be located in or adjacent to the fire alarm control panel.
- B. The audio control module default mode shall provide for automatic total building fire alarm evacuation. The audible evacuation alarm signal shall consist of three slow whoop alarm tones followed by a fire alarm voice evacuation message. At the end of each voice evacuation message, the alarm tones shall resume. The alarm tones and voice evacuation message shall sound alternately until the alarm silence pushbutton at the fire alarm control panel or remote annunciator has been pressed. All audio signals and messages shall be digitally transmitted between nodes.
- C. The audio control modules shall provide for manual total building or selected area pre-recorded voice message generation by pushing a pre-recorded voice message pushbutton. One pushbutton shall initiate the fire alarm voice evacuation message, and the other pushbuttons shall initiate Owner-defined pre-recorded voice messages.

- D. The audio control modules shall provide for manual total building or selected areas communications. Upon keying of the microphone, a three second continuous alert tone shall sound over the speakers indicating a voice message will occur.
- E. The alarm tones shall be digitally generated by programmable software so that changes can be made without component rewiring. The voice messages shall be stored digitally in non-volatile EPROM memory.

**DELETE THE FOLLOWING PARAGRAPH IF NOT APPLICABLE.**

- F. The alarm tone for rodent rooms only shall be produced by a separate audio control module and amplifier that generate a slow whoop or warble sound with a peak frequency below the hearing range of rodents (i.e. 500 Hz).
- G. Audio amplifiers shall have a frequency response of 125 Hz to 12,000 Hz minimum.
- H. Microphones shall be of a hand-held, push-to-talk, noise-canceling type with a frequency range of 200 Hz to 4000 Hz and a self-winding five foot coiled cable. An LED shall indicate the microphone push-to-talk pushbutton has been pressed and the speaker circuits are ready for transmission.
- I. Remote microphones shall be enclosed in remote annunciator cabinets or wall-mounted cabinets as shown on the plan drawings, with the same pushbuttons for selecting pre-recorded voice messages, and lockable doors. Remote microphones shall duplicate the manual voice transmission capability of the local microphone at the fire alarm control panel. The fire alarm control panel microphone shall have priority over any remote microphones.

The remote microphone in a remote annunciator cabinet shall provide for total building or selected areas communications.

The remote microphone and cabinet at the fire alarm system head end equipment in the UHFCC shall provide for total building or selected areas communications.

- J. Should a Fire Department telephone communication system be provided, the telephones system shall be capable of being patched to the emergency voice/alarm communications system. Manual operation shall be controlled at the fire command center.

**2.22 FIRE DEPARTMENT TELEPHONE COMMUNICATIONS**

- A. Fire Department telephone communications shall consist of a minimum of eight dedicated communications circuits between a fire command center communications panel and remotely located emergency telephone jacks, a master telephone handset and five pluggable telephone handsets.

- B. The communications panel shall include a master telephone controller for processing of two-way communications. This module shall include a circuit selector switch and "Call" and "Trouble" LED indicators for each circuit, an audible device for call and trouble signaling, a trouble silence switch with ring-back, and an LED trouble indicator. Circuit supervision modules shall be included to electrically supervise for shorts, opens, and grounds of circuit wiring.
- C. The system shall be capable of handling single or simultaneous conversations with all telephones connected into the system. The circuits shall be so designed to prevent static, hum, or other interferences to clear, intelligible two-way conversations. The communications shall be transported digitally between devices.
- D. The act of plugging a handset into an emergency telephone jack shall cause the appropriate circuit indicator LED to flash and a distinctive audible device to sound at the communications panel. The subsequent picking up of the master telephone and selection of the proper circuit shall silence the pulsing sound, cause the circuit indicator LED to latch on, and couple the remote telephone to the master telephone. Two or more telephones shall be capable of being connected into an active conversation at the discretion of the operator.
- E. Attempting to use a subsequent telephone on the same circuit shall not cause the pulsing sound to activate if any two-way communications are already established. Any new circuits activated shall, however, cause their circuit indicator LED's to flash until acknowledged.
- F. Unplugging the handsets in use and returning the related circuit selector switches to the normal position shall cause the restoration of normal supervisory functions. If any remote telephone remains plugged in, the appropriate circuit indicator LED shall flash and the pulsing sound shall resume at the communications panel.
- G. The master telephone handset shall be recessed within a protective enclosure at the communications panel.
- H. A single line circuit shall be provided to a jack in each stairwell at each floor, in each elevator car, in each elevator lobby, at each area of refuge, at the emergency generator(s) and at the fire pump location. Emergency telephone jacks shall be mounted on a stainless steel single gang plate engraved with the words "Fire Emergency Telephone".
- I. Furnish an emergency telephone jack for installation in each elevator car. Wiring from the elevator controls to each elevator car and installation of the jacks will be provided by the elevator contractor.
- J. Provide five pluggable emergency telephone handsets with self-winding five foot cords within a storage cabinet mounted at the fire command center. Key the cabinet to match the fire alarm control panel.

**PART 3 - EXECUTION**

**3.1 SYSTEM INTERRUPTIONS**

- A. Coordinate with the UMHHC Facility Command Center (734-936-4000) before performing any work affecting an existing fire alarm system. Operating, programming, modifying or impairing an existing system without approval of the UMHHC Facility Command Center is strictly prohibited.
- B. When renovating a fire alarm system, test the system to document its condition before changes are made. Maintain operation of fire alarm system devices outside of the work area.
- C. When replacing a fire alarm system, maintain operation of the existing system until acceptance of the new system. If operation of the existing system cannot be maintained and the building is occupied, provide a 24 hour/day fire watch until the new system is accepted.

**3.2 INSTALLATION**

*FOR NEW FIRE ALARM PROJECTS, SELECT ONE OF THE FOLLOWING THREE PARAGRAPHS (A, B OR C) AS DIRECTED BY THE PROJECT MANAGER. FOR FIRE ALARM RENOVATION PROJECTS, SELECT THE PARAGRAPH THAT MATCHES THE EXISTING INSTALLATION.*

- A. Provide wiring in conduit in accordance with Sections 260533 and 260513, and Manufacturer's instructions.
- B. Provide wiring in conduit or provide fire alarm-rated MC cables in accordance with Sections 260533 and 260513, and Manufacturer's instructions.
- C. Provide wiring and raceways as follows and in accordance with Sections 260533 and 260513 and Manufacturer's instructions.
  - 1. Concealed in walls, exposed on walls up to 8' AFF, and above non-accessible ceilings - provide wiring in conduit.
  - 2. Above accessible ceilings and above 8' AFF in unfinished spaces - provide open wiring in J-hooks. Provide conduit sleeves where open wiring penetrates walls and floors.
- D. For systems that provide partial evacuation or relocation of occupants rather than full evacuation, protect power supply and notification appliance circuits from attack by fire until they enter the notification zone they serve. Provide 2-hour rated cable assemblies or protect circuits in 2-hour rated shafts, enclosures or sprinklered stairwells in accordance with Sections 260533 and 260513.
- E. Circuits may be T-tapped only where shown on the manufacturer's wiring diagrams.
- F. Provide waterproof back boxes with gaskets for devices and appliances installed outdoors or in wet or wash-down areas.
- G. Paint fire alarm junction boxes, covers and fittings red or provide red conduit throughout, except fire alarm raceways exposed in finished areas may be painted to match wall color.

- H. Modifications to fire alarm control panels, node panels, NAC panels and remote annunciator panels shall be made by a Manufacturer's Representative.
- I. Final connections to the fire alarm system components and system programming shall be performed by Fire Alarm Technicians with NICET Level II or higher certification.
- J. Label fire alarm panels with the room numbers, electrical panel numbers and circuit breaker numbers feeding them.
- K. Paint the handles of circuit breakers feeding fire alarm panels red, and install handle locks.
- L. Smoke and heat detectors shall not be installed until after construction clean-up is completed.
  - 1. When renovating an existing system, remove and store existing detectors during construction activities.
  - 2. Detectors installed prior to construction clean-up shall be cleaned by the manufacturer or replaced.

**3.3 TESTING**

- A. Demonstrate complete operation of the fire alarm system in accordance with NFPA 72, NFPA 101 (classroom, in-patient medical and Housing projects only), the Michigan Building Code, and Manufacturer's instructions. Notify the Owner's Representative 3 working days in advance of the test.
  - 1. The test shall be witnessed by a U-M OSEH Fire Inspector, a U-M Electrical Inspector, and the U-M Fire Protection Shop.
  - 2. Especially on fire alarm renovation projects, the U-M Fire Protection Shop may participate in or direct the testing activities.
  - 3. On classroom, in-patient medical and housing projects, also include an Inspector from the Michigan Bureau of Fire Services.
- B. Submit a signed and dated NFPA 72 test report to the Electrical Inspector prior to acceptance of the fire alarm system by the Owner.
- C. On classroom, in-patient medical and Housing projects, also submit a signed and dated FS-12A Form to the Michigan Bureau of Fire Services.

**3.4 COMMISSIONING**

- A. Perform Commissioning activities per Related Sections above.

**3.5 TRAINING**

**DELETE A AND B IF IT IS KNOWN IN ADVANCE THAT THIS TRAINING HAS ALREADY OCCURRED.**

- A. Provide the Owner's Fire Alarm Technicians with classroom training on the operation and maintenance of this model of system. This training shall be by the Manufacturer and shall be the same training as given to the Manufacturer's field service technicians. The University will pay the travel costs to the Manufacturer's training site. If the Owner's Technicians have already received operations and maintenance training from the manufacturer on this model of system, this training requirement will be waived.
- B. Provide the Owner's Fire Alarm Technicians with classroom training on the programming of this model of system. This training shall be by the Manufacturer and shall be the same training given to the Manufacturer's field service technicians. The University will pay the travel costs to the Manufacturer's training site. If the Owner's Technicians have already received programming training on this model of system, this training requirement will be waived.
- C. Train the Owner's Fire Alarm Technicians on unfamiliar components installed in this system.
- D. Walk the Owner's Fire Alarm Technicians through the building and identify the locations of fire alarm devices hidden from plain view.
- E. Train UMHHC Security and the OSEH Fire Inspectors on the basic operation of the system, including how to acknowledge audible notification appliances after an alarm.

***DELETE THE FOLLOWING TWO PARAGRAPHS WHEN EMERGENCY VOICE/ALARM COMMUNICATIONS IS NOT INCLUDED.***

- F. Train UMHHC Security and the OSEH Fire Inspectors on how to override the smoke control systems, on how to use the emergency voice/alarm communications, and on how to use the Fire Department telephone communications systems. Invite representatives from the Ann Arbor Fire Department to this training.
- G. Train the Facility Manager on how to use the emergency voice/alarm communications system.

NUMBER            SECTION DESCRIPTION

**DIVISION 31 EARTHWORK**

SECTION 312000 - EARTH MOVING

**END OF CONTENTS TABLE**

**DIVISION 31 EARTHWORK**  
**SECTION 312000 - EARTH MOVING**

*THIS SECTION IS FOR VERY LIMITED EXCAVATION AND BACKFILL PROJECTS. FOR BUILDING ADDITIONS AND OTHER SIGNIFICANT STRUCTURES, USE THE AIA MASTERSPEC SECTION OF SAME NUMBER AND NAME.*

*2/07 - SUBBASE COMPACTION CHANGED TO FROM 95% TO 98%*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. This Section includes the following:
1. Preparing sub-grades for slabs-on-grade and walks.
  2. Excavating.
  3. Drainage and moisture-control fill course for slabs-on-grade.
  4. Sub-base course for walks.
  5. Subsurface drainage backfill for walls and trenches.
  6. Excavating and backfilling trenches within building lines.
  7. Excavating and backfilling for underground mechanical and electrical utilities and appurtenances.

**1.2 DEFINITIONS**

- A. Unauthorized excavation consists of removing materials beyond indicated sub-grade elevations or dimensions without direction by the Architect. Unauthorized excavation, as well as remedial work directed by the Architect, shall be at the Contractor's expense.

**PART 2 - PRODUCTS**

**2.1 SOIL MATERIALS**

- A. General: Provide approved borrow soil materials from off-site when sufficient approved soil materials are not available from excavations.
- B. Satisfactory Soil Materials: ASTM D 2487 soil classification groups GW, GP, GM, SW, SP, and SM; free of rock or gravel larger than 2 inches in any dimension, debris, waste, frozen materials, vegetation and other deleterious matter.
- C. Unsatisfactory Soil Materials: ASTM D 2487 soil classification groups GC, SC, ML, MH, CL, CH, OL, OH, and PT.
- D. Backfill Materials: Satisfactory soil materials.
- E. Sub-base Material: MDOT Class II; washed, graded sand, ASTM C 136, with 100 percent passing a 3-inch sieve, not less than 60 percent passing a 1-inch sieve, and not more than 30 percent passing a No. 100 sieve.

- F. Drainage Fill: Washed, evenly graded mixture of crushed stone, or crushed or uncrushed gravel, ASTM D 448, coarse aggregate grading size 57, with 100 percent passing a 1-1/2-inch sieve and not more than 5 percent passing a No. 8 sieve.
- G. Filtering Material: Evenly graded mixture of natural or crushed gravel or crushed stone and natural sand, with 100 percent passing a 1-1/2-inch sieve and 0 to 5 percent passing a No. 50 sieve.
- H. Impervious Fill: Clayey gravel and sand mixture capable of compacting to a dense state.

**PART 3 - EXECUTION**

**3.1 PREPARATION**

- A. Protect structures, utilities, sidewalks, pavements, and adjacent plant materials from damage caused by earthwork operations.

**3.2 EXCAVATION**

- A. Excavate to indicated elevations and dimensions within a tolerance of plus or minus 0.10 foot.
  - 1. Excavations for Footings: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other work.
  - 2. Excavation for Walks: Excavate surfaces under walks to indicated cross sections, elevations, and grades.
  - 3. Excavation for Utility Trenches: Excavate trenches to indicated slopes, lines, depths, and invert elevations.
    - a. Excavate trenches to uniform widths to provide a working clearance on each side of pipe or conduit.
    - b. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit.

**ALWAYS INCLUDE NEXT TWO PARAGRAPHS FOR PROJECTS REQUIRING EXCAVATION.**

- B. During Work activities if suspect contaminated soil, groundwater, or other unknown material is encountered contact both University of Michigan Construction Management Representative and UM OSEH Hazardous Materials and Remediation Services Program (phone no. 743-763-6973) immediately. Suspect contaminated soil may exhibit chemical or unusual odors, staining, unusual coloring, and/or contain man-made debris. Suspect contaminated groundwater may exhibit chemical or unusual odors, unusual coloring, and/or sheen.
- C. Immediately cease all excavation, dewatering, transport, or disturbance of the suspect material until given direction by University of Michigan Construction Management Representative.
- D. Fill unauthorized excavation under foundations by extending indicated bottom elevation of concrete foundation or footing to excavation bottom.

**3.3 UTILITY TRENCH BACKFILL**

- A. Place and compact initial backfill of satisfactory soil material or sub-base material, free of particles larger than 1 inch, to a height of 12 inches over the utility pipe or conduit.
- B. Coordinate backfilling with utilities testing.
- C. Place and compact final backfill of satisfactory soil material to final sub-grade.

*INCLUDE BELOW FOR BACKFILLING AT FOOTING DRAINS.*

**3.4 SUBSURFACE DRAINAGE BACKFILL**

- A. Drainage Backfill: Place and compact drainage backfill of filtering material over subsurface drain, in width indicated, to within 12 inches of final sub-grade. Overlay drainage backfill with one layer of filter fabric, overlapping edges at least 6 inches.
- B. Impervious Fill: Place and compact impervious fill material over drainage backfill to final sub-grade.

**3.5 COMPACTION**

- A. Place backfill materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.
- B. Place backfill materials evenly on all sides of structures to required elevations. Place backfill and fill uniformly along the full length of each structure.
- C. Compact soil to not less than 95 percent maximum dry density according to ASTM D 1557.

**3.6 SUBBASE COURSE**

- A. Under walks, place sub-base course material on prepared sub-grades.
  - 1. Compact sub-base course at optimum moisture content to required grades, lines, cross sections and thickness to not less than 98 percent of ASTM D 4254 relative density.
  - 2. When thickness of compacted sub-base course exceeds 6 inches, place materials in equal layers, with no layer more than 6 inches thick or less than 3 inches thick when compacted.

**3.7 DRAINAGE FILL**

- A. Under slabs-on-grade, place drainage fill course on prepared sub-grade.
  - 1. Compact drainage fill to the required cross sections and thickness.
  - 2. When compacted thickness of drainage fill exceeds 6 inches thick place materials in equal layers, with no layer more than 6 inches thick; less than 3 inches thick when compacted.

3.8 DISPOSAL OF SURPLUS AND WASTE MATERIALS

- A. Disposal: Remove surplus satisfactory soil and waste material, including unsatisfactory soil, trash, and debris, and legally dispose of it off the Owner's property.

SPECIFICATION DIVISION 31

NUMBER SECTION DESCRIPTION

DIVISION 31 EARTHWORK

SECTION 312323 - FILL

END OF CONTENTS TABLE

**DIVISION 31 EARTHWORK**  
**SECTION 312323 - FILL**

**PART 1 - GENERAL**

**THIS SECTION SPECIFIES ENGINEERED COMPACTED GRANULAR FILL MATERIAL. USE ONLY WHEN FILL MUST BE ENGINEERED, NOT FOR ORDINARY BELOW-SLAB USE.**

**1.1 SUMMARY**

- A. Extent of engineered granular fill indicated on drawings.
- B. Type of engineered granular fill is compacted sand and gravel, installed in layers and tested for compliance with requirements.

**1.2 QUALITY ASSURANCE**

- A. Employ an approved Geotechnical Testing Laboratory to evaluate and confirm compaction effort by testing for moisture content, and density of materials in place. For each 6 inch lift, test 6 locations at intervals not exceeding 25 feet. Immediately obtain test results, and re-compact and re-test areas not conforming to specified compaction requirements prior to placing additional fill materials.

**PART 2 - PRODUCTS**

**2.1 MATERIALS**

- A. Comply with the following Michigan Department of Transportation "1984 Standard Specifications for Construction" Section 8.02.06 for Granular Material Class I:
  - 1. Sieve Analysis: ASTM C 136
  - 2. Total Percent Passing - Dry Weights:
    - a. For 2-inch: 100 percent.
    - b. For 1/2-inch: 45-85 percent.
    - c. For No. 4: 20-85 percent.
    - d. For No. 30: 5-3 percent.
  - 3. Percent Loss by Washing - Dry Weights: ASTM C 117; 0-5 percent.
- B. Provide Granular Materials consisting of one, or any combination of, the following:
  - 1. Sand; gravel; crushed stone; foundry sand; iron blast-furnace slag; reverberatory-furnace slag.
  - 2. Provide foundry sand free of combustible materials and containing negligible quantities of iron.
- C. The following materials are not permitted:
  - 1. Cementitious shale.
  - 2. Crushed concrete.

**PART 3 - EXECUTION**

**3.1 PLACEMENT AND COMPACTION**

- A. Place fill materials in layers not exceeding 6 inches and compacted with portable pneumatic tampers and vibratory compactors to not less than 95 percent of maximum dry density as determined in accordance with ASTM D 1557 (modified Proctor).

DIVISION 31 EARTHWORK

SECTION 312326 - FLOWABLE FILL

END OF CONTENTS TABLE

**DIVISION 31 EARTHWORK**  
**SECTION 312326 - FLOWABLE FILL**

**PART 1 - GENERAL**

***THIS SECTION SPECIFIES A PUMPABLE CONCRETE GROUT MATERIAL WITH LIMITED SHRINKAGE - USED IN SPECIAL CIRCUMSTANCES ONLY.***

**1.1 SUMMARY**

- A. Work Included: Class A Compacted Fill as indicated on drawings.
  - 1. In addition, install embedded items furnished under Division 05 Section "Metal Fabrication".

**1.2 SUBMITTALS**

- A. Submittals: In addition to product data, submit proposed mix design, including slump and weight data; and copy of laboratory test report showing strengths achieved and expected curing time.

**PART 2 - PRODUCTS**

**2.1 ACCEPTABLE MANUFACTURERS**

- A. Manufacturer: Provide materials manufactured by the following:
  - 1. Flo-Fill Co., 1008 Scheurmann St., Essexville, Mi 48732; phone no. (517)-893-1493.
    - a. "Flo-Fill" compacted, class A, fill; complying with the following:
  - 2. Fly Ash: approximately 1950 pounds per cubic yard.
  - 3. Portland cement: approximately 85 pounds per cubic yard.
    - a. Water: 60 to 70 gallons per cubic yard.
  - 4. Minimum Cured Strength: 6000 pounds per square foot.
  - 5. Dry Weight: 60 to 70 pounds per cubic foot.

**2.2 MIXING**

- A. Mix material on site in strict accordance with manufacturer's instructions.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- A. Placing: Pump mixture into place in fluid state to eliminate compaction effort. Spread and level to grades indicated on drawings.
- B. Curing: Cure by drying for a minimum of 7 calendar days before placing additional construction over fill material.

NUMBER            SECTION DESCRIPTION

**DIVISION 31 EARTHWORK**

SECTION 312500 - EROSION AND SEDIMENTATION CONTROLS

**END OF CONTENTS TABLE**

**DIVISION 31 EARTHWORK**

**SECTION 312500 - EROSION AND SEDIMENTATION CONTROLS**

*AUGUST, 2005 - UPDATED TO REFLECT CURRENT REQUIREMENTS OF UM OSEH.*

*DUE TO REGULATORY REQUIREMENTS, DO NOT EDIT THIS SECTION OTHER THAN WHERE INDICATED BY COMMENTARY.*

*CONSULT WITH OSEH ON ALL PROJECTS FOR WHICH SOIL EROSION AND SEDIMENTATION CONTROL MIGHT BE REQUIRED IN ORDER TO DETERMINE IF THE PROJECT DOES REQUIRE SESC AND TO DETERMINE APPROPRIATE SESC MEASURES FOR THE PROJECT. IF THE PROJECT QUALIFIES FOR SESC, SUBMIT A PROJECT NOTIFICATION FORM TO OSEH. FORM CAN BE DOWNLOADED FROM WEB SITE WWW.OSEH.UMICH.EDU/SESCAPPA.PDF*

*IF THIS SECTION IS INCLUDED IN THE SPECIFICATIONS, ALSO INCLUDE ACCOMPANYING SOIL EROSION AND SEDIMENTATION CONTROLS SUPPLEMENTAL CONDITIONS IN THE FRONT END DOCUMENTS.*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. This Section includes conducting earthwork and earth change activity operations in a manner to protect Waters of the State (of Michigan), storm drains, and adjacent properties from soil erosion and sedimentation.

**1.2 DEFINITIONS**

- A. "Waters of the State" includes the Great Lakes and their connecting waters, lakes, ponds and streams which may or may not be serving as a County drain as defined by the drain code; or any other body of water that has definite banks, a bed and visible evidence of a continued flow or continued occurrence of water or wetlands regulated under Part 303.

**1.3 SUBMITTALS**

- A. Submit product information for materials proposed for use.

**1.4 QUALITY CONTROL**

- A. Requirements of Regulatory Agencies: For earth changes, comply with the following:

*DELETE BELOW IF SITE IS LESS THAN ONE ACRE AND MORE THAN 500 FEET FROM WATERS OF THE STATE.*

- 1. Part 91, Soil Erosion and Sedimentation Control (SESC) of the Natural Resource & Environmental Protection Act, 1994 PA 451, as amended (Part 91).

