- U-M EHS will inspect all projects at least weekly and after every significant storm events to evaluate the effectiveness of the control measures.
- Per plan and per U-M EHS maintain all temporary and permanent control measures daily and as needed based on the site inspections.
- Complete permanent soil erosion control measures for all slopes, channels, ditches, or any disturbed land area within 5 calendar days after final grading or the final earth change has been completed.
- Remove all temporary control measures after permanent soil erosion control measures are in place and the area is stabilized.
- Notify the Project Manager for a final inspection when the project is completed.

DESIGN GUIDELINE 321000 **WALKS, ROADS AND PARKING PAVING**

Scope

Scope: Paving for walks, roads and parking.

LEED Reference Guide for Green Building Design and Construction

Design Requirements

All work within City of Ann Arbor street right-of ways shall be in accordance with the current version of the City's standards and requirements. During design, the A/E shall submit plans and specifications to the City for review and approval. This process should be completed prior to the issuance of 100% CD's.

All materials, equipment and construction for bituminous and concrete pavements shall be in accordance with the current version of the Michigan Department of Transportation Standard Specifications for Construction. No welded wire fabric shall be used in sidewalk construction.

In order to promote infiltration and an even distribution of storm water flow, impervious surfaces should be minimized. The A/E should evaluate the site for potential pervious pavement/infiltration opportunities early in the design process. Consult with the U-M Design Manager and Campus Planning to determine the appropriate paving materials for each project.

Pervious Pavement Installation Requirements

Pervious pavement should not be located on top of recent fill or compacted areas, unless adequate under drainage is provided. Traffic type, pavement use, and type of loading should be considered in design, for example, dumpsters should not be located on porous pavement due to concentrated point load while emptying the dumpster.

Properly sized infiltration beds and under drains in locations with poorly drained soils should be incorporated. All porous paving installations should include an overflow system. This could consist of bleed-out pipes connected to sumps or outfalls into an unconventional or conventional storm water system.

Utilize perforated pipes along the bottom of the filter bed to evenly distribute runoff. Infiltration areas should be located within the immediate project areas in order to control runoff at its source. Install compatible plantings adjacent to the pervious pavement that do not block the porosity.

Soil type (infiltration rate) and amount of water stored will determine the depth of the pervious pavement system. Frost depth should also be considered and the minimum filtration bed depth should increase accordingly.

“Vacuuming” the pavement should occur annually in order to keep the porous system operating at its potential.

Systems

- **Porous concrete:** Pervious pavement should be underlaid with a stone sub-base. Installation methods and outcomes should be carefully observed where grading requirements are stringent.
- **Porous asphalt:** Pervious asphalt should be placed directly on the stone sub-base in a single layer and rolled into a finished surface. This system is best used for parking lots, walkways, and in natural areas.
- **Porous concrete unit pavers/paver blocks:** This system is best used in high-visibility areas such as courtyards and plazas, as well as sites containing heavy loads, such as parking lots, service areas and low-speed drives. Accessible ramps within porous paver areas should use standard concrete to achieve and maintain the required grade.

Impervious Concrete Installation Requirements

Concrete shall consist of air entrained Portland Cement with a total air content of not less than 4 percent but not more than 7 percent. Cement content shall be a minimum of 6 sacks per cubic yard. Concrete shall contain polypropylene fibrillated fibers at a volume of 1.5 pounds per cubic yard

All regular sidewalks shall be 8 feet wide and 8 inches thick, and all steps and stairs eliminated if at all possible to facilitate cleaning and snow removal.

Paved areas at building entrances shall be adequate to accommodate refuse containers.

Where possible, impervious surface drainage should be directed to water receiving landscape areas such as lawns and planted areas.

Quality Acceptance Test

Minimum concrete 28 day compressive strength shall be 4000 psi.

Slump shall be not more than 4 inches, or less than 1 1/2 inches, as determined by the slump cone test specified in ASTM C-143.

Cleanup Requirements

Concrete and asphalt work (including cutting, grinding, drilling, and hyro-demolition) washout cannot be discharged into storm drains, catch basins or to the sanitary sewer system. Direct the Contractor to utilize proper disposal and washout practices and to perform washing of concrete trucks in designated areas or offsite.

DESIGN GUIDELINE 321000
WALKS, ROADS AND PARKING PAVING

Scope

Paving for walks, paths, roads and parking.

Michigan Department of Transportation Standard Specifications for Construction

[City of Ann Arbor Design, Building and Construction Resources](#)

Southeast Michigan Council of Governments Low Impact Development Manual

LEED Reference Guide for Green Building Design and Construction

AASHTO Guide for the Development of Bicycle Facilities

AASHTO Green Book – A Policy on Geometric Design of Highways and Streets

[State of Michigan Community EV Toolkit](#)

Design Requirements

“Complete Streets” are roadways that are planned, designed and constructed to provide appropriate access to all legal users in a manner that promotes safe and efficient movement of people of all ages and abilities whether by car, truck, public transportation, transit assistive device, foot or bicycle. Evaluate roads, walks, paths for multimodal use early in the design phase.

Identify and schedule traffic planning needs early and coordinate with Planning and Communications (PC).

Accessibility

American with Disabilities Act (ADA) must be followed as the standard in the design of accessible features in new construction and alterations.

The U.S. Access Board is in the process of developing new guidelines under the Americans with Disabilities Act (ADA) and the Architectural Barriers Act (ABA) that will address access to sidewalks and streets, crosswalks, curb ramps, pedestrian signals, on-street parking, shared use paths, and other components of public rights-of-way. The proposed guidelines define public rights-of-way to mean public land or property, usually in interconnected corridors, that is acquired for or dedicated to transportation purposes. A draft of the [\(Proposed\) Public Rights-of-Way Accessibility Guidelines \(PROWAG\)](#) is posted on the Access Board's web site. Until the proposed guidelines are adopted as standards, the proposed guidelines represent best practices for accessibility issues in the public rights-of-way not fully addressed in existing accessibility standards.

Required accessible exterior pedestrian routes shall be clearly identified on plans with hatching and shall include dimensions, slope/direction of slope and spot elevations.

Accessible routes passing through parking facilities between public arrival points and accessible entrances shall be physically separated from vehicular traffic. An exception is an accessible route crossing a drive aisle. The ADA Standards require that an accessible route connect parking space access aisles to the accessible entrance they serve but they do not specifically prohibit the accessible route from running behind parking spaces. However, it is recommended that accessible routes be configured so that they run in front of parking spaces for greater safety.

Design Standards

A Policy on Geometric Design of Highways and Streets (current edition) by the American Association of State Highway and Transportation Officials (AASHTO) shall be followed for all U-M street designs except as modified below.

Bike accommodations shall follow the current AASHTO Guide for the Development of Bicycle Facilities.

All materials, equipment and construction for bituminous and concrete pavements shall follow U- M standards (details, specifications, and notes) and should, at a minimum, be in accordance with the current version of the Michigan Department of Transportation Standard Specifications for Construction. As technology is advancing, the specifications may not keep pace. Consider use of new alternatives with improved performance and lower carbon emissions while maintaining the U-M standards for strength, longevity, and aesthetics. Design consults shall review and present to the Design Manger the use of low-carbon materials through standard and/or performance based specifications. Deviations from the standards shall be approved by Planning & Communications. Allow adequate time for the Design Manager to share within AEC for technical reviews.

All work within Public street rights-of-way shall meet or exceed the current version of the Authority Having Jurisdiction (AHJ) and U-M standards and requirements. During design, the A/E shall submit plans and specifications to the AHJ for review and approval. Allow adequate time for this process to be completed prior to the issuance of 100% CD's.

Clear Vision Zones: Plans shall identify all clear vision zones throughout road design, paying particular attention to intersections, drives and curves.

For roads and parking lots, specify U-M standard bituminous pavement systems. See U-M Standard Detail.

For parking lots, consider concrete sign maintenance strips internal to the lot and perimeter concrete maintenance strips for vehicle overhang.

Parking spaces are typically 9' x 18'. Van accessible spaces are typically 8' wide x 18' long with an 8' access aisle per ADA standards. Standard accessible spaces are typically 8' wide x 18' long with a minimum 5' wide access aisle per ADA standards. Consider and discuss with the U-M Design Manager and U-M Logistics Transportation & Parking the installation of EV charging spaces, solar lighting, pay booths, bus stops, multimodal parking and confirm parking space size within the parking facilities. New parking lot should have 24" curb and gutter to facilitate the use of standard catch basin inlet frames.

New U-M roads should have 24" standard curb and gutter and a 12' lane width - obtain Planning & Communications approval for lane widths less than twelve feet. See U-M Standard Details for curb and asphalt pavement.

The minimum width of a bike lane should be five (5) feet against a curb. On streets where the bike lane is adjacent to the curb and the curb includes a 1-foot to 2-foot gutter pan, bike lanes should be a minimum of four (4) feet wide (width does not include the gutter pan, since bicyclists are typically unable to use this space).

Emergency vehicle site access at midblock locations should have emergency vehicle access curbs per the U-M Standard Detail.

Pathways/Sidewalks should be adjacent to each side of the road wherever physically possible.

Walking paths shall be constructed of eight inch (8") thick 4000 psi concrete per the U-M Standard Detail, unless otherwise specified. Consider low carbon performance based specifications that align with MDOT's 4000 psi concrete specs. Other materials and porous pavements will be considered if it fits within the aesthetic framework of the site.

Sidewalks are typically a minimum of eight feet (8') wide with 8' x 8' concrete flags. Identify all expansion and control joints on the drawings. Where site lighting or other items that consistently minimize the clear width are directly adjacent to the curb within the walk, the walks are typically widened to a minimum of 10 feet.

Concrete drive approaches and roads shall be designed to meet loading requirements and shall have a minimum thickness of eight inches (8"). Concrete service dock aprons and bus pull outs shall have a minimum thickness of ten (10) inches.

Use of Welded Wire Fabric is to be avoided in exterior slab on ground concrete pavement and walks.

Exterior slab on ground concrete control joints shall be initially hand-tooled and then saw cut to 25% depth of walk. Saw cutting and/or V-notch in lieu of hand tooling is not an accepted alternative. See standard concrete walk detail.

Paving at building entrances shall be frost free and should be separated from the approaching pathway with an expansion joint. The expansion joint shall be epoxy coated slip dowel for load transfer. Pavement systems with the potential for settlement (such as pavers on aggregate base) or frost heave shall be avoided at all facility entrances.

Paved areas at building entrances should be adequate in size to accommodate trash receptacles.

Snow removal, snow storage, and regular maintenance shall be considered and accommodated in the design of paved areas.

Prohibited Concrete Surfaces:

- Exposed Aggregate (without prior approval)
- Stamped concrete
- Surface-applied color
- Steel troweled finishes
- Broken concrete and any surface treatment where a stumbling potential is possible, especially for the visually impaired or blind.

Pavement Grading and Drainage

Allow for construction tolerances in the design grading plan. Design accessible and typical walk running slopes to be 4.5% maximum. Design cross slopes and turning spaces to be 1.5% max. For ramps, design running slopes a maximum of 7% to allow for construction tolerances.

In areas where flooding considerations are a concern, evaluate sites for flood levels and heavy rainfall conditions to identify potential problems. Adjust designs to address potential and existing site and building flood problems.

Storm water drainage patterns should minimize flow across or within pedestrian travel ways.

Where possible, impervious surface drainage should be directed to water receiving landscape areas such as lawns and planted areas. Drainage shall take into consideration and accommodate conditions where landscape material and snow/ice buildup over time prohibits sheet flow runoff.

Permeable Pavement Systems

In order to promote infiltration and an even distribution of storm water flow, impervious surfaces should be minimized. The A/E should evaluate the site for potential permeable pavement systems with infiltration opportunities early in the design process. Consult with the U-M Design Manager and Campus Planning & Information to determine the appropriate paving materials for each project.

Porous concrete: Pervious pavement should be underlain with a stone sub-base. The pavement system shall be engineered to accommodate the design storm water volume. Installation should be avoided where grading requirements are stringent.

Porous asphalt: Pervious asphalt should be placed directly on the stone sub-base in a single layer and rolled into a finished surface. The pavement system shall be engineered to accommodate the design storm water volume. This system is best used for parking lots, walkways, and in natural areas. The limits shall be appropriately located to maximize durability, reduce the frequency of raveling and completely surrounded by concrete curb/gutter.

Permeable concrete unit pavers/paver blocks: This system is best used in high-visibility areas such as courtyards and plazas, as well as sites containing heavy loads, such as emergency vehicles access routes, parking lots, service areas and low-speed drives. The pavement system shall be engineered to accommodate the design storm water volume. Unit pavers are typically underlain with porous concrete and a stone -subbase. Do not design pavers on asphalt base. Use of pavers directly on stone sub – base requires Campus Planning & Communication approval and should be avoided where settlement cannot be tolerated.

Infiltrating pavement system designs shall be engineered and considered in combination with conventional storm water management conveyance to satisfy requirements as well as site specific conditions.

Soil type (infiltration rate) and amount of water stored will determine the depth of the permeable pavement system. Frost depth should also be considered and the minimum filtration bed depth should increase accordingly.

Traffic type, pavement use, and type of loading shall be considered in design. For example, dumpsters shall not be located on permeable pavement systems due to concentrated point load while emptying the dumpster. The potential for hydraulic fluid leak in loading zones shall also be considered during design.

Properly sized infiltration beds and overflow perforated pipe in locations with poorly drained soils shall be incorporated. All permeable pavement system installations should include an overflow system. This could consist of bleed-out pipes connected to sumps or outfalls into an unconventional or conventional storm water system.

Install compatible plantings adjacent to the pervious pavement that do not block the porosity with leaves, seeds, pollen, etc.

Accessible ramps within paver and porous pavement system areas should consist of standard concrete to achieve and maintain the required grade.

Pervious pavement has a maintenance component to be considered during design – include discussions of maintenance with stakeholders in design selection. For example, “Vacuuming” the pavement should occur annually in order to keep the porous system operating at its potential.

DRAFT

DESIGN GUIDELINE 321723 **PAVEMENT MARKINGS**

Scope

This Design Guideline pertains to designing and specifying materials, surface preparation, and application of pavement markings for University of Michigan campus roads and parking lots.

Related Sections

U-M Design Guidelines

[DG 321000 Walks, Roads and Parking Paving](#)

[DG 5.6 Parking Structures](#)

Related Documents (latest versions)

[AEC Design Deliverables](#)

[MDOT Standard Specifications for Construction](#)

[MDOT Pavement Marking Standards](#)

[Michigan Manual on Uniform Traffic Control Device \(MMUTCD\)](#)

[A Policy on Geometric Design of Highways and Streets \(AASHTO\)](#)

[City of Ann Arbor Standard Specifications, Division V](#)

Summary

Provide road and surface parking lot pavement markings, shapes, spacing, and dimensions that conform to the MDOT Standard Specifications for Construction (MDOT Standard Specifications) Section 811, Permanent Pavement Markings, and Section 920, Permanent Pavement Marking Materials, unless noted herein or by the Design Manager. Removal of pavement markings shall conform to MDOT Standard Specifications Section 812.03.F, Pavement Marking Removal. Temporary pavement markings follow MDOT Standard Specifications Section 812.03.D.11, Temporary Pavement Markings. Parking structures pavement markings shall follow recommendations in Master Painters Institute (MPI) Architectural Painting Specification Manual applicable to substrates and paint systems.

All striping shall meet current Michigan Manual on Uniform Traffic Control Devices (MMUTCD) requirements.

Surface preparation and material application shall be per manufacturer's directions.

Permanent Pavement Markings

Roads

Centerline pavement markings are standard yellow 4-inch wide lines used to delineate the separation of traffic that is moving in opposite directions on an undivided roadway. The patterns used are per MDOT Standard Plans. Centerline markings are applied with sprayable thermoplastic.

Lane line pavement markings are white 4-inch wide lines used to delineate the separation of traffic moving in the same direction. The patterns used are per MDOT Standard Plans. Lane line markings are applied with sprayable thermoplastic.

Edgeline pavement markings delineate the right or left edge of a roadway and identify the extents of the pavement to be used for vehicular traffic. On one-way streets, the left edgeline is to be standard yellow. The right-hand edgeline should always be white. The line width should be 4-inch. Edgeline markings are applied with sprayable thermoplastic.

Special Markings (also called Transverse Markings) include shoulder markings, word and symbol markings, stop bars, crosswalk lines, yield lines, and others. White is the typical color for special markings. Confirm color with Campus Planning for newly introduced special markings. If multi-colored markings are required, use Preformed Thermoplastic. Consult Campus Planning during bike lane marking design and for new special markings.

Special markings are typically applied with retroreflective polyurea (min 20 mil binder thickness). If pavement is new, preformed thermoplastic or ribbon thermoplastic may be used. Consider recessing the special marking area in locations where the trapping of water, ice and debris is not a concern for pedestrians, bicycles and motorcycles. Follow MDOT Standard Specification Section 811 for preparation of surface for polyurea.

On-Street Parking markings are white 4-inch wide lines used to delineate parking stalls on a roadway. Waterborne, sprayable thermoplastic or thermoplastic material may be used. Refer to AASHTO on-street parking standards.

Surface Parking Lots

Parking area pavement markings are 4-inch wide markings that define parking stalls and buffers in a parking area. Two coats are to be used over new pavement. Check with the User (e.g. LTP, Student Life, Athletics, Michigan Medicine) on the marking color to be used for parking stalls and accessible parking stalls for a particular parking lot. Confirm whether accessible parking pavement marking symbols will be used in the ADA accessible stalls. Typically, LTP prefers only yellow markings and no ADA symbols within the ADA parking stalls. LTP prefers to use signage to delineate ADA parking. Typically, Michigan Medicine prefers blue markings as well as an ADA symbol in the ADA accessible stalls.

Parking area markings are applied with waterborne or sprayable thermoplastic paint and do not require retroreflectivity.

Parking Structures

Parking structure pavement markings are standard yellow 4-inch wide markings with no retroreflectivity that define parking stalls and buffers in a parking structure. Markings are applied in a 2-coat system with solvent-based chlorinated rubber or alkyd paint and shall conform to Master Painters Institute (MPI) Approved Products List #32 Traffic Marking Paint, Solvent Based.

Temporary Pavement Markings

Temporary markings may be required per the Engineer to temporarily mark finished pavement prior to the placement of permanent markings. For linear markings, offset temporary markings from the permanent location so that the permanent markings can be placed prior to removal of the temporary markings. Refer to MDOT Standard Specifications Section 812.03.D.11 for further detail on the appropriate use of removable markings (Type R) and non-removable markings (Type NR). Refer to the MDOT Qualified Products List.

DESIGN GUIDELINE 321900 **U-M ROAD SIGN INSTALLATION**

Scope

Typical installation placement for regulatory, advisory and informational/directional road signs installed adjacent to U-M roads and service drives.

Related Sections

U-M Standard Details:

9.4 Site/Civil, Miscellaneous Details, Sign Mount Detail

http://www.umaec.umich.edu/for.archs/details/Civil/Miscellaneous-Details/SD-MISC-SIGN_MOUNT.pdf

Reference Documents:

Current AASHTO Greenbook, Michigan Manual of Uniform Traffic Control Devices (MMUTCD), MUTCD, MDOT

Design and Installation Requirements

Design and installation of Regulatory, Advisory, and Informational/Directional signs mounted along U-M roads and services drives are to follow current AASHTO, MMUTCD, MUTCD and MDOT guidelines and satisfy current ADA requirements. In City or County Right-of-Way (ROW), follow Authority Having Jurisdiction for requirements and directions.

Consider signage similar in treatment for crosswalks on Ann Arbor Campus as per [City of Ann Arbor's Crosswalk Design Guidelines](#). Coordinate with Campus Planner.

Additional design and installation guidelines at U-M include the following as typical for all signs installed along U-M roads or service drives:

1. Sign width shall not overhang the face of the curb into the roadway
2. Base of the sign shall be 7' clear above finish grade of sidewalk, road or landscaped area. If the bottom of a secondary sign is mounted below another sign and is lower than 7' above a sidewalk or pathway (such as a crosswalk arrow), the secondary sign shall not project more than 4 inches into the pedestrian facility. See [MUTCD section 2A.18](#) Mounting Height.
3. All regulatory signs along the road shall be installed on their own posts. Avoid sign placement on light posts without prior Campus Planner approval and coordination with Outside Power & Lighting.
4. Avoid excess signage along the road, such as general no parking signs (with the exception of Fire Lane/No Parking). Non-regulatory road signs require Campus Planner approval.
5. Coordinate sign post placement with other competing space requirements, such as light poles, fire hydrants, street trees, snow removal, etc. to avoid pedestrian traffic and maintenance impediments while maintaining sign

visibility and sidewalk ADA clear widths. Snow removal equipment requires a typical minimum 7' horizontal clearance (6' width of equipment plus mirrors).

6. Review sign placement with Campus Planner and DPSS early in design and prior to installation.
 7. Consider high visibility sign post markings where appropriate.
 8. Obtain support early in design with U-M DPSS for Traffic Control Orders (TCO) and follow-up with U-M DPSS during/after sign installation for TCO's.
- **Regulatory signs**, such as STOP, YIELD and SPEED LIMIT, shall have the sign posts installed within two to three feet (2'-3') from the face of the curb along the road, this dimension is for adjacent lawn panel and sidewalks greater than or equal to eight feet (8') width and also includes from the edge of curbless roadways. For adjacent sidewalks less than eight feet in width, see AEC Civil and DPSS for direction.
 - **Advisory signs**, such as PEDESTRIAN CROSSING, SHARE THE ROAD, SUGGESTED SPEED/SPEED HUMP, etc, where the roadway or service drive is adjacent to
 1. Grass panel: sign post is typically installed 2' minimum to 3' maximum from the face of the curbed roadway or edge of pavement if no curb
 2. Equal to or less than 8' walk: sign post is typically installed behind the walk
 3. Greater than 8' walk: sign post is typically installed 2' minimum to 3' maximum from the face of the curbed roadway
 - **Directional/Informational signs**, where the roadway or service drive is adjacent to
 1. Grass panel: sign post is typically installed 2' minimum to 3' maximum from the face of the curbed roadway or edge of pavement if no curb
 2. Equal to or less than 8' walk: sign post is typically installed behind the walk
 3. Greater than 8' walk: sign post is typically installed 2' minimum to 3' maximum from the face of the curbed roadway. Depending on the specific sign and if sign visibility is clear, sign posts could be considered for installation behind the walk.
 - **Parking designation signs** for parking within a U-M roadway or service drive, such as BLUE PERMIT parking or MOTORCYCLE parking on the roadway, shall typically have the sign posts installed the minimum of two feet (2') off the face of the curb along the road for lawn panel, sidewalk equal to/greater than 8 feet, and from the edge of the roadway if no curb. For adjacent sidewalks less than eight feet in width, see AEC Civil and DPSS for direction.

DESIGN GUIDELINE 328400 **IRRIGATION**

Scope

Designing and specifying irrigation.

Related Sections

U-M Design Guidelines

[6.0 DG310000 Site Requirements](#)

[DG 3.1 Sustainable Design and LEED Requirements](#)

[DG 4.4.1 Landscape](#)

U-M Standard Details

Irrigation Controller / Time Clock Installation Detail

Schematic Irrigation System Detail

Related Documents

[Maintenance Priority System Campus Map](#)

[Southeast Michigan Council of Governments Low Impact Development Manual](#)

Summary

Careful consideration should be given to the selection of plant materials that require less water to sustain their life. The designer should also consider context when preparing landscape plans and work with Campus Planning to ensure an investment in an irrigation system is warranted. For example, a landscape within an area of high-visibility and high pedestrian traffic may be more richly planted, which would warrant irrigation. U-M Grounds Services (Grounds) has developed a maintenance priority system and corresponding campus maps that can serve as a guide for where irrigation (or intensity thereof) may be appropriate.

When irrigation is warranted, U-M is committed to installing water-efficient irrigation systems with metering equipment and other high-efficiency irrigation technologies to reduce potable water consumption.

Design Requirements

Design teams shall coordinate during Schematic Design with Grounds to identify system

requirements, including components to be pre-purchased and provided by Grounds due to central control irrigation system requirements. Grounds/Owner-provided items are a project cost.

In addition to irrigation design, the Design Professional (DP) should provide plumbing, mechanical systems, electrical and irrigation system/coverage design for associated irrigation components within the building envelope and exterior to the building. Consult with Grounds to evaluate adequate capacity and flow when tying into an existing irrigation system.

The DP shall design the connection of power to the controller and pump, building penetrations and note sequencing to avoid waterproofing warranty violation.

Separate meters for irrigation measurement should also be included—coordination with the City/authority having jurisdiction through the U-M Design Manager is required. Design Professionals are not authorized to contact jurisdictional agencies outside the university without U-M permission. See the standard details Irrigation Controller / Time Clock Installation Detail as well as the Schematic Irrigation System Detail.

Contractor's plumbing/mechanical, electrical and site trades will provide (except for identified Grounds/Owner-provided items) and install (including Grounds/Owner-provided items) all irrigation components associated with the irrigation system. Owner-provided material and Contractor material and installation, which comprise a full working irrigation system, are project costs.

DESIGN GUIDELINE 334443 **VORTEX-TYPE HYDRODYNAMIC SEPARATORS**

Scope

This Design Guideline pertains to designing and specifying vortex-type hydrodynamic separators for storm water treatment. This guidance does not include conventional gravity separators or coalescing plate separators for storm water or wastewater, often referred to as oil/water or oil/grit separators.

Related Sections

U-M Design Guidelines

DG 3.1 Sustainable Design and LEED Requirements

DG 8.5 Site/Civil Preferred Manufacturers List

Related Documents

[Storm Water Management – Post Construction Requirements \(EP3-001\)](#)

[AEC Design Deliverables](#)

[Storm Water Management Procedures For Use By Project Team](#)

[Southeast Michigan Council of Governments Low Impact Development Manual](#)

Summary

Selection of appropriate storm water best management practices (BMPs) to manage storm water runoff from a site drainage area should follow the required “Storm Water Management Procedures For Use By Project Team”. Storm water management planning begins during the pre-design phase with storm water goals and requirements set by the “Storm Water Management Team” consisting of the Project Team and U-M representatives from Environment, Health & Safety (EHS) and Architecture, Engineering & Construction (AEC).

Vortex-type hydrodynamic separators are most suitable for use as a treatment device in constrained storm water retrofit or ultra-urban settings and in areas with a high potential for spills, provided the specified unit is capable of capturing and containing floatable materials, such as oils and fuel. Note that these units are not intended for regulatory secondary containment, but rather, capturing contaminants in runoff from incidental small spills and drips. Storm water BMPs able to provide higher levels of water quality treatment, such as infiltrating or filtering practices, are preferred where feasible.

Design Considerations

If a vortex-type hydrodynamic separator is selected as a component of the storm water management plan, preferably three different manufactured devices and models are to be specified for the project.

Follow manufacturer's recommendations for design including maximum contributing drainage area and peak flow rate to a device.

Assess the drainage area for potential pollutants and typical concentrations when selecting an appropriate storm water treatment device.

An off-line device configuration is preferred to minimize re-suspension of sediment during high flows. If not feasible, the design must include a high flow bypass intrinsic to the device.

If this unit is the only means of treatment from a contributing area for projects required to meet NPDES requirements (ie.>1ac of earth disturbance), it should be capable of meeting UM NPDES treatment goals of at least 80% removal efficiency. Refer to [Storm Water Management – Post Construction Requirements \(EP3-001\)](#).

Consider impact of lead times on project schedule and availability of the device in Michigan.

Maintenance Considerations

The device must be easily accessible for maintenance. During design, seek input from U-M Utilities on maintenance access and the limitations of available maintenance equipment.

Document maintenance requirements in the Storm Water Management Plan per the EHS [Storm Water Management – Post Construction Requirements \(EP3-001\)](#).

- Ensure accessibility by U-M Utilities vacuum truck. Consider overhead clearance, width, loading rate, and turn around of access route.
- Avoid positioning the access port(s) beneath parking spots.
- Depth of the bottom of the sump from the vacuum truck pump shall not exceed maximum vertical suction lift (approximately 25 feet).

Submittals

- During the size/model selection process, provide to the Storm Water Management Team in-situ performance testing data. The data should reflect results for drainage areas of a comparable size and land use showing that the device will meet the sediment removal requirements for the target water quality flow rate. Provide a performance curve over the full operating range of that model.
- During installation, verify the location, manufacturer, and model of the installed device, document information on the as-built drawings, and provide drawing to EHS and Utilities for

documentation. EHS will coordinate with U-M Facilities & Operations Information Services (FOIS) to incorporate the device location and attributes into U-M GIS.

This section of the U-M Design Guidelines Website contains guide Master Specifications for the design and construction of facilities at the University of Michigan. The U-M Master Specifications were developed by Architecture and Engineering, for projects designed by our in-house design staff. They are maintained by roughly the same group that maintains the Design Guidelines Technical Sections. At this time we allow A/Es to use their own master specification, but strongly encourage them to use our Master Specification as a guide. Certain Design Guideline Technical Sections require that a related U-M Master Specification section be used as the basis for the A/Es project specific specification.

In all cases when U-M Master Specifications are used they must be edited as required to be made project specific. The Master Specifications include extensive hidden notes to the designer, which should be deleted prior to issuing for bid. The Master Specification is divided by CSI Division. Most sections are available in both Acrobat (pdf) and Word (doc) format.

UPDATED TO BETTER ALIGN WITH NEW STANDARD GENERAL CONDITIONS AND FRONT END DOCUMENTS. INCORPORATED SOME TOPICS PREVIOUSLY INCLUDED IN SUPPLEMENTAL GENERAL CONDITIONS.

*07/2016 - REMOVED 019100 FULL PROJECT CX AND 019110 PROJECT CX FOR SMALL PROJECTS. REPLACED WITH 019100 "PROJECT COMMISSIONING". FROM THIS DATE FORWARD ONLY ONE CX SPEC IS NEEDED FOR ALL TYPES OF COMMISSIONING, BOTH "FULL" AND "REDUCED SCOPE".
D.KARLE.*

DIVISION 01 GENERAL REQUIREMENTS
SECTION 011000 - SUMMARY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The Drawings and the general provisions of the Contract, including the current edition of the University of Michigan Standard General Conditions apply to each section of this Project's specifications.

1.2 PROJECT DESCRIPTION

EDIT BELOW TO SUIT PROJECT

- A. The Project: Remodel approximately *insert* sq. ft. of existing *insert next or modify* laboratory and office space in rooms *insert room numbers* in the *insert name* Building on the University of Michigan's *insert next or modify* Medical Central North South (athletic) Campus in Ann Arbor, Michigan. Major aspects of the work include, but are not limited to:

EDIT BELOW TO SUIT PROJECT. THIS LIST SHOULD NOT BE A CONSIDERED A "SCOPE" ARTICLE. IT IS INTENDED TO HELP THE CONTRACTOR GET ORIENTED TO THE PROJECT.

1. Demolition of existing structures as required for new construction.
2. Removal, abatement, and proper disposal of existing asbestos containing materials, lead containing materials, PCB containing materials, and regulated building materials.
3. Construction of new masonry and drywall/metal stud walls and partitions.
4. Interior and exterior doors and hardware.
5. Architectural finishes
6. Laboratory furniture and pre-packaged controlled environmental room.
7. Revision of existing HVAC system, including new fume-hood exhaust system.
8. New plumbing work, including natural gas, vacuum, domestic hot and cold water, purified water piping, and drainage, waste and vent plumbing.
9. Fire protection piping.
10. Electrical lighting and power.
11. Alarm and telecommunications systems.

INCLUDE BELOW ONLY FOR PROJECTS IN BUILDINGS UNDER THE JURISDICTION OF THE STATE OF MICHIGAN BUREAU OF FIRE SERVICES (BFS). FOR A COMPLETE LISTING, REFER TO DESIGN GUIDELINE 1.0 CODES AND REGULATORY AGENCIES.

- B. The building in which the project is located is under the jurisdiction of the State of Michigan Bureau of Fire Services (BFS).

INCLUDE BELOW ONLY FOR PROJECTS IN BUILDINGS WITH A BFS COMPARTMENT BUT ARE OUTSIDE OF THAT COMPARTMENT. FOR A COMPLETE

LISTING, REFER TO DESIGN GUIDELINE 1.0 CODES AND REGULATORY AGENCIES

- C. The compartment of the building in which the project is located is not under the jurisdiction of the State of Michigan Bureau of Fire Services (BFS). There are compartments in the building that are under the jurisdiction of the State of Michigan Bureau of Fire Services (BFS). Submit fire alarm and fire suppression work to the State of Michigan and request related inspections.

INCLUDE AND EDIT BELOW FOR PHASED CONSTRUCTION

1.3 WORK SEQUENCE

- A. Work Sequence (Phasing): Conduct the Project in phases to provide the least possible interference to activities of the Owner's personnel, and to permit the orderly transfer of personnel and equipment to the new facilities.

THE FOLLOWING IS AN EXAMPLE OF PHASING LANGUAGE. MODIFY TO SUIT PROJECT

- 1. Achieve Substantial Completion (ready for Owner's occupancy) in room 10 before beginning work in room 20; achieve Substantial Completion in room 20 before beginning work in room 30.
- B. Notify Owner's Representative 7 calendar days prior to scheduled date of Substantial Completion of each phase of the Project. Before beginning successive phases of Work, comply with the following requirements:
 - 1. Obtain Architect's Certificate of Substantial Completion for the completed phase of Work.
 - 2. Allow 7 calendar days before beginning next phase, to permit Owner to prepare space for use.

INCLUDE BELOW IF WORK UNDER OTHER CONTRACTS WILL BE OCCURRING DURING CONTRACT TIME. INCLUDE INFORMATION ON DRAWINGS RELATED TO OTHER CONTRACT WORK (I.E. SHARED STAGING, ACCESS AND DUMPSTER SPACE.)

1.4 WORK UNDER OTHER CONTRACTS

- A. During the Contract Time, additional construction work under separate contract will be taking place. Major aspects of work under other contracts are indicated on Drawings. Coordinate construction operations and cooperate with Owner and other contractors to minimize possible conflicts. Contact The University of Michigan Construction Management Department (734) 764-2457 for further information.

1.5 WORK BY OWNER

ALWAYS RETAIN BELOW.

- A. Shut-down and restoration of utilities, including plumbing, fire protection (and Owner's implementation of Red Tag Permit system), HVAC, electrical, fire alarm, or other services that require temporary discontinuation and later restoration shall be conducted by Owner's Maintenance personnel. Contractors are not authorized to impair any services. Contact the Maintenance Department through the Owner's Representative.

DELETE BELOW IF NO OTHER CONSTRUCTION WORK BY OWNER.

- B. During the Contract Time, additional construction work performed by Owner will be taking place. Major aspects of work under other contracts are indicated on drawings. Coordinate construction operations and cooperate with Owner to minimize possible conflicts.

INCLUDE BELOW WHERE ASBESTOS ABATEMENT WORK IS BEING DONE BY OWNER OR OWNER'S SUB-CONTRACTOR

- C. During the Contract Time, Asbestos Abatement Work will be performed by Owner. The Contractor shall coordinate the Work performed by the Owner and Owner's Asbestos Abatement Sub-contractor, if any. Refer to Division 02 Section for information on Abatement Work to be performed by Owner.

INCLUDE BELOW FOR PRE-ORDERED EQUIPMENT

1.6 PRODUCTS ORDERED IN ADVANCE

EDIT SAMPLE LANGUAGE BELOW FOR PRE-ORDERED EQUIPMENT THAT WILL BE INSTALLED BY THE CONTRACTOR.

CONTRACTORS ARE REQUIRED TO PAY USE TAX ON EQUIPMENT PRE-PURCHASED BY THE UNIVERSITY AND INSTALLED BY THE CONTRACTOR. FORM OF PROPOSAL SHOULD NOTE THAT THE PROJECT INCLUDES USE TAX. ALWAYS INCLUDE EQUIPMENT COST BELOW UNLESS IT IS INCLUDED ON THE FORM OF PROPOSAL. THE BIDDERS WILL NEED THIS TO CALCULATE THE 6% USE TAX. COORDINATE WITH AEC PROJECT CONTROLS.

- A. Owner has pre-ordered and paid for the products indicated below. Work of this Contract includes unloading, handling, storing, setting, installing and making building service connections. Contractor responsible for payment of State of Michigan use tax on equipment cost listed below.

LIST EQUIPMENT OR MATERIALS AND APPROXIMATE DELIVERY DATES. WHEN PRE-ORDERING MATERIALS, INCLUDE CLEAR DESCRIPTION OF SCOPE OF MATERIALS INCLUDED. BELOW ARE EXAMPLES ONLY

1. Unit substation:
 - a. Approximate delivery date:
 - b. Equipment Cost:
 2. Irrigation central control components, excluding piping.
 - a. Approximate delivery date:
 - b. Equipment Cost:
- B. Coordinate exact time and date of delivery with equipment manufacturer.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION (NOT APPLICABLE)

END OF SECTION 011000

SECTION 011400 - WORK RESTRICTIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Types of special construction requirements include the following:

EDIT THE LIST BELOW TO SUIT PROJECT. ADDITIONAL POSSIBILITIES INCLUDE CENTRAL SYSTEM DISABLEMENT, SEASON-SPECIFIC CONSTRUCTION, AND DURATION-LIMITED CONSTRUCTION.

1. Use of premises.
2. Security.
3. Parking on U-M property.
4. Scheduling of work.
5. Drone use.
6. Refrigerant handling.
7. Tunnel projects.
8. Medical School facilities.
9. Noise and vibration control.
10. Animal rooms.
11. Student housing.
12. Fume hood ductwork demolition.
13. Protections when using epoxy coatings.

ALWAYS INCLUDE TWO PARAS BELOW.

B. This Section contains requirements that apply to Divisions 01 through 14 and Divisions 21, 22, 23, 26, 27, 28, 31, 32 and 33 of the specifications.

C. Related Work of other Sections:

1. Division 01 Section "Summary" for general restrictions on site use.
2. Division 01 sections "Temporary Facilities and Controls" and "Temporary Tree and Plant Protection"

EDIT BELOW IN CONJUNCTION WITH FACILITY MANAGER AND PROJECT MANAGER. NOTE THAT SOME AREAS THAT MAY HAVE NON-STANDARD WORKING HOURS INCLUDING HOUSING, ANIMAL ROOMS.

1.2 DEFINITIONS:

- A. Work Hours: 7:00 AM through 5:00 PM, Monday through Friday.
- B. Business Hours: 8:30 AM through 5:00 PM, Monday through Friday.
- C. Off-Hours: Hours outside of Work Hours defined above.
- D. Early morning Hours: 7:00 AM through 8:30 AM, Monday through Friday.

ALWAYS EDIT AND INCLUDE USE OF PREMISES ARTICLE BELOW. ARTICLE IS PRE-EDITED FOR SMALLER SCALE RENOVATION PROJECTS.

1.3 USE OF PREMISES

A. Coordinate use of premises under direction of the Owner's Representative.

EDIT THE FOLLOWING TO SUIT PROJECT

- 1. The building in which Project is located will be continuously occupied during construction. Coordinate construction efforts with Owner to minimize interference with Owner's operations.
- 2. Provide and maintain access of Owner's personnel to toilets, telephone closets and janitor closets on Owner-occupied floors throughout Contract Time.
- 3. Maintain emergency egress routes for Owner's personnel as directed by Owner's Representative.

RETAIN 1 OF THE 2 OPTIONS BELOW. ALLOWING USE OF BUILDING TOILETS IS COMMON PRACTICE.

- 4. Existing toilets designated by Owner may be used by Contractor's personnel for personal use only during construction. Do not use toilet facilities to conduct construction operations without written permission of Owner's Representative.
 - a. If use of toilets for construction activities is permitted by Owner's Representative, clean toilet facilities daily.
- 5. Contractor's personnel are prohibited from using toilets facilities during construction. Provide temporary toilet facilities for construction personnel. Coordinate location with Owner's representative.

INCLUDE THE FOLLOWING WHERE APPLICABLE

- 6. Contractor's staging area is strictly limited to areas indicated on the drawings. Where no staging area is indicated, Contractor's use of site is limited to areas within the Contract bounds, or as reasonably required to complete the Work. Strictly comply with Owner's Representative's directions establishing staging and operation areas, through-building routes, and locations for material delivery and disposal.

ALWAYS INCLUDE BELOW.

- 7. Smoking is prohibited in all University of Michigan buildings and grounds, including, Project site, mechanical rooms, utility spaces, and roof tops.

ALWAYS INCLUDE BELOW.

1.4 SECURITY

A. Purchase University-provided photographic identity badges for each person engaged in on-site work and ensure that workers wear badges at all times on University property. Purchase cost per badge is \$4.00. Coordinate through Owner's Representative.

EDIT AND INCLUDE PARKING ARTICLE BELOW FOR ALL PROJECTS THAT DO NOT HAVE SPECIAL CONDITIONS. PROJECTS THAT USE SPECIAL CONDITIONS MAY INCLUDE PARKING REQUIREMENTS IN THE SPECIAL CONDITIONS. COORDINATE WITH CONSTRUCTION MANAGEMENT.

COORDINATE PARKING LOT DESIGNATION WITH CONSTRUCTION MANAGEMENT AND SVEN SAWIN (UPO). INCLUDE PRINTOUT OF THIS SECTION WITH BRR PAPERWORK.

*TYPICAL LOCATIONS:
SC7 -- NORTHEAST CORNER OF STADIUM BLVD AND KIPKE DR.*

NC37 -- GREEN ROAD COMMUTER LOT. NOTE THAT THIS LOT IS SERVED BY AATA BUSES NOT UM BUSES. SELECT LANGUAGE AS APPROPRIATE BELOW.

1.5 PARKING ON U-M PROPERTY

- A. Arrange parking for Contractor's personnel in accordance with Article 1.6 of the University of Michigan Standard General Conditions.

INCLUDE THE FOLLOWING 3 ITEMS FOR SC7 LOT OR OTHER ORANGE LOTS, SERVED BY UM BUS SYSTEM. DO NOT USE FO NC37

- B. The Owner has designated the use of U-M parking lot *insert*, located *insert location* for the Contractor's use on this project. This lot requires each vehicle to display a U-M orange parking permit and is the only U-M parking that will be made available to the Contractor for this project.
1. The cost and arrangement for purchase of permits for U-M parking shall be the Contractor's responsibility. The Owner will not repay the Contractor for parking for this project. Information regarding current rates and annual price adjustments (traditionally on July 1 each year) for parking permits may be obtained from the U-M Parking Customer Services office located at 523 South Division Street, Ann Arbor, Michigan 48104. Phone 734-764-8291.
 2. The Owner will allow use of standard U-M bus services for contractor personnel between the above designated lot and the jobsite at no cost to the Contractor. The U-M bus follows an existing schedule and route that may not go directly to, nor stop directly in front of the jobsite. The U-M bus frequency and bus routes can be obtained from the U-M Parking Customer Services office or the LPT website (<http://ltp.umich.edu/transit/routes.php>).

INCLUDE THE FOLLOWING 3 ITEMS FOR NC37 (GREEN ROAD COMMUTER LOT) ONLY

- C. The Owner has designated the use of U-M parking lot NC37 (Green Road commuter lot), located on Green Road, near Baxter Road for the Contractor's use on this project. This lot does not require permits.
1. The Owner has designated the use of U-M parking lot NC37, located on Green Road, near Baxter Road for the Contractor's use on this project. This lot does not require permits.
 2. The AAATA bus systems serves NC37. Bus frequency and bus routes can be obtained from the AAATA website (<http://www.theride.org>).

INCLUDE ON ALL PROJECTS.

- D. The Contractor shall not transport materials or tools on UM or AAATA busses.

ALWAYS EDIT AND INCLUDE SCHEDULING ARTICLE BELOW. COORDINATE WITH AEC CONSTRUCTION MANAGEMENT.

1.6 SCHEDULING OF WORK

- A. Schedule work with Owner to fit Owner's operations, to facilitate completion of this work, to coordinate with and expedite new construction work on project, and as follows:

1. Schedule with Owner work that interferes with facility operation, including shut-off of mechanical and electrical services and encumbrance of Owner's ingress and egress routes and normal operation. Provide the following notice of planned interruption of services:

10 DAYS IS MINIMUM FOR ALL PROJECTS

- a. Provide not less than 10 working days notice before interruption, with final confirmation not less than 72 hours before interruption.
2. When permitted by Owner's Representative to deliver items of equipment to Owner's loading dock facilities, schedule such deliveries in advance with Owner. Provide minimum 1 business day notice prior to planned delivery time of equipment.
 - a. Dock hours: < >
 - b. Permitted delivery hours: < >

IN OCCUPIED BUILDINGS, WORK HOURS SHOULD BE DISCUSSED WITH THE AEC CONSTRUCTION MANAGEMENT AND BUILDING FACILITY MANAGER AND MODIFIED ACCORDINGLY. NOTE THAT WORK IN RESIDENCE HALLS HAS DIFFERENT TIME RESTRICTIONS. COORDINATE WITH "STUDENT HOUSING" ARTICLE BELOW.

3. Schedule work during Work Hours unless otherwise approved by Owner.

INCLUDE THE FOLLOWING ONLY WHERE A SPECIFIC TIME PERIOD OR DEADLINE DATE IS REQUIRED. IF REQUIRED, DATE WILL BE LISTED IN FRONT END DOCUMENTS PRODUCED BY PROJECT CONTROLS.

4. Schedule and coordinate construction operations to achieve Substantial Completion, ready for Owner's occupancy, by the date listed in the form of proposal.

- B. Start of Operations: Do not commence work before insurance and bonds have been submitted to Owner.

RETAIN BELOW FOR ALL PROJECTS WITH EXTERIOR WORK.

1.7 DRONE USE

- A. The use of unmanned aircraft systems (drones) is regulated by the Regents Ordinance-Article XV. Outdoor use of drones on U-M property is prohibited.

INCLUDE REFRIGERANT HANDLING REQUIREMENTS BELOW IN CONSULTATION WITH MECHANICAL ENGINEER, BUT ALWAYS WHEN DEMOLITION WILL

INCLUDE REMOVAL OF A/C EQUIPMENT OR PIPING, AND WHENEVER NEW A/C EQUIPMENT WILL BE INCLUDED IN THE PROJECT.

1.8 REFRIGERANT HANDLING

- A. Refrigerant Installation and Disposal: Perform all work related to refrigerant contained in chillers, cooling coils, air conditioners, and similar equipment, including related piping, in strict accordance with the following requirements:
 - 1. ASHRAE Standard 15 and Related Revisions: Safety Code for Mechanical Refrigeration.
 - 2. ASHRAE Standard 34 and Related Revisions: Number Designation and Safety Classification of Refrigerants.
 - 3. United States Environmental Protection Agency (US EPA) requirements of Section 808 (Prohibition of Venting and Regulation of CFC) and applicable State and local regulations of authorities having jurisdiction.
- B. Comply with Owner's tracking procedure for CFC and HCFC refrigerants. When new refrigeration equipment is installed, or when refrigerant is disposed of, complete the "Refrigerant Disposal Form". Copies of the form are available from Owner's Facilities and Operations Mechanical Systems Program Manager. Contact (734) 647-2041. Submit completed forms to the Owner's Representative and Air Conditioning Shop.
 - 1. For new refrigeration equipment, the following information is required: Unit location, area served, make, model and serial number of unit, refrigerant type and quantity.
 - 2. For removed refrigeration equipment, the following information is required: Unit location, area served, make, model and serial number of unit, refrigerant type and quantity. Removed refrigerant shall become the property of the Contractor.

INCLUDE BELOW FOR TUNNEL PROJECTS. DELETE IF TUNNEL WORK NOT INCLUDED IN PROJECT

1.9 TUNNEL PROJECTS

- A. Tunnel Access: As shown on drawings.
- B. Construction Energy: Use of electric arc welders is permitted at the discretion of the Owner, subject to verification of adequacy of power source.
 - 1. Notify the Owner of the expected electrical consumption per welding rig and the number of rigs proposed for use.
 - 2. The Owner will identify sources of limited amounts of both 120 VAC, single phase, electric power, and compressed air, from existing distribution systems.
 - 3. Tie into the identified sources for power and compressed air only in the presence of Owner's personnel.
- C. Safety Requirements: Perform work within tunnels in strict compliance with the published requirements of Owner's Environment, Health and Safety (EHS) department. Copies of requirements are available from the Safety Division of Owner's EHS department.

- D. Contractor shall notify Department of Public Safety Dispatch at 734-763-1131 prior to entering and after exiting the tunnel system.

EDIT AND INCLUDE BELOW FOR MEDICAL SCHOOL PROJECTS. CAN BE EDITED FOR OTHER SCHOOLS AND COLLEGES. NOTE THAT WORK SUSPENSION AND RIGOROUS CLEANING REQUIREMENTS ADD COST.

1.10 MEDICAL SCHOOL FACILITIES

- A. Scheduled Suspended-Work Periods: The University's Medical School conducts noise sensitive research and regularly scheduled academic examinations throughout the year. Certain construction operations are expected to result in noise, vibration, utility shut-offs, and other nuisances that will negatively affect the examination environment.

1. Upon request of the Owner's Representative, suspend activities conducted within the indicated areas that produce noise, vibration, and other nuisances, or that otherwise have, in the opinion of the Owner, the potential to disturb Medical School research and examinations:
 - a. The precise dates, times, and durations of the work suspension periods are unknown. The Owner's Representative will provide full details of each required work suspension not less than 7 calendar days prior the beginning of the suspension.

REVIEW QUANTITY BELOW WITH MEDICAL SCHOOL FACILITIES PRIOR TO INCLUDING. WORK IN MEDICAL SCIENCE UNIT II SECOND AND THIRD FLOORS TEND TO IMPACT STUDENTS & EXAMS MOST FREQUENTLY.

- b. Include in the construction schedule 20 working days, of eight hours each, of suspended work time within the areas indicated.

USUALLY INCLUDE BELOW FOR ALL MEDICAL SCHOOL PROJECTS.

- B. Daily Cleaning Program: In public areas, including lobbies, corridors, elevator cabs, and similar areas used for construction traffic, but outside the limit of the Project, comply with the following:
1. Either at the end of each working day or before 7:30 AM each working day, broom clean floors using commercial cleaning compound. Wet mop floors after broom cleaning to completely remove dirt, dust, and scuff.
 2. Storage of construction related materials and equipment, including temporary storage of all types, is prohibited outside the Project limits.

THE FOLLOWING CAN HAVE SIGNIFICANT COST IMPLICATIONS. DISCUSS THE FOLLOWING REQUIREMENTS WITH MEDICAL SCHOOL REPRESENTATIVE BEFORE INCLUSION.

- C. Nuisance Control Program: Schedule dust, noise, vibration, and fume generating activities during Off Hours. Applicable nuisance-generating activities include:
1. Demolition work, including cutting, coring, asbestos abatement, and debris removal operations.

2. Use of gasoline or diesel-powered vehicles or equipment.
3. Utility shut-downs and tie-ins.
4. Fume/odor generating construction activities, including application of non-water-based paints, epoxy coatings, resinous flooring and similar materials that release significant quantities of volatile organic compounds during application and cure.
5. Construction activities in public areas (including corridors, lobbies and stairs) outside the immediate Project limits.
6. Delivery of materials to site and trucking of debris from site.
7. Transportation of construction materials and debris through public areas (including corridors, lobbies and stairs) to and from immediate Project limits.

INCLUDE BELOW FOR NOISE AND VIBRATION CONTROL EXCEPT IN MEDICAL SCHOOL.

DELETE BELOW FOR MEDICAL SCHOOL PROJECTS AND USE "SPECIAL REQUIREMENTS FOR MEDICAL SCHOOL PROJECTS" ARTICLE.

1.11 NOISE AND VIBRATION CONTROL

- A. Noise-Vibration Restrictions: Noise- and vibration-sensitive research will be conducted for the duration of the Project.

THE OPTIONS BELOW ARE GIVEN AS A GUIDE TO CREATING YOUR OWN PROJECT-SPECIFIC SPECIAL REQUIREMENTS - READ AND EDIT THE FOLLOWING CAREFULLY. TYPICALLY NOT ALL WILL APPLY.

1. Demolition operations are restricted to Off-Hours.
2. Terminate disruptive work during the times and dates listed below:

PROVIDE SPECIFIC TIMES AND DATES DURING WHICH DIRUPTIVE WORK SHOULD NOT OCCUR (E.G.: EXAM SCHEDULE IN ADJACENT CLASSROOM)

- a. <>
3. Arrange a system of notification with Owner's Representative that will provide building occupants not less than 24 hours warning of performance of construction operations that will cause noise and vibration.
4. Conduct demolition work in a single, continuous operation. Complete demolition work within 7 calendar days from start of demolition operations.
5. Plan, schedule and perform work during evenings and weekends, at no additional cost to Owner, as required to achieve completion of floor slab demolition within indicated time.

INCLUDE BELOW FOR WORK INSIDE ANIMAL ROOMS IN ANY UNIVERSITY UNIT.

1.12 ANIMAL ROOMS

THE FOLLOWING REQUIREMENTS MAY NOT BE REQUIRED IN EVERY CASE. DISCUSS WITH ULAM REPRESENTATIVE BEFORE INCLUSION.

- A. For work conducted in animal rooms, comply with the following special scheduling requirements:

1. Schedule work in designated Animal Rooms during Work Hours.
2. Unless other arrangements have been agreed to by Owner in writing, Contractor's personnel shall not enter designated Animal Rooms until each of the following conditions are met:

REVISE BELOW TO SUIT DEPARTMENT AND REPRESENTATIVE FOR EACH PROJECT.

- a. Contractor has coordinated work with Medical School Facilities Management and Planning. Contact the Medical School Facilities Department, located in room 1590 of Medical Science Research Building (MSRB) II, at (734) 747-2788.
- b. Owner has removed animals from each room in which work is to be performed.
- c. Owner's personnel have cleaned each room in which work is to be performed and notified Contractor that each room is ready.
- d. Contractor's personnel are properly attired in clothing provided by Owner. Attire is required for the protection of the sterile environment provided for research animals. Contractor's personnel should not expect to encounter substances or contaminants hazardous to humans, unless otherwise informed by Owner.

INCLUDE BELOW FOR PROJECTS IN HOUSING DEPARTMENT BUILDINGS.

1.13 STUDENT HOUSING

- A. The building will be occupied and used as a residence throughout the construction period.
- B. Comply with the following special safety and security requirements for work conducted within student occupied buildings and areas:

MODIFY TIMES BELOW IN COOPERATION WITH HOUSING DEPARTMENT REPRESENTATIVE

1. Schedule Work during the Work Hours, with the following restrictions:
 - a. Occupied Buildings: Do not begin work that will generate noise or vibration before 9:00 AM.

MODIFY OR DELETE THE FOLLOWING SUBPARA TO SUIT PROJECT CONDITIONS. COORDINATE WITH HOUSING DEPARTMENT REPRESENTATIVE.

- b. Study and Exam Days: No work will be permitted during officially designated study and exam days. Study and exam days include:

LIST ALL APPLICABLE DATES BELOW.

- 1) <>
2. Building Access: During Business Hours, notify Owner's Representative for access to Project site.

- a. Individual areas can be opened as often as once each day by the Owner's building facilities manager. When more frequent daily access is required, or when access is required for more than 5 working days, obtain keys from the Housing Security Department, or from the University Key Office. Use keys to obtain access to areas in strict compliance with approved construction schedule issued to Housing Security. When working in more than one area, check with the building facilities manager to ensure no scheduling conflicts exist.
 - b. Building access outside of Business Hours is available only with the written approval of the Owner's Representative. Coordinate access with the Owner's Representative and the Owner's Public Safety Department.
3. Personal Conduct Restrictions: Employees of the Contractor and subcontractors shall comply with the following restrictions regarding personal conduct while on University of Michigan property:
- a. Harassment: Conduct considered by the Owner as harassing is strictly prohibited, including the use of profanity; or the use of derogatory or demeaning gender- or race-related comments or actions. The Owner reserves the right to require the Contractor, at no additional cost to the Owner, to remove from the Project all personnel who violate this policy.

INCLUDE BELOW IN PROJECTS WITH FUME HOOD DUCTWORK MODIFICATION OR DEMOLITION.

1.14 FUME HOOD DUCTWORK DEMOLITION AND MODIFICATION

- A. Existing fume hood ductwork may have been corroded by exposure to a variety of chemicals during its use.
- B. Ensure that all personnel engaged in demolition or modification of fume hood ductwork wear indicated personnel protective equipment (PPE).
- C. PPE is prudent and precautionary only; it does not suggest an inherent health hazard from the ductwork.
- D. In addition to standard OSHA and MIOSHA safety gear (such as hard hats, steel-toed footwear and similar items), PPE includes the following:
 - 1. Leather gloves for dry conditions; rubber over-gloves for wet conditions.
 - 2. Safety eye wear to prevent dust or debris from falling into the eyes.
 - 3. Protective outerwear to protect against dust or debris contact with skin.

INCLUDE BELOW IN PROJECTS WHERE THE BUILDING WILL BE OCCUPIED DURING CONSTRUCTION AND SOLVENT-BORNE OR HIGH BUILD EPOXY BLOCK FILLERS, PAINTS, OR FLOOR COATINGS. CONSIDER LOW VOC PRODUCTS WHERE POSSIBLE.

1.15 PROTECTIONS WHEN USING EPOXY COATINGS

- A. The building will be occupied during construction.
- B. Comply with the following requirements for Work involving the application of solvent-borne epoxy coatings or high-build epoxy products:
 - 1. Protect the work area where the epoxy coatings are applied. Provide temporary barrier enclosures around the work area consisting of 8 mil polyethylene sheeting supported by wood or metal studs. The joints in the sheeting and the perimeter of the barriers must be sealed.
 - 2. Provide temporary equipment to ensure that the work area is under negative pressure relative to the rest of the building. Ventilation must be sufficient to prevent a build-up of excessive vapors inside the enclosure during the application and curing of epoxy. The ventilation must be operational 24 hrs/day until completion of epoxy application and curing.
 - 3. Provide seven days' notice prior to the beginning of epoxy application. The Owner's Representative shall schedule a meeting to coordinate activities required to achieve the protection requirements indicated above and to determine whether air quality monitoring will be performed during epoxy application. Attendees at the meeting shall include the General Contractor, the Subcontractor for the epoxy application, the Owner's Representative and a representative of the University of Michigan's Environment, Health and Safety Department (EHS).
 - 4. Provide waste disposal plans to Owner's Representative for review and approval by UM EHS. Waste materials that have been in contact with products containing solvents must be disposed as hazardous waste.

TREE PROTECTION REMOVED FROM THIS SECTION. UTILIZE SECTION 015639 "TEMPORARY TREE AND PLANT PROTECTION" FOR PROJECT IMPACTING TREES AND PLANT.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION (NOT APPLICABLE)

END OF SECTION 011400

SECTION 012100 - ALLOWANCES

GENERALLY ASK FOR ASSISTANCE WHEN PREPARING THIS SECTION. PREVIOUS EXPERIENCE HAS SHOWN THIS TO BE A PROBLEM SECTION FOR MANY PROJECTS.

PART 1 - GENERAL

1.1 SUMMARY

- A. Selected materials are shown and specified in the Contract Documents by allowances. Allowances have been established in lieu of additional requirements and to defer selection of actual materials to a later date. Additional requirements, if necessary, will be issued by Change Order.

THE FOLLOWING TYPE OF CASH ALLOWANCE INCLUDES MATERIAL ONLY, NOT LABOR - THIS TYPE IS COMMON FOR BRICK AND CARPET

- 1. Cash Allowances: Contractor's costs for unloading and handling on the site, labor, installation costs, overhead, profit and other expenses contemplated for the allowance shall be included in the Contract Sum and not in the allowance.
- B. Type of allowance is "Lump-sum" cash allowance.
- C. General information concerning cash allowances and procedures for submitting and handling Change Orders are included in "Standard General Conditions".

1.2 SELECTION AND PURCHASE

- A. At the earliest feasible date after Contract award, advise the Owner of the date when the final selection and purchase of product described by allowance must be completed in order to avoid delay in performance of the Work.
 - 1. When requested by the Owner, obtain proposals for each allowance for use in making final selections; include recommendations that are relevant to performance of the work.

1.3 SUBMITTALS

- A. Submit proposals for purchase of products or systems included in allowance, in the form specified for Change Orders.
- B. Submit invoices or delivery slips to indicate actual quantities of materials delivered to the site for use in fulfillment of allowance.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 SCHEDULE OF CASH ALLOWANCES

MODIFY THE FOLLOWING TO SUIT PROJECT. PAY SPECIAL ATTENTION TO DOLLAR VALUES - BELOW ARE EXAMPLES ONLY

- A. Cash Allowance: Include a lump sum material cost of \$35.00 per square yard for purchase of carpeting as indicated on drawings and specifications.
- B. Cash Allowance: Include a lump sum material cost of \$425.00 per thousand units for purchase of face brick as indicated on drawings and specifications.

END OF SECTION 012100

SECTION 012200 - UNIT PRICES

**GENERALLY, EDITING THIS SECTION REQUIRES CAREFUL ATTENTION TO
DETAIL AND STRONG KNOWLEDGE OF THE STANDARD GENERAL CONDITIONS
- ASK FOR ASSISTANCE IF REQUIRED.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes administrative and procedural requirements for unit prices.

1.2 DEFINITION

- A. Unit price: A unit price is an amount proposed by Bidders and stated on the Bid Form as a price per unit of measurement for materials or services that will be added to or deducted from the Contract Sum by Change Order if estimated quantities of Work required by the Contract Documents are increased or decreased

1.3 PROCEDURES

- A. Unit prices include necessary material, overhead, profit and applicable taxes.
- B. Refer to individual Sections
 - 1. For demolition or construction activities requiring establishment of unit prices.
 - 2. For requirements for materials and methods described under each unit price.
- C. Owner reserves the right to reject the Contractor's measurement of Work-in-place that involves the use of established unit prices, and to have this Work measured by an independent surveyor acceptable to the Contractor at the Owner's expense.

**RETAIN ONLY ONE OF THE FOLLOWING 2 OPTIONS. STANDARD UNIT PRICES
SHOULD BE LISTED ONLY IN FOP. NON-STANDARD UNIT PRICES SHOULD
BE DETAILED BELOW WITH SHORTER DESCRIPTION IN FOP.**

- D. List of Unit Prices: A schedule of unit prices is included in the Form of Proposal.
- E. List of Unit Prices: A schedule of unit prices is included in Part 3.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

USE FRAMEWORK BELOW FOR NON-STANDARD UNIT PRICES.

- A. SCHEDULE OF UNIT PRICE ITEMS Unit Price No. 1: <Brief Description - match FOP>

1. <Detailed description>
2. Unit of Measure: < >
3. Quantity: < >

END OF SECTION 012200

SECTION 012300 - ALTERNATES

PART 1 - GENERAL

1.1 SUMMARY

- A. Notification: Immediately following award of Contract, prepare and distribute to each party involved notification of the status of each alternate. Indicate whether alternates have been accepted, rejected or deferred for consideration at a later date. Include a complete description of negotiated modifications to alternates, if any.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 SCHEDULE OF ALTERNATES

BELOW ARE 3 EXAMPLES OF ALLOWABLE ALTERNATE TYPES. COORDINATE DESCRIPTION IN THIS SECTION WITH AECION / FORM OF PROPOSAL (FOP). FOP DESCRIPTION ARE LIMITED TO 1 SENTENCE. SCOPE DESCRIPTION IN THIS SECTION SHOULD CONTAIN IDENTICAL KEY PHASE. ADDITIONAL DETAIL CAN BE PROVIDED FOLLOWING THE KEY PHRASE IF NEEDED.

- A. Alternate No. 1: Provide the ADD price for <describe the additional work to be added to the base bid scope of work>
- B. Alternate No. 2: Provide the DEDUCT price for <describe the work to be deleted from the base bid scope of work>
- C. Alternate No. 3: Provide the ADD or DEDUCT price for providing_<description> in lieu of <description>.

END OF SECTION 012300

SECTION 013100 - PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 RELATED SECTIONS

- A. Additional project coordination, phasing, and scheduling requirements are included in Division 01 Sections "Summary" and "Work Restrictions"

1.2 COORDINATION

- A. Project Meetings: Attend regular meetings with Owner and subcontractors as directed by Owner. Location of meetings will be determined by Owner.
- B. Coordinate inspections and testing of concealed Work to occur prior to concealing that Work.
- C. Coordinate sequencing of Work to occur during conditions of temperature, humidity, exposure, forecast weather, and status of Project completion, which will ensure best possible results for each unit of Work. Isolate each unit of Work from non-compatible Work, as required to prevent deterioration.
- D. Coordinate work between trades for the most efficient sequence of installation, to prevent space conflicts, and to provide clearances required by code, Drawings, and the manufacturer.
 - 1. Minor dimension changes (including the need to adjust finish dimensions), difficult installations and/or the addition of off-set fittings will not be considered changes to the Contract.
 - 2. Obtain approval of the Owner's Representative prior to any changes or alternate configurations.

1.3 COORDINATION DRAWINGS

- A. General: For all Work in areas indicated under scope, prepare coordination drawings with space conflicts resolved, and showing clearances required by code, Drawings, and the manufacturer.

EDIT BELOW TO BE PROJECT SPECIFIC

- B. Scope: Provide coordination drawings for the following project areas:

EDIT TO BE PROJECT SPECIFIC. ON SMALLER PROJECTS, CONSIDER LIMITING TO CRITICAL AREAS TO MINIMIZE COST AND TIME IMPLICATIONS.

- 1. Open ceiling areas above 7-feet.
- 2. Ceiling and above ceiling space.
- 3. Slab Edge and Embedded Items.
- 4. Mechanical rooms.
- 5. Mezzanines and interstitial spaces.
- 6. Electrical rooms.
- 7. Shafts.
- 8. Tunnels.

9. Other spaces where the contractor determines limited space availability necessitates coordination.

EDIT BELOW TO BE PROJECT SPECIFIC

- C. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts.
 1. General: Show the following on all drawings:
 - a. Functional and spatial relationships of components.
 - b. Space / access requirements as indicated by code, on Drawings, and per manufacturer requirements.
 - c. Column center lines, interior partition locations and heights, ceiling heights, and fire rated construction locations.
 - d. Dimensions.
 2. Drawing types:
 - a. Floor Plans
 - b. Reflected Ceiling Plans
 - c. Plenum Plans: Locate all components within ceiling plenum to accommodate layout of light fixtures and other ceiling mounted items indicated on Drawings.
 - d. Section drawings: As needed to adequately represent the Work.
 - e. Elevations: Locate all equipment, panels, controls, and other wall mounted items in mechanical and electrical rooms.
 3. Architectural and structural: Show the following:
 - a. Relationships between ceilings mounted devices and the acoustical ceiling grid.
 - b. Sub-framing for support of ceiling, soffit, and wall systems
 - c. Structural penetrations and openings for all disciplines.
 - d. Location and size of access doors.
 - e. Slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
 4. Equipment:
 - a. Indicate equipment that projects into the above ceiling coordination space.
 5. Mechanical and Plumbing Work: Show the following:
 - a. Sizes, bottom, and top elevations of ductwork, piping, and conduit runs, including insulation, bracing, flanges, and support systems.
 - b. Dimensions of major components, such as dampers, valves, diffusers, access doors, and cleanouts.
 - c. Fire-rated enclosures around ductwork.
 - d. Location of DDC control panels and major control devices (e.g. flow meters, control dampers, control valves greater than 2")
 - e. Location and pitch for steam, condensate, sanitary, storm, and all other pitched services.
 - f. Space for tube pulls, coil pulls, filter removal, etc.
 6. Electrical Work: Show the following:
 - a. Runs of vertical and horizontal conduit 1-1/4 inches in diameter and larger.

BuildingName

The Description of the Project

P00000000 0000 Issued for:XXX

013100 - 2

- b. Light fixture, exit light, emergency battery pack, smoke detector, and other fire-alarm device locations.
 - c. Panelboard, switchboard, switchgear, substation transformer, busway, generator, and motor control center locations.
 - d. Location of pull boxes and junction boxes, dimensioned from column center lines.
 - e. Cable trays.
7. Fire-Protection System: Show the following:
- a. Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.

D. Process requirements:

- 1. Base drawings: Architect will furnish Contractor one set of digital data files of Drawings for use in preparing coordination digital data files.
 - a. Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings or to existing conditions.
- 2. Meetings:
 - a. Kick-off meeting: Introduce and define process. Establish drawing format, zoning, sequencing, and milestones schedule dates.
 - b. Progress meetings as needed to complete the work but not less than every 2 weeks during coordination.
 - c. Require each trade contractor's coordination representative to physically attend the meetings.
 - d. Invite Architect, Engineer, and Owner's Representative to each meeting.
 - e. Provide meeting minutes within 5 business day of each meeting.
- 3. Sequencing: Coordinate the addition of information from each trade in a sequence that best provides for coordination of the information and resolution of conflicts between installed components before submitting for review.
- 4. Conflict resolution: Resolve drawing conflicts between meetings. Review major conflicts at the meeting with the Architect / Engineer for resolution. Provide the Architect / Engineer with necessary information to review.
- 5. Field Coordination: Use approved coordination drawing during installation. When new conflicts are determined, review with coordination team, Architect / Engineer, and Owner's Representative for resolution.

E. Submittal requirements

- 1. Submit the following:
 - a. Coordination drawings that the contractor has signed-off as being complete. Drawings shall be at a legible scale and include:
 - 1) Composite view of all systems.
 - 2) Isolated view of each individual system.
 - b. Record drawings showing actual built conditions and service configurations.

2. Review: Architect will review coordination drawings to confirm that the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility. If Architect determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Architect will so inform Contractor, who shall make changes as directed and resubmit.
3. Coordination Drawing Prints: Prepare coordination drawing prints according to requirements in Section 013300 "Submittal Procedures."

ELECTRONIC 2-D FILES LISTED BELOW.

4. Coordination Digital Data Files: Prepare coordination digital data files according to the following requirements:
 - a. File Preparation Format: DWG, DXF, or DGN.
 - b. File Submittal Format: Submit or post coordination drawing files using format same as file preparation format and Portable Data File (PDF) format.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION (NOT APPLICABLE)

END OF SECTION 013100

SECTION 013200 - CONSTRUCTION PROGRESS DOCUMENTATION

THIS SECTION SPECIFIES REQUIREMENTS FOR CONSTRUCTION SCHEDULE AND SHOP DRAWING LOG. MODIFY AS REQUIRED FOR PROJECT.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:

ADJUST LIST BELOW TO SUIT PROJECT.

1. Contractor's Construction Schedule.
2. Submittals Schedule.

1.2 SUBMITTALS

- A. Submittals Schedule: Submit one copy of schedule. Arrange the following information in a tabular format in chronological order:

REVISE LIST BELOW TO SUIT PROJECT. ADD INFORMATION, SUCH AS SCHEDULED DATES FOR PURCHASING AND INSTALLATION AND THE ACTIVITY OR EVENT NUMBER, IF A CPM CONSTRUCTION SCHEDULE IS USED.

1. Scheduled date for first submittal.
2. Specification Section number and title.
3. Submittal category (action or informational).
4. Name of subcontractor.
5. Description of the Work covered.
6. Scheduled date for Architect's final release or approval.

- B. Contractor's Construction Schedule: Submit one printed copy of initial schedule, large enough to show entire schedule for entire construction period.

1.3 COORDINATION

- A. Coordinate preparation and processing of schedules and reports with performance of construction activities and with scheduling and reporting of separate contractors.
- B. Coordinate Contractor's Construction Schedule with the Schedule of Values, list of subcontracts, Submittals Schedule, progress reports, payment requests, and other required schedules and reports.
1. Secure time commitments for performing critical elements of the Work from parties involved.
 2. Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

PART 2 - PRODUCTS

2.1 SUBMITTALS SCHEDULE

- A. Submit concurrently with the first complete submittal of Contractor's Construction Schedule. Comply with requirements of individual specification sections.
- B. Coordinate Submittals Schedule with list of subcontracts, the Schedule of Values, and Contractor's Construction Schedule.

2.2 CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL

- A. Time Frame: Extend schedule from date established for the Notice of Award to date of Substantial Completion.
 - 1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.
- B. Activities: Treat each story or separate area as a separate numbered activity for each principal element of the Work. Comply with the following:
 - 1. Procurement Activities: Include procurement process activities for long lead items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
 - a. **INSERT LIST OF MAJOR ITEMS OR PIECES OF EQUIPMENT**
 - 2. Submittal Review Time: Include review and re-submittal times indicated in Division 01 Section "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's Construction Schedule with Submittals Schedule.
 - 3. Startup and Testing Time: Include not less than **INSERT NUMBER** business days for startup and testing.
 - 4. Substantial Completion: Indicate completion in advance of date established for Substantial Completion, and allow time for Architect's administrative procedures necessary for certification of Substantial Completion.
- C. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule, and show how the sequence of the Work is affected.

DELETE SUBPARAGRAPHS BELOW NOT APPLICABLE.

- 1. Phasing: Arrange list of activities on schedule by phase.
- 2. Work Restrictions: Show the effect on the schedule of the following:

REVISE LIST BELOW TO SUIT PROJECT.

- a. Limitations of continued occupancies.
 - b. Uninterruptible services.
 - c. Use of premises restrictions.
- D. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to the following:

EDIT BELOW TO BE PROJECT SPECIFIC. INCLUDE ITEM 2 AND SUB-ITEMS BELOW FOR ALL PROJECT SUBMITTED TO BFS. SUB-ITEMS A, B, & D CAN BE DELETED FROM PROJECTS THAT DO NOT HAVE FIRE ALARM OR FIRE SUPPRESSION WORK. REFER TO DESIGN GUIDELINE 1.0 CODES AND REGULATORY AGENCIES FOR A LISTING OF BFS BUILDINGS.

1. Notice to Proceed.
2. State of Michigan Bureau of Fire Services (BFS) milestones:
 - a. Submission of "Application for Fire Safety Plan Examination" and associated fee for fire alarm and fire suppression work.
 - b. Submission of OFS 12A and associated fee.
 - c. BFS 50% inspection.
 - d. Final fire alarm test.
 - e. BFS final inspection.
3. Delivery of major equipment.
4. Substantial Completion.
5. Final Completion.

2.3 CONTRACTOR'S CONSTRUCTION SCHEDULE (GANTT CHART)

GANTT-CHART SCHEDULE IN THIS ARTICLE IS ADEQUATE FOR MANY PROJECTS.

- A. Gantt-Chart Schedule: Submit a comprehensive, fully developed, horizontal Gantt-chart-type, Contractor's Construction Schedule within 30 days of date established for the Notice of Award. Base schedule on the Preliminary Construction Schedule and whatever updating and feedback was received since the start of Project.
- B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line.

PART 3 - EXECUTION

3.1 CONTRACTOR'S CONSTRUCTION SCHEDULE

- A. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities
 1. As the Work progresses, indicate Actual Completion percentage for each activity.
- B. Distribution: Distribute copies of approved schedule to Owner and other parties identified by Contractor with a need-to-know schedule responsibility.
 1. Post copies in Project meeting rooms and temporary field offices.
 2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

END OF SECTION 013200

SECTION 013300 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including Standard General Conditions, Supplemental General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, apply to this Section.
- B. Related sections:

EDIT BELOW TO BE PROJECT SPECIFIC

- 1. Division 01 Section "Construction Progress Documentation" for submitting submittal and construction schedules.
- 2. Division 01 Section "Special Procedures for Fire Marshal Review and Inspection" for submittal requirements for Fire Marshal review.
- 3. Division 01 Section "Project Commissioning" for commissioning submittals.
- 4. Division 01 Section "Operation and Maintenance Manuals" for submitting operation and maintenance manuals.

1.2 SUMMARY

- A. Section includes requirements for the submittal schedule and administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals.

1.3 DEFINITIONS

- A. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.

1.4 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
 - 1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
 - 2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.

RETAIN SUBPARAGRAPH BELOW IF ONE SUBMITTAL HAS AN IMPACT ON ANOTHER SUBMITTAL. SUBMITTALS THAT REQUIRE CONCURRENT REVIEW SHOULD BE SO INDICATED IN THOSE SECTIONS.

- 3. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.

- a. Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.
- B. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
1. Initial Review: Allow 10 business days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Architect will advise Contractor when a submittal being processed must be delayed for coordination.
 2. Resubmittal Review: Allow 10 business days for review of each resubmittal.
- C. Electronic Submittals: Identify and incorporate information in each electronic submittal file as follows:
1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form.
 2. Name file with submittal number or other unique identifier, including revision identifier.
 - a. File name shall use project identifier (UM project number) and Specification Section number followed by a brief description. Resubmittals shall include a decimal point, followed by a sequential number. Example file names:
 - 1) PXXXX 081700 Door hardware schedule.pdf; PXXXX 081700 Door hardware schedule.2.pdf
 - 2) PXXXX 238236 Finned Tube Cover product data.pdf
 - b. Coordinate project specific file naming with Architect prior to first submittal.
 3. Transmittal Form for Electronic Submittals: Use electronic form, containing the following information:
 - a. Project name and Owner's Project Number.
 - b. Date.
 - c. Architect name and address.
 - d. Contractor name, address and telephone number.
 - e. Name of firm or entity that prepared submittal.
 - f. Names of subcontractor, manufacturer, and supplier.
 - g. Specification Section number and title or Drawing sheet number.
 - h. Description of items included:
 - 1) Brief written description of each item.
 - 2) Indication of full or partial submittal.
 - 3) Action requested (eg. "for review", "for information only", or other notation).
 - 4) Location(s) where product is to be installed, as appropriate.
- D. Options: Identify options requiring selection by Architect.

- E. Deviations and Additional Information: Clearly note on submittals all deviations from Contract Documents. Do not proceed with work related to the submittal, regardless of Architect/Engineer's action marking, without the Architect/Engineer's specific, written approval of such deviation. Refer to Standard General Conditions for additional requirements and obligations related shop drawings.
- F. Resubmittals: Resubmit in same form as initial submittal.
 - 1. Note date and content of previous submittal.
 - 2. Note date and content of revision in label or title block and clearly indicate extent of revision.
 - 3. Resubmit submittals until they are marked with approval notation from Architect's action stamp.
- G. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, commissioning agent, Owner and others as necessary for performance of construction activities. Show distribution on transmittal forms.
- H. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Architect's action stamp.

PART 2 - PRODUCTS

2.1 SUBMITTAL PROCEDURES

- A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.
 - 1. Management of submittal exchange to be coordinated between design and construction teams at start of construction. Potential methods include:
 - a. Web-Based Project Management Software: Prepare submittals in PDF form, and upload to web-based Project management software website. Enter required data in web-based software site to fully identify submittal.
 - b. Web-based file transfer site: Prepare submittals as PDF package, and upload to transfer side, sending notifications of upload via email. Include PDF transmittal form. Include information in email subject line indicating project and submittal specifics.
 - c. Email: Prepare submittals as PDF package and transmit to Architect by sending via email. Include PDF transmittal form. Include information in email subject line indicating project and submittal specifics.
 - d. Physical samples:
 - 1) Deliver physical samples to Architect.
 - 2) Submit PDF documentation of physical samples, including transmittal and images of physical samples.

- B. Certificates and Certifications Submittals: Provide a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
- C. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.
 - 1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
 - 2. Mark each copy of each submittal to show which products and options are applicable.
 - 3. Include the following information, as applicable:
 - a. Manufacturer's catalog cuts.
 - b. Manufacturer's product specifications.
 - c. Standard color charts.
 - d. Statement of compliance with specified referenced standards.
 - e. Testing by recognized testing agency.
 - f. Application of testing agency labels and seals.
 - g. Notation of coordination requirements.
 - h. Availability and delivery time information.
 - 4. For equipment, include the following in addition to the above, as applicable:
 - a. Wiring diagrams showing factory-installed wiring.
 - b. Printed performance curves.
 - c. Operational range diagrams.
 - d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
 - 5. Submit Product Data before or concurrent with Samples.
- D. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.
 - 1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:
 - a. Identification of products.
 - b. Schedules.
 - c. Compliance with specified standards.
 - d. Notation of coordination requirements.
 - e. Notation of dimensions established by field measurement.
 - f. Relationship and attachment to adjoining construction clearly indicated.

DELETE BELOW IF PROJECT DOES NOT INCLUDE DELEGATED DESIGN.

- g. Seal and signature of professional engineer if specified.

REVISE SPECIFIC SHEET SIZE INDICATED BELOW IF NEEDED FOR PROJECT.

- 2. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings in electronic files formatted for printing to scale on sheets at least 8-1/2 by 11 inches, but no larger than 30 by 42 inches.

- E. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.
1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
 2. Identification: Attach label on unexposed side of Samples that includes the following:
 - a. Generic description of Sample.
 - b. Product name and name of manufacturer.
 - c. Sample source.
 - d. Number and title of applicable Specification Section.
 - e. Specification paragraph number and generic name of each item.
 3. Provide corresponding electronic submittal of Sample transmittal, digital image file illustrating Sample characteristics, and identification information for record.
 4. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.

RETAIN FIRST SUBPARAGRAPH BELOW IF REQUIRED.

- a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
- b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.

RETAIN BELOW IF APPLICABLE.

5. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
 - a. Number of Samples: Submit one full set of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected.
6. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected.
 - a. Number of Samples: Comply with requirement of individual specification. Unless noted otherwise, submit three sets of Samples. Architect will retain **one** Sample set; FIC will retain one sample set; remainder will be returned.
 - 1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.

- 2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.
- F. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:
1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
 2. Manufacturer and product name, and model number if applicable.
 3. Number and name of room or space.
 4. Location within room or space.
- G. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.
- H. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.
- I. Installer Certificates: Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.
- J. Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.
- K. Product / Material Certificates: Submit written statements on manufacturer's letterhead certifying that product / material complies with requirements in the Contract Documents.
- L. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
- M. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
- N. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.

- O. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.

**RETAIN BELOW IF PROJECT INCLUDES DELEGATED DESIGN SERVICES.
TYPICALLY DELETE.**

2.2 DELEGATED-DESIGN SERVICES

- A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - 1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.
- B. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF electronic file, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.
 - 1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

- A. Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect.
- B. Project Closeout and Maintenance Material Submittals: See requirements in Division 01 Section "Closeout Procedures"
- C. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 DELIVERY OF SAMPLES

- A. Hand deliver all required physical submittals / samples to AEC offices or project site. Location to be coordinated with Owner's Representative at pre-construction meeting.

AEC

Facilities Services Building A
326 E. Hoover, Mail Stop B
University of Michigan
Ann Arbor, Michigan 48109

**LANGUAGE BELOW MATCHES STANDARD SUBMITTAL STAMPS USED BY AEC,
A&E. OTHER A/E SHOULD EDIT TO MATCH LANGUAGE USED ON THE STAMP
THAT WILL BE USED FOR THE PROJECT.**

3.3 ARCHITECT'S ACTION

- A. Architect's/Engineer's Action: Where action and return is required or requested, Architect/Engineer will review each submittal, mark with "Action", and whenever possible return within 2 weeks of receipt.
1. Final Unrestricted Release: Work may proceed, provided it complies with contract documents.
 - a. Marking: "Approved"
 2. Final But Restricted Release: Work may proceed, provided it complies with notations and corrections on submittals and with contract documents.
 - a. Marking: "Approved as Noted, Resubmission Not Required"
 3. Partial Release: Work may proceed on the indicated portions of the submitted item(s), provided it complies with contract documents. Do not proceed with work on items noted to be resubmitted.
 - a. Marking: "Partial Approval, Resubmit as Noted."
 4. Returned for Re-submittal: Do not proceed with work. Revise submittal in accordance with notations and resubmit without delay to obtain a different action marking.
 - a. Marking: "Not Approved, Revise and Resubmit"
 5. Returning sample or information: Submittals which were for information only and require no action.
 - a. Marking: "Returning Samples / Information"
 6. Submittals Not Requiring Action: Submittals which require no action, such as cleaning and maintenance information; or submittals not required and not reviewed, will be acknowledged as follows:
 - a. Marking: "Action Not Required"
- B. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.
- C. Submittals not required by the Contract Documents may be returned by the Architect without action.

END OF SECTION 013300

SECTION 013500 - SPECIAL PROCEDURES FOR FIRE MARSHAL REVIEW AND INSPECTION

INCLUDE THIS SECTION FOR ALL PROJECTS - BOTH BFS AND NON-BFS.

EDIT ONLY AS NOTED

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes special procedures for Fire Marshal review and inspection for construction projects in University of Michigan buildings under the following jurisdiction:

SELECT ONE OR TWO OF THE FOLLOWING AS APPLICABLE TO PROJECT A LIST OF BFS JURISDICTION BUILDINGS IS AVAILABLE IN 1.0 CODES AND REGULATORY AGENCIES AT THE FOLLOWING LINK:

[HTTP://WWW.UMAEC.UMICH.EDU/DESGUIDE/1.0-CODES/DG1.0.PDF](http://www.umaec.umich.edu/desguide/1.0-codes/dg1.0.pdf)

1. State of Michigan Bureau of Fire Services (BFS).
2. University of Michigan Health Environment Health and Safety department, Fire Safety division.
3. State of Michigan Bureau of Fire Services (BFS) for fire alarm and fire suppression work only.

1.2 RELATED DOCUMENTS

RETAIN BELOW FOR BFS PROJECTS.

- A. Schedule milestones for BFS project are included in Division 01 section "Construction Progress Documentation".

1.3 SUBMITTALS

INCLUDE ITEM A. BELOW FOR BFS PROJECTS CONTAINING FIRE ALARM OR FIRE SUPPRESSION WORK. ITEMS B AND C APPLY TO ALL PROJECTS.

- A. Projects including fire alarm and fire suppression scope require submission of the following documents to the State of Michigan BFS. Copies shall be submitted to UM concurrent with submission to BFS:
1. "Application for Fire Safety Plan Examination" for fire alarm and fire suppression work with all supporting documentation and copy of associated fee payment.
 2. Signed OFS 12 A with copy of fee payment.
- B. Copies of all inspection reports.
- C. Final inspection manual as detailed in article 2.1:
1. Draft copy: Submit draft copy to UM Owner's Representative for review concurrent with request for inspection, typically at least four weeks prior to final inspection.
 2. Inspection copy: Provide one copy to the Fire Marshal at the final inspection.

3. Final copy: Submit two copies to UM Owner's Representative after final inspection is complete.

1.4 COORDINATION

- A. Coordinate scheduling and timing of required administrative procedures, system testing, and inspections with other construction activities to avoid conflicts and to ensure orderly progress of work and inspections.

PART 2 - PRODUCTS

2.1 FINAL INSPECTION MANUAL

- A. General: The final inspection manual shall provide the Fire Marshal with information needed to conduct a final inspection.
- B. Contents:

RETAIN BRACKETED TEXT FOR BFS PROJECTS

1. Contents of the inspection manual are specific to each project [and include those items noted on the BFS "Plan Review Report"].
2. Typical contents include but are not limited to the following:
 - a. Details for each through-penetration firestop system from a qualified testing and inspecting agency.
 - b. Notarized affidavits of Compliance for all non-labeled interior finish materials attesting to compliance with the specified flame spread and smoke developed ratings. Affidavits shall state:
 - 1) Name of product.
 - 2) Indication that product has been tested by a nationally recognized independent testing laboratory.
 - 3) Name of testing laboratory.
 - 4) Laboratory project or test number.
 - 5) Date of test.
 - 6) Test results.
 - 7) Statement that product was installed as tested.
 - c. Construction inspection approval certificates for mechanical and electrical construction.
 - d. Light level calculations for required emergency lighting.
 - e. Final fire alarm approval certificate.
- C. Format:
 1. Manuals shall be three hole punched and bound.
 2. Provide heavy paper dividers with plastic tabs to divide the Manual into sections.
 3. Provide a Table of Contents at the front of the Manual. List each tabbed section of the Manual.

PART 3 - EXECUTION (NOT APPLICABLE)

END OF SECTION 013500

SECTION 014200 - REFERENCES

PART 1 - GENERAL

GENERALLY, EDITING OF THIS SECTION IS NOT REQUIRED

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 DEFINITIONS

- A. General: Basic Contract definitions are included in the Conditions of the Contract.
- B. "Approved": When used to convey Architect's action on Contractor's submittals, applications, and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.
- C. "Directed": A command or instruction by Architect. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed." No such implied meaning will be interpreted to extend Architect/Engineer's responsibility into Contractor's area of construction supervision.
- D. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."
- E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.
- F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.
- G. "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.
- H. "Provide": Furnish and install, complete and ready for the intended use.
- I. "Or equal": When the phrase "or equal" is used after a single manufacturer's name, or at the end of a list of manufacturer's names, submit proposed products in strict compliance with the "Owner's Options" clauses of the Standard General Conditions.
 - 1. The Owner will consider only those Contractor-proposed substitutions submitted with the Bid in the "Owner's Options" portion of the Form of Proposal.
 - 2. In all cases, judgments of equality of products will be made solely by the Architect/Engineer.

1.3 ABBREVIATIONS AND ACRONYMS

A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States" and as follows:

1. "AFF": "Above finished floor" level
2. "Mfr"/"Mfr's": "manufacturer" / "manufacturer's"
3. "NIC": "Not in Contract"
4. "OFCI": "Owner furnished, Contractor installed"
5. "w/": "with"

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION (NOT APPLICABLE)

END OF SECTION 014200

SECTION 015000 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes temporary plumbing and electrical services and provisions for protecting personnel and property.
- B. Related Work of other Sections:
 - 1. Division 01 Section "Temporary Tree and Plant Protection".

1.2 QUALITY ASSURANCE

- A. Standards and Regulations: Comply with applicable laws and regulations and the following:
 - 1. NFPA Code 241, "Building Construction and Demolition Operations".
 - 2. ANSI-A10 Series standards for "Safety Requirements for Construction and Demolition".
 - 3. NECA Electrical Design Library "Temporary Electrical Facilities".
- B. Conditions of Use: Keep facilities clean and neat. Operate in a safe and efficient manner. Take necessary fire prevention measures. Do not allow hazardous, dangerous or unsanitary conditions, or public nuisances to develop or persist on the site.

PART 2 - PRODUCTS

RETAIN BELOW FOR RENOVATION PROJECTS. DESIGN MANAGER OR ARCHITECT SHALL IDENTIFY ELEVATOR(S) THAT CONTRACTOR MAY USE ON PROJECT DRAWINGS.

2.1 ELEVATOR USE AND PROTECTION

- A. Existing Elevator Use:
 - 1. Use of designated Owner's existing elevator will be permitted, provided elevator is protected, cleaned and maintained daily in a condition acceptable to Owner's Representative.

SELECT ONE OF THE FOLLOWING IN CONJUNCTION WITH THE PROJECT MANAGER

- 2. Elevator will be dedicated to contractor use.
- 3. Elevator will be shared with other users. Coordinate use with Owner's Representative and provide priority to U-M use.

INSERT ADDITIONAL SHARED USE REQUIREMENTS (HOURS OF USE) HERE.

- B. Documentation: Before beginning work, document the condition of the car entries, interior, and controls by photographs. Submit all documentation to Owner's Representative.
- C. Protection

1. Do not exceed 25% of elevator load capacity with any one piece of material, equipment, or hand truck. Do not exceed elevator load capacity. Coordinate and schedule heavy usage with Owner's Representative prior to loading.
2. Provide removable protective coverings (pads), barriers, devices, signs, or other procedures to protect elevator car (wall and ceilings) and entrance doors and frame.
 - a. All materials shall be class A and have a label permanently affixed to the pad. Labels shall be visible when materials are installed.
 - b. Submit weight of materials to Owner's Representative.

CONFIRM WITH FACILITY AND/OR PROJECT MGR IF EXISTING PROTECTIVE WALL PADS ARE AVAILABLE FROM PREVIOUS PROJECT. IF YES, RETAIN PARAGRAPH BELOW.

- c. Obtain existing removable wall pads from the Owner and install for the duration of the project. Return at completion of work. Replace all pads damaged during construction.
3. Maintain access to the emergency phone, main car operating panel, and emergency escape hatch inside the elevator.

D. Substantial completion

1. At Substantial Completion, restore elevator to condition existing before initial use
2. If, elevators were damaged during work, engage certified Elevator Installer to restore damaged work so no evidence remains of correction work. Return items that cannot be refinished in field to the shop, make required repairs and refinish entire unit, or provide new units as required.
 - a. Correct any damage to car interior, controls, sills, and entrance doors and frame, and restore elevator to condition existing before initial use.

FOR LARGE PROJECTS WHERE ELEVATOR IS USED EXCLUSIVELY BY CONTRACTORS FOR AN EXTENDED PERIOD OF TIME, REVIEW POTENTIAL REPAIRS AND INCLUDE IN ELEVATOR SPEC (CONSIDER REPLACING WORN CABLES, GUIDE SHOES, AND SIMILAR ITEMS OF LIMITED LIFE.)

2.2 CONSTRUCTION FENCE

INCLUDE BELOW WHERE SECURITY IS NOT AN ISSUE

- A. Fabricate construction fence of minimum 36-inch tall factory-wired wood slat "snow fence" with water-resistant treated wood support stakes at 48-inches on center.

INCLUDE BELOW WHERE SECURITY IS AN IMPORTANT ISSUE - OR WHERE DESIRABLE TO CONCEAL CONSTRUCTION ACTIVITY FROM VIEW

- B. Fabricate construction fence of the following materials:
 1. Wire Mesh Fabric: 9 gage galvanized steel wires, woven into 2-inch diamond mesh pattern with top selvages knuckled.
 2. Posts: As required for indicated height, but not less than 2.37 outside diameter.

INCLUDE BELOW FOR FENCING INSTALLATIONS ON EXISTING PAVED SURFACES OR OTHER AREAS WHERE SURFACE MOUNTED POSTS ARE PREFERABLE TO POSTS DRIVEN INTO THE GROUND.

3. Fence post base plates: As required for indicated height.

GATES ARE NOT TYPICALLY REQUIRED

4. Gate Frames: 1.90-inch outside diameter. Fabricate gates with 7 gage diagonal tension wires for units wider than 36 inches.

RAILS NOT TYPICALLY REQUIRED, UNLESS NEEDED AS STRUCTURE FOR GATES

5. Rails: Not less than 1.66-inch outside diameter.
6. Hardware: Provide galvanized steel connectors, gate hinges and hasps as recommended by manufacturer.

INCLUDE BELOW ONLY WHERE NEEDED TO BLOCK VIEW OF SITE

7. Screening Material: 85% closed knitted polyethylene screen fabric; 5.1 oz. per sq. yd.; grommets spaced 24 inches on center along cloth perimeter for attachment to wire mesh and posts.
 - a. Product: Midwest Cover Inc., Construction 85, Color: Navy.

2.3 ROOF PROTECTION

- A. Roofing Protection: Provide protective measures for areas on existing roof used for construction access, where materials are being moved or stored.
- B. Provide 1 1/2" ISO insulation with 3/4" plywood over ISO at all areas of work and foot traffic. Plywood is to be tied together.
- C. Prevent debris from entering the roof drains by placing filter fabric over the drains. When cleaning is complete remove the filter fabric and properly dispose of collected debris.

PART 3 - EXECUTION

3.1 PERFORMANCE

- A. Barriers: In general, provide barriers between active construction operations and completed areas of work, and between construction activity and Owner occupied areas. Provide barriers in locations indicated on drawings, or if not indicated, as required by Owner's Representative.

SELECT BELOW FOR GENERAL DUST BARRIER ONLY.

1. Construct barriers of metal or fire-retardant treated wood studs and 6 mil thick plastic sheet.

1 HOUR BARRIER REQUIRED BETWEEN ACTIVE CONSTRUCTION AREAS AND OCCUPIED AREAS REQUIRED IN ALL BUILDINGS. INCLUDE BELOW AND SHOW ON DRAWINGS.

2. Construct construction barriers serving as separation between active construction areas and occupied areas to provide 1-hour fire-rated assembly as defined by Underwriters Laboratory "Fire-Resistance Directory."

INCLUDE THE FOLLOWING IF DESIRED

3. Provide dust covers over Owner's equipment and furnishings. Use 6 mil thick clear plastic sheet and thoroughly tape seams to provide dust-proof cover.

3.2 TEMPORARY UTILITY INSTALLATION

- A. Electrical Service: Comply with NEMA, NECA and UL standards and regulations for temporary electrical service. Install service in compliance with National Electrical Code (NFPA 70). Provide outlets and lighting as required for operations. Comply with applicable provisions of Division-26.
 1. Owner will pay for reasonable use of electricity related to the Work.
- B. Water Service: Connect to existing building services. Comply with applicable provisions of Division-22.
 1. Owner will pay for reasonable use of water related to the Work.

EDIT BELOW TO SUIT PROJECT. ADD OR DELETE REQUIREMENTS AS NEEDED

3.3 PROTECTIONS

- A. Openings Between Floors: Shaft and chase spaces may terminate above occupied areas within building. Existing barriers between floors are not designed to prevent debris from falling through to bottom level. Provide appropriate barriers at all unprotected openings between floors during construction operations.
 1. Protect openings between floors with appropriate materials, providing full coverage of opening in a manner which will prevent personnel, equipment, construction materials and debris, from falling through; capable of withstanding loads imposed during construction operations; and secured to prevent unintentional removal.
- B. Roofing Protection: Provide protective measures for areas on existing roof and around curbed openings during installation of fans or other roof mounted units and areas where materials are being moved or stored.

DELETE BELOW IF NO "SNOW FENCE" CONSTRUCTION FENCE INCLUDED

- C. Construction Fence Erection: Drive support stakes into ground not more than 48-inches on center and to sufficient depth to provide support for fencing. Wire pre-fabricated fencing material to stakes.

SELECT BETWEEN FENCING WITH BASE PLATES AND FENCING WITH DRIVEN POSTS. DELETE ALL FENCING REQUIREMENTS BELOW IF NO WIRE MESH CONSTRUCTION FENCE INCLUDED. COORDINATE WITH PM.

FENCING WITH BASE PLATES

- D. Construction Fence Erection: Provide fence panels with posts and post base-plates. Do not drive posts into ground, concrete walks or pavement.

1. Fence Panels: 6'-0" high X 12'-0" long max.

INCLUDE BELOW WHERE APPLICABLE

2. Provide hasp and pad lock at each gate.
3. Secure wire mesh to outside face of posts with 9 ga. galvanized metal wire ties spaced not less than 16 inches on center. Install mesh to align with top of posts.

INCLUDE BELOW WHERE APPLICABLE

4. Secure fabric screen to outside face of construction fence using 9 gage galvanized steel wire. Fasten fabric sheets at 18-inches o.c. through grommets to top rail, each line and corner post, and at bottom to wire mesh.

FENCING WITH DRIVEN POSTS

- E. Construction Fence Erection: Drive line and corner posts into ground not less than 42 inches below grade, with not less than indicated dimension exposed above grade, and spaced not more than 18 (may use 12 feet if no top rails) feet on center. Erect top rails and gates where indicated.

SELECT ONE OF THE TWO BELOW - USUALLY 8 FEET UNLESS CONSTRUCTION MANAGER REQUESTS GREATER HEIGHT

1. Height of Fence Exposed Above Grade: 8 feet.
2. Height of Fence Exposed Above Grade: 10 feet.

INCLUDE BELOW WHERE APPLICABLE

3. Provide hasp and pad lock at each gate.
4. Secure wire mesh to outside face of posts with 9 ga. galvanized metal wire ties spaced not less than 16 inches on center. Install mesh to align with top of posts.

INCLUDE BELOW WHERE APPLICABLE

5. Secure fabric screen to outside face of construction fence using 9 gage galvanized steel wire. Fasten fabric sheets at 24-inches o.c. through grommets to top rail, each line and corner post, and at bottom to wire mesh.

3.4 CONCRETE AND GROUT WASHOUT

- A. Do Not Discharge concrete/grout washout into storm drains, catch basins, the sanitary sewer system, ditches, or surface waters. Perform washing of concrete trucks and materials clean-up in designated areas or an approved off site location. Use as little water as necessary.
- B. Designated pit areas should be clearly posted. All pits should be lined to prevent seepage. If not lined, the bottom of the pit should be at least 5 feet above the water table. Locate designated areas a minimum of 50 feet from storm drains, bodies of water, and ditches.

- C. Alternative to a designated pit area: Provide an appropriate washout container. Inspection of these wash out containers should occur regularly, to ensure no liquids are draining from the box to storm drains, catch basins, the sanitary sewer systems, ditches, or surface waters. Be aware of forecasted rain events and plan to empty containment systems ahead of time to provide enough storage, or cover to prevent overflow.
- D. Once concrete washout has hardened, dispose of properly. Disposal of hardened concrete/grout should occur on a regular basis.
- E. Washout areas must be cleaned when 75% full. Provide additional locations as needed.
- F. For additional information, review the Concrete Washout Water and Slurry Guideline: [HTTPS://EHS.UMICH.EDU/WP-CONTENT/UPLOADS/2021/02/CONCRETE-WASHOUT-WATER-AND-SLURRY.PDF](https://EHS.UMICH.EDU/WP-CONTENT/UPLOADS/2021/02/CONCRETE-WASHOUT-WATER-AND-SLURRY.PDF) or CONTACT EHS - EPPP AT 734-647-1143.

END OF SECTION 015000

SECTION 015639 - TEMPORARY TREE AND PLANT PROTECTION

INCLUDE SECTION FOR ALL PROJECTS WHERE TREES MIGHT BE AFFECTED BY CONSTRUCTION OPERATIONS, INCLUDING STAGING, LAY DOWN AREAS, AND CONTRACTOR PARKING (LEGAL OR ILLEGAL), EVEN IF NO ACTUAL SITE WORK IS PART OF THE PROJECT. IF THERE ARE NO TREES IN THE VICINITY OF THE PROJECT, PARAGRAPHS BELOW CAN BE DELETED.

IF THE VICINITY OF THE SITE CONTAINS TREES, IT WILL BE NECESSARY TO GET A TREE SURVEY. CAMPUS PLANNING WILL PROVIDE ASSISTANCE IN OBTAINING THE TREE SURVEY. ALL TREES IN THE VICINITY OF THE CONSTRUCTION SITE SHOULD BE NOTED ON THE PLAN. SUBMIT THE PLAN TO THE UNIVERSITY FORESTER, WHO WILL DESIGNATE "SIGNIFICANT" TREES.

THE PROTECTION ZONE FOR SIGNIFICANT TREES CANNOT ENCROACH ON THE CANOPY DRIPLINE UNLESS THERE IS A COMPELLING REASON WHY THIS CANNOT HAPPEN. DEVIATION FROM THIS REQUIREMENT MUST BE APPROVED BY THE UNIVERSITY FORESTER AND THE ASSOC. VP FOR FACILITIES & OPERATIONS.

FOR TREES OTHER THAN SIGNIFICANT TREES, THE PROTECTIVE ZONE SHOULD EXTEND TO THE CANOPY DRIPLINE WHEREVER POSSIBLE. DEVIATIONS FROM THIS STANDARD NEED TO BE APPROVED BY THE UNIVERSITY FORESTER

PART 1 - GENERAL

1.1 WORK INCLUDED

- A. Provide all equipment and materials, and do all work necessary to protect existing trees and plants from damage as a result of the Contractor's operations.

1.2 SUBMITTALS

- A. Proposed methods, materials to be employed and schedule for effecting tree and plant protection shall be submitted for approval, including tree protection fence.

1.3 SPECIAL SITE LIMITATIONS

- A. Areas around trees that could be impacted by construction activities before such activity begins are identified on the Drawings as "Protective Zones/Protected Areas". Protective zones around each tree shall be clearly identified on contract documents. The protective zone shall not encroach on the canopy dripline unless there is a compelling reason why this is not practical. In such a situation, approval for the deviation must be obtained from the Owner's Representative.

- B. Protected areas shall not be entered or used for any purpose during construction except as authorized by the University Forester (UF). Areas identified on the Drawings as "Temporary Work Zones" within the Protected Areas are zones in which construction shall be undertaken, but only after the UF has been notified of the intended operations in the Temporary Work Zone. The UF shall be notified at least 48 hours prior to work scheduled in the Temporary Work Zone. Depending on field conditions, the UF may require additional tree protection consisting of fencing and boxing to protect tree trunks and roots.
- C. Plans for all operations within Temporary Work Zones shall be reviewed fully with the UF before beginning work. Contractor shall plan operations in Temporary Work Zones to minimize the use of wheeled, motorized equipment, and to minimize root compaction and root disturbance. All excavation in Temporary Work Zones shall be initiated with root pruning trenching as specified herein. All excavation in Temporary Work Zones shall be scheduled to minimize the amount of time between excavation and completion of the construction item in the Temporary Work Zone. Schedule shall be approved by the Owner's Representative. After each work item is completed in the Temporary Work Zone, the protection fence shall be restored to its original position to reestablish the protected area.

PART 2 - PRODUCTS

2.1 TREE/LANDSCAPE PROTECTION FENCING

- A. Tree and landscape protected area fencing shall be:
 - 1. Wire Mesh Fabric: Six foot 9 gage galvanized steel wires, woven into 2-inch diamond mesh pattern with top selvages knuckled.
 - 2. Posts: As required for indicated height, but not less than 2.37 outside diameter.

RAILS NOT TYPICALLY REQUIRED UNLESS TO MEET A TEMPORARY TRAFFIC PEDESTRIAN BARRIER REQUIREMENT - VERIFY AND DELTE BELOW IF NOT NECESSARY

 - 3. Rails: Not less than 1.66-inch outside diameter. Rails are not typically required unless a bottom rail is required for areas adjacent to walks to meet accessibility requirements.
- B. Fencing other than that specified above will be subject to the approval of the UF, or as specifically noted on the plans.

2.2 BOXING

- A. Boxing shall be installed for trees that are in jeopardy of damage in the Temporary Work Zone and identified for boxing by the UF. Size of box enclosure for each tree will be determined in the field by the University Forester.
- B. Boxing shall be 4 x 4 inch wood posts spaced 8 feet on center with three, 2 x 4 inch wood rails between posts to a height of approximately 5 feet.

PART 3 - EXECUTION

3.1 PRE-INSTALLATION MEETING

- A. Contractor shall schedule a tree and plant protection pre-installation site meeting with the Owner's Representative and UF and/or qualified U-M Grounds personnel prior to the start of site construction, which includes prior to installation of construction fence and tree and plant protection.

3.2 INSTALLATION OF FENCING

- A. Prior to start of demolition work and clearing and grubbing operations, tree and planting protection fencing shall be installed in accordance with the following:
 - 1. At tree protection areas indicated on Drawings and as staked in the field.
 - 2. At locations indicated on the Drawings as "Protected Areas."
- B. The protective zone will be extended at a minimum out to the tree's dripline and is better defined as the "critical root zone" (CRZ). CRZ is determined by measuring a radius from the tree's trunk that is equal to 1 foot for each inch of tree diameter.
- C. Tree and Landscape "Protected Area" temporary fence erection: Drive line and corner posts into ground not less than 42 inches below grade, with not less than indicated dimension exposed above grade, and spaced not more than 18 feet on center (may use 12 feet if no top rails). Erect bottom rails where needed to meet ADA requirements.
 - 1. Height of Fence Exposed Above Grade: 6 feet.
 - 2. Secure wire mesh to outside face of posts with 9 gage galvanized metal wire ties spaced not less than 16 inches on center. Install mesh to align with top of posts.

3.3 ROOT PRUNING

- A. Where excavation will be in close proximity to existing trees designated to remain, roots shall be pruned by University Forester or as otherwise specified by the Owner's Representative after consulting with the University Forester. Contact Owner's Representative when roots are exposed. Root pruning shall be as indicated on the drawings and as additionally identified in the field by the Owner's Representative. Root pruning shall consist of cutting clean, straight excavation through upper root zone, 12 inches to 18 inches deep, wherein all roots shall be cut cleanly and flush with face of excavation thus causing minimum amount of disturbance to remaining roots. Use of motorized ditch-digging machine for this purpose is permitted. Use of other motorized excavation equipment, which causes excessive root movement, dislodgment, ripping, or splintering will not be permitted. In this situation, UF and/or U-M arborists may use an Air Spade (compressed air soil excavator) to clear soil from root zone to route utilities under the root system without cutting roots.

- B. Coordinate with Owner's Representative to provide aeration and slow release tree watering bags as remediation measures for trees that have been negatively impacted by construction.

3.4 REMOVAL OF PROTECTION

- A. Except as otherwise indicated or requested by Project Manager after consulting with the UF, temporary protection devices and facilities installed during course of the work shall be removed only after all work that may injure or damage trees and plants is completed.

END OF SECTION 015639

SECTION 015719 - CONSTRUCTION AIR QUALITY

FOR USE ON ALL PROJECTS.

THE CONTENTS OF THE FOLLOWING ARE INTENDED TO BE AN EXAMPLE ONLY AND INCLUDES TYPICAL REQUIREMENTS - MODIFY TO SUIT PROJECT. SOME PROJECTS, PARTICULARLY NEAR THE HOSPITAL MAY HAVE MORE STRINGENT REQUIREMENTS.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including Standard General Conditions, Supplemental General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, apply to this Section.

CAREFULLY VERIFY, EDIT AND COORDINATE RELATED SECTIONS.

- B. Related Sections:
 - 1. Division 23 Section: Custom Air Handling Units.
 - 2. Division 23 Section: Semi-Custom Air Handling Units.
 - 3. Division 23 Section: Air Filters.
 - 4. Division 23 Section: HVAC Ducts and Casings.
 - 5. Division 23 Section: Air Duct Accessories and RGD's.

1.2 SUMMARY

- 1. This Section includes requirements for construction air quality including diesel exhaust mitigation.

RETAIN BELOW FOR LEED PROJECTS

- 2. These requirements are also applicable to LEED 2009 IEQ credit 3.1 Construction Indoor Air Quality Management Plan - During Construction.

1.3 QUALITY ASSURANCE

- A. Indoor Air Quality Reports: Review periodic Indoor Air Quality Reports provided by others and promptly comply with report recommendations.
- B. Inspection and Maintenance: Periodically inspect project conditions to assure that indoor air quality measures are being implemented. Maintain indoor air quality measures to assure operational effectiveness.

PART 2 - PRODUCTS

2.1 AIR FILTRATION

- A. Provide air filters or filtration media with a Minimum Efficiency Reporting Value (MERV) of 8 or as specified, whichever is greater.

PART 3 - EXECUTION

3.1 HVAC SYSTEM PROTECTION

- A. Protect HVAC systems per Related Sections.
- B. Ductwork Contamination: Provide professional cleaning for all ductwork contaminated with construction debris and dust.

3.2 SOURCE/POLLUTION CONTROL

- A. Temporary Heat and Hazardous Exhaust: Provide temporary heaters that exhaust combustion air directly to the outside of the building, or that prevents hazardous exhaust levels within the construction area. Limit the use of exhaust producing equipment inside the construction area.
- B. Assure exhaust fumes are not drawn into new and existing air intakes.
- C. Volatile Organic Compounds (VOC) control: Limit the buildup of VOCs within the construction area by storing VOCs in tight containers, providing ventilation with outside air during installation of VOC emitting material. Locate pollutant sources in one designated area away from supply ducts, areas occupied by workers, and absorbent materials.
- D. Smoking is prohibited in all University of Michigan buildings and grounds.