*ALWAYS INCLUDE BELOW.*

2. The University of Michigan Soil Erosion & Sedimentation Control Procedures.

### 1.5 PERFORMANCE REQUIREMENTS

- A. Implement the soil erosion and sedimentation control plan including required maintenance during construction and final removal as directed in the plans, and as needed per site conditions and as required by site inspections by University of Michigan Occupational Safety and Environmental Health (OSEH).
- B. Control runoff, soil erosion, and sedimentation. No sediment should leave the site.
- C. Prevent wind erosion. No visible emissions (dust) should leave the site.
- D. Comply with The University of Michigan Soil Erosion and Sedimentation Control Procedures.

### 1.6 REFERENCES

- A. The University of Michigan Soil Erosion & Sedimentation Control Procedures.  
<http://www.oseh.umich.edu/stormwater/emsec.html>
- B. Guidebook of Best Management Practices for Michigan Watersheds  
[http://www.michigan.gov/deq/0,1607,7-135-3313\\_3682\\_3714-118554--,00.html](http://www.michigan.gov/deq/0,1607,7-135-3313_3682_3714-118554--,00.html)

## PART 2 - MATERIALS (NOT APPLICABLE)

## PART 3 - EXECUTION

### 3.1 GENERAL

- A. Where the following events result in the need for additional or modified soil erosion and sedimentation control installations to meet the objective of the referenced procedures, provide remedial installations on a timely basis.
  1. Unanticipated alterations to the construction schedule.
  2. Unanticipated site conditions except Acts of God such as a tornado or fire.
- B. Install temporary erosion and sedimentation control measures prior to or upon commencement to earthwork activities.
  1. Install an entrance anti-tracking pad with a minimum of 50 feet in length. A geotextile filter fabric should be placed under 6 inches of limestone aggregate.
  2. Install temporary inlet protection at all adjacent and down-gradient storm water inlets, catch basins and manholes that may be impacted.

**BELOW IS ONE EXAMPLE OF A PERIMETER BARRIER. MODIFY TO SUIT PROJECT.**

3. Install silt fence with stakes on the side down gradient from the disturbed area. Toe in six inches of the fencing material.
  4. Place stockpiles and other spoil piles away from the drainage system to minimize sediment transport. Keep as few stockpiles as possible during the course of the project. If the stockpile and/or spoil pile must remain on-site overnight, or if the weather conditions indicate the chance for precipitation,
    - a. cover the pile with water repellent material to prevent erosion or
    - b. install silt fencing around the base of the pile to prevent transport of sediment to the storm water system and wet the pile as needed to prevent wind erosion, or
    - c. apply other control methods as appropriate to the site.
  5. Where runoff enters the existing storm water system, protect the storm system from sedimentation.
    - a. Temporary inlet protection must prevent the release of sediment and allow for proper drainage.
      - 1) Use of burlap is not acceptable as a SESC measure.
      - 2) If filter fabric is used on drains, ensure the filter fabric is placed over (not under) the storm grates to facilitate maintenance (cleaning) of the controls.
      - 3) If high storm water flows are expected, use silt sacks in lieu of filter fabric for drain protection. Based on site conditions select regular or high flow silt sacks as appropriate.
- C. Utilize a water truck as needed for dust control.
- D. Utilize a sweeping machine to remove sediment tracked onto the pavement on a daily basis at minimum. Use sweeper more frequently as dictated by site conditions.
- E. Maintain erosion and sedimentation controls on a daily basis until the contract has been completed and accepted. Maintenance shall include:
1. Repair of damaged installations.
  2. Replacement of lost soil erosion & sedimentation control measures.
  3. Periodic removal of collected silt and sedimentation as required or directed to maintain effectiveness of the silt traps, filters and basins.
- F. Correct non-conforming soil erosion and sedimentation control Work on a timely basis within 24 hours, if Waters of the State are being impacted or within 5 days if not impacting Waters of the State.
- G. Complete permanent soil erosion control measures for all slopes, channels, ditches, or any disturbed land area within 5 calendar days after final grading or the final earth change has been completed. Maintain temporary control measures until permanent soil erosion control measures are in place and the area is stabilized.

**3.2 CLEAN UP**

- A. Remove temporary erosion control measures after permanent soil erosion measures are in place and the area is stabilized, unless ordered by the Owner's Representative to remain in place. Care shall be taken during removal to prevent soil erosion and sedimentation.

**SPECIFICATION DIVISION 32**

NUMBER            SECTION DESCRIPTION

**DIVISION 32 EXTERIOR IMPROVEMENTS**

SECTION 329210 - LAWN REPAIR

**END OF CONTENTS TABLE**

**DIVISION 32 EXTERIOR IMPROVEMENTS**  
**SECTION 329210 - LAWN REPAIR**

*THIS SECTION SPECIFIES LAWN REPAIR FOR DUMPSTER AND TRUCK TIRE DAMAGE. REFER MORE EXTENSIVE LAWN WORK TO LANDSCAPE ARCHITECT.*

*2/07 - ADDED NOTE TO REQUIRE 4" MIN. TOPSOIL*

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Extent of lawn repair includes areas damaged by construction operations, including movement of heavy equipment, dumpster locations and similar operations.
- B. Types of lawn repair include the following:
  - 1. Grading and fine raking.
  - 2. Seeding.
  - 3. Mulching.

**1.2 SUBMITTALS**

- A. Product data or certificates of conformance indicating that products used comply with requirements.

**PART 2 - PRODUCTS**

**2.1 MATERIALS**

- A. Seed: Fresh, clean, dry, new-crop seed composed of varieties, in equal proportions, tested for minimum percentages by weight of purity and germination as follows:
  - 1. Baron Kentucky Bluegrass; 98% purity; 80% germ.
  - 2. Nugget Kentucky Bluegrass; 98% purity; 90% germ.
  - 3. Touchdown Kentucky Bluegrass; 98% purity; 90% germ.
  - 4. Pennlawn Red Fescue; 98% purity; 90% germ.
  - 5. Manhattan Ryegrass; 97% purity; 90% germ.

**PART 3 - EXECUTION**

**3.1 PREPARATION**

- A. Thoroughly loosen and grade soil to true lines, free from unsightly variation, lumps, ridges and depressions. Remove sticks, stones, roots and other objectionable material over 1 inch in any dimension that might interfere with the formation of a finely pulverized seed bed.
- B. Level displaced soil around perimeter of ruts and depressions.

- C. Distribute topsoil on damaged lawn areas in quantity sufficient to provide repaired areas that are level and uniform with adjacent undisturbed lawn areas.
- D. Spread, cultivate and lightly compact a minimum of 4" topsoil to prevent future settlement; drag and grade to finished grade.

**3.2 APPLICATION**

- A. Rake seed uniformly to an average depth of 1/4 inch, and at a rate of 2.3 lb. per 1000 sq. ft. Lightly roll the seed bed to provide good moisture contact between the seed and soil.
- B. Mulch seeded areas with straw.
- C. Water thoroughly and immediately with a fine mist until straw is compacted and soil is soaked to a depth of 3 inches.

## 8.0 PREFERRED MANUFACTURERS LIST

Preferred List of Manufacturers (PML) contains specific manufacturers that are acceptable for use on U of M projects This section is divided by CSI number. When the A/E uses U-M Master Specifications for a project, adding manufacturers from the PML as approved manufacturers in the specification is optional.

**For University of Michigan Hospitals and Health Centers (UMHHC) funded projects, click here for a list of [Preferred Manufacturers Lists](#) specific to work at UMHHC.**

[Preferred Manufacturers List General Procedures](#)

	Last Update	Replaces Document

<a href="#">8.4 Electrical</a>	February 2015	
8.5 Site/Civil		

## **DESIGN GUIDELINE 8.1** **SUBSTITUTIONS**

**(Formerly Owner's Option)**

### **General**

The University requires that specific vendor's products be used to assure job quality through reliability, ease of maintenance, manufacturers proven maintenance and warranty support, control of stock and value. This process is controlled by disallowing the Contractor from making substitutions for specified products. The Contractor is typically permitted to propose Owner's Options (voluntary alternates) at the time of bid only. It is unusual for the University to consider a substitution after bids have been awarded and during the construction phase.

### **Related Documents**

[Project Manual, Instructions to Bidders](#)

Preferred Manufacturers List (PML)

### **Specifications**

Include language explicitly prohibiting substitutions.

Do not use the phrase "or equal" after any specific vendor's product identification in the specification sections or on the drawings (including details).

For all specification sections that are included in the PML, restrict product selections to those manufacturers listed in the PML. Where none are listed, select manufacturers utilizing the criteria in the "General" paragraph of this document. The University encourages the largest number of PML listed manufacturers be included in the specification. However, if there are concerns with a particular manufacturer, it is not required they be included, provided a minimum of three are listed as approved in the specification. If it is believed manufacturers other than those listed in the PML should be considered, discuss this issue with the Design Manager prior to release of the construction documents.

## **DESIGN GUIDELINE 8.2** **ARCHITECTURAL PREFERRED MANUFACTURERS LIST**

### **General**

This list is a compilation of products approved for use on University of Michigan projects. Where specific manufacturers or products are listed for a given building element, limit selection to the products listed. When, in your opinion, an unlisted product should be considered for inclusion in a project, consult with the Design Manager. Do not substitute this list for your professional judgment concerning appropriate products and materials.

Where specific products are not listed for a given building element (i.e. curtain walls), base the selection of manufacturers, types, styles, or models on your professional judgment. Wherever possible, select the products of at least 3 manufacturers. Avoid the use of open ended "or equal" statements.

This list is updated as needed.

Entrances, Doors and Storefront Systems:

- EFCO Corp., a Pella company.
- Kawneer North America; an Alcoa company
- Oldcastle Building Envelope.
- Tubelite Company, Inc.
- Wausau Window and Wall Systems

Flush Panel FRP Doors (Doors only, not framing):

- Commercial Door Systems
- Kawneer North America; an Alcoa companyRebco, Inc.
- Special-Lite, Inc.

## **Section 084413 - Glazed Aluminum Curtain Wall**

- EFCO, Corp.; a Pella company.
- Graham Architectural Products
- Harmon, Inc.
- Kawneer North America; an Alcoa company.
- Oldcastle Building Envelope.
- Wausau Window and Wall Systems.

## **Section 085113 - Aluminum Windows**

Architectural Grade Windows (subject to availability of project-applicable products):

- Graham Architectural Products
- Kawneer North America; an Alcoa company.
- Wausau Window and Wall Systems.

## Section 087100 - Door Hardware

### Butt Hinges:

- Hager Companies
- Ives, Allegion
- McKinney Products Company
- Stanley

### Continuous Geared Hinges:

- Hager Companies
- Ives, Allegion
- Pemko
- Select Products Limited

### Locksets (mechanical and electrified):

- Corbin Russwin ML2200
- Sargent 8200 Series
- Schlage L Series

### Electric Strike:

- Von Duprin 6000 Series
- HES 1006, 9400 and 9600 Series

### Small Format Interchangeable Cores (SFIC):

In existing buildings, match existing core type for ease of keying.

- Best Access Systems
- Medeco Keymark
- Schlage Everest

### Exit Devices (mechanical and electrified):

- Sargent
- Von Duprin

### Digital Locks (Standalone battery operated, not connected to campus access control system):

- Schlage only
  - Keypad type (programmable at door without additional hardware/software): CO-100-MS-70-KP
  - Keypad type type (programmable at door with additional hardware/software): CO-200-MS-70-KP
  - Mag stripe card reader (programmable at door with additional hardware/software): CO-200-MS-70-MSK

### Closers: specify arm specific closers; do not specify closers with multiple arms

- LCN 4000 Series only
- Sargent 281 Series with heavy duty arm

### Overhead Holders and Stops:

- Concealed heavy duty type by any BHMA member

Local Exit Alarms (not connected to fire alarm or campus access control systems):

- Detex

Flush Bolts (Automatic, Constant Latching and Manual):

- Door Controls International (DCI)
- Ives
- Rockwood

Flatgoods: Any BHMA member

Weatherstripping /Thresholds: Any BHMA member

Concealed Power Transfer:

- Securitron
- Von Duprin

### **Section 088000 - Glazing**

Primary Glass:

- AGC Flat Glass North America
- Guardian Industries Corp.
- Pilkington North America, Inc.
- PPG Industries, Inc.

Laminated Glass:

- AGC Flat Glass North America
- Guardian Industries Corp.
- Oldcastle Glass Group.
- Viracon, Inc.

Insulating Glass Units:

- AGC Flat Glass North America
- Guardian Industries Corp.
- Oldcastle Glass Group.
- Viracon, Inc.

Fire-Rated Glazing:

- AGC Glass Company. Pyrosafe
- Nippon Electric Glass Co., Ltd. Firelite
- Pilkington Group, Pyrostop.
- Vetrotech Saint-Gobain USA.

### **Section 102113 - Toilet Compartments**

- All American Metal Corp.
- Bradley Corporation; Mills Partitions.
- Flush-Metal Partitions LLC.
- Hadrian Manufacturing, Inc.

## **Section 102800 - Toilet and Bath Accessories**

- American Specialties, Inc. (ASI).
- Bobrick Washroom Equipment, Inc.
- Bradley Corp.
- Elcoma Metal Fabricating (grab bars and shower seats only).
- Gamco, a division of Bobrick Washroom Equipment (except for shower seats and counter mounted soap dispensers).
- Koala Kare Products (baby changing stations only), a division of Bobrick Washroom Equipment.

Note: Toilet paper dispensers, paper towel dispensers (roll-type), and wall mounted soap dispensers are provided by UM, but installed by the Contractor. Coordinate with Design Manager.

## **Section 115313 - Laboratory Chemical Fume Hoods**

Chemical Fume Hoods: All types except reduced face velocity

- Air Master Systems Corp.
- BMC Laboratory Cabinets & Fume Hoods
- Hamilton Scientific
- Kewaunee Scientific Corp.
- Labconco Corp.
- Mott Manufacturing Ltd.
- Lab Crafters, Inc.

Chemical Fume Hoods: Reduced face velocity

- Kewaunee Scientific Corp.; Supreme Air LV
- Lab Crafters, Inc.; Air Sentry
- Labconco Corp. ; Protector XStream

Base Cabinets for Fume Hoods: Refer to approved laboratory casework manufacturers list.

## **Section 123553 - Laboratory Casework**

Metal Casework; associated distributors:

- Air Master Systems Corp.
- BMC Laboratory Cabinets & Fume Hoods,; RD Landstra Associates.
- Jamestown Metal Products; Farnell Contracting
- Kewaunee Scientific Equip. Corp.; Farnell Equipment Co.

- Laboratory Design & Supply, Inc.
- Mott Manufacturing, Ltd.; Detroit Technical Equipment Company

Flammable Storage: Produced in accordance with NFPA 30 and FM or UL labeled.

Wood Casework; associated distributors:

- Kewaunee Scientific Equip. Corp.; Farnell Equipment Co.
- Laboratory Design & Supply, Inc. (Flush overlay only; lipped overlay not available)
- Mid Canada Millwork
- Mott Manufacturing, Ltd.; Detroit Technical Equipment Company
- Conditional Approval: The following manufacturers are new to the PML and are approved for use on small projects (estimated casework cost less than \$100,000):
  - CIFLab L-Line (lipped overlay) and E-line (full overlay); Stonecreek Interior Systems, LLC
  - Diversified Casework; RD Landstra Associates.
  - Wood-Metal Industries; Divisions of Wood-Mode; Farnell Contracting

Epoxy Resin Tops and Sinks:

- Kemresin (Kewaunee Scientific Corp.)
- Durcon, Inc.
- Epoxyn; Epoxyn Products

Stainless Steel Sinks and Tops:

- Elkay Co.
- Just Manufacturing

Fiberglass Sinks:

- Kreolab, Inc.

Shelf Standards and Brackets:

- Cooper B-Line, Inc.
- Flex-Strut, Inc.
- Kewaunee Scientific Equip. Corp.
- Nu-Strut framing channel system, Kumar Industries, Inc.
- Unistrut Corp.

Service Fittings:

- Chicago Faucets, a Geberit Company.
- T & S Brass and Bronze Works, Inc.
- Watersaver Faucet Company
- Wolverine Brass, Inc.

## **Section 122000 - Window Treatment**

Review specific window treatment requirements with Design Manager. Small renovation projects will typically match established building standard. New buildings and major renovations will select window treatments based on performance requirements, including solar transmission and thermal properties.

### Aluminum Horizontal Blinds

- Levolor Window Fashions
- Hunter Douglas
- Springs Window Fashions; Bali

### Roller Shade Hardware:

- Springs Window Fashions; Bali
- Draper Inc.; Flexshade
- OpenLight
- MechoShade Systems, Inc.
- Roll Ease, Skyline Series
- SRF Enterprises, Inc.

Shade Fabric: Tested in accordance with NFPA 701.

## **Section 132100 – Controlled Environment Rooms**

### Environmental Rooms:

- Bahnsen Environmental Specialties, an EMCOR company
- Environmental Growth Chambers
- Harris Environmental Systems, Inc.
- Insulated-Structures, Ltd.
- Nor-Lake, Inc.

## DESIGN GUIDELINE 8.3

### MECHANICAL PREFERRED MANUFACTURERS LIST

#### **INDEX OF MECHANICAL SECTIONS:**

SECTION 211313 - WET-PIPE SPRINKLER SYSTEMS (15300)  
SECTION 213113 - FIRE PUMPS (15320)  
SECTION 220000 - UNDERGROUND PIPING IN CONDUIT SYSTEM  
SECTION 220500 - COMMON WORK RESULTS FOR MECHANICAL (15010)  
SECTION 220513 - MOTORS (15170)  
SECTION 220514 - VARIABLE FREQUENCY DRIVES (15960)  
SECTION 220516 - PIPE EXPANSION JOINTS (15125)  
SECTION 220519 - THERMOMETERS, PRESURE GAUGES & ACC'S (15130)  
SECTION 220523 - VALVES (15100)  
SECTION 220533 - HEAT TRACING FOR PIPING (15128)  
SECTION 220548 - VIBRATION CONTROL (15240)  
SECTION 220553 - MECHANICAL IDENTIFICATIONS (15190)  
SECTION 220719 - MECHANICAL SYSTEMS INSULATION (15250)  
SECTION 221113 - PIPING MATERIALS & METHODS (15060)  
SECTION 221119 - DOMESTIC WATER PIPING SPECIALITIES (15411)  
SECTION 221319 - DRAINAGE SPECIALITIES (15420)  
SECTION 221500 - COMPRESSED AIR ACCESSORIES (15481)  
SECTION 223116 - WATER SOFTENER (15455)  
SECTION 224200 - PLUMBING FIXTURES (15440)  
SECTION 230000 - AIR COOLED CONDENSING UNITS  
SECTION 230000 - AIR COOLED PACKAGED CHILLERS  
SECTION 230000 - DUCTLESS SPLIT ROOM AIR CONDITIONERS- AIR COOL  
SECTION 230000 - HEAT EXCHANGERS & CONVERTERS  
SECTION 230000 - HUMIDIFIERS  
SECTION 230000 - HVAC WATER TREATMENT  
SECTION 230000 - MULTIMEDIA FILTRATION SYSTEMS MS NOT ON WEBSITE  
SECTION 230000 - PACKAGED COMPUTER ROOM AIR CONDITIONING SYSTEM  
SECTION 230000 - PACKAGED HEAT TRANSFER UNITS  
SECTION 230000 - PACKAGED TERMINAL AIR CONDITIONERS, AIR-COOLED  
SECTION 230000 - STEAM ABSORPTION CHILLER  
SECTION 230000 - STEAM CONDENSATE RETURN UNITS  
SECTION 230000 - TERMINAL UNITS  
SECTION 230593 - TESTING, ADJUSTING AND BALANCING (15990)  
SECTION 230900 - MECHANICAL SYSTEMS CONTROLS (15975)  
SECTION 230910 - LABORATORY TERMINAL AIR FLOW UNITS & CONTROL (digital)  
SECTION 230920 - LABORATORY TERMINAL AIR FLOW UNITS & CONTROL (15910 - analog)  
SECTION 230930 - REFRIGERANT DETECTION AND ALARM (15635)  
SECTION 231123 - FACILITY NATURAL GAS PIPING (15488)  
SECTION 232116 - HYDRONIC PIPING SPECIALTIES (15515)  
SECTION 232123 - PLUMBING AND HYDRONIC PUMPS (INCLUDES VACUUM PUMPS) (15160)  
SECTION 232216 - STEAM & CONDENSATE PIPING SPECIALTIES (15525)  
SECTION 232300 - REFRIGERANT PIPING (15530)  
SECTION 232519 - STEAM BOILER CHEMICAL WATER TREATMENT (15188)  
SECTION 233100 - HVAC DUCTS & CASINGS (15890)  
SECTION 233300 - AIR DUCT ACCESSORIES & RGDS (158950)  
SECTION 233400 - FANS (15870)  
SECTION 233600 - AIR TERMINAL UNITS (15896)  
SECTION 234000 - HVAC AIR CLEANING DEVICES (15885)  
SECTION 235100 - BREECHINGS, CHIMNEYS & STACKS (15575)  
SECTION 235240 - FIRE TUBE BOILERS (STEAM) (15558)  
SECTION 236416 - CENTRIFUGAL WATER CHILLERS (15684)  
SECTION 236500 - COOLING TOWERS (15710)  
SECTION 237213 - ROTARY AIR TO AIR ENERGY RECOVERY WHEELS  
SECTION 237323 - CUSTOM AIR HANDLING UNITS (15854)  
SECTION 237324 - SEMI-CUSTOM AIR HANDLING UNITS (15855)

SECTION 238216 - COILS AND DRAIN PANS (15820)  
SECTION 238219 - FLOOR MOUNTED FAN COIL UNITS (UN-DUCTED) (15763)  
SECTION 238220 - HORIZONTAL FAN COIL UNITS (15764)  
SECTION 238221 - BLOWER COIL UNITS (15765)

## **INTRODUCTION:**

Manufacturers on this list fall into three categories:

**Preferred Manufacturer:** Listed manufacturer's product may be used on U-M projects. However, manufacturer's product must be listed as approved in the project's contract documents or specifications. Listing in the PML does not guarantee a product will automatically be listed in a project's documents or specifications.

**Conditional Approval:** Listed manufacturer's product may be used on select U-M projects, however approval from the respective A & E Technical Committee must first be obtained. If approved, it may be listed as approved in the project's contract documents or specifications. Manufacturers in the Conditional Approval category have gone through successful preliminary review, but Technical Committee requires additional in-service input prior to final category listing.

**Under Consideration:** Listed manufacturer's product is being evaluated. The product should not be included in U-M projects.