3.3 PATHWAY INTERRUPTION

- A. Construction partitions: Provide air tight temporary construction partitions to separate occupied or completed areas from active construction areas.
- B. Construction area pressurization: Provide temporary fans or portions of the permanent air handling system to maintain a negative pressure in the construction areas relative to adjacent occupied or completed spaces.
- C. Provide construction entry mats at each entry to limit dirt and debris from entering the building.

3.4 HOUSEKEEPING

- A. Perform daily housekeeping to prevent the accumulation and tracking of debris, dirt, dust, and moisture within the construction area. Coordinate activities of the various trades to organize work areas to assure that routine cleaning is effective.
- B. Provide thorough cleaning of all building interior surfaces prior to HVAC filter replacement, testing and balancing, and commissioning activities.

3.5 SCHEDULING

- A. Schedule high pollution activities that utilize high VOC level products such as paints, sealants, adhesives, caulking and cleaners to take place prior to installing highly absorbent materials such as ceiling tiles, carpet, fabric furniture, acoustic panels, insulation, and gypsum board.
- B. Where practical, perform high VOC work during off-hours to minimize personnel exposure.
- C. Coordinate schedule for installation of low-VOC products with temperature requirements.
- D. Schedule delivery to minimize storage requirements of materials on the project site.
 - 1. Where air testing or building flush-out procedures are required, provide adequate time to conduct these activities prior to building occupancy.

3.6 DIESEL EXHAUST MITIGATION

- A. All diesel equipment utilized on the project site except delivery trucks shall be fueled with biodiesel B-20. In case of extreme cold weather, biodiesel B-5 is acceptable. Provide records of refueling receipts when requested by the owner.
- B. All diesel equipment utilized on the project for more than ten workdays shall utilize exhaust after-treatment devices to reduce emission from diesel engines. Exhaust after treatment devices shall be either diesel oxidation catalyst type or diesel particulate filters. The required minimum percent reduction in emissions for either device shall be, PM: 20%, HC: 40%, CO: 10%.

END OF SECTION 015719

SECTION 016000 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section specifies administrative and procedural requirements governing the product delivery, storage and handling and Contractor's selection of products for use in the Project.

1.2 QUALITY ASSURANCE

- A. Compatibility of Options: When Contractor is given the option of selecting between two or more products for use on the Project, the product selected shall be compatible with products previously selected, even if previously selected products were also options.

1.3 PRODUCT DELIVERY STORAGE AND HANDLING

- A. Deliver, store and handle products in accordance with the manufacturer's recommendations, using means and methods that will prevent damage, deterioration and loss, including theft.

MODIFY BELOW TO SUIT PROJECT

- 1. Schedule delivery to minimize storage time at site and to avoid overcrowding of construction area.
- 2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft and other losses.
- 3. Deliver products to the site in the manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting and installing.
- 4. Inspect products upon delivery to ensure that products are undamaged and properly protected.
- 5. Store heavy materials away from the project structure in a manner that will not endanger the supporting construction.

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION

- A. General Product Requirements: Provide products that are undamaged and, unless otherwise indicated, unused at the time of installation.
 - 1. Provide products complete with accessories, trim, finish, safety guards and other devices and details needed for a complete installation and for the intended use and effect.

USUALLY RETAIN ALL BELOW

- B. Product Selection Procedures: No substitutions will be permitted, except those in compliance with the Contract Document provisions concerning "Owner's Options"; otherwise comply with the following:

1. Proprietary Specification Requirements: Where a single product or manufacturer is named, provide only the product indicated.
2. Semi-proprietary Specification Requirements: Where two or more products or manufacturers are named, provide one of the products indicated.
 - a. Where products or manufacturers are specified by name, accompanied by the term "or equal", or "or approved equal" comply with the Contract Document provisions concerning "Owner's Options."
3. Descriptive Specification Requirements: Where Specifications describe a product or assembly, listing exact characteristics required, with or without use of a brand or trade name, provide only a product or assembly possessing the specified characteristics and that otherwise complies with Contract requirements.
4. Performance Specification Requirements: Where Specifications require compliance with performance requirements, provide products that comply with indicated requirements, and are recommended by the manufacturer for the application indicated.
5. Compliance with Standards, Codes and Regulations: Where Specifications only require compliance with a code, standard or regulation, select a product that complies with the indicated standards, codes and regulations.
6. Visual Matching: Where Specifications require matching an established sample, the Architect's decision will be final on whether a proposed product matches satisfactorily.

PART 3 - EXECUTION (NOT APPLICABLE)

END OF SECTION 016000

SECTION 017300 - EXECUTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes general administrative and procedural requirements governing execution of the Work including, but not limited to, the following:
 - 1. Installation of the Work.
 - 2. Protection of installed construction.
- B. Related Requirements:
 - 1. Section 011000 "Summary" and 011400 "Work Restrictions" for limits on use of Project site.
 - 2. Section 017329 "Cutting and Patching"
 - 3. Section 017700 "Closeout Procedures" for final cleaning.
 - 4. Section 019100 "Project Commissioning" for start-up.
 - 5. Section 024119 "Selective Demolition" for demolition.
 - 6. Section 078413 "Penetration Firestopping" for patching penetrations in fire-rated construction.

1.3 QUALITY ASSURANCE

- A. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of products and equipment.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
 - 1. Examine rough-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
 - 2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
 - 3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

- B. Correct defects that would result in unacceptable performance of materials or equipment to be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- A. **Field Measurements:** Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
- B. **Space Requirements:** Verify space requirements and dimensions of items shown diagrammatically on Drawings.
- C. **Review of Contract Documents and Field Conditions:** Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of Contractor, submit a request for information

3.3 INSTALLATION

- A. **General:** Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.
 - 1. Make vertical work plumb and make horizontal work level.
 - 2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
 - 3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
 - 4. Install Work within recognized industry tolerances, if not otherwise indicated.
- B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.
- C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.
- D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.
- E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on site and placement in permanent locations.
- F. **Templates:** Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

- G. Attachment: Provide blocking and attachment plates, anchors, fasteners, and other devices of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions.
 - 1. Allow for building movement, including thermal expansion and contraction.
 - 2. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- H. Mounting Heights: Except as otherwise indicated, mount individual units of Work at industry recognized standard mounting heights for applications indicated. The Contractor shall refer questionable mounting height choices to the Architect/Engineer and the Owner for final decision. The Contractor shall comply with the Owner's and the State of Michigan's requirements for accessible mounting heights.
- I. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.
- J. Adjust, clean, lubricate, restore marred finishes and protect installed Work to ensure that it will remain without damage or deterioration during the remainder of the construction period. Unless otherwise specified by the Contract Documents, all Work is to be thoroughly cleaned prior to its being turned over to the Owner. This includes dusting, window cleaning, floor cleaning and all other operations associated with the proper cleaning of the Work. Waxing or buffing floors shall be performed when required by the Contract Documents.

3.4 PROTECTION OF INSTALLED CONSTRUCTION

- A. Provide final protection and maintain conditions that ensure installed Work (completed or in progress) is without damage or deterioration at time of Substantial Completion. Comply with manufacturer's written instructions.

END OF SECTION 017300

SECTION 017329 - CUTTING AND PATCHING

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of cutting and patching work is generally not specifically shown on drawings. Include cutting and patching work as indicated by provisions of this Section.
 - 1. Cut holes and openings in, or remove portions of, existing construction necessary for connection of new architectural elements, mechanical and electrical utilities and services, equipment and supports.
 - 2. Patch around mechanical and electrical penetrations.
 - 3. Patch floors, walls, and ceilings damaged by demolition operations, including removal of indicated mechanical and electrical items, and indicated wall-, floor-, and ceiling-mounted items. Patch and paint openings in walls, floors and ceilings created by demolition and removal operations.
 - 4. Patch and repair blemishes and holes in existing construction surfaces left in place, and scheduled to be exposed, that have been damaged due to construction operations.
- B. Materials removed and not indicated to be turned over to Owner or indicated for reuse, as well as rubble and debris resulting from these operations, are property of Contractor.
- C. Related requirements:
 - 1. General: Refer to other Sections for specific requirements and limitations applicable to cutting and patching individual parts of the work.
 - 2. Division 2 sections for selective demolition, regulated construction waste, asbestos, lead and PCB remediation.
 - 3. Division 21, 22, 23 and Division 26, 27 and 28 sections for other requirements and limitations applicable to cutting and patching mechanical and electrical installations.

1.2 DEFINITIONS

- A. Cutting: Removal of in-place construction necessary to permit installation or performance of other work.
- B. Patching: Fitting and repair work required to restore construction to original conditions after installation of other work.

1.3 SUBMITTALS

DELETE BELOW IF NO FINISHES PATCHING, EDIT TO BE PROJECT SPECIFIC OR DELETE IF INCLUDED IN INDIVIDUAL DIV 9 SECTIONS.

- A. Product data indicating compliance with requirements for the following finish materials used in patching:
 - 1. Acoustical tile.
 - 2. Resilient flooring.
 - 3. Rubber base.

DELETE BELOW IF SAMPLES NOT REQUIRED, EDIT TO BE PROJECT SPECIFIC OR DELETE IF INCLUDED IN INDIVIDUAL DIV 9 SECTIONS.

B. Samples for initial selection for the following:

1. Acoustical tile.
2. Resilient flooring.
3. Rubber base.

DELETE BELOW IF NO ROOFING REPAIR

C. Qualification data for firm engaged to perform cutting and patching of roofing system.

1.4 QUALITY ASSURANCE

A. Assignment of Cutting and Patching Responsibilities:

1. Cutting shall be the work of the individual architectural, mechanical or electrical trade requiring such cutting for access, or to permit alteration to be performed, or similar purposes.
 - a. Cutting required for inspection and to obtain test samples shall be the work of the General Contractor.
2. Patching shall be the work of the appropriate architectural trade.

DELETE SUBCATEGORIES THAT DO NOT APPLY TO PROJECT.

B. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.

1. Roofing Elements:
 - a. Standards: Perform cutting and patching work in compliance with University of Michigan Facilities and Operations standards (phone 647-2059 for information on requirements), and with recommendations of the National Roofing Contractor's Association "Roofing and Waterproofing Manual".
 - b. Installer Qualifications: Arrange for cutting and patching of roofing systems by firm experienced in similar work, and licensed by manufacturer of roofing system to perform required repair work.
 - c. Pre-Construction Conference: Arrange and attend meeting with Owner's Representative, representative of Owner's roofing maintenance department, and representative of roofing firm to determine procedures for cutting and patching roofing system.
2. Structural Elements: When cutting and patching structural elements, notify Architect of locations and details of cutting before proceeding. Shore, brace, and support structural elements during cutting and patching. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection
3. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety.

BuildingName

The Description of the Project

P00000000 0000 Issued for:XXX

017329 - 2

4. Other Construction Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety.
5. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.

PART 2 - PRODUCTS

2.1 MATERIALS

BELOW IS GENERAL STATEMENT. IF SPECIFIC MATERIALS ARE KNOWN, LIST ON FINISH SCHEDULE.

- A. Materials for Patching: Unless otherwise indicated, use materials for patching identical to existing materials. If identical materials are not available, or cannot be used, use materials visually matching existing adjacent surfaces to the fullest extent possible and that result in equal-or-better performance characteristics.
- B. Asphalt Patching: Provide 8-inch thick 21 AA limestone base, 2-inch No. 1300 leveling course, and 2-inch No. 1300 wearing course in accordance with MDOT 1984 Standard Specifications for Construction.

PART 3 - EXECUTION

3.1 PERFORMANCE

- A. Protect existing property, equipment, remaining surfaces, utilities and services within and adjacent to work from damage due to operations. If utilities or services are uncovered that are not indicated on drawings, advise Owner and do not work in immediate area until instructed by Owner.
 1. Shore and brace existing construction during cutting operations as required to prevent cracking, movement, or collapse of existing assemblies, surfaces and materials.
- B. Use extreme caution when cutting into shafts and chases. Shafts and chases may end above occupied areas within building. Take all necessary precautions to prevent debris from falling into shaft during cutting and patching operations. Comply with requirements of Division 01 Section "Temporary Facilities and Controls".
- C. Before cutting and patching the following building elements, obtain the Owner's Representative's approval to proceed:

EDIT THE FOLLOWING TO SUIT PROJECT.

1. Structural concrete.

2. Roofing materials.
3. Miscellaneous structural metals, including lintels and equipment supports.

ALWAYS RETAIN BELOW.

- D. Cutting Concrete Floors: Before core drilling, saw-cutting, or breaking up concrete floors, test for the presence of electrical conduits. Use an impulse induction type scanner, similar to Hilti Ferrosan, capable of detecting both metallic conduits and copper wires in PVC conduits. Tracers that scan for energized cables or that scan for injected high frequency signals are not acceptable. Immediately restore, at no cost to the Owner, conduits damaged during cutting operations. Comply with the following notification requirements:
1. Notify the Owner's Representative not less than 72 hours in advance of each core drilling operation. Owner's Representative will arrange notification of building occupants of potential for power outage.
 2. Notify the Owner's Inspection Department prior to conducting each test.
- E. Patching: Match existing construction. Comply with applicable materials and workmanship requirements of individual sections of these Specifications that govern new work.
1. Patch exposed-to-view surfaces with seams which are durable and as invisible as possible. Create surface finishes matching existing adjacent surfaces in color, texture, gloss and other visual characteristics.
 2. Patch all partition, floor, ceiling and roof assemblies to maintain original performance characteristics, including those for fire and acoustical barriers.
 - a. Patch fire-rated assemblies using safing materials between the penetrating element and fire-rated assembly. Use safing materials complying with Division 07 Section "Penetration Firestopping" and that will not reduce the fire-rating of the existing assembly.
 - b. Patch assemblies to maintain acoustical barrier performance using joint sealing materials between the penetrating element and assembly. Use latex acoustical sealants complying with Division 07 Section "Joint Sealants."
- F. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

END OF SECTION 017329

SECTION 017420 - CONSTRUCTION AND DEMOLITION WASTE TRACKING

FOR USE ON ALL PROJECTS.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

1.2 SUMMARY

- A. This section defines requirements for reporting the disposition of construction and demolition waste/material quantities on all University of Michigan projects.

1.3 REFERENCES

- A. Definitions
 1. Waste: Removal off-site of demolition and construction materials for deposit to a landfill or incinerator as is acceptable to authorities having jurisdiction.
 2. Recycle: Removal off-site of demolition and construction materials to a Recycling Center for processing.
 3. Salvage: Removal off-site of demolition or construction materials for subsequent sale or reuse in another application.
 4. Waste Manifest: Removal off-site of demolition and construction materials included in the UM-EHS Waste Manifest. Exclude from all calculations.
 5. Soils and Excavation: Excavated soils and land-clearing debris. Exclude from all calculations.

1.4 SUBMITTALS

- A. Waste Quantities Report: Provide information documenting all types and amounts of demolition and construction materials removed from the project site using the form provided in Part 3.
- B. Receipts: Provide records from the salvage and recycling facilities, landfills and incinerators, in as much as available, documenting quantities of materials received by each.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 IMPLEMENTATION

- A. Transmit completed Waste Quantities Report(s) and receipts to c-d-waste-tracking@umich.edu by the time of Substantial Completion.

END OF SECTION 017420

Waste Quantities Report

Project name: _____

U-M project number: _____

Report Date: _____

Name of person completing this report: _____

Contractor - Company Name: _____

Address: _____

Phone #: _____

Waste^{1 2 3}:

Waste dumpsters: _____ Cubic yards _____ Tons
(Landfilled or incinerated)

Recycled dumpsters: _____ Cubic yards _____ Tons
(Dropped off at recycling center)

Salvaged Waste: _____ Cubic yards _____ Tons
(Sold or reused)

Totals: _____ Cubic yards _____ Tons

¹ Report shall be completed in the same unit for each category of waste.

² Hazardous Waste Manifest and soils and excavation are excluded from all calculations.

³ Provide receipts when available.

SUBMIT COMPLETED FORM TO c-d-waste-tracking@umich.edu

SECTION 017700 - CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

- A. The requirements of this Section are in addition to project closeout requirements indicated in the Standard General Conditions.

1.2 SUBSTANTIAL COMPLETION

- A. Prerequisites to Substantial Completion: Complete the following:
 - 1. Submit statement showing changes to Contract Sum. Advise Owner of pending insurance change-over requirements.

1.3 DEFINITIONS

- A. Discharge to Ground: Discharge to grassy and/or soil areas capable of water infiltration. Frozen ground conditions are not capable of infiltration.
- B. Wash Water: Liquid waste generated during cleaning activities, including mixtures of water and chemicals and/or detergents. It also includes water containing residues of chemicals, detergents, or the substances being removed (i.e., paint, solvents, etc.). It does not include runoff from cleaning with only potable water that has not come into contact with chemicals or detergents.

1.4 FINAL CLEANING

- A. Final Cleaning: Immediately before turning project over to Owner, wash and clean all parts of the Work. Remove tools and equipment, construction debris, rubbish, and surplus materials.
 - 1. Clean interior and exterior surfaces of window units and glass within the limits of construction area, including the following:

SELECT PARA ABOVE OR BELOW, OR DELETE BOTH IF NO GLASS IN PROJECT.

- 2. Clean interior surfaces of window units and glass within the limits of construction area.

INCLUDE SUBPARA BELOW WITH EITHER PARA ABOVE. SELECT ONE OF THE FOLLOWING THREE OPTIONS.

- a. New window units and glass installed under Contract.
 - b. Existing window units and glass repaired under Contract.
 - c. Existing window units and glass not installed or repaired under Contract.
- B. Disposal of Wash Water from Activities Outside Buildings:
 - 1. Protect storm drains and catch basins. Do not allow runoff from cleaning activities that is discharged to ground to leave the site.

2. Utilize one of the following two procedures to handle wash water generated from detergent or chemical cleaning.
 - a. Obtain approval from the Michigan Department of Environmental Quality (MDEQ) for contractor to discharge to the ground by "authorization by notification" as a mobile power washer. Do not reference University of Michigan in application.
 - 1) Contact UM Environment, Health and Safety department (EHS) - Environmental Protection & Permitting at 734-936-1920 for information on discharge to ground.
 - b. Collect wash water and sample to determine proper disposal method.
 - 1) Contact UM EHS-HazMat at 734-763-4568.
 - 2) Allow adequate lead time for sampling, analysis and disposal coordination.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION (NOT APPLICABLE)

END OF SECTION 017700

SECTION 017823 - OPERATION AND MAINTENANCE MANUALS

09/2021 SPEC EDITORS UPDATED THE MS 017823 OPERATION AND MAINTENANCE MANUALS TO ELIMINATE THE REQUIREMENT FOR PAPER O&MS AND REQUIRE ELECTRONIC O&MS

PART 1 - GENERAL

***SPEC EDITORS:** EXCEPT AS NOTED, DO NOT EDIT THIS SPEC SECTION. INCLUDE IT ON ALL PROJECTS INVOLVING SYSTEMS, EQUIPMENT OR MATERIALS THAT REQUIRE OPERATION OR MAINTENANCE FOR SAFETY, SUCCESSFUL PERFORMANCE, LONGEVITY, OR PRESERVATION OF WARRANTIES.*

1.1 SUMMARY

- A. This Section defines the Contractor's requirements for providing electronic Operation and Maintenance (O&M) Manuals.
 - 1. Provide O&M information for all materials, equipment, and systems supplied.
 - 2. Contractors installing equipment pre-purchased by the project (AHU's, chillers, substations, generators, etc.) shall provide O&M Manuals for the pre-purchased equipment assigned to them for installation.
 - 3. Contractors installing or relocating equipment furnished by the Users (lab equipment, audio/visual equipment, etc.) need not provide O&M Manuals for User-furnished equipment.

1.2 RELATED DOCUMENTS

- A. Refer to the U-M Standard General Conditions and other Division 01 Specification Sections for requirements which apply to this Section.
- B. Special operation and maintenance data requirements referenced in the other Technical Specification Sections apply to this Section.

1.3 SCHEDULE

- A. Submit a draft O&M Manual for approval soon after construction starts.
- B. Submit, as soon as it is completed and in advance of all training, a copy of the final O&M Manuals for approval.
- C. Provide approved O&M Manuals for Owner use a minimum of two weeks prior to scheduled Owner training.
- D. Submission of approved O&M Manuals is a prerequisite for Substantial Completion and final payment.

1.4 CONTENTS

- A. The O&M Manuals shall provide the Owner's maintenance personnel with the information they need to install, inspect, test, operate, clean, lubricate, maintain, adjust, repair and replace the project's materials, systems and equipment.
- B. The O&M Manuals shall include information on the following:

ARCHITECTURAL LEAD: ADD TO OR DELETE FROM THE FOLLOWING LIST TO MAKE IT PROJECT SPECIFIC. ADD ARCHITECTURAL ITEMS REQUIRING MAINTENANCE USING SPECIAL CLEANERS, PRESERVATIVES, PROCEDURES, ETC.

1. Divisions 02 Through 14: Systems and equipment items include but are not limited to:
 - a. Power operated doors, windows, fire shutters, roof hatches, and related items.
 - b. Operable partitions.
 - c. Electric signs and graphics systems.
 - d. Motorized projection screens and projector lifts.
 - e. Fume hoods, bio-safety cabinets and snorkels.
 - f. Laboratory plumbing and electrical fixtures specified as part of laboratory casework.
 - g. Laboratory equipment including ventilated cages, sterilizers, glass washers, tunnel washers, cage and rack washers, bedding dispensers/disposers, water bottle fillers, and auto watering systems.
 - h. Darkroom equipment.
 - i. Motorized shades and blinds.
 - j. Dock levelers and truck restraint systems.
 - k. Trash compactors
 - l. Controlled environment rooms.
 - m. Elevators and barrier-free lifts.
 - n. Food service equipment.
 - o. Roofing
 - p. Flooring
 - q. Windows
 - r. Doors
 - s. Skylight systems
 - t. Door/window/skylight hardware

MECHANICAL LEAD ENGINEER: ADD TO OR DELETE FROM THE FOLLOWING LIST TO MAKE IT PROJECT SPECIFIC.

2. Divisions 21, 22 and 23: Systems and equipment items include but are not limited to:
 - a. Tunnel piping, valves, expansion joints, and loops.
 - b. Building piping, valves, expansion joints, and loops.
 - c. Meters and gauges.
 - d. Heat trace systems.
 - e. Motors, motor controllers, and variable frequency drives.
 - f. Water treatment systems.
 - g. Fire protection systems.
 - h. Piping and plumbing specialties.
 - i. Hot and cold domestic water systems.
 - j. Sanitary and laboratory waste systems.
 - k. Grease interceptors/separators.
 - l. Rainwater and storm sewer systems.
 - m. Irrigation systems.
 - n. Purified and RO/DI water systems.
 - o. Pumps.
 - p. Medical and specialty gas systems.
 - q. Natural gas systems.
 - r. Fuel oil storage and transfer systems.
 - s. Hot water heating systems.
 - t. Boilers.
 - u. Chilled water systems.
 - v. Chillers.
 - w. Cooling towers.

- x. Condenser water systems.
- y. Steam and condensate systems.
- z. Engine-generator exhaust systems.
- aa. Sand filters.
- bb. Humidifiers.
- cc. Heat exchangers.
- dd. Terminal heating and cooling units.
- ee. Energy recovery systems.
- ff. Free cooling systems.
- gg. Smoke evacuation systems.
- hh. Stairwell pressurization systems.
- ii. Point exhaust systems.
- jj. Laboratory vacuum systems.
- kk. Compressed air systems.
- ll. Control air systems.
- mm. Exhaust air systems.
- nn. HVAC systems.
- oo. Air handling units.
- pp. Fans.
- qq. Pressurization control systems.
- rr. Mechanical systems controls.
- ss. Laboratory and fume hood controls.
- tt. Clean room controls.
- uu. Kitchen Hoods.
- vv. Kitchen exhaust controls.
- ww. Fan coil units.
- xx. DX systems.
- yy. Computer room HVAC systems.
- zz. Saw dust collection systems.

ELECTRICAL LEAD ENGINEER: ADD TO OR DELETE FROM THE FOLLOWING LIST TO MAKE IT PROJECT SPECIFIC.

- 3. Divisions 26, 27 and 28: Systems and equipment items include but are not limited to:
 - a. Primary power distribution.
 - b. Unit substations.
 - c. Secondary power distribution and metering.
 - d. Engine-generators, transfer switches and load banks.
 - e. Paralleling switchgear.
 - f. Motor starters and controls.
 - g. Wiring devices.
 - h. Grounding.
 - i. Normal and emergency lighting.
 - j. Lighting control and dimming systems.
 - k. Lighting individual controls.
 - l. Voice & data systems.
 - m. Emergency and campus telephones.
 - n. Audio/visual systems.
 - o. Room scheduler systems.
 - p. Master clocks.
 - q. Access control systems.
 - r. Security and CCTV systems.
 - s. Fire detection and alarm systems.
 - t. Emergency responder radio coverage systems.
 - u. MOSCAD (Motorola SCADA alarm transmitter to DPSS).
- 4. Divisions 31, 32, 33 and similar site/civil:
 - a. Provide O&M information for all materials, equipment, and systems supplied or assigned to install.

1.5 DOCUMENTATION REQUIREMENTS

- A. Provide complete information regarding the installation, inspection, testing, operation, cleaning, lubrication, maintenance, and adjustment of the equipment supplied, including data needed to facilitate maintenance in accordance with the warranty requirements, and data needed to order an exact replacement or the approved spare parts. Manufacturers' sales literature and similar promotional materials shall not be included.
- B. Documentation shall be project specific. Edit manufacturers' standard documentation to reflect the exact equipment supplied. Circle, box out, or draw an arrow toward information that applies. Cross out information that does not apply. Do not highlight information because highlighting cannot be photocopied. Documentation that is not properly marked will be rejected.
- C. Drawings shall not be reduced in size when converted/assembled as a PDF.
- D. When documentation on a system or assembly includes data from more than one manufacturer, provide complete data on each component. Assemble the data into one bookmarked section of the Manual.

1.6 IDENTIFICATION

- A. In the Table of Contents and in each bookmarked section, identify each system and equipment item using the same name designation used in the Contract Documents.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 PREPARATION

- A. Soon after construction starts, submit a draft O&M Manual for approval. This draft shall indicate the proposed electronic organization of the O&M using named electronic folders, subfolders and preliminary bookmarks.
- B. Throughout the construction process, gather operation and maintenance documentation and enter the data into the electronic folders. As documentation is compiled into the O&M, create electronic bookmarks that make it easy to find information within each PDF. Periodically, and when requested by the Commissioning Authority, submit the O&M for review of the folder arrangement and bookmarks.

3.2 GENERAL FORMAT REQUIREMENTS

- A. The electronic O&M information shall be provided as Adobe Acrobat PDFs stored in a folder structure. The folder structure shall serve as the Table of Contents for the O&M. All words (characters) in PDFs shall be searchable, including those in images, wiring diagrams, exploded views, etc. Provide information from manufactures that is word/character searchable; only when not available, scan documents using Optical Character Recognition (OCR) software. Assemble the documentation so that the reading orientation is the same throughout the O&M manual. When viewed electronically, it shall not be necessary to "rotate" pages in order to read the predominant text orientation on a page in a horizontal manner.
- B. The folder name format for the over-all Manual shall be PXXXXX O&M DRAFT YY-MM-DD.pdf, where XXXXX is the last 5 digits of the U-M project number and YY-MM-DD is the date the draft version is submitted (arrange date as indicated). Subsequent drafts shall have the same file name except with an updated date in the file name. Revise the word DRAFT to FINAL upon final approval of the Manual.
- C. The folder structure of the electronic O&M shall be divided by major trade, i.e. Architectural, Mechanical and Electrical.
- D. The file name of any O&M file and the total of the folder path names to that file shall not exceed 250 characters (including spaces). This is required to allow importation of the information into the Owner's digital archive (by the Owner after the final O&M is accepted). Keep folder and file names short to avoid exceeding the character limit.

3.3 TABLE OF CONTENTS AND ARRANGEMENT

- A. The table of contents shall consist of electronic folders and subfolders arranged and labeled in a logical and intuitive manner. Arrange and label the folders and subfolders per the Sample Table of Contents (TOC) shown at the end of this specification.
 - 1. The **highest level** of the folder structure shall be O&M manual name, named per the naming convention described in Article 3.2 above.
 - 2. The **second highest level** of the folder structure shall be by major trade, i.e. Architectural, Mechanical and Electrical.
 - 3. The **third highest level** shall be the O&M information provide for each trade (Architectural, Mechanical and Electrical). The information for each trade shall be provided in the following order:
 - a. The information designated by the folder names given in the Sample TOC:
 - 1) General information, as outlined in Article 3.4.A below, shall be provided first.
 - 2) Specific O&M information, as outlined in Article 3.4.B below, shall be provided next, divided into sub-folders labeled by the specification section number related to that equipment.

- a) Within each specification numbered subfolder, in addition to the basic O&M information applicable to that section number, include the related nameplate data, pump curves, flow curves, fan curves, etc.
- b) Sub-Divide a specification section (folder) into subsections (subfolders) when the section contains documentation on multiple major equipment items.
- c) Nameplate data, pumps curves, and other important information shall be bookmarked within each PDF.
- d) Where multiple PDFs are included in an O&M spec section (folder), also provide a combined PDF of all the PDFs in that section folder. Name the combined PDF as follows: Combined XX-XXXXX.pdf where X = the specification number.

3.4 CONTENTS

- A. Provide the following general documents:
 - 1. **Installing Contractor Contact Information.** Provide the information required by Article 3.6 for the Installing Contractor Contact Information Form. Include the GC's or CM's contact information, along with the contact information for each major sub-contractor.
 - 2. **Supplier Contact Information.** Provide the information required by Article 3.6 for the Supplier Contact Information Form. Provide for each major piece of equipment.
 - 3. **Extended Warranty Information** for equipment with warranties in excess of one year. Provide the information required by Article 3.6 for the Extended Warranty Information Form.
 - 4. **Service Agreements** for equipment with a service agreement, including service agreement contacts. Provide the information required by Article 3.6 for the Service Agreement Information Form.
 - 5. **Inspection Report and Approval Certificates** for systems requiring Federal or State inspections such as elevators and fire alarm systems.
 - 6. **Elevator Wiring Diagrams** (record copies)
 - 7. **Power One Line and Riser Diagrams** (record copies)
 - 8. **Short Circuit Analysis** with overcurrent protective device settings and fuse sizes.
 - 9. **Valve Tag Schedule.** Provide a combined schedule for the valves installed by the various contractors/subcontractors.
 - a. The valve tag identification number shall be coordinated so that each valve has a unique tag number, and identifies the valve service e.g. CHW-25.
 - b. The schedule shall indicate the valve tag number, valve type (e.g. "ball valve"), size, approximate location (building and room #) valve service and important notes ("Main Bldg. Shut-Off"). Include a service legend (e.g. CHW = Chilled Water, LN2 = Liquid Nitrogen, etc.)
- B. Provide the following equipment or system specific documents:

1. Complete **operation and maintenance instructions** for each system and major equipment item.
2. Complete **manufacturer's nameplate data** for major equipment.
3. **Manufacturer's start-up reports.**
4. **Pump curves** for pumps.
5. **Flow curves** for flow elements (pitot tube, triple duty valve, circuit setter, etc.).
6. **Fan curves** for fans.
7. **Clean and dirty filter pressure drops for each filter.**
8. **Exploded assembly views** with references to part numbers.
9. List of **manufacturers' recommended spare parts.**
10. Record copies of the **fire protection system piping schematics.**
11. Record copies of the **temperature control schematics.**
12. Record copies of the **fire alarm and security system wiring diagrams.**
13. Record copies of the **lighting controls wiring diagrams.**
14. **Software.** Provide software back-ups, pass codes, settings, etc. for controls provided by equipment manufacturers or provided for a particular system (e.g. RO/DI system PLC).

3.5 SUBMISSION

- A. To avoid delaying Owner training, Substantial Completion and final payment, complete the O&M Manual as early in the construction process as possible.
- B. Transmit all versions of the Manual using the file naming convention described in Article 3.2. Copy the U-M Project Manager on all Manual transmittals.
- C. Transmit an electronic copy of the draft final Manual to the Commissioning Authority, for review and approval.
- D. Incorporate the review comments into the final version of the Manual.
- E. Transmit the final version manual (via a file sharing site) to the Commissioning Authority, U-M Project Manager, and others as directed.

3.6 FORMS

- A. Provide, at minimum, the information listed below for each form type.
- B. Installing Contractor Contact Information Form
 1. U-M Project Number ("P" number)
 2. U-M Project Name
 3. Contractor/Supplier Name
 4. Address
 5. Phone Number
 6. Emergency Phone Number
 7. E-Mail
 8. Contractor/Supplier Project/PO Number or equivalent
 9. Brief description of what was installed
- C. Supplier Contact Information Form
 1. Items 1-8 listed in Article 3.6.B
 2. List of equipment or systems provided, including:

- a. Equipment/System Name
 - b. Manufacturer
 - c. Mfr.'s PO number
 - d. Mfr.'s address, phone number, website
 - e. Model Number
 - f. Serial Number
 - g. Nominal size or capacity
- D. Extended Warranty Information Form
- 1. Items 1-8 listed in Article 3.6.B
 - 2. Items 2.a - 2.g listed in Article 3.6.C
 - 3. Length of extended warranty with warranty start and end date
- E. Service Agreement Information Form
- 1. Items 1-8 listed in Article 3.6.B
 - 2. Description of system or equipment covered by the service agreement, including:
 - a. Equipment/System Name
 - b. Manufacturer
 - c. Duration of agreement
 - d. Description of services provided

For each spec section folder, include all the respective O&M info as a PDF. Where this requires multiple PDFs, also provide a combined PDF of all the PDFs, also saved in that spec section folder. Bookmark important sections of individual PDFs.

Sample folders are shown for each spec section. Add as many folders "Z" as apply to the project.

END OF SECTION 017823

SECTION 019100 - PROJECT COMMISSIONING

JULY 2016: REVISED TO ESTABLISH 019100 AS THE SOLE SPECIFICATION FOR CX.ING, ALLOWING 019110 "SMALL" PROJECT COMMISSIONING TO BE RETIRED.

ARCHITECT/ENGINEER: EDIT THE FOLLOWING ARTICLES TO MAKE THIS SPECIFICATION PROJECT SPECIFIC: 1.1.B, 1.2.B. REVISE 3.1.N IF NECESSARY, SEE THE EDITOR'S NOTE AT THAT LOCATION. EDIT ARTICLE 1.2.B TO LIST ALL EQUIPMENT AND SYSTEMS TO BE COMMISSIONED INCLUDING PREPURCHASED AND OWNER FURNISHED EQUIPMENT. CLARIFY WITH THE DESIGN MANAGER EXACTLY WHICH OWNER FURNISHED EQUIPMENT IS TO BE COMMISSIONED. GENERALLY OWNER FURNISHED EQUIPMENT IS NOT COMMISSIONED. IF A COMMISSIONING AUTHORITY (CXA) HAS BEEN HIRED FOR THE PROJECT, REQUEST THE CXA REVIEW YOUR EDITED VERSION OF THIS SPECIFICATION AND INCORPORATE ANY INPUT RECEIVED.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The Drawings and the general provisions of the Contract, including the Standard General Conditions and the Supplemental General Conditions, apply to this Section.

EDIT THE BELOW SPECIFICATION SECTION NUMBERS. U-M MASTER SPECIFICATION SECTION 017823 SHALL BE USED AS THE O&M MANUAL SPECIFICATION.

- B. Refer to other Division 01 Specification Sections, including the following, for related requirements which apply to this Section.
 - 1. Division 01 Section - Project Management and Coordination.
 - 2. Division 01 Section - Submittal Procedures.
 - 3. Division 01 Section - Operation and Maintenance Manuals.
- C. Testing, balancing, commissioning, operation and maintenance manual, and Owner training requirements referenced in the other Technical Specification Sections apply to this Section.

1.2 SUMMARY

- A. Each Contractor shall perform the commissioning activities for the systems, equipment and materials they install. When the equipment and materials are part of a larger system, each Contractor shall commission their portion of the work as part of the overall system commissioning. The commissioning activities will be coordinated by the University's Commissioning Authority (CxA). Perform the commissioning activities as outlined in Part 3, "Execution" and as described in the U-M "Generic Sample Commissioning Plan" available for review at <http://www.umaec.umich.edu/wp-content/uploads/2013/08/Sample-Cx-Plan-Master.pdf> . Where terms, procedures, forms, etc. are indicated in this specification, the requirements for such items shall be as described in the U-M "Generic Sample Commissioning Plan".
- B. Perform commissioning activities on the following:

ADD TO OR DELETE FROM THE FOLLOWING LIST TO MAKE IT PROJECT SPECIFIC.

1. Divisions 02 through 14: Systems and equipment include but are not limited to:
 - a. Power operated doors, windows, fire shutters, roof hatches, and related items.
 - b. Operable partitions.
 - c. Electric signs and graphics systems.
 - d. Motorized projection screens and projector lifts.
 - e. Fume hoods, bio-safety cabinets and snorkels.
 - f. Laboratory plumbing and electrical fixtures specified as part of laboratory casework.
 - g. Laboratory equipment including ventilated cages, sterilizers, glass washers, tunnel washers, cage and rack washers, bedding dispensers/disposers, water bottle fillers, and auto watering systems.
 - h. Darkroom equipment.
 - i. Motorized shades and blinds.
 - j. Dock levelers and truck restraint systems.
 - k. Trash compactors
 - l. Controlled environment rooms.
 - m. Elevators and barrier-free lifts.
 - n. Food service equipment.

ADD TO OR DELETE FROM THE FOLLOWING LIST TO MAKE IS PROJECT SPECIFIC.

2. Divisions 21, 22 and 23: Systems and equipment include but are not limited to:
 - a. Tunnel piping, valves, expansion joints, and loops.
 - b. Building piping, valves, expansion joints, and loops.
 - c. Meters and gauges.
 - d. Heat trace systems.
 - e. Motors, motor controllers, and variable frequency drives.
 - f. Water treatment systems.
 - g. Fire protection systems.
 - h. Piping and plumbing specialties.
 - i. Hot and cold domestic water systems.
 - j. Sanitary and laboratory waste systems.
 - k. Grease interceptors/separators.
 - l. Rainwater and storm sewer systems.
 - m. Irrigation systems.
 - n. Purified and RO/DI water systems.
 - o. Pumps.
 - p. Medical and specialty gas systems.
 - q. Natural gas systems.
 - r. Fuel oil storage and transfer systems.
 - s. Hot water heating systems.
 - t. Boilers.
 - u. Chilled water systems.
 - v. Chillers.
 - w. Cooling towers.
 - x. Condenser water systems.
 - y. Steam and condensate systems.
 - z. Engine-generator exhaust systems.
 - aa. Sand filters.
 - bb. Humidifiers.
 - cc. Heat exchangers.

BuildingName

The Description of the Project

P00000000 0000 Issued for:XXX

019100 - 2

- dd. Terminal heating and cooling units.
- ee. Energy recovery systems.
- ff. Free cooling systems.
- gg. Smoke evacuation systems.
- hh. Stairwell pressurization systems.
- ii. Point exhaust systems.
- jj. Laboratory vacuum systems.
- kk. Compressed air systems.
- ll. Control air systems.
- mm. Exhaust air systems.
- nn. HVAC systems.
- oo. Air handling units.
- pp. Fans.
- qq. Pressurization control systems.
- rr. Mechanical systems controls.
- ss. Laboratory and fume hood controls.
- tt. Clean room controls.
- uu. Kitchen Hoods.
- vv. Kitchen exhaust controls.
- ww. Fan coil units.
- xx. DX systems.
- yy. Computer room HVAC systems.
- zz. Saw dust collection systems.

ADD TO OR DELETE FROM THE FOLLOWING LIST TO MAKE IT PROJECT SPECIFIC.

- 3. Divisions 26, 27 and 28: Systems and equipment items include but are not limited to:
 - a. Primary power distribution.
 - b. Unit substations.
 - c. Secondary power distribution and metering.
 - d. Engine-generators, transfer switches and load banks.
 - e. Paralleling switchgear.
 - f. Motor starters and controls.
 - g. Wiring devices.
 - h. Grounding.
 - i. Normal and emergency lighting.
 - j. Lighting control and dimming systems.
 - k. Lighting individual controls.
 - l. Voice & data systems.
 - m. Emergency and campus telephones.
 - n. Audio/visual systems.
 - o. Room scheduler systems.
 - p. Master clocks.
 - q. Access control systems.
 - r. Security and CCTV systems.
 - s. Fire detection and alarm systems.
 - t. Emergency responder radio coverage systems.
 - u. MOSCAD (Motorola SCADA alarm transmitter to DPSS).

1.3 SUBMITTALS

- A. Provide the Commissioning Authority with the lists, forms, drawings, plans, reports, and manuals described in Part 3, "Execution".

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 COMMISSIONING ACTIVITIES

- A. Attend regularly scheduled Commissioning Team meetings, separate from other project meetings and occurring at intervals deemed appropriate by the CxA. Typically meetings will be held one per month at the beginning, increasing to one per week for the last third of the project.
 - 1. Solely when dictated by the CxA, on some projects the Commissioning Team meetings will be held as part of regular project construction meetings.
- B. Attend additional commissioning meetings including but not limited to:
 - 1. Pre-start meetings.
 - 2. Functional test preparation meetings.
 - 3. Pre-balance conferences.
 - 4. Water treatment meetings.
- C. Maintain one all-inclusive Commissioning Plan and keep it up-to-date.

COMMISSIONING AUTHORITY: MAINTAIN A SECOND COPY OF THE COMMISSIONING PLAN.

- 1. The Commissioning Plan shall be used to store all of the documents produced during the commissioning process. Maintain the Commissioning Plan in the construction office.
- 2. An initial draft of the Commissioning Plan will be prepared and delivered to the Contractor by the CxA soon after construction starts.
- 3. Provide to the CxA a complete list of trade contractor, major manufacturer, and major supplier contact information for inclusion in the Commissioning Plan.
- 4. The CxA will develop project-specific commissioning forms for inclusion in the Cx Plan, along with other required documents. Each Contractor shall complete, sign, and insert into the Commissioning Plan the portion of each form that relates to their work. The types of documents required for this project include but are not limited to:
 - a. Commissioning meeting minutes.
 - b. Interim and final commissioning reports.
 - c. Installation Sequences.
 - d. Commissioning Status Check Sheets.
 - e. Pre-Installation Check Sheets.
 - f. Pipe Flushing and Cleaning Forms.
 - g. Duct Leak Test Reports.
 - h. Pre-Start Check Sheets.
 - i. Mfr.'s reports documenting equipment start-up.
 - j. Equipment Functional Test Check Sheets.
 - k. System Functional Test Check Sheets.
 - l. Training plans and training attendance sheets.

5. Provide one copy of the following documents to the CxA for systems or equipment being commissioned when such tests are required by other specification sections:
 - a. Manufacturers' factory test reports.
 - b. Field inspection and test reports.
 - c. Manufacturers' check-test-start reports.
 6. Provide a detailed list of every control point installed. Include, in checklist format, a detailed procedure to verify all aspects of the controls' operational sequence.
 7. Insert the original of each form or document in the Commissioning Plan and provide a copy of each to the CxA.
- D. Assist with establishing the order, timing, and duration of the commissioning activities, and add them to the Project Schedule.
- E. During the shop drawing submittal process, submit one set of shop drawings for all systems and equipment being commissioned to the CxA for review.
1. Submit the shop drawings at the same time they are submitted to the A/E for review.
 2. The CxA assists the A/E in reviewing submittals and will not return comments directly back to the contractor.
 3. After completion of the review, provide to the CxA one set of the A/E reviewed and stamped shop drawings for all systems and equipment being commissioned.
- F. At the time of shop drawing submittal, provide to the CxA installation manuals for the systems and equipment being commissioned.
- G. Soon after construction starts, submit one draft Operation and Maintenance (O&M) Manual in accordance with the related specification section.
- H. Submit duct leak testing plans and calculations prior to leak testing each section of duct. No testing shall commence until the plan and calculations are approved by the CxA.
- I. Submit pipe flushing and cleaning plans for each systems for CxA approval at least 2 weeks prior to the first flushing and cleaning activities.
- J. Submit electrical test reports for CxA approval at least 2 weeks prior to equipment energization.
- K. Provide at least 2 weeks advance notification of the following activities:
1. Coordination drawing meetings. The CxA may attend.
 2. Duct leak tests. The CxA must witness duct leak tests unless waived by the CxA.
 3. Pipe flushing and cleaning of each system or portion of each system. The CxA must witness flushings and cleanings unless waived by the CxA.
 4. Manufacturer check-test-starts. The CxA may attend.
 5. Functional tests. The Commissioning Authority must witness and approve all functional tests.
 6. Owner training sessions.
- L. Check, test, and start up each system in accordance with the Manufacturer's instructions.

1. The Pre-Start Check Sheets shall be submitted and approved prior to starting up systems and equipment. This applies both to early starts for construction use and to full startups before functional testing.
 2. Where required by the Project Specifications or by the Manufacturer, startup shall be performed by a Manufacturer's Representative. Provide a copy of the completed equipment start up form used by the Manufacturer's Representative during start up.
- M. Functionally test each piece of equipment and system to verify proper function in all modes of operation. Coordinate with other trades so all modes of operation can be demonstrated. Each Contractor shall demonstrate the portion of the work they provided.
1. Test each system component, zone, and control sequence.
 2. Test under both full and partial loads.
 3. Test under normal, abnormal, and emergency conditions.
 4. Test under design basis seasonal conditions.

FOR SMALL PROJECTS, CONSIDER IN CONSULTATION WITH THE COMMISSIONING AUTHORITY IF THE 20% RANDOM FUNCTIONAL TESTING LIMIT SPECIFIED BELOW IS ADEQUATE AND REVISE IF APPROPRIATE. IF THE COMMISSIONING AUTHORITY HAS YET TO BE HIRED, CONSULT WITH THE U-M MANAGER OF COMMISSIONING AND PLAN REVIEW THROUGH THE U-M DESIGN MANAGER. NORMALLY FOR PROJECTS WITH SMALL QUANTITIES OF TERMINAL UNITS, PLUMBING FIXTURES, ETC. THIS SECTION SHOULD BE REVISED TO SPECIFY THAT ALL UNITS BE FUNCTIONALLY TESTED.

- N. Functional testing shall include:
1. 100 percent of all major equipment
 2. 100 percent of terminal units that are controlled in any way by occupancy sensors.
 3. 100 percent of terminal units or zones that provide temperature, humidity, pressure, or similar control outside of what would be the design criteria for a typical office, e.g. those serving museum, special storage, or similar spaces.
 4. 100 percent of terminal units serving any space designated as a lab.
 5. Random functional testing of no less than 20% of fan coil units, VAV boxes, chilled beams, plumbing fixtures, lighting occupancy sensors, and similar high unit count equipment. If the quantity is 25 units or less, no less than 5 units shall be functionally tested. If significant issues are found, randomly functional test in additional increments of 10% until no significant issues are found. The CxA shall designate the specific units to be tested.
- O. When requested by the CxA, provide trend logs of the controlled variables for all central equipment, and for any zone or terminal unit serving spaces with specific temperature, humidity, or pressure setpoints. For systems or equipment determined not to be operating properly by the CxA, provide logs for any additional control points requested, for trouble-shooting purposes.
1. Trend logs shall begin once each functional test is complete, and continue until the equipment or system is accepted by the CxA.

2. The sampling interval and the required frequency of providing trend logs shall be as required by the CxA.
- P. Correct the incomplete and non-conforming items that were identified during the commissioning process.
1. Deficiencies that affect system operation must be corrected prior to functional testing.
 2. Deficiencies discovered during or after functional testing must be corrected prior to acceptance of the systems by the CxA.
- Q. At the same time they are submitted to the A/E for review, submit a copy of each Air and Water Balance Test Report to the CxA for review.
- R. Provide four reviewed and approved paper copies of O&M Manuals in accordance with the O&M Manual specification section a minimum of two weeks prior to scheduled Owner training.
- S. Arrange for and participate in Owner training sessions for the systems and equipment being commissioned.
1. Assist the CxA in developing a training plan. Submit for CxA approval a master list of all training sessions at least 30 days in advance of the proposed first training session. Include systems and equipment, area served, agenda, duration, time and location of each training session. The CxA will develop the final training plan which the contractor shall comply with. Dates and times of each session shall be as convenient for the Owner.
 - a. A training session may include several common types of similar systems or typical equipment that all Trainees have involvement with. Standard AHU's, fans, and ductwork can all be covered in one air handling systems training session. General lighting systems and typical power distribution systems can be covered in one electrical systems training session.
 - b. Keep unique, large or complex systems and equipment in their own training sessions (e.g. fume hoods, lab exhaust controls, emergency power systems, or large lab exhaust systems must be separate from a general air handling systems training session).
 2. Define each training session as either overview training or specific system/equipment training.
 - a. Overview training shall provide the design intent and general operation of each system and its equipment, including interactions with other systems and equipment. Overview training is generic in nature and at a level that is consistent with the level of Trainee's knowledge.
 - b. Specific system/equipment training shall include the overview followed by more detail. It is intended to expand the Trainee's specific knowledge of a particular system or equipment. Specific system/equipment training generally only applies when special training requirements are referenced in other Technical Specification Sections.
 3. Training sessions shall occur after the system and equipment have passed functional testing, and after final approved O&M Manuals have been provided to the Owner.
 - a. Invite Manufacturers' representatives when required by other Technical Specification Sections or when required due to the complexity of the system or equipment.

- b. Provide the appropriate design and coordination as-built drawings and O&M Manuals for each training session.
- 4. Conduct the training at the system or equipment. For specific system/equipment training, also conduct classroom training when specified or appropriate.
 - a. In conjunction with the CxA, provide overview training on the system and equipment.
 - b. Review the contents of the O&M Manual as it relates to the Training Session.
 - c. Walk down each system with the Trainees. Indicate the locations and explain the operation of basic system components such as isolation valves, drains, vents, expansion compensators, distribution piping, flow meters, electrical panels, motor controls, disconnects, lighting controls, fire alarm and security devices, roof hatch access, etc.
 - d. For specific system/equipment training, also provide the following:
 - 1) Meanings of alarms, indicators, and warning signs.
 - 2) Operating procedures under all normal, abnormal and emergency modes of operation.
 - 3) Maintenance procedures including cleaning, lubricating and adjustment procedures.
 - 4) Inspection, troubleshooting and repair procedures.
 - e. After each training session, insert a copy of the agenda and completed sign-in sheet into the Commissioning Plan.
- T. Submit the completed Commissioning Plan to the CxA for approval.

SECTION 013220 - PHOTOGRAPHIC DOCUMENTATION

DM/PM, please revise this document as needed to align with the requirements of your specific project. Edit the highlighted areas per your project needs. (Delete pink text before saving the final draft)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes administrative and procedural requirements for the following:
1. Photographic Documentation
 - a) Pre-construction photographs.
 - b) Periodic construction photographs.
 - c) Final Completion construction photographs.
- B. Related Sections include the following:
1. Division 1 Section "Submittal Procedures" for submitting photographic documentation.
 2. Division 1 Section "Selective Demolition" for photographic documentation before selective demolition operations commence.
 3. Division 1 Section "Closeout Procedures" for submitting digital media as Project Record Documents at Project closeout.
 4. Division 1 Section "Demonstration and Training" for submitting videotapes of demonstration of equipment and training of Owner's personnel

1.3 SUBMITTALS

- A. Qualification Data: For photographer.
- B. Key Plan: Submit key plan of Project site and building with notation of vantage points marked for location and direction of each photograph and video recording. Indicate elevation or story of construction. Include same label information as corresponding set of photographs and video recording.
- C. Digital Photographs: Within ten (10) days of taking digital photographs, the Contractor shall share the digital photographs with the Architect and the Owner. The Contractor shall identify each

electronic file by title. The drive shall be identified by project title, project number and date of the photographs.

1. Format: Unaltered, original files, with same aspect ratio as the sensor, uncropped, date and time stamped, in the folder named by date of photograph, accompanied by key plan file.

Amend as appropriate for the project.

2. Identification: Provide the following information with images labeled in groups (folders) or individual images with the description in the file metadata tag:
 - a) Owner name.
 - b) Name of Project.
 - c) Name and contact information for photographer.
 - d) Architect's Project Number
 - e) Name of Architect and Construction Manager.
 - f) Name of Contractor.
 - g) Date photograph was taken if not date stamped by camera.
 - h) Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
 - i) Unique sequential identifier keyed to accompanying key plan.

1.4 QUALITY ASSURANCE

- A. Photographer Qualifications: An individual who has been regularly engaged as a professional photographer of construction projects for not less than three years.
- B. Photographer: Engage a qualified commercial photographer to take final construction photographs. A non-professional competent in the operation of the digital camera may take pre-construction and progress photographs.

1.5 COORDINATION

- A. Auxiliary Services: Cooperate with the photographer and provide auxiliary services requested, to adequately portray the extent of work complete.

1.6 USAGE RIGHTS

- A. The photos become the property of The Regents of the University of Michigan, a Michigan Constitutional Corporation.
- B. The Contractor, Architect or additional third parties shall not share these photographs without the express written consent of AEC.

PART 2 - PRODUCTS

2.1 PHOTOGRAPHIC MEDIA

- A. Digital Images: Provide images in uncompressed JPG **[add add'l format if preferred]** format. Images need to be of sufficient resolution to

see details the pictures are intended to convey. Final images should be produced by a digital camera with a minimum sensor size of 8.0 megapixels and at an image resolution of not less than 3200 by 2400 pixels.

PART 3 - EXECUTION

3.1 PHOTOGRAPHS, GENERAL

A. Date Stamp: Unless otherwise indicated, date and time stamp each photograph as it is taken so the stamp is integral to the photograph.

3.2 CONSTRUCTION PHOTOGRAPHS

A. Pre-construction Photographs: Before starting construction, take color photographs of the Project Site and surrounding properties from different vantage points, as directed by the Architect. Take pictures of the interior conditions, including **[list items here]** and other items or areas as directed by the Architect. This will serve as a basis for establishment of pre-contract conditions.

1. Take enough photographs to adequately document the existing conditions relative to the project. Take additional photographs for areas with pronounced deficiencies. Photograph the site surrounding the building and adjoining buildings to show existing conditions adjacent to the property before starting the Work. Examples include settlement or cracking adjacent structures, pavements and improvements or defective, deficient, deteriorated or unusual conditions to the building.

B. Periodic Construction Photographs: Take enough color progress photographs taken **bi-weekly**. The actual number and location of views shall be directed by the Architect. Photographs shall be taken at the start and finish of various elements of construction designated by the Architect.

C. Time-Lapse Sequence Construction Photographs: Take enough photographs as indicated, to show the status of construction progress since the last photographs were taken.

1. Frequency: Take photographs **bi-weekly**, with timing each month adjusted to coincide with the cutoff date associated with each Application for Payment.

2. Vantage Points: The Architect and Contractor shall select vantage points. During each of the following construction phases, take not less than **[five] (<insert number>)** of the required shots from the same vantage point each time to create a time-lapse sequence as follows:

- a) Exterior Work, through date of Substantial Completion
- b) Interior Work, through date of Substantial Completion

D. Final Construction Photographs: Take [sixty] (<insert number>) color photographs after the date of Substantial Completion for submission as Project Record Documents. The Architect will direct the Photographer for desired vantage points.

1. Do not include the date stamp on Final Construction Photographs.

E. Additional Photographs: The Owner or Architect may issue requests for additional photographs, in addition to the periodic photographs specified. Additional photographs will be paid for by Change Order and not included in the initial Contract Sum.

1. Photographer will be given three (3) days' notice, where feasible.

2. In emergency situations, Photographer shall take additional photographs within twenty-four (24) hours of request

3. Circumstances that could require additional photographs include, but are not limited to, the following:

a) Special events planned at Project Site

b) Immediate follow-up when on-site events result in construction damage or losses.

c) Photographs to be taken at fabrication locations away from the Project site. These photographs are not subject to unit prices.

d) Salvage materials prior to removal.

e) Substantial Completion of a major phase or component of Work.

f) Extra record photographs at time of final acceptance.

g) Owner's request for special publicity photographs.

F. Storage of Images: In addition to the photographs submitted to the Owner and Architect (via email or preferred Google Drive or Dropbox), the Contractor / Construction Manager shall maintain one set of images on USB or external hard drive in the field office at the Project Site, available at all times for reference. Identify images same as for those submitted to the Architect and Construction Manager.

SECTION 024119 - SELECTIVE DEMOLITION

END OF CONTENTS TABLE

DIVISION 02 EXISTING CONDITIONS
SECTION 024119 - SELECTIVE DEMOLITION

*5/6/2014 -- EDITED TO ADD DEFINITIONS SECTION AND MORE CLOSELY
ALIGN WITH STANDARD REFERENCE SPECIFICATION SECTION.*

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Work of this Section includes the following:
1. Demolition work of existing construction and building elements indicated on Drawings or by provisions of this Section.
 2. Salvage of existing items to be reused or recycled.
- B. Related work of other Sections includes the following:

*DELETE BELOW IN CONSULTATION WITH MECHANICAL ENGINEER OR IF NO
A/C EQUIPMENT OR PIPING DEMOLITION IS INCLUDED IN PROJECT.*

1. Refrigerant handling requirements are specified in Division 01 Section "Work Restrictions."

*DELETE BELOW IN CONSULTATION WITH MECHANICAL ENGINEER OR IF NO
FUME HOOD DUCTWORK DEMOLITION IS INCLUDED IN PROJECT.*

2. Fume hood ductwork demolition requirements are specified in Division 01 Section "Work Restrictions."

USUALLY RETAIN BELOW.

3. Safety barriers and temporary closures are specified in Division 01 Section "Temporary Facilities and Controls."

*RETAIN BELOW FOR REROOFING PROJECTS INVOLVING TEAROFF OF
EXISTING ROOF.*

4. Installation of new roofing system after removal of existing roof is specified in Division 07.

DELETE BELOW IF NO ASBESTOS WORK IN PROJECT.

5. Removal and disposal of asbestos-containing materials is specified in Division 02 Section "Asbestos Remediation."

DELETE BELOW IF NO SPECIAL LEAD PRODUCT REMOVAL WORK.

6. Removal and disposal of lead-containing materials is specified in Division 02 Section "Lead Products Remediation - Renovation, Repair and Painting in Child Care Facilities and Target Housing."

DELETE BELOW IF NO LIGHT FIXTURE DEMOLITION WORK IN PROJECT.

7. Removal and disposal of fluorescent lamps and ballasts is specified in Division 26 Section "Basic Electrical Requirements."

1.3 DEFINITIONS

INCLUDE TERMS THAT APPLY TO PROJECT.

- A. Remove: Detach items from existing construction and dispose of them off-site unless indicated to be salvaged or reinstalled.
- B. Remove and Salvage: Detach items from existing construction, in a manner to prevent damage, and deliver to Owner ready for reuse or store as noted on Drawings.
- C. Remove and Reinstall: Detach items from existing construction, in a manner to prevent damage, prepare for reuse, and reinstall where indicated.
- D. Existing to Remain: Leave existing items that are not to be removed and that are not otherwise indicated to be salvaged or reinstalled.
- E. Dismantle: To remove by disassembling or detaching an item from a surface, using gentle methods and equipment to prevent damage to the item and surfaces; disposing of items unless indicated to be salvaged or reinstalled.

1.4 MATERIALS OWNERSHIP

- A. Unless otherwise indicated, demolition waste becomes property of Contractor.
- B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.
 1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.5 SUBMITTALS

- A. Landfill Records: Indicate receipt and acceptance of demolished material by a landfill facility authorized to accept such material.

1.6 QUALITY ASSURANCE

- A. Notify the Michigan Department of Environmental Quality as required by law, of demolition work, including work that does not involve asbestos abatement work.

1.7 WARRANTY

RETAIN BELOW FOR WORK IMPACTING ROOFS UNDER WARRANTY. CONTACT PLANT REGIONAL ASSET MANAGER TO VERIFY IF ROOF IS UNDER

WARRANTY. MOST ROOFS LESS THAN 15 YEARS OLD ARE UNDER WARRANTY.

- A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during selective demolition, by methods and with materials and using approved contractors so as not to void existing warranties. Notify warrantor before proceeding. Existing warranties include the following:
 - 1. Roof system
- B. Notify warrantor on completion of selective demolition, and obtain documentation verifying that existing system has been inspected and warranty remains in effect. Submit documentation at Project closeout.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 DEMOLITION, GENERAL

- A. Carry out all demolition work in a neat and orderly manner. Keep noise, dust, and similar nuisances to a minimum. Do not collapse walls. Do not throw or drop materials.
 - 1. Where material indicated to be removed is suspected of containing asbestos, inform Owner's Representative immediately. Do not disturb materials suspected of containing asbestos until asbestos content has been verified by Owner.

INCLUDE BELOW WHEN SHAFTS WILL BE CUT INTO FOR ARCHITECTURAL, MECHANICAL OR ELECTRICAL WORK.

- 2. Use extreme caution when cutting into shafts and chases. Shafts and chases may end above occupied areas within building. Take all necessary precautions to prevent debris from falling through openings between floors during demolition operations. Comply with requirements of Division 01 Section "Temporary Facilities and Controls".

RETAIN ARTICLES B & C AS APPLICABLE TO PROJECT

- B. Removed and Salvaged Items:
 - 1. Clean salvaged items.
 - 2. Pack or crate items after cleaning. Identify contents of containers.
 - 3. Store items in a secure area until delivery to Owner.

INCLUDE LOCATION IN BUILDING IF KNOWN OR INDICATE LOCATION IN ANOTHER BUILDING IF APPLICABLE.

- 4. Transport items to Owner's storage area location in building.
- 5. Protect items from damage during transport and storage.
- C. Removed and Reinstalled Items:

1. Clean and repair items to functional condition adequate for intended reuse.
 2. Pack or crate items after cleaning and repairing. Identify contents of containers.
 3. Protect items from damage during transport and storage.
 4. Reinstall items in locations indicated. Comply with installation requirements for new materials and equipment. Provide connections, supports, and miscellaneous materials necessary to make item functional for use indicated.
- D. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during selective demolition. When permitted by Owner's Representative, items may be removed to a suitable, protected storage location off-site during selective demolition and reinstalled in their original locations after selective demolition operations are complete.

3.2 PROTECTION

- A. Temporary Protection: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent materials to remain.
1. Provide protection to ensure safe passage of people around selective demolition area and to and from occupied portions of building.
 2. Provide temporary weather protection, during interval between selective demolition of existing construction on exterior surfaces and new construction, to prevent water leakage and damage to structure and interior areas.
 3. Protect existing utilities and services indicated to remain in service and protect them against damage during demolition operations.
 4. Protect walls, ceilings, floors, and other existing finish work that are to remain or that are exposed during selective demolition operations.
 5. Cover and protect furniture, furnishings, and equipment that have not been removed.
 6. Patch, repair or replace materials and items accidentally damaged during demolition operations.
- RETAIN THE PARAGRAPH BELOW FOR REROOFING PROJECTS.**
7. Re-roofing Project Demolition: Removal of existing roofing materials shall not expose more of the underlying construction than can be recovered in one day with the specified roofing system.
 8. Comply with requirements for temporary enclosures, dust control, heating, and cooling specified in Section 015000 "Temporary Facilities and Controls."
 - a. Confine dust and debris to immediate area of demolition activity to the greatest extent practicable.
- B. Temporary Shoring: Design, provide, and maintain shoring, bracing, and structural supports as required to preserve stability and prevent movement, settlement, or collapse of construction and finishes to remain, and to prevent unexpected or uncontrolled movement or collapse of construction being demolished.

1. Strengthen or add new supports when required during progress of selective demolition.
- C. Remove temporary barricades and protections where hazards no longer exist.

3.3 DEMOLITION OF ARCHITECTURAL FINISHES

- A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:
1. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping, to minimize disturbance of adjacent surfaces. Temporarily cover openings to remain.
 2. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.
 3. Do not use cutting torches without written permission from Owner's Representative. Comply with provisions of the Standard General Conditions and Owner's rules and procedures.
 4. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loading on supporting walls, floors, or framing.
 5. Dispose of demolished items and materials promptly.
- B. Remove all loose material from partially demolished work leaving only sound and secure construction.

INCLUDE THE FOLLOWING WHEN PLASTER REPAIR MAY BE REQUIRED

1. Plaster: Remove loose plaster that will be exposed in finished construction. Loose plaster is defined as plaster material of at least 2 inches by 4 inches in size that can be moved by touch or that sounds hollow when lightly tapped with a hammer.

INCLUDE THE FOLLOWING WHEN CARPET OR RESILIENT FLOORING WILL BE REMOVED

2. Flooring: Where shown, scheduled or otherwise required for application or installation of new floor finishes or coverings, remove existing flooring tile, resilient sheet flooring as follows:
 - a. Remove all traces of existing flooring materials. Remove resilient sheet and tile flooring products in compliance with recommended methods of Resilient Floor Covering Institute "Recommended Work Practices for Removal of Resilient Floor Coverings."
 - b. Remove adhesives, except those containing asbestos. Use chemical strippers approved by manufacturer of new flooring materials, or grind concrete floor surfaces to completely remove adhesive. Obtain Owner's Representative's approval of removal method prior to beginning removal work.

- c. Do not remove vinyl composition tile or adhesives suspected of containing asbestos. Owner will verify asbestos content of questionable materials. Removal of asbestos-containing adhesives (if any) is included in Division 02 Section "Asbestos Abatement."
- d. Clean floor slabs of dust and adhesive residue.

3.4 DEMOLITION OF CONCRETE OR ASPHALT

- A. Water used during concrete and asphalt work (including sweeping and saw-cutting) must be contained and collected for proper disposal. Do not discharge water containing dust or debris from concrete or asphalt work into storm drains, catch basins or to the sanitary sewer system.

3.5 DISPOSAL OF DEMOLISHED MATERIALS

- A. Remove demolition waste materials from Project site and dispose of them in an EPA-approved construction and demolition waste landfill acceptable to authorities having jurisdiction.
 - 1. Remove and transport debris in accordance with the Standard General and Supplemental General Conditions.

INCLUDE THE PARAGRAPHS BELOW IF DEMOLISHED ACOUSTICAL PANELS AND TILE ARE TO BE RECYCLED. THIS IS A VIABLE ECONOMIC OPTION IF COST OF SEPARATING ACOUSTICAL TILE FROM THE REST OF CONSTRUCTION DEBRIS IS MINIMAL. USG, ARMSTRONG AND BPB ALL HAVE RECYCLING PROGRAMS AND WILL PICK UP PROPERLY PREPARED PANELS FREE OF CHARGE IF THE TYPE OF TILE IS RECYCLABLE. SEE ALSO COMMENTS IN SECTION 095100.

3.6 RECYCLING OF MATERIALS

- A. Acoustical ceiling panels and tile.
 - 1. Coordinate with requirements for accepting materials by acoustical ceiling manufacturer selected to supply materials under Division 09 Section "Acoustical Ceilings."
 - 2. Neatly stack large clean pieces on wooden pallets. Shrink wrap pallets or bind with straps.
 - 3. Notify manufacturer when collection and wrapping of materials is complete and ready for pickup.
 - 4. Store in a protected location accessible to manufacturer for pickup.

3.7 SELECTIVE DEMOLITION SCHEDULE

RETAIN THIS ARTICLE IF DRAWINGS DO NOT SHOW ALL SELECTIVE DEMOLITION NOTES AND LISTS. SEE "DEFINITIONS" ARTICLE FOR DEFINITION OF TERMS.

- A. Remove and Salvage:

BELOW ARE SEVERAL STANDARD ITEMS. EDIT TO BE PROJECT SPECIFIC

1. Ancillary Materials: Where mechanical or electrical devices are indicated to be demolished, legally dispose of ancillary materials.

EDIT BELOW TO SUIT PROJECT.

- a. Lubricant oils: Contact UM EHS Hazardous Materials (734-763-4568) to arrange for proper disposal of lubricant oils.
2. Remove cylinders from locksets removed during demolition operations. Turn cylinders over to Owner's Key Office.
3. **<Insert description of items to remove and salvage>.**

B. Remove and Reinstall:

BELOW IS A STANDARD ITEM. EDIT TO BE PROJECT SPECIFIC

1. Remove cylinders from locksets removed during demolition operations. Turn cylinders over to Owner's Key Office.
2. **<Insert description of items to remove and reinstall>.**

"EXISTING TO REMAIN" PARAGRAPH BELOW MAY BE USED TO INFORM CONTRACTOR OF ITEMS THAT ARE TO REMAIN, SUCH AS THOSE THAT OCCUR IN, OR ARE ADJACENT TO, CONSTRUCTION BEING DEMOLISHED, BUT ARE NOT BEING REMOVED AND REINSTALLED. RETAIN PARAGRAPH IF REQUIRED.

C. Existing to Remain:

1. **<Insert description of items to remain>.**

"DISMANTLE" PARAGRAPH BELOW MAY BE USED TO INFORM CONTRACTOR OF ITEMS ATTACHED TO VALUABLE SUBSTRATES THAT REQUIRE SPECIAL CARE IN REMOVAL. INSERT ADDITIONAL REQUIREMENTS IF ITEMS ARE TO BE SALVAGED OR REUSED; OTHERWISE ITEMS ARE TO BE DISPOSED.

D. Dismantle:

1. **<Insert description of items to be removed>.**

NUMBER SECTION DESCRIPTION

DIVISION 02 EXISTING CONDITIONS

SECTION 028110 - REGULATED CONSTRUCTION WASTE REMEDIATION

END OF CONTENTS TABLE

DIVISION 02 EXISTING CONDITIONS

SECTION 028110 - REGULATED CONSTRUCTION WASTE REMEDIATION

SECTION ADDED 9/04

THIS SECTION DESCRIBES REQUIREMENTS FOR REMOVAL AND DISPOSAL OF REGULATED CONSTRUCTION WASTE, I.E., CONSTRUCTION WASTE THAT CANNOT BE DISPOSED OF WITH TYPICAL NON-HAZARDOUS CONSTRUCTION AND DEMOLITION DEBRIS. THIS APPLIES TO BUILDING ITEMS INCLUDING BUT NOT LIMITED TO MERCURY-CONTAINING EQUIPMENT, BATTERIES, SELF-LUMINESCENT EXIT SIGNS, FIRE EXTINGUISHERS AND BULK CLEANERS, PAINTS ETC. THAT WILL BE DISTURBED/REMOVED DURING DEMOLITION OR RENOVATION.

THE A/E MUST CONTACT OSEH EARLY IN THE DESIGN PHASE FOR A SURVEY OF REGULATED BUILDING WASTE TO BE DISTURBED/REMOVED.

1.1 SUMMARY

- A. This Section specifies requirements for the removal, staging and disposal of Regulated Waste, including but not limited to the following:

ALWAYS INCLUDE THE FOLLOWING PARAGRAPHS.

1. Mercury-containing articles and equipment, including but not limited to controls, thermometers, thermostats, switches, manometers and gauges.
2. Batteries, including but not limited to lead-, nickel- and or mercury-containing batteries from exit signs, smoke detectors and backup power sources.
3. Smoke detectors.
4. Self-luminescent exit signs.
5. Containers of paint and paint related materials, cleaners, pesticides, compressed gas cylinders and above ground and below ground fuel tanks and portable fuel cans.
6. Fire extinguishers.
7. Electronic Waste, including but not limited to TVs, computers, monitors, printers and any other electronics containing a circuit board.
8. Hazardous or Liquid Industrial Waste.

- B. Extent of regulated building waste is as follows:

SELECT FROM OPTIONS BELOW

1. As identified in the survey.
2. As identified by the Contractor during demolition or construction.

1.2 RELATED SECTIONS

DELETE PARAGRAPHS BELOW WHICH DO NOT APPLY TO THE PROJECT.

- A. Asbestos abatement is covered in Division 02 Sections "Asbestos Remediation"; "Asbestos Remediation - Floor Tile and Mastic"; and "Asbestos Remediation - Roofing Material".

- B. Removal of lead products is covered in Division 02 Sections "Lead Remediation" and "Lead Remediation - Renovation, Repair and Painting in Child Care Facilities and Target Housing".
- C. PCB disposal is covered in Division 02 Section "PCB Remediation".
- D. Selective demolition is covered in Division 02 Section "Selective Demolition".
- E. Refrigerant handling and disposal is covered in Division 01 Section "Work Restrictions".
- F. Lamp and ballast recycling is covered in Division 26 Section "Basic Electrical Requirements".

1.3 DEFINITIONS

- A. The term "Construction and Demolition Debris" refers to Non-Hazardous Waste generated during construction, renovation and demolition projects.
- B. The term "Regulated Waste" refers to building equipment or materials that will be demolished as part of a renovation or construction project, but cannot be disposed of as typical Construction and Demolition Debris
- C. The term "EHS-HMM" refers to Owner's Environment, Health and Safety Department-Hazardous Materials Management program, 1239 Kipke Drive, Ann Arbor, MI 48109-1010, phone (734) 763-4568.
- D. The term "Project Site" indicates the limits of the project site as indicated on drawings or by provisions of this specification.

1.4 QUALITY ASSURANCE

- A. Contractor personnel must be thoroughly familiar with the following information:
 - 1. Proper methods for removal and staging of regulated waste. See PART 3, 3.2, A-E of this Section for requirements.
 - 2. Proper response in case of an emergency spill or leak. See PART 3, 3.2, F of this Section for requirements.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 NOTIFICATION

- A. Contact EHS immediately if fuel tanks or laboratory chemicals are discovered. EHS-HMM program personnel will arrange for proper removal and disposal of these materials.

3.2 REMOVAL AND STAGING OF WASTE

- A. Regulated Waste must be removed and staged in an intact state in an area easily accessible by EHS-HMM program personnel (loading dock).

- B. Do not disassemble exit signs. Stage whole exit sign for pickup by EHS-HMM.
- C. Store waste containers and other staged waste in a secure area (preferably a locked room) at the project site. Labels shall remain visible and shall be legible. Waste containers shall be inspected daily for leaks, closure, labeling and container integrity. Set containers securely on a hard surface which is accessible to EHS drum carts. Do not stage containers on lawns, dirt piles, gravel drives, areas with mud or basement areas with no elevator access.
- D. Place mercury-containing articles and equipment **ONLY** in EHS provided containers. Remaining waste types do not need to be containerized, but must be staged in a neat and orderly fashion and grouped by waste type (i.e. all batteries staged together, all paint staged together, etc.) Obtain empty containers from the EHS North Campus Transfer Facility, 1655 Dean Road. Contact the EHS-HMM program at 734-763-4568 at least three working days in advance to request pick-up of pails and/or drums.
- E. Do not mix Regulated Waste with trash, and construction debris. Contractor shall be responsible for costs incurred by the Owner for disposing of foreign items mixed with Regulated Waste. **DO NOT DISPOSE OF ANY REGULATED WASTE IN THE REGULAR SOLID WASTE. DO NOT DISPOSE OF ANY LIQUIDS IN THE REGULAR SOLID WASTE.**
- F. Handle mercury-containing articles and equipment with extreme care to prevent the release of elemental mercury. Mercury-containing articles and equipment shall be cushioned to prevent breakage. Leave enough space at the top of each container for the installation of lids. Ensure that the lid is secured tightly. Use duct tape or another strong tape if necessary to secure the lid.
- G. If elemental mercury is accidentally spilled due to the breakage of a mercury-containing article or equipment, immediately evacuate the area to limit exposure and contact the EHS-HMM program at 734-763-4568 (M-F, 8AM-5PM) or after hours the University of Michigan Department of Public Safety (DPS) 734-763-1131. DPS will notify UM EHS On-Call staff to respond to the scene and clean up the mercury.
 - 1. Without walking through the spill area, close off the area and restrict access to the spill site by locking doors to the room or taping off the area. Avoid tracking the material to other areas of the site.
 - 2. Remain at the project site until EHS or DPS personnel arrive at the scene.

3.3 DISPOSAL OF WASTE

- A. Disposal of regulated construction waste shall be done in coordination with EHS.
 - 1. Contact EHS at least one week in advance to request pick-up of the containers.
 - 2. EHS will package, pickup and dispose of properly staged Regulated Waste at no cost to the contractor. Call the EHS-HMM program at 734-763-4568 to schedule a pickup immediately after regulated waste has been staged.

END OF SECTION 028110

SPECIFICATION DIVISION 2

NUMBER SECTION DESCRIPTION

DIVISION 02 EXISTING CONDITIONS

SECTION 028213 - ASBESTOS REMEDIATION

END OF CONTENTS TABLE

DIVISION 02 EXISTING CONDITIONS
SECTION 028213 - ASBESTOS REMEDIATION

PART 1 - GENERAL

1.1 SUMMARY

BEFORE EDITING THIS SECTION DETERMINE WHETHER ASBESTOS ABATEMENT WORK WILL BE DONE AS PART OF THE GENERAL CONTRACT, WILL BE BID OUT SEPARATELY DIRECTLY TO ABATEMENT CONTRACTORS OR WILL BE PERFORMED BY THE OWNER. IF ABATEMENT WORK IS NOT PART OF THE GENERAL CONTRACTOR'S WORK, DO NOT INCLUDE THIS SECTION.

- A. This Section includes removal and disposal of asbestos-containing materials by full enclosure, glove bag, or entire structures methods as applicable. Demolition and debris removal of all asbestos-containing materials identified by provisions of this Section, or shown on drawings, or identified at the site, shall be executed under the provisions of this Section, and other applicable sections of these specifications.
- B. Extent of asbestos removal work is as follows:

EDIT THE FOLLOWING TO SUIT PROJECT

- 1. Indicated on drawings.
- 2. Surveyed and listed in "Schedule of Items Containing Asbestos" Article in Part 3 of this Section.

SELECT ABOVE OR BELOW FOR SURVEYED AND SCHEDULED EXTENT

- 3. Surveyed and listed in "Schedule of Items Containing Asbestos" Article in Part 3 of this Section, as specified in related sections, and as indicated on the drawings. Proceed with Work of this Section simultaneously, and in coordination with, remaining Work of the Project.
- 4. Marked at the site during the pre-bid inspection "walk through".
- 5. Limited to that required to connect new plumbing work to existing piping.

INCLUDE THE FOLLOWING IF UNIT PRICE PAYMENT METHOD IS REQUIRED

1.2 RELATED SECTIONS

INCLUDE THE FOLLOWING IF UNIT PRICE PAYMENT METHOD IS REQUIRED

- A. Unit price items are scheduled with related units of measure in Division 01 Section "Unit Prices."

INCLUDE THE FOLLOWING IF ABATEMENT WORK IS AN ALTERNATE

- B. Work of this Section that is affected by alternates is described in Division 01 Section "Alternates."
- C. Demolition and removal of items not containing asbestos as a component is included in Division 02 Section "Selective Demolition."
- D. Pipe re-insulation is included in Division 23 Section "Mechanical Insulation."

1.3 DEFINITIONS

- A. Asbestos Abatement Firm: Firm engaged to perform actual removal and disposal work, either as Contractor or subcontractor.
- B. Asbestos Containing Material: The term "asbestos containing material" is abbreviated ACM.
- C. Owner's Consultant: Firm engaged by Owner to identify and measure asbestos containing materials, or to inspect demolition operations, including monitoring of air quality.
- D. EHS: Owner's Environment, Health & Safety Department, 1239 Kipke Drive, Ann Arbor, MI 48109-1010; phone (734) 647-1143.

1.4 SUBMITTALS

- A. Initial Submittals: Submit the following documents to Owner's Representative at the pre-abatement meeting:
 - 1. License from the State of Michigan in accordance with Act 135 P.A. 1986 (Asbestos Abatement Contractors Licensing Act).
 - 2. Copy of notification sent to appropriate federal, state, and local agencies.
 - 3. Schedule of removal, specifying work locations, length and number of shifts, foreman's name, and crew size.
 - 4. Disposal Site Certification: Letter, signed by the Contractor, certifying that an approved asbestos-accepting type II landfill will be used for disposal. Include the facility name, address, and phone number.
- B. Waste Disposition Submittals: Submit to ESH signed waste shipment record stating that asbestos waste has been properly disposed. Submit the following:
 - 1. Receipts (trip tickets) from approved landfill.
 - 2. Asbestos Waste Shipment Record: As follows:
 - a. Prior to removing asbestos-containing material from the project site, provide Owner's Representative or Owner's consultant with a completed waste shipment record fully complying with Section 61.150 of the NESHAP standard, and 49 CFR Part 172.200 of the U.S. Department of Transportation, and including all required information.
 - b. Ensure that the landfill operator provides a signed copy of the waste shipment record to EHS within 35 days of the date that asbestos-containing material is removed from the project site. If waste is not transported directly from the project site to the landfill, the waste shipment record shall reflect each transfer.
 - c. The Owner will not make final payment prior to receipt of signed waste shipment record.
- C. Contract Closeout Submittals: Comply with the following additional requirements of Division 01 Section "Closeout Procedures":
 - 1. Asbestos Quantity Removal Report: Submit 3 copies of asbestos quantity removal report to Owner's Representative at least 4 weeks prior to Contractor's application for final payment. Include information in the following format:
 - a. Quantities of Asbestos Removed:

- 1) Asbestos insulation removed from _____ft. of _____ inch diameter pipes.
 - 2) _____ square feet of asbestos insulation removed from ducts, chiller surfaces, equipment, etc.
 - 3) _____ square feet of asbestos-containing debris removed from project area.
 - 4) _____ square feet of asbestos-containing floor covering.
2. Statement of Visual Inspection: Prior to application for final payment, submit to EHS a statement of visual inspection signed by the Contractor's competent person/supervisor. Include the following:
- a. Name of licensed contractor conducting work.
 - b. Name, signature, and title of on-site supervisor.
 - c. Name, location, and start and finish date of abatement work.
 - d. Current date.
 - e. Statement that the work was completed according to applicable federal, state, and local laws, and these specifications.
 - f. Statement that the Asbestos Abatement Firm's field supervisor has visually inspected the work site and has found no dust, debris, or other suspect asbestos-containing materials that were part of the scope of work.

1.5 **QUALITY ASSURANCE**

- A. Pre-Qualified Asbestos Abatement Firms: Engage one of the following pre-qualified firms to perform abatement of asbestos containing materials:
1. 21st Century Salvage Inc.
 2. Asbestos Abatement Incorporated
 3. BDS Environmental
 4. Certified Abatement Services, Inc.
 5. Detroit Dismantling Corporation
 6. Environmental Maintenance Engineers
 7. Environmental Specialty Services, Inc.
 8. Great Lakes Environmental Service, Inc.
 9. Homrich
 10. Innovative Environmental Solutions & Services DBA Paige Construction
 11. Michigan Mechanical Abatement, Inc.
 12. Midwest Environmental Inc.
 13. MIS Corporation-Michigan
 14. National Environmental Group, LLC
 15. Next Generation Environmental, Inc.
 16. Professional Thermal Systems, Inc.
 17. Quality Environmental Services, Inc.
 18. Rand Environmental Services
- B. Regulatory Requirements: Make all necessary notifications to the appropriate federal, state, and local agencies.

1. The National Emission Standards for Hazardous Air Pollutants (NESHAP), Asbestos regulation 40 CFR 61, Sub-Part M requires that if at least 80 lin. meters (260 lin. ft.) of friable asbestos materials, at least 15 sq. meters (160 square feet), or 1 cu. meter (35 cu. ft.) of friable asbestos materials, or other facility components are stripped or removed while renovating a facility, all the requirements of section 61.147 apply.
 2. When applicable, notify the Michigan Department of Environmental Quality (MDEQ), the Michigan Department of Licensing and Regulatory Affairs (MDLARA), and appropriate state and local regulatory agencies. No work shall be conducted without notification of authorities having jurisdiction.
- C. Pre-Abatement Meeting: Approximately 2 weeks prior to scheduled start of the abatement project, the Owner's Representative will hold a pre-abatement meeting with the individuals indicated below:
1. Contractor' representative.
 2. Asbestos Abatement Firm's representative.
 3. EHS representative.
 4. Owner's consultant.
 5. Owner's Representative.
 6. Owner's building maintenance personnel.
- D. The meeting agenda will include:
1. Review of the scope of work.
 2. Removal methods to be used.
 3. Review of Contractor's initial submittals.
 4. A walk-through survey of the site, if appropriate.
- E. For small projects, the meeting may be suspended at the discretion of the Owner's Representative. If the meeting is suspended, deliver required initial submittals to the Owner's Representative's office 2 weeks prior to the start of work.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 ASBESTOS ABATEMENT, GENERAL

- A. Conduct asbestos abatement operations in a manner that fully protects Contractor's and subcontractor's employees, the general public, and building occupants from exposure to asbestos and other safety and health hazards.
1. Asbestos abatement projects shall be directly supervised by a competent person as described in 29 CFR 1926.1101.
 2. The supervisor/competent person must complete responsibility checklists throughout all phases of the project.
- B. Protect adjacent areas, materials and surfaces from damage due to demolition operations, including but not necessarily limited to the following:
1. Water damage.

2. Dirt, dust and debris.
 3. Abrasion.
 4. Cuts and scratches.
 5. Holes from fasteners for temporary barriers.
- C. All asbestos work shall be conducted within a regulated area that complies with the following requirements:
1. Post a sufficient number of signs required by 29 CFR 1926.1101 at the asbestos abatement area and at every work area entrance, so that tenants, Owner's personnel, and other contractor's employees have an opportunity to take protective measures before exposing themselves to asbestos. Place banners if necessary to secure open areas. Include information on signs indicating location and quantity of asbestos-containing material.
 2. Allow only authorized, properly protected personnel to enter the regulated area. Immediately report unauthorized individuals entering the work area to EHS or the Owner's consultant.
- D. When required, provide employees and inspectors authorized to enter the regulated area with protective work clothing consisting of disposable Dupont "Tyvek" (or equivalent) full body coveralls, head covers, boots, and other necessary safety gear, including a hard hat and eye protection.
- E. Provide respiratory protection to employees as required by current OSHA regulations including 29CFR 1910.134 and 1926.1101.
1. Provide asbestos abatement workers with powered air purifying respirators (PAPR) with full facepiece and HEPA filters for adequate protection during asbestos material removal operations. Respiratory protection may be down-graded if negative exposure assessment indicates that less protection is required.
 2. A half-face respirator or PAPR must be worn while tearing down and setting up enclosures, while glovebagging, and during pre-cleaning and post-cleaning work.
 3. Do not allow respirators to be pulled away from faces while in the work area.
 4. Maintain an extra PAPR unit on site at all times for the duration of the abatement project.
 5. Provide full facepiece supplied-air respirators operated in pressure demand mode equipped with air auxiliary and pressure self-contained breathing apparatus or HEPA egress filters if required for measured fiber concentrations.
- F. Maintain at each job site and post the following documents:
1. Copy of MDEQ/MDLARA notification.
 2. Employee respiratory protection program.
 3. Michigan Right-To-Know poster.
 4. Material Safety Data Sheet locator.
 5. Company standard operating procedure.
 6. This specification Section.
 7. Material Safety Data Sheets for products used on job.
 8. CFR 1926.1101.
 9. CFR, Part 61 (NESHAP).

10. The foreman's or supervisor's Contractor/Supervisor Accreditation Certificate.
 11. State of Michigan Accreditation Certificates and Medical Approval for each worker.
- G. Use the following engineering controls and work practices for all asbestos abatement operations, regardless of measured exposure levels:
1. Vacuum cleaners equipped with HEPA filters to collect all asbestos-containing dust and debris.
 2. Wet methods to control exposures during asbestos removal and clean-up, except where proven to be infeasible.
 3. Prompt clean-up and disposal of asbestos-contaminated wastes and debris in leak-proof containers.
 4. Establish a decontamination area, adjacent and connected to the regulated area, if the Project requires the removal of more than 25 lin. ft., or 10 sq. ft. of thermal systems insulation or surfacing ACM.
 5. Establish an equipment area adjacent to the regulated area if the Project requires the removal of less than 25 lin. ft. or 10 sq. ft. of thermal systems insulation or surfacing ACM.
- H. Do not use any of the following equipment or work practices during asbestos abatement operations, regardless of measured exposure levels:
1. High-speed abrasive disc saws not equipped with point-of-cut HEPA ventilation or HEPA filtered exhaust air enclosures.
 2. Blowing with compressed air to remove asbestos-containing materials.
 3. Dry sweeping, shoveling, or other dry methods to clean up asbestos-containing dust and debris.
 4. Employee rotation as a means of reducing employee exposure to asbestos.

ALWAYS RETAIN FULL ARTICLE BELOW

3.2 ASBESTOS REMOVAL BY FULL ENCLOSURE METHOD

- A. Preparation of the Work Area: Complete the following preparation work prior to beginning asbestos removal operations:
1. Install critical barriers over each opening into the regulated area. The following requirements are in addition to, not in lieu of, other indicated surface and object protection requirements:
 - a. Seal each opening between the work area and adjacent areas with not less than 2 layers of 4-mil polyethylene sheeting. Use an expanding-polyurethane foam gun to seal areas with large numbers of pipes, conduits and beams. Openings include, but are not necessarily limited to, windows, skylights, doorways, elevator hoistway openings, corridor entrances, drains, ducts, grills, grates, and diffusers.
 - b. Seal intake and exhaust vents and duct seams within the regulated area with not less than 2 layers of 6-mil polyethylene sheeting.

2. HVAC System Shutdown: Owner's maintenance personnel will shut down heating, cooling, and air conditioning systems when necessary. Coordinate scheduling with Owner's personnel and provide 72 hours notice to the Owner's Representative prior to planned shut-down.
3. Protection of Surfaces and Objects: The following requirements are in addition to, not in lieu of, indicated work area sealing requirements. Cover the following surfaces and objects as follows:
 - a. Protect all surfaces beneath all removal activity. Remove moveable objects from the work area, and cover fixed objects with impermeable dropcloths or plastic sheeting with edges securely sealed with tape.
 - b. Cover open tanks with plywood or other solid material.
 - c. Provide clean, fresh air to mechanical equipment, where required to maintain proper performance of equipment.
 - d. Fully pre-clean all covered surfaces with amended water and a HEPA vacuum.
 - e. Cover walls with not less than 2 layers of 4-mil polyethylene sheeting. Construct free-standing enclosure walls of not less than 6-mil polyethylene sheeting, with supports spaced not more than 3 feet o.c.
 - f. Cover floors with not less than 2 layers of 6-mil polyethylene sheeting. Avoid seams where possible. If seams are necessary, overlap not less than 12 inches and tape joints. Extend sheeting 12 inches up the side walls leaving no seams at the wall and floor joint. Immediately repair punctures and leaks, and clean up seepage.
4. Cleaning: Do not use cleaning methods that raise dust, such as sweeping or using vacuum cleaners not equipped with HEPA filters. Do not disturb asbestos materials during pre-cleaning phases.
 - a. Treat water removed from the enclosure as asbestos contaminated waste. Fully seal floor drains.
5. Deactivate or install ground-fault circuit interrupters on each electrical circuit within the enclosure.
6. Construct a three-chambered decontamination facility that is adjacent to and connected to the regulated area, and that consists of a dirty room, a shower room, and a clean room in series. Construct decontamination facilities that are exposed to weather of lumber and exterior grade plywood. Secure the facility when not in use.
 - 1) Supply the equipment room with properly labeled, impermeable bags and containers for the containment and disposal of contaminated protective equipment.
 - 2) Construct showers that comply with the requirements of 29 CFR 1910.141 (d) (3), with the shower room adjacent to both the equipment room and the clean room. Filter water waste and shower water through a 5 micron filter, or remove water from site as asbestos waste.
 - 3) Equip the clean room with a locker or appropriate storage container for each employee.
7. Employee Decontamination Facilities: Comply with the following requirements:

- a. Access the work area only through an approved decontamination system. Lock or block other entrances. Seal emergency exits (for use during a fire or accident) with polyethylene sheeting and tape.
 - b. Seal the waste pass-out, except during the removal of asbestos waste from the enclosure.
 - c. Entrance To The Regulated Area: Employees shall enter the decontamination area through the clean room, remove and store clothing, and put on protective clothing and respiratory protection before passing through to the equipment room.
 - d. Exit From The Regulated Area: Employees shall exit the regulated area by removing gross contamination and debris from their protective clothing. The clothing shall be removed and disposed of in the equipment room into labeled impermeable bags or containers. Employees shall then shower and enter the clean room before changing into street clothes.
8. Local Exhaust Ventilation: Maintain portable air filtration units with a HEPA filter in use during asbestos abatement operations requiring enclosures. Units shall conform to OSHA Standard 1926.1101, Appendix F, and shall be designed in accordance with 40 CFR 61, Subpart M, Section 61.153.
- a. Exhaust directly to building exterior. Provide a backup portable air filtration unit at each removal enclosure. Startup ventilation units prior to initiating asbestos removal operations and run until the Owner's consultant has approved their shut-down after cleaning, sampling, visual inspection, and tear-down.
 - b. Direct air movement within the enclosure away from the employees' work area and toward the air filtration device.
 - c. Provide not less than 4 air changes per hour within the enclosure.
 - d. Within the enclosure, through the period of its use, maintain a pressure differential of not less than minus 0.02 water gage with respect to ambient conditions outside the enclosure.
9. Visually inspect the enclosure for breeches and smoke-test for leaks before work begins, and before the start of each work shift. Make all modifications to the enclosure prior to starting removal work.
- B. Asbestos Removal Operations: Comply with the following requirements for asbestos removal operations:
- 1. Immediately preceding asbestos removal, apply a fine mist of amended water (water and wetting agent) to the asbestos materials and the surrounding area. Keep surrounding areas wet by spraying periodically with amended water. Maintain a high humidity environment to assist in fiber settling.
 - 2. Remove asbestos material using two-person teams, on staging platforms, if necessary.
 - 3. Remove the wet asbestos material as intact sections or components. Carefully lower the material to the floor or place directly into container. Never drop or throw asbestos material on the floor.

4. At working heights between 15 and 50 feet above the floor, place removed asbestos materials in containers at the elevated levels and lower to floor, or place onto inclined chutes or scaffolding for subsequent collection and placement into containers. Clean all debris at the completion of each workday.
5. Once the asbestos material is at ground level, pack in labeled 6-mil polyethylene bags, wet and, if appropriate, hold in drums prior to starting the next section.
6. Use 2 sealed and labeled 6-mil thick bags for storage and transportation of asbestos waste. Standing water shall be in each bag
7. Wrap large components removed intact in two layers of 6-mil polyethylene sheeting, label, and secure with tape for transport to the landfill. Comply with all wetting requirements.
8. Treat wires, hangers, steel bands, nails, screws, metal lath, tin sheeting, and similar sharp objects removed with asbestos material as asbestos waste. Place in drums for disposal.
9. Label containerized asbestos waste in accordance with OSHA, EPA, and Department of Transportation regulations, as follows:
 - a. Label each container with OSHA label that contains the following information:

**DANGER
CONTAINS ASBESTOS FIBERS
MAY CAUSE CANCER
CAUSES DAMAGE TO LUNGS
DO NOT BREATHE DUST
AVOID CREATING DUST**

- b. Label each container with Owner's and Asbestos Abatement Firm's names and addresses as required by NESHAP. Owner's address is EHS, 1239 Kipke Drive, Ann Arbor, MI 48109-1010.
 - c. Label each container with Class 9 Label required by DOT and identify waste as "RQ, Asbestos NA 2212."
10. Prepare a complete and accurate NESHAP Waste Shipment Record (special manifest). Assure all information required by the U.S. Department of Transportation regulation is included. Under "special handling instructions" provide the required DOT identification information: RQ Asbestos 9, NA 2212, PG III.
 - a. Do not remove waste from site until Owner's Representative has signed and verified the shipment record.
11. Remove containerized asbestos waste daily from site, or store on site in a locked or secured location until ready for final disposal. Obtain approval of Owner's Representative and EHS representative of the location of disposal containers. Outdoor waste containers shall be fully enclosed and locked. Mark vehicles used to transport waste during the loading and unloading of asbestos waste with a visible sign, as required by NESHAP.
12. Each container shall have excess water evident, or the asbestos waste shall be mixed in a slurry.

- C. Post-Removal Operation Requirements: After completion of asbestos removal and clean-up operations, comply with the following requirements:

1. The Asbestos Abatement Firm representative, in presence of Owner's consultant, shall inspect the entire work area for asbestos. Include decontamination unit, all plastic sheeting, seals over doorways, windows, and all other openings.
 - a. If any suspect asbestos is found, repeat final cleaning operation, until the visual inspection is satisfactory to the Owner's consultant and the asbestos removal firm. Asbestos not scheduled to be removed as part of the project is exempt.
2. Encapsulate all walls, floors, ceilings, other exposed surfaces, and decontamination facilities after completing the work area inspection.
 - a. Remove the inner polyethylene barrier that is not integral to maintaining negative pressure in the enclosure at this time, and post-abatement air samples will be collected by Owner's consultant. Immediately clean any asbestos-containing materials observed behind these secondary barriers.
3. When post-abatement fiber levels are greater than either 0.01 fiber/cc or background level, repeat cleanup operation until the area is below either 0.01 fibers/cc or background level.
4. When the post-abatement samples are in compliance, and the Owner's consultant or EHS has completed the visual inspection, the enclosure shall be removed.
 - a. Turn off HEPA filter exhaust units only after all barriers have been removed.
 - b. A final visual inspection will be conducted by the Owner's consultant or EHS representative before the Contractor is released from the removal site. The final inspection will include tape, polyethylene sheet, debris, and equipment.

DELETE BELOW IF NO GLOVE BAG REMOVAL TECHNIQUES ARE APPLICABLE

3.3 REMOVAL BY NEGATIVE PRESSURE GLOVE BAG SYSTEMS

- A. Equipment and Materials: Use the following equipment and materials for each glovebag procedure:
 1. Glovebags fabricated of 6-mil thick plastic without seams at the bottom.
 2. HEPA vacuum system attached to the glovebag and run continuously during operation.
 3. Protective suits and respirators.
 4. Plastic sheeting.
 5. Wetting agent.
 6. Encapsulant.
- B. Procedures: Comply with the following glovebag method requirements:
 1. Wrap loose and friable material adjacent to the removal area in 2 layers of 6-mil thick plastic, or otherwise render intact.
 2. Place plastic sheeting on the floor and equipment beneath each glovebag.
 3. Wet-wipe or HEPA vacuum dust and dirt from insulation to be removed.
 4. Install glovebags to completely cover the circumference of pipe or other structure where work is to be done.
 5. Smoke-test glovebags for leaks. Seal leaks prior to use.

6. Insert and seal equipment that penetrates the bag (spray wands, vacuum nozzles) before insulation is disturbed.
 7. Wet the insulation to be removed before, during, and after the removal.
 8. Provide only bags capable of withstanding constant wetting and evacuation through a HEPA filtered device.
 9. During the performance of glovebag operations removing thermal systems, insulation, or surfacing materials, employ not less than 2 persons, working simultaneously, for each task.
 10. Wipe insulation residue from the pipe prior to application of an encapsulant.
 11. Spray the pipe and glovebag with an encapsulant before the bag is removed from the pipe.
 12. Seal exposed insulation ends with a heavy grade mastic.
 13. Follow glovebag manufacturer's instructions.
 14. Comply with requirements for asbestos waste disposal indicated in "Removal by Full Enclosure Method" of this Section.
- C. Unacceptable Conditions and Procedures and Conditions: In general, do not use the glovebag method in conditions that prevent safe completion of the removal process. The following procedures are not allowed during glovebag removal:
1. Removing severely damaged insulation.
 2. Overloading glovebag.
 3. Sliding or moving insulation or glovebag along pipe.
 4. Squeezing bags to remove air.
 5. Placing glovebags on pipes or other surfaces that exceed 150 deg. F.
 6. Using a glovebag more than once.

DELETE BELOW IF NO ENTIRE STRUCTURES REMOVAL METHODS ARE APPLICABLE

3.4 REMOVAL BY ENTIRE STRUCTURES METHOD

- A. The removal of entire structures without disturbing the asbestos is encouraged. An example is removal of asbestos covered pipe fittings by cutting out the entire pipe section scheduled for demolition.
1. Obtain Owner's Representative's approval of removal by entire structures method prior to starting the project.
- B. Required Procedures: Comply with the following requirements applicable to removal of entire structures:
1. Properly wet all asbestos materials before starting procedure. Ensure that material stays adequately wet throughout the entire procedure by continuing application of water as needed.
 2. Properly and fully wrap and label the structure before it is moved or cut out.
 3. Provide the equipment necessary for asbestos debris cleaning on site during the procedure.
 4. Comply with requirements for asbestos waste disposal indicated in "Removal by Enclosure Full Method" Article of this Section.

3.5 FIELD QUALITY CONTROL

- A. Pre-Notification of EHS Representative: To permit adequate time to schedule air monitoring, notify the EHS representative not less than 10 calendar days prior to planned start of all removal operations.

DELETE PARAGRAPH B. AND SUBPARAGRAPHS 1. AND 2. BELOW IF ONLY ROOFING REMOVAL IS INCLUDED.

IF BOTH ROOFING AND OTHER CATEGORIES OF REMOVAL WORK ARE INCLUDED IN PROJECT, INCLUDE HIDDEN TEXT IN PARAGRAPHS BELOW

- B. Air Monitoring: Except for roofing removal work Owner will retain a professional independent industrial hygiene consultant to collect air samples and oversee the project to insure that compliance with applicable codes, regulations, and ordinances, including 29 CFR 1926.1101, NESHAP, and P.A. 135. The consultant will collect background, contiguous, work area, personal, and post-abatement air samples. EHS will provide one copy of the report to the Contractor.
 - 1. If contiguous sampling indicates airborne fiber concentrations above 0.01 fibers/cc or background level, work will be stopped unless otherwise approved by EHS. Work may resume when the source of contamination has been corrected and the contamination has been cleaned to the satisfaction of the EHS.
 - 2. Glovebag, entire structures, and full enclosure clearance sampling will be by the aggressive PCM method when feasible. Enclosures must be fully dry before sampling.
 - 3. Roofing removal Contractors may provide their own air monitoring in compliance with roofing removal requirements of this Section.
- C. Inspection: If during the project, EHS representative or Owner's consultant determines that work practices either violate applicable rules and regulations or endanger employees, the Contractor's on-site representative shall stop operations immediately and take corrective action. Cooperate fully with EHS representative and Owner's consultant.

RETAIN BELOW FOR REMOVAL OF FLOOR TILE, FLOORING ADHESIVE, TRANSITE TOPS AND PANELS, OR ROOFING MATERIALS

3.6 REMOVAL OF NON-FRIABLE ASBESTOS-CONTAINING MATERIALS

ALWAYS RETAIN PARAGRAPHS BELOW IF "NON-FRIABLE" ARTICLE IS RETAINED

- A. Removal of Non-Friable Materials, General: For each type of non-friable asbestos-containing material indicated, comply with the following requirements:
 - 1. Comply with requirements of Article 3.1 of this Section.
 - 2. Conduct non-friable material removal operations to prevent the material from becoming friable during the removal and disposal process. No visible emissions are permitted. If the material does not remain substantially intact, comply with the requirements for friable asbestos removal specified in Articles 3.2 of this Section (except roofing removal).

3. Place impermeable dropcloths on surfaces beneath removal activity.
4. Do not conduct asbestos removal unless the Owner's Consultant is present at the site and EHS has been notified. For roofing removal projects, notify EHS prior to start of work.
5. Labeling Containerized Waste: Comply with the requirements of Article 3.2, paragraphs B.9.a. through c. of this Section.

RETAIN BELOW IF VINYL-ASBESTOS TILE REMOVAL IS INCLUDED IN PROJECT - DELETE IF NONE

B. Removal of Resilient Flooring Materials:

1. Prior to removal, critical barriers shall be placed over openings to the regulated area. During removal, air in the regulated area shall be filtered through the use of air filtration device(s).
2. Removal of floor tile with an infrared heat machine eliminates the critical barrier and negative pressure requirements.
3. Prior to removal, clean floors of dirt and debris with vacuums equipped with HEPA filter, disposable dust bag, and metal floor tool (brush tools are not permitted). Control odors and fumes with engineering controls.
4. Sanding the floor or related backing is not permitted.
5. Mechanical chipping of vinyl floor tile is prohibited, except when performed in a negative pressure enclosure.
6. Thoroughly wet vinyl floor tile with amended water. Use a slip scraper or equivalent to loosen the floor tile from the floor. Remove the floor tile in an intact state. Keep the floor tile wet throughout the removal and cleanup.
 - a. Removal of floor tile using an infrared heat machine eliminates the wetting requirement.
7. Remove vinyl sheet flooring by cutting while wetting the snip-point. Wet sheet flooring during delamination. Rip-up of resilient flooring material is not permitted.
8. Clean resilient flooring of all debris using a HEPA vacuum, wet sweeping, mopping or equivalent and allow time to dry. Dry sweeping is prohibited.
9. Place the resilient flooring material and debris in an asbestos disposal bag. Seal the bag and place it in a properly labeled drum or polypun bag. Comply with the disposal and labeling requirements of this Section.

RETAIN BELOW IF VINYL TILE ADHESIVE REMOVAL IS INCLUDED IN PROJECT - DELETE IF NONE

C. Asbestos Mastic Removal:

1. Clean the floor of all debris using a HEPA vacuum, wet sweeping, mopping or equivalent.
2. Remove as much mastic as possible using an EHS approved solvent. Control odors and fumes with engineering controls.
3. Perform scraping of residual adhesive and backing using wet methods.
4. After all debris is removed, thoroughly mop the floor and allow time to dry.

5. If shot blasting is used to remove mastic, comply with requirements for friable asbestos removal specified in Article 3.2 of this Section.
6. Properly dispose of all asbestos and solvent waste according to all applicable regulations, and comply with the disposal and labeling requirements of this Section.

RETAIN BELOW IF TRANSITE BOARDS OR ASBESTOS-CONTAINING LABORATORY TOPS REMOVAL IS INCLUDED IN THE PROJECT - DELETE IF NONE

- D. Asbestos-Containing Siding, Transite Panels, and Laboratory Counter Tops: Remove non-friable asbestos-containing siding, shingles, transite panels, and laboratory counter tops using the following technique:
1. Cutting, abrading, or breaking material is not permitted.
 2. Wet material with amended water prior to removal.
 3. Carefully disassemble material such a manner as to prevent breakage.
 4. Wrap and seal material in two layers 6-mil thick polyethylene, asbestos disposal bags, or equivalent. Seal bags or packages and properly label them with appropriate asbestos warning signs as indicated in "Removal of Non-Friable Materials, General" Article of this Section.
 5. Immediately lower to the ground unwrapped or unbagged materials via covered, dust-tight chute, crane, or hoist; or place in an impervious waste bag or wrap in plastic sheet and lower to the ground no later than the end of the work shift.
 6. Clean the floor of all debris using a HEPA vacuum, wet sweeping, mopping or equivalent and allow time to dry.
 7. Dispose of asbestos waste in accordance requirements of this Section.

RETAIN BELOW IF ROOFING REMOVAL IS INCLUDED IN PROJECT - DELETE IF NONE

- E. Non-Friable Asbestos-Containing Roofing Materials: Non-friable asbestos-containing roofing materials may be removed in a non-friable state. This specification does not apply to removal of intact cements, coatings, or mastics. Obtain EHS review and approval of planned removal operations prior to beginning. Remove non-friable asbestos-containing roofing materials in using the following technique:
1. Each employee who is likely to disturb or handle asbestos material shall have completed an 8-hour training class, and the project shall be supervised by a competent person who has completed the appropriate contractor/supervisor course.
 2. Isolate roof level heating and ventilation air intake sources within the regulated area and others that will be affected; or arrange for shut-down the affected ventilation system during removal operations. Acceptable isolation techniques include the following:
 - a. Use 20-foot or larger buffer zones.
 - b. Installation of HEPA filters over the air intakes.

- c. Erection of horizontal or vertical extensions that relocate the opening of the intake outside or above the regulated area.
 - d. Covering the intake with plastic sheeting or other appropriate barrier.
3. Personal protective equipment (PPE), including disposable coveralls and NIOSH approved appropriate high efficiency particulate absolute (HEPA) respirators, shall be worn by personnel if the asbestos containing material is not removed in an intact state.
4. Remove roofing material in an intact state.
5. Use wet methods to remove materials that are not intact, or that are rendered not intact during removal, except where wet methods will create a safety hazard or are otherwise not feasible.
6. Continuously apply a water mist to the blade of power cutting tools, unless a competent person determines that misting will substantially decrease worker safety.
7. When removing roofing felts, collect the dust generated by power roof cutters with a HEPA-filtered dust collector; or immediately vacuum using a HEPA-filtered vacuum along the cut line. For smooth surfaces only, gently sweep wet dust generated from cutting operations, and carefully and completely wipe up the still-wet dust and debris.
8. For removal and repair operations of intact roofing less than 25 sq. ft. in area, the use of wet methods or HEPA vacuuming is not required, provided manual methods do not render the material non-intact and no visible dust is created.
9. Do not drop or throw to the ground asbestos-containing roofing material that has been removed. As soon as practicable, but not later than the end of the work shift, lower debris to ground either by passing or carrying by hand, or by lowering to the ground in a covered, dust-tight chute, crane or hoist.
 - a. While on the roof, keep non-intact asbestos-containing materials wet; or seal in impermeable waste bags, or wrap in plastic sheeting.
 - b. While on the roof, intact asbestos-containing material is not required to be kept wet, bagged, or wrapped.
10. Upon being lowered to the ground, transfer unwrapped material to a closed receptacle in manner that precludes the dispersion of dust. Dispose of the material in an asbestos-accepting Type II landfill. Notify the landfill that the roofing material contains asbestos and provide waste shipment records to EHS within 35 days.
11. For removal of intact pipeline asphaltic wrap or roof flashings that contain asbestos, engage a competent person to examine the material and determine whether the material is intact and likely to remain intact during removal. Remove the material using manual methods. Sanding, grinding, or other abrading operations are not permitted. Do not throw or drop materials to the ground. Lower the material in a covered, dust-tight chute, crane, or hoist. Remove debris from the roof at the end of the work shift.

RETAIN BELOW IF EXTERIOR MISCELLANEOUS (NON ROOFING) REMOVAL IS INCLUDED IN PROJECT - DELETE IF NONE

- F. Non-Friable Asbestos Containing Exterior Sealant, Caulk, Putty and Window Glazing: Remove exterior non-friable asbestos-containing sealants, caulk, putty and window glazing using the following technique:
1. Any existing loose material shall be HEPA vacuumed prior to removal.
 2. The material shall be thoroughly wetted prior to and during its removal.
 3. The material should be removed as intact as possible. Manual methods such as scraping or raking shall be used, unless power tools are used that are equipped with HEPA ventilation. If power tools are used comply with Article 3.2 (Asbestos Removal by Full Enclosure Method) of this Section.
 4. Asbestos containing materials removed, shall be immediately bagged or wrapped and kept wetted until transferred to a closed receptacle.
 5. The removal of windows and other whole building components without disturbing the asbestos is encouraged. An example of this would be removing a window with asbestos containing glazing or caulk by cutting out the entire window scheduled for demolition. Comply with Article 3.4 (Removal by Entire Structures Method) of this Section when removing entire building components containing asbestos.
 6. If the material becomes friable during the abatement process, comply with the requirements for friable asbestos removal specified in Article 3.2 (Asbestos Removal by Full Enclosure Method) of this Section.
 7. Dispose of all asbestos containing materials, including those removed by the entire structures method, per the requirements of this Section.