## **SECTION 211313 (15300) - WET-PIPE SPRINKLER SYSTEMS**

### **Preaction Systems**

Siemens (Pyrotronics), Notifier, Viking

### **Piping - Grooved**

Tyco Grinnell, Victaulic

### **Sprinkler Heads**

Reliable  
Tyco  
Viking  
Victaulic

### **Tamper Switches**

Grinnell, System Sensor, Victaulic

### **Valves - Fire Protection, Detector Check**

Grinnell  
Reliable  
Viking  
Victaulic  
Hersey-Anvil  
Ames

### **Valves - Fire Protection, Zone Control**

Grinnell  
Victaulic  
Milwaukee  
Nibco  
Stockham

## SECTION 213113 (15320) - FIRE PUMPS

### Pumps - Fire

Allis-Chalmers  
Aurora  
Peerless

## SECTION 220000 - UNDERGROUND PIPING IN CONDUIT SYSTEM

### Piping Systems - Underground

Perma-Pipe, Rovanco, Under Consideration: Urecon

## SECTION 220500 (15010) - COMMON WORK RESULTS FOR MECHANICAL

### Fasteners

Refer to UM Master Specification

### Fire Stopping

3M, Hilti, Tremco, Manville

### Roof Curbs

Pate  
Creative Metals  
Roof Curbs Engineered and Manufactured by the Manufacturer of the Equipment to be supported

## SECTION 220513 (15170) - MOTORS

### Motors - General, Premium Efficiency Type Only - 1/2 HP and above

Reliance, Baldor, Dayton, GE, Toshiba, Leeson, Marathon, U.S. Motors

## SECTION 220514 (15960) - VARIABLE FREQUENCY DRIVES

### Variable Frequency Drives (and variable speed controllers)

Danfoss-Graham, Toshiba, ABB

## SECTION 220516 (15125) - PIPE EXPANSION JOINTS

### Expansion Joints - Bellow Type

Flexonics, Metraflex, Microflex, Twin City Hose

### Expansion Joints - Externally Pressurized

Hyspan, ATS

## SECTION 220519 (15130) – THERMOMETERS, PRESSURE GAUGES, AND ACC'S

### Pressure Gauges

Dwyer, H.O. Treice, Weksler, Marsh, Ashcroft, Weiss, Miljoco

### Pressure & Temperature Plugs

Pete's Plug, Schrader, Sisco, Miljoco

### Thermometers

Industrial Glass: H. O. Treice, Weksler, Marsh, Ashcroft, Weiss, Miljoco  
Electronic Digital (light powered): Weiss, Techcontrols, Miljoco

## SECTION 220523 (15100)- VALVES

**Flow Measuring & Balancing Equipment - Manual Hydronic**

PSE Inc.  
ITT Bell & Gossett Circuit Setter  
Taco  
Ellison Annubar  
Accuset  
Armstrong  
T & A (part of Victaulic)  
Flow Design Inc

**Valves - Automatic Hydronic Regulating/Balancing**

Auto-Flow (press. indep.)  
Griswold (press. indep.)  
B & G (press. indep.)

**Valves - Manual Hydronic Regulating**

B & G  
T & A  
Armstrong  
Taco  
Flow Design

**Valves - Ball With Lever Handle**

Pegler  
Crane  
Grinnell

Watts  
Jomar  
Milwaukee  
American Valve  
Nibco  
Apollo  
Hammond

**Valves - High Performance Butterfly**

Bray  
Crane Flowseal  
Dezurik,  
Fisher Not specified in MS 220523  
Grinnell-GHP,  
Jamesbury  
Milwaukee  
Tri-Seal-Valve-Contromatics (formerly Watts/KF Contromatics)  
Xomox.

**Valves - Lubricated Plug**

Honestead, Milliken, Resun

**Valves - Gas (UL Approved)**

Pegler  
Jomar  
Watts  
Grinnell

Crane  
Milwaukee "Butter Ball" MS 15100 "Butter Ball" not specified.  
Nibco  
Hammond  
Jamesbury  
Apollo  
American Valve

**Valves - Gate**

Watts  
Crane  
Milwaukee  
Grinnell  
Stockham  
Nibco  
Hammond

**Valves - Swing Check**

Milwaukee  
Crane  
Grinnell  
Nibco

**Valves - Silent Check**

(except tunnels) Milwaukee, APCO, Mueller, Metraflex  
Utility tunnels:  
a. 2" and under: Check All  
b. over 2" - Durabula, stainless body

**Valves - City Water Main (Ann Arbor) (formerly OS&Y)**

Kennedy 4068  
Mueller A-2380  
East Jordan Series A  
Other valves specifically approved by the City of Ann Arbor for this application  
3 piece full port ball valve: Conbraco (rep. J.O. Galloup)

**SECTION 220533 (15128)– HEAT TRACING FOR PIPING**

**Heat Tracing**

Raychem, Thermon

**SECTION 220548 (15240) - VIBRATION CONTROL**

**Vibration Isolators**

Amber Booth, Korfund, Mason, Vibration Eliminator, Vibration Isolation Co.

**SECTION 220553 (15190)- MECHANICAL IDENTIFICATIONS**

**Pipe Markers**

Brady Co. (Signmark Div.), Brimer, Craftmark, Kolbi, MSI (Marking Services Inc.),  
Seton Name Plate

**SECTION 220719 (15250)- MECHANICAL SYSTEMS INSULATION**

**Insulation - Duct/Pipe/Equipment - Fiberglass**

Owens Corning  
Knauf  
Schullers (Johns Manville)  
Armstrong  
Pittsburg-Corning  
Certaineed  
Johns-Manville

**Insulation - Flexible/Elastomeric/Polyolefin**

AP Armaflex, IMCOA, Nomaco K-Flex, Rubatex

**Insulation - PVC Covering, Elbows and Fittings**

Proto  
Zeston  
Ceelco

**Insulation - Removable Jackets**

Q-Master by ESI  
Insulation Tech. Inc.

**SECTION 221113 (15060) - PIPING MATERIALS & METHODS**

**Grooved Joints for Copper and Steel Piping (except tunnels):**

Victaulic, Tyco Grinnell.

**Grooved Joints for Copper Piping In Tunnels:**

Victaulic Style 607

**Dielectric Fittings**

Refer to UM Master Specification

**Flexible Metal Hose Connectors (Stainless)**

Flex Hose Co., Flexonics, Mason, Metraflex  
Under Consideration: Twin City Hose

**Flexible Metal Hose Connectors (Copper)**

Anaconda, Flex Hose Co., Flexonics, Mason, Metraflex

**Flexible Connectors (Rubber)**

Flex Hose Co., Flexonics, Garlock, Mason, Mercer Rubber Co., Metraflex

**Pipe Hangers and Mechanical Supports**

Anvil, Cooper B-Line, Carpenter & Paterson, PHD Manufacturing, Unistrut,  
Powerstrut

**Thermal Hanger Shield Inserts**

Cooper B-Line, ERICO International Corp, Pipe Shields Inc., Rilco Manufacturing  
Company, Value Engineered Products, American Mechanical Insulation Sales

**Piping - Lab Waste and Vent (Polypropylene)**

Enfield, Orion, Zurn

**Strainers - Steam & Water**

Keckley  
Yarway  
Mueller  
Spirex-Sarco

Metraflex  
Watts  
Armstrong  
Victaulic (grooved water piping only)  
Tyco Grinnell (grooved water piping only)

**Valves - Safety Relief**

Spirax-Sarco  
Watts  
Leslie  
Anderson-Greenwood  
Conbraco  
Keckley

**SECTION 221119 (15411) - DOMESTIC WATER PIPING SPECIALITIES**

**Backflow Preventers**

Ames  
Conbraco  
Febco  
Watts  
Zurn-Wilkins

**Hydrants - Wall Type**

Woodford  
Zurn  
Chicago  
J.R. Smith

**Vacuum Breakers - Backflow Prevention**

Kewaunee  
Chicago Water Saver  
Bell & Gossett  
Watts  
Conbraco

**Valves - Water Pressure Regulating**

Bell & Gossett, Conbraco, Hoffman, Keckley, Leslie, Spirax Sarco, Watts

**Water Hammer Arrestors**

Zurn  
Watts  
Josam  
J.R. Smith  
Sioux Chief  
Wade

**SECTION 221319 (15420)- DRAINAGE SPECIALITIES**

**Drains - Roof, Floor and Trench, Grease Interceptors**

Josam  
J.R. Smith  
Zurn

Wade  
Watts  
Sioux Chief  
Under Consideration: MIFAB (V.E. Sales Co.)

### SECTION 221500 (15481) - COMPRESSED AIR ACCESSORIES

#### Air Compressors - Screw Type (1800 RPM)

Atlas - Copco  
Quincy QSI Series

#### Air Compressors - Reciprocating

Quincy  
Gast  
Devilbliss

#### Air Dryers and Related Filters

Wilkinson  
Zeks  
Van-Aire  
Hankison

#### Air Pressure Reducing Stations

Van-Aire  
Zeks  
Parker-Hannifin  
Fisher  
Siemens  
Wilkerson

### SECTION 223116 (15455) - WATER SOFTENER

#### Deionized Water and Reverse Osmosis Water Suppliers

Crown Solutions (Veolia)  
Siemens/U.S. Filter  
Ionpure  
Millipore

#### Water Treatment Equipment - Softeners

Crown Solutions (Veolia)  
Burmah / Venture (H.V. Burton)  
Bruner (K.L. McCoy)

#### Water Treatment Equipment

Refer to U-M Master Specifications

### SECTION 224200 (15440) - PLUMBING FIXTURES

#### Domestic Water Heaters - Gas Fired Or Electric

Lochinvar  
A.O. Smith  
State  
Rheem

Raypak  
Under Consideration: Copper Fin (Quality water & air)

**Emergency Shower And Eyewash**

Bradley, Haws, Speakman

**Faucets - Automatic, Battery and Electric Type**

American Standard, Chicago Faucets, Sloan, Zurn

**Faucets - Manual**

American Standard, Chicago Faucets, Moen

**Plumbing Fixtures - Water Closets, Lavatories, Urinals And Sinks**

Lavatories:

American Standard, Crane, Kohler, Sloan, Zurn

Urinals:

American Standard, Kohler, Sloan, Zurn

Water Closets:

American Standard, Crane, Kohler, Sloan

**Shower Heads**

American Standard, Chicago Faucet, Kohler, Speakman, Symmons

**Toilet Room Fixture Supports**

Josam, J.R. Smith, Wade, Watts, Zurn

**Toilet Seats**

Bemis, Centoco, Church

**Valves - Flush Including Automatic Flushing System**

Sloan, Kohler, Zurn

**Valves - Shower Control Valves**

American Standard, Chicago Faucet, Kohler, Powers, Speakman, Symmons

**Valves - Thermostatic Mixing for Handwashing**

Powers, Symmons, Wilkins

**Water Coolers**

Halsey Taylor, Haws, Oasis International

**Water Filters - Inline Type**

Cuno  
Filtrine  
Honeywell  
Culligan  
Dollinger  
Bruner

**SECTION 230000 - AIR COOLED CONDENSING UNITS**

**Air Cooled Condensers**

Bohn, Dunham Bush, McQuay, Trane, York

**Refrigeration Compressors**

Copeland, Dunham Bush, McQuay, Tecumseh, Trane, York

**SECTION 230000 - AIR COOLED PACKAGED CHILLERS**

**Chillers - Reciprocating, Air-Cooled**

Trane, York by Johnson Controls  
Under Consideration: Carrier.

**Chillers - Process Cooling**

Filtrine, Liebert, Trane, Neslab

**Refrigeration Compressors**

Tecumseh, Copeland, Trane, York, McQuay

**SECTION 230000 - DUCTLESS SPLIT ROOM AIR CONDITIONERS- AIR COOL**

**Air Conditioning Units - Ductless, Spot Coolers**

Daikin, Friedrich, Liebert, Mitsubishi, Sanyo, Trane

**SECTION 230000 - HEAT EXCHANGERS & CONVERTERS**

**Dry Coolers**

McQuay, Trane, York, Bohn

**Convertors (Shell & Tube) - Steam To Hot Water**

Bell & Gossett, Taco, Armstrong, Mueller

**Heat Exchanger - Plate & Frame**

Alpha-Laval, Armstrong, Bell & Gossett, Mueller, Tranter

**Laser Heat Exchangers - Water Cooled**

Haskris  
Remcor  
Neslab  
Laser Pure (Coherent)

**SECTION 230000 - HUMIDIFIERS**

Armstrong, Cemline, Dri-Steem, Herrmidifier, Nortec, Pure, Spirax-Sarco, Stulz

**SECTION 230000 – HVAC WATER TREATMENT**

**Chemical Service Providers**

Chemtreat  
Crown Solutions  
GE Water  
Kroff  
Mitco  
Nalco  
Rochester Midland

**HVAC Water Treatment Equipment**

Refer to U-M Master Specifications

**SECTION 230000 - MULTIMEDIA FILTRATION SYSTEM**

**Acceptable Manufacturers**

Crown Equipment Systems, PEP Filters, Everfilt

**SECTION 230000 - PACKAGED COMPUTER ROOM AIR CONDITIONING SYSTEM**

**Air Conditioning Units - Computer Room**

APC, Liebert, Stulz

**SECTION 230000 - PACKAGED HEAT TRANSFER UNITS**

Bell & Gossett

**SECTION 230000 - PACKAGED TERMINAL AIR CONDITIONERS, AIR-COOLED**

**Air Conditioning Units - Package Type (thru the wall self-contained DX)**

IslandAire, McQuay, Trane, York

**Air Conditioning Units - Window Type (Flush installation with wall exterior)**

Comfort-Aire, Fedders, White Westinghouse

**SECTION 230000 - STEAM ABSORPTION CHILLER**

**Chillers - Absorption**

Trane, York by Johnson Controls

**SECTION 230000 - STEAM CONDENSATE RETURN UNITS**

**Condensate Meters - Gravity Type - no longer used**

**Condensate Receiver**

ITT Domestic, Skidmore, Shipco, Spirax-Sarco

**Condensate Meters - Magnetic Induction**

Refer to U-M Master Specification 230900

**Pumps - Boiler Feed**

Skidmore, Spirax-Sarco, Shipco, Weinman

**Pumps - Condensate (Condensate Receiver Must Be Cast Iron)**

ITT Domestic (Hoffman), Skidmore, Spirax-Sarco, Shipco, Weinman

**Pumps - Condensate, Steam Or Air Pressure Powered**

Sarco, Armstrong

**SECTION 230000 - TERMINAL UNITS**

**Baseboard Radiation, Finned Tube Radiation**

Dunham-Bush, Rittling, Slantfin, Sterling Radiator, Trane, Vulcan Radiator

**Panel Radiators**

Jaga, Runtal Radiator, Sterling

**Convectors**

Dunham-Bush, Rittling, Sterling, Trane

**Unit Heaters**

Dunham-Bush, McQuay, Modine, Reznor, Rittling, Sterling, Trane, Wing

**Cabinet Heaters**

Dunham-Bush, McQuay, Modine, Rittling, Sterling, Trane

**Unit Ventilators**

American Air Filter, Trane

**Electric Cabinet Heaters**

Berko, Qmark, Trane

**Electric Heating Coils**

Brasch, Chromalux, Indeeco, Trane

**Gas Fired Duct Furnaces**

Modine, Reznor, Sterling, Trane

**Radiant Ceiling Panel - Hot Water**

Aero-Tech, Air-TEX, Sun-El, Sterling/TWA

**SECTION 230593 (15990) - TESTING, ADJUSTING AND BALANCING**

**TAB Sub-Contractors**

Absolut, Air Flow Testing, Enviroaire - Total Balance

**SECTION 230900 (15975)- MECHANICAL SYSTEMS CONTROLS**

Because of the extensive amount of control components, approved manufacturers are listed in U-M Master Specification 230900.

**SECTION 230910 (digital) , 230920 (15910- analog) - LABORATORY TERMINAL AIR FLOW UNITS & CONTROLS**

**Fume Hood Monitors**

Phoenix,

**Laboratory Terminal Airflow Units (LTAUs)**

Phoenix

**SECTION 230930 (15635) - REFRIGERANT DETECTION AND ALARM**

**Acceptable Manufacturers**

MSA Corporation

**SECTION 231123 (15488) – FACILITY NATURAL GAS PIPING**

**Master Gas Valve Boxes**

Ohmeda  
Mueller

**SECTION 232116 (15515) - HYDRONIC PIPING SPECIALTIES**

**Automatic & Manual Air Vents**

Armstrong, B & G, Hoffman, Wheatley, Taco

**Suction Diffusers**

Armstrong, B & G, Grinnell, Taco, Victaulic, Wheatley

**Triple Duty Valves**

Armstrong, B & G, Taco, Wheatley

**Water Pressure Relief Valve**

ITT B & G, ITT McDonnell Miller, Consolidated, Watts

**Water Pressure Regulating/Reducing Valve**

B & G, Hoffman, Watts

**Air Separators**

Amtrol, Armstrong, B & G, Spirotherm, Wheatley

**Coalescing Separator**

Spirotherm (Spirovent Dirt HV)

**Expansion Tank**

Amtrol, Armstrong, Bell and Gossett, Wessels, Taco CA

**Centrifugal Separator**

Griswold Controls, Lakos

**In-Line Filters**

Bruner, Culligan, Cumo Dollinger, Honeywell

**Glycol Feed Packages**

Advantage Control Inc., Burmah, Crown Engineering, J.L. Wingert Co., Neptune Chemical Pump Co., Wessel Co.

**Inhibited Ethylene Glycol**

Dowtherm SR-1

**SECTION 232123 (15160) – PLUMBING AND HYDRONIC PUMPS**

**Pumps - Condensate Waste**

Little Giant, Hartell, Marsh, Bekette

**Pumps - Double Suction - Base Mounted**

Bell & Gossett (ITT), Allis-Chalmers, Weinman, Armstrong, Paco

**Pumps - End Suction , Close Coupled - Base Mounted**

Bell & Gossett (ITT), Allis-Chalmers, Weinman, Armstrong, Taco

**Pumps - End Suction , Flexibly Coupled - Base Mounted**

Bell & Gossett (ITT), Allis-Chalmers, Weinman, Armstrong, Taco

**Pumps - In-Line Circulators**

Bell & Gossett (ITT), Armstrong, Grundfos, Weinman, Taco

**Pumps - In-Line Close Coupled - Hanger Supported**

Bell & Gossett (ITT) Series 60, Grundfos, Armstrong, Weinman, Taco 1600

**Pumps - In-Line Split Coupled - Base Mounted**

Bell & Gossett (ITT) Series 80-SC, Grundfos, Armstrong, Weinman, Taco KS Vertical Split Coupled

**Pumps - Sump Pumps**

Vertiflo (B&G), Allis Chalmers, Weinman, Armstrong, Zoller, Weil  
Under Consideration: Aurora / Hydromatic (K.L. McCoy)

**Pumps - Vacuum**

Nash  
Domestic  
Sehi

Shipco

Under Consideration: Skidmore (K.L.McCoy), Busch (Kerr pump & supply)

### SECTION 232216 (15525) - STEAM AND CONDENSATE PIPING SPECIALTIES

#### Steam Pressure Reducing Stations

Armstrong, Jordan, Leslie, Spence, Spirax-Sarco, Watts Anderson-Greenwood

#### Steam Traps - All Types

Armstrong, Spirax Sarco, Hoffman (ITT), Watson McDaniels

#### Flash Tank, Vacuum Breaker, Drip Pan Elbow, Pressure Reducing Valve

Refer to U-M Master Specification

### SECTION 232300 (15530)- REFRIGERANT PIPING

#### Valves - Refrigeration

Asco, Hansen, Henry Valve, Parker, Sporlan

### SECTION 232519 (15188)- STEAM BOILER CHEMICAL WATER TREATMENT

Refer to master specification 232519

Seton

### SECTION 233100 (15890) - HVAC DUCTS & CASINGS

#### Exhaust Ductwork - PVC Coated

United McGill, Tangent, Foremost, Semco

#### Exhaust Ductwork - Teflon Coated Stainless Steel

Fab-Tech (PermaShield Pipe)

#### Exhaust Ductwork - FRP

Perry, Spunstrand, Tangent

#### Flexible Non-Metallic Duct

Atco (Flex-Aire), Flexmaster, Hart & Cooley (Genflex)

#### Double-Walled Panels, Plenums, and Duct at Outside Air Intake Plenums

McGill Airflow LLC., Semco Mfg Co., VAW Systems, Vibro-Acoustics

#### Clothes Dryer Vent Ductwork

Intended for heavy use clothes dryer applications such as resident hall laundry rooms with multiple dryers where access to disassemble duct for periodic cleaning may be challenging. For simple dryer applications, specifying conventional duct may be more appropriate.

Nordfab Quick-Fit/ACS of Fenton, Missouri

#### Duct Sealants

Hardcast, McGill Airflow LLC. , Polymer Adhesives, Ductmate, Childers/Foster

### SECTION 233300 (15895)- AIR DUCT ACCESSORIES & RGDS

#### Duct Flexible Connectors

Ductmate, Duro-Dyne, Fanair, Pathway, United McGill, Ventglas

#### Dampers - Fire, Smoke, Combination Fire/Smoke

Air Balance, American Warming & Vent, Greenheck, Nailor, Ruskin, Vent Products

**Dampers - Balance (manual volume control)**

American Warming & Vent, Arrow, Flexmaster (for round ducts, single branch takeoff only), Ruskin, Greenheck, Krueger, Vent Products, Young Regulator

**Dampers - Iris**

Continental Fan Manufacturing Inc.

**Dampers - Backdraft**

Young Regulator Company.  
American Warming & Ventilating Co.  
Vent Products Co., Inc.  
Arrow United Industries.

**Sound Attenuators**

IAC, Semco, Ruskin, United McGill, VAW Systems, Vibro-Acoustics, Price

**Registers, Grilles and Diffusers**

Carnes, E.H. Price, Krueger, MetalAire, Nailor, Titus, Tuttle & Bailey

**Louvers**

American W. & V., Ruskin, Vent Products

**Ductwork Cleaning Specialist**

Sani-Vac, Power Vac, High Tec Vacuum, Aero Filters Inc., Stanley Steamer Great Lakes Inc.

**SECTION 233400 (15870)- FANS**

**Fans: All types except Vane and Tube Axial, FRP, High-Plume Induction Lab Type**

Aerovent, Acme, Barry Blower, Buffalo, Carnes, Greenheck, Loren Cook, Penn, Trane, Twin City

**Fans - High-Plume Induction-Type Lab Exhaust**

Greenheck - Vektor , Strobic,

**Fans -FRP Construction**

M.K. Plastics  
Under Consideration: Harrington

**Fans -Vaneaxial, TubeAxial**

Buffalo, Cook, Greenheck, Joy, Trane, Woods

**SECTION 233600 (15896)- AIR TERMINAL UNITS**

**VAV, CAV, Dual Duct, and Retrofit Terminal Air Flow Units**

Carnes, Titus, Krueger, Metalaire, Nailor Industries, Inc., Price Industries, Tuttle and Bailey

**SECTION 234000 (15885)- HVAC AIR CLEANING DEVICES**

**Primary Filters, Secondary Filters and Filter Housing Rack**

American Air Filter, Camfarr, Eaton, Flanders, Purolator, Tri-Dim

**HEPA Filters**

Camfarr, Eaton, Flanders

**Gas Adsorption Filters**

American Air Filter, Camfarr, Charcoal Service Corp., Flanders, Purolator

**Filter Gauges**

Bacharach Instrument Co., Deiterich Standard Corp., Dwyer, Moeller Instrument Co.

**SECTION 235100 (15575)- BREECHINGS, CHIMNEYS, AND STACKS**

**Boiler Stack**

Metalbestos, Metal-Fab, Van Packer, Schebler, AMP Co

**SECTION 235240 (15558)- FIRE TUBE BOILERS (STEAM)**

**Boilers**

Bryan, Unilux, Burnham, Cleaver Brooks, Johnston

**SECTION 236416 - CENTRIFUGAL WATER CHILLERS**

**Chillers - Centrifugal**

Trane, York by Johnson Controls

**Chillers - Screw or Scroll**

Dunham-Bush  
York by Johnson Controls  
Trane

**SECTION 236500 (15710)- COOLING TOWERS**

**Cooling Towers**

Baltimore Air Coil, Marley, EVAPCO

**SECTION 237213 - ROTARY AIR TO AIR ENERGY RECOVERY WHEELS**

Semco, Desicant Rotors International

**SECTION 237323 (15854) - CUSTOM AIR HANDLING UNITS**

**Air Handlers**

Air Enterprises, Air Flow Equipment, Buffalo Air Handling, Governair LLC,  
Mafna Air Conditioning, Inc., TMI Custom Air Systems, Ventrol.