3.7 SCHEDULE OF ITEMS CONTAINING ASBESTOS

WHERE THE FOLLOWING PARAGRAPH IS INCLUDED, BE SURE TO REFERENCE THESE BIDDING REQUIREMENTS IN THE "INSTRUCTIONS TO BIDDERS" FRONT-END DOCUMENT

- A. Bidding Requirements: Comply with the following requirements related to bidding:
1. Survey quantities provided are approximate. Bidders are required to field investigate as necessary and assume all responsibility to verify the work required and quantities involved for complete asbestos abatement.
 2. The building is open for field inspection by all bidders during the bidding period.
 3. A "pre-bid orientation meeting" will be conducted to familiarize prospective bidders with site conditions and provide for verification of marked and scheduled quantities, as applicable.

EDIT THE FOLLOWING LIST TO SUIT PROJECT

- B. The following items have been surveyed and determined to have asbestos as a component:
1. Roofing felts and base flashing.

2. Roofing underlayment.
3. Spray applied insulation.
4. Blown-in insulation.
5. Fire proofing materials.
6. Fire doors.
7. Drywall and drywall taping compounds.
8. Acoustic and decorative plaster.
9. Vinyl asbestos floor tile.
10. Composition sheet flooring.
11. Shaft wall construction.
12. Flooring adhesives.
13. Textured paints and coatings.
14. Laboratory countertops, sinks and shelves.
15. Cabinet liners and bottoms.
16. Laboratory fume hood interior.
17. Vinyl wall coverings.
18. Cement pipes.
19. Boiler insulation.
20. Piping insulation.
21. Duct insulation.
22. Flexible fabric ductwork connections.
23. Cement composition board ducts.
24. Electrical panel partitions.
25. Electrical wiring insulation and electrical cloth.
 - a. Assignment of Responsibility: Removal of wire covered with non-friable, asbestos-containing, insulation shall be performed by the electrical (sub)contractor. Electrical (sub)contractor shall accumulate wire in containers furnished by the asbestos abatement contractor. The asbestos abatement (sub)contractor shall seal and dispose of containers as asbestos waste.
26. Underground electric ductbank insulation.

NUMBER SECTION DESCRIPTION

DIVISION 02 EXISTING CONDITIONS

SECTION 028214 - ASBESTOS REMEDIATION - FLOOR TILE AND MASTIC

END OF CONTENTS TABLE

DIVISION 02 EXISTING CONDITIONS

SECTION 028214 - ASBESTOS REMEDIATION - FLOOR TILE AND MASTIC

USE THIS SECTION FOR PROJECTS WHERE ASBESTOS ABATEMENT IS LIMITED TO REMOVING NON-FRIABLE VINYL ASBESTOS FLOOR TILE.

PART 1 - GENERAL

1.1 SUMMARY

BEFORE EDITING THIS SECTION DETERMINE WHETHER ASBESTOS ABATEMENT WORK WILL BE DONE AS PART OF THE GENERAL CONTRACT, WILL BE BID OUT SEPARATELY DIRECTLY TO ABATEMENT CONTRACTORS OR WILL BE PERFORMED BY THE OWNER. IF ABATEMENT WORK IS NOT PART OF THE GENERAL CONTRACTOR'S WORK, DO NOT INCLUDE THIS SECTION.

- A. This Section includes removal and disposal of asbestos-containing materials by full enclosure, glove bag, or entire structures methods as applicable. Demolition and debris removal of all asbestos-containing materials identified by provisions of this Section, or shown on drawings, or identified at the site, shall be executed under the provisions of this Section, and other applicable sections of these specifications.

- B. Extent of asbestos removal work is as follows:

EDIT THE FOLLOWING TO SUIT PROJECT

- 1. Indicated on drawings.
- 2. Surveyed and listed in "Schedule of Items Containing Asbestos" Article in Part 3 of this Section.

SELECT ABOVE OR BELOW FOR SURVEYED AND SCHEDULED EXTENT

- 3. Surveyed and listed in "Schedule of Items Containing Asbestos" Article in Part 3 of this Section, as specified in related sections, and as indicated on the drawings. Proceed with Work of this Section simultaneously, and in coordination with, remaining Work of the Project.
- 4. Marked at the site during the pre-bid inspection "walk through".
- 5. Limited to that required to connect new plumbing work to existing piping.

INCLUDE THE FOLLOWING IF UNIT PRICE PAYMENT METHOD IS REQUIRED

1.2 RELATED SECTIONS

INCLUDE THE FOLLOWING IF UNIT PRICE PAYMENT METHOD IS REQUIRED

- A. Unit price items are scheduled with related units of measure in Division 01 Section "Unit Prices."

INCLUDE THE FOLLOWING IF ABATEMENT WORK IS AN ALTERNATE

- B. Work of this Section that is affected by alternates is described in Division 01 Section "Alternates."

- C. Demolition and removal of items not containing asbestos as a component is included in Division 02 Section "Selective Demolition."
- D. Pipe re-insulation is included in Division 23 Section "Mechanical Insulation."

1.3 DEFINITIONS

- A. Asbestos Abatement Firm: Firm engaged to perform actual removal and disposal work, either as Contractor or subcontractor.
- B. Asbestos Containing Material: The term "asbestos containing material" is abbreviated ACM.
- C. Owner's Consultant: Firm engaged by Owner to identify and measure asbestos containing materials, or to inspect demolition operations, including monitoring of air quality.
- D. EHS: Owner's Environment, Health and Safety Department, 1239 Kipke Drive, Ann Arbor, MI 48109-1010; phone (734) 647-1143.

1.4 SUBMITTALS

- A. Initial Submittals: Submit the following documents to Owner's Representative at the pre-abatement meeting:
 - 1. Schedule of removal, specifying work locations, length and number of shifts, foreman's name, and crew size.
 - 2. Disposal Site Certification: Letter, signed by the Contractor, certifying that an approved asbestos-accepting type II landfill will be used for disposal. Include the facility name, address, and phone number.
- B. Waste Disposition Submittals: Submit to EHS signed waste shipment record stating that asbestos waste has been properly disposed. Submit the following:
 - 1. Receipts (trip tickets) from approved landfill.
 - 2. Asbestos Waste Shipment Record: As follows:
 - a. Prior to removing asbestos-containing material from the project site, provide Owner's Representative or Owner's consultant with a completed waste shipment record fully complying with Section 61.150 of the NESHAP standard, and 49 CFR Part 172.200 of the U.S. Department of Transportation, and including all required information.
 - b. Ensure that the landfill operator provides a signed copy of the waste shipment record to EHS within 35 days of the date that asbestos-containing material is removed from the project site. If waste is not transported directly from the project site to the landfill, the waste shipment record shall reflect each transfer.
 - c. The Owner will not make final payment prior to receipt of signed waste shipment record.
- C. Contract Closeout Submittals: Comply with the following additional requirements of Division 01 Section "Closeout Procedures":
 - 1. Asbestos Quantity Removal Report: Submit 3 copies of asbestos quantity removal report to Owner's Representative at least 4 weeks prior to Contractor's application for final payment. Include information in the following format:

- a. Quantities of Asbestos Removed:
 - 1) _____ square feet of asbestos-containing floor covering and or mastic.
2. Statement of Visual Inspection: Prior to application for final payment, submit to EHS a statement of visual inspection signed by the Contractor's competent person/supervisor. Include the following:
 - a. Name of contractor conducting work.
 - b. Name, signature, and title of on-site supervisor.
 - c. Name, location, and start and finish date of abatement work.
 - d. Current date.
 - e. Statement that the work was completed according to applicable federal, state, and local laws, and these specifications.
 - f. Statement that the Asbestos Abatement Firm's field supervisor has visually inspected the work site and has found no dust, debris, or other suspect asbestos-containing materials that were part of the scope of work.

1.5 QUALITY ASSURANCE

- A. Pre-Qualified Asbestos Abatement Firms: Engage one of the following pre-qualified firms to perform abatement of asbestos containing materials. Contact EHS for approval if a contractor is not on the list (i.e. flooring contractors trained specifically to remove floor tile).
 1. 21st Century Salvage Inc.
 2. Asbestos Abatement Incorporated
 3. BDS Environmental
 4. Certified Abatement Services, Inc.
 5. Detroit Dismantling Corporation
 6. Environmental Maintenance Engineers
 7. Environmental Specialty Services, Inc.
 8. Great Lakes Environmental Service, Inc.
 9. Homrich
 10. Innovative Environmental Solutions & Services DBA Paige Construction
 11. Michigan Mechanical Abatement, Inc.
 12. Midwest Environmental Inc.
 13. MIS Corporation-Michigan
 14. National Environmental Group, LLC
 15. Next Generation Environmental, Inc.
 16. Professional Thermal Systems, Inc.
 17. Quality Environmental Services, Inc.
 18. Rand Environmental Services
- B. Pre-Abatement Meeting: Approximately 2 weeks prior to scheduled start of the abatement project, the Owner's Representative will hold a pre-abatement meeting with the individuals indicated below:
 1. Contractor's representative.
 2. Asbestos Abatement Firm's representative.
 3. EHS representative.
 4. Owner's consultant.
 5. Owner's Representative.
 6. Owner's building maintenance personnel.

- C. The meeting agenda will include:
 - 1. Review of the scope of work.
 - 2. Removal methods to be used.
 - 3. Review of Contractor's initial submittals.
 - 4. A walk-through survey of the site, if appropriate.
- D. For small projects, the meeting may be suspended at the discretion of the Owner's Representative. If the meeting is suspended, deliver required initial submittals to the Owner's Representative's office 2 weeks prior to the start of work.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 ASBESTOS ABATEMENT, GENERAL

- A. Conduct asbestos abatement operations in a manner that fully protects Contractor's and subcontractor's employees, the general public, and building occupants from exposure to asbestos and other safety and health hazards.
 - 1. Asbestos abatement projects shall be directly supervised by a competent person as described in 29 CFR 1926.1101.
 - 2. The supervisor/competent person must complete responsibility checklists throughout all phases of the project.
- B. Protect adjacent areas, materials and surfaces from damage due to demolition operations, including but not necessarily limited to the following:
 - 1. Water damage.
 - 2. Dirt, dust and debris.
 - 3. Abrasion.
 - 4. Cuts and scratches.
 - 5. Holes from fasteners for temporary barriers.
- C. All asbestos work shall be conducted within a regulated area that complies with the following requirements:
 - 1. Post a sufficient number of signs required by 29 CFR 1926.1101 at the asbestos abatement area and at every work area entrance, so that tenants, Owner's personnel, and other contractor's employees have an opportunity to take protective measures before exposing themselves to asbestos. Place banners if necessary to secure open areas. Include information on signs indicating location and quantity of asbestos-containing material.
 - 2. Allow only authorized, properly protected personnel to enter the regulated area. Immediately report unauthorized individuals entering the work area to EHS or the Owner's consultant.

- D. When required, provide employees and inspectors authorized to enter the regulated area with protective work clothing consisting of disposable Dupont "Tyvek" (or equivalent) full body coveralls, head covers, boots, and other necessary safety gear, including a hard hat and eye protection.
- E. Provide respiratory protection to employees as required by current OSHA regulations including 29CFR 1910.134 and 1926.1101.
 - 1. Provide asbestos abatement workers with powered air purifying respirators (PAPR) with full facepiece and HEPA filters for adequate protection during asbestos material removal operations. Respiratory protection may be down-graded if negative exposure assessment indicates that less protection is required.
 - 2. A half-face respirator or PAPR must be worn while tearing down and setting up enclosures, and during pre-cleaning and post-cleaning work.
 - 3. Do not allow respirators to be pulled away from faces while in the work area.
 - 4. Maintain an extra PAPR unit on site at all times for the duration of the abatement project.
 - 5. Provide full facepiece supplied-air respirators operated in pressure demand mode equipped with air auxiliary and pressure self-contained breathing apparatus or HEPA egress filters if required for measured fiber concentrations.
- F. Maintain at each job site and post the following documents:
 - 1. Employee respiratory protection program.
 - 2. Michigan Right-To-Know poster.
 - 3. Material Safety Data Sheet locator.
 - 4. Company standard operating procedure.
 - 5. This specification Section.
 - 6. Material Safety Data Sheets for products used on job.
 - 7. CFR 1926.1101.
 - 8. CFR, Part 61 (NESHAP).
 - 9. Training Certificates and Medical Approval for each worker.
- G. Use the following engineering controls and work practices for all asbestos abatement operations, regardless of measured exposure levels:
 - 1. Vacuum cleaners equipped with HEPA filters to collect all asbestos-containing dust and debris.
 - 2. Wet methods to control exposures during asbestos removal and clean-up, except where proven to be infeasible.
 - 3. Prompt clean-up and disposal of asbestos-contaminated wastes and debris in leak-proof containers.
- H. Do not use any of the following equipment or work practices during asbestos abatement operations, regardless of measured exposure levels:
 - 1. High-speed abrasive disc saws not equipped with point-of-cut HEPA ventilation or HEPA filtered exhaust air enclosures.
 - 2. Blowing with compressed air to remove asbestos-containing materials.
 - 3. Dry sweeping, shoveling, or other dry methods to clean up asbestos-containing dust and debris.

4. Employee rotation as a means of reducing employee exposure to asbestos.

3.2 REMOVAL OF NON-FRIABLE ASBESTOS-CONTAINING MATERIALS

A. Removal of Non-Friable Materials, General: For each type of non-friable asbestos-containing material indicated, comply with the following requirements:

1. Comply with requirements of Article 3.1 of this Section.
2. Conduct non-friable material removal operations to prevent the material from becoming friable during the removal and disposal process. No visible emissions are permitted. If the floor tile does not remain substantially intact, cease operations and contact EHS.
3. Do not conduct asbestos removal unless the Owner's Consultant is present at the site and EHS has been notified.
4. Labeling Containerized Waste: Label containerized asbestos waste in accordance with OSHA, EPA, and Department of Transportation regulations, as follows:
 - a. Label each container with OSHA label that contains the following information:

**DANGER
CONTAINS ASBESTOS FIBERS
MAY CAUSE CANCER
CAUSES DAMAGE TO LUNGS
DO NOT BREATHE DUST
AVOID CREATING DUST**

- b. Label each container with Owner's and Asbestos Abatement Firm's names and addresses as required by NESHP. Owner's address is EHS, 1239 Kipke Drive, Ann Arbor, MI 48109-1010.
 - c. Label each container with Class 9 Label required by DOT and identify waste as "RQ, Asbestos NA 2212."
5. Prepare a complete and accurate NESHP Waste Shipment Record (special manifest). Assure all information required by the U.S. Department of Transportation regulation is included. Under "special handling instructions" provide the required DOT identification information: RQ Asbestos 9,NA 2212, PG III.
 - a. Do not remove waste from site until Owner's Representative has signed and verified the shipment record.
6. Remove containerized asbestos waste daily from site, or store on site in a locked or secured location until ready for final disposal. Obtain approval of Owner's Representative and EHS representative of the location of disposal containers. Outdoor waste containers shall be fully enclosed and locked. Mark vehicles used to transport waste during the loading and unloading of asbestos waste with a visible sign, as required by NESHP.
7. Each container shall have excess water evident, or the asbestos waste shall be mixed in a slurry.

RETAIN BELOW IF VINYL-ASBESTOS TILE REMOVAL IS INCLUDED IN PROJECT - DELETE IF NONE

B. Removal of Resilient Flooring Materials:

1. Prior to removal, critical barriers shall be placed over openings to the regulated area. During removal, air in the regulated area shall be filtered through the use of air filtration device(s).
2. Removal of floor tile with an infrared heat machine eliminates the critical barrier and negative pressure requirements.
3. Prior to removal, clean floors of dirt and debris with vacuums equipped with HEPA filter, disposable dust bag, and metal floor tool (brush tools are not permitted). Control odors and fumes with engineering controls.
4. Sanding the floor or related backing is not permitted.
5. Mechanical chipping of vinyl floor tile is prohibited, except when performed in a negative pressure enclosure.
6. Thoroughly wet vinyl floor tile with amended water. Use a slip scraper or equivalent to loosen the floor tile from the floor. Remove the floor tile in an intact state. Keep the floor tile wet throughout the removal and cleanup.
 - a. Removal of floor tile using an infrared heat machine eliminates the wetting requirement.
7. Remove vinyl sheet flooring by cutting while wetting the snip-point. Wet sheet flooring during delamination. Rip-up of resilient flooring material is not permitted.
8. Clean resilient flooring of all debris using a HEPA vacuum, wet sweeping, mopping or equivalent and allow time to dry. Dry sweeping is prohibited.
9. Place the resilient flooring material and debris in an asbestos disposal bag. Seal the bag and place it in a properly labeled drum or polypun bag. Comply with the disposal and labeling requirements of this Section.

RETAIN BELOW IF VINYL TILE ADHESIVE REMOVAL IS INCLUDED IN PROJECT - DELETE IF NONE

C. Asbestos Mastic Removal:

1. Clean the floor of all debris using a HEPA vacuum, wet sweeping, mopping or equivalent.
2. Remove as much mastic as possible using an EHS approved solvent. Control odors and fumes with engineering controls.
3. Perform scraping of residual adhesive and backing using wet methods.
4. After all debris is removed, thoroughly mop the floor and allow time to dry.
5. Shot blasting is prohibited, except when performed in a negative pressure enclosure.
6. Properly dispose of all asbestos and solvent waste according to all applicable regulations, and comply with the disposal and labeling requirements of this Section.

3.3 FIELD QUALITY CONTROL

- A. Pre-Notification of EHS Representative: To permit adequate time to schedule air monitoring, notify the EHS representative not less than 10 calendar days prior to planned start of all removal operations.

- B. Air Monitoring: Owner will retain a professional independent industrial hygiene consultant to collect air samples and oversee the project to insure that compliance with applicable codes, regulations, and ordinances, including 29 CFR 1926.1101, NESHAP, and P.A. 135. The consultant will collect background, contiguous, work area, personal, and post-abatement air samples. EHS will provide one copy of the report to the Contractor.
 - 1. If contiguous sampling indicates airborne fiber concentrations above 0.01 fibers/cc or background level, work will be stopped unless otherwise approved by EHS. Work may resume when the source of contamination has been corrected and the contamination has been cleaned to the satisfaction of the EHS.
- C. Inspection: If during the project, EHS representative or Owner's consultant determines that work practices either violate applicable rules and regulations or endanger employees, the Contractor's on-site representative shall stop operations immediately and take corrective action. Cooperate fully with EHS representative and Owner's consultant.

3.4 SCHEDULE OF ITEMS CONTAINING ASBESTOS

WHERE THE FOLLOWING PARAGRAPH IS INCLUDED, BE SURE TO REFERENCE THESE BIDDING REQUIREMENTS IN THE "INSTRUCTIONS TO BIDDERS" FRONT-END DOCUMENT

- A. Bidding Requirements: Comply with the following requirements related to bidding:
 - 1. Survey quantities provided are approximate. Bidders are required to field investigate as necessary and assume all responsibility to verify the work required and quantities involved for complete asbestos abatement.
 - 2. The building is open for field inspection by all bidders during the bidding period.
 - 3. A "pre-bid orientation meeting" will be conducted to familiarize prospective bidders with site conditions and provide for verification of marked and scheduled quantities, as applicable.

EDIT THE FOLLOWING LIST TO SUIT PROJECT

- B. The following items have been surveyed and determined to have asbestos as a component:
 - 1. Vinyl asbestos floor tile.
 - 2. Composition sheet flooring.
 - 3. Flooring adhesives.

END OF CONTENTS TABLE

DIVISION 02 EXISTING CONDITIONS

SECTION 028215 - ASBESTOS REMEDIATION - ROOFING MATERIAL

USE THIS SECTION WHEN ASBESTOS ABATEMENT IS LIMITED TO REMOVAL OF ROOFING MATERIALS.

PART 1 - GENERAL

1.1 SUMMARY

BEFORE EDITING THIS SECTION DETERMINE WHETHER ASBESTOS ABATEMENT WORK WILL BE DONE AS PART OF THE GENERAL CONTRACT, WILL BE BID OUT SEPARATELY DIRECTLY TO ABATEMENT CONTRACTORS OR WILL BE PERFORMED BY THE OWNER. IF ABATEMENT WORK IS NOT PART OF THE GENERAL CONTRACTOR'S WORK, DO NOT INCLUDE THIS SECTION.

- A. This Section includes removal and disposal of asbestos-containing materials by full enclosure, glove bag, or entire structures methods as applicable. Demolition and debris removal of all asbestos-containing materials identified by provisions of this Section, or shown on drawings, or identified at the site, shall be executed under the provisions of this Section, and other applicable sections of these specifications.

- B. Extent of asbestos removal work is as follows:

EDIT THE FOLLOWING TO SUIT PROJECT

- 1. Indicated on drawings.
- 2. Surveyed and listed in "Schedule of Items Containing Asbestos" Article in Part 3 of this Section.

SELECT ABOVE OR BELOW FOR SURVEYED AND SCHEDULED EXTENT

INCLUDE THE FOLLOWING IF UNIT PRICE PAYMENT METHOD IS REQUIRED

1.2 RELATED SECTIONS

INCLUDE THE FOLLOWING IF UNIT PRICE PAYMENT METHOD IS REQUIRED

- A. Unit price items are scheduled with related units of measure in Division 01 Section "Unit Prices."

INCLUDE THE FOLLOWING IF ABATEMENT WORK IS AN ALTERNATE

- B. Work of this Section that is affected by alternates is described in Division 01 Section "Alternates."
- C. Demolition and removal of items not containing asbestos as a component is included in Division 02 Section "Selective Demolition."
- D. Pipe re-insulation is included in Division 23 Section "Mechanical Insulation."

1.3 DEFINITIONS

- A. Asbestos Abatement Firm: Firm engaged to perform actual removal and disposal work, either as Contractor or subcontractor.

- B. Asbestos Containing Material: The term "asbestos containing material" is abbreviated ACM.
- C. Owner's Consultant: Firm engaged by Owner to identify and measure asbestos containing materials, or to inspect demolition operations, including monitoring of air quality.
- D. EHS: Owner's Environment, Health and Safety Department, 1239 Kipke Drive, Ann Arbor, MI 48109-1010; phone (734) 647-1143.

1.4 SUBMITTALS

- A. Initial Submittals: Submit the following documents to Owner's Representative at the pre-abatement meeting:
 - 1. License from the State of Michigan in accordance with Act 135 P.A. 1986 (Asbestos Abatement Contractors Licensing Act) (when applicable).
 - 2. Copy of notification sent to appropriate federal, state, and local agencies (when applicable).
 - 3. Copy of 8-hour training class certificates for each employee who is likely to disturb or handle asbestos material. Contractor/supervisor course certificates are also required for the competent person.
 - 4. Schedule of removal, specifying work locations, length and number of shifts, foreman's name, and crew size.
 - 5. Disposal Site Certification: Letter, signed by the Contractor, certifying that an approved asbestos-accepting type II landfill will be used for disposal. Include the facility name, address, and phone number.
- B. Waste Disposition Submittals: Submit to EHS signed waste shipment record stating that asbestos waste has been properly disposed. Submit the following:
 - 1. Receipts (trip tickets) from approved landfill.
 - 2. Asbestos Waste Shipment Record: As follows:
 - a. Prior to removing asbestos-containing material from the project site, provide Owner's Representative or Owner's consultant with a completed waste shipment record fully complying with Section 61.150 of the NESHAP standard, and 49 CFR Part 172.200 of the U.S. Department of Transportation, and including all required information.
 - b. Ensure that the landfill operator provides a signed copy of the waste shipment record to EHS within 35 days of the date that asbestos-containing material is removed from the project site. If waste is not transported directly from the project site to the landfill, the waste shipment record shall reflect each transfer.
 - c. The Owner will not make final payment prior to receipt of signed waste shipment record.
- C. Contract Closeout Submittals: Comply with the following additional requirements of Division 01 Section "Project Closeout":
 - 1. Asbestos Quantity Removal Report: Submit 3 copies of asbestos quantity removal report to Owner's Representative at least 4 weeks prior to Contractor's application for final payment. Include information in the following format:
 - a. Quantities of Asbestos Removed:

- 1) _____ square feet of asbestos-containing roofing material removed from project area.
2. Statement of Visual Inspection: Prior to application for final payment, submit to EHS a statement of visual inspection signed by the Contractor's competent person/supervisor. Include the following:
 - a. Name of licensed contractor conducting work.
 - b. Name, signature, and title of on-site supervisor.
 - c. Name, location, and start and finish date of abatement work.
 - d. Current date.
 - e. Statement that the work was completed according to applicable federal, state, and local laws, and these specifications.
 - f. Statement that the Asbestos Abatement Firm's field supervisor has visually inspected the work site and has found no dust, debris, or other suspect asbestos-containing materials that were part of the scope of work.

1.5 QUALITY ASSURANCE

- A. Pre-Qualified Asbestos Abatement Firms: Engage one of the following pre-qualified firms to perform abatement of asbestos containing materials (when applicable):
 1. 21st Century Salvage Inc.
 2. Asbestos Abatement Incorporated
 3. BDS Environmental
 4. Certified Abatement Services, Inc.
 5. Detroit Dismantling Corporation
 6. Environmental Maintenance Engineers
 7. Environmental Specialty Services, Inc.
 8. Great Lakes Environmental Service, Inc.
 9. Homrich
 10. Innovative Environmental Solutions & Services DBA Paige Construction
 11. Michigan Mechanical Abatement, Inc.
 12. Midwest Environmental Inc.
 13. MIS Corporation-Michigan
 14. National Environmental Group, LLC
 15. Next Generation Environmental, Inc.
 16. Professional Thermal Systems, Inc.
 17. Qualified Abatement Services, Inc.
 18. Rand Environmental Services
- B. Regulatory Requirements: Make all necessary notifications to the appropriate federal, state, and local agencies.
 1. The National Emission Standards for Hazardous Air Pollutants (NESHAP), Asbestos regulation 40 CFR 61, Sub-Part M requires that if at least 80 lin. meters (260 lin. ft.) of friable asbestos materials, at least 15 sq. meters (160 square feet), or 1 cu. meter (35 cu. ft.) of friable asbestos materials, or other facility components are stripped or removed while renovating a facility, all the requirements of section 61.147 apply.

2. When applicable, notify the Michigan Department of Environmental Quality (MDEQ), the Michigan Department of Licensing and Regulatory Affairs (MDLARA), and appropriate state and local regulatory agencies. No work shall be conducted without notification of authorities having jurisdiction.
- C. Pre-Abatement Meeting: Approximately 2 weeks prior to scheduled start of the abatement project, the Owner's Representative will hold a pre-abatement meeting with the individuals indicated below:
1. Contractor' representative.
 2. Asbestos Abatement Firm's representative.
 3. EHS representative.
 4. Owner's consultant.
 5. Owner's Representative.
 6. Owner's building maintenance personnel.
- D. The meeting agenda will include:
1. Review of the scope of work.
 2. Removal methods to be used.
 3. Review of Contractor's initial submittals.
 4. A walk-through survey of the site, if appropriate.
- E. For small projects, the meeting may be suspended at the discretion of the Owner's Representative. If the meeting is suspended, deliver required initial submittals to the Owner's Representative's office 2 weeks prior to the start of work.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 ASBESTOS ABATEMENT, GENERAL

- A. Conduct asbestos abatement operations in a manner that fully protects Contractor's and subcontractor's employees, the general public, and building occupants from exposure to asbestos and other safety and health hazards.
1. Asbestos abatement projects shall be directly supervised by a competent person as described in 29 CFR 1926.1101.
 2. The supervisor/competent person must complete responsibility checklists throughout all phases of the project.
- B. Protect adjacent areas, materials and surfaces from damage due to demolition operations, including but not necessarily limited to the following:
1. Water damage.
 2. Dirt, dust and debris.
 3. Abrasion.
 4. Cuts and scratches.
 5. Holes from fasteners for temporary barriers.
- C. All asbestos work shall be conducted within a regulated area that complies with the following requirements:

1. Post a sufficient number of signs required by 29 CFR 1926.1101 at the asbestos abatement area and at every work area entrance, so that tenants, Owner's personnel, and other contractor's employees have an opportunity to take protective measures before exposing themselves to asbestos. Place banners if necessary to secure open areas. Include information on signs indicating location and quantity of asbestos-containing material.
 2. Allow only authorized, properly protected personnel to enter the regulated area. Immediately report unauthorized individuals entering the work area to EHS or the Owner's consultant.
- D. When required, provide employees and inspectors authorized to enter the regulated area with protective work clothing consisting of disposable Dupont "Tyvek" (or equivalent) full body coveralls, head covers, boots, and other necessary safety gear, including a hard hat and eye protection.
- E. Provide respiratory protection to employees as required by current OSHA regulations including 29CFR 1910.134 and 1926.1101.
1. Provide asbestos abatement workers with powered air purifying respirators (PAPR) with full facepiece and HEPA filters for adequate protection during asbestos material removal operations. Respiratory protection may be down-graded if negative exposure assessment indicates that less protection is required.
 2. A half-face respirator or PAPR must be worn while tearing down and setting up enclosures, while glovebagging, and during pre-cleaning and post-cleaning work.
 3. Do not allow respirators to be pulled away from faces while in the work area.
 4. Maintain an extra PAPR unit on site at all times for the duration of the abatement project.
 5. Provide full facepiece supplied-air respirators operated in pressure demand mode equipped with air auxiliary and pressure self-contained breathing apparatus or HEPA egress filters if required for measured fiber concentrations.
- F. Maintain at each job site and post the following documents:
1. Copy of MDEQ/MDLARA notification (when applicable).
 2. Employee respiratory protection program (when applicable).
 3. Michigan Right-To-Know poster.
 4. Material Safety Data Sheet locator.
 5. Company standard operating procedure.
 6. This specification Section.
 7. Material Safety Data Sheets for products used on job.
 8. CFR 1926.1101.
 9. CFR, Part 61 (NESHAP).
 10. The foreman's or supervisor's Contractor/Supervisor Accreditation Certificate.
 11. State of Michigan Accreditation Certificates and Medical Approval for each worker (when applicable).
- G. Use the following engineering controls and work practices for all asbestos abatement operations, regardless of measured exposure levels:

1. Vacuum cleaners equipped with HEPA filters to collect all asbestos-containing dust and debris.
 2. Wet methods to control exposures during asbestos removal and clean-up, except where proven to be infeasible.
 3. Prompt clean-up and disposal of asbestos-contaminated wastes and debris in leak-proof containers.
 4. Establish a decontamination area, adjacent and connected to the regulated area, if the Project requires the removal of more than 25 lin. ft., or 10 sq. ft. of thermal systems insulation or surfacing ACM.
 5. Establish an equipment area adjacent to the regulated area if the Project requires the removal of less than 25 lin. ft. or 10 sq. ft. of thermal systems insulation or surfacing ACM.
- H. Do not use any of the following equipment or work practices during asbestos abatement operations, regardless of measured exposure levels:
1. High-speed abrasive disc saws not equipped with point-of-cut HEPA ventilation or HEPA filtered exhaust air enclosures.
 2. Blowing with compressed air to remove asbestos-containing materials.
 3. Dry sweeping, shoveling, or other dry methods to clean up asbestos-containing dust and debris.
 4. Employee rotation as a means of reducing employee exposure to asbestos.

ALWAYS RETAIN FULL ARTICLE BELOW

3.2 ASBESTOS REMOVAL BY FULL ENCLOSURE METHOD

- A. Preparation of the Work Area: Complete the following preparation work prior to beginning asbestos removal operations:
1. Install critical barriers over each opening into the regulated area. The following requirements are in addition to, not in lieu of, other indicated surface and object protection requirements:
 - a. Seal each opening between the work area and adjacent areas with not less than 2 layers of 4-mil polyethylene sheeting. Use an expanding-polyurethane foam gun to seal areas with large numbers of pipes, conduits and beams. Openings include, but are not necessarily limited to, windows, skylights, doorways, elevator hoistway openings, corridor entrances, drains, ducts, grills, grates, and diffusers.
 - b. Seal intake and exhaust vents and duct seams within the regulated area with not less than 2 layers of 6-mil polyethylene sheeting.
 2. HVAC System Shutdown: Owner's maintenance personnel will shut down heating, cooling, and air conditioning systems when necessary. Coordinate scheduling with Owner's personnel and provide 72 hours notice to the Owner's Representative prior to planned shut-down.
 3. Protection of Surfaces and Objects: The following requirements are in addition to, not in lieu of, indicated work area sealing requirements. Cover the following surfaces and objects as follows:

- a. Protect all surfaces beneath all removal activity. Remove moveable objects from the work area, and cover fixed objects with impermeable dropcloths or plastic sheeting with edges securely sealed with tape.
 - b. Cover open tanks with plywood or other solid material.
 - c. Provide clean, fresh air to mechanical equipment, where required to maintain proper performance of equipment.
 - d. Fully pre-clean all covered surfaces with amended water and a HEPA vacuum.
 - e. Cover walls with not less than 2 layers of 4-mil polyethylene sheeting. Construct free-standing enclosure walls of not less than 6-mil polyethylene sheeting, with supports spaced not more than 3 feet o.c.
 - f. Cover floors with not less than 2 layers of 6-mil polyethylene sheeting. Avoid seams where possible. If seams are necessary, overlap not less than 12 inches and tape joints. Extend sheeting 12 inches up the side walls leaving no seams at the wall and floor joint. Immediately repair punctures and leaks, and clean up seepage.
4. Cleaning: Do not use cleaning methods that raise dust, such as sweeping or using vacuum cleaners not equipped with HEPA filters. Do not disturb asbestos materials during pre-cleaning phases.
- a. Treat water removed from the enclosure as asbestos contaminated waste. Fully seal floor drains.
5. Deactivate or install ground-fault circuit interrupters on each electrical circuit within the enclosure.
6. Construct a three-chambered decontamination facility that is adjacent to and connected to the regulated area, and that consists of a dirty room, a shower room, and a clean room in series. Construct decontamination facilities that are exposed to weather of lumber and exterior grade plywood. Secure the facility when not in use.
- 1) Supply the equipment room with properly labeled, impermeable bags and containers for the containment and disposal of contaminated protective equipment.
 - 2) Construct showers that comply with the requirements of 29 CFR 1910.141 (d) (3), with the shower room adjacent to both the equipment room and the clean room. Filter water waste and shower water through a 5 micron filter, or remove water from site as asbestos waste.
 - 3) Equip the clean room with a locker or appropriate storage container for each employee.
7. Employee Decontamination Facilities: Comply with the following requirements:
- a. Access the work area only through an approved decontamination system. Lock or block other entrances. Seal emergency exits (for use during a fire or accident) with polyethylene sheeting and tape.
 - b. Seal the waste pass-out, except during the removal of asbestos waste from the enclosure.
 - c. Entrance To The Regulated Area: Employees shall enter the decontamination area through the clean room, remove and store clothing, and put on protective clothing and respiratory protection before passing through to the equipment room.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 028215 - - 7

- d. Exit From The Regulated Area: Employees shall exit the regulated area by removing gross contamination and debris from their protective clothing. The clothing shall be removed and disposed of in the equipment room into labeled impermeable bags or containers. Employees shall then shower and enter the clean room before changing into street clothes.
8. Local Exhaust Ventilation: Maintain portable air filtration units with a HEPA filter in use during asbestos abatement operations requiring enclosures. Units shall conform to OSHA Standard 1926.1101, Appendix F, and shall be designed in accordance with 40 CFR 61, Subpart M, Section 61.153.
 - a. Exhaust directly to building exterior. Provide a backup portable air filtration unit at each removal enclosure. Start up ventilation units prior to initiating asbestos removal operations and run until the Owner's consultant has approved their shut-down after cleaning, sampling, visual inspection, and tear-down.
 - b. Direct air movement within the enclosure away from the employees' work area and toward the air filtration device.
 - c. Provide not less than 4 air changes per hour within the enclosure.
 - d. Within the enclosure, through the period of its use, maintain a pressure differential of not less than minus 0.02 water gage with respect to ambient conditions outside the enclosure.
 9. Visually inspect the enclosure for breeches and smoke-test for leaks before work begins, and before the start of each work shift. Make all modifications to the enclosure prior to starting removal work.
- B. Asbestos Removal Operations: Comply with the following requirements for asbestos removal operations:
1. Immediately preceding asbestos removal, apply a fine mist of amended water (water and wetting agent) to the asbestos materials and the surrounding area. Keep surrounding areas wet by spraying periodically with amended water. Maintain a high humidity environment to assist in fiber settling.
 2. Remove asbestos material using two-person teams, on staging platforms, if necessary.
 3. Remove the wet asbestos material as intact sections or components. Carefully lower the material to the floor or place directly into container. Never drop or throw asbestos material on the floor.
 4. At working heights between 15 and 50 feet above the floor, place removed asbestos materials in containers at the elevated levels and lower to floor, or place onto inclined chutes or scaffolding for subsequent collection and placement into containers. Clean all debris at the completion of each workday.
 5. Once the asbestos material is at ground level, pack in labeled 6-mil polyethylene bags, wet and, if appropriate, hold in drums prior to starting the next section.
 6. Use 2 sealed and labeled 6-mil thick bags for storage and transportation of asbestos waste. Standing water shall be in each bag

7. Wrap large components removed intact in two layers of 6-mil polyethylene sheeting, label, and secure with tape for transport to the landfill. Comply with all wetting requirements.
8. Treat wires, hangers, steel bands, nails, screws, metal lath, tin sheeting, and similar sharp objects removed with asbestos material as asbestos waste. Place in drums for disposal.
9. Label containerized asbestos waste in accordance with OSHA, EPA, and Department of Transportation regulations, as follows:
 - a. Label each container with OSHA label that contains the following information:

**DANGER
CONTAINS ASBESTOS FIBERS
MAY CAUSE CANCER
CAUSES DAMAGE TO LUNGS
DO NOT BREATHE DUST
AVOID CREATING DUST**

- b. Label each container with Owner's and Asbestos Abatement Firm's names and addresses as required by NESHAP. Owner's address is EHS, 1239 Kipke Drive, Ann Arbor, MI 48109-1010.
 - c. Label each container with Class 9 Label required by DOT and identify waste as "RQ, Asbestos NA 2212."
10. Prepare a complete and accurate NESHAP Waste Shipment Record (special manifest). Assure all information required by the U.S. Department of Transportation regulation is included. Under "special handling instructions" provide the required DOT identification information: RQ Asbestos 9, NA 2212, PG III.
 - a. Do not remove waste from site until Owner's Representative has signed and verified the shipment record.
11. Remove containerized asbestos waste daily from site, or store on site in a locked or secured location until ready for final disposal. Obtain approval of Owner's Representative and EHS representative of the location of disposal containers. Outdoor waste containers shall be fully enclosed and locked. Mark vehicles used to transport waste during the loading and unloading of asbestos waste with a visible sign, as required by NESHAP.
12. Each container shall have excess water evident, or the asbestos waste shall be mixed in a slurry.

C. Post-Removal Operation Requirements: After completion of asbestos removal and clean-up operations, comply with the following requirements:

1. The Asbestos Abatement Firm representative, in presence of Owner's consultant, shall inspect the entire work area for asbestos. Include decontamination unit, all plastic sheeting, seals over doorways, windows, and all other openings.
 - a. If any suspect asbestos is found, repeat final cleaning operation, until the visual inspection is satisfactory to the Owner's consultant and the asbestos removal firm. Asbestos not scheduled to be removed as part of the project is exempt.

2. Encapsulate all walls, floors, ceilings, other exposed surfaces, and decontamination facilities after completing the work area inspection.
 - a. Remove the inner polyethylene barrier that is not integral to maintaining negative pressure in the enclosure at this time, and post-abatement air samples will be collected by Owner's consultant. Immediately clean any asbestos-containing materials observed behind these secondary barriers.
3. When post-abatement fiber levels are greater than either 0.01 fiber/cc or background level, repeat cleanup operation until the area is below either 0.01 fibers/cc or background level.
4. When the post-abatement samples are in compliance, and the Owner's consultant or EHS has completed the visual inspection, the enclosure shall be removed.
 - a. Turn off HEPA filter exhaust units only after all barriers have been removed.
 - b. A final visual inspection will be conducted by the Owner's consultant or EHS representative before the Contractor is released from the removal site. The final inspection will include tape, polyethylene sheet, debris, and equipment.

3.3 FIELD QUALITY CONTROL

- A. Pre-Notification of EHS Representative: To permit adequate time to schedule air monitoring, notify the EHS representative not less than 10 calendar days prior to planned start of all removal operations.
 1. Roofing removal Contractors may provide their own air monitoring in compliance with roofing removal requirements of this Section.
- B. Inspection: If during the project, EHS representative or Owner's consultant determines that work practices either violate applicable rules and regulations or endanger employees, the Contractor's on-site representative shall stop operations immediately and take corrective action. Cooperate fully with EHS representative and Owner's consultant.

RETAIN BELOW FOR REMOVAL OF FLOOR TILE, FLOORING ADHESIVE, TRANSITE TOPS AND PANELS, OR ROOFING MATERIALS

3.4 REMOVAL OF NON-FRIABLE ASBESTOS-CONTAINING MATERIALS

ALWAYS RETAIN PARAGRAPHS BELOW IF "NON-FRIABLE" ARTICLE IS RETAINED

- A. Removal of Non-Friable Materials, General: For each type of non-friable asbestos-containing material indicated, comply with the following requirements:
 1. Comply with requirements of Article 3.1 of this Section.
 2. Conduct non-friable material removal operations to prevent the material from becoming friable during the removal and disposal process. No visible emissions are permitted. If the material does not remain substantially intact, comply with the requirements for friable asbestos removal specified in Articles 3.2 of this Section (except roofing removal).

3. Place impermeable dropcloths on surfaces beneath removal activity.
4. Do not conduct asbestos removal unless the Owner's Consultant is present at the site and EHS has been notified. For roofing removal projects, notify EHS prior to start of work.
5. Labeling Containerized Waste: Comply with the requirements of Article 3.2, paragraphs B.9.a. through c. of this Section.

RETAIN BELOW IF ROOFING REMOVAL IS INCLUDED IN PROJECT - DELETE IF NONE

- B. Non-Friable Asbestos-Containing Roofing Materials: Non-friable asbestos-containing roofing materials may be removed in a non-friable state. This specification does not apply to removal of intact cements, coatings, or mastics. Obtain EHS review and approval of planned removal operations prior to beginning. Remove non-friable asbestos-containing roofing materials in using the following technique:
1. Each employee who is likely to disturb or handle asbestos material shall have completed an 8-hour training class, and the project shall be supervised by a competent person who has completed the appropriate contractor/supervisor course.
 2. Isolate roof level heating and ventilation air intake sources within the regulated area and others that will be affected; or arrange for shut-down the affected ventilation system during removal operations. Acceptable isolation techniques include the following:
 - a. Use 20-foot or larger buffer zones.
 - b. Installation of HEPA filters over the air intakes.
 - c. Erection of horizontal or vertical extensions that relocate the opening of the intake outside or above the regulated area.
 - d. Covering the intake with plastic sheeting or other appropriate barrier.
 3. Personal protective equipment (PPE), including disposable coveralls and NIOSH approved appropriate high efficiency particulate absolute (HEPA) respirators, shall be worn by personnel if the asbestos containing material is not removed in an intact state.
 4. Remove roofing material in an intact state.
 5. Use wet methods to remove materials that are not intact, or that are rendered not intact during removal, except where wet methods will create a safety hazard or are otherwise not feasible.
 6. Continuously apply a water mist to the blade of power cutting tools, unless a competent person determines that misting will substantially decrease worker safety.
 7. When removing roofing felts, collect the dust generated by power roof cutters with a HEPA-filtered dust collector; or immediately vacuum using a HEPA-filtered vacuum along the cut line. For smooth surfaces only, gently sweep wet dust generated from cutting operations, and carefully and completely wipe up the still-wet dust and debris.
 8. For removal and repair operations of intact roofing less than 25 sq. ft. in area, the use of wet methods or HEPA vacuuming is not required, provided manual methods do not render the material non-intact and no visible dust is created.

9. Do not drop or throw to the ground asbestos-containing roofing material that has been removed. As soon as practicable, but not later than the end of the work shift, lower debris to ground either by passing or carrying by hand, or by lowering to the ground in a covered, dust-tight chute, crane or hoist.
 - a. While on the roof, keep non-intact asbestos-containing materials wet; or seal in impermeable waste bags, or wrap in plastic sheeting.
 - b. While on the roof, intact asbestos-containing material is not required to be kept wet, bagged, or wrapped.
10. Upon being lowered to the ground, transfer unwrapped material to a closed receptacle in manner that precludes the dispersion of dust. Dispose of the material in an asbestos-accepting Type II landfill. Notify the landfill that the roofing material contains asbestos and provide waste shipment records to EHS within 35 days.
11. For removal of intact pipeline asphaltic wrap or roof flashings that contain asbestos, engage a competent person to examine the material and determine whether the material is intact and likely to remain intact during removal. Remove the material using manual methods. Sanding, grinding, or other abrading operations are not permitted. Do not throw or drop materials to the ground. Lower the material in a covered, dust-tight chute, crane, or hoist. Remove debris from the roof at the end of the work shift.

3.5 SCHEDULE OF ITEMS CONTAINING ASBESTOS

WHERE THE FOLLOWING PARAGRAPH IS INCLUDED, BE SURE TO REFERENCE THESE BIDDING REQUIREMENTS IN THE "INSTRUCTIONS TO BIDDERS" FRONT-END DOCUMENT

- A. Bidding Requirements: Comply with the following requirements related to bidding:
 1. Survey quantities provided are approximate. Bidders are required to field investigate as necessary and assume all responsibility to verify the work required and quantities involved for complete asbestos abatement.
 2. The building is open for field inspection by all bidders during the bidding period.
 3. A "pre-bid orientation meeting" will be conducted to familiarize prospective bidders with site conditions and provide for verification of marked and scheduled quantities, as applicable.

EDIT THE FOLLOWING LIST TO SUIT PROJECT

- B. The following items have been surveyed and determined to have asbestos as a component:
 1. Roofing felts and base flashing.
 2. Roofing underlayment.

DIVISION 02 EXISTING CONDITIONS
SECTION 028300 - LEAD REMEDIATION

DO NOT USE THIS SPEC FOR RENOVATION, REPAIR AND PAINTING (RRP) WORK IN CHILD CARE FACILITIES, FAMILY HOUSING, RESIDENTIAL PROPERTIES AND HALL DIRECTOR/OTHER APARTMENTS WITHIN RESIDENCE HALLS. CONTACT OSEH DIRECTLY FOR ASSISTANCE IN DEVELOPING A CUSTOM SPEC FOR THESE FACILITIES.

THIS SECTION DESCRIBES REQUIREMENTS FOR INSTALLATION, REMOVAL AND DISPOSAL OF LEAD-CONTAINING MATERIALS (LCM) DURING DEMOLITION OR RENOVATION ACTIVITIES.

SURVEY ALL BUILDING COMPONENTS WHICH MAY CONTAIN LEAD OR BE COVERED WITH LEAD-BASED PAINT (LBP), INCLUDING WALLS, CEILING, FLOORS, AND STRUCTURAL STEEL. CONTACT OSEH EARLY DURING THE DESIGN PHASE FOR A LEAD-PAINT SURVEY TO DETERMINE EXTENT AND CONCENTRATION OF LEAD-BASED PAINT, IF ANY. BRETT GOECKE IS THE OSEH CONTACT FOR LEAD-PAINT SAMPLING.

INCLUDE OSEH IN ANY PRE-CONSTRUCTION MEETINGS FOR PROJECTS INVOLVING LBP DISTURBANCE.

FOR DRY SANDBLASTING, WELDING, BURNING, OR OTHER OPERATIONS THAT CREATE SIGNIFICANT AMOUNTS OF AIRBORNE DUST, FUME OR LIQUID WASTE, OSEH MUST REVIEW AND APPROVE THE PROPOSED METHODS OF PAINT DISTURBANCE.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section specifies requirements for working with lead-containing materials (LCM), during any of the following operations:

DELETE OR MODIFY BELOW TO SUIT PROJECT CONDITIONS.

1. Demolition of Lead-Containing Materials (LCM): Includes razing a building or any portion of a building or piece of equipment with LCM.
2. Incidental Removal or Disturbance of Lead-Based Paint (LBP): This includes activities such as sanding and scraping for paint preparation activities.
3. Removal of Lead-Based Paint (LBP): Complete removal of LBP from substrate, typically prior to torch cutting for demolition activities.
4. Removal or installation of lead sheet products as follows:
 - a. Radiation shielding.
 - b. Soundproofing.
 - c. Flashing.
 - d. Pipe, sink traps and sinks.

- B. Extent of known LCM is as follows:

SELECT ONE OF THE FOLLOWING PARAGRAPHS REGARDING EXTENT OF WORK OR MODIFY TO REFLECT PROJECT SCOPE.

1. As shown on drawings and survey reports. Assume all paint or other coatings not identified on drawings or reports contain lead.
2. Marked at the site during the pre-bid inspection "walk through."

1.2 RELATED SECTIONS

- A. Demolition and removal of items not containing lead as a component is included in Division 02 Section "Selective Demolition."

1.3 DEFINITIONS

- A. The term "Lead-Based Paint" (LBP) is identified as paint or other surface coating such as varnish, sealer or stain containing lead in any detectable amount.
- B. The term "Incidental Removal or Disturbance of Lead-Based Paint" indicates one or more of the following operations:
 1. Scraping, hand sanding, or otherwise removing loose LBP from existing surfaces scheduled to remain in place.
- C. The term "Demolition of LCM" refers to cutting, drilling, abrading, demolishing, or otherwise disturbing building elements coated with LBP or containing lead.
- D. The term "Lead-Containing Materials" (LCM) is identified as construction debris coated with lead-based paint or other materials containing lead, such as x-ray shielding.
- E. The term "Critical Barrier" indicates the perimeter of the enclosure within which lead disruption/removal work takes place. Critical Barriers may include existing floor, wall, and ceiling structures, as well as constructed partitions, closures and seals.
- F. The term "Project Site" indicates the limits of the Project Site as indicated on drawings or by provisions of this specification.
- G. The term "Work Area" indicates the area within the Critical Barrier.
- H. The term "Action Level" means exposure to an airborne concentration of lead of 30 micrograms per cubic meter of air calculated as an 8-hour time-weighted average (TWA).
- I. The term "Exposure Assessment" means a determination of employee exposures for a given task measured by air monitoring. The Assessment must meet the criteria for objective data as outlined in the MIOSHA/OSHA Lead in Construction Standard (MIOSHA Part 603, R325.51992 and 29 CFR 1926.62).
- J. The term "OSHA PEL" stands for the Permissible Exposure Limit established by the Occupational Safety and Health Administration for lead exposure. The OSHA PEL refers to an airborne concentration of lead of 50 micrograms per cubic meter of air calculated as an 8-hour time-weighted average (TWA).
- K. The abbreviation "TCLP" stands for Toxicity Characteristic Leaching Procedure and refers to one of the tests to determine if waste is considered a Hazardous Waste or non-hazardous solid waste.

- L. The term "Hazardous Waste" refers to a listed waste or any solid or liquid waste with one or more of the following characteristics: toxic, corrosive, flammable, explosive, combustible, oxidizer, pyrophoric, unstable (reactive) or water - reactive.
- M. The term "Non-Hazardous Waste" refers to any solid or liquid waste not exhibiting characteristics of Hazardous Waste.
- N. The term "EHS-HMM" refers to Owner's Environment, Health and Safety Department - Hazardous Materials Management Program 1239 Kipke Drive, Ann Arbor, MI 48109-1010, phone (734)763-4568.

1.4 SUBMITTALS

- A. Exposure Assessment Documentation: Submit to EHS
- B. All information used to document previous employee exposure assessments, if available. If not available, conduct an initial exposure assessment at the start of the project.
- C. Written Compliance Plan: Submit to EHS a Written Compliance Plan incorporating all requirements in the MIOSHA Lead in Construction Standard. Also indicate type of containment and method of liquid waste capture to be established if water is utilized for removal.
- D. Health and Safety Requirements: Submit to EHS the following information for each employee that will conduct lead disturbance on the job site:
 - 1. Respiratory Protection Program.
 - 2. Proof of current fit test for respirator that will be worn on Project Site.
 - 3. Proof of medical surveillance for respirator usage and lead work.
 - 4. Proof of lead awareness training in accordance with section 1.5. QUALITY ASSURANCE.
- E. Prepare a written schedule for each operation expected to disturb/remove LCM, indicating the following:
 - 1. Type of work to be performed, such as cutting, demolition, paint removal, or other action.
 - 2. Location of work to be performed.
 - 3. Proposed starting date and time.
 - 4. Proposed working hours.
 - 5. Proposed duration.
- F. Waste Container Order: If necessary, submit an order for hazardous waste containers (pails, drums, or dumpsters) to EHS-HMM not less than 10 working days prior to beginning LBP disruption/removal work. Containers are not needed for demolition waste with LBP that has been TCLP tested and found to be non-hazardous Contact EHS-HMM (734)-763-4568 to order containers and labels. The following information should be submitted with the order:
 - 1. Location
 - 2. Work activities/methods
 - 3. Estimated number of pails, drums or dumpsters needed for both solid and liquid waste.
- G. All submissions must be directed to EHS.

1.5 QUALITY ASSURANCE

- A. Personnel involved in the disturbance of LCM shall be trained in accordance with the requirements of the MIOSHA Lead in Construction Standard, including:
 - 1. The content of the MIOSHA Lead in Construction Standard and its appendices;
 - 2. The specific nature of the operations which could result in exposure to lead above the action level;
 - 3. The purpose, proper selection, fitting, use, and limitations of respirators;
 - 4. The purpose and a description of the medical surveillance program, and the medical removal protection program including information concerning the adverse health effects associated with excessive exposure to lead (with particular attention to the adverse reproductive effects on both males and females and hazards to the fetus and additional precautions for employees who are pregnant);
 - 5. The engineering controls and work practices associated with the employee's job assignment including training of employees to follow relevant good work practices;
 - 6. The contents of any compliance plan in effect;
 - 7. Instructions to employees that chelating agents should not routinely be used to remove lead from their bodies and should not be used at all except under the direction of a licensed physician; and
 - 8. The employee's right of access to records under 29 CFR 1910.20.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 HEALTH AND SAFETY REQUIREMENTS

- A. General: Determine employee exposure to lead in air as required in MIOSHA Lead in Construction Standard.
- B. Exposure Assessment: If the Contractor has made a previous Exposure Assessment that is representative of the task to be performed on-site, the Contractor may rely on this data and determine the need for personal protective equipment and work practice controls based upon this data, if approved by EHS.
- C. Job requirements: When the Contractor does not have an Exposure Assessment or the Assessment is determined to be insufficient, the Contractor must conduct personal air monitoring in accordance with the MIOSHA Lead in Construction Standard and follow the requirements below which are outlined by job task until monitoring determines otherwise:
 - 1. Manual demolition, scraping, sanding, heat gun application, power tool cleaning with HEPA dust collection system, spray painting with LCM:
 - a. Use of 1/2 mask respirator with HEPA filters.
 - b. PPE.

- c. Medical surveillance.
 - d. Use of changing room.
 - e. Use of handwashing facilities.
 - f. Provision of lead awareness training.
2. Using lead mortar, lead burning, rivet busting, power tool cleaning without HEPA collection, cleaning up with dry expendable abrasives, removing or relocating enclosure:
- a. Loose fitting PAPR with HEPA or supplied air respirator.
 - b. PPE.
 - c. Medical surveillance.
 - d. Use of changing room.
 - e. Use of handwashing facilities.
 - f. Provision of lead awareness training.

THE TECHNIQUES USED IN THE PARAGRAPH BELOW SHOULD BE USED ONLY IF NO OTHER ALTERNATIVES ARE AVAILABLE AND AFTER CONSULTATION WITH OSEH. DELETE THE PARAGRAPH BELOW IF OSEH WILL NOT ALLOW THESE TECHNIQUES IN THE PROJECT.

3. Abrasive blasting, welding, using cutting torch, burning (Contact EHS for alternatives before using these methods):
- a. Supplied air respirator or SCBA.
 - b. PPE
 - c. Medical surveillance.
 - d. Use of changing room.
 - e. Use of handwashing facilities.
 - f. Provision of lead awareness training.

3.2 PREPARATION

- A. General: Prepare Work Areas in a manner that will protect Owner's personnel and property, and the visiting public, from contact with LCM. Prior to beginning work, confirm starting date and time with Owner. Do not begin work that will disturb LCM without Owner's approval.

DELETE PARAGRAPH BELOW IF NO REMOVAL WORK ON BUILDING EXTERIOR.

- B. Preparing Building Exteriors: Ensure adequate measures are in place to limit airborne lead content below the Action Level of 30 ug/m³ (micrograms per cubic meter) adjacent to the Work Area.
- 1. Erect barricades and install warning tape or signs as necessary to prevent inadvertent exposure of passersby to LCM in all forms, including, but not necessarily limited to dust, particles, and fumes.
 - 2. Completely cover grounds and vegetation with minimum 8-mil thick polyethylene sheets with joints between sheets lapped and taped; with one edge taped to adjacent building surfaces below area of work; and with free ends secured in position with stakes, tie-down lines or weights. Cover sufficient ground area to capture wind-blown chips, dust and particles.

DELETE PARA BELOW IF NO REMOVAL WORK WITHIN BUILDING.

C. Preparing Building Interiors: Ensure adequate measures are in place to protect building occupants from exposure to airborne lead dust, particles, fumes or other LCM exceeding the Action Level of 30 ug/m³ (micrograms per cubic meter) lead content in air. Adequate measures shall include, but are not necessarily limited to, construction of Critical Barriers and/or establishment of negative pressure within Work Area.

1. Seal off openings and penetrations into the Work Area. Provide temporary dust barriers consisting of at least polyethylene plastic sheet on wood studs. Lap and tape joints of plastic sheeting to prevent dust, particles, fumes, and other forms of lead debris from leaving the enclosed area.
2. Discontinue building ventilation within the Work Area and seal off ventilation supply and return or exhaust diffusers, grilles or openings.
3. Post warning signs at all entrances to the Work Area that state the following, as required in MIOSHA Lead in Construction Standard:

DANGER

LEAD WORK AREA

MAY DAMAGE FERTILITY OR THE UNBORN CHILD

CAUSES DAMAGE TO THE CENTRAL NERVOUS SYSTEM

DO NOT EAT, DRINK OR SMOKE IN THIS AREA

3.3 WORK PRACTICES

A. General: Perform any removal, demolition or disturbance of LCM in compliance with the following requirements:

1. Restrict access to Work Area to essential personnel.
2. Use moist-removal methods and/or HEPA vacuuming where applicable. Do not over-saturate the Work Area.
3. Any debris generated must be cleaned up immediately before it can be tracked into other areas.
4. Remove contaminated clothing and personal protective equipment before leaving the Work Area, or Work Area enclosure, as applicable.
5. If the Action Level is exceeded outside the Work Area, discontinue work and modify Critical Barrier, or perform other modifications of methods or materials as required to reduce the lead contamination below the Action Level.
6. Prohibit eating, drinking, and smoking in the Work Area.

THE PARAGRAPH BELOW COVERS BOTH LARGE AND SMALL PAINT REMOVAL PROJECTS, FOR BOTH EXTERIORS AND INTERIORS. DELETE ONLY IF NO PAINT PREP IS REQUIRED.

B. Incidental Removal of LBP: Remove paint from building surfaces by hand scraping and sanding; or through the use of fluid-applied chemical strippers designed to dry into a solid polymeric sheet and peel off with paint encapsulated. Hand-scraping and sanding must be used in conjunction with moist-removal methods using misted water. Leave moist paint dust and chips in place to air dry before collection. Contact EHS as soon as removal has begun.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 028300 - - 6

1. Wet methods (including power-washing) that use amounts of water that can drip, spill, or leak onto the ground, or onto or into other adjacent surfaces are prohibited unless approved by EHS.
2. Dry removal methods (including sand blasting, power sanding, and other methods relying on high velocity mechanical abrasion) that create airborne fine particulate waste materials are prohibited unless specifically reviewed and approved by EHS.
3. Prior to torch-cutting building elements containing LBP, remove paint within four inches of centerline of cut in accordance with requirements of this Section.

DELETE PARAGRAPH BELOW IF NO SOLID SHEET REMOVAL. BELOW ASSUMES THAT LEAD IS NOT CONTAMINATED BY RADIATION OR REGULATED CHEMICALS. IF CONTAMINATION IS POSSIBLY PRESENT, CONSULT WITH OSEH REGARDING DECONTAMINATION OR DISPOSAL AS HAZARDOUS MATERIAL.

- C. Removal of Solid Lead Sheeting: Remove and stockpile solid lead sheet materials in a manner that will not result in the contamination of Work Area or Project Site. Remove sheet products in the largest sections possible. Do not unnecessarily cut or abrade lead sheet materials. Provide minimum 8-mil thick plastic sheet covering between solid lead stockpiles and walls, floors, paving or ground as applicable.
 1. Do not separate lead sheet materials that are adhesively laminated to gypsum substrates. Remove and dispose as lead hazardous waste all gypsum board with lead laminate attached.

3.4 DISPOSAL

- A. Lead Painted Demolition Debris and Lead Paint Chips: Prior to removal of waste from the site, coordinate Toxicity Characteristic Leaching Procedure (TCLP) testing of LCM waste with EHS-HMM. Allow two weeks for testing results. If TCLP testing shows the waste to be nonhazardous, the waste can be disposed of as normal construction demolition debris. If waste is classified as Hazardous or has not been TCLP tested, comply with the following requirements:
 1. Collect and place solid and liquid waste in Owner-provided containers.
 2. Store waste containers in a secure area (preferably a locked room at the project site. Set containers securely on a hard surface which is accessible to EHS drum carts. Do not stage containers on lawns, dirt piles, gravel drives, areas with mud or basement areas with no elevator access.
 3. Ensure that soil, ground water, and drains or sewers within the storage area are protected from possible contamination. Keep containers secure and tightly closed at all times, except when adding waste.
 4. Keep lead waste segregated from other waste. Do not co-mingle waste. **DO NOT MIX LIQUID AND SOLID WASTE.**

5. Place appropriate labels on all containers. Provide all information required on the label; mark labels using indelible ink. The name of the "Waste Generator" is as follows:
 - a. "Campus Area" 1655 Dean Road, Ann Arbor, Michigan 48109.
 - b. Contact EHS at the start of the project (734-763-4568) for proper generator name and site address.
 6. Mark the side of each container with the name and phone number of Owner's Representative knowledgeable about the type of waste contained.
 7. Do not remove waste from Project Site.
- B. Disposal of hazardous lead waste shall be done in coordination with EHS-HMM.
1. Contact EHS-HMM at least one week in advance to request pick-up of the containers.
 2. EHS will pickup and dispose of properly packaged and staged hazardous lead waste at no cost to the contractor. Call the EHS-HMM Program at 734-763-4568 to schedule a pickup immediately after lead waste has been staged.
- C. Disposal of Non-Hazardous LCM from Demolition/Renovation Activities: Collect non-hazardous LCM waste in a covered dumpster and dispose of the waste at a Type II or III landfill. For projects where large amounts of hazardous waste are generated, EHS may allow for transportation and disposal of waste by a qualified contractor. If applicable, contact EHS for additional transportation and disposal requirements.

3.5 CLEAN UP

- A. Upon completion of LCM or LBP removal and disposal operations, clean all surfaces within the Work Area before it can be tracked into other areas, including, but not necessarily limited to the following:
1. Siding.
 2. Steel support structures.
 3. Floors and ground.
 4. Walls.
 5. Window sills.
 6. Trim.
 7. Ledges and projections.
- B. For projects within building interior spaces, use a HEPA filtered vacuum for removal/elimination of dust, particulates, and debris.
1. Brushing, brooming and other dry methods that generate airborne dust are prohibited.
- C. Remove and dispose of wash water and HEPA filters as Hazardous Waste.
- D. Remove and dispose of all solid waste used for protection and clean-up as Non-Hazardous Waste as indicated in Section 3.4, "Disposal of Non-Hazardous LCM from Demolition/Renovation Activities".

- E. Field Testing: Upon completion of removal, disposal, and clean-up operations, the Owner may visually inspect and/or test the Project Site for evidence of remaining lead contamination. Return to Project Site and, at no additional cost to Owner, re-clean areas found to be contaminated.

SECTION 028333 - LEAD REMEDIATION - RENOVATION, REPAIR AND PAINTING IN
CHILD-OCCUPIED FACILITIES AND TARGET HOUSING

END OF CONTENTS TABLE

DIVISION 02 EXISTING CONDITIONS

SECTION 028333 - LEAD REMEDIATION - RENOVATION, REPAIR AND PAINTING IN CHILD-OCCUPIED FACILITIES AND TARGET HOUSING

DECEMBER 2011

THIS SECTION IS TO BE USED FOR REMOVAL AND DISPOSAL OF LEAD CONTAINING MATERIALS (LCM) DURING RENOVATION, REPAIR AND PAINTING (RRP) WORK IN CHILD CARE FACILITIES, FAMILY HOUSING, RESIDENTIAL PROPERTIES AND HALL DIRECTOR/OTHER APARTMENTS WITHIN RESIDENCE HALLS. LEAD WORK WITHIN RESIDENCE HALL STUDENT ROOMS AND OTHER SPACES WITHIN RESIDENCE HALLS IS COVERED BY THE CONSTRUCTION LEAD SPECIFICATION, SECTION 028300. FOR LEAD ABATEMENT WORK (NOT RRP WORK) IN CHILD CARE FACILITIES ETC. CONTACT UM OSEH-IH&S (DANIELLE SHEEN 734-647-1142) FOR PROJECT SPECIFIC LEAD ABATEMENT SPECIFICATION DEVELOPMENT.

SURVEY ALL BUILDING COMPONENTS WHICH MAY CONTAIN LEAD OR BE COVERED WITH LEAD-BASED PAINT (LBP). THE SURVEY MUST BE CONDUCTED BY A CERTIFIED LEAD RENOVATOR. CONTACT OSEH EARLY DURING THE DESIGN PHASE FOR A LEAD-PAINT SURVEY TO DETERMINE EXTENT AND CONCENTRATION OF LEAD-BASED PAINT, IF ANY. BRETT GOECKE (734-647-2306) IS THE OSEH CONTACT FOR LEAD PAINT SAMPLING. INCLUDE OSEH IN ANY PRE-CONSTRUCTION MEETINGS FOR PROJECTS INVOLVING LBP DISTURBANCE.

IF AREAS OF LEAD PAINT DISTURBANCE ARE BELOW SIX SQUARE FEET (SF) FOR INTERIOR WORK AND 20 SF FOR EXTERIOR WORK, THE EPA RULE DOES NOT APPLY. CONSULT OSEH TO DETERMINE IF THE RULE APPLIES. THIS EXCEPTION DOES NOT APPLY TO WINDOW REPLACEMENT, DEMOLITION OR ANY PROHIBITED ACTIVITIES LISTED BELOW IN THE SPECIFICATION.

PART 1 - GENERAL

1.1 SUMMARY

- A. This section specifies requirements when renovating, repairing or painting in target housing and child occupied facilities built before 1978. Activities impacting lead-based paint (LBP) that are subject to the requirements of this section include but are not limited to:
1. Remodeling and repair/maintenance.
 2. Electrical work.
 3. Plumbing repairs or improvements.
 4. Painting.
 5. Carpentry.
 6. Window replacement.
 7. Demolition of painted walls or ceilings.
 8. Re-plastering.
 9. Any other activities which disturb painted surfaces.

- B. This section does not apply to lead abatement projects in housing and child occupied facilities. Lead abatement is work designed to permanently eliminate lead based paint hazards.
- C. Extent of LBP is as follows:

SELECT ONE OF THE FOLLOWING THREE ITEMS REGARDING EXTENT OF WORK OR MODIFY TO REFLECT PROJECT SCOPE.

- 1. As shown on drawings.
 - 2. All existing paint.
 - 3. Marked at the site during the pre-bid inspection "walk through."
- D. Prohibited Activities:
 - 1. Prohibited activities include open flame burning/torching, using a heat gun above 1,100 degrees Fahrenheit (°F) and sanding, grinding, planing, needle gunning or blasting without a shroud and HEPA vacuum attachment.

1.2 RELATED SECTIONS

- A. Demolition and removal of items not containing lead as a component are included in Division 02 Section "Selective Demolition."

1.3 DEFINITIONS

- A. The term "Abatement" signifies any measure or set of measures designed to permanently eliminate lead-based paint hazards from the target housing or child-occupied facility as defined in 40 CFR part 745, subpart L. Abatement includes, but is not limited to:
 - 1. The removal of lead-based paint and lead-contaminated dust, the permanent enclosure or encapsulation of lead-based paint, the replacement of lead-painted surfaces or fixtures, and the removal or covering of lead-contaminated soil.
 - 2. Preparation, cleanup, disposal, and post-abatement clearance testing activities associated with such measures.
- B. The term "Action Level" means an airborne concentration of lead of 30 micrograms per cubic meter of air calculated as an 8-hour time-weighted average (TWA).
- C. The term "Certified Inspector or Risk Assessor" means an individual who has been trained and is certified by the Environmental Protection Agency (EPA) or the Michigan Department of Community Health to conduct lead-based paint inspections or risk assessments.
- D. The term "Child-occupied Facility" means a building, or portion of a building, constructed prior to 1978, visited regularly by the same child, 6 years of age or under, on at least two different days within any week (Sunday through Saturday period), provided that each day's visit lasts at least 3 hours and the combined weekly visit lasts at least 6 hours, and the combined annual visits last at least 60 hours. Child-occupied facilities may include, but are not limited to, day-care centers, preschools and kindergarten classrooms.

- E. The term "Cleaning Verification Card" means a card developed and distributed, or otherwise approved, by the EPA for the purpose of determining, through comparison of wet and dry disposable cleaning cloths with the card, whether post-renovation cleaning has been properly completed.
- F. The term "Common Area" means a portion of a building that is generally accessible to all residents or users. Common areas include (but are not limited to) hallways, stairways, laundry rooms, recreation rooms, playgrounds, community centers and fenced areas whether interior or exterior spaces.
- G. The term "Component" means a specific design or structural element or fixture distinguished by its form, function, and location. A component can be located inside or outside the dwelling. Examples include (but are not limited to) ceilings, wall, floors, shelves, crown molding, trim, fences, handrails window sills and soffits.
- H. The term "Containment" means a process to protect workers and the environment by controlling exposures to the lead-contaminated dust and debris created during a renovation, repair or painting project.
- I. The term "Critical Barrier" indicates the perimeter of the enclosure within which lead disruption/removal work takes place. Critical Barriers may include existing floor, wall, and ceiling structures, as well as constructed partitions, closures and seals.
- J. The term "Encapsulant" means a substance that forms a barrier between lead-based paint and the environment using a liquid-applied coating (with or without reinforcement materials) or an adhesively bonded covering material.
- K. The term "Enclosure" means the use of rigid, durable construction materials that are mechanically fastened to the substrate in order to act as a barrier between lead-based paint and the environment.
- L. The term "Exposure Assessment" means a determination of employee exposure for a given task measured by air sampling. The Assessment must meet the criteria for objective data as outlined in the MIOSHA/OSHA Lead in Construction Standard (MIOSHA Part 603, R325.51992 and 29 CFR 1926.62).
- M. The term "Hazardous Waste" refers to a listed waste or any solid or liquid waste with one or more of the following characteristics: toxic, corrosive, flammable, explosive, combustible, oxidizer, pyrophoric, unstable (reactive) or water - reactive. This definition includes lead paint that has been removed from the substrate and has failed the TCLP for any reason.
- N. The term "Inspection" means a surface-by-surface investigation to determine the presence of lead-based paint and the provision of a report explaining the results of the investigation.
- O. The term "Lead-Based Paint" (LBP) is identified as paint or other surface coatings that contain lead equal to or in excess of 1.0 milligrams per square centimeter or more than 0.5 percent by weight or lesser value as defined by EPA.

- P. The term "Non-Hazardous Waste" refers to any solid or liquid waste not exhibiting characteristics of Hazardous Waste. This definition includes lead-based paint not removed from substrate and not failing TCLP for other characteristics. It also includes lead paint chips that do not fail the TCLP for any reason.
- Q. The term "EHS" refers to Owner's Environment, Health and Safety Department, 1239 Kipke Drive, Ann Arbor, MI 48109-1010, phone (734)647-1142.
- R. The term "OSHA PEL" stands for the Permissible Exposure Limit established by the Occupational Safety and Health Administration for lead exposure. The OSHA PEL refers to an airborne concentration of lead of 50 micrograms per cubic meter of air calculated as an 8-hour time-weighted average (TWA).
- S. The term "Renovation" refers to a modification of all or part of any existing structure that disturbs a painted surface, including (but not limited to) removal/modification of painted surfaces, components or structures, surface preparation activities and window replacement as defined in 40 CFR part 745, subpart E.
- T. The term "Renovator" means a person who either performs or directs workers who perform a renovation. A certified renovator is a renovator who has successfully completed a renovator course accredited by the EPA or the Michigan Department of Community Health. Note: because the term renovation is broadly defined by the EPA rule "Lead-Based Paint Renovation, Repair and Painting Program" contractors such as electricians and plumbers may be considered "renovators" under this rule.
- U. The term "Target Housing" refers to housing constructed before 1978, except for: housing for the elderly, dormitories, studio apartments, efficiencies, military barracks and rentals of individual rooms.
- V. The term "TCLP" stands for Toxicity Characteristic Leaching Procedure and refers to one of the tests to determine if waste is to be disposed as a Hazardous Waste or non-hazardous solid waste.
- W. The term "Wet Disposable Cleaning Cloth" refers to a commercially available, pre-moistened, white disposable cloth designed to be used for cleaning hard surfaces such as countertops and uncarpeted floors.

1.4 SUBMITTALS

- A. All submittals must be directed to UM EHS. Submit documents requested in paragraphs B - E before start of project.
- B. Project Information:
 1. Copy of Firm Certification from the EPA or the State of Michigan Department of Community Health.
 2. Schedule of renovation, repair and painting activities.
 3. Length and number of shifts.
 4. Certified supervisor name, crew size, length and number of shifts.

- C. Written Compliance Plan: Submit to EHS a Written Compliance Plan incorporating all requirements in the MIOSHA Lead in Construction Standard. Also indicate type of containment and disposal to be established if water is utilized for removal.
- D. Health and Safety Requirements: Information must be provided for all workers that will conduct renovation, repair and painting activities on site, including the following for each employee that will conduct lead disturbance on the job site:
 - 1. Exposure Assessment Documentation, if available.
 - 2. Respiratory Protection Program.
 - 3. Proof of current fit test for respirator that will be worn on Project Site.
 - 4. Proof of medical surveillance for respirator usage and lead work.
 - 5. Proof of certified renovator training and accreditation for each supervisor on-site.
 - 6. Proof of lead awareness training and medical approvals for all workers on-site.
- E. Renovation Work Notification
 - 1. Renovations in Housing or other Dwelling Units
 - a. Occupants of units where renovations will take place must be provided with EPA's lead pamphlet "Renovate Right-Important Lead Hazard Information for Families, Child Care Providers and Schools".
 - b. Obtain written acknowledgement from an adult occupant that the pamphlet has been received or certify in writing that the pamphlet has been delivered to the dwelling and the occupant refused to sign or was unavailable.
 - c. Obtain a certificate of mailing at least 7 days prior to the renovation.
 - d. The written certification must include the address of the unit undergoing renovation, the date and method of delivery of the pamphlet, name of person delivering the pamphlet, reason for lack of acknowledgement, the signature of a representative of the firm performing the renovation and the date of the signature.
 - 2. Renovations in Common Areas
 - a. Where renovations take place in common areas, occupants of affected units must be notified in writing. Such notification shall be accomplished by distributing the written notification to each affected unit.
 - b. The notice shall describe the general nature and locations of the planned renovations activities, the expected start and ending dates and a statement of how the occupant can obtain the EPA lead pamphlet at no cost.
 - c. Obtain a certificate of mailing at least 7 days prior to the renovation.

- d. In place of the written notification to each affected unit the renovator may, while the renovation is ongoing, post in an area likely to be seen by occupants of all the units, informational signs describing the general nature and locations of the work and anticipated completion date. Additionally post a copy of the EPA lead pamphlet or information on how to obtain a copy free of charge from the renovator.
 - e. Prepare sign and date a statement describing the steps performed to notify all occupants of the intended renovation activities and to provide the pamphlet.
 - f. If the scope, locations or expected starting and ending dates change, re-notify the occupants prior to beginning additional renovation work.
3. Renovations in Child-Occupied Facilities
- a. Child-occupied facilities where renovations will take place must be provided with the EPA's lead pamphlet "Renovate Right-Important Lead Hazard Information for Families, Child Care Providers and Schools".
 - b. Obtain written acknowledgement from an adult representative of the child-occupied facility that the pamphlet has been received or certify in writing that the pamphlet has been delivered to the child-occupied facility and the adult representative refused to sign or was unavailable.
 - c. Obtain a certificate of mailing at least 7 days prior to the renovation.
 - d. The written certification must include the address of the unit undergoing renovation, the date and method of delivery of the pamphlet, name of person delivering the pamphlet, reason for lack of acknowledgement, the signature of a representative of the firm performing the renovation and the date of the signature.
 - e. Provide the parents or guardians of children using the child-occupied facility with the pamphlet and the information describing the general nature and locations of the renovation and the anticipated completion date by mailing or hand-delivering the information. Or, while the renovation is ongoing, post in an area likely to be seen by the parents or guardians of the children frequenting the child-occupied facility, informational signs describing the general nature and locations of the work and anticipated completion date. Additionally post a copy of the pamphlet or information on how to obtain a copy free of charge from the renovator.
 - f. Prepare sign and date a statement describing the steps performed to notify all parents and guardians of the intended renovation activities and to provide the pamphlet.
 - g. Any written acknowledgements required above must include the occupant's name and acknowledgement that the pamphlet was received prior to the renovation, the address of the facility undergoing renovation and the dated signature of the occupant.

- F. Waste Drum Order: Submit order for waste drums to EHS not less than 10 working days prior to beginning LBP disruption/removal work. The following information should be submitted with the order:
 - 1. Location.
 - 2. Work activities/methods.
 - 3. Estimated number of barrels/drums needed for both solid (paint chips) and liquid waste (wash water).
- G. Prior to application for final payment, submit a renovation report prepared by a certified renovator. The report should include the following:
 - 1. Start and completion dates of project.
 - 2. The name and address of each certified person conducting the renovation and the name of each supervisor assigned to the project.
 - 3. A detailed written description of the project, including all of the following:
 - a. Renovation methods used.
 - b. Locations of rooms and components where renovation, repair and painting occurred.
 - c. Results of Visual Inspection and Cleaning Verification.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 LEAD RENOVATION, GENERAL

- A. Conduct lead renovation, repair and painting activities in accordance with all state and federal regulations and guidelines.
- B. Assign a Certified Renovator to the project who will remain on-site during all renovation, repair and painting work.
- C. Maintain at each job site and post the following documents:
 - 1. Employee Respiratory Protection Program.
 - 2. Michigan Right-To-Know poster.
 - 3. Material Safety Data Sheet locator.
 - 4. Company standard operating procedure.
 - 5. This specification section.
 - 6. Material Safety Data Sheets for products used on job.
 - 7. EPA or Michigan Department of Community Health Renovator Certificates for each supervisor (initial and the most recent refresher).
 - 8. Proof of lead awareness training and medical approvals for all workers on-site.
 - 9. For renovations in common areas and child care facilities post a written notification detailing the general nature and locations of the work and anticipated completion date.
 - 10. For renovations in common areas and child care facilities post a copy of the EPA lead pamphlet "Renovate Right-Important Lead Hazard Information for Families, Child Care Providers and Schools".

- D. Open-flame burning or torching of lead-based paint is prohibited.
- E. Machine sanding, grinding, abrasive blasting and sandblasting of lead-based paint is prohibited, unless the sanding, grinding, blasting, or sandblasting is conducted using a shrouded tool with a high-efficiency particulate air (HEPA) exhaust control that removes particles of 0.3 microns or larger from the air at an efficiency of 99.97% or more.
- F. Dry scraping of lead-based paint is permitted only in conjunction with heat guns or around electrical outlets. Operating a heat gun on lead-based paint is permitted only if the temperature generated by the heat gun is less than 1,100 °F.

3.2 HEALTH AND SAFETY REQUIREMENTS

- A. General: Determine employee exposure to lead in air as required in MIOSHA Lead in Construction Standard.
- B. Exposure Assessment: If the Contractor has made a previous Exposure Assessment that is representative of the task to be performed on-site, the Contractor may rely on this data and determine the need for personal protective equipment and work practice controls based upon this data, if approved by EHS.
- C. Personal Air Monitoring: When the Contractor does not have an Exposure Assessment or the Assessment is determined to be insufficient, the Contractor must conduct personal air sampling in accordance with the MIOSHA Lead in Construction Standard and follow all State and Federal regulations and procedures as covered in Certification Training courses.

3.3 PREPARATION

DELETE PARAGRAPH BELOW IF NO RENOVATION WORK ON THE EXTERIOR.

- A. General: Prepare Work Areas in a manner that will protect Owner's personnel and property and contain the work area so that no dust or debris leaves the work area.
- B. Preparing Building Exteriors: Ensure adequate measures are in place to prevent dust and debris from escaping the work area and to limit airborne lead content below the Action Level of 30 ug/m3 (micrograms per cubic meter) adjacent to the Work Area.
 - 1. Close all doors and windows within 20 feet of the renovation on the same floor and all doors and windows on floors below the renovation area.
 - 2. Ensure that doors within the work area that will be used while the job is being performed are covered with plastic sheeting in a manner that allows workers to pass through while confining the dust and debris.
 - 3. Erect barricades and install warning tape or signs as necessary to prevent inadvertent exposure of passersby to LBP in all forms, including, but not necessarily limited to dust, particles, and fumes.

4. Completely cover grounds and vegetation extending 10 feet beyond the perimeter or a sufficient distance to collect falling debris with minimum 8-mil thick polyethylene sheets with joints between sheets lapped and taped; with one edge taped to adjacent building surfaces below area of work; and with free ends secured in position with stakes, tie-down lines or weights. Cover sufficient ground area to capture wind-blown chips, dust and particles. Contractor is responsible for any paint debris found at project completion.

DELETE PARAGRAPH BELOW IF NO RENOVATION WORK WITHIN THE BUILDING

C. Preparing Building Interiors:

1. Discontinue building ventilation within the Work Area and seal off ventilation supply, return or exhaust diffusers, grilles or openings.
2. Remove all objects from the work area or cover with plastic sheeting with all seams and edges sealed.
3. Close windows and doors in the work area to form a Critical Barrier. Doors must be covered with plastic sheeting.
4. Cover the floor surface a minimum of six feet beyond the perimeter of the surfaces undergoing renovation or a sufficient distance to contain the dust, whichever is greater.
5. Post warning signs at all entrances to the Work Area that states the following, as required in MIOSHA Lead in Construction Standard:

**DANGER
LEAD WORK AREA
MAY DAMAGE FERTILITY OR THE UNBORN CHILD
CAUSES DAMAGE TO THE CENTRAL NERVOUS SYSTEM
DO NOT EAT, DRINK OR SMOKE IN THIS AREA**

3.4 WORK PRACTICES

A. General: Perform renovation of LBP coated materials in compliance with the following requirements:

1. Restrict access to Work Area to essential personnel.
2. Use moist-removal methods where applicable. Do not over-saturate the Work Area.
3. Remove contaminated clothing and personal protective equipment before leaving the Work Area, or Work Area enclosure, as applicable.
4. If dust or debris is escaping the Work Area or if the Action Level is exceeded outside Work Area, discontinue work and modify Critical Barrier, or perform other modifications of methods or materials as required to prevent dust and debris from escaping.
5. Prohibit eating, drinking, and smoking in the Work Area.
6. Collect and contain all paint chips, debris, personal protective equipment and protective sheeting, daily. Seal in heavy duty bags or drums to prepare for proper disposal.

7. Use precautions (such as tack mats, shoe covers, HEPA vacuuming and or wet wiping) to ensure that all personnel, tools, waste containers and other items are free of dust and debris when leaving the area.

3.5 POST RENOVATION CLEANING

- A. Upon completion of work, mist the plastic sheeting and fold the plastic containment sheeting dirty side inward, after misting and seal edges or dispose of plastic in sealed bags.
- B. Brushing, brooming and other dry methods that generate airborne dust are prohibited.
- C. Remove and dispose of all solid waste used for protection and clean-up as Non-Hazardous Waste as indicated in Disposal Article (2.6) below.
- D. Clean all objects and surfaces within project area, and two feet beyond, per the methods detailed below, always cleaning higher to lower.
 1. Clean walls starting at the ceiling and working down to the floor by either vacuuming with a HEPA vacuum or wiping with a damp cloth.
 2. Thoroughly vacuum all remaining surfaces and objects in the work area including furniture and fixtures, with a HEPA vacuum. The HEPA vacuum must be equipped with a beater bar when vacuuming carpets and rugs.
 3. Wipe all remaining surfaces and objects in the area, except for carpeted and upholstered surfaces with a damp cloth. Mop uncarpeted floors thoroughly, using a mopping method that keeps the wash water separate from the rinse water, such as the 2-bucket mopping method or using a wet mopping system. Properly contain all wash water for testing to determine if it is hazardous. Dispose wash water as Hazardous Waste if testing indicates that it is hazardous. If testing indicates that it is non-hazardous filter for particulates and dispose of in a sanitary drain. Do not dispose of wash water in storm drains.
- E. After cleanup is complete a Certified Renovator must perform a visual inspection to determine if dust, debris or residue is present. If dust, debris or residue is present the area must be re-cleaned and the visual inspection repeated.
- F. After the visual inspection has passed, exterior areas are considered clean. Cleanup of interior areas must be further verified. Start the post renovation cleaning verification process with windows sills and then proceed to uncarpeted floors and countertops, cleaning higher to lower as detailed below:
 1. The Certified Renovator must wipe, with a wet disposable cleaning cloth that is damp to the touch, each window sill, uncarpeted floor and countertop within the work area and compare the cleaning cloth to the cleaning verification card. If the cleaning cloth is darker than the verification card cleaning must be repeated. If it is not, then cleaning is complete.

2. Each window sill in a project area must be wiped with a separate cleaning verification cloth.
 3. Uncarpeted floors and countertops in the project areas must be less than 40 square feet (sf). If the surface is larger than 40 sf, the work area must be divided into roughly equal sections less than 40 sf.
 4. Wipe each section separately with a new wet disposable cleaning cloth.
 5. Floors must be wet wiped with an application device with a long handle and a head to which the cloth is attached.
 6. For any areas that failed, repeat cleaning, wet wipe again and compare cloth again to the verification card. If the cleaning cloth is darker than the verification card, cleaning must be repeated. If the cleaning cloth is not darker than the verification card, cleaning is complete.
 7. For any areas that have failed two wet wipes, wait until the area has dried completely or 1 hour has passed, whichever is longer. Once dry, wipe that area with a dry disposable cleaning cloth and consider the area adequately cleaned.
- G. Contractor is responsible for re-cleaning any areas that do not pass applicable cleaning verification standards. The Owner or Owners Consultant may dictate the method of cleaning to reach clearance.
- H. The Owner reserves the right to perform dust clearance sampling to determine if a renovated area is free of lead hazards.
- I. Remove all warning signs and tape after proper cleaning has been verified.

3.6 DISPOSAL

- A. Disposal of Non-Hazardous Lead-Based Paint or Lead-Based Paint Components: Collect Non-hazardous LBP waste in a covered dumpster and dispose of the waste at a landfill.
- B. Project Waste (LBP paint and wash water only): Coordinate testing, collection, and removal of waste from the Project Site with EHS. Where testing of waste indicates waste is Non-Hazardous, dispose as in Paragraph above, "Disposal of Non-Hazardous LBP or LBP Components. If waste is classified as Hazardous, comply with the following requirements:
1. Keep lead waste segregated from other waste and from other Projects. Do not co-mingle waste. Collect and place solid and liquid waste in Owner-provided drums. DO NOT MIX LIQUID AND SOLID WASTE.
 2. Store containers in the Work Area within the Project Site, protected from physical damage, weather, fire hazard and vandalism. Ensure that soil, ground water, and drains or sewers within the storage area are protected from possible contamination. Keep containers secure and tightly closed at all times, except when adding waste.
 3. Place appropriate labels on all containers. Provide all information required on the label; mark labels using indelible ink. The name of the "Waste Generator" is as follows: "Building Name" 1655 Dean Road, Ann Arbor, Michigan 48109.

4. Mark the side of each drum with the name and phone number of Owner's Representative knowledgeable about the type of waste contained.
 5. Prepare a complete and accurate State of Michigan Hazardous Waste Manifest. Obtain approval from Owner's Representative (EHS) to assure correct Generator Name and US EPA Identification Number.
- C. Disposal of LBP waste shall be done in coordination with EHS-Hazardous Materials Management (HMM).
1. Contact EHS-HMM at least one week in advance to request pick-up of the containers.
 2. EHS-HMM will pickup and dispose of properly packaged and staged LBP waste at no cost to the contractor. Call the EHS-HMM Program at 734-763-4568 to schedule a pickup immediately after LBP waste has been staged.

SPECIFICATION DIVISION 2

NUMBER SECTION DESCRIPTION

DIVISION 02 EXISTING CONDITIONS

SECTION 028400 - PCB REMEDIATION

END OF CONTENTS TABLE

DIVISION 02 EXISTING CONDITIONS
SECTION 028400 - PCB REMEDIATION

THIS SECTION DESCRIBES REQUIREMENTS FOR DEMOLITION AND DISPOSAL OF BUILDING MATERIALS SUSPECTED OF CONTAINING PCB'S. THIS APPLIES TO ALL SUSPECT PCB CONTAINING BUILDING MATERIALS TO BE DISTURBED DURING DEMOLITION OR RENOVATION. AEC MUST CONTACT OSEH EARLY IN THE DESIGN PHASE FOR A PCB SURVEY OF SUSPECT MATERIALS TO BE DISTURBED. OSEH WILL CONDUCT SAMPLING TO DETERMINE THE PRESENCE AND QUANTITY OF PCBs IN THE MATERIAL.

PART 1 - GENERAL

1.1 SUMMARY

- A. This section specifies requirements for the demolition and disposal of PCB Bulk Product Waste (BPW). The requirements of this section apply to demolition or renovation of the following:
 - 1. Material (paint, caulk and sealants etc.) previously determined or assumed to contain greater than 50 parts per million (ppm) PCBs.
 - 2. Substrate contaminated (>50 ppm) by PCB paints, caulks and/or sealants etc., if removed at the same time as PCB BPW.
- B. Extent of PCB-containing materials is as follows:

INSERT SURVEY INFORMATION HERE.

1.

1.2 DEFINITIONS

- A. The abbreviation "PCB" stands for Polychlorinated Biphenyl.
- B. The term "PCB bulk product waste" refers to waste derived from manufactured products containing PCBs in a non-liquid state, where the concentration at time of disposal is greater than or equal to 50 parts per million (ppm). This includes caulks, applied dried paints, varnishes, waxes, or other similar coatings or sealants.
- C. The term "Project Site" indicates the limits of the project site as indicated on drawings or by provisions of this specification.
- D. The term "work area" indicates the area within the critical barrier.
- E. The term "critical barrier" indicates the perimeter of the enclosure within which PCB disruption/removal work takes place. Critical barriers may include existing floor, wall, and ceiling structures, as well as constructed partitions, closures and seals.
- F. The term "EHS" refers to Owner's Environment, Health and Safety Department, 1239 Kipke Drive, Ann Arbor, MI 48109-1010, phone (734)747-1142.

1.3 RELATED SECTIONS

- A. Demolition and removal of items not containing PCB as a component is included in Division 02 Section "Selective Demolition."

PART 2 - (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 PCB BULK PRODUCT WASTE REMOVAL, GENERAL

- A. Conduct PCB removal operations in a manner that fully protects Contractor's and subcontractor's employees, the general public, and building occupants from exposure to PCB's.
- B. Protect adjacent areas, materials and surfaces from damage due to demolition operations, including but not necessarily limited to the following:
 - 1. Water damage.
 - 2. Dirt, dust and debris.
 - 3. Abrasion.
 - 4. Cuts and scratches.
 - 5. Holes from fasteners for temporary barriers.
- C. All removal shall be conducted within a regulated area that complies with the following requirements:
 - 1. Establish a regulated area with caution tape and signage to keep unauthorized personnel out of the area.
 - 2. Allow only authorized, properly protected personnel to enter the regulated area. Immediately report unauthorized individuals entering the work area to EHS or the Owner's consultant.
- D. Provide respiratory protection to employees as required by current MiOSHA regulations including Part 451 Respiratory Protection and MiOSHA part 301 Air Contaminants.
 - 1. Provide abatement workers with adequate respiratory protection during PCB BPW removal. At a minimum, half face respirators with HEPA cartridges must be used. If removal methods generate heat above 212°F, combination HEPA/organic cartridges must be used.
 - 2. Provide personal protective equipment for protection against dermal exposures including nitrile gloves and Tyvek^R or similar suits.
- E. Maintain at each job site and post the following documents:
 - 1. Employee respiratory protection program.
 - 2. Michigan Right-To-Know poster.
 - 3. Material Safety Data Sheet locator.
 - 4. Company standard operating procedure.
 - 5. This specification Section.
 - 6. Material Safety Data Sheets for products used on job.
- F. Do not use any of the following equipment or work practices, regardless of measured exposure levels:

1. Dry sweeping or use of compressed air to clean work surfaces.
2. Removal of caulk using abrasive grinding wheels, wire wheels, sanding or other means that generate excessive dust.
3. Use of ordinary vacuums to clean up dust and debris. Vacuums with HEPA filtration must be used.

3.2 PCB BPW REMOVAL BY HAND METHODS

- A. Preparation of the Work Area: Complete the following preparation work prior to beginning removal operations using hand methods (utility knife, hammer and chisel, putty knife etc.).
 1. Seal intake and exhaust vents and duct seams within the regulated area with 1 layer of 6-mil polyethylene sheeting.
 2. Protect all surfaces near removal activity. Remove moveable objects from the work area, and cover fixed objects with impermeable dropcloths or plastic sheeting with edges securely sealed with tape.
 3. All floor and wall areas adjacent to the work area shall have a layer of 6 mil fire retardant polyethylene sheeting, attached to the interior wall and on floor surfaces below the abatement work area, at least 5 feet wide.
 4. Close all windows during interior and exterior removal projects.
 5. Regardless of method of removal, if dust is noted during removal activities, stop removal and adjust work practices or engineering controls. If dust generation continues, a full enclosure is required. See Section 3.3 "PCB Removal by Mechanical Methods."
- B. PCB BPW Removal Operations: Comply with the following requirements for removal operations:
 1. Remove PCB BPW using misting methods to assist in dust settling.
 2. Material should be removed in intact sections if possible.
 3. Adjust mechanical ventilation and or work practices accordingly to eliminate visible dust levels.
 4. Place PCB BPW in labeled 6-mil polyethylene bags.
 5. Place all bagged PCB BPW in owner provided drums or dumpsters.
- C. Post-Removal Operation Requirements: After completion of PCB BPW removal and clean-up operations, comply with the following requirements:
 1. HEPA vacuum and wet wipe/mop all areas until area is dust free.
 2. The Contractor representative, in presence of Owner or Owner's Representative shall inspect the entire work area for PCB BPW dust or material.
 3. If any suspect material is found, repeat final cleaning operation, until the visual inspection is satisfactory to the Owner.
- D. Employee Decontamination Requirements:
 1. Employees shall immediately wash hands, face and other potentially exposed surfaces of the body with soap and water each time they leave the regulated area.

2. Change out of work clothes and shower if necessary to prevent bringing PCB contamination home.

ALWAYS RETAIN FULL ARTICLE BELOW

3.3 PCB BPW REMOVAL BY MECHANICAL METHODS

- A. Preparation of the Work Area: Complete the following preparation work prior to beginning removal operations using mechanical means (any method other than hand tools).
 1. Mechanical cutting or grinding of PCB materials is not permitted, unless the equipment has a HEPA filtered exhaust.
 2. Install critical barriers over each opening into the regulated area. The following requirements are in addition to, not in lieu of, other indicated surface and object protection requirements:
 - a. Seal each opening between the work area and adjacent areas with 1 layer of 4-mil polyethylene sheeting. Openings include, but are not necessarily limited to, windows, skylights, doorways, elevator hoistway openings, corridor entrances, drains, ducts, grills, grates, and diffusers.
 - b. Seal intake and exhaust vents and duct seams within the regulated area with 1 layer of 6-mil polyethylene sheeting.
 3. HVAC System Shutdown: Owner's maintenance personnel will shut down heating, cooling, and air conditioning systems when necessary. Coordinate scheduling with Owner's personnel and provide 72 hours notice to the Owner's Representative prior to planned shut-down.
 4. Close all windows during interior and exterior removal projects.
 5. Protection of Surfaces and Objects: The following requirements are in addition to, not in lieu of, indicated work area sealing requirements. Cover the following surfaces and objects as follows:
 - a. Protect all surfaces near removal activity. Remove moveable objects from the work area, and cover fixed objects with impermeable dropcloths or plastic sheeting with edges securely sealed with tape.
 - b. Completely cover walls and floors within the regulated area with a layer of 6-mil polyethylene sheeting. Avoid seams where possible. If seams are necessary, overlap not less than 12 inches and tape joints. Immediately repair punctures and leaks, and clean up seepage.
 - c. Cleaning: Do not use cleaning methods that raise dust, such as sweeping or using vacuum cleaners not equipped with HEPA filters.
 - d. Fully seal floor drains.
 6. Local Exhaust Ventilation: Maintain portable air filtration units in use during PCB BPW removal at interior locations.
 - a. Exhaust directly to building exterior.
 - b. Provide not less than 4 air changes per hour within the enclosure.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID

028400 - 4

- c. Within the enclosure, through the period of its use, maintain a pressure differential of not less than minus 0.02" water gage with respect to ambient conditions outside the enclosure.
 - 7. Visually inspect the enclosure for breeches and smoke-test for leaks before work begins, and before the start of each work shift. Make all modifications to the enclosure prior to starting removal work.
- B. PCB BPW Removal Operations: Comply with the following requirements for removal operations:
 - 1. Remove PCB BPW using misting methods to assist in dust settling.
 - 2. Material should be removed in intact sections if possible.
 - 3. Adjust mechanical ventilation and or work practices accordingly to minimize visible dust levels.
 - 4. Place PCB BPW in labeled 6-mil polyethylene bags.
 - 5. Place all bagged PCB BPW in owner provided drums or dumpsters.
- C. Post-Removal Operation Requirements: After completion of PCB BPW removal and clean-up operations, comply with the following requirements:
 - 1. HEPA vacuum and wet wipe/mop all areas until area is dust free.
 - 2. The Contractor representative, in presence of Owner or Owner's Representative shall inspect the entire work area for PCB BPW dust or material.
 - 3. If any suspect material is found, repeat final cleaning operation, until the visual inspection is satisfactory to the Owner.
- D. Employee Decontamination Requirements: Comply with the following requirements:
 - 1. Access the work area only through an approved decontamination system. Lock or block other entrances. Seal emergency exits (for use during a fire or accident) with polyethylene sheeting and tape.
 - 2. Entrance To The Regulated Area: Employees shall enter the decontamination area through the clean room, remove and store clothing, and put on protective clothing and respiratory protection before passing through to the equipment room.
 - 3. Exit From The Regulated Area: Employees shall exit the regulated area by removing gross contamination and debris from their protective clothing. The clothing shall be removed and disposed of in the equipment room into labeled impermeable bags or containers.
 - 4. Employees shall wash hands, face and other potentially exposed surfaces of the body with soap and water each time they leave the containment.
 - 5. Employees shall change out of work clothes and shower if necessary to prevent bringing PCB contamination home.

3.4 DISPOSAL OF WASTE

- A. PCB BPW shall be disposed of as PCB waste following the requirements listed below:
1. Bag and place PCB BPW in Owner-provided drums or dumpsters. Contact EHS-HMM (734)763-4568 at least two weeks in advance to request containers.
 2. All PCB waste must be less than 3 foot x 3 foot prior to bagging or wrapping for disposal.
 3. Store waste containers or articles in a secure area.
 4. Do not stage containers on lawns, dirt piles, gravel drive areas with mud or basement areas with no elevator access.
 5. Ensure that soil, ground water, and drains or sewers within the storage area are protected from possible contamination. Keep containers secure and tightly closed at all times, except when adding waste.
 6. Keep abatement waste segregated from other waste and from other Projects. Do not co-mingle waste.
 7. Place appropriate labels on all containers. Provide all information required on the label; mark labels using indelible ink. The name of the "Waste Generator" is as follows:
 - a. "Campus Area" 1655 Dean Road, Ann Arbor, Michigan 48109.
 - b. Contact EHS at the start of the project (734-763-4568) for proper generator name and site address.
 8. Mark the side of each container with the name and phone number of Owner's Representative knowledgeable about the type of waste contained.
 9. Do not remove waste from Project Site.
- B. Disposal of PCB waste shall be done in coordination with EHS-Hazardous Materials Management (HMM).
1. Contact EHS-HMM at least one week in advance to request pick-up of the dumpster.
 2. EHS will pickup and dispose of properly packaged and staged PCB waste at no cost to the contractor. Call the EHS-HMM Program at 734-763-4568 to schedule a pickup immediately after PCB waste has been staged.

SECTION 033053 - MISCELLANEOUS CAST-IN-PLACE CONCRETE

END OF CONTENTS TABLE

DIVISION 03 CONCRETE

SECTION 033053 - MISCELLANEOUS CAST-IN-PLACE CONCRETE

THIS SECTION HAS BEEN PRE-EDITED TO APPLY ONLY TO VERY SMALL PATCHING-TYPE PROJECTS ONLY. USE AIA MASTERSPEC SECTION 033000 "CAST-IN-PLACE CONCRETE" FOR MORE SUBSTANTIAL PROJECTS.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.
- B. Related Sections:
 - 1. Section 079200 - Joint Sealants

1.2 SUMMARY

- A. Section includes:
 - 1. Cast-in-place concrete, including reinforcement, concrete materials, mixture design, placement procedures, and finishes.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product.

INCLUDE BELOW FOR LEED PROJECTS.
- B. Sustainable Design Submittals:
 - 1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

"PRODUCT CERTIFICATES FOR CREDIT MR 5" SUBPARAGRAPH BELOW APPLIES TO LEED-NC, LEED-CS, AND LEED FOR SCHOOLS.

RETAIN "DESIGN MIXTURES FOR CREDIT ID 1.1" SUBPARAGRAPH BELOW IF FLY ASH, SLAG CEMENT, SILICA FUME, OR OTHER MATERIALS ARE USED AS PORTLAND CEMENT REPLACEMENTS FOR LEED CREDIT ID 1.1. TO ACHIEVE THIS CREDIT, REPLACEMENT MATERIALS MUST BE SUBSTITUTED FOR AT LEAST 40 PERCENT OF THE PORTLAND CEMENT THAT WOULD OTHERWISE BE USED.

- 2. Design Mixtures for Credit ID 1.1: For each concrete mixture containing fly ash as a replacement for portland cement or other portland cement replacements. For each design mixture submitted, include an equivalent concrete mixture that does not contain portland cement replacements, to determine amount of portland cement replaced.
- C. Design Mixtures: For each concrete mixture.

1. Submit written report to Architect for each proposed concrete mix at least 15 days prior to start of work. Do not begin concrete production until mixes have been reviewed and are acceptable to Architect.
- D. Laboratory Reports: Submit two (2) copies of laboratory test or evaluation reports for concrete materials and mix designs.

1.4 QUALITY ASSURANCE

- A. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94 requirements for production facilities and equipment.

PART 2 - PRODUCTS

2.1 FORMWORK

- A. Form Materials: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.
1. Wood or metal forms, sufficient to withstand pressure of placed concrete without bow or deflection.

RETAIN BELOW IF DESIRED.

- B. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch, minimum, unless otherwise indicated on Drawings.
- C. Form Ties: Factory-fabricated, removable or snap-off metal or glass-fiber-reinforced plastic form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

2.2 CONCRETE, GENERAL

- A. Comply with the following sections of ACI 301 unless modified by requirements in the Contract Documents:
1. "General Requirements."
 2. "Formwork and Formwork Accessories."
 3. "Reinforcement and Reinforcement Supports."
 4. "Concrete Mixtures."
 5. "Handling, Placing, and Constructing."
 6. "Lightweight Concrete."
- B. Comply with ACI 117.

2.3 STEEL REINFORCEMENT

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
- B. Reinforcing Bars: ASTM A 615, Grade 60, deformed.

- C. Joint Dowel Bars: ASTM A 615, Grade 60, plain-steel bars, cut bars true to length with ends square and free of burrs.
- D. Plain-Steel Wire: ASTM A 1064, as drawn.
- E. Plain-Steel Welded-Wire Reinforcement: ASTM A 1064, plain, fabricated from as-drawn steel wire into flat sheets.

2.4 CONCRETE MATERIALS

- A. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

- B. Cementitious Materials:

TYPE I LISTED BELOW (TYPICAL PORTLAND CEMENT), TYPICAL. CONSIDER TYPE III (HIGH EARLY STRENGTH) FOR SELECT APPLICATIONS (COLD WEATHER CONDITIONS AND EARLY LOADING REQUIREMENTS, DOES NOT HELP WITH CURE TIME FOR FLOORING INSTALLATION)

- 1. Portland Limestone Cement: ASTM C 595, Type II, unless otherwise indicated.
- 2. Fly Ash: ASTM C 618, Class C or F.
- C. Normal-Weight Aggregate: ASTM C 33, selected and uniformly graded and as follows:
 - 1. Class: Severe weathering region, but not less than 3S for foundations and walls and not less than 4S for flatwork.
 - 2. Nominal Aggregate Size: In accordance with ACI 318.
- D. Air-Entraining Admixture: ASTM C 260.
- E. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
 - 1. Water-Reducing Admixture: ASTM C 494, Type A.
 - 2. Retarding Admixture: ASTM C 494, Type B.
 - 3. Water-Reducing and Retarding Admixture: ASTM C 494, Type D.
- F. Water: ASTM C 94; potable.

TYPICALLY INCLUDE FOR EXTERIOR WORK AND INTERIOR TRENCHING. FIBER HELPS TO REDUCE SHRINKING AND CRACKING.

- G. Synthetic Fiber: Monofilament non-metallic polypropylene fibers engineered and designed for use in concrete, complying with ASTM C 1116/C 1116M, Type III, 1/2 to 1-1/2 inches long.
- H. Prepackaged Concrete Mix for Project Site Mixing: Preblended mixture of Portland cement/Portland limestone cement and aggregates requiring only the addition of water with 28 day compressive strength of 4000 psi.
 - 1. Products:
 - a. Quikrete Concrete Mix No. 1101; Quikrete Companies.
 - b. Sakrete Concrete Mix; King Packaged Materials Company.

2.5 RELATED MATERIALS

EDIT LIST TO BE PROJECT SPECIFIC

- A. Vapor Retarder: Plastic sheet, ASTM E 1745, Class A, polyethylene, minimum 15 mils thick. Include manufacturer's recommended pressure-sensitive tape.
- B. Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber, or ASTM D 1752, cork or self-expanding cork.
- C. Self-Expanding Bentonite Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite, for adhesive bonding to concrete, 3/4 by 1 inch.
 - 1. Products:
 - a. Carlisle Coatings & Waterproofing, Inc.; MiraSTOP.
 - b. Colloid Environmental Technologies Company; Volclay Waterstop-RX.
 - c. Greenstreak; Swellstop.
- D. Bonding Agent: ASTM C 1059, Type I, acrylic emulsion.
 - 1. Product: Polyweld; Chem-Masters, or equivalent.
- E. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces:

SELECT TYPES FROM TWO OPTIONS IN SUBPARAGRAPH BELOW BASED ON SERVICE LOADINGS.

- 1. Types IV and V, for bonding hardened or freshly mixed concrete to hardened concrete.
- 2. Product: EUCO 352 or 452; Euclid Chemical Company, or equivalent.

2.6 CURING MATERIALS

- A. Water: Potable.

BELOW IS CURING ONLY.

- B. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.
 - 1. VOC Content: 200 g/L or less.
 - 2. Products:
 - a. Dayton Superior Corporation; Clear Cure WB (J7WB).
 - b. Euclid Chemical Company (The); Tammscure WB 30.
 - c. Meadows, W. R., Inc.; 1100 Clear.

BELOW IS CURING AND SEALING COMPOUND. CONSIDER SEALING EXPOSED CONCRETE TO PROVIDE A MORE DURABLE FINISH.

- C. Clear, Waterborne, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type 1, Class A.
 - 1. VOC Content: 100 g/L or less.
 - 2. Products:
 - a. Dayton Superior Corporation; Clear & Seal EF 1315
 - b. Euclid Chemical Company (The); Super Aqua Clear VOX.
 - c. Meadows, W. R., Inc.; Vocomp-30.

2.7 CONCRETE MIXTURES

- A. Comply with ACI 301.
- B. Normal-Weight Concrete:
 - 1. Minimum Compressive Strength: 3000 psi at 28 days, unless otherwise indicated.
 - 2. Maximum W/C Ratio: 0.48.
 - 3. Fly Ash: Maximum 25 percent by weight of cementitious material.
 - 4. Slump Limit: 8 inches for concrete with verified slump of 2 to 4 inches before adding high-range water-reducing admixture, plus or minus 1 inch.
 - 5. Air Content: Use air-entraining admixture in all concrete; maintain within range permitted by ACI 301.
 - a. Do not allow air content of trowel-finished floor slabs to exceed 3 percent.
 - b. Provide not less than 4 percent nor more than 8 percent entrained air for concrete exposed to freezing and thawing.
 - c. Provide from 2 percent to 4 percent for all other concrete.
- C. Synthetic Fiber: Uniformly disperse in concrete mix at manufacturer's recommended rate but not less than a rate of 1.5 lb/cu. yd.

2.8 CONCRETE MIXING

- A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94, [**and ASTM C 1116/C 1116M (for fiber reinforced concrete)**] and furnish batch ticket information.
 - 1. When material temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.
 - 2. When material temperature exceeds 95 deg F, material is unsuitable for installation.
- B. Project-Site Mixing: Use prepackaged concrete mix that requires only the addition of water at project site. Mix prepackaged concrete mix and water in appropriate drum-type batch machine mixer.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Notify Owner's Representative 48 hours before placing concrete. Do not place concrete before Architect has approved completed reinforcement installation.

3.2 FORMWORK INSTALLATION

- A. Design, construct, erect, brace, and maintain formwork according to ACI 301.

INCLUDE BELOW IF DESIRED.

1. Provide chamfer strips in the corners of concrete forms to produce beveled corners on walls and columns which will be exposed to view in finished construction.

3.3 FORMWORK REMOVAL

- A. Forms may be removed after cumulatively curing at not less than 50 deg F for 24 hours after placing concrete, if concrete is hard enough to not be damaged by form-removal operations and curing and protection operations are maintained. And as follows:

1. Do not remove formwork until cylinder break test indicates concrete has reached 2500 psi strength.

3.4 EMBEDDED ITEM INSTALLATION

- A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

3.5 VAPOR-RETARDER INSTALLATION

- A. Install, protect, and repair vapor retarders according to ASTM E 1643; place sheets in position with longest dimension parallel with direction of pour.