**Air Blenders**

Blender Products Inc., R.M. Products

**Gas Fired Make-Up Air Units (direct and indirect)**

Rapid, Reznor, Sterling, Trane  
Under Consideration: Modine (Air Design), Greenheck

**SECTION 237324 (15855) - SEMI-CUSTOM AIR HANDLING UNITS**

**Air Handlers**

Air Flow Equipment, Buffalo Air Handling, Governair LLC,  
Mafna Air Conditioning, Inc., McQuay, Thermal Corporation,

TMI Custom Air Systems, Trane, Ventrol

**Air Blenders**

Blender Products Inc., R.M. Products

**SECTION 238216 (15820) - COILS AND DRAIN PANS**

Aerofin, Heatcraft, Marlo, McQuay, Trane, USA Coil, Ventrol, York, Coil Replacement Co

**SECTION 238219 (15763)- FLOOR MOUNTED FAN COIL UNITS (UN-DUCTED)**

Airtherm, Enviro-Tec by Johnson Controls, International Environmental Corporation, Zehnder Rittling

**SECTION 238220 (15764) - HORIZONTAL FAN COIL UNITS**

Airtherm, Enviro-Tec by Johnson Controls, International Environmental Corporation, Mcquay International, Price, Trane, Zehnder Rittling

**SECTION 238221 (15765) - BLOWER COIL UNITS**

Airtherm, Enviro-Tec by Johnson Controls, International Environmental Corporation, Mcquay International, Price, Trane

## **DESIGN GUIDELINE 8.3**

SECTION 238221 - BLOWER COIL UNITS (15765)

## **INTRODUCTION:**

Manufacturers on this list fall into three categories:

**Preferred Manufacturer:** Listed manufacturer's product may be used on U-M projects. However, manufacturer's product must be listed as approved in the project's contract documents or specifications. Listing in the PML does not guarantee a product will automatically be listed in a project's documents or specifications.

**Conditional Approval:** Listed manufacturer's product may be used on select U-M projects, however approval from the respective A & E Technical Committee must first be obtained. If approved, it may be listed as approved in the project's contract documents or specifications. Manufacturers in the Conditional Approval category have gone through successful preliminary review, but Technical Committee requires additional in-service input prior to final category listing.

**Under Consideration:** Listed manufacturer's product is being evaluated. The product should not be included in U-M projects.

## **SECTION 211313 (15300) - WET-PIPE SPRINKLER SYSTEMS**

### **Preaction Systems**

Siemens (Pyrotronics), Notifier, Viking

### **Piping - Grooved**

Tyco Grinnell, Victaulic

### **Sprinkler Heads**

Reliable  
Tyco  
Viking  
Victaulic

### **Tamper Switches**

Grinnell, System Sensor, Victaulic

### **Valves - Fire Protection, Detector Check**

Grinnell  
Reliable  
Viking  
Victaulic  
Hersey-Anvil  
Ames

### **Valves - Fire Protection, Zone Control**

Grinnell  
Victaulic  
Milwaukee  
Nibco

Stockham

**SECTION 213113 (15320) - FIRE PUMPS**

**Pumps - Fire**

Allis-Chalmers  
Aurora  
Peerless

**SECTION 220000 - UNDERGROUND PIPING IN CONDUIT SYSTEM**

**Piping Systems - Underground**

Perma-Pipe, Rovanco, Under Consideration: Urecon

**SECTION 220500 (15010) - COMMON WORK RESULTS FOR MECHANICAL**

**Fasteners**

Refer to UM Master Specification

**Fire Stopping**

3M, Hilti, Tremco, Manville

**Roof Curbs**

Pate  
Creative Metals  
Roof Curbs Engineered and Manufactured by the Manufacturer of the Equipment to be supported

**SECTION 220513 (15170) - MOTORS**

**Motors - General, Premium Efficiency Type Only - 1/2 HP and above**

Reliance, Baldor, Dayton, GE, Toshiba, Leeson, Marathon, U.S. Motors

**SECTION 220514 (15960) - VARIABLE FREQUENCY DRIVES**

**Variable Frequency Drives (and variable speed controllers)**

Danfoss-Graham, Toshiba, ABB

**SECTION 220516 (15125) - PIPE EXPANSION JOINTS**

**Expansion Joints - Bellow Type**

Flexonics, Metraflex, Microflex, Twin City Hose

**Expansion Joints - Externally Pressurized**

Hyspan, Microflex  
Expansion Joints - Slip Type (Packed) For Steam Piping – no longer used

**SECTION 220519 (15130) – THERMOMETERS, PRESSURE GAUGES, AND ACC'S**

**Pressure Gauges**

Dwyer, H.O. Treice, Weksler, Marsh, Ashcroft, Weiss, Miljoco

**Pressure & Temperature Plugs**

Pete's Plug, Schrader, Sisco, Miljoco

**Thermometers**

Industrial Glass: H. O. Trefice, Weksler, Marsh, Ashcroft, Weiss, Miljoco  
Electronic Digital (light powered): Weiss, Techcontrols, Miljoco

### SECTION 220523 (15100)- VALVES

#### Flow Measuring & Balancing Equipment - Manual Hydronic

PSE Inc.  
ITT Bell & Gossett Circuit Setter  
Taco  
Ellison Annubar  
Accuset  
Armstrong  
T & A (part of Victaulic)  
Flow Design Inc

#### Valves - Automatic Hydronic Regulating/Balancing

Auto-Flow (press. indep.)  
Griswold (press. indep.)  
B & G (press. indep.)

#### Valves - Manual Hydronic Regulating

B & G  
T & A  
Armstrong  
Taco  
Flow Design

#### Valves - Ball With Lever Handle

Pegler  
Crane  
Grinnell

Watts  
Jomar  
Milwaukee  
American Valve  
Nibco  
Apollo  
Hammond

#### Valves - High Performance Butterfly

Bray  
Crane Flowseal  
Dezurik,  
Fisher Not specified in MS 220523  
Grinnell-GHP,  
Jamesbury  
Milwaukee  
Tri-Seal-Valve-Contromatics (formerly Watts/KF Contromatics)  
Xomox.

#### Valves - Lubricated Plug

Honestead, Milliken, Resun

**Valves - Gas (UL Approved)**

Pegler  
Jomar  
Watts  
Grinnell  
Crane  
Milwaukee "Butter Ball" MS 15100 "Butter Ball" not specified.  
Nibco  
Hammond  
Jamesbury  
Apollo  
American Valve

**Valves - Gate**

Watts  
Crane  
Milwaukee  
Grinnell  
Stockham  
Nibco  
Hammond

**Valves - Swing Check**

Milwaukee  
Crane  
Grinnell  
Nibco

**Valves - Silent Check**

(except tunnels) Milwaukee, APCO, Mueller, Metraflex  
Utility tunnels:  
a. 2" and under: Check All  
b. over 2" - Durabula, stainless body

**Valves - City Water Main (Ann Arbor) (formerly OS&Y)**

Kennedy 4068  
Mueller A-2380  
East Jordan Series A  
Other valves specifically approved by the City of Ann Arbor for this application  
3 piece full port ball valve: Conbraco (rep. J.O. Galloup)

**SECTION 220533 (15128)– HEAT TRACING FOR PIPING**

**Heat Tracing**

Raychem, Thermon

**SECTION 220548 (15240) - VIBRATION CONTROL**

**Vibration Isolators**

Amber Booth, Korfund, Mason, Vibration Eliminator, Vibration Isolation Co.

**SECTION 220553 (15190)- MECHANICAL IDENTIFICATIONS**

**Pipe Markers**

Brady Co. (Signmark Div.), Brimer, Craftmark, Kolbi, MSI (Marking Services Inc.),  
Seton Name Plate

**SECTION 220719 (15250)- MECHANICAL SYSTEMS INSULATION**

**Insulation - Duct/Pipe/Equipment - Fiberglass**

Owens Corning  
Knauf  
Schullers (Johns Manville)  
Armstrong  
Pittsburg-Corning  
Certainteed  
Johns-Manville

**Insulation - Flexible/Elastomeric/Polyolefin**

AP Armaflex, IMCOA, Nomaco K-Flex, Rubatex

**Insulation - PVC Covering, Elbows and Fittings**

Proto  
Zeston  
Ceelco

**Insulation - Removable Jackets**

Q-Master by ESI  
Insulation Tech. Inc.

**SECTION 221113 (15060) - PIPING MATERIALS & METHODS**

**Grooved Joints for Copper and Steel Piping (except tunnels):**

Victaulic, Tyco Grinnell.

**Grooved Joints for Copper Piping In Tunnels:**

Victaulic Style 607

**Dielectric Fittings**

Refer to UM Master Specification

**Flexible Metal Hose Connectors (Stainless)**

Flex Hose Co., Flexonics, Mason, Metraflex  
Under Consideration: Twin City Hose

**Flexible Metal Hose Connectors (Copper)**

Anaconda, Flex Hose Co., Flexonics, Mason, Metraflex

**Flexible Connectors (Rubber)**

Flex Hose Co., Flexonics, Garlock, Mason, Mercer Rubber Co., Metraflex

**Pipe Hangers and Mechanical Supports**

Anvil, Cooper B-Line, Carpenter & Paterson, PHD Manufacturing, Unistrut,  
Powerstrut

**Thermal Hanger Shield Inserts**

Cooper B-Line, ERICO International Corp, Pipe Shields Inc., Rilco Manufacturing  
Company, Value Engineered Products, American Mechanical Insulation Sales

**Piping - Lab Waste and Vent (Polypropylene)**

Enfield, Orion, Zurn

**Strainers - Steam & Water**

Keckley  
Yarway  
Mueller  
Spirex-Sarco  
Metraflex  
Watts  
Armstrong  
Victaulic (grooved water piping only)  
Tyco Grinnell (grooved water piping only)

**Valves - Safety Relief**

Spirax-Sarco  
Watts  
Leslie  
Anderson-Greenwood  
Conbraco  
Keckley

**SECTION 221119 (15411) - DOMESTIC WATER PIPING SPECIALITIES**

**Backflow Preventers**

Ames  
Conbraco  
Febco  
Watts  
Zurn-Wilkins

**Hydrants - Wall Type**

Woodford  
Zurn  
Chicago  
J.R. Smith

**Vacuum Breakers - Backflow Prevention**

Kewaunee  
Chicago Water Saver  
Bell & Gossett  
Watts  
Conbraco

**Valves - Water Pressure Regulating**

Bell & Gossett, Conbraco, Hoffman, Keckley, Leslie, Spirax Sarco, Watts

**Water Hammer Arrestors**

Zurn  
Watts  
Josam  
J.R. Smith  
Sioux Chief  
Wade

**SECTION 221319 (15420)- DRAINAGE SPECIALITIES**

**Drains - Roof, Floor and Trench, Grease Interceptors**

Josam  
J.R. Smith  
Zurn  
Wade  
Watts  
Sioux Chief

Under Consideration: MIFAB (V.E. Sales Co.)

**SECTION 221500 (15481) - COMPRESSED AIR ACCESSORIES**

**Air Compressors - Screw Type (1800 RPM)**

Atlas - Copco  
Quincy QSI Series

**Air Compressors - Reciprocating**

Quincy  
Gast  
Devilbliss

**Air Dryers and Related Filters**

Wilkinson  
Zeks  
Van-Aire  
Hankison

**Air Pressure Reducing Stations**

Van-Aire  
Zeks  
Parker-Hannifin  
Fisher  
Siemens  
Wilkerson

**SECTION 223116 (15455) - WATER SOFTENER**

**Deionized Water and Reverse Osmosis Water Suppliers**

Crown Solutions (Veolia)  
Siemens/U.S. Filter  
Ionpure  
Millipore

**Water Treatment Equipment - Softeners**

Crown Solutions (Veolia)  
Burmah / Venture (H.V. Burton)  
Bruner (K.L. McCoy)

**Water Treatment Equipment**

Refer to U-M Master Specifications

**SECTION 224200 (15440) - PLUMBING FIXTURES**

**Domestic Water Heaters - Gas Fired Or Electric**

Lochinvar  
A.O. Smith  
State  
Rheem  
Raypak

Under Consideration: Copper Fin (Quality water & air)

**Emergency Shower And Eyewash**

Bradley, Haws, Speakman

**Faucets - Automatic, Battery and Electric Type**

American Standard, Chicago Faucets, Sloan, Zurn

**Faucets - Manual**

American Standard, Chicago Faucets, Moen

**Plumbing Fixtures - Water Closets, Lavatories, Urinals And Sinks**

Lavatories:

American Standard, Crane, Kohler, Sloan, Zurn

Urinals:

American Standard, Kohler, Sloan, Zurn

Water Closets:

American Standard, Crane, Kohler, Sloan

**Shower Heads**

American Standard, Chicago Faucet, Kohler, Speakman, Symmons

**Toilet Room Fixture Supports**

Josam , J.R. Smith, Wade, Watts, Zurn

**Toilet Seats**

Bemis, Centoco, Church

**Valves - Flush Including Automatic Flushing System**

Sloan, Kohler, Zurn

**Valves - Shower Control Valves**

American Standard, Chicago Faucet, Kohler, Powers, Speakman, Symmons

**Valves - Thermostatic Mixing for Handwashing**

Powers, Symmons, Wilkins

**Water Coolers**

Halsey Taylor, Haws, Oasis International

**Water Filters - Inline Type**

Cuno  
Filtrine  
Honeywell  
Culligan  
Dollinger  
Bruner

**SECTION 230000 - AIR COOLED CONDENSING UNITS**

**Air Cooled Condensers**

Bohn, Dunham Bush, McQuay, Trane, York

**Refrigeration Compressors**

Copeland, Dunham Bush, McQuay, Tecumseh, Trane, York

**SECTION 230000 - AIR COOLED PACKAGED CHILLERS**

**Chillers - Reciprocating, Air-Cooled**

Trane, York by Johnson Controls  
Under Consideration: Carrier.

**Chillers - Process Cooling**

Filtrine, Liebert, Trane, Neslab

**Refrigeration Compressors**

Tecumseh, Copeland, Trane, York, McQuay

**SECTION 230000 - CAST IRON BOILERS**

**Boilers**

Burnham, Peerless, Weil McLain

**SECTION 230000 - DUCTLESS SPLIT ROOM AIR CONDITIONERS- AIR COOL**

**Air Conditioning Units - Ductless, Spot Coolers**

Daikin, Friedrich, Liebert, Mitsubishi, Sanyo, Trane

**SECTION 230000 - HEAT EXCHANGERS & CONVERTERS**

**Dry Coolers**

McQuay, Trane, York, Bohn

**Convertors (Shell & Tube) - Steam To Hot Water**

Bell & Gossett, Taco, Armstrong, Mueller

**Heat Exchanger - Plate & Frame**

Alpha-Laval, Armstrong, Bell & Gossett, Mueller, Tranter

**Laser Heat Exchangers - Water Cooled**

Haskris  
Remcor  
Neslab  
Laser Pure (Coherent)

**SECTION 230000 - HUMIDIFIERS**

Armstrong, Cemline, Dri-Steem, Herrmidifier, Nortec, Pure, Spirax-Sarco, Stulz

**SECTION 230000 – HVAC WATER TREATMENT**

**Chemical Service Providers**

Chemtreat  
Crown Solutions  
GE Water  
Kroff  
Mitco

Nalco  
Rochester Midland

**HVAC Water Treatment Equipment**

Refer to U-M Master Specifications

**SECTION 230000 - MULTIMEDIA FILTRATION SYSTEM**

**Acceptable Manufacturers**

Crown Equipment Systems, PEP Filters, Everfilt

**SECTION 230000 - PACKAGED COMPUTER ROOM AIR CONDITIONING SYSTEM**

**Air Conditioning Units - Computer Room**

APC, Liebert, Stulz

**SECTION 230000 - PACKAGED HEAT TRANSFER UNITS**

Bell & Gossett

**SECTION 230000 - PACKAGED TERMINAL AIR CONDITIONERS, AIR-COOLED**

**Air Conditioning Units - Package Type (thru the wall self-contained DX)**

IslandAire, McQuay, Trane, York

**Air Conditioning Units - Window Type (Flush installation with wall exterior)**

Comfort-Aire, Fedders, White Westinghouse

**SECTION 230000 - STEAM ABSORPTION CHILLER**

**Chillers - Absorption**

Trane, York by Johnson Controls

**SECTION 230000 - STEAM CONDENSATE RETURN UNITS**

**Condensate Meters - Gravity Type - no longer used**

**Condensate Receiver**

ITT Domestic, Skidmore, Shipco, Spirax-Sarco

**Condensate Meters - Magnetic Induction**

Refer to U-M Master Specification 230900

**Pumps - Boiler Feed**

Skidmore, Spirax-Sarco, Shipco, Weinman

**Pumps - Condensate (Condensate Receiver Must Be Cast Iron)**

ITT Domestic (Hoffman), Skidmore, Spirax-Sarco, Shipco, Weinman

**Pumps - Condensate, Steam Or Air Pressure Powered**

Sarco, Armstrong

**SECTION 230000 - TERMINAL UNITS**

**Baseboard Radiation, Finned Tube Radiation**

Dunham-Bush, Rittling, Slantfin, Sterling Radiator, Trane, Vulcan Radiator

**Panel Radiators**

Jaga, Runtal Radiator, Sterling

**Convectors**

Dunham-Bush, Rittling, Sterling, Trane

**Unit Heaters**

Dunham-Bush, McQuay, Modine, Reznor, Rittling, Sterling, Trane, Wing

**Cabinet Heaters**

Dunham-Bush, McQuay, Modine, Rittling, Sterling, Trane

**Unit Ventilators**

American Air Filter, Trane

**Electric Cabinet Heaters**

Berko, Qmark, Trane

**Electric Heating Coils**

Brasch, Chromalux, Indeeco, Trane

**Gas Fired Duct Furnaces**

Modine, Reznor, Sterling, Trane

**Radiant Ceiling Panel - Hot Water**

Aero-Tech, Air-TEX, Sun-El, Sterling/TWA

**SECTION 230593 (15990) - TESTING, ADJUSTING AND BALANCING**

**TAB Sub-Contractors**

Absolut, Air Flow Testing, Enviroaire - Total Balance

**SECTION 230900 (15975)- MECHANICAL SYSTEMS CONTROLS**

Because of the extensive amount of control components, approved manufacturers are listed in U-M Master Specification 230900.

**SECTION 230910 (digital) , 230920 (15910- analog) - LABORATORY TERMINAL AIR FLOW UNITS & CONTROLS**

**Fume Hood Monitors**

Phoenix,

**Laboratory Terminal Airflow Units (LTAUs)**

Phoenix

**SECTION 230930 (15635) - REFRIGERANT DETECTION AND ALARM**

**Acceptable Manufacturers**

MSA Corporation

**SECTION 231123 (15488) – FACILITY NATURAL GAS PIPING**

**Master Gas Valve Boxes**

Ohmeda

Mueller

## SECTION 232116 (15515) - HYDRONIC PIPING SPECIALTIES

### Automatic & Manual Air Vents

Armstrong, B & G, Hoffman, Wheatley, Taco

### Suction Diffusers

Armstrong, B & G, Grinnell, Taco, Victaulic, Wheatley

### Triple Duty Valves

Armstrong, B & G, Taco, Wheatley

### Water Pressure Relief Valve

ITT B & G, ITT McDonnell Miller, Consolidated, Watts

### Water Pressure Regulating/Reducing Valve

B & G, Hoffman, Watts

### Air Separators

Amtrol, Armstrong, B & G, Spirotherm, Wheatley

### Coalescing Separator

Spirotherm (Spirovent Dirt HV)

### Expansion Tank

Amtrol, Armstrong, Bell and Gossett, Wessels, Taco CA

### Centrifugal Separator

Griswold Controls, Lakos

### In-Line Filters

Bruner, Culligan, Cumo Dollinger, Honeywell

### Glycol Feed Packages

Advantage Control Inc., Burmah, Crown Engineering, J.L. Wingert Co., Neptune Chemical Pump Co., Wessel Co.

### Inhibited Ethylene Glycol

Dowtherm SR-1

## SECTION 232123 (15160) – PLUMBING AND HYDRONIC PUMPS

### Pumps - Condensate Waste

Little Giant, Hartell, Marsh, Bekette

### Pumps - Double Suction - Base Mounted

Bell & Gossett (ITT), Allis-Chalmers, Weinman, Armstrong, Paco

### Pumps - End Suction , Close Coupled - Base Mounted

Bell & Gossett (ITT), Allis-Chalmers, Weinman, Armstrong, Taco

### Pumps - End Suction , Flexibly Coupled - Base Mounted

Bell & Gossett (ITT), Allis-Chalmers, Weinman, Armstrong, Taco

### Pumps - In-Line Circulators

Bell & Gossett (ITT), Armstrong, Grundfos, Weinman, Taco

### Pumps - In-Line Close Coupled - Hanger Supported

Bell & Gossett (ITT) Series 60, Grundfos, Armstrong, Weinman, Taco 1600

### Pumps - In-Line Split Coupled - Base Mounted

Bell & Gossett (ITT) Series 80-SC, Grundfos, Armstrong, Weinman, Taco KS Vertical Split Coupled

**Pumps - Sump Pumps**

Vertiflo (B&G), Allis Chalmers, Weinman, Armstrong, Zoller, Weil  
Under Consideration: Aurora / Hydromatic (K.L. McCoy)

**Pumps - Vacuum**

Nash  
Domestic  
Sehi  
Shipco  
Under Consideration: Skidmore (K.L.McCoy), Busch (Kerr pump & supply)

**SECTION 232216 (15525) - STEAM AND CONDENSATE PIPING SPECIALTIES**

**Steam Pressure Reducing Stations**

Armstrong, Jordan, Leslie, Spence, Spirax-Sarco, Watts Anderson-Greenwood

**Steam Traps - All Types**

Armstrong, Spirax Sarco, Hoffman (ITT), Watson McDaniels

**Flash Tank, Vacuum Breaker, Drip Pan Elbow, Pressure Reducing Valve**

Refer to U-M Master Specification

**SECTION 232300 (15530)- REFRIGERANT PIPING**

**Valves - Refrigeration**

Asco, Hansen, Henry Valve, Parker, Sporlan

**SECTION 232519 (15188)- STEAM BOILER CHEMICAL WATER TREATMENT**

Refer to master specification 232519

Seton

**SECTION 233100 (15890) - HVAC DUCTS & CASINGS**

**Exhaust Ductwork - PVC Coated**

United McGill, Tangent, Foremost, Semco

**Exhaust Ductwork - Teflon Coated Stainless Steel**

Fab-Tech (PermaShield Pipe)

**Exhaust Ductwork - FRP**

Perry, Spunstrand, Tangent

**Flexible Non-Metallic Duct**

Atco (Flex-Aire), Flexmaster, Hart & Cooley (Genflex)

**Double-Walled Panels, Plenums, and Duct at Outside Air Intake Plenums**

McGill Airflow LLC., Semco Mfg Co., VAW Systems, Vibro-Acoustics

**Clothes Dryer Vent Ductwork**

Intended for heavy use clothes dryer applications such as resident hall laundry rooms with multiple dryers where access to disassemble duct for periodic cleaning may be challenging. For simple dryer applications, specifying conventional duct may be more appropriate.

Nordfab Quick-Fit/ACS of Fenton, Missouri

**Duct Sealants**

Hardcast, McGill Airflow LLC. , Polymer Adhesives, Ductmate, Childers/Foster

**SECTION 233300 (15895)- AIR DUCT ACCESSORIES & RGDS**

**Duct Flexible Connectors**

Ductmate, Duro-Dyne, Fanair, Pathway, United McGill, Ventglas

**Dampers - Fire, Smoke, Combination Fire/Smoke**

Air Balance, American Warming & Vent, Greenheck, Nailor, Ruskin, Vent Products

**Dampers - Balance (manual volume control)**

American Warming & Vent, Arrow, Flexmaster (for round ducts, single branch takeoff only), Ruskin, Greenheck, Krueger, Vent Products, Young Regulator

**Dampers - Iris**

Continental Fan Manufacturing Inc.

**Dampers - Backdraft**

Young Regulator Company.  
American Warming & Ventilating Co.  
Vent Products Co., Inc.  
Arrow United Industries.

**Sound Attenuators**

IAC, Semco, Ruskin, United McGill, VAW Systems, Vibro-Acoustics, Price

**Registers, Grilles and Diffusers**

Carnes, E.H. Price, Krueger, MetalAire, Nailor, Titus, Tuttle & Bailey

**Louvers**

American W. & V., Ruskin, Vent Products

**Ductwork Cleaning Specialist**

Sani-Vac, Power Vac, High Tec Vacuum, Aero Filters Inc., Stanley Steamer Great Lakes Inc.

**SECTION 233400 (15870)- FANS**

**Fans: All types except Vane and Tube Axial, FRP, High-Plume Induction Lab Type**

Aerovent, Acme, Barry Blower, Buffalo, Carnes, Greenheck, Loren Cook, Penn, Trane, Twin City

**Fans - High-Plume Induction-Type Lab Exhaust**

Greenheck - Vektor , Strobic,

**Fans -FRP Construction**

M.K. Plastics  
Under Consideration: Harrington

**Fans -Vaneaxial, TubeAxial**

Buffalo, Cook, Greenheck, Joy, Trane, Woods

**SECTION 233600 (15896)- AIR TERMINAL UNITS**

**VAV, CAV, Dual Duct, and Retrofit Terminal Air Flow Units**

Carnes, Titus, Krueger, Metalaire, Nailor Industries, Inc., Price Industries,

Tuttle and Bailey

**SECTION 234000 (15885)- HVAC AIR CLEANING DEVICES**

**Primary Filters, Secondary Filters and Filter Housing Rack**

American Air Filter, Camfarr, Eaton, Flanders, Purolator, Tri-Dim

**HEPA Filters**

Camfarr, Eaton, Flanders

**Gas Adsorption Filters**

American Air Filter, Camfarr, Charcoal Service Corp., Flanders, Purolator

**Filter Gauges**

Bacharach Instrument Co., Deiterich Standard Corp., Dwyer, Moeller Instrument Co.

**SECTION 235100 (15575)- BREECHINGS, CHIMNEYS, AND STACKS**

**Boiler Stack**

Metalbestos, Metal-Fab, Van Packer, Schebler, AMP Co

**SECTION 235239 (15557) - FIRE TUBE BOILERS (HOT WATER)**

**Boilers**

Easco, Johnston, Superior , Conditional Approval: Hurst Boilers

**Burners**

Webster

Under Consideration: Viessmann

**SECTION 235240 (15558)- FIRE TUBE BOILERS (STEAM)**

**Boilers**

Bryan, Unilux

**SECTION 236416 - CENTRIFUGAL WATER CHILLERS**

**Chillers - Centrifugal**

Trane, York by Johnson Controls

**Chillers - Screw or Scroll**

Dunham-Bush

York by Johnson Controls

Trane

**SECTION 236500 (15710)- COOLING TOWERS**

**Cooling Towers**

Baltimore Air Coil, Marley, EVAPCO

**SECTION 237213 - ROTARY AIR TO AIR ENERGY RECOVERY WHEELS**

Semco, Desiccant Rotors International

**SECTION 237323 (15854) - CUSTOM AIR HANDLING UNITS**

**Air Handlers**

Air Enterprises, Air Flow Equipment, Buffalo Air Handling, Governair LLC, Mafna Air Conditioning, Inc., TMI Custom Air Systems, Ventrol.

**Air Blenders**

Blender Products Inc., R.M. Products

**Gas Fired Make-Up Air Units (direct and indirect)**

Rapid, Reznor, Sterling, Trane  
Under Consideration: Modine (Air Design), Greenheck

**SECTION 237324 (15855) - SEMI-CUSTOM AIR HANDLING UNITS**

**Air Handlers**

Air Flow Equipment, Buffalo Air Handling, Governair LLC, Mafna Air Conditioning, Inc., McQuay, Thermal Corporation, TMI Custom Air Systems, Trane, Ventrol

**Air Blenders**

Blender Products Inc., R.M. Products

**SECTION 238216 (15820) - COILS AND DRAIN PANS**

Aerofin, Heatcraft, Marlo, McQuay, Trane, USA Coil, Ventrol, York, Coil Replacement Co

**SECTION 238219 (15763)- FLOOR MOUNTED FAN COIL UNITS (UN-DUCTED)**

Airtherm, Enviro-Tec by Johnson Controls, International Environmental Corporation, Zehnder Rittling

**SECTION 238220 (15764) - HORIZONTAL FAN COIL UNITS**

Airtherm, Enviro-Tec by Johnson Controls, International Environmental Corporation, Mcquay International, Price, Trane, Zehnder Rittling

**SECTION 238221 (15765) - BLOWER COIL UNITS**

Airtherm, Enviro-Tec by Johnson Controls, International Environmental Corporation, Mcquay International, Price, Trane

**DESIGN GUIDELINE 8.4**  
**ELECTRICAL PREFERRED MANUFACTURERS LIST**

**SCOPE**

The Electrical Trades Preferred Manufacturers List identifies manufacturers and suppliers who are known to provide good quality products, meet specification and schedule requirements, provide technical support, and provide service after the sales. This list is intended to regulate product quality, standardize electrical designs, and simplify maintenance activities. It is not intended to limit competition. It is not all inclusive. It is a list of manufacturers whose products are well known to the University due to their frequent and successful use.

This List shall be used by A/E's when selecting manufacturers for specification in electrical designs. **A/E'S SHALL SPECIFY ONLY THE LISTED MANUFACTURERS THAT MEET THEIR PROJECT'S REQUIREMENTS, AND SHOULD SPECIFY A MINIMUM OF THREE MANUFACTURERS WHENEVER POSSIBLE.** A/E's may specify manufacturers not on this list to satisfy project requirements, **BUT SHALL OBTAIN UNIVERSITY APPROVAL IN ADVANCE.**

This List **SHALL NOT** be used by Contractors to justify making substitutions for products specified in the construction documents. **CONTRACTORS SHALL PROVIDE THE PRODUCTS SPECIFIED IN THE CONSTRUCTION DOCUMENTS UNLESS THE UNIVERSITY APPROVED THEIR PROPOSED SUBSTITUTIONS AT THE TIME OF BID IN ACCORDANCE WITH THE PROJECT'S STANDARD GENERAL CONDITIONS.**

**THIS LIST DOES NOT APPLY** to purchases by the University Plant Department of replacement electrical products required to match or maintain existing installations.

This List is revised as needed. Before using it, check the AEC Website for the latest revision.

## **SECTION 260513 - MEDIUM, LOW & CONTROL VOLTAGE CABLES**

### **Cables (Medium Voltage)**

General Cable  
Kerite  
Okonite  
Prysmian

### **Cables and Wire (600 Volts)**

Alan Wire  
Alan Wire and Cable  
American Insulated Wire  
Cerro Wire  
Encore  
General Cable  
Republic Wire  
Rockbestos-Surprenant  
Service Wire  
Southwire  
United Copper Industries

### **Type MC Cables (600 Volts)**

AFC  
Encore  
Kaf-Tech  
Rockbestos-Surprenant  
Service Wire  
Southwire  
United Copper Industries

### **2-Hour Fire Rated Cables (600 Volts)**

Pyrotenax Mineral Insulated (Type MI) by Pentair

### **Control Cables and Wire**

Belden  
Coleman

### **Cable Splices for Medium Voltage Cable**

Raychem

### **Cable Terminations for Medium Voltage Cable**

Raychem

## **SECTION 260526 - GROUNDING & BONDING FOR ELECTRICAL**

### **Ground Connections**

Burndy Hyground (Proper dies must be used)  
Cadweld  
Thermoweld  
Thomas & Betts Blackburn (Above grade only)

## **SECTION 260533 - ELECTRICAL MATERIALS AND METHODS**

**Cable Trays - Center Spline and Wall Mount Types (Use only where ladder and wire basket trays cannot be used, and only with ITCS (Campus projects) or MCIT (UMHHC projects) approval)**

B-Line  
Legrand/Wiremold  
Mono-Systems  
Thomas & Betts

### **Cable Trays - Ladder Type**

B-Line  
Chalfant  
Cope  
Globetrax (GS Metals)  
Husky  
Legrand Cablofil  
Mono-Systems  
Thomas & Betts

**Cable Trays – Wire Basket Type (Use only with ITCS (Campus projects) or MCIT (UMHHC projects) approval)**

B-Line  
Chalfant  
Legrand Cablofil EZTray  
Mono-Systems

### **Conduits, Raceways and Accessories -**

**EMT, liquid-tight flexible metallic conduit, and/or non-liquid-tight flexible metallic conduit/raceway; plus associated accessories, fittings, junction and pull boxes, and related products**

Products of all manufacturers are acceptable as long as they are electro-galvanized steel, have a smooth interior, and are NRTL labeled for the application.

**Rigid (galvanized metal), and IMC (intermediate metal) conduits/raceway, plus associated accessories, fittings, junction and pull boxes, and related products**

Products of all manufacturers are acceptable, as long as they are hot-dipped galvanized steel inside and out, have a smooth interior, and are NRTL labeled for the application. Boxes shall be cast, not formed. IMC may only be used when tools specifically designed for IMC are used.

**PVC conduit/raceway (Type DB, Schedule 40, and Schedule 80), plus associated accessories, fittings, junction and pull boxes, and related products**

Products of all manufacturers are acceptable as long as they are sunlight resistant, and NRTL labeled for the application. Products from manufacturers making both the conduit and the fittings are preferred whenever possible.

**Fiberglass Reinforced Epoxy (FRE) conduit/raceways, accessories, fittings, and related products**

Champion  
FRE

### **Cord Reels**

Appleton  
Hubbell  
Reel-O-Matic Systems  
Woodhead

**Electrical Enclosures**

Carlson (For use with PVC raceways)  
Hammond  
Hauffman  
Park Metal  
Rittal

**Fire Stop Compounds**

A. D. Fire Protection Systems  
Flame Safe  
Hilti  
Nelson  
STI SpecSeal  
3M Company

**Structural Support Materials**

Aickinstrut (Fiberglass)  
B-Line  
Champion (Fiberglass)  
Hilti  
Powerstrut  
Unistrut

**Surface and Underfloor Wireways**

Carlson  
Hubbell  
Legrand Evolution Floor Boxes  
Legrand (Wiremold)  
Panduit

**SECTION 260543 - UNDERGROUND SERVICES FOR ELECTRICAL****Underground Hand Holes, Junction Boxes and Pull Boxes**

Carson-Brooks  
CDR Systems  
Quazite

**SECTION 260800 - ELECTRICAL ACCEPTANCE TESTS****Nationally Recognized Testing Laboratory Services**

CSA  
ETL  
MET Laboratories  
UL (Northbrook, IL)

**Testing Services**

Bisbee Infrared Services (Penny Wilson, (517) 787-4620)  
Northern Electrical Testing (Lyle Detterman, (810) 689-8980)  
Utilities Instrumentation Services (David Wheeler, (734) 482-1450)

## **SECTION 261100 - UNIT SUBSTATIONS**

### **Non-Current Limiting Fuses (Primary)**

Eaton/Cutler-Hammer Type RBA-400 (With high interrupting capacity adapter)  
S & C Type SM-5SS (With high interrupting capacity adapter)

### **Current Limiting Fuses (Primary)**

Eaton/Cutler-Hammer Type CLE  
Ferraz-Shawmut, Type CL-14  
General Electric Type EJO

### **KWHR/Demand Meters**

Power Measurement Limited (PML) 7330 ION (With options per Master Spec 16313)

### **15 kV Fused and Unfused Primary Switches (5kV rated switches may only be used for 5 kV (4,160 volt) class motors)**

Eaton/Cutler-Hammer  
Powercon  
Square D

### **15kV Metal Clad Switchgear and/or Circuit Breakers (5kv rated circuit breakers may only be used for 5 kV (4,160 volt) class motors)**

Eaton/Cutler-Hammer  
General Electric  
Square D

### **Circuit Breakers for 600-volt Class Secondary Switchgears and Switchboards**

Asea Brown Boveri  
Eaton/Cutler-Hammer  
General Electric  
Square D

### **Transformers**

Asea Brown Boveri  
Eaton/Cutler-Hammer  
General Electric  
MGM  
Olsun  
Square D

**Substation Assemblers (Using components from Preferred Manufacturers only)**

Controlled Power Corporation  
Eaton/Cutler-Hammer  
Electrical Product Sales  
General Electric  
Park Metal  
Pederson Power Products  
Powercon  
Shallbetter  
Square D

**Addresses of above Assemblers**

Controlled Power Corporation  
295 Wetmore Ave SE  
Massillon, Ohio 44646  
Phone: 800 321 0414  
FAX: 330 834 3201

Eaton/Cutler-Hammer  
McNaughton-McKay Electric Co.  
4670 Runway Blvd, Ann Arbor, MI 48108  
Phone: 734-327-6251  
Fax: 734-327-6285

Eaton/Cutler-Hammer

## **SECTION 262000 - LOW VOLTAGE ELECTRICAL DISTRIBUTION**

### **Bus Ducts**

Eaton/Cutler-Hammer  
General Electric  
Siemens  
Square D

### **Fuses (600 Volts and Below)**

Bussmann  
Ferraz-Shawmut  
Littlefuse

### **Surge Protective Devices**

Current Technology  
Eaton/Cutler-Hammer-Tycor  
Intermatic (For protection of individual loads and receptacle panels only)  
Leviton (For protection of individual loads and receptacle panels only)  
Liebert  
L.E.A. Dynatech  
Square D

### **Switchboards, Panelboards and Circuit Breakers**

Eaton/Cutler-Hammer (Only with U of M Lugs - confirm on shop drawings)  
General Electric  
Industrial Electrical Manufacturing (For custom and retrofit applications only)  
Siemens  
Square D

**Time Switches**

Intermatic  
Paragon  
Sangamo  
Tork

**Transformers (Liquid Filled and Dry Pad-Mounted Type)**

Eaton/Cutler-Hammer  
General Electric  
Olsun Electric  
Pennsylvania  
Pioneer

**Transformers (Distribution Dry Type)**

Acme  
Eaton/Cutler-Hammer  
General Electric  
Hammond Power Systems  
Hevi-Duty  
MGM  
Olsun Electric  
Siemens  
Square D

**SECTION 262726 - WIRING DEVICES****Dimmer Switches**

Leviton  
Lithonia  
Lutron

**Occupancy Sensors (Infrared, Ultrasonic, Combination Infrared/Microphonic Dual Technology and Combination Infrared/Ultrasonic Dual Technology)**

Hubbell  
Leviton  
Lutron  
Sensor Switch  
Tork  
Watt Stopper

**Pin & Sleeve Connectors**

Crouse-Hinds  
Hubbell  
Killark  
Leviton  
Pass & Seymour

**Power Poles**

Hubbell  
Mono-Systems  
Steelcase  
Wiremold

**120-volt, 20-ampere Receptacles and Plugs**

Arrow Hart (Cooper)  
Bryant  
Hubbell  
Leviton  
Pass & Seymour

**120-volt, 20-ampere Receptacles (GFCI, Hospital Grade, TVSS & Child Resistant)**

Arrow Hart (Cooper)  
Bryant  
Hubbell  
Leviton  
Pass & Seymour

**Special Power Receptacles and Plugs**

Arrow Hart (Cooper)  
Bryant  
Hubbell  
Leviton  
Pass & Seymour

**USB Charging Port Receptacles**

Leviton

**120/277 Volt, 20-Ampere Light Switches**

Arrow Hart (Cooper)  
Bryant  
Hubbell  
Leviton  
Pass & Seymour

**SECTION 262900 - MOTOR CONTROLS****Capacitors for Power Factor Correction**

Aerovox  
Eaton/Cutler-Hammer  
General Electric  
Myron Zucker  
Siemens  
Square D

**Motor Controls (MCC's, Starters, Contactors, Disc. Switches and Control Devices)**

Allen-Bradley  
Eaton/Cutler-Hammer  
General Electric  
Siemens  
Square D

**Motor Starters (Electronic Soft Starter Type)**

Allen-Bradley  
Eaton/Cutlet-Hammer  
Sprecher & Schuh

## **SECTION 263000 - ENGINE-GENERATOR SYSTEMS**

### **Natural Gas Fired Engine-Generator Sets (Only those which require inlet gas pressures of 14 inches of water column or less)**

Caterpillar  
Cummins  
Generac Industrial Power (up through 300 kW)  
Kohler  
Olympian

### **Automatic and Manual Transfer Switches (Open and Closed Transition Types)**

ASCO  
Cummins  
Eaton/Cutler-Hammer  
GE Zenith Controls  
Kohler

### **Automatic Transfer Switches (Soft-Loading Type)**

ASCO  
Eaton/Cutler-Hammer  
Kohler

### **Resistive Load Banks**

Avtron  
Sephco  
Simplex

## **SECTION 263300 - BATTERY EQUIPMENT**

### **Batteries**

C & D Technologies  
Chloride Plante  
Energys  
Johnson Controls

### **Battery Chargers**

C & D Technologies  
Energys  
Hi-Tran  
LaMarche  
SCI

### **Uninterruptible Power Supply Systems (Battery type)**

A.P.C  
Best (Individual small load units only)  
Controlled Power  
Liebert  
MGE  
Mitsubishi (Totally solid-state)  
Toshiba

### **Rotary UPS Systems**

Designed Power Solutions International (DPSI)

## **SECTION 264100 - FACILITY LIGHTNING PROTECTION**

### **Lightning Protection Services**

Guardian Equipment, Novi, MI (248) 449-5200  
Michigan Lightning Protection, Grand Rapids, MI (616) 453-1174  
Orion Services, Wixom, MI (248) 624-2120  
Sleeping Bear Lightning Protection, Maple City, MI (231) 228-4112

## **SECTION 265100 - INTERIOR LIGHTING**

### **Ballasts (Electronic Compact Fluorescent)**

Aculite  
Advance Smart Mate  
Lightolier  
Prescolite

### **Ballasts (Electronic Rapid Start T-8 Fluorescent)**

Advance Optanium  
Bodine (For emergency lighting only)  
Osram/Sylvania Quicktronic Professional  
Universal AccuStart

### **Ballasts (Electronic Dimming T-8 Fluorescent)**

Advance Mark X (5% dimming type)  
Lightolier (1% dimming type)  
Osram/Sylvania (10% dimming type)

### **Emergency Power Ballasts (Electronic Rapid Start T-8 Fluorescent)**

Bodine (For emergency lighting only)  
Lithonia

### **Ballasts (H.I.D.)**

Advance  
MagneTek  
Universal

### **Dimming Systems**

AMX  
Crestron Electric, Inc.  
E.T.C.  
Leviton (Small single room systems only)  
Lithonia  
Lutron  
Strand (Stage lighting only)

### **Emergency Lights**

Chloride  
Dual-Lite  
Emergi-Lite  
Exide Lightguard  
Lightalarms  
Lithonia  
Sure-Lite

**Exit Signs (LED)**

Chloride  
Dual-Lite  
Emergi-Lite  
Exide Lightguard  
Lightalarms  
Lithonia  
LSI Industries  
Morlite (High abuse areas) (Philips)  
Prescolite  
Sure-Lites

**Lamps**

General Electric Ecolux  
Osram/Sylvania Ecologic  
Philips Alto  
Venture (H.I.D. only)

**Lighting Fixtures (Fluorescent)**

Alkco (Philips)	Kenall
Bartco	Kirlin
Columbia	Lightolier (Philips)
Cooper (Metalux)	Linear Lighting
Day-Brite (Philips)	Lithonia (Acuity)
Fail-Safe (Cooper)	LSI Industries
Finelite	Peerless (Acuity)
Focal Point	Prudential
Guth (Philips)	Quality (Philips)
Harris	Visa
Holophane (Acuity)	Williams
Hubbell	Zumtobel
Keene	

**Lighting Fixtures (H.I.D.)**

Best	Kenall
Crouse-Hinds (Cooper)	Lightolier (Philips)

### **Fire Alarm Systems**

EST (through Riverside Fire and Security only)  
Honeywell (UMHHC only)  
Simplex Time Recorder (through Simplex/Grinnell)  
Vesda (For smoke sampling systems only)

## **Preferred Manufacturers List General Procedure**

**Policy:** A Preferred Manufacturers List (PML) is maintained by Technical Committees at the University of Michigan (U-M) Department of Architecture, Engineering & Construction (AEC). The PML is used as the basis of manufacturer selection for University projects. The PML is updated on an ongoing basis. The A/E should review the included Preferred Manufacturers List (PML) and follow in the preparation of the specification. If the A/E believes other manufacturers should be considered they must discuss this issue with the Design Manager prior to release of the construction documents.

**Purpose of Policy:** Improve the quality and value of products provided to the University. Improve manufacturer understanding of the U-M PML revision process.

**General:** Anyone can [Request for Addition or Change of Listing](#) to the PML by contacting the appropriate [Committee Chair](#). The extent of evaluation will vary based on many factors. Therefore, time to evaluate requests will vary.

Manufacturers are listed in the PML in one of three categories:

1. Preferred Manufacturer: Listed manufacturer's product may be used on U-M projects. However, manufacturer's product must also be listed as approved in the project contract documents.
2. Conditional Approval: Listed manufacturer's product may be used on select U-M projects. Approval from the Technical Committee is required. Manufacturer's product must also be listed as approved in the project contract documents. Manufacturers in the Conditional Approval category have gone through successful preliminary review, but Technical Committee requires additional in-service input prior to final category listing.
3. Under Consideration: Listed manufacturer's product is being evaluated. The product should not be included in U-M projects.

All products are expected to meet specification requirements, quality level, and project schedule commitment.

**DESIGNER NOTES (DELETE FROM CONTRACT DRAWINGS)**

- A. FOR A CONDENSER WATER SYSTEM WITH MULTIPLE CHILLERS AND CONDENSER WATER PUMPS, EACH SUPPLY PIPE BETWEEN THE PUMPS AND THE CHILLERS REQUIRES A TAP WITH A BALL VALVE AND CHECK VALVE.
- B. THE COOLING TOWER DRAIN AND OVERFLOW DRAIN SHOULD BE CONNECTED BEFORE THE BLOWDOWN METER.
- C. IF THE CONDENSER WATER SYSTEM INCLUDES A CENTRIFUGAL OR COALESCING SEPARATOR, THE BLOWDOWN CONNECTION SHOULD BE FROM THE SEPARATOR DRAIN TO PROVIDE PERIODIC SOLIDS BLOWDOWN.
- D. PROVIDE LOCKABLE 120V SWITCH LOCATED AT/NEAR CITY WATER MAG METERS.
- E. PROVIDE 110V DEDICATED CIRCUIT FOR CHEMICAL PANEL AND CITY BLOWDOWN MAG METER.
- F. CONTROL DRAWINGS SHOWN SHOULD BE INCLUDED WITH CONTROL DRAWING SHEETS.
- G. REFER TO SCHEDULE BELOW FOR REQUIRED BLOWDOWN PIPE SIZES. INDICATE PIPE SIZES ON PROJECT DRAWINGS.