1. Lap joints 6 inches and seal with manufacturer's recommended adhesive or joint tape.

3.6 STEEL REINFORCEMENT INSTALLATION

- A. Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and re-seal vapor retarder before placing concrete.

3.7 JOINTS

- A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.

- B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

- C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of concrete thickness, as follows:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint to a radius of 1/8 inch. Repeat grooving of contraction joints after applying surface finishes. Eliminate groover marks on concrete surfaces. Exterior exposed concrete slab on grade pavement contraction joints shall be hand tooled/grooved, unless otherwise indicated.

2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch-wide joints into concrete when cutting action does not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.
- D. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated.

3.8 CONCRETE PLACEMENT

- A. Comply with ACI 301 for placing concrete.
- B. Do not add water to concrete during delivery, at Project site, or during placement.
- C. Consolidate concrete with mechanical vibrating equipment according to ACI 301.

INCLUDE BELOW IF BONDING AGENT REQUIRED

- D. Application of Bonding Agent: Clean existing surfaces free of dirt, oil, grease and cleaning agents. Apply bonding agent in accordance with manufacturer's directions. Do not allow bonding agent to puddle in low spots. Place new concrete within time limits recommended by bonding agent manufacturer.

3.9 FINISHING FORMED SURFACES

- A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections exceeding 1/2 inch.
 1. Apply to concrete surfaces not exposed to public view.
- B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defective areas. Remove fins and other projections exceeding 1/8 inch.
 1. Apply to concrete surfaces exposed to public view.
- C. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.10 FINISHING UNFORMED SURFACES

- A. General: Comply with ACI 302.1R for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

- B. Screed surfaces with a straightedge and strike off. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane before excess moisture or bleedwater appears on surface.
 - 1. Do not further disturb surfaces before starting finishing operations.
- C. Float Finish: Apply float finish to surfaces indicated, to surfaces to receive trowel finish, and to floor and slab surfaces to be covered with fluid-applied or sheet waterproofing, fluid-applied or direct-to-deck-applied membrane roofing, or sand-bed terrazzo.
- D. Trowel Finish: Apply a hard trowel finish to surfaces indicated and to floor and slab surfaces exposed to view or to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin film-finish coating system.
- E. Floor Slab Flatness: Finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly trafficked floor surface:

SELECT ONE OF THE FOLLOWING TWO PARAGRAPHS.

- 1. Specified overall values of flatness, F(F) 35; and of levelness, F(L) 25; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 17; for slabs-on-grade.

CRITERIA ABOVE APPLY TO FLOORS TO RECEIVE THINSET TILE OR RESILIENT FLOORING. CRITERIA BELOW APPLY TO CARPETED FLOORS. USUALLY SELECT ABOVE AND DELETE BELOW. SEE MASTERSPEC EVALUATION SHEETS FOR ADDITIONAL EXPLANATION. NOTE THAT EVEN USING THE ABOVE CRITERIA THERE MAY STILL BE A NEED FOR FLOOR LEVELING FOR THINSET OR RESILIENT TILE DUE TO CONCRETE CURLING AND RIGID ACCEPTANCE CRITERIA BY FLOORING CONTRACTORS. CONSIDER INCLUDING AN ALLOWANCE IN DIV. 03 OR 09 SECTIONS FOR FLOOR PREPARATION.

- 2. Flatness and Levelness Criteria: overall values F(F) 25, and minimum levels of flatness F(F) 17 flatness tolerance; overall values of levelness F(L) 20, and minimum values of levelness F(L) 15 levelness tolerance, when tested in accordance with ASTM E 1155.

3.11 CONCRETE PROTECTING AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 308, ACI 306.1 for cold-weather protection and with ACI 305 for hot-weather protection during curing.
- B. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.
- C. Curing Methods: Cure formed and unformed concrete for at least seven days by one or a combination of the following methods:

1. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period, using cover material and waterproof tape.
2. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.
3. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.12 CONCRETE SURFACE REPAIRS

- A. Defective Concrete: Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval.
- B. Patching Mortar: Mix dry-pack patching mortar, consisting of one part portland cement to two and one-half parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.
- C. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension in solid concrete, but not less than 1 inch in depth. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
- D. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar will match surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
- E. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.

3.13 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Tests: Perform according to ACI 301.

1. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. or fraction thereof of each concrete mixture placed each day.

3.14 CONCRETE WASHOUT

A. Do Not Discharge concrete/grout washout into storm drains, catch basins, the sanitary sewer system, ditches, or surface waters. Perform washing of concrete trucks and materials clean-up in designated areas or an approved off site location. Use as little water as necessary.

1. See Division 01, Section 015000 - Temporary Facilities and Controls for additional Concrete and Grout Washout requirements.

DIVISION 03 CONCRETE

SECTION 035416 - HYDRAULIC CEMENT UNDERLAYMENT

END OF CONTENTS TABLE

DIVISION 03 CONCRETE
SECTION 035416 - HYDRAULIC CEMENT UNDERLAYMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections apply to this Section.

1.2 SUMMARY

- A. Section includes the following underlayments for application below interior floor coverings:
 - 1. Poured, self-leveling underlayment.
 - 2. Trowel-on underlayment for sloped applications.
- B. Where uneven floor levels or holes occur, fill, patch, and provide underlayment as required to level surface to indicated standard prior to installation of finished floor material.

REQUIREMENT BELOW IS INTENDED TO LIMIT CLAIMS FOR EXTRAS.

- 1. Required for the following percentage of the gross floor area of the Project:

MODIFY PERCENTAGES BELOW BASED ON YOUR JUDGMENT.

- a. Approximately 20 percent.
- b. Approximately 50 percent.
- c. Approximately 75 percent.
- d. Full area.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

INCLUDE BELOW FOR LEED PROJECTS

- B. LEED Submittals:

"PRODUCT DATA FOR CREDIT IEQ 4.2" SUBPARAGRAPH BELOW APPLIES TO LEED-NC, LEED-CI, AND LEED-CS; COORDINATE WITH REQUIREMENTS SELECTED IN PART 2 FOR PAINTS AND COATINGS.

- 1. Product Data for Credit IEQ 4.2: For priming and sealing coatings, documentation including printed statement of VOC content.

1.4 INFORMATIONAL SUBMITTALS

- A. Product Certificates: Signed by manufacturers of underlayment and floor-covering systems certifying that products are compatible.

1.5 QUALITY ASSURANCE

- A. Product Compatibility: Manufacturers of underlayment and floor-covering systems certify in writing that products are compatible.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to comply with manufacturer's written instructions to prevent deterioration from moisture or other detrimental effects.

1.7 PROJECT CONDITIONS

- A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ventilation, ambient temperature and humidity, and other conditions affecting underlayment performance.
 - 1. Place hydraulic-cement-based underlayments only when ambient temperature and temperature of substrates are between 50 and 80 deg F.

1.8 COORDINATION

- A. Coordinate application of underlayment with requirements of floor-covering products and adhesives, to ensure compatibility of products.

PART 2 - PRODUCTS

2.1 SELF-LEVELING UNDERLAYMENTS

- A. Underlayment: Hydraulic-cement-based, polymer-modified, self-leveling product that can be applied at a minimum thickness of 1/4 inch up to 1-1/2 inch over large areas neat, and up to 4 inches with the addition of proper aggregate and can be featheredged to match existing floor elevations.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ardex Engineered Cements; Ardex K-15.
 - b. Dayton Superior; LeveLayer.
 - c. Euclid Chemical Company; Super Flo-Top.
 - d. Maxxon Corporation; Level-Right.
 - 2. Cement Binder: ASTM C 150, portland cement, or hydraulic or blended hydraulic cement as defined by ASTM C 219.
 - 3. Compressive Strength: Not less than 4000 psi at 28 days when tested according to ASTM C 109.
- B. Primer: Product of underlayment manufacturer recommended in writing for substrate, conditions, and application indicated.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ardex Engineered Cements; Ardex P 51 Primer, Ardex P 82 Ultra Prime.
 - b. Dayton Superior; J42, J42RTU.

- c. Euclid Chemical Company; Tammsweld.
- d. Maxxon Corporation; Maxxon Floor Primer.
- 2. Primer shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D.

2.2 SLOPED-FLOOR TROWELABLE UNDERLAYMENTS

- A. Sloped-Floor Underlayment: Trowelable, cement-based, polymer-modified, repair mortar that can be applied in minimum uniform thickness of 1/2 inch.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ardex Engineered Cements; Ardex TRM.
 - b. Dayton Superior; Polyfast FS.
 - c. Euclid Chemical Company; Concrete-Top Supreme.
 - 2. Cement Binder: ASTM C 150, portland cement, or hydraulic or blended hydraulic cement as defined by ASTM C 219.
 - 3. Compressive Strength: Not less than 9000 psi at 28 days when tested according to ASTM C 109.
- B. Primer: Product of sloped-floor underlayment manufacturer recommended in writing for substrate, conditions, and application indicated.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Ardex Engineered Cements; Ardex BACA, Ardex P 71.
 - b. Euclid Chemical Company; Duralprep AC.
 - c. Saturated Surface Dry (SSD) existing concrete surface with a scrub coat of sloped-floor underlayment.
 - 2. Primer shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D.

2.3 MISCELLANEOUS MATERIALS

- A. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch; or coarse sand as recommended by underlayment manufacturer.
 - 1. Provide aggregate when recommended in writing by underlayment manufacturer for underlayment thickness required.
- B. Water: Potable and at a temperature of not more than 70 deg F.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, with Installer present, for conditions affecting performance.
 - 1. Proceed with application only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. General: Prepare and clean substrate according to manufacturer's written instructions.

1. Treat nonmoving substrate cracks according to manufacturer's written instructions to prevent cracks from telegraphing (reflecting) through underlayment.
2. Fill substrate voids to prevent self-leveling underlayment from leaking.

DELETE SUBSTRATE MATERIALS THAT DO NOT APPLY TO PROJECT.

- B. Concrete Substrates: Mechanically remove, according to manufacturer's written instructions, laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants that might impair underlayment bond.

INCLUDE BELOW FOR NEW SLABS.

1. Moisture Testing: Perform anhydrous calcium chloride test, ASTM F 1869. Proceed with installation only after substrates do not exceed a maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.
- C. Wood Substrates: Mechanically fasten loose boards and panels to eliminate substrate movement and squeaks. Sand to remove coatings that might impair underlayment bond and remove sanding dust.
1. Install underlayment reinforcement recommended in writing by manufacturer.
- D. Metal Substrates: Mechanically remove, according to manufacturer's written instructions, rust, foreign matter, and other contaminants that might impair underlayment bond. Apply corrosion-resistant coating compatible with underlayment if recommended in writing by underlayment manufacturer.
- E. Nonporous Substrates: For ceramic tile, quarry tile, and terrazzo substrates, remove waxes, sealants, and other contaminants that might impair underlayment bond, and prepare surfaces according to manufacturer's written instructions.
- F. Adhesion Tests: After substrate preparation, test substrate for adhesion with underlayment according to manufacturer's written instructions.

3.3 APPLICATION

- A. General: Mix and apply underlayment components according to manufacturer's written instructions.
1. Close areas to traffic during underlayment application and for time period after application recommended in writing by manufacturer.
 2. Coordinate application of components to provide optimum underlayment-to-substrate and intercoat adhesion.
 3. At substrate expansion, isolation, and other moving joints, allow joint of same width to continue through underlayment.
- B. Apply primer over prepared substrate at manufacturer's recommended spreading rate.
1. For Sloped-Floor Underlayments, provide either a Saturated Surface Dry (SSD) concrete face or primer as recommended in writing by the Sloped-Floor Underlayment Manufacturer.

- C. Apply underlayment to produce uniform, level surface.
 - 1. Apply a final layer without aggregate to product surface.
 - 2. Feather edges to match adjacent floor elevations.
- D. Cure underlayment according to manufacturer's written instructions. Prevent contamination during application and curing processes.
- E. Do not install floor coverings over underlayment until after time period recommended in writing by underlayment manufacturer.
- F. Remove and replace underlayment areas that evidence lack of bond with substrate, including areas that emit a "hollow" sound when tapped.

3.4 PROTECTION

- A. Protect underlayment from concentrated and rolling loads for remainder of construction period.

3.5 CONCRETE WASHOUT

- A. Perform washout using proper disposal and washout practices. Perform washing of concrete trucks in designated areas or off site. Do not discharge concrete washout into storm drains, catch basins or to the sanitary sewer system.

SECTION 037300 - TUNNEL CONCRETE RESTORATION

END OF CONTENTS TABLE

DIVISION 03 CONCRETE

SECTION 037300 - TUNNEL CONCRETE RESTORATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Locate and remove delaminated, spalled and unsound concrete.
 - 2. Preparation of cavities created by removal to receive patching materials.
 - 3. Replacement of existing deteriorated concrete and reinforcement.
 - 4. Crack repair.
 - 5. Temperature, ventilation and humidity control per manufacturers recommendations for proper curing.

1.3 REFERENCES

- A. Except as herein specified or as indicated on the Drawings, the work of this Section shall comply with the following:
 - 1. ASTM:
 - a. A185 - Steel Welded Wire Fabric, Plain, for Concrete Reinforcement.
 - b. A615 - Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
 - c. A775 - Epoxy-Coated Reinforcing Steel Bars.
 - d. C33 - Concrete Aggregates.
 - e. C94 - Ready-Mixed Concrete.
 - f. C109 - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or Cube Specimens).
 - g. C136 - Sieve Analysis of Fine and Coarse Aggregates.
 - h. C150 or C595 - Cementitious material.
 - i. C260 - Air-Entraining Admixtures for Concrete.
 - j. C309 - Liquid Membrane Forming Compounds for Curing Concrete.
 - k. C494 - Chemical Admixtures for Concrete.
 - 2. ACI:
 - a. 301 - Specification for Structural Concrete for Buildings.
 - b. 302 - Guide for Concrete Floor and Slab Construction.
 - c. 308R - Guide to External Curing of Concrete.
 - d. 390R - Guide to Consolidation of Concrete.
 - e. 347R - Guide to Formwork for Concrete.
 - f. 503.2 - Standard Specification for Bonding Plastic Concrete to Hardened Concrete with a Multi-Component Epoxy Adhesive.
 - g. 503R - Pull Off Test to Determine CFRP Adhesive to Concrete Substrate.

- h. 546.1 - Guide for Repair of Concrete Bridge Superstructures.
- 3. US Corps of Engineers:
 - a. EM - 1110-2-2002 - Corp of Engineers Manual.
- 4. International Concrete Repair Institute (ICRI).

1.4 DEFINITIONS

- A. Delaminations: Fracture planes or "internal cracks," within concrete. Typically these fractures are parallel to the member face and vary in depth.
- B. Spalls: Potholes, cavities or voids in floor slabs, beams, columns, and walls. Usually result of delamination migrating to face of concrete member. When fracture finally reaches surface, concrete encompassed by delamination breaks away, resulting in spall.
- C. Unsound Concrete: Concrete exhibiting one or more of the following:
 - 1. Incipient fractures present beneath existing delaminated or spalled surfaces.
 - 2. Honeycombing.
 - 3. Friable or punky areas.
 - 4. Deterioration from freeze-thaw action.
- D. Scaling: Deterioration which attacks mortar fraction (paste) of concrete mix. First appears as minor flaking and disintegration of concrete surface. Scaling eventually progresses deeper into concrete, exposing aggregate which breaks away. Concrete scaling is caused by freeze-thaw action. If concrete is frozen in saturated state, excess water freezing in concrete causes high internal stresses.
- E. Saturated Surface Dry (SSD): The condition where the concrete is saturated with water and cannot absorb more, but no free water is present on the surface and is in accordance with the ICRI recommendations.

1.5 SUBMITTALS

- A. Product Data:
 - 1. For manufactured materials and products including reinforcement and forming accessories, concrete materials, shot Crete materials, admixtures, and curing compounds.
 - 2. Shop drawings: for details of fabricating, bending, and placing reinforcement. Include support anchor details, number and location of splices, and special reinforcement required for openings.
 - 3. MSDS safety data sheets for each product
 - 4. Design mixes: For each concrete or shot Crete mix
 - 5. Material test reports: For concrete or shot Crete materials
 - 6. Material Certificates: for each material item, signed by manufacturers. Include specifications and recommended application procedures showing compliance with the project requirements.
 - 7. Provide MSDS material safety sheets for products used.

8. Provide either an approved ICBO Evaluation Report number in the name of the system and system's Manufacturer, or an evaluation by independent testing facility.
9. Product Suitability:
 - a. Submit signed letter from Product Manufacturer's technical representative stating that they have visited the Site, reviewed conditions and agree that the products specified are suitable for this application.
 - b. The letter shall certify that the Product Manufacturer's technical representative:
 - 1) Is familiar with the project, aware of job conditions and aware of associated products (i.e., sealants, concrete repair products and other proposed for the Project).
 - 2) Agrees with the intended application of their products as specified.
 - 3) Agrees with the surface preparation specified.
 - 4) Agrees with project specifications. If necessary, submit revisions to project specifications.
 - 5) Agrees that their product is compatible with associated products (i.e., sealants, concrete repair materials and other proposed for the Project).
 - 6) Agrees with the type and quantity of testing specified to ensure their product is adequately installed.
 - 7) Agrees that all components of concrete repair materials furnished comply with this Specification and are compatible.
 - 8) Agrees with proposed means to assure proper curing of the repair material.
- B. Surface Preparation Method: Submit details of preparation method to Engineer for review prior to commencing work.

1.6 QUALITY ASSURANCE

- A. Fabrication and Installation Personnel Qualifications:
 1. Contractor shall have not less than 5 years of experience in the field of structural concrete restoration. The installer shall have completed concrete work similar in material, design, and whose work has resulted in construction with a record of successful in-service performance.
 2. Knowledgeable of the design and the reviewed Shop Drawings.
 3. Each component of a system or product shall be installed by Manufacturer trained personnel. Installers shall demonstrate knowledge of product and installation. Provide Manufacturer's certification of the applicator's training and experience with the systems to be installed.
- B. Manufacturer's Services:
 1. Provide 4 hours of product Manufacturer's technical representative for start-up of application for each repair product in each work site as defined in the documents. Review the work to be performed with the applicator and the Engineer's Site representative.

2. Manufacturer's technical representative shall certify in writing for each site or area of work, that the preparation and installation procedures are in accordance with the manufacturer's directions.
- C. Formwork: Design of the formwork is the responsibility of the Contractor. Proposed method of forming shall be submitted to Engineer for review prior to placement of concrete. Submitted method shall include materials and means of bracing and sealing formwork. Design shall provide adequate means of ensuring complete filling of forms with concrete through the use of birdmouths or other methods. Refer to ACI 347R for assistance with design of formwork.
- D. Testing:
1. Concrete and Prebagged Mixes:
 - a. The Owner will engage and pay for a testing laboratory approved by the Engineer and Owner.
 - b. Testing will be performed both by the Engineer, and by the testing agency selected and employed by the Owner.
 - c. Contractor shall cooperate fully with the Engineer and the testing agency while they perform testing.
 - d. Contractor shall include as incidental, the cost for additional material, time and expense; and repair cost to allow the testing to be performed.
 - e. The representative of the testing agency shall be at the Site for sampling, inspection and testing during concrete repair placement.
 - f. Concrete Repair:
 - 1) Compressive strength, slump and concrete temperature tests shall be performed at the point of placement for each batch of redi-mixed concrete and prebagged repair mixes used each day.
 - 2) 3 x 6 compressive strength test specimens shall be molded in accordance with ASTM C31 and tested in accordance with ASTM C39.
 - 3) Slump and temperature tests shall be performed in accordance with ASTM C143 and C1064, respectively.
 - 4) 2 cylinders minimum per set of specimens shall be tested for compressive strength at 7 days and 2 cylinders minimum shall be tested for compressive strength at 28 days.
 - 5) 2 reserve cylinders shall be molded for testing at later ages if required.
 - g. Trowel Applied Prebagged Mixes: 1 set of three 2-inch cubes shall be made from each prebagged mix placed each day and tested by the Owner's testing laboratory in accordance with ASTM C109 and Manufacturer's requirements.

1.7 QUALITY CONTROL

- A. Work Oversight:
1. Pre-Repair Area Preparation:
 - a. Perform demolition and repair preparation for review and approval by the Engineer and Project Representative:
 - 1) Sawcut and remove deteriorated concrete.
 - 2) Clean exposed reinforcing.

- 3) Splice reinforcing if needed.
 - 4) Install crack injection ports.
 - 5) Rout cracks.
- b. Notify Engineer and Project Representative when concrete repair cavities demolition and prep has been completed and ready for review, prior to patching. Provide a minimum of 48-hours' notice.
- 1) Supplemental reinforcement shall be added where existing reinforcement as 15% or more section loss as directed by Engineer.
 - 2) Reinforcement damaged by Contractor's demolition operations shall be repaired at no additional cost.
 - 3) Correct items identified by Engineer prior to patching.
2. Final Repair Area Application
- a. Perform repair and indicate ambient temperature at time of repair.
 - b. Notify Engineer and Project Representative when areas are ready for review.

1.8 AIR TEMPERATURE, HUMIDITY AND VENTILATION CONTROL

- A. The Installation Contractor or a Specialty Contractor shall provide temporary/mobile air temperature, humidity and ventilation control during the course of this project to meet manufacturer's installation requirements for performance.
- B. Provide additional equipment and fuel as required to condition the space for surface preparation, application of products, and curing of those products, in accordance with Manufacturer's requirements. This equipment may include, but not be limited to, dehumidification, heaters, fans for intake and exhaust air, and throw away filters. Discharge of work-related dust and debris outside of the tunnel is prohibited.

1.9 WARRANTY

- A. All material under this section shall be fully warranted for a period of five years against any defects in materials or workmanship commencing with the date of Substantial Completion.
- B. All required warranties shall be obtained by the Contractor as an agent for the Owner from all installation contractors, and the manufacturers. All such warranties shall inure to the benefit of the Owner without the necessity of separate transfer or assignment thereof.
- C. Submission: Within 7 days after the bid, a signed copy of the comprehensive 5-year warranty attached to this Section shall be submitted to the Owner. Failure to submit this signed warranty will result in rejection of the contractor's bid. Submit 1 warranty for each supplier of concrete repair materials.
- D. Responsibilities of Each Party
 1. Contractor: Shall act as the agent for the Owner in collecting and enforcing submission of the warranty requirements prior to Substantial Completion of the project.

2. Installation Contractor: Responsible for 100% of the labor to remove and replace the defective material if a failure occurs within the warranty period.
3. Manufacturer: Responsible for supplying 100% of replacement material in case of a failure during the warranty period unless stated otherwise in the warranty.

E. Specific Warranty Requirements

1. The five-year comprehensive warranty shall specifically cover the following:
 - a. A fully complete 100% warranty for all workmanship and material for the repairs.
 - b. Delamination of the coating or substrate.
 - c. Any damage to material or equipment caused by coating system failure.
 - d. Failures due to improper surface preparation, use of non-approved materials, insufficient thickness for any part of the system including primer(s), faulty workmanship, or non-approved deviations from current manufacturer's specifications and written instructions.
 - e. Material incompatibility with any existing coating.

F. Replacement Cost:

1. The warranty shall cover 100% of the replacement cost whether or not the Owner has benefitted from use of the product through part of its useful life.
2. When the work covered by the warranty has failed, the replacement work shall be warranted to cover the original remaining warranty period.

PART 2 - PRODUCTS

2.1 MATERIALS

A. VOC Compliance:

1. All individual coatings and coating systems shall have VOC levels at or below the EPS recommendations identified in 40 CFR Part 59.
2. VOC content shall be tested in accordance with EPA Method 24.

B. Vertical and Overhead (Walls, Floors and Ceilings) Trowelable Concrete Repairs(Prebagged products):

1. SikaQuick VOH.
2. EucoRepairV100 by Euclid Chemical Co.
3. MasterEmaco S488C1 by MaterBulders
4. Or preapproved equal.

C. Horizontal (Slabs) Cementitious Overlays:

1. Sikacrete 211 SCC+. 1 inch - 8 inch thick.

D. Structural Injection Resins:

1. Sikadur 31 and Sikadur 35 by Sika Corp.
2. Dural 452 Gel by Euclid Chemical.
3. ADH 327 RS by MasterBuilders
4. Or preapproved equal.

- E. Water Reactive Injection Polyurethane Sealants:
 - 1. Hydrophobic:
 - a. Sika Fix HH Plus.
 - b. DeNeef Flex LV.
 - c. Or preapproved equal.
- F. Hydraulic (Water Stop) Grouts:
 - 1. ThoRoc Plug by ThoRoc.
 - 2. Water Stop by Dayton-Superior.
 - 3. Sika Set Plug by Sika Corp.
 - 4. MasterSeal 500 by MasterBuilders
- G. Corrosion Inhibitor (Surface Applied On Reinforcing Bars Only):
 - 1. Sika Armatec 110 Epo Cem by Sika.
 - 2. Dural Prep AC by Euclid.
- H. Steel Reinforcing:
 - 1. Reinforcing Bars:
 - a. ASTM A615.
 - b. Yield Stress: $F_y = 60,000$ psi.
 - c. Epoxy coated, conforming to ASTM A775.
 - 2. Welded Wire Fabric:
 - a. ASTM A185.
 - b. Yield Stress: $F_y = 65,000$ psi.
- I. Corrosion Inhibiting Coating
 - 1. Ferroguard 903 by Sika Corp.
 - 2. Or preapproved equal.
- J. Water-Based Concrete Cure & Seal Compound
 - 1. VOCOMP-20 by W.R. Meadows, Inc.
 - 2. Cure & Seal 309 J18 by Dayton Superior Corporation.
- K. General: Provide primers as required in accordance with Manufacturer's recommendations.

PART 3 - EXECUTION

3.1 GENERAL

- A. Installation: Install products in strict accordance with Manufacturer's recommendations.
- B. For each type of repair, all repair products must be sourced from a single manufacturer's product line for single-source responsibility.
- C. Maintain ambient air temperature, temperature of concrete substrate and temperature of all products, components of mixing water within manufactures written limitations or between 40 deg F and 90 deg F (whichever is more stringent) for a minimum of 48 hours before repair products are placed and for a minimum of 48 hours after all placement is complete. Maintain daily temperature logs for all items above for inspection by Owner and for submittal upon completion of project work.

- D. For each area of and type of repair, maintain daily record of demolition and preparation work quantities (SF patching, LF crack injection, etc.) and notify Owner in advance of exceeding stipulated contract quantities, for evaluation and Owner direction on how to proceed. Contractor will not be reimbursed for overages which are not authorized in writing by Owner.
- E. Engineer's Inspection: Do not install patching or reinforcing material until Engineer has inspected the repair site.
- F. Inspection by Specialty Concrete Manufacturers Representative: For area of repair coordinate inspection by manufacturer's representative to review surface preparation and procedures for preparation and mixing of repair compounds and other components. Provide notice to Owner to allow attendance by Owner's representative. Manufacturer's representative shall prepare written certification that surface preparation and preparation of repair compounds is in strict accordance of the project specifications and the manufacturer's written directions.
- G. Acceptance of completed concrete Work will be according to provisions of ACI 301.
 - 1. Repair areas shall be sounded by Engineer and Contractor with hammer or rod after curing for 72 hours. Contractor shall repair all hollowness detected by removing and replacing patch or affected area at no extra cost to Owner.
 - 2. If shrinkage cracks appear in repair area when initial curing period is completed, repair shall be considered defective, and it shall be removed and replaced by Contractor at no extra cost.
- H. Waste Removal: Remove waste material from Site and dispose of legally.

3.2 CONCRETE REPAIRS

- A. General:
 - 1. Delaminated Areas:
 - a. Areas to be repaired have been identified on the drawings and marked with paint in the field.
 - b. Concrete shall be removed from within marked boundary to minimum depth of 3/4-inch using 15 pound maximum electric or pneumatic chipping hammers or hand tools.
 - c. If delaminations exist beyond minimum removal depth or beyond marked boundary, notify Engineer prior to proceeding.
 - d. Engineer will define and mark additional unsound concrete areas for removal, if required.
 - 2. Spalls:
 - a. Areas of spalling have been marked with paint after and identified on the drawings.
 - b. Engineer will define and mark additional unsound concrete areas for removal, if required.
 - 3. Embedments:
 - a. Locate and determine depth of embedded reinforcement and electrical conduit in repair area.

- b. Mark these locations for reference during concrete removal.
 - c. Where embedded reinforcement or electrical conduit is exposed by concrete removal, exercise extra caution to avoid damaging it during removal of unsound concrete.
 - d. Damage due to removal operations shall be repaired by Contractor in accordance with building code requirements at no cost to the Owner.
 - e. Embedded materials which are defective prior to construction may be repaired or replaced by Contractor or abandoned at Owner's option and cost.
4. Sawcut Edges:
- a. For vertical and overhead surfaces marked boundary must be sawcut to depth of 1/2-inch to 0.625-inch into existing concrete, measured from original surface. Sawcut boundary prior to any concrete removal to minimize overages.
 - b. Edges shall be straight and patch areas square or rectangular-shaped.
 - c. Diamond blade saw or grinder with abrasive disk suitable for cutting concrete is acceptable for performing work.
 - d. Edge cut at delamination boundary shall be dressed perpendicular to member face. It shall also be of uniform depth, for entire length of cut.
 - e. Exercise extra caution during sawcutting to avoid damaging existing reinforcement and electrical conduit and other embedded items near surface of concrete.
 - f. Damage to existing reinforcement or conduit during removals shall be repaired by Contractor with Engineer approved methods at no additional cost to Owner.
5. Clearance:
- a. Concrete shall be removed to provide minimum of 3/4-inch clearance on all sides of defective or damaged exposed embedded reinforcement that is left in place.
 - b. Minimum of 1-1/2-inch concrete cover shall be provided over new and existing reinforcement.
 - c. Concrete cover over reinforcement may be reduced to 1-inch with Engineer approval if coated with an approved epoxy resin.
6. Preparing Cavities:
- a. Cavities shall be sandblasted; waterblasting is prohibited.
 - b. Remove deleterious materials such as damaged concrete, corrosion, laitance, dirt and grease from concrete surfaces.
 - c. Roughen surface to CSP-7 as defined by the ICRI.
 - d. Airblasting is required as final step to remove sand.
 - e. Apply corrosion inhibitor on full circumference of reinforcing bars.
7. Rectangular Areas: Areas to be removed shall be as straight and rectangular as practical to encompass repair and provide neat patch. Avoid acute angles on patch.
8. Reinforcement Repair:
- a. Supplement defective or damaged embedded reinforcement by addition of reinforcement of equal diameter with Class "B" minimum splice in accordance with ACI 318 beyond damaged portion of reinforcement.

- b. Secure new reinforcement to existing reinforcement with wire ties or approved anchors into concrete, or both.
 - c. Supplemental reinforcement shall be installed in accordance with ACI 318 and ACI 301.
 - d. If rust is present on embedded reinforcement where it enters sound concrete, additional removal of concrete along and beneath reinforcement is required.
 - e. Additional removal shall continue until non-rusted reinforcement is exposed, or may be terminated as Engineer directs.
 - 1) If bond between exposed embedded reinforcement and adjacent concrete is impaired by removal operations, perform additional removal around and beyond perimeter of reinforcement for minimum of 3/4-inch along entire length affected at no cost to Owner.
 - 2) Remove rust from the full circumference of reinforcement.
 - f. Embedded reinforcement exposed during surface preparation that has lost more than 10% of original cross-section due to corrosion shall be considered defective.
 - g. Non-defective exposed reinforcement that has lost section to extent specified as direct result of Contractor's removal operations shall be considered damaged.
 - h. Exposed steel shall be cleaned of rust to bare metal by sandblasting; waterblasting is not allowed.
 - i. Cleaning shall be completed immediately before patch placement to ensure that base metal is not exposed to elements and further rusting for extended periods of time.
 - j. Loose reinforcement exposed during surface preparation shall be securely anchored prior to patch placement.
 - k. Drilled-in anchors shall be approved by the Engineer.
 - l. Engineer will determine adequacy of wire ties and approve other anchoring devices prior to their use.
 - m. Securing loose reinforcement is incidental to surface preparation and no additions to the Contract Sum will be allowed for this work.
9. Inspection of Repair Preparation:
- a. Inspection:
 - 1) After removals are complete, but prior to final cleaning, cavity and exposed reinforcement shall be inspected by Contractor and verified by Engineer for compliance with requirements of this Section.
 - 2) Where Engineer finds unsatisfactory cavity preparation, Engineer shall direct Contractor to perform additional removals. Engineer shall verify areas after additional removals.
 - b. Defects:
 - 1) Inspect embedded reinforcement and conduits exposed within cavity for defects due to corrosion or damage resulting from removal operations.
 - 2) Notify Engineer of defective and damaged reinforcement or conduits.
 - 3) Replace damaged or defective reinforcement or conduits according to this Section and as directed by Engineer.
10. Provide other surface treatment as required by the Manufacturer of the patching compounds.

11. Inform Engineer at least 2 days in advance of concrete repair placement to allow adequate time for Engineer to schedule inspection.
12. Predampen cavity surface with clean water. Cavity concrete surfaces shall be saturated surface dry (SSD) with no free water.
13. Apply bonding grout / slurry to existing concrete surfaces to have repair concrete bonded to. Bonding grout shall have the same makeup as the approved concrete mix and the consistency of pancake batter.
14. After placement of concrete repair material, wet concrete surface and allow surface water to dissipate, then immediately apply water-based concrete cure & seal compound to entire area of repair per Manufacturer's requirements.
15. Following Manufacturer's guidelines for application timeframe, apply corrosion inhibiting coating over entire area of concrete repair. Ambient air temperature must be held less than 90°F for a minimum of 48 hours following application of coating.

B. Crack Repair:

1. Refer to Drawings for specific criteria for crack repair.
2. Follow sealant Manufacturer's specific guidelines where more stringent than those referenced herein.
3. Cracks which are prepared shall be sealed the same day.
4. Routing of cracks shall be a dry process.

3.3 CRACK INJECTION

- A. Cracks identified for injection and adjacent substrate must be clean, sound and free of frost. Remove dust, laitance, grease, curing compounds, waxes, impregnations, foreign particles, efflorescence and other bond inhibiting materials from the surface by mechanical means, as recommended by the Manufacturer.
- B. Injection ports may be located directly on the crack or they may be drilled along the side of the crack at 45 degrees. Drill the hole to intersect the crack midway through the substrate. Install the injection packers (ports) in the holes.
- C. Install injection ports and grout ports as recommended by the product Manufacturer.
- D. Spacing of injection ports shall be accomplished as required to achieve the travel of the adhesive for the pressure injection grouting between ports and to completely fill the cracks. Stagger ports both sides of the crack.
- E. Injection products which are composed of individual components shall be thoroughly mixed in strict accordance with the Manufacturer's recommendations.
- F. Dispense the material for injection under constant pressure in accordance with procedures recommended by the equipment Manufacturer or as required to achieve maximum filling and penetration of the prepared cracks without the inclusion of air pockets or voids in the adhesive.

- G. Injection of the material into each crack shall begin at the entry port at the lowest elevation. Injection shall continue at the first port until the injection adhesive begins to flow out of the port at the next highest elevation or until the material is flowing out of the crack between these ports.
- H. Remove injection packers, clean ports and grout holes.

3.4 ENCLOSURE

- A. Construct an enclosure within the tunnel system at the project extents of the repair work. The enclosure shall be of such quality as to maintain optimal conditions for the repair work, as well as to prevent debris and dust from entering in to the tunnel system and adjacent buildings.
- B. The enclosures shall remain until the repair work is sufficiently cured.
- C. Provide additional equipment as required to condition the space for repair work. This equipment may include, but not be limited to, dehumidification and fans for intake and exhaust air. Coordinate opening and protection of access hatches with U-M Project Manager and Tunnel Utilities representative (Contact: Mike Rhodes (734) 323-8592 rhodey@umich.edu).

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Engineer: Check prep work and final repair work, each site.
- B. Promptly make corrections, changes, and additions required by Manufacturer's engineer.

3.6 CLEANING

- A. Clean materials installed under this Section in accordance with Division 01 Section 01500 requirements.

SPECIFICATION DIVISION 4

NUMBER SECTION DESCRIPTION

DIVISION 04 MASONRY

SECTION 042010 - UNIT MASONRY ASSEMBLIES (LIMITED APPLICATIONS)

END OF CONTENTS TABLE

DIVISION 04 MASONRY

SECTION 042010 - UNIT MASONRY ASSEMBLIES (LIMITED APPLICATIONS)

THIS SECTION HAS BEEN PRE-EDITED TO APPLY ONLY TO INTERIOR MASONRY WORK LIMITED TO MODIFYING EXISTING CMU ASSEMBLIES. USE MASTERSPEC SECTION 042000 "UNIT MASONRY ASSEMBLIES" OR AIA MASTERSPEC SECTION OF SAME NAME AND NUMBER FOR MORE SUBSTANTIAL PROJECTS.

12/1/2017 - ADDED IDENTIFICATION REQUIREMENTS.

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of masonry work consists of modifying existing concrete masonry unit structures and is indicated on drawings and by provisions of this Section.
- B. Section Includes:
 - 1. Concrete masonry units (CMU's).
 - 2. Steel reinforcement.
- C. Related Sections Includes:
 - 1. Division 05 Section "Metal Fabrications" for steel lintels.

1.2 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: For reinforcing steel. Detail bending and placement of unit masonry reinforcing bars. Comply with ACI 315, "Details and Detailing of Concrete Reinforcement."

1.3 QUALITY ASSURANCE

- A. Masonry Standard: Comply with ACI 530.1/ASCE 6/TMS 602 unless modified by requirements in the Contract Documents.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
- B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

1.5 PROJECT CONDITIONS

- A. Stain Prevention: Prevent grout and mortar from staining the face of masonry. Immediately remove grout and mortar that come in contact with masonry.

1. Protect floor and base of walls from mortar splatter by spreading coverings on floor and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect floors and adjacent walls from mortar droppings.
4. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.

PART 2 - PRODUCTS

2.1 MASONRY UNITS, GENERAL

- A. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.
- B. Fire-Resistance Ratings: Where indicated, provide units that comply with requirements for fire-resistance ratings indicated as determined by testing according to ASTM E 119, by equivalent masonry thickness, or by other means, as acceptable to authorities having jurisdiction.

2.2 CONCRETE MASONRY UNITS

SECTION IS PRE-EDITED FOR NEW BLOCK IN AREAS WITH EXISTING BLOCK. IF NO EXISTING BLOCK, SECTION WILL REQUIRE ADDITIONAL INFORMATION.

- A. Concrete Masonry Units: Provide new concrete masonry units, mortar, and accessories that match the existing installation in every respect, including size, texture and strength.
- B. Concrete Masonry Units: ASTM C 90
 1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 1900 psi.
 2. Density Classification: Medium weight.

INDICATE NOMINAL WIDTHS ON DRAWINGS.

 3. Size: Nominal face dimension of 16 inches long x 8 inches high (15-5/8 inches x 7-5/8 inches actual) x 3/8 inch less than nominal widths indicated on Drawings.
- C. Shapes: Provide shapes indicated and for lintels, corners, jambs, control joints and other special conditions.

2.3 MORTAR AND GROUT MATERIALS

BELOW ARE TYPICAL SELECTIONS FOR INTERIOR APPLICATIONS.

- A. Portland Cement: ASTM C 150, Type I.
- B. Hydrated Lime: ASTM C 207, Type S.
- C. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.

- D. Masonry Cement: ASTM C 91.
- E. Mortar Cement: ASTM C 1329.
- F. Aggregate for Mortar: ASTM C 144.
- G. Aggregate for Grout: ASTM C 404.
- H. Water: Potable.

2.4 CONCRETE AND MASONRY LINTELS

- A. General: Provide the following:

SELECT ONE OF THE FOLLOWING OR EDIT ABOVE TO STATE "ONE OF THE FOLLOWING" AND ALLOW CONTRACTOR TO SELECT.

FOR CONCRETE MASONRY UNIT WALLS WHERE LINTEL IS EXPOSED TO VIEW, USE PREFABRICATED OR BUILT-IN-PLACE BOND BEAM LINTELS.

FOR CONCRETE MASONRY UNIT WALLS WHERE LINTEL IS NOT EXPOSED TO VIEW, USE EITHER CONCRETE LINTELS OR BOND BEAM LINTELS

- 1. Concrete Lintels: ASTM C 1623, matching CMUs in color, texture, and density classification; and with reinforcing bars indicated. Provide lintels with net-area compressive strength not less than CMUs.
- 2. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs with reinforcing bars placed as indicated and filled with coarse grout.

2.5 REINFORCEMENT

- A. Masonry Joint Reinforcement, General: ASTM A 951.

INTERIOR WALLS EXPOSED TO A MEAN RELATIVE HUMIDITY LESS THAN OR EQUAL TO 75% USE MILL GALVANIZED.

INTERIOR WALLS EXPOSED TO A MEAN RELATIVE HUMIDITY GREATER THAN OR EQUAL TO 75% USE HOT-DIPPED GALVANIZED.

USE 0.187 INCH DIAMETER WIRE SIZE FOR 1/2 INCH THICK JOINTS

EDIT BELOW.

- 1. Interior Walls: [Mill-] [Hot-dip galvanized], carbon steel
 - 2. Wire Size for Side Rods: [0.148-inch (9 gage)] [0.187-inch] diameter.
 - 3. Wire Size for Cross Rods: [0.148-inch (9 gage)] [0.187-inch] diameter.
 - 4. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.
 - 5. Provide in lengths of not less than 10 feet, with prefabricated corner and tee units.
- B. Masonry Joint Reinforcement for Single-Wythe Masonry: Either ladder or truss type with single pair of side rods.

2.6 MORTAR AND GROUT MIXES

- A. Mortar for Unit Masonry: Comply with ASTM C 270, Proportion Specification. Provide the following types of mortar for applications stated unless another type is indicated.
 - 1. For interior non-load-bearing partitions: Type N.
 - 2. For interior load-bearing walls: Type S.
- B. Grout for Unit Masonry: Comply with ASTM C 476.
 - 1. Use grout of type (fine or coarse) that will comply with Table 1.15.1 in ACI 530.1/ASCE 6/TMS 602 for dimensions of grout spaces and pour height.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Lay masonry units with bond pattern matching existing adjacent units, with face shells fully bedded in mortar and with head joints of depth equal to bed joints and as follows:
 - 1. Vertical Joints: Tooth into adjacent existing block walls; do not vertically align joints at interface of existing and new masonry work.
 - 2. Horizontal Joints: Align coursing to match existing, adjacent units.
- B. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.
- C. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.
- D. Cut exposed masonry units, where necessary, with a power saw. Allow units to dry before laying. Install cut units with cut surfaces and, where possible, cut edges concealed. Avoid the use (by proper layout) of less than half-size units.
- E. Bond intersecting walls with masonry units or provide anchors spaced 24 inches on center.
- F. Reinforcing: Install entire length of longitudinal side rods in mortar with a minimum cover of 1/2 inch on interior walls. Lap reinforcement a minimum of 6 inches. Do not bridge control and expansion joints in the wall system.

INCLUDE BELOW IF APPROPRIATE.

*REVISE SUBPARAGRAPHS BELOW IF DIFFERENT SPACING IS REQUIRED;
DELETE IF SHOWN ON DRAWINGS.*

- 1. Space reinforcement not more than 16 inches o.c.
 - 2. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings in addition to continuous reinforcement.
- G. Build other work into the masonry work as shown, fitting masonry units around other work, and grouting for secure anchorage.

3.2 LINTELS

- A. Provide concrete or masonry lintels where shown and where openings of more than 24 inches are shown without steel or other supporting lintels.
- B. Provide minimum bearing of 8 inches at each jamb.

3.3 IDENTIFICATION

- A. Provide permanent identification of all assemblies requiring opening protectives including fire walls, fire barriers, fire partitions, and smoke barriers.
- B. Install in accordance with the requirements of Michigan Building Code chapter 7.
- C. Location:
 - 1. Locate in accessible concealed spaces above finished ceiling. In locations without accessible concealed location, coordinate location with architect.
 - 2. Locate within 15 feet of the end of each wall and at intervals not exceeding 30 feet measured horizontally along the assembly.
- D. Signage requirements:
 - 1. Lettering:
 - a. 3-inch minimum; 3/8-inch stroke width.
 - b. Color: Red on white background
 - 2. Verbiage incorporating project specific hourly rating. Refer to life safety plan for rating requirements:
 - a. FIRE RATED ASSEMBLY (___HR) - PROTECT ALL OPENING
 - b. SMOKE BARRIER - PROTECT ALL OPENINGS

3.4 CLEANING

MOST ACIDIC CLEANERS, EVEN PROPRIETARY PRODUCTS LISTED AS "MILD", ARE ACTUALLY QUITE STRONG. THEY MAY CAUSE DAMAGE TO MASONRY AND ADJACENT SURFACES AND ARE DIFFICULT TO COLLECT AND DISPOSE OF PROPERLY.

GOOD MASONRY PRACTICE INCLUDES REMOVING MORTAR FROM EXPOSED MASONRY FACES BEFORE SETTING. IF THIS IS NOT DONE, USE OF ACIDIC CLEANERS MAY BE NECESSARY. REFER TO AIA MASTERSPEC SECTION 42010 FOR LISTING OF PROPRIETARY ACIDIC CLEANERS AND READ PRODUCT LITERATURE BEFORE SPECIFYING. INCLUDE IN SPECIFICATION A PROVISION FOR TESTING A SMALL AREA BEFORE GENERAL CLEANING. CONTACT OSEH FOR INFORMATION REGARDING PROPER DISPOSAL.

- A. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.
- B. Clean excess mortar as work progresses.
- C. Remove large mortar particles by hand using non-metallic scrapers or paddles.
- D. Final cleaning: Clean masonry with stiff non-metallic brushes, clean water, and a mild non-acidic soap or detergent, if required. Do not use acids without prior written approval.

E. Dispose of wash water by methods described in Division 01 Section
"Closeout Procedures."

NUMBER SECTION DESCRIPTION

DIVISION 05 METALS

SECTION 053100 - STEEL DECKING

END OF CONTENTS TABLE

DIVISION 05 METALS
SECTION 053100 - STEEL DECKING

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes steel deck units for roof repair.

1.2 SUBMITTALS

- A. Product data including manufacturer's specifications and installation instructions for each type of decking and accessories.
1. Provide test data for mechanical fasteners used in lieu of welding for fastening deck to supporting structures.
- B. Shop drawings showing layout of deck units, anchorage details, and sump pans, cut openings, special jointing, and other accessories.
- C. Submit the following to Factory Mutual for plan review at least three weeks prior to commencing installation: completed FM application, shop drawings and product data complying with the requirements listed under "Quality Assurance" article in this section. Include sufficient information on drawings to ensure compliance with FM fastening requirements for both field areas and perimeter areas.

1.3 QUALITY ASSURANCE

- A. Codes and Standards: Comply with provisions of the following codes and standards, except as otherwise indicated:
1. American Iron and Steel Institute (AISI), "Specification for the Design of Cold-Formed Steel Structural Members."
2. American Welding Society (AWS), D1.3 "Structural Welding Code - Sheet Steel."
3. Steel Deck Institute (SDI), "Design Manual for Composite Decks, Form Decks and Roof Decks."
- B. Qualification of Field Welding: Use qualified welding processes and welding operators in accordance with "Welder Qualification" procedures of AWS.
- C. Underwriters' Label: Provide metal floor deck units listed in Underwriters' Laboratories "Fire Resistance Directory", with each deck unit bearing the UL label and marking for specific system detailed.
- D. FM Listing: Provide steel roof deck units that have been evaluated by Factory Mutual System and are listed in "Factory Mutual Approval Guide" for "Class 1" fire-rated construction.

SELECT THE APPROPRIATE FM CLASS FOR ROOF CONSTRUCTION IN THE FOLLOWING PARAGRAPH

- E. FM Standards: Comply with FM Global Standards, the FM Research Approval Guide and all applicable FM data sheets, including but not limited to, Property Loss Prevention Data Sheets 1-28, 1-29, 1-49, and 1-54. Roof assembly shall meet the requirements of FM Class 1-60 1-90 1-120.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:

Bowman Metal Deck Div., Cyclops Corp.
Consolidated Systems, Inc.
Roll Form Products, Inc.
Roof Deck, Inc.
United Steel Deck, Inc.
Vulcraft Div., Nucor Corp.
Wheeling Corrugating Co.

2.2 MATERIALS

- A. Steel for Galvanized Metal Deck Units: ASTM A 446, grade as required to comply with SDI specifications.
- B. Sheet Metal Accessories: ASTM A 526, commercial quality, galvanized.

REVISE BELOW IF HEAVIER GALVANIZING (G90) REQUIRED.

- C. Galvanizing: ASTM A 525, G60.
- D. Galvanizing Repair: Where galvanized surfaces are damaged, prepare surfaces and repair in accordance with procedures specified in ASTM A 780.

2.3 FABRICATION

- A. General: Form deck units in lengths to span three or more supports, with flush, telescoped, or nested 2-inch laps at ends and interlocking or nested side laps, of metal thickness, depth, and width as indicated.
- B. Roof Deck Units: Provide deck configurations that comply with SDI "Specifications and Commentary for Steel Roof Deck."
- C. Roof Sump Pans: Fabricate from single piece of 0.071-inch min. (14 gage) galvanized sheet steel with level bottoms and sloping sides to direct water flow to drain. Provide sump pans of adequate size to receive roof drains and with bearing flanges not less than 3 inches wide. Recess pans not less than 1-1/2 inches below roof deck surface unless otherwise shown or required by deck configuration. Holes for drains will be cut in the field by others.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Install deck units and accessories in strict accordance with manufacturer's recommendations, shop drawings, Factory Mutual standards and as specified herein.
- B. Place deck units on supporting steel framework and adjust to final position with ends accurately aligned and bearing on supporting members before being permanently fastened. Do not stretch or compress side lap interlocks.
- C. Place deck units flat and square, secured to adjacent framing without warp or deflection.
- D. Coordinate and cooperate with structural steel erector in locating decking bundles to prevent overloading of structural members.
- E. Fastening Deck Units:
 - 1. Fasten roof deck units to steel supporting members by not less than 1/2-inch-diameter puddle welds or elongated welds of equal strength, spaced not more than 12 inches at every support, and at closer spacing where indicated. In addition, secure deck to each supporting member in ribs where side laps occur.
 - 2. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used in correcting welding work.
 - a. Use welding washers where recommended by deck manufacturer.
 - 3. Mechanical fasteners, either powder-actuated or pneumatically driven, may be used in lieu of welding. Locate mechanical fasteners and install in accordance with deck manufacturer's instructions.
 - 4. Mechanically fasten side laps of adjacent deck units between supports, at intervals not exceeding 36 inches o.c., using self-tapping No. 8 or larger machine screws.
 - 5. Uplift Loading: Install and anchor roof deck units to resist gross uplift loading of 45 lbs. psf at eave overhang and 30 lbs. psf for other roof areas.
- F. Cutting and Fitting: Cut and neatly fit deck units and accessories around other work projecting through or adjacent to the decking, as shown.
- G. Reinforcement at Openings: Provide additional metal reinforcement and closure pieces as required for strength, continuity of decking, and support of other work shown.
- H. Roof Sump Pans: Place over openings provided in roof decking and weld to top decking surface. Space welds not more than 12 inches o.c. with at least one weld at each corner.
- I. Touch-Up Painting: After decking installation, wire brush, clean, and paint scarred areas, welds, and rust spots on top and bottom surfaces of decking units and supporting steel members.
 - 1. Touch-up galvanized surfaces with galvanizing repair paint applied in accordance with manufacturer's instructions.

SPECIFICATION DIVISION 5

NUMBER SECTION DESCRIPTION

DIVISION 05 METALS

SECTION 055000 - METAL FABRICATIONS

END OF CONTENTS TABLE

DIVISION 05 METALS
SECTION 055000 - METAL FABRICATIONS

NOV 2004 - CHANGED LADDER RUNGS PER ROOFING DEPT. REQUEST.

PART 1 - GENERAL

1.1 SUMMARY

- A. Types of metal fabrications include the following:

EDIT BELOW TO SUIT PROJECT

1. Rough hardware.
2. Steel ladders.
3. Loose bearing and leveling plates.
4. Loose steel lintels.
5. Railings and guards.
6. Metal stairs.
7. Metal bar gratings.
8. Miscellaneous framing and supports.
9. Miscellaneous steel trim.
10. Structural steel door frames.

1.2 SUBMITTALS

- A. Product data indicating compliance with requirements for the following:

EDIT BELOW TO SUIT PROJECT

1. Grout.
 2. Metal grating.
- B. Shop drawings detailing fabrication and erection of each metal fabrication indicated. Include plans, sections, and details of metal fabrications and their connections. show anchorage and accessory items. Provide templates for anchors and bolts installed under other Sections.
- C. Welder certificates signed by the Contractor and indicating that welders comply with requirements specified under "Quality Assurance" Article.

1.3 QUALITY ASSURANCE

- A. Codes and Standards: AISC "Specifications for the Design, Fabrication and Erection of Structural Steel for Buildings"; AWS "Structural Welding Code"; comply with applicable provisions.
- B. Welding Standards: Comply with applicable provisions of AWS D1.1 "Structural Welding Code - Steel," AWS D1.2 "Structural Welding Code - Aluminum," and AWS D1.3 "Structural Welding Code - Sheet Steel."
1. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and if pertinent, has undergone recertification.

1.4 PROJECT CONDITIONS

- A. Where field measurements cannot be made without delaying The Work, guarantee dimensions and proceed with fabricating products without field measurements. Coordinate construction to ensure that actual dimensions correspond to guaranteed dimensions. Allow for trimming and fitting.

PART 2 - PRODUCTS

2.1 FERROUS MATERIALS

- A. Metal Surfaces, General: For metal fabrications exposed to view in the completed Work, provide materials selected for their surface flatness, smoothness, and freedom from surface blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- B. Steel Plates, Shapes, Bars: ASTM A 36.
- C. Rolled Steel Floor Plates: ASTM A 786.
- D. Steel Tubing: Product type (manufacturing method) as follows:
 - 1. Cold-Formed Steel Tubing: ASTM A 500.
 - 2. Hot Formed Steel Tubing: ASTM A 501.

REVISE BELOW AS REQUIRED.

- a. For exterior installations and where indicated, provide tubing with hot-dip galvanized coating per ASTM A 53.
- E. Steel Pipe: ASTM A 53, standard weight (schedule 40), unless otherwise indicated, or another weight required by structural loads.
 - 1. Black finish, unless otherwise indicated.

DELETE ABOVE OR BELOW IF NOT APPLICABLE.

- 2. Galvanized finish for exterior installations and where indicated.
- F. Welding Rods and Bare Electrodes: Select according to AWS specifications for the metal alloy to be welded.

2.2 PAINT

DELETE BELOW IF NO SHOP PRIMING REQUIRED.

- A. Shop Primer for Ferrous Metals: Fast-curing, lead- and chromate-free universal modified-alkyd primer with good resistance to normal atmospheric corrosion, complying with performance requirements of FS TT-P-664. Select paint for compatibility with finish paint systems indicated, and for capability to provide a sound foundation for field-applied topcoats, despite prolonged exposure.

DELETE BELOW IF NO GALVANIZING.

- B. Galvanizing Repair Paint: High-zinc-dust-content paint for regalvanizing welds in galvanized steel, with dry film containing not less than 94 percent zinc dust by weight, and complying with SSPC Paint 20.

2.3 FASTENERS

BELOW IS GENERAL ONLY. IF SPECIFIC FASTENERS ARE REQUIRED AND NOT INDICATED ON DRAWINGS, ADD REQUIREMENTS HERE.