**SCHEDULE**

SYSTEM TONS	PIPE SIZE
<500	3/4"
1000	1"
1500	1 1/2"
2000	1 1/2"
>2000	2"

**SEQUENCE**

- DDC MONITORS GENERAL FAULT ALARM AND WATER CONDUCTIVITY.

NOTE 1: WATER METER AND REMOTE READOUT PURCHASED BY OWNER  
 NOTE 2: ALL COMPONENTS SHALL BE FM APPROVED EXCEPT AS NOTED.

- ① U.L. AND F.M. APPROVED DOUBLE CHECK DETECTOR ASSEMBLY. PROVIDE WITH OS&Y GATE VALVES.
- ② PRESSURE GAUGE AND BALL VALVE
- ③ OS&Y VALVE
- ④ BALL VALVE
- ⑤ DOUBLE CHECK VALVES
- ⑥ U.L. LISTED AND/OR F.M. APPROVED 3/4" WATER METER (OBTAINED FROM CITY OF ANN ARBOR, INSTALLED BY CONTRACTOR)
- ⑦ TERMINATION OF DUCTILE IRON PIPE SHALL BE THREADED AND EQUIPPED WITH SCREW-ON MACHINE TIGHTENED, DUCTILE IRON FLANGE COMPLYING WITH ANSI/AWWA C110 AND C115.
- ⑧ PROVIDE ALL CONNECTIONS, VALVES AND FITTINGS REQUIRED TO PROPERLY TEST THE BACKFLOW PREVENTION DEVICE.
- ⑨ REMOTE READOUT (OBTAINED FROM CITY OF ANN ARBOR, INSTALLED BY CONTRACTOR).
- ⑩ 1/2" EMT CONDUIT WITH 3 WIRE PHONE CABLE. CABLE FURNISHED BY CITY OF ANN ARBOR. CONTRACTOR SHALL FURNISH AND INSTALL ONDUIT AND INSTALL CABLE. CONTACT CITY FOR MAX. CABLE LENGTH.

## FIRE SERVICE SYSTEM DETAIL

NO SCALE

D 15300 001 01 14.dgn

DESIGNER'S NOTE: REVISE NOTE ① AND ⑤ SPECIFY A RPZ OR A DOUBLE CHECK ASSEMBLY, AS REQUIRED BY THE CITY OF ANN ARBOR BASED ON THE BUILDING HAZARD LEVEL.

**NOTE:**  
 DETAIL DOES NOT SHOW ALL  
 REQUIRED COMPONENTS.  
 PROVIDE ALL PIPING AND  
 COMPONENTS REQUIRED BY  
 NFPA STANDARDS.

- |                   |  |  |

| ④ FIRE PUMP       |  |  |

## FIRE PUMP SYSTEM DETAIL

NO SCALE (GENERAL ARRANGEMENT)

- ① U.L. APPROVED DOUBLE CHECK DETECTOR ASSEMBLY OR REDUCED PRESSURE ZONE DETECTOR ASSEMBLY, AS REQUIRED BY CITY OF ANN ARBOR. PROVIDE WITH OS&Y GATE VALVES.
- ② HIGH PERFORMANCE BUTTERFLY VALVE
- ③ WATER METER (OBTAINED FROM CITY OF ANN ARBOR, INSTALLED BY CONTRACTOR)
- ④ PRESSURE GAUGE AND BALL VALVE
- ⑤ REMOTE READOUT (OBTAINED FROM CITY OF ANN ARBOR, INSTALLED BY CONTRACTOR)

- ⑥ 1/2" EMT CONDUIT WITH 3 WIRE PHONE CABLE. CABLE FURNISHED BY CITY OF ANN ARBOR. CONTRACTOR SHALL FURNISH AND INSTALL CONDUIT AND INSTALL CABLE. CONTACT CITY FOR MAX. CABLE LENGTH.
- ⑦ TERMINATION OF DUCTILE IRON PIPE SHALL BE THREADED AND EQUIPPED WITH SCREW-ON MACHINE TIGHTENED, DUCTILE IRON FLANGE COMPLYING WITH ANSI/AWWA C110 AND C115.
- ⑧ PROVIDE ALL CONNECTIONS, VALVES AND FITTINGS REQUIRED TO PROPERLY TEST THE BACKFLOW PREVENTION DEVICE.

## DOMESTIC WATER SERVICE SYSTEM DETAIL

NO SCALE

DESIGNER'S NOTE: REVISE NOTE ① TO SPECIFY A RPZ OR A DOUBLE CHECK ASSEMBLY, AS REQUIRED BY THE CITY OF ANN ARBOR BASED ON THE BUILDING HAZARD LEVEL.

## CORROSION COUPON RACK

## SHOT FEEDER PIPING SCHEMATIC

### SHOT FEEDER:

THE FEEDER SHALL NOT BE SUPPORTED BY THE SUPPLY AND RETURN PIPING. THE FEEDER TOP OPENING SHALL NOT BE MORE THAN 48 INCHES ABOVE THE FLOOR TO AVOID ANY SPLASHING OF CHEMICALS ON THE OPERATOR.

### PIPING:

PIPE SHOT FEEDER & COUPON RACK SO SUPPLY AND RETURN CONNECTIONS ARE COMMON TO ALL SYSTEM PUMPS.

## CLOSED SYSTEM SHOT FEEDER DETAIL

ALUMINUM WIRE TERMINATION  
TO DRILLED BUS

ALUMINUM WIRE TERMINATION  
TO MECHANICAL CLAMP CONNECTOR

**NOTES:**

1. ALUMINUM WIRES SHALL BE TERMINATED TO BUS BARS USING 2-HOLE COMPRESSION LUGS AND TO MECHANICAL CLAMP CONNECTORS USING COPPER WIRE PIGTAIL COMPRESSION LUGS. ALUMINUM WIRES SHALL NOT BE CLAMPED DIRECTLY IN MECHANICAL CLAMP CONNECTORS.
2. ONLY THE SPECIFIED BRANDS AND MODELS OF COMPRESSION LUGS ARE ACCEPTABLE.
3. COMPRESSION LUGS SHALL BE PRE-FILLED WITH AN OXIDE INHIBITOR.
4. ONLY THE CRIMPING TOOLS AND DIES RECOMMENDED BY THE LUG MANUFACTURER ARE ACCEPTABLE. DIE AND CRIMP TOOL NUMBERS SHALL BE CLEARLY VISIBLE FOR INSPECTION AFTER THE LUGS ARE CRIMPED.
5. ALUMINUM WIRES HAVE LARGER MINIMUM BEND RADII THAN EQUIVALENT COPPER WIRES, AND COMPRESSION LUGS INCREASE BEND RADII EVEN MORE. OVERSIZE SUBSTATION SECONDARY GEAR, ELECTRICAL ENCLOSURES, AND PANEL WIRING GUTTERS ACCORDINGLY.
6. VERIFY THAT OVERSIZED EQUIPMENT FITS IN AVAILABLE SPACE.

**ALUMINUM WIRE TERMINATIONS**

3-Phase, 3-Wire Systems

**CONSTRUCTION NOTES (CASING):**

- AUGERS OR SIMILAR DEVICES USED FOR PIPE IMPLACEMENT SHALL BE PROVIDED WITH MECHANICAL ARRANGEMENT THAT WILL PREVENT THE CUTTING HEAD FROM LEADING THE PIPE SO THAT THERE WILL BE NO UNSUPPORTED EXCAVATION AHEAD OF PIPE.
- THE USE OF WATER OR OTHER LIQUIDS TO FACILITATE THE CASING IMPLACEMENT AND SOIL REMOVAL IS PROHIBITED.
- WHEN AN OBSTRUCTION IS ENCOUNTERED DURING INSTALLATION, AND IT BECOMES EVIDENT THAT IT IS IMPOSSIBLE TO ADVANCE THE PIPE, ALL OPERATIONS WILL CEASE. THE CASING PIPE SHALL BE ABANDONED IN PLACE AND FILLED COMPLETELY WITH 1:6 GROUT.
- AFTER CONDUIT IS PULLED INTO PLACE VIA THE CONDUIT SLED, CASING PIPE IS TO BE COMPLETELY FILLED WITH PRESSURE GROUTING WITH A UNIFORM 1:6 MIXTURE.
- GROUT PUMP TO BE MONITORED BY PRESSURE GAUGE, PRESSURE NOT TO EXCEED 100 PSI.
- CONTRACTOR MAY SUBSTITUTE SLED AND SPACERS WITHIN CASING PIPE WITH BORING SPACERS MANUFACTURED BY UNDERGROUND DEVICES, CONTRACTOR MUST FOLLOW MANUFACTURERS INSTALLATION GUIDELINES.

**IPS** - Interruptible Power Supply (battery inverter)  
**LP** - Lighting Panel (typically a 480/277V panel feeding lighting)  
**MCC** - Motor Control Center  
**PP** - Power Panel (panel primarily feeding loads directly)  
**RP** - Receptacle Panel (typically a 208/120V panel feeding receptacles)  
**UPS** - Uninterruptable Power Supply

**B. Add the Substation Number - If more than 1 substation exists**

**C. Insert a hyphen and identify the room number**

**D. Insert a hyphen and add sequence # if there is more than one of that type Panel/MCC in a room**

**Example:**

**ELECTRICAL EQUIPMENT:**

**Transformers:**

**T** - (Location Room #), e.g. **T-380**. If more than one transformer in room, add sequence # after room #, e.g. T-380-1

**Disconnects (Safety Switches):**

**A. Fused:** **DF** - (Location Room #), e.g., **DF-380**. If more than one in room, add sequence #, e.g. **DF-380-1**.  
**B. Non-Fused:** **D** - (Location Room #), e.g. **D-380**. If more than one in room, add sequence #, e.g. **D-380-2**.

## NOTES:

A. PROVIDE POWER TO EXIT LIGHT WITH 2-#12 + 1-#12 GROUND.

- ① EXISTING CEILING OR WALL.
- ② PROVIDE GROUNDED BOX FOR MOUNTING.
- ③ HEAVY-DUTY ANCHORS.
- ④ JUNCTION BOX COVER PLATE.

## TYPICAL EXIT SIGN MOUNTING DETAIL

NO SCALE

**NOTES:**

A. PREPARE AND PAINT UNISTRUT, END CAPS & JUNCTION BOX COVER PLATE WITH TWO COATS OF "OFF WHITE" TO MATCH EXIT LIGHT.

B. PROVIDE POWER TO EXIT LIGHT WITH 2#12 & #12 GROUND.

- ① EXISTING DOOR OR WALL.
- ② EXISTING JUNCTION BOX. GROUND BOX IF NOT GROUNDED.
- ③ ½" THREADED PIPE BETWEEN UNISTRUT & JUNCTION BOX WITH LOCK NUTS AND BUSHINGS.
- ④ HEAVY-DUTY ANCHORS.
- ⑤ JUNCTION BOX COVER PLATE.
- ⑥ 1 5/8" x 1 3/16" UNISTRUT P4000 CUT TO LENGTH OF FIXTURE.
- ⑦ UNISTRUT WIREWAY END CAP P42800W (TYP. FOR 2)
- ⑧ UNISTRUT 3/8" BOLT & NUT P4008 (TYP. FOR 2)

### SENSOR SYSTEM - GENERAL NOTES:

1. ALL WIRING SHALL BE IN RACEWAYS.
2. USE TWO (OR MORE) JUNCTION BOXES, BOLTED TOGETHER AS NEEDED TO ACCOMMODATE WIRING OF DEVICES SO 277 VOLT, 120 VOLT AND 24 VOLT APPLICATIONS ARE NOT IN SAME BOX, OR RACEWAY. SUPPORT BOXES ABOVE CEILING, AT LOCATIONS OF SENSOR.
3. LIGHT SWITCHING WILL BE PLACED AT DOOR OF ROOM AND WILL ALLOW COMPLETE CONTROL OF LIGHTS WHEN ROOM IS OCCUPIED. PART OR ALL OF LIGHTING MAY BE TURNED OFF, OR BACK ON, AS NEEDED.
4. PROVIDE THREE-WAY SWITCHING IN NOTED ROOMS. IN SUCH ROOMS ONLY ONE "SENSOR SYSTEM" IS NEEDED. WIRE THREE-WAYS IN STANDARD FASHION.
5. NO OCCUPANCY SENSORS SHALL BE PLACED ON LIGHTING FOR CORRIDORS OR STAIRWAYS.
6. ALL SENSOR SYSTEM RELATED EQUIPMENTS SHALL BE FROM ONE MANUFACTURER.

### SENSOR SYSTEM - REFERENCE NOTES:

- A** USE THESE CONTACTS FOR CONTROL OF HVAC VIA TEMPERATURE CONTROL SYSTEM. COORDINATE WIRING EXTENSIONS WITH TC CONTRACTOR.
- B** DIAGRAM SHOWS TWO LEVEL LIGHTING FOR (FIXTURES WITH 3 OR 4 LAMPS). FIXTURES WITH TWO LAMPS, OR AS NOTED OTHERWISE, WILL ONLY NEED AN LIGHT SWITCH.
- C** USA A 277 TO 24 VOLT POWER SUPPLY HAVING A 277 VOLTS, 20 AMP RATED CONTROL CONTACT CAPABLE OF SWITCHING POWER FOR LIGHTS. USE WATTSTOPPER A277-E, OR A FUNCTIONALLY EQUIVALENT DEVICE THAT IS APPROVED FOR PURPOSE SHOWN.
- D** USE A 24 VOLT CONTROL RELAY WITH A 24 VOLT COIL, AND A 120 VOLT, 20 AMP CONTACT. USE WATTSTOPPER S-277-E, OR FUNCTIONALLY EQUIVALENT DEVICE THAT IS APPROVED FOR PURPOSE SHOWN.
- E** USE A 360° SENSITIVITY, PASSIVE INFRARED SENSOR, HAVING 24 VOLT CONTROLS, AND MOUNTABLE IN THE CEILING. PLACE SENSOR IN CENTER OF ROOM TO BEST SENSE MOVEMENT THROUGHOUT ROOM. SENSOR SHALL HAVE HOUSING AND TRIM TO RESULT IN A CLEAN FINISHED LOOK IN CEILING WHEN INSTALLED. PROVIDE SENSOR IN WHITE. USE WATTSTOPPER CI-200, OR EQUIVALENT TO COVER 1200 SQUARE FEET, FUNCTIONALLY EQUIVALENT DEVICE THAT IS APPROVED FOR PURPOSE SHOWN.
- F** SEE LIGHTING PLAN FOR CIRCUIT NUMBER. PLEASE NOTE THAT ONE CIRCUIT SERVES MULTIPLE ROOMS.
- G** SEE RECEPTACLE PANEL SCHEDULE FOR CIRCUIT NUMBERS. PLEASE NOTE THAT FAN COIL UNITS IN SEVERAL ROOMS MAY BE ON ONE CIRCUIT.

## GENERAL NOTES:

1. THE CONTRACTOR SHALL PROVIDE THE PEDESTRIAN LIGHTING FIXTURES, POLES, LAMPS AND STANDARD ANCHOR BOLTS.
2. THE ANCHOR BOLTS SHALL BE 3/4" X 20" X 3" ELL, HOT DIPPED FULL GALVANIZED STEEL. EACH ANCHOR BOLT SHALL INCLUDE 2 FLAT WASHERS AND 2 HEX NUTS.
3. WHEN POLES ARE LOCATED ON WALLS, IN PLANTERS OR ON OTHER ARCHITECTURAL FEATURES, ORDER SPECIAL HEIGHT POLES SO THAT THE FIXTURES' LUMINOUS CENTER (BAND OF GLOBE) IS AT THE SAME HEIGHT AS THOSE OF SURROUNDING FIXTURES.
4. PROVIDE A THIRD (SPARE) 1 1/4" CONDUIT STUBBED OUT 3' FROM BASE AT FIXTURES INDICATED BY "STUB SPARE C." ON PLAN DRAWINGS FOR FUTURE EXTENSION OF THE LIGHTING CIRCUIT.
5. LOCATE BASES ON CENTER LINES WHERE CENTER LINES ARE SHOWN ON PLANS, OR CENTER BASES 30" BACK FROM THE CURB OR SIDEWALK WHERE CENTER LINES ARE NOT SHOWN.
6. ROUTE UNDERGROUND CONDUITS AS CLOSE TO CURBS AND SIDEWALKS AS POSSIBLE TO AVOID INTERFERENCES WITH FUTURE LANDSCAPING.
7. CONTRACTOR SHALL STAKE ALL SITE LIGHTING FIXTURES AND RECEIVE APPROVAL FROM ARCHITECTURE & ENGINEERING (764-3414) BEFORE INSTALLING ANY LIGHT BASES.

### CONTROL WIRING FOR CONTACTOR

**NOTE 1:**  
LABEL LIGHTING CONTACTOR  
"BUILDING EXTERIOR LIGHTING CIRCUIT E-XXXX-X"

BUILDING NUMBER

SEQUENCE NUMBER

### TYPICAL RISER FOR BUILDING EXTERIOR LIGHTING POWER SOURCE

**SITE LIGHTING SPECIFICATIONS**

**PART 1 - GENERAL**

- Contact Miss Dig (1-800-482-7171) before performing any excavation work.
- Contact the University Electrical Inspectors for an inspection before backfilling any sleeves, conduits and junction boxes, and before energizing any circuits.
- During the installation of new wall lighting, the existing wall and Detroit Edison lighting shall be kept operational at the Contractor's expense. Coordinate with the University Electric Shop (Duane Briggs at 310-1041) for repairs to existing lighting.
- The University will provide the fixtures, lamps and base covers for the wall lighting. The contractor must pick them up from a North Campus warehouse on Baxter Road. Contact the University Electric Shop (Duane Briggs at 310-1041) to arrange for pick-up of these items.

**PART 2 - PRODUCTS**

- Fixture mounting components shall be as detailed on the drawings.
- Sleeves for underground site lighting installations shall be 6" Schedule 40 PVC, UL Labeled for use with 90 Deg.C cables, Conrex or Corlon.
- Conduits shall be Schedule 40 PVC, UL Labeled for use with 90 Deg.C cables, Conrex or Corlon.
- Junction boxes shall be pre-cast polymer concrete or polymer foam, heavy duty rated, one size larger than required by the NEC, bottomless, with a single piece cover engraved "IM Outside Lighting" and attached with pentahed stainless steel bolts, GDR Systems, Carson-Brooks or Duozite.
- Marking tape shall be plastic, vinyl or mylar, 6" wide, red for electrical and orange for telephone circuits, and labeled to indicate the type of circuit buried below.
- Wire shall be single conductor stranded copper, with Type XMM insulation rated 90 Deg.C in dry locations and 75 Deg.C in wet locations, 600 volts, American Insulated Wire, Rockbestos-Rome, Service Wire, Southwire or Triangle.
- Terminations
  - Connectors for splicing and terminating lighting conductors in junction boxes shall be Inco No. 8484 or RABE "Flood Seals" only.
  - Connectors for terminating lighting conductors in fixture bases shall be copper split bolt connectors with full fin plating, Blackburn 18PW for #3 AWG wire and #9PW for #6 AWG ground wire.
- Fuse holders for lighting fixtures shall be Busmann TRON No. HEB-24 In-Line, waterproof fuse holders rated 300 volts, 30 amps.
- Fuses for lighting fixtures shall be Busmann No. KTR-5 rated 5 amps.

**PART 3 - EXECUTION**

- Sleeves
  - Sleeves shall be buried at a minimum depth of 24" to their top. Sleeves shall extend a minimum of 12" beyond the pavement they pass under.
  - Sleeves shall be taped closed at both ends with duct tape.
  - Sleeve ends shall be marked with steel stakes, pipes or conduits that are 3" long minimum, driven vertically down at the sleeve ends to a depth of 6" below grade to their top.
- Conduits
  - Conduit bends shall not be smaller than the radius of standard manufactured elbows (1-1/4" bend radius for 1-1/4" conduit).
  - Locate underground conduits as close to curbs, sidewalks and walls as possible to avoid interferences with future landscaping.
  - Where conduits can not be installed at a minimum depth of 24", install rigid steel conduits or pour concrete over the conduits in accordance with NEC Table 300-5.
- Junction Boxes
  - Keep the number of junction boxes to a minimum. Splice inside fixtures wherever possible. Stagger splices as required to fit.
  - Locate junction boxes in mulched areas wherever possible. The top of the junction box shall be level with the existing grade.
  - Install junction boxes on a base of pea gravel or Class 2 sand at least 1'-0" deep.
  - Provide metal barriers in junction boxes containing circuits of two different voltages or containing both power and telephone circuits.
- Sleeves and conduits shall be marked for their entire length with a marking tape buried 12" above them.
- Fixture bases shall be plumb.
- Lighting fixtures shall be aligned so that one spoke of the globe basket is perpendicular to the wall.
- The center band of lighting fixtures shall be level.
- Terminations
  - Provide one fuse holder and fuse for each globe.
  - Provide adequate slack in the fixture conductors so that the conductors can be pulled out for maintenance.

**1. Grounding**

- Provide a 1/2" minimum diameter copper ground rod 8' minimum long for each light fixture.
- Provide exothermic weld type ground connections or acorn clamps for concealed, underground and concrete encased ground connections, splices and taps.
- Coordinate carefully with general contractor to insure needed conduits, wire, backfill, fixture mounting components and other materials are scheduled and installed to allow for required electrical inspections and proper long term operation of the lighting systems.

SCALE: 3" = 1'-0"

- NOTES:**
- UNIVERSITY WILL PROVIDE FIXTURES, LAMPS AND BASE COVERS.
  - TEMPORARILY PLUG CONDUIT ENDS WITH GUC-SEAL DURING CONCRETE POURING TO KEEP CONDUITS FROM FILLING WITH CONCRETE.
  - CONNECT FIXTURES TO ALTERNATE PHASES OF POWER CIRCUIT TO BALANCE LOAD.
  - ADJUST ANCHOR BOLT HEX NUTS UNTIL LIGHT FIXTURE BASE IS PLUMB.
  - TIGHTEN SET SCREWS TO SECURE BASE EXTENSION OR FIXTURE SPIDER.

**GENERAL NOTES:**

1. THE CONTRACTOR SHALL PROVIDE THE LIGHTING FIXTURES, POLES, LAMPS AND ANCHOR BOLTS.
2. THE ANCHOR BOLTS SHALL BE 1" X 42" X 4" ELL, HOT DIPPED GALVANIZED STEEL. EACH ANCHOR BOLT SHALL INCLUDE 2 FLAT WASHERS AND 2 HEX NUTS.
3. ROUTE UNDERGROUND CONDUITS AS CLOSE TO CURBS AND SIDEWALKS AS POSSIBLE TO AVOID INTERFERENCES WITH FUTURE LANDSCAPING.
4. PROVIDE A THIRD (SPARE) 1 1/2" C. CONDUIT STUBBED OUT 3' FROM BASE AT FIXTURES INDICATED BY "STUB SPARE C." ON PLAN DRAWINGS FOR FUTURE EXTENSION OF THE LIGHTING CIRCUIT.

1. TELEPHONE STANCHION, TELEPHONE BACK BOX, BEACON, STANCHION LIGHT, PHONE AND PHONE LINE FURNISHED AND INSTALLED BY UM ITCOM.
2. CONTRACTOR TO PROVIDE CONCRETE BASE, GROUND ROD, POWER AND PHONE CONDUITS, 4" SQ. BOX AND ASSOCIATED FITTINGS AS REQUIRED.
3. CONTRACTOR TO PROVIDE POWER WIRING AND CONNECTIONS TO STANCHION LIGHT AND BEACON AS SHOWN ON DETAIL #1675006.
4. BOTH CONDUITS AND GROUND WIRE MUST BE STUBBED UP WITHIN THE 4" DIA. CIRCLE AS SHOWN ON PLAN VIEW.
5. PROVIDE CLASS II SAND BACKFILL COMPACTED TO 95% IN EXCAVATED AREAS. SEE SPECIFICATIONS.
6. PROVIDE 6" OF TOP SOIL IN LAWN AREAS. GRADE AND SEED TO MATCH EXISTING.
7. ANCHOR BOLTS FURNISHED BY ITCOM AND POURED IN BASE BY CONTRACTOR.
8. TRANSITION TO 1 1/2" RIGID GALVANIZED STEEL CONDUIT AT BUILDING WALL PENETRATION TO ITCOM CLOSET, SWEEPS ONLY (10X OUTSIDE DIAMETER OF CONDUIT), NO LB'S ALLOWED.
9. PROVIDE 12" SQUARE (MIN.) PULL BOX EVERY 180° OF BEND. IN PVC/RGS CONDUIT RUN TO ITCOM CLOSET.

**NOTES:**

1. EMERGENCY TELEPHONE MANUFACTURED BY GAI-TRONICS CORP., MODEL 397-001. TELEPHONE AND TELEPHONE CABLE FURNISHED AND INSTALLED BY ITSComm. BACKBOX FURNISHED BY ITSComm AND INSTALLED BY CONTRACTOR.
2. TELEPHONE IS 10" TALL X 8.5" WIDE X 2.5' DEEP AND INCLUDES A FLUSH MOUNT BACK BOX. FLUSH MOUNT TELEPHONE UNLESS SURFACE MOUNTING IS SHOWN ON PLAN DRAWING. TO SURFACE MOUNT, REQUEST OPTIONAL GAI-TRONICS MODEL 238 BACK BOX FROM ITSComm.
3. MOUNT TELEPHONE SO TOP OF RED EMERGENCY CALL BUTTON IS CLOSE TO BUT NO MORE THAN 48" ABOVE FINISHED FLOOR.
4. PROVIDE TELECOM CONDUIT AND ASSOCIATED FITTINGS.
5. BOND THE TELECOM CONDUIT AT THE TELECOM CABLE TRAY OR TELECOM ROOM GROUND BUS BAR.
6. PROVIDE 24" WIDE X 13" TALL LAMINATED PLASTIC SIGN WITH BLACK TEXT AND GRAPHIC ON WHITE BACKGROUND AS SHOWN. TEXT SHALL COMPLY WITH ADA SECTION 703.5. BRAILLE SHALL COMPLY WITH ADA SECTION 703.3. MOUNT SIGN IN COMPLIANCE WITH ADA SECTIONS 703.5.5 AND 703.5.6 SO BASELINE OF CHARACTERS IS A MINIMUM OF 40" ABOVE FINISHED FLOOR.
7. UM PROJECT MANAGER SHALL ARRANGE FOR ITSComm TO PROVIDE A DEDICATED TELEPHONE IN THE BUILDING'S FIRE COMMAND CENTER (IF FIRE COMMAND CENTER EXISTS). EACH AREA OF REFUGE TWO-WAY COMMUNICATION DEVICE SHALL BE PROGRAMMED BY ITSComm TO RING DIRECTLY TO THE BUILDING FIRE COMMAND CENTER PHONE. IF THE CALL IS NOT ANSWERED IN 3 RINGS, THE CALL SHALL AUTOMATICALLY BE TRANSFERRED TO THE U OF M DPSS COMMAND CENTER.
8. IF THE PROJECT DOES NOT INCLUDE A FIRE COMMAND CENTER, EACH AREA OF REFUGE TWO-WAY COMMUNICATION DEVICE SHALL BE PROGRAMMED TO RING DIRECTLY TO THE UM DPSS COMMAND CENTER.

3. MOUNT PANEL ASSEMBLY TO  $\frac{3}{4}$ " PLYWOOD BACKING BY ARCHITECTURAL TRADES.
4. REFER TO SPECIFICATION SECTION 281300 ACCESS CONTROL AND MONITORING SYSTEM FOR DETAILED INFORMATION REGARDING ASSEMBLY COMPONENTS.

## REFERENCE NOTES

- ① PROVIDE MINIMUM OF (2) DEDICATED 120V, 20A CIRCUITS TO POWER SUPPLIES FOR ACCESS CONTROL PANELS AND LOCKS. INSTALL LOCKS ON BREAKERS. PROVIDE ADDITIONAL CIRCUITS AS MAY BE REQUIRED FROM SYSTEM REQUIREMENTS.
- ② 4"x4" METAL LAY-IN NEMA 1 TYPE HINGE COVER WIREWAY FOR LOW VOLTAGE, INTER-PANEL WIRING. PROVIDE IN LIGHT GRAY. HOFFMAN F44G SERIES.
- ③ INSTALL BUSHINGS IN PANEL SIDES AS NEEDED TO ALLOW WIRING TO REACH WIREWAY.
- ④ CLEAR SPACE FOR CONDUIT EXITS. CONDUITS MAY EXIT ABOVE OR BELOW.
- ⑤ PROVIDE ONE POWER SUPPLY WITH BATTERY BACK-UP SIZED PER SPECIFICATION.
- ⑥ PROVIDE POWER SUPPLY FOR READER HEAT.
- ⑦ PROVIDE POWER SUPPLY FOR ACCESS CONTROL PANEL.

PROPERTY OF THE UNIVERSITY OF MICHIGAN.  
NOT TO BE DISCLOSED TO PERSONS OUTSIDE OF THIS PROJECT

## TYP. INSTALLATION FOR CARD READER PANEL IN BUILDING

**NOTE:** NEW DOOR CONNECT TO EXISTING LEVEL ACCESS CONTROL SYSTEM. ELECTRICAL CONTRACTOR SHALL PROVIDE COMPOSITE CABLE FROM ACCESS CONTROL PANEL TO EACH DOOR. PROVIDE CONDUIT AND/OR CABLE SUPPORT AS REQUIRED PER NEC. RUN CABLES IN UNBROKEN LENGTHS FROM CONTROL PANEL TO EACH DOOR. COORDINATE SPECIFIC CABLE REQUIREMENTS WITH SECURITY CONTRACTOR. SECURITY CONTRACTOR SHALL PROVIDE FINAL CONNECTIONS, PROGRAMMING AND CONTROL PANEL MODIFICATION. APPROVED SECURITY CONTRACTOR: D/A CENTRAL, 13155 CLOVERDALE, OAK PARK MI. 48237 (248) 399-0600 TERRY WOYCIK x116

## GENERAL NOTES

1. ALL RACEWAYS INCLUDING JUNCTION BOXES TO BE RECESSED UNLESS OTHERWISE NOTED.
2. DETERMINE EXACT RACEWAY ROUTING BASED ON FIELD CONDITIONS.
3. POWER FOR ELECTRIFIED DEVICES OBTAINED FROM POWER SUPPLIES AT ACCESS CONTROL PANEL ASSEMBLY UNLESS OTHERWISE NOTED.
4. PROVIDE WEATHER-PROOF (WP) JUNCTION BOXES
5. WIRE SIZES SHALL BE IN ACCORDANCE WITH MANUFACTURERS INSTRUCTIONS.
6. SEE 03710 FOR SEQUENCE OF OPERATIONS.

## LEGEND

CR	CARD READER. MOUNT ON JUNCTION BOX ON UNSECURED SIDE OF DOOR. (CARD READER OWNER FURNISHED, CONTRACTOR INSTALLED)
DM	DOOR MONITOR CONTACT
EM	ELECTRIC MORTISE LOCKSET WITH REQUEST TO EXIT SWITCH
EPT	ELECTRICAL POWER TRANSFER
J	JIC-JUNCTION BOX, 6x6 MINIMUM. MOUNT ABOVE DROPPED CEILING ON SECURED SIDE OF DOOR. IF CEILING IS NOT REMOVABLE, PROVIDE ACCESS PANEL FOR MAINTENANCE.

PROPERTY OF THE UNIVERSITY OF MICHIGAN.  
NOT TO BE DISCLOSED TO PERSONS OUTSIDE OF THIS PROJECT

## N.C.R.C - TYP. RACEWAY INSTALLATION AT SINGLE DOOR WITH ELECTRIC MORTISE DEVICE

NO SCALE

28130014.dgn

**NOTES:**

1. PROVIDE ALARM JUNCTION BOX, HOFFMAN NO. A-14N124 WITH NO. A-14N2LP PANEL, AND STANDARD SLOTTED FLUSH LATCH.
2. FINAL LOCATION OF ANTENNA TO BE SELECTED BY U OF M RADIO SHOP.
3. ANTENNA CONDUIT SHALL HAVE A MAXIMUM OF TWO 90 DEGREE BENDS. WITH A MINIMUM BEND RADIUS OF 6". IF THIS IS NOT POSSIBLE, INSTALL 6"X6"X4" JB'S AT BENDS TO MEET THIS REQUIREMENT. COAX RUN FROM RTU TO ANTENNA SHALL NOT EXCEED 50'.
4. PROVIDE A GREENLEE CONDUIT MEASURING TAPE: PART # 435 FROM MOSCAD RTU BOX TO ANTENNA.
5. ALL CONDUITS SHALL ENTER RTU BOX WITHIN 6" OF CORNERS TO PREVENT INTERFERENCE WITH RTU ELECTRONICS INSTALLATION.
6. PROVIDE 12 CONDUCTOR (MINIMUM) CABLE COMPATIBLE WITH FIRE ALARM SYSTEM INSTALLED IN BUILDING. CONNECT ONE PAIR OF WIRES TO "BUILDING FIRE ALARM" CONTACTS IN THE FIRE ALARM CONTROL PANEL, ONE PAIR TO "FIRE ALARM SUPERVISORY", ONE PAIR TO "FIRE ALARM SYSTEM TROUBLE" AND ONE PAIR TO "FIRE ALARM SYSTEM MAINTENANCE ALERT". REMAINING CONDUCTORS ARE SPARES. CONTACTS IN THE FIRE ALARM CONTROL PANEL SHALL BE NORMALLY CLOSED SO CIRCUITS CAN BE SUPERVISED.
7. PROVIDE DEDICATED, LOCKING 20A, 1-P CIRCUIT BREAKER & CIRCUIT W/INSULATED GROUND WIRE TO MOSCAD. PROVIDE QUAD RECEPTACLES ON DEDICATED CIRCUIT. INSTALL LOCK ON BRANCH CIRCUIT BREAKER SERVING FIRE ALARM PANEL.
8. U OF M RADIO SHOP PROVIDES MOSCAD RTU BOX, ELECTRONICS IN MOSCAD RTU AND ALARM JUNCTION BOXES, ANTENNA CABLE, ANTENNA, FINAL MOSCAD RTU CONNECTIONS AND PROGRAMMING, FINAL CONNECTIONS IN ALARM JUNCTION BOX AND ANTENNA INSTALLATION & CONNECTIONS.
9. PROVIDE 22AWG, 25 TWISTED PAIR JACKETED CABLE.
10. PROVIDE 6 CONDUCTOR (MINIMUM) CABLE. CONNECT ONE PAIR OF WIRES TO "FIRE PUMP RUNNING" CONTACTS IN FIRE PUMP CONTROLLER AND ONE PAIR TO "FIRE PUMP TROUBLE". REMAINING CONDUCTORS ARE SPARES. CONTACTS IN FIRE PUMP CONTROLLER SHALL BE NORMALLY CLOSED.
11. RF SITES LOCATED AT DENNISON, WOLVERINE TOWER AND NC SERVICE BUILDING #1.

**PROPERTY OF THE UNIVERSITY OF MICHIGAN.  
NOT TO BE DISCLOSED TO PERSONS OUTSIDE OF THIS PROJECT.**

**NOTES**

1. THE FOLLOWING IS A MATERIAL LIST FOR THE HEARING ASSISTANCE SYSTEM.

- PHONIC EAR MODEL PE-550T FM TRANSMITTER. TRANSMITTERS SHALL BE TUNABLE FOR CHANNELS 33, 35, 36, 37, & 38.
- PHONIC EAR MODEL AT-209A PLUG IN POWER SUPPLY UNITS.
- PHONIC EAR MODEL AT-565 ANTENNA WITH PHONIC EAR MODEL AT-567 GROUNDING PLANE.
- 100 FOOT SECTIONS OF (XLR) CABLE, WITH CONNECTORS, TO GO BETWEEN THE TRANSMITTER AND ANTENNA.
- PHONIC EAR MODEL AT-575 RACK MOUNTING KITS.
- PHONIC EAR PE-350 R SIX CHANNEL FM RECEIVERS TUNABLE FOR CHANNELS 33, 34, 35, 36, 37, & 38.
- PHONIC EAR MODEL AT-541 WALKMAN STYLE HEADPHONE.
- PHONIC EAR MODEL AT-538M MONAURAL EARBUD UNITS.
- PHONIC EAR MODEL AT-538S BINAURAL EARBUD UNITS.
- PHONIC EAR MODEL AT-163-B TELELOOP UNITS WITH PHONIC EAR MODEL AT-1543 CONNECTORS.

2. THE ADA REQUIRES THE NUMBER OF RECEIVERS TO BE NO LESS THAN 4% OF THE NUMBER OF SEATS, AND IN NO CASE LESS THAN TWO RECEIVERS. SO A 100 SEAT ROOM WILL REQUIRE 4 RECEIVERS.

- B** PANEL MOUNTING BNC-BNC FEED THROUGH.
- J** PANEL MOUNTING ¼" PHONE JACK.
- M** PANEL MOUNTING MICROPHONE JACK.
- 1** SPECIAL "TSC" THREADED COAXIAL CONNECTOR. SEE "WIRING DETAIL HEARING ASSISTANCE ANTENNA"

**NOTES:**

1. DETECTOR SHALL BE FROM SAME MANUFACTURER AS THE FIRE ALARM SYSTEM, OR SHALL MATCH THE OTHER DUCT SMOKE DETECTORS IN THE FIRE ALARM SYSTEM.
2. DETECTOR SHALL BE WIRED TO ITS OWN ZONE, OR SHALL BE ASSIGNED ITS OWN ADDRESS IN AN ADDRESSABLE FIRE ALARM SYSTEM.
3. DETECTOR SHALL BE RESETTABLE FROM THE FIRE ALARM CONTROL PANEL.
4. FIRE ALARM SYSTEM ANNUNCIATOR AND ZONE/ADDRESS LIST SHALL BE UPDATED ACCORDINGLY.
5. DETECTOR SHALL BE FURNISHED BY ELECTRICAL CONTRACTOR AND INSTALLED BY TEMPERATURE CONTROLS CONTRACTOR. CONDUIT AND WIRING SHALL BE PROVIDED AS SHOWN.

### REFERENCE NOTES

- 1 DETECTOR SHALL BE SUPPLIED AND DEVICE CONNECTIONS MADE BY THE FIRE ALARM SYSTEM CONTRACTOR.
- 2 DETECTOR SHALL BE WIRED TO ITS OWN ZONE, OR SHALL BE ASSIGNED ITS OWN ADDRESS IN THE ADDRESSABLE FIRE ALARM SYSTEM.
- 3 DETECTOR SHALL BE RESETTABLE FROM THE FIRE ALARM CONTROL PANEL.
- 4 UPDATE FIRE ALARM SYSTEM ANNUNCIATOR AND ZONE/ADDRESS LIST FOR EACH DUCT SMOKE DETECTOR.
- 5 CABLE & CONDUIT FOR DETECTOR & INTERFACE BOX SHALL BE FURNISHED BY ELECTRICAL CONTRACTOR. DETECTOR LOCATION AND TEMPERATURE CONTROL WIRING TO INTERFACE BOX SHALL BE INSTALLED BY THE TEMPERATURE CONTROLS CONTRACTOR
- 6 USE 4" SQUARE DEEP BOX WITH 4 TERMINAL, TERMINAL STRIP INSTALLED INSIDE. STRIP TO BE 120 VOLT RATED.
- 7 INTERFACE BOX AND CONTROLLED OUTPUT DEVICE (OF FIRE ALARM SYSTEM) SHOULD BE CLOSE TO MOTOR STARTER OF ASSOCIATED FAN SYSTEM.
- 8 PAINT INTERFACE BOX EXTERIOR AND COVER RED AND BLUE; FIRE ALARM SYSTEM HALF IS RED, TEMPERATURE CONTROL SIDE IS BLUE
- 9 PLACE AND INSTALL DUCT SMOKE DETECTOR IN AN ACCESSIBLE LOCATIONS, AND IN FULL COMPLIANCE WITH SMOKE DETECTOR MANUFACTURER'S PLACEMENT AND INSTRUCTIONS.

**REFERENCE NOTES**

- ① DETECTOR SHALL BE SUPPLIED AND WIRED BY THE FIRE ALARM SYSTEM CONTRACTOR.
- ② DETECTOR SHALL ASSIGNED IT'S OWN ADDRESS IN THE ADDRESSABLE FIRE ALARM SYSTEM
- ③ DETECTOR SHALL BE RESETTABLE FROM THE FIRE ALARM CONTROL PANEL.
- ④ UPDATE FIRE ALARM SYSTEM ADDRESS LIST FOR EACH DUCT SMOKE DETECTOR AND DIGITAL CONTROL DEVICE.
- ⑤ DETECTOR SHALL BE SIMILAR TO OTHER PHOTO ELECTRIC SMOKE DETECTORS IN DLDG.
- ⑥ PART OF MOTOR STARTER
- ⑦ PART OF TEMPERATURE CONTROL PANEL.
- ⑧ PART OF TEMPERATURE CONTROL/FAN SYSTEM.
- ⑨ PRESENT ONLY WHEN REQUIRED BY HVAC DESIGN.
- ⑩ CONTACT IS IN FIRE ALARM SYSTEM CONTROL RELAY,

**GENERAL NOTES**

- A. EXACT NUMBER OF CONDUCTORS DEPENDENT OF FIRE ALARM SYSTEM BEING USED. CONFIRM NUMBER AND TYPE REQUIRED AT EACH LOCATION WITH FIRE ALARM SYSTEM SUPPLIER.
- B. USE 4" SQUARE DEEP BOX WITH 4 TERMINAL, TERMINAL STRIP INSTALLED INSIDE. STRIP TO BE 120 VOLT RATED.
- C. INTERFACE BOX AND CONTROLLED OUTPUT DEVICE (OF FIRE ALARM SYSTEM) SHOULD BE CLOSE TO MOTOR STARTER OR TEMPERATURE CONTROL PANEL.
- D. PAINT INTERFACE BOX EXTERIOR AND COVER RED AND BLUE; FIRE ALARM SYSTEM HALF IS RED, TEMPERATURE CONTROL SIDE IS BLUE
- E. PLACE AND INSTALL DUCT SMOKE DETECTOR IN AN ACCESSIBLE LOCATIONS, AND IN FULL COMPLIANCE WITH SMOKE DETECTOR MANUFACTURER'S PLACEMENT AND INSTRUCTIONS.

SAMPLE TEMPLATE FOR BUILDING SIGNS - SEE NOTES BELOW

-- SIGN # TBD. SIGN FACE DETAIL - SEE OTHER SHEET FOR FULL DETAILS AND DIMENSIONS

- SIGN SIZE VARIES DEPENDING ON NEED AND MAY BE 4', 5' OR 6' IN LENGTH
- LETTERING ON FACE AND SPACING WILL VARY DEPENDING ON BUILDING NAME
- UNIVERSITY PLANNER'S OFFICE (UPO) WILL DETERMINE SIZE OF SIGN(S)
- DESIGN MANAGER TO CONTACT UPO DURING SCHEMATIC DESIGN PHASE FOR DETAILS ON SIZE AND FOR LAYOUT
- CONTRACTOR TO PROVIDE SHOP DRAWING FOR UPO APPROVAL
- CONTACT UPO FOR MICROSTATION OF CAD DRAWINGS. DESIGNER MUST PURCHASE SPECIAL FONT (UNIVERS 67 CONDENSED BOLD) BEFORE USING MICROSTATION OR CAD.
- UPO TO PROVIDE AN IMAGE FILE (NO FONTS) OF THE LOGO (BLOCK M AND WORDS "UNIVERSITY OF MICHIGAN")

- SIGN #TBD LOCATION: (SPECIFY). CONFIRM LOCATION AND ORIENTATION WITH UNIVERSITY PLANNER'S OFFICE.
- CONTRACTOR TO PROVIDE SHOP DRAWING FOR OWNER APPROVAL (UNIVERSITY PLANNER'S OFFICE).
- FABRICATE NEW SIGN WITH STAINLESS STEEL PANELS, THEN PRIME, PAINT, APPLY VINYL LETTERS AND LOGO. INSTALL ON NEW CONCRETE BASE.
- SIGN IS TO BE DOUBLE-SIDED (2 PANELS) - NOTE: TWO STEEL PANELS ARE HUNG ON EITHER SIDE OF THE J-TUBING FRAME AND ARE SEPARATED BY THE FRAME. FRAME MUST BE CAST INTO CONCRETE BASE. REFER TO ADDITIONAL DETAIL SHEET.
- SIGNFACE: 16 GA STAINLESS STEEL PRIMED (2 COATS MINIMUM), PAINTED (2 COATS MINIMUM) WITH MATTHEWS PAINT TO MATCH PMS BLUE 282, SATIN.
- LETTERING FOR BUILDING NAME AND ADDRESS: FONT - UNIVERS 67 CONDENSED BOLD, UPPER AND LOWER CASE; HIGH PERFORMANCE WHITE VINYL.
- LOGO CONSISTS OF BLOCK M AND WORDS "UNIVERSITY OF MICHIGAN." OWNER TO PROVIDE AN IMAGE FILE (NO FONTS). AUTOCAD FILE ALSO AVAILABLE. BLOCK M TO BE HIGH PERFORMANCE SUNFLOWER YELLOW VINYL. WORDS "UNIVERSITY OF MICHIGAN" TO BE HIGH PERFORMANCE WHITE VINYL.
- FILLER STRIP (REVEAL): STAINLESS STEEL PRIMED (2 COATS MINIMUM), PAINTED (2 COATS MINIMUM) WITH MATTHEWS PITCH BLACK SEMI GLOSS.
- J-TUBING: PREPARE SURFACE PER PLANS, PRIME, PAINT WITH MATTHEWS PAINT TO MATCH PMS BLUE 282.
- INSTALL ON NEW CONCRETE BASE W/ RUSTICATION DETAIL. CONCRETE SHOULD BE 4000 PSI WITH 6% AIR ENTRAPMENT. REPAIR CONCRETE/LANDSCAPING/LAWN AS NEEDED. PER U-M STANDARDS AND DETAILS.

1. VERTICAL SURFACES:  
 PROVIDE MANUFACTURER'S STANDARD, NON-MODIFIED, TWO-OR-MORE-PART, POLY-SULFIDE-BASED, ELASTOMERIC SEALANT; COMPLYING WITH EITHER ASTM C 920 TYPE M CLASS 25, OR FS TT-S-00227E CLASS A; NON-SAG GRADE/TYPE.
2. HORIZONTAL SURFACES:  
 PROVIDE MANUFACTURER'S STANDARD, NON-MODIFIED, TWO-OR-MORE-PART, POLYURETHANE-BASED, ELASTOMERIC SEALANT; COMPLYING WITH EITHER ASTM C 920 TYPE M CLASS 25, OR FS TT-S-00227E CLASS A; SELF-LEVELING GRADE/TYPE.
3. SET UP TIME FOR SEALANT ON WALKING SURFACES SHALL BE NO LONGER THAN 8 HOURS.
4. PROVIDE PRODUCT OF ONE OF THE FOLLOWING MANUFACTURES:
  - a. CONTECH/SONNEBORN
  - b. MAMECO INTERNATIONAL
  - c. W.R. MEADOWS, INC.
  - d. PECORA CORP.
  - e. PRODUCTS RESEARCH & CHEMICAL CORP.
  - f. SIKA CHEMICAL CORP.
  - g. TREMCO, INC.
  - h. TOCH/CARBOLINE
5. DO NOT ALLOW SEALANTS TO OVERFLOW OR SPILL ONTO ADJOINING SURFACES. REMOVE EXCESS AND SPILLAGE OF SEALANTS PROMPTLY.

## **NOTES & SPECIFICATIONS**

---

1. ALL MATERIALS, EQUIPMENT AND CONSTRUCTION SHALL BE IN ACCORDANCE WITH MICHIGAN DEPARTMENT OF TRANSPORTATION SPECIFICATIONS FOR CONSTRUCTION.
2. GRANULAR MATERIAL SHALL BE A MINIMUM OF MDOT CLASS II COMPACTED TO 98% ASTM 1557 VALUE. COMPACTED GRANULAR GRANULAR MATERIAL SHALL EXTEND HORIZONTIALLY FOR MINIMUM DISTANCE OF 6" BEYOND THE EDGES OF NEW CONCRETE.
3. ALL CONCRETE SHALL BE 4000 POUNDS PER SQUARE INCH MINIMUM COMPRESSIVE STRENGTH AT 28 DAYS AND CONSIST OF AIR ENTRAINED PORTLAND CEMENT WITH A TOTAL AIR CONTENT OF NOT LESS THAN 5% AND NOT MORE THAN 7%. CEMENT CONTENT AND SHALL BE A MINIMUM OF SIX (6) SACKS PER CUBIC YARD.  
SLUMP SHALL NOT BE MORE THAN 4" NOR LESS THAN 1 $\frac{1}{2}$ " AS DETERMINED BY THE SLUMP CONE TEST ASTM C-143. ALL FLATWORK SHALL INCLUDE POLYPROPYLENE FIBRILLATED FIBERS WITH A VOLUMN OF 1.5 POUNDS PER CUBIC YARD.
4. CONCRETE CURING COMPOUND SHALL BE CLEAR MEMBRANE CONFORMING TO ASTM C-309, TYPE II AND APPLIED AT A RATE OF NOT LESS THAN ONE GALLON PER 200 SQ. FT. OF CONCRETE SURFACE IMMEDIATELY AFTER FINISHING OPERATIONS ARE COMPLETE.
5. ALL DISTURBED LAWN AREAS SHALL BE FINE GRADED AND RAKED TO AN ELEVATION 4" BELOW FINAL GRADE FOR TOPSOIL AND SEED BY OTHERS.
6. ALL PREPARED GRANULAR FILL BASE SHALL MEET COMPACTION REQUIREMENTS PRIOR TO THE SCHEDULING OF CONCRETE/PAVING MATERIAL DELIVERY.
7. SAWCUTTING REQUIRED FOR REMOVAL SHALL BE INCIDENTAL.

## SOIL EROSION AND SEDIMENTATION CONTROL SEQUENCE

In accordance with rule 1709 promulgated under the authority of Part 91, Soil Erosion and Sedimentation Control, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, and in addition to the information in the project plans and specifications, the following general conditions apply to the earth change authorized by this document:

- a. Design, construct, and complete the earth change in a manner that limits the exposed area of disturbed land for the shortest period of time.
- b. Remove sediment caused by accelerated soil erosion from runoff water before it leaves the site of the earth change.
- c. Temporary or permanent control measures shall be designed and installed to convey water around, through or from the earth change at a non-erosive velocity.
- d. Install temporary soil erosion and sedimentation control measures before or upon commencement of the earth change activity and maintain the measures on a daily basis. Remove temporary soil erosion and sedimentation control measures after permanent soil erosion measures are in place and the area is stabilized. ("Stabilized" means the establishment of vegetation or the proper placement, grading or covering of soil to ensure its resistance to soil erosion, sliding, or other earth movement.)
- e. Complete permanent soil erosion control measure for the earth change within five (5) calendar days after final grading or upon completion of the final earth change. If it is not possible to permanently stabilize the earth change, then maintain temporary soil erosion and sedimentation control measures until permanent soil erosion control measures are in place and the area is stabilized.
- f. The contractor is responsible for maintaining landscaping during the warranty period. After the warranty has expired, the permanent SESC measures will be maintained by the University of Michigan Plant Operations Grounds & Waste Management Department and the Plumbing Shop as appropriate. The Grounds & Waste Manager will be responsible for maintenance of any permanent landscaping SESC measures. The Plumbing Shop foreman will be responsible for the maintenance of any SESC measures that are part of the storm water drainage system piping.

## SOIL EROSION AND SEDIMENTATION CONTROL MAINTENANCE NOTES

1. Install temporary inlet filters at all adjacent and down-gradient storm water inlets, catch basins and manholes that may be impacted. Catch basin inlet filters shall be maintained clean at all times throughout the construction period. If a filter has holes or is inundated with sediment, the filter will require replacement.
2. Install an anti-tracking pad at the site entry and exit(s). The anti-tracking pad should be constructed of geotextile fabric with limestone over it.
3. Silt fence shall be maintained at all times throughout the construction period. If repair or replacement is necessary, it shall be performed according to the manufacturer's specifications. Maintenance includes the removing of built-up sediment accumulates to ½ the height of the fence. Contractor shall remove, replace, retrench, or re-backfill the fence if it fails. Additionally, the contractor shall reinstall any portion of the fencing damaged by construction machinery.
4. Place stockpiles and other spoil piles away from the drainage system to minimize sediment transport. If the stockpile and/or spoil pile must remain on-site overnight, or if the weather conditions indicate the chance for precipitation, A) cover the pile with water repellent material to prevent erosion and/or B) install silt fencing around the base of the pile to prevent transport of sediment to the storm water system, or apply other control methods appropriate to the site. Control measures to guard against wind erosion must also be employed, such as wetting or covering the stockpiles. Keep as few stockpiles as possible during the course of the project.
5. Throughout the construction period, all mud/silt tracked onto existing roads from the site due to construction shall be immediately removed by the contractor.
6. Seeding or other stabilization shall be required immediately to areas which have been damaged by runoff.
7. The contractor shall maintain dust control on the site throughout the duration of the construction process.
8. Weekly inspections by a University SESC trained Certified Storm Water Management Operator as well as periodic inspections within 24 hours of any rainfall will be required. These inspections may result in recommendations for routine maintenance of the soil erosion control devices, as well as additional controls.

### Stockpiles

Place stockpiles and other spoil piles away from the drainage system to minimize sediment transport. If the stockpile and/or spoil pile must remain on-site overnight, or if the weather conditions indicate the chance for precipitation, A) cover the pile with water repellent material to prevent erosion and/or B) install silt fencing around the base of the pile to prevent transport of sediment to the storm water system, or apply other control methods appropriate to the site. Control measures to guard against wind erosion must also be employed, such as wetting or covering the stockpiles. Keep as few stockpiles as possible during the course of the project.

### Suspect Contaminated Soil, Groundwater, or other Unknown Material

- During work activities if suspect contaminated soil, groundwater, or other unknown material is encountered contact your University of Michigan Construction Management Representative and the UM Occupational Safety & Environmental Health Department (763-6973) immediately. Suspect contaminated soil may exhibit chemical or unusual odors, staining, unusual coloring, and/or contain man-made debris. Suspect contaminated groundwater may exhibit chemical or unusual odors, unusual coloring, and/or sheen.
- Immediately cease all excavation, dewatering, transport, or disturbance of the suspect material until given direction by the UM Construction Management Representative.

### Dewatering

Groundwater and surface water which is free of contamination and sediment may be discharged to a storm drain. Drains must be protected from sediment by using filter fabric or silt sacks. However, if field indicators indicate possible contamination the water cannot be discharged. Immediately cease all discharge and contact your University of Michigan Construction Management Representative and UM Occupational Safety & Environmental Health Department (763-6973) for inspection of the water and disposal determination. Note: suspect contaminated groundwater may exhibit chemical or unusual odors, unusual coloring, sheen, and/or contain man-made debris.

1. MATERIAL USED FOR RIP- RAP SHALL BE SOUND, TOUGH, DURABLE AND FREE FROM STRUCTURAL DEFECTS, AND MAY CONSIST OF STONE, ROCK, COBBLESTONE OR BROKEN CONCRETE WITH AT LEAST ONE DIMENSION OF 8 INCHES AND A VOLUME OF NOT LESS THAN  $\frac{1}{3}$  OF A CUBIC FOOT. SMALLER PIECES MAY BE USED FOR FILLING VOIDS AFTER LARGER PIECES HAVE BEEN SET.
2. EACH PIECE OF RIP-RAP SHALL BE LAID INDIVIDUALLY BY HAND, AND SHALL BE BEDDED INTO THE SUB-BASE AND AGAINST ADJOINING STONE.
3. RIP-RAP THICKNESS SHALL BE 8 INCH MINIMUM.
4. RIP-RAP SHALL BE LAID ON GRANULAR SUB-BASE WITH A GEOTEXTILE FABRIC BETWEEN THE RIP-RAP AND THE SUB-BASE.
5. RIP-RAP SHALL BE COMPACTED AS IT IS INSTALLED, AND THE FINISHED SURFACE SHOULD BE EVEN AND TIGHT.
6. VOIDS BETWEEN PIECES OF RIP-RAP SHALL BE FILLED WITH MORTAR GROUT.

## 10.0 CHANGES TO DESIGN GUIDELINES

This section lists the changes made to Design Guidelines each month.

### April 2015

[SBA 5.11 Fire Command Center](#) and [DG 230900 Mechanical Systems Controls](#)

SBA 5.11 Fire Command Center was revised to clarify certain code requirements for Fire Command Centers that are subject to interpretation, which often results in changes during construction. In particular, the requirements for smoke control panels are now described, as well as the requirements for controlling air distribution systems not related to smoke controls. It is expected that these revisions will reduce costs by avoiding change orders, and because in many cases designers or contractors were including features not required by the code or the U-M AHJ, or were failing to include code requirements such as air distribution system controls for high rises. These revisions were reviewed and approved by the U-M Fire Marshal.

Because revised SBA 5.11 specifies that building controls be used for air distribution system controls (rather than duplicating similar functions in the fire alarm system), DG 230900 Mechanical Systems Controls was revised to describe that requirement, and therefore is also included for approval.

### Master Specifications

[MS211313 Wet and Dry Pipe Sprinkler Systems](#)

Revisions: Pipe used on dry systems is now specified to be schedule 40 galvanized steel in all sizes. Dry system piping must be installed with the pipe seam above horizontal, must be sloped to drain at all locations and all trapped sections must be equipped with a drain valve. Added spec for dry pipe valve. Minor format fixes and mfr. updates. Revised spec name to wet and dry pipe sprinkler systems. Changes are due to ongoing problems with microbiological corrosion on dry pipe systems. A tracked version is provided for information.

### 6.0 Technical Sections

[DG210000 Fire Protection](#)

As recommended by the Fire Protection/Plumbing Mech. Tech Team:

Due to significant problems with microbiologically induced corrosion (MIC), dry pipe systems are to be specified with schedule 40 galvanized steel pipe in lieu of schedule 10 steel pipe. This does increase the cost of dry systems somewhat, however U-M is having significant leakage problems with dry pipe systems utilizing the thin-walled schedule 10 pipe within a few few years after installation, including incidents at the U-M Museum of Art. Due to the corrosion problems dry pipe systems experience, a thicker wall pipe would now be required. Additionally, galvanized pipe is recommended by FM. This change does not impact wet type sprinkler systems, which are the vast majority of sprinkler systems installed at U-M.

Mains and branch lines are required to be pitched at least 1/2 in. per 10 ft in all

locations, regardless if in non-refrigerated areas/areas subject to freezing.

Additionally, antifreeze sprinkler systems are banned due to flammability problems with such systems. The State of Michigan recently banned anti freeze systems.

Formatting improvements were also made to the DG.

### [1.0 Codes and Regulatory Agencies](#)

- Michigan Electrical Code 2012 on page 11 changed to Michigan Electrical Code 2011.
- Asterisk placed next to Building 108 Lawyers Club due to BFS compartmentalization.
- Removed “Website: <https://www.ashrae.org/news/2013/ashrae-publishes-revised-standard-on-ventilation-in-health-care-facilities->” from ASHRAE Standard 170-2013 on page 20.
- February 2015 changed to March 2015 in footer.

### **3.0 Sustainability**

#### [Design Guideline DG 3.1 Sustainable Design Requirements](#)

This document has been revised to require visual displays for projects over \$10M construction cost. Also, you shall find the AEC Title Block and Sustainable Facts Template.

### **9.0 Standard Details and Schedules**

#### [Tunnel Toolkit](#)

There are two new sheets (TK Cvrsh, TK-9).  
 Sheet TK-4 was divided into two sheets (TK-4A, TK-4B).  
 The reference file '2331m101 (reference 1)' was revised and renamed to 'm101'.  
 The reference file '2331t101 (reference 2)' was revised and renamed to 't101'.  
 There were numerous changes to the other sheets.

#### [New Mechanical Design Detail 15910002 Laboratory DDC Architecture and Scope of Work](#)

Equal scope of work will now be placed on both of our approved laboratory controls contractors. The scope of Plant DDC work is reduced. And baseline guidance can now be provided for future internal and external design of lab controls.

#### **March 2015**

University of Michigan AEC has updated the Design Guidelines website. The new Design Guideline format is based on a book of chapters. The book of Design Guidelines has been compiled into 10 Chapters. These chapters originated from previous design guideline titles and categories. The goal of the new format is to create streamlined, adaptable categories of subjects for design professionals. Numbers have replaced letter designations to allow for future expansion, and ease in abbreviation for meeting minutes and comments.

The information contained within the Design Guidelines has not changed.

SID (Special Instructions to Designers) documents are now located within their area of technical interest.

#### [New Design Guideline chapters and a reference list of relocated SID documents](#)

### **Preferred Manufacturers List**

[Mechanical PML](#) 

This is a quick update to remove grooved coupling mfr.s listed in the PML that are no longer approved in U-M's master piping specification, and to add approved mfr.s that are listed in the U-M master spec.s to the PML (with an occasional exception).

Outdated expansion joint info revised.

Outdated boiler info deleted.

**Master Specifications**[MS010000 Div 01 General Requirements](#) 

The 017823 – Operation and Maintenance Manuals, 019100 – Full Project Commissioning and 019110 – Project Commissioning for Small Projects sections were revised to incorporate the recent AEC reaffirmation that Contractors shall provide 4 paper copies of O&M manuals and all 4 copies are to be submitted to FIC for distribution. Final Contractor payment will be contingent upon FIC receiving 4 paper copies of the O&M manuals.

[MS261100 Unit Substation Specification](#) . The updates include:

- A number of typos and punctuation errors were corrected throughout.
- 1.2.F – clarified that written certification is required prior to energization.
- 1.9.A – clarified the warranty requirements. These are now in better alignment with our general warranty requirements.
- 1.9.A.1 – added a reference to the Substantial Completion date.
- 2.1.F.3 – revised bolt and washer finish to clear zinc.
- 2.1.K – revised metal barriers to barriers
- 2.2.D.6 – clarified the connection between fused switch and transformer
- 2.2.D.9 – refined the rear door requirements
- 2.2.D.14 – clarified the viewing window requirements
- 2.2.E.13 – added position switches for remote indication.
- 2.2.F.2 – updated fuse manufacturer
- 2.2.F.3 and 4 – clarified the role of the Engineer-of-Record in fuse specification and sizing
- 2.3.H.1 – clarified the primary connection type
- 2.4.B and C – clarified CT and PT requirement
- 2.4.F – clarified the blank compartments are not permitted
- 2.4.G.5 – added open and close push buttons
- 2.4.G.17 – added kirk key interlock requirement for tie breakers
- 2.4.J.1.c – clarified control power transfer circuit language
- 2.4.K.1 – revised metering mounting height parameter
- 2.4.K.2.d – clarified current transformers and shorting blocks
- 2.4.K.3.d – deleted redundant height requirement.
- 2.4.K.5 – revised kilowatt meter model number (previous model was discontinued)
- 2.4.K.6.a.4 – added shorting terminal block description
- 3.1.E – added 1" chamfered edge to pad. Deleted leveling channels.
- 3.1.O and P – added one-inch data conduits for metering and position switches
- 3.2.C – deleted warranty language (clarified in 1.9.A above)

- 3.2.D – added written certification requirement
- 3.2.I – clarified study settings required prior to testing
- 3.4.D – added language to coordinate training sessions and topics

[MS283100 Fire Detection and Alarm Specification](#)  The updates include:

- 1.2.A and 1.2.B – deletion of all text related to a “design-build” concept. There have been a number of internal meetings over the past few months to discuss the “design-build” process. At this time, the majority of projects allot designers several months to design a fire alarm system, bidders a few weeks to pull numbers together, and then onto construction. With this process, the electricians are at the mercy of the designers and how well the set is documented, and so they can only bid what they see on the drawings to be competitive. Instead of a true “design-build” process, we’re really structured as “bid-build”. Further discussions are anticipated on the overall process, but for now, we are eliminating this text. It’s not clear that the text added value or savings to projects, just confusion.
- 1.5.K – added a designer hidden note to meter and document maximum ambient sound levels in renovation projects. This is a reminder to the designer to properly field verify, with the anticipation of reducing errors/omissions.
- 1.5.L.1 – added a designer hidden note to include room names on all plans, with offices and multi-person offices differentiated. This is a reminder to the designer to properly document, with the anticipation of reducing errors/omissions.
- 1.5.N.2 – added a designer hidden note to identify make and model of existing FACP’s in order to determine whether a cross-tie is feasible. This is a reminder to the designer to properly field verify, with the anticipation of reducing errors/omissions.
- 2.3 – added a designer hidden note to identify the fire alarm control panel as an “Elevator Recall Control and Supervisory Control Unit” in special circumstances. This complies with the latest Codes.
- 2.13 – corrected spelling of “plastic” within designer hidden note.
- 2.23.A.8 – deleted “2007” from the NFPA 72 reference. Keeping this one “date neutral” will save on revisions down the road.

[MS 260533 Electrical Materials & Methods](#)  The updates include:

- 2.3.J.1.c – added MonoSystems as an acceptable manufacturer for metallic raceways.

**February 2015.**

**Standard Details and Master Specifications**

Update our master details to include a radiused bend within the surface raceway (PDF, DGN, and DWG versions for each detail).

[26053313 – Dual Channel Raceway Installation](#)

[26053315 – Metallic Raceway With Modular Furniture Feed](#)

and update the specifications to accompany the detail revisions (refer to Paragraph 2.3.B).

[260533 Electrical Materials and Methods](#) 

These revisions should help keep project costs down by easing installation of cables and by minimizing the potential of damage to cables.

### Master Specifications

Removed 235239 Fire Tube Boilers (Hot Water)

Removed from the U-M web page because it does not reflect current U-M requirements for such boilers. Having it on the website risks it being used by outside A/Es, causing significant issues on projects.

### Technical Sections

#### DG 102800 Toilet Accessories

Feminine product dispensers are not supported by building services, if requested review operational impact with department.

Added in dimensions of the trash receptacles design professional should plan for.

#### 265600 Exterior Lighting

This revision switches exterior roadway, parking lot, pedestrian and building-mounted lighting from metal halide and fluorescent to LED. This change will increase energy efficiency and lamp longevity, reduce up-lighting, glare and light trespass, and reduce fixture maintenance. Project initial cost right now will be a little higher or a little lower depending upon multiple factors. Because LED prices are continuing to fall, eventually initial cost will always be lower. Energy and maintenance costs will be much lower. Light level requirements remain unchanged.

#### Codes and Regulatory Agencies

Updated issue date to February 2015

Page 2

– Changed title on table of contents from “State of Michigan Department of Licensing and Regulatory Affairs, Bureau of Fire Services (BFS)” to “State of Michigan Health Care Safety Rules”

Page 6

– Updated Right of Way A2gov.org URL to the new web link

Page 7

– Changed title from “State of Michigan Department of Licensing and Regulatory Affairs, Bureau of Fire Services (BFS)” to “State of Michigan Health Care Safety Rules”

– Included “Bureau of Fire Services (BFS) ((Filed December 23, 2014) Effective February 3, 2015)” after the title

– NFPA 101 – Life Safety Code updated from 2006 to 2012

– Added “Note this requires by reference compliance with NFPA 99 Health Care Facilities Code 2012” at the end of the paragraph

– Updated Administrative rules web site to include the link to the new 2012 code

**January 2015.**

New [Underwriter Insurer](#)  Currently under Special Instructions to Designers.

New [Lab Design and Safety](#)  Under Special Building Areas

### Master Specifications

Remove all four specification sections listed under Division 14 – Conveying systems: 142123, 142423, 144200, 146000.

Add the substantially revised and updated:

- [Master Specification 142123 – Electric Traction Elevator](#) 
- [Master Specification 142423 – Hydraulic Elevator](#) 

Both specifications were substantially revised to reflect current format and latest code and PML revisions. No significant cost change is associated with the revised specs.

### December 2014.

#### Special Instructions to Designers

##### [SID-L Owner's Review](#)

Updated the format to match our new DG format.

Updated the language to declarative statements.

Updated the reviewers list to incorporate department name changes.

Added the requirement for the A/E to submit for review an updated Energy and Water Conservation Report.

This DG has been updated to match our current Owner's Review process.

No impact on project cost.

##### [SID-G Commissioning](#)

The technical changes include:

Two related documents were added and the name of another was updated, Spec numbers were updated to match the current 6-digit numbering system.

Revision dates were removed for the reference documents.

Commissioning Authority work scope was clarified.

It has been updated to match our current commissioning processes and updated to match or current DG format.

This revision should have no impact on project cost.

### Master Specifications

[MS 235716 Steam-To-Water Heat Exchangers](#)  – New

##### [MS 220523 Valves](#)

Changes:

- Revised to strike ball valve mfr.s no longer approved or available.
- Add specific Jomar model number ball valve as approved
- Strike Grinnell GHP since it's the same valve as the Keystone that has proven unreliable.
- Restricted use of lead free valves to potable water systems only due to soldering challenges.

##### [MS 221113 Piping Materials & Methods](#)

Add George Fischer as approved for PP pressure piping, add material requirements for storm and sanitary pump discharge piping. Add general requirements for plastic pipe hangers/supports. Per Plumbing and FP MTT.

### Technical Section

[230030 Laboratory Ventilation Design](#) 

Revised: Velocity requirement for snorkels and similar devices added. See page 7. No cost impact.

**Standard Details**

Updated detail – [27200009 – Area of Refuge Two-way Comm System](#)

We had updated the DGN version in November, but the PDF and DWG versions were not updated. The PDF and DWG versions now match the DGN version.

New Tunnel Toolkit drawing: [TK-12 Tunnel Temporary Shoring Detail](#).

**Procedures and Guidelines for Exterior Elements**

[Guidelines for Installing Antennas on University Buildings or Structures](#) 

Contact person was change from Julie Truettner to Tony Catchot.