- A. General: Provide plated fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating, for exterior use or where built into exterior walls. Provide fasteners as indicated on drawings, or if not indicated, select fasteners for the type, grade, and class required to provide a complete, secure installation.

2.4 GROUT AND ANCHORING CEMENT

RETAIN BELOW FOR HEAVY-DUTY STRUCTURAL GROUTING APPLICATIONS. DO NOT USE IN WET AREAS OR ON EXTERIOR.

- A. Nonshrink, Metallic Grout: Factory-packaged, ferrous-aggregate grout complying with ASTM C 1107, specifically recommended by manufacturer for heavy-duty loading applications. Subject to compliance with requirements, provide one of the following:

Hi Mod Grout; Euclid Chemical Co.
Embeco 885 and 636; Master Builders Technologies, Inc.
Ferrolith G Redi-Mix and G-NC; Sonneborn Building Products-ChemRex, Inc.

RETAIN BELOW FOR GROUTING APPLICATIONS WHERE NONSTAINING GROUT IS REQUIRED.

- B. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications. Subject to compliance with requirements, provide one of the following:

Construction Grout; W. R. Bonsal Co.
Sure-grip High Performance Grout; Dayton Superior Corp.
Euco N-S Grout; Euclid Chemical Co.
Five Star Grout; Five Star Products.
Vibropruf #11; Lambert Corp.
Crystex; L & M Construction Chemicals, Inc.
Masterflow 928 and 713; Master Builders Technologies, Inc.
Sealtight 588 Grout; W. R. Meadows, Inc.
SonogROUT 14; Sonneborn Building Products-ChemRex, Inc.

BELOW FOR SETTING HANDRAILS AT INTERIOR APPLICATIONS ONLY.

- C. Interior Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound. Use for interior applications only. Subject to compliance with requirements, provide one of the following:

Ankertite Cement; Dayton Superior Corp.
Por-Rok; Minwax Construction Products Division.

BELOW SETTING HANDRAILS AT BOTH INTERIOR AND EXTERIOR APPLICATIONS.

- D. Erosion-Resistant Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound. Provide formulation that is resistant to erosion from water exposure without need for protection by a sealer or waterproof coating and is recommended for exterior use by manufacturer. Subject to compliance with requirements, provide one of the following:

Bonsal Anchor Cement; W.R. Bonsal Co.
Super Por-Rok; Minwax Construction Products Division.
Thorogrip; Thoro Systems Products.

2.5 FABRICATION, GENERAL

- A. Form metal fabrications from materials of size, thickness, and shapes indicated but not less than that needed to comply with performance requirements indicated. Work to dimensions indicated or accepted on shop drawings, using proven details of fabrication and support. Use type of materials indicated or specified for various components of each metal fabrication.
- B. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges.

BELOW IS INTENDED FOR EXTERIOR METALWORK. REVISE TO SUIT PROJECT CONDITIONS AND METALWORK EXPOSURE.

- C. Allow for thermal movement resulting from the following maximum change (range) in ambient temperature in the design, fabrication, and installation of installed metal assemblies to prevent buckling, opening up of joints, and overstressing of welds and fasteners. Base design calculations on actual surface temperatures of metals due to both solar heat gain and nighttime sky heat loss.

1. Temperature Change (Range): 100 deg F.

- D. Shear and punch metals cleanly and accurately. Remove burrs.
- E. Ease exposed edges to a radius of approximately 1/32 inch, unless otherwise indicated. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- F. Remove sharp or rough areas on exposed traffic surfaces.
- G. Weld corners and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing, and contour of welded surface matches those adjacent.
- H. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners wherever possible. Use exposed fasteners of type indicated or, if not indicated, Phillips flat-head (countersunk) screws or bolts. Locate joints where least conspicuous.
- I. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.
- J. Shop Assembly: Preassemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- K. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.
- L. Fabricate joints that will be exposed to weather in a manner to exclude water, or provide weep holes where water may accumulate.

BELOW FOR SUPPORTING AND ATTACHING WOODWORK.

2.6 ROUGH HARDWARE

- A. Furnish bent, or otherwise custom-fabricated, bolts, plates, anchors, hangers, dowels, and other miscellaneous steel and iron shapes as required for framing and supporting woodwork, and for anchoring or securing woodwork to concrete or other structures. Straight bolts and other stock rough hardware items are specified in Division 06 Sections.
- B. Fabricate items to sizes, shapes, and dimensions required. Furnish malleable-iron washers for heads and nuts that bear on wood structural connections, and furnish steel washers elsewhere.

2.7 STEEL LADDERS

SEE AIA MASTERSPEC FOR SAFETY CAGES AND SHIP'S LADDERS, IF REQUIRED.

- A. General: Fabricate ladders for the locations shown, with dimensions, spacings, details, and anchorages as indicated. Comply with requirements of ANSI A14.3.

DELETE REQUIREMENTS BELOW IF LADDERS ARE DETAILED ON DRAWINGS.

- B. Side Rails: Continuous, steel, 1/2-by-2-1/2-inch flat bars, with eased edges, spaced 18 inches apart.

- C. Rungs: Steel 13 ga. HRPO rungs with cold-formed closely spaced perforated buttons for slip resistance.
- D. Fit rungs in centerline of side rails, plug weld and grind smooth on outer rail faces.
- E. Support each ladder at top and bottom and at intermediate points spaced not more than 5 feet o.c. with welded or bolted steel brackets.
 - 1. Size brackets to support design dead and live loads indicated and to hold centerline of ladder rungs clear of the wall surface by not less than 7 inches.
 - 2. Extend side rails 42 inches above top rung, and return rails to wall or structure unless other secure handholds are provided. If the adjacent structure does not extend above the top rung, goose-neck the extended rails back to the structure to provide secure ladder access.
- F. Galvanize ladders, including brackets and fasteners, in exterior locations.

2.8 LOOSE BEARING AND LEVELING PLATES

- A. Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction, made flat, free from warps or twists, and of the required thickness and bearing area. Drill plates to receive anchor bolts and for grouting as required. Galvanize after fabrication.

2.9 LOOSE STEEL LINTELS

- A. Fabricate loose structural steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated.
- B. Weld adjoining members together to form a single unit where indicated.

DELETE BELOW IF BEARING LENGTHS ARE INDICATED ON DRAWINGS OR SCHEDULES.

- C. Size loose lintels for equal bearing of 1 inch per foot of clear span but not less than 8 inches bearing at each side of openings, unless otherwise indicated.
- D. Galvanize loose steel lintels located in exterior walls.

2.10 RAILINGS AND GUARDS

- A. Railings, General: Fabricate tube handrails with dimensions, spacing, and anchorages indicated. Comply with requirements of Michigan Building Code, unless otherwise indicated.

- B. Railings: Interconnect railing members by butt-welding. Notch ends of intersecting members to fit contour of tube to which end is joined and weld all around at tee and cross intersections. Form curves by bending tube in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross-section of tube throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of tube.
1. Shape for Handrails: Round.
 2. Shape for Members Other Than Handrails: Round, unless otherwise indicated on drawings.
 3. Outside Diameter of Tube for Handrails: 1-1/2 inches.
 4. Dimensions of Members Other Than Handrails: As indicated on drawings.
 5. Tube Wall Thickness: 11 gage.
 6. 1-1/4-inch O.D. pipe is not acceptable for use as a handrail.
 7. Rail Ends: Provide wall returns at ends of wall-mounted handrails. Weld 3/16-inch thick steel plate at ends of tube, except where clearance between tube end and adjoining wall surface is less than 1/4-inch.
 8. Supports: Space support posts or brackets as shown on drawings, but not more than 6 feet on center.
 9. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnections of tube attachment of railings and handrails to other work. Furnish inserts and other anchorage devices for connecting railings and handrails to concrete or masonry work.

MODIFY BELOW FOR VERTICAL BARS OR TUBES.

- C. Guards: Provide infill panels where indicated for interior stairs. Fabricate units from 10 gage flattened, expanded carbon steel sheet with 3/4 inch diamond pattern and weighing approximately 1.7 lbs per sq. ft. Provide each panel with a continuous "U" shaped perimeter frame fabricated of 18 gage sheet metal, lapping both sides of panel 1-inch, and with mitered corners. Include mounting tabs indicated on drawings.
- D. Finish: As follows:
1. Interior Handrails and Components: Black finish.
 2. Exterior Handrails and Components: Galvanized after fabrication.

2.11 METAL STAIRS

- A. Metal Stairs: Construct stairs to conform to sizes and arrangements indicated. Join pieces together by welding, unless otherwise indicated. Provide complete stair assemblies, including metal framing, hangers, columns, railings, newels, balusters, struts, clips, brackets, bearing plates, and other components necessary for the support of stairs and platforms, and as required to anchor and contain the stairs on the supporting structure.

1. Comply with NAAMM "Metal Stair Manual" "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" for Commercial class stair, except where more stringent requirements are indicated.
2. Framing: Fabricate stringers of structural steel shapes shown. Provide closures for exposed stringer ends. Construct platforms of structural steel channel headers and miscellaneous framing members as shown. Weld headers to strings and framing members to strings and headers.
3. Metal Pan Risers, Subtreads, and Subplatforms: Uncoated, 12 gage, cold-rolled steel sheet metal formed into risers and subtreads to conform to configuration shown. Weld brackets to stringers and metal pans to brackets.
4. Stair Railings and Handrails: Comply with applicable requirements specified elsewhere in this Section. Connect to stair framing by direct welding.

BELOW IS LIGHT-DUTY UNIT FOR PEDESTRIAN TRAFFIC. REFER TO AIA MASTERSPEC FOR MORE COMPLETE SELECTION OF GRATING TYPES AND MATERIALS.

2.12 METAL BAR GRATINGS

- A. Welded Steel Gratings: Fabricate welded steel gratings to comply with requirements of "Standard Specifications for Metal Bar Grating and Metal Bar Grating Treads" published in ANSI/NAAMM A202.1 "Metal Bar Grating Manual" and as indicated below:

1. Mark/Size: W-19-4 (welded with bearing bars 1-3/16 inch o.c. and cross bars 4 inches o.c.)/bearing bar sizes as indicated.
2. Bearing bar size: 1-1/2" by 3/16".
3. Traffic Surface: Plain.

SELECT ABOVE OR BELOW.

4. Traffic Surface: Applied abrasive finish consisting of aluminum oxide aggregate in an epoxy resin adhesive.
5. Steel Finish: Hot-dip galvanized with a coating weight of not less than 1.8 oz. per sq. ft. of coated surface.
6. Fabricate removable grating sections with banding bars attached by welding to entire perimeter of each section. Include anchors and fasteners of type recommended by manufacturer, for attachment to supports.
 - a. Provide not less than 4 saddle clips for each grating section and spaced not less than 15/16 inch o.c, with each clip designed and fabricated to fit over 2 bearing bars.
 - b. Furnish threaded bolts with nuts and washers for each clip required.
7. Fabricate cutouts in grating sections for penetrations indicated. Arrange layout of cutouts to permit grating removal without disturbing items penetrating gratings.
 - a. Edge band openings in grating that interrupt 4 or more bearing bars with bars of same size and material as bearing bars.
 - b. Do not notch bearing bars at supports to maintain elevation.

8. Manufacturers: Subject to compliance with requirements, provide metal bar gratings by one of the following:
Alabama Metal Industries Corp.
Barnett/Bates Corp.
Blaw-Knox Grating Div., Blaw-Knox Corp.
IKG Industries
Klemp Corp.
Ohio Gratings, Inc.
Reliance Steel Products, Inc.
Seidelhuber Metal Products, Inc.
Trueweld, Inc.

2.13 MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Provide steel framing and supports for applications indicated that are not a part of structural steel framework as required to complete the Work.
- B. Fabricate units to sizes, shapes, and profiles indicated and required to receive other adjacent construction retained by framing and supports. Fabricate from structural steel shapes, plates, and steel bars of welded construction using mitered joints for field connection. Cut, drill, and tap units to receive hardware, hangers, and similar items.
 1. Equip units with integrally welded anchors for casting into concrete or building into masonry. Furnish inserts if units must be installed after concrete is placed.
 - a. Except as otherwise indicated, space anchors 24 inches o.c. and provide minimum anchor units in the form of steel straps 1-1/4 inches wide by 1/4 inch thick by 8 inches long.

REVISE BELOW TO SUIT SPECIFIC PROJECT REQUIREMENTS. ADD SIMILAR PROVISIONS FOR OTHER SUPPORTS, SUCH AS FOR OPERABLE PARTITIONS, OVERHEAD DOORS, ETC.

- C. Toilet Partition Supports: Fabricate support for suspended toilet partitions as follows:
 1. Beams: Continuous steel shapes as shown on drawings, or if not shown, of size required to limit deflection to L/360 between hangers, but use not less than C8 by 11.5 channels or another shape with equivalent structural properties.
 2. Hangers: Steel rods as shown on drawings, or if not shown, 1/2-inch minimum diameter, spaced not more than 36 inches o.c. Thread rods to receive anchor and stop nuts. Fit hangers with wedge-shaped washers for full bearing on sloping flanges of support beam.
 3. Braces and Angles: Steel angles of size required for rigid support of beam and for secure anchorage.

DELETE BELOW IF NO EXTERIOR FRAMING AND SUPPORTS.

- D. Galvanize miscellaneous framing and supports in exterior locations.

2.14 MISCELLANEOUS STEEL TRIM

- A. Unless otherwise indicated, fabricate units from structural steel shapes, plates, and bars of profiles shown with continuously welded joints, and smooth exposed edges. Miter corners and use concealed field splices wherever possible.
- B. Provide cutouts, fittings, and anchorages as required to coordinate assembly and installation with other work. Provide anchors, welded to trim, for embedding in concrete or masonry construction, spaced not more than 6 inches from each end, 6 inches from corners, and 24 inches o.c., unless otherwise indicated.
- C. Galvanize miscellaneous steel trim in exterior locations.

2.15 STRUCTURAL STEEL DOOR FRAMES

- A. Fabricate steel door frames from structural shapes and bars of size and to dimensions indicated, fully welded together, with 5/8-by-1-1/2-inch steel bar stops, unless otherwise indicated. Plug-weld built-up members and continuously weld exposed joints. Secure removable stops to frame with countersunk machine screws, uniformly spaced at not more than 10 inches o.c. Reinforce frames and drill and tap as required to accept finish hardware.
- B. Provide steel strap anchors for securing door frames into adjoining concrete or masonry, using 1/8-by-2-inch straps of the length required for a minimum 8-inch embedment, unless otherwise indicated. Weld anchors to frame jambs no more than 12 inches from both bottom and head of frame and space anchors not more than 30 inches apart.

DELETE BELOW IF NOT REQUIRED. DOOR FRAMES CONNECTED TO STRUCTURAL STEEL FRAMING ARE SPECIFIED WITH THAT WORK IN ANOTHER DIVISION 05 SECTION.

- C. Extend bottom of frames to floor elevation indicated with steel angle clips welded to frames for anchoring frame to floor with expansion shields and bolts.
- D. Galvanize frames and anchors in exterior locations.

2.16 STEEL AND IRON FINISHES

- A. Galvanizing: For those items indicated for galvanizing, apply zinc coating by the hot-dip process complying with the following requirements:
 - 1. ASTM A 153 for galvanizing iron and steel hardware.
 - 2. ASTM A 123 for galvanizing both fabricated and unfabricated iron and steel products made of uncoated rolled, pressed, and forged shapes, plates, bars, and strip 0.0299 inch thick or thicker.
- B. Preparation for Shop Priming: Prepare uncoated ferrous metal surfaces to comply with minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed metal fabrications:

BOTH OF BELOW APPLY TO LOCATIONS THAT WOULD NORMALLY REMAIN DRY IN SERVICE.

1. Exteriors (SSPC Zone 1B): SSPC-SP 6 "Commercial Blast Cleaning."
 2. Interiors (SSPC Zone 1A): SSPC-SP 3 "Power Tool Cleaning."
- C. Apply shop primer to uncoated surfaces of metal fabrications, except those with galvanized finishes or to be embedded in concrete, sprayed-on fireproofing, or masonry, unless otherwise indicated. Comply with requirements of SSPC-PA 1 "Paint Application Specification No. 1" for shop painting.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Coordinate and furnish anchorages, setting drawings, diagrams, templates, instructions, and directions for installing anchorages, including concrete inserts, sleeves, anchor bolts, and miscellaneous items having integral anchors that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.
- B. Set sleeves in concrete with tops flush with finish surface elevations. Protect sleeves from water and concrete entry.

3.2 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing miscellaneous metal fabrications to in-place construction. Include threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws, and other connectors as required.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing miscellaneous metal fabrications. Set metal fabrication accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- C. Provide temporary bracing or anchors in formwork for items that are to be built into concrete masonry or similar construction.
- D. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop-welded because of shipping size limitations. Do not weld, cut, or abrade the surfaces of exterior units that have been hot-dip galvanized after fabrication and are intended for bolted or screwed field connections.
- E. Field Welding: Comply with the following requirements:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.

4. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing, and contour of welded surface matches those adjacent.

DELETE ARTICLES BELOW NOT APPLICABLE TO PROJECT.

3.3 SETTING LOOSE PLATES

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of bearing plates.
- B. Set loose leveling and bearing plates on wedges or other adjustable devices. After the bearing members have been positioned and plumbed, tighten the anchor bolts. Do not remove wedges or shims, but if protruding, cut off flush with the edge of the bearing plate before packing with grout.
 1. Use nonshrink, metallic grout in concealed locations where not exposed to moisture; use nonshrink, nonmetallic grout in exposed locations, unless otherwise indicated.

DELETE BELOW IF NOT REQUIRED.

2. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.4 INSTALLING SUPPORTS FOR TOILET PARTITIONS

- A. Anchor supports securely to and rigidly brace from overhead building structure.

3.5 ADJUSTING AND CLEANING

- A. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of the shop paint on miscellaneous metal is specified in Division 09 Section "Painting."
- B. For galvanized surfaces, clean welds, bolted connections, and abraded areas, and apply galvanizing repair paint to comply with ASTM A 780.

SPECIFICATION DIVISION 5

NUMBER SECTION DESCRIPTION

DIVISION 05 METALS

SECTION 055800 - FORMED-METAL FABRICATIONS

END OF CONTENTS TABLE

DIVISION 05 METALS
SECTION 055800 - FORMED-METAL FABRICATIONS

PART 1 - GENERAL

THIS SECTION INCLUDES A LIMITED LIST OF SHEET METAL ITEMS. OTHER POSSIBILITIES INCLUDE LIGHTING TROUGHS, COLUMN COVERS, EXTERIOR OR INTERIOR CLOSURE STRIPS, VARIOUS CANOPIES, HOODS AND OTHER ARCHITECTURAL STRUCTURES.

1.1 SUMMARY

- A. This Section includes the following:

EDIT BELOW TO SUIT PROJECT.

1. Pockets for window treatment.
2. Filler panels.

1.2 SUBMITTALS

- A. Shop drawings detailing fabrication and installation of sheet metal fabrications. Include plans, elevations, sections, details of components, and attachments to other units of Work. Indicate jointing, fasteners, anchorage, accessory items, and finishes.
- B. Samples for initial selection in the form of manufacturer's color charts showing the full range of colors, textures, and patterns available for each type of sheet metal fabrication indicated.

1.3 PROJECT CONDITIONS

- A. Field Measurements: Check actual dimensions of other construction by accurate field measurements before fabrication of sheet metalwork; show recorded measurements on final shop drawings.
1. Where field measurements cannot be made without delaying the Work, guarantee dimensions and proceed with fabricating sheet metalwork without field measurements. Coordinate other construction to ensure that actual dimensions correspond to guaranteed dimensions.

PART 2 - PRODUCTS

2.1 SHEET METAL

- A. General: Provide sheet metal selected for surface flatness, smoothness, and freedom from surface blemishes where exposed to view in the finished unit. Do not use materials with pitting, seam marks, roller marks, variations in flatness exceeding those permitted by referenced standards for stretcher-leveled metal sheet, stains, discoloration, or other imperfections.

SELECT MATERIALS FROM THE FOLLOWING, DELETE OTHERS, OR REVISE AS NEEDED.

- B. Steel Sheet: Commercial-quality, cold-rolled, stretcher-leveled, carbon-steel sheet, complying with the following requirements:
 - 1. Electrolytic Zinc-Coated Steel Sheet: ASTM A 591, with Class C zinc coating; chemically treated in mill with phosphate solution and light chromate rinse.
 - 2. Uncoated Steel Sheet: ASTM A 366, Class I, matte finish.
- C. Aluminum Sheet: Not less than the strength and durability properties specified in ASTM B 209 for 5005-H15.

2.2 MISCELLANEOUS MATERIALS

- A. Sound-Deadening Insulation: Unfaced, mineral-fiber blanket or batt insulation complying with ASTM C 665 for Type I and passing ASTM E 136 test.
- B. Welding Electrodes and Filler Metal: Type and alloy of filler metal and electrodes as recommended by producer of metal to be welded, complying with applicable AWS specifications, and as required for strength and compatibility in the fabricated items.
- C. Fasteners: Of same basic metal and alloy as fastened metal, unless otherwise indicated. Do not use metals that are corrosive or incompatible with metals joined.
 - 1. Provide concealed fasteners for interconnection of sheet metal fabrications and for attaching them to other work except where exposed fasteners are unavoidable or are the standard fastening method.
 - 2. Provide Phillips flat-head machine screws for exposed fasteners, unless otherwise indicated.
- D. Anchors: For applications not indicated to comply with design loadings, provide anchors of type, size, and material required for type of loading and installation indicated.

BELOW IS AN EXAMPLE ONLY. REVISE TO SUIT INSTALLATION INDICATED.

- E. Flexible Cellular Neoprene Gaskets: ASTM D 1056, Type 1, Class A, grade as recommended by gasket manufacturer to obtain airtight seal for application indicated.
- F. Bituminous Paint: Cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers.
- G. Joint Sealants for Concealed Joints: Butyl sealant.

2.3 FABRICATION, GENERAL

- A. Coordinate dimensions and attachment methods of sheet metal fabrications with those of adjoining products and construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned with one another in the relationship indicated.

- B. Increase metal thickness or reinforce metal with concealed stiffeners, backing materials, or both, as required to produce surfaces whose variations in flatness do not exceed those permitted by referenced standards for stretcher-leveled metal sheet and to impart sufficient strength for indicated use.
 - 1. Support joints with concealed stiffeners as required to hold exposed faces of adjoining sheets in flush alignment.
 - 2. Fill space between stiffeners with sound-deadening insulation attached to face sheet with cold-applied asphalt mastic.
- C. Assemble sheet metal fabrications in the shop to the greatest extent possible to minimize field splicing and assembly.
- D. Form sheet metal fabrications to profiles indicated in maximum lengths to minimize joints and without exposed cut edges. Fold back exposed ends of unsupported sheet metal to form a 1/2-inch-wide hem on the concealed side, or ease exposed edges with backing to a radius of approximately 1/32 inch. Produce flat, flush surfaces without cracking or grain separation at bends.
- E. Continuously weld joints and seams, except where other methods of joining are indicated. Grind, fill, and dress welds to produce smooth flush exposed surfaces in which welds are not visible after final finishing is completed.
- F. Build in straps, plates, and brackets as required for supporting and anchoring fabricated items to adjoining construction. Reinforce sheet metal units as required to attach and support other construction.

2.4 BLIND AND DRAPERY POCKETS

DELETE THIS ARTICLE IF NO BLIND OR DRAPERY POCKETS. REVISE TITLE ABOVE AND TERMS BELOW IF ONLY ONE, BLIND OR DRAPERY POCKET, APPLIES.

- A. Form pockets from sheet metal of type and thickness indicated below, with end closures. Coordinate dimensions and attachment methods with blind and drapery equipment, window frames, ceiling suspension system, and other related construction to produce a coordinated, closely fitting assembly.
 - SELECT 1 REQUIREMENT FROM BELOW, OR REVISE TO SPECIFY ANOTHER METAL OR THICKNESS.*
 - 1. Steel sheet, 0.0478 inch.
 - 2. Galvanized-steel sheet, 0.0516 inch.
 - 3. Aluminum sheet, 0.0625 inch.
- B. Reinforce pockets for attaching window treatment equipment and hardware, or increase metal thickness.
- C. Divide continuous pockets with built-in partitions located to separate adjoining drapery and blind units, coincide with window mullions, and receive filler panels at ends of partitions.

2.5 FILLER PANELS

DELETE THIS ARTICLE IF NO FILLER PANELS, OR IF FILLER PANELS ARE SPECIFIED IN DIVISION 06 SECTION (CLEAR ACRYLIC PLASTIC), OR IN DIVISION 09 SECTION WITH PARTITIONS.

- A. Form filler panels for closing ends of partition systems and for other applications indicated from sheet metal of type and thickness indicated. Incorporate reveals, trim, and concealed anchorages for attachment to adjacent surfaces.

SELECT 1 REQUIREMENT FROM BELOW, OR REVISE TO SPECIFY ANOTHER METAL OR THICKNESS.

- 1. Steel sheet, 0.0598 inch.
2. Galvanized-steel sheet, 0.0635 inch.
3. Aluminum sheet, 0.0625 inch.

- B. Adhesively attach gaskets to filler panel edges that abut glass. Use 1-inch-square material, unless otherwise indicated, set approximately 1/4 inch into channeled edge of filler panel.

DELETE ABOVE OR BELOW IF NOT REQUIRED, OR REVISE TO SUIT PROJECT.

- C. Attach gaskets to all edges of panels that abut adjacent surfaces to form a continuous seal. Use compressible gaskets or mastic sealing tape, applied to center of panel edges to be concealed from view, unless otherwise indicated.

DELETE BELOW IF NOT REQUIRED.

- D. Fill interior of panel with sound-deadening insulation permanently attached to inside panel faces.

2.6 ALUMINUM FINISHES

DELETE THIS ARTICLE IF NO ALUMINUM. RETAIN FINISHES BELOW APPLICABLE TO PROJECT.

- A. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.
B. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.7 mil or thicker) complying with AAMA 607.1.
C. Class I, Color Anodic Finish: AA-M12C22A42/A44 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.7 mil or thicker) complying with AAMA 606.1 or AAMA 608.1.

RETAIN COLOR REQUIREMENT BELOW WITH EITHER CLASS OF COLOR ANODIC FINISH RETAINED ABOVE.

- 1. Color: Dark bronze.
2. Color: Black.

D. Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Apply baked enamel complying with paint manufacturer's specifications for cleaning, conversion coating, and painting.

1. Organic Coating: Thermosetting, modified-acrylic enamel primer/topcoat system standard with manufacturer, with minimum dry film thickness of 1.5 mils, medium gloss.

RETAIN 1 COLOR REQUIREMENT FROM BELOW.

2. Color: As indicated by manufacturer's standard color designations.

3. Color: Match Architect's samples.

4. Color: As selected by Architect from manufacturer's full range of colors.

2.7 STEEL SHEET FINISHES

DELETE THIS ARTICLE IF NO UNCOATED OR ELECTROLYTIC ZINC-COATED STEEL SHEET.

A. Surface Preparation: Solvent-clean surfaces to comply with SSPC-SP 1 to remove dirt, oil, grease, and other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel to comply with SSPC-SP 5 (White Metal Blast Cleaning) or SSPC-SP 8 (Pickling).

B. Pretreatment: Immediately following surface preparation, apply a conversion coating of type suited to organic coating applied over it.

C. Factory Priming for Field-Painted Finish: Apply shop primer specified below immediately following surface preparation and pretreatment.

1. Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with performance requirements of FS TT-P-664 selected for good resistance to normal atmospheric corrosion, compatibility with finish paint systems indicated, and capability to provide a sound foundation for field-applied topcoats despite prolonged exposure.

DELETE BELOW IF NO FACTORY-APPLIED BAKED-ENAMEL FINISH FOR STEEL SHEET.

D. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard 2-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat. Comply with paint manufacturer's instructions for applying and baking to achieve a minimum dry film thickness of 2.0 mils.

RETAIN 1 COLOR REQUIREMENT FROM BELOW.

1. Color and Gloss: As indicated by manufacturer's standard color and gloss designations.

2. Color and Gloss: Match Architect's sample.

3. Color and Gloss: As selected by Architect from manufacturer's full range of choices for color and gloss.

TO ENSURE OBTAINING EXACT FINISH DESIRED, INSERT PRODUCT AND MFRS' NAMES OF COATING SYSTEM OR SYSTEMS.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Locate and place sheet metal fabrications plumb, level, and in alignment with adjacent construction. Use concealed anchorages where possible. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers as indicated.
- B. Install concealed gaskets, joint fillers, insulation, and flashings as the work progresses to make work soundproof or lightproof as required.
- C. Corrosion Protection: Coat concealed surfaces of aluminum, zinc-coated, and nonferrous metals that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.2 ADJUSTING AND PROTECTION

- A. Restore finishes damaged during installation and construction period so that no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units as required.
- B. Protect finishes of sheet metal fabrications from damage during construction period. Remove temporary protective coverings at the time of Substantial Completion.

SPECIFICATION DIVISION 6

NUMBER SECTION DESCRIPTION

DIVISION 06 WOOD, PLASTICS AND COMPOSITES

SECTION 061000 - ROUGH CARPENTRY

END OF CONTENTS TABLE

DIVISION 06 WOOD, PLASTICS AND COMPOSITES
SECTION 061000 - ROUGH CARPENTRY

*JAN, 2005 - UPDATED TO REMOVE ARSENIC- AND CHROMIUM-CONTAINING
WOOD PRESERVATIVES AND TO ADD CORROSION-RESISTANT FASTENERS.*

PART 1 - GENERAL

1.1 SUMMARY

*NOTE THAT ROUGH CARPENTRY REQUIRED FOR INSTALLATION OF
ARCHITECTURAL CASEWORK IS USUALLY INCLUDED IN SECTION 064023 -
"INTERIOR ARCHITECTURAL WOODWORK."*

EDIT BELOW TO SUIT PROJECT

- A. Types of work in this section include the following:
 - 1. Wood framing.
 - 2. Wood blocking.
 - 3. Telephone backboard panel.
 - 4. Plywood reinforcement panels within gypsum drywall walls.
- B. "Interior Architectural Woodwork" is specified in another Division 06 Section.

*DELETE ABOVE IF NO FINISH CARPENTRY. DELETE BELOW IF THIS
SECTION DOES NOT INCLUDE REINFORCING OF DRYWALL PARTITIONS*

- C. Drywall partitions are specified in Division 09 Section "Gypsum Board Assemblies."

1.2 SUBMITTALS

- A. Wood treatment data, including instructions for handling, storing, installing, and finishing treated materials, and the following:
 - 1. Certification by treating plant stating type of preservative solution and pressure process used, net amount of preservative retained, and compliance with applicable standards.
 - 2. Statement that moisture content of treated materials was reduced to levels indicated before shipment to Project site.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Lumber Standards: Manufacturer lumber to comply with PS 20 "American Softwood Lumber Standard" and with applicable grading rules of inspection agencies certified by American Lumber Standards Committee's (ALSC) Board of Review.

- B. Grade Stamps: Factory-mark each piece of lumber with grade stamp of inspection agency evidencing compliance with grading rule requirements and identifying grading agency, grade, species, moisture content at time of surfacing, and mill.
1. For exposed lumber apply grade stamps to ends or back of each piece, or omit grade stamps entirely and issue certificate of grade compliance from inspection agency in lieu of grade stamp.
- C. Nominal sizes are indicated, except as shown by detail dimensions. Provide actual sizes as required by PS 20, for moisture content specified for each use.
1. Provide seasoned lumber with 19 percent moisture content at the time of dressing and shipment, for sizes 2 inches or less in thickness.

DELETE THIS ARTICLE IF NOT APPLICABLE.

- D. Preservative Treated Materials: Comply with applicable requirements of AWPA C2 (lumber), except that lumber that is not in contact with the ground and is continuously protected from liquid water may be treated according to AWPA C31 with inorganic boron (SBX) and AWPA C9 (plywood). Mark each treated item with the Quality Mark Requirements of an inspection agency approved by ALSC's Board of Review.
1. Preservative Chemicals shall contain no arsenic or chromium.
 2. Treat indicated items and the following:

MODIFY LIST BELOW TO SUIT PROJECT.

- a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
 - b. Wood sills, sleepers, blocking, furring, stripping, and similar concealed members in contact with masonry or concrete.
 - c. Wood framing members less than 18 inches (460 mm) above grade.
 - d. Wood floor plates installed over concrete slabs directly in contact with earth.
3. Approved Manufacturers: Provide treatment chemicals produced by one of the following:
Arch Wood Protection, Inc.
Baxter: J. H. Baxter Co.
Chemical Specialties, Inc.
Hickson Corp.
Hoover Treated Wood Products, Inc.
Osrose Wood Preserving, Inc.
 4. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent.
 5. Complete fabrication of treated items before treatment, where possible. If cut after treatment, apply field treatment complying with AWPA M4 to cut surfaces. Inspect each piece of lumber or plywood after drying and discard damaged or defective pieces.

INCLUDE BELOW IF REQUIRED

- E. Fire Resistant Treated Lumber and Plywood: Where indicated, provide "Osmose" "Flame Proof LHC" or equal.

DELETE BELOW IF NOT APPLICABLE]

1. Provide fire resistant lumber in each application, unless otherwise indicated.
- F. Dimension Lumber: Provide lumber of the following product classification and species indicated:

BELOW FOR LIGHT FRAMING (2" TO 4" THICK, 2" TO 6" WIDE, 10 FEET LONG AND SHORTER). SPECIFY NO. 2 GRADE FOR STRUCTURAL APPLICATIONS

1. Concealed Boards: Standard grade, any species graded under WPA rules or No. 3 grade Southern Pine graded under SPIB rules.
2. Lumber for Miscellaneous Uses: Standard grade lumber for support of other work, including bucks, nailers, blocking, furring, stripping and similar members.

EDIT BELOW TO SUIT PROJECT

- G. Plywood: Provide plywood of APA grade B-C, exterior glue, southern pine veneer for use in concealed locations.
1. Plywood Backing Panels: For mounting electrical equipment, provide fire-retardant treated plywood panels with grade designation APA C-D PLUGGED INT with exterior glue, and in thickness indicated, or if not otherwise indicated, not less than 23/32-inch.
 2. Plywood Reinforcing Panels: For concealed installation within drywall partitions, provide fire-retardant treated panels with grade designation APA STRUC I RATED SHEATHING. Provide units of thickness shown, or if not shown, of thickness matching drywall.
- H. Fasteners and Anchorages: Provide size, type, material and finish as indicated and as recommended by applicable standards, complying with applicable Federal Specifications for nails, staples, screws, bolts, nuts, washers and anchoring devices. Provide metal hangers and framing anchors of the size and type recommended by the manufacturer for each use including recommended nails.
1. Where rough carpentry work is exposed to weather, in ground contact, or in area of high relative humidity, provide connectors, fasteners and anchorages with a G185 hot-dip zinc coating (ASTM A 153 for fasteners and ASTM A123 for individual connectors).

THE NEWER NON-CCA PRESERVATIVE TREATMENTS HAVE SHOWN EVIDENCE OF INCREASED CORROSIVENESS. FOR FASTENERS USED WITH THIS MATERIAL, USE TYPE 304 STAINLESS STEEL FASTENERS. FOR NON-AMMONIA-CONTAINING PRESERVATIVES WITH A RETENTION LEVEL OF 0.40 PCF OR LESS, HOT-DIP GALVANIZED COATING WITH A MINIMUM THICKNESS OF 185 MILS MAY SUFFICE. THE NEWER NON-CCA PRESERVATIVE TREATMENTS HAVE SHOWN EVIDENCE OF INCREASED CORROSIVENESS. FOR FASTENERS USED WITH THIS MATERIAL, USE

TYPE 304 STAINLESS STEEL FASTENERS. FOR NON-AMMONIA-CONTAINING PRESERVATIVES WITH A RETENTION LEVEL OF 0.40 PCF OR LESS, HOT-DIP GALVANIZED COATING WITH A MINIMUM THICKNESS OF 185 MILS MAY SUFFICE.

FOR LESS SEVERE CONDITIONS DESCRIBED ABOVE SELECT ABOVE PARAGRAPH AND DELETE PARAGRAPH BELOW.

2. Where rough carpentry work is exposed to weather, in ground contact, or in area of high relative humidity, provide connectors, fasteners and anchorages of Type 304 or Type 316 stainless steel.
- I. Insulation: "Dow", "Styrofoam-SM"; 24 inch wide by 2 inch thick boards.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Discard units of material with defects which might impair quality of work, and units which are too small to use in fabricating work with minimum joints or optimum joint arrangement.
- B. Set carpentry work to required levels and lines, with members plumb and true to line and cut and fitted.
- C. Install rough carpentry work to comply with recommendations of mfr of product involved for use intended. Set carpentry work to required levels and lines, with members plumb and true and cut to fit.
- D. Securely attach carpentry work. Install fasteners without splitting wood: fasten panel products to allow for expansion at joints unless otherwise indicated.
 1. Countersink nail heads on exposed carpentry work and fill holes.
- E. Install plywood backing panels for telephone equipment to substrate as indicated, or if not indicated, with 3/8-inch diameter expansion bolts or toggle bolts spaced 18-inches on center around panel perimeters and on 24-inch centers within panels.

SPECIFICATION DIVISION 6

NUMBER SECTION DESCRIPTION

DIVISION 06 WOOD, PLASTICS AND COMPOSITES

SECTION 064023 - INTERIOR ARCHITECTURAL WOODWORK

END OF CONTENTS TABLE

DIVISION 06 WOOD, PLASTICS AND COMPOSITES
SECTION 064023 - INTERIOR ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.1 SUMMARY

EDIT FOLLOWING LIST TO SUIT PROJECT.

A. Work specified in this Section includes:

Plastic laminate casework.
Hardwood veneer plywood casework.
Plastic laminate counter tops.
Cast plastic counter tops.
Plastic laminate shelving.
Glass shelving.
Acrylic plastic shelving.
Hardwood veneer plywood shelving.
Hardwood door frames.
Hardwood moldings and trim.

B. Related work of other Sections:

DELETE BELOW IF BLOCKING AND NAILERS WILL BE INCLUDED IN THIS SECTION.

1. Blocking, nailers and other carpentry work that is not exposed to view is specified in Section 061000, "Rough Carpentry".

DELETE BELOW IF WOOD WILL BE FACTORY FINISHED.

2. Field finishing of exposed wood is specified in Section 099100, "Painting".

1.2 SUBMITTALS

A. Product Literature: Submit manufacturer's product literature indicating compliance with requirements for each specified hardware item.

B. Shop Drawings: Submit shop drawings showing dimensioned plans and elevations, large scale details, attachment devices and other components for the following:

1. Casework.
2. Counter tops.
3. Shelves.
4. Door frames.
5. Miscellaneous trim.

INCLUDE BELOW WHERE WOOD SAMPLES ARE REQUIRED. MODIFY AS NEEDED.

C. Samples: Submit the following samples for Architect's initial selection:

1. Submit 3 samples of each specified species and cut of hardwood as follows:

- a. Submit 2 samples showing extremes of grain and coloration range to be expected; submit 1 sample showing typical piece of wood.
2. Submit 3 flitches of each specified hardwood veneer, not less than 12 inches by 12 inches.

1.3 QUALITY ASSURANCE

- A. Standards: Except as otherwise shown or specified, comply with specified provisions of the latest edition of Architectural Woodwork Institute (AWI) "Architectural Woodwork Quality Standards."
 1. When an AWI quality grade is not specified, fabricate items in accordance with requirements of AWI "Premium" grade, where applicable.

MODIFY SHOP DRAWING REQUIREMENTS TO SUIT PROJECT.

PART 2 - PRODUCTS

2.1 MATERIALS

MODIFY LIST BELOW TO SUIT ANTICIPATED MATERIAL REQUIREMENTS FOR PROJECT

- A. General: Provide materials that comply with requirements of the referenced AWI woodworking standard, and as follows:
 1. Hardboard: ANSI/AHA A135.4
 2. High Pressure (Plastic) Laminate: NEMA LD 3.
 3. Particleboard: ANSI A208.1; Grade M-2.

THE FOLLOWING PRODUCT IS A GREEN SUBSTITUTE FOR PARTICLEBOARD OR PLYWOOD. IT USES WASTE STRAW AND FORMALDEHYDE-FREE RESINS AND EQUALS THE PERFORMANCE OF PARTICLEBOARD, BUT IS LIGHTER IN WEIGHT. COST MAY BE SLIGHTLY HIGHER.

4. Particleboard: Straw-based particleboard complying with requirements of ANSI A208.1, Grade M-2, except for density.
 5. Softwood Plywood: PS 1.
 6. Veneered Plywood: HPVA HP-1 Clear, selected for grain and color compatible with exposed solid lumber, no defects.
- DELETE BELOW IF NO PLASTIC LAMINATE IN PROJECT.*
7. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated, or if not indicated, as required by indicated woodwork quality standard.

A COLOR/STYLE COULD BE INCLUDED HERE FOR SIMPLE PROJECTS, OR IN SPECIFIC PRODUCT DESCRIPTION FOR MORE DIFFICULT PROJECT, OR ON DRAWINGS FOR VERY COMPLEX PROJECTS.

- a. Approved Manufacturers: Subject to compliance with requirements, provide products of one of the following:
 - 1) Formica Corporation
 - 2) Laminart.
 - 3) Nevamar Corp.

4) Ralph Wilson Plastics Co.

DELETE BELOW IF NO CHEMICAL-RESISTANT LAMINATE REQUIRED. FORMICA COMES ONLY IN BLACK BUT HAS HIGHER CHEMICAL RESISTANCE THAN VARIETY OF WILSONART COLORS.

8. Chemical-Resistant, High-Pressure Decorative Laminate: NEMA LD 3, Grade PF-42.

FORMICA AVAILABLE ONLY IN BLACK, BUT HAS BETTER CHEM. RESISTANCE THAN VARIETY OF WILSONART COLORS.

- a. Approved Products: Subject to compliance with requirements, provide products of one of the following:
- 1) Lab Grade 840 Black; Formica Corporation
 - 2) Chemsurf; Ralph Wilson Plastics Co.

DELETE BELOW IF NO PLASTIC LAMINATE.

9. Adhesive for Bonding Plastic Laminate: Contact cement; except use urea-formaldehyde for bonding chemical-resistant laminates.

MODIFY BELOW IF ROUGH CARPENTRY WILL CONTAIN THESE REQUIREMENTS.

B. Installation Materials: Provide fire-resistant furring, blocking and hanging strips of softwood or hardwood lumber, kiln dried to less than 15 percent moisture content, and as follows:

1. Screws: Select material, type, size, and finish required for each use. Comply with ASME B18.6.1 for applicable requirements.
2. Nails: Select material, type, size, and finish required for each use. Comply with FS FF-N-105 for applicable requirements.
3. Anchors: Select material, type, size, and finish required for each substate for secure anchorage. Provide nonferrous metal or hot-dipped galvanized anchors and inserts on inside face of exterior walls and elsewhere where required for corrosion resistance. Provide toothed steel or lead expansion anchors for drilled-in-place anchors.

2.2 FABRICATION, GENERAL

A. Measures: Before proceeding with fabrication of woodwork required to be fitted to other construction, obtain measurements and verify dimensions and shop drawing details as required for accurate fit.

DELETE BELOW IF NO WOOD OR WOOD VENEERS.

B. Exposed Wood and Veneer Materials: The following are not permitted in surfaces exposed-to-view in finished construction:

1. Knots.
2. Pinhole knots.
3. Surfaces of lighter-than-average color joined with exposed surfaces of darker-than-average color.
4. Adjacent surfaces which are noticeably dissimilar in grain, figure and natural character markings.

DELETE BELOW IF NOT APPLICABLE.

- C. Smooth edges of cutouts and, where located in countertops and similar exposures, seal edges on cutouts with a water-resistant coating.

DELETE BELOW IF NO PLASTIC LAMINATE CLAD CASEWORK.

2.3 PLASTIC LAMINATE CLAD CASEWORK

- A. Quality Standard: AWI Section 400 and its Division 400B "Laminate Clad Cabinets".

USUALLY SELECT CUSTOM FOR P.LAM. WORK.

- 1. Grade: Custom.
- 2. Grade: Premium.
- 3. AWI Type of Cabinet Construction: Provide cabinet construction of type indicated on drawings, or if not indicated, as follows:

SELECT ONE OF THE FOLLOWING.

- a. Type: Flush overlay (door and drawer faces partially cover body members with spaces sufficient for clearance only).
 - b. Type: Reveal overlay (door and drawer faces cover body members or face frames and create reveals).
 - c. Type: Exposed face frame (door and drawer faces set flush with face frame).
- B. Laminate Cladding: High pressure decorative laminate, with selections of colors, patterns, and finishes made by Architect from laminate manufacturer's full range of standard colors and finishes. Provide laminate cladding complying with the following requirements for type of surface and grade:
 - 1. Horizontal Surfaces Other Than Tops: GP-50 (0.050 inch nominal thickness).
 - 2. Vertical Surfaces: GP-28 (0.028 inch nominal thickness).
 - 3. Edges: GP-28 (0.028 inch nominal thickness).
 - 4. Semiexposed Surfaces: High Pressure Laminate, GP-28.

DELETE BELOW IF DESIRED - NOT REQUIRED BY AWI STANDARD.

- C. Provide dust panels of 1/4 inch tempered hardboard above compartments and drawers except where located directly under tops.

DELETE BELOW IF NO TRANSPARENT FINISHED PLYWOOD CASEWORK.

2.4 WOOD CASEWORK

- A. Quality Standard: Comply with AWI Section 400 and its Division 400A "Wood Cabinets".

SELECT ONE BELOW: CUSTOM PERMITS GRAIN ON DOORS AND DRAWERS TO RUN IN DIFFERENT DIRECTIONS - PREMIUM REQUIRES GRAIN TO RUN IN SAME DIRECTION.

- 1. Grade: Custom.
- 2. Grade: Premium.

- B. AWI Type of Cabinet Construction: Provide cabinet construction of type indicated on drawings, or if not indicated, as follows:

SELECT ONE OF THE FOLLOWING.

1. Type: Flush overlay (door and drawer faces partially cover body members with spaces sufficient for clearance only).
2. Type: Reveal overlay (door and drawer faces cover body members or face frames and create reveals).
3. Type: Exposed face frame (door and drawer faces set flush with face frame).

- C. Wood Species for Exposed Surfaces: Provide the following species and cut:

USUAL SELECTION IS RED OAK, PLAIN SLICED.

1. Red oak (quercus rubra), plain sliced.
2. Red oak (quercus rubra), rift sawn.
3. Red oak (quercus rubra), quarter sawn.

SELECT ONE OF THE FOLLOWING FOR PREMIUM CASEWORK - DELETE IF NO PREMIUM CASEWORK IS INCLUDED.

4. Grain Matching: Run and match grain vertically for drawer fronts, doors, and fixed panels.
5. Grain Matching: Run and match grain horizontally for drawer fronts, doors, and fixed panels.
6. Grain Matching: As indicated on drawings.

SELECT ONE OF THE FOLLOWING FOR PREMIUM CASEWORK - DELETE IF NO PREMIUM CASEWORK IS INCLUDED. NOTE THAT BOOK MATCH REQUIRES OPPOSING SIDES OF VENEER TO BE EXPOSED - POSSIBLY CREATING "BARBER POLE" EFFECT.

7. Matching of Veneer Leaves: Book match.
8. Matching of Veneer Leaves: Slip match.
9. Matching of Veneer Leaves: Random match.
10. Matching of Veneer Leaves: End match.

SELECT ONE OF THE FOLLOWING FOR PREMIUM CASEWORK - DELETE IF NO PREMIUM CASEWORK IS INCLUDED. CENTER MATCH CAN RESULT IN SIGNIFICANT COST INCREASE.

11. Veneer Matching within Panel Face: Running match.
12. Veneer Matching within Panel Face: Slip match.
13. Veneer Matching within Panel Face: Center match.

- D. Wood Species for Semiexposed Surfaces: Match species and cut indicated for exposed surfaces.

RETAIN BELOW IF DESIRED; NOT REQUIRED BY AWI STANDARD.

- E. Provide dust panels of 1/4 inch plywood or tempered hardboard above compartments and drawers except where located directly under tops.

DELETE BELOW IF NO LAMINATE CLAD COUNTERTOPS.

2.5 LAMINATE CLAD COUNTERTOPS

- A. Quality Standard: Comply with AWI Section 400 and its Division 400C.

1. AWI Grade: Premium.
- B. Tops, General: Plastic laminate clad with backing sheet on concealed or semi-concealed surfaces. Provide units with the following features:
1. Edge Treatment: Same laminate cladding as on horizontal surfaces.
- USUALLY SELECT ABOVE AND DELETE BELOW EDGE TREATMENT.*
2. Edges: Clear anodized aluminum angle fastened with countersunk aluminum screws.
 3. Back-Splash (Curb): Applied type, fabricated of materials matching top. Fabricate to dimensions shown, or if not shown, 4 inches high and 3/4-inch thick.
 4. Subtop: 45 pound-per-cu. ft. particle board, of thickness shown, or if not shown, 1-1/8-inch.
- C. Laminate Cladding for Horizontal Surface: High pressure decorative laminate, with colors, patterns, and finishes selections made by Architect from manufacturer's full range of standard colors and finishes.
1. Grade: GP-50 (0.050 inch nominal thickness).

DELETE BELOW IF NO CAST PLASTIC COUNTERTOPS.

2.6 CAST PLASTIC COUNTERTOPS

- A. Type of Top: Solid plastic top, trim and curb of dimensions and configuration shown on drawings, and as follows:
1. Composition: Cast acrylic plastic.
 2. Composition: Cast polyester-acrylic resin.
 3. Composition: Filled methyl methacrylate.
- EITHER SELECT ONE OF ABOVE AND DELETE BELOW, OR DELETE ALL ABOVE AND RETAIN BELOW FOR OPEN SPEC.*
4. Composition: Manufacturer's standard formulation of cast plastic materials.
- SELECT ONE OF THE FOLLOWING.*
5. Edge Treatment: Plain.
 6. Edge Treatment: Plain with drip groove on underside of overhang.
 7. Edge Treatment: As indicated on drawings.
- SELECT ONE OF THE FOLLOWING.*
8. Thickness: 1/4-inch.
 9. Thickness: 1/2-inch.
 10. Thickness: 3/4-inch.
 11. Color/Pattern: Solid White.
- EDIT ABOVE FOR SPECIFIC SELECTION OR DELETE ABOVE AND RETAIN BELOW.*
12. Color/Pattern: To be selected from manufacturer's standard range of solids and patterns.

13. Back-Splash (Curb): Applied type, fabricated of materials matching top. Fabricate to dimensions shown, or if not shown, 4 inches high and 3/4-inch thick.

B. Product: Subject to compliance with requirements, one of the following:

EITHER SELECT ONE OR RETAIN ALL FOR OPEN SPEC.

1. Fountainhead (cast acrylic); Nevamar Corp.
2. Gibraltar (cast polyester-acrylic resin); Wilson Art.
3. Corian (filled methyl methacrylate); E.I. DuPont de Nemours and Co.

DELETE BELOW IF NO PLASTIC LAMINATE SHELVING.

2.7 LAMINATE CLAD SHELVING

A. Quality Standard: Comply with AWI Section 400 and its Division 400B.

USUALLY SELECT CUSTOM GRADE BELOW.

1. Grade: Custom.
2. Grade: Premium.

B. Laminate Cladding: High pressure decorative laminate with colors, patterns, and finishes selections made by Architect from laminate manufacturer's full range of standard colors and finishes.

1. Horizontal Surfaces Other Than Tops: GP-50 (0.050 inch nominal thickness).
2. Edges: GP-50 (0.050 inch nominal thickness).

C. Shelving Material: Particle board as follows:

1. Thickness: As shown or, if not shown, 3/4 inch.
2. Width: As shown or, if not shown, 12 inches.

DELETE BELOW IF NO TRANSPARENT FINISHED PLYWOOD SHELVING.

2.8 WOOD SHELVING FOR TRANSPARENT FINISH

A. Quality Standard: Comply with AWI Section 400 and its Division 400A.

1. Grade: Custom.
2. Grade: Premium.

B. Wood Species: Provide plywood shelves with both faces veneered for use in exposed condition, of the following species and cut:

MODIFY TO SUIT PROJECT.

1. Red oak (quercus rubra).

C. Wood Species for Solid Hardwood Edges: Match species and cut indicated for exposed surfaces.

DELETE BELOW IF NO GLASS SHELVING.

2.9 GLASS SHELVING

- A. Glass for Shelving: Clear tempered float glass, ASTM C 1048 Condition A (uncoated surfaces), Type I (transparent glass, flat), Class I (clear), Quality q3 (glazing select), Kind FT (fully tempered).

SELECT ONE OF THE FOLLOWING: NOTE THAT NO STANDARD THICKNESS-STRENGTH RELATIONSHIP HAS BEEN DEVELOPED FOR GLASS SHELVES, AND THAT TEMPERED GLASS HAS BEEN KNOWN TO SPONTANEOUSLY SHATTER.

- 1. Thickness: 1/4 inch.
- 2. Thickness: 1/2 inch.

GRINDING BELOW PRODUCES GLASS WITH "FROSTED" EDGES. FLAME POLISHING PRODUCES CLEAR, BUT GREEN EDGES.

- 3. Grind edges smooth.
- 4. Flame-polish edges.

DELETE BELOW IF NO PLASTIC SHELVING.

2.10 ACRYLIC PLASTIC SHELVING

- A. Construct shelves of clear, cast methacrylic plastic to comply with ASTM D 702, and with special scratch and abrasion resistant (SAR) formulation.

DELETE BELOW IF NO SITE-BUILT DOOR FRAMES.

2.11 WOOD DOOR FRAMES

- A. Quality Standard: AWI Section 900 and its Division 900B "Interior Door Frames".
 - 1. Grade: Premium.
- B. Wood Species for Exposed Surfaces: Plain sawn with narrow heart and without character markings. Panel products are not permitted. Provide wood of the following species:

DELETE OR RETAIN BELOW TO SUIT PROJECT.

- 1. Transparent Finish: Red oak (quercus rubra).
- 2. Opaque Finish: Yellow poplar (liriodendron tulipifera), natural hard maple (acer saccharum), or yellow birch (betula alleghaniensis).

2.12 MISCELLANEOUS TRIM

- A. Quality Standard: Comply with AWI Section 700.

CUSTOM AND ECONOMY GRADES NOT AVAILABLE.

- 1. Grade: Premium.
- B. Lumber Species: Provide miscellaneous trim for use in exposed condition, of the following species:

DELETE OR RETAIN BELOW TO SUIT PROJECT.

- 1. Transparent Finish: Red oak (quercus rubra).

2. Opaque Finish: Yellow poplar (*liriodendron tulipifera*), natural hard maple (*acer saccharum*), or yellow birch (*betula alleghaniensis*).

2.13 ACCESSORIES

- A. Hardware Schedule: Refer to schedule at end of this section for hardware required for architectural woodwork.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Quality Standard: Install woodwork to comply with AWI Section 1700 for same grade specified in Part 2 of this Section for type of woodwork involved.
- B. Install woodwork plumb, level true and straight with no distortions. Shim as required using concealed shims. Install to a tolerance of 1/8 inch in 8 feet for plumb and level (including tops); and with no variations in flushness of adjoining surfaces.
- C. Scribe and cut woodwork to fit adjoining work, and refinish cut surfaces or repair damaged finish at cuts.
- D. Anchor woodwork as indicated. Secure with countersunk, concealed fasteners and blind nailing as required for a complete installation. Use fine finishing nails for exposed nailing, countersunk and filled flush with woodwork, and matching final finish where transparent finish is indicated.
- E. Cabinets: Install without distortion so that doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete the installation of hardware and accessory items as indicated.
- F. Tops: Anchor securely to base units and other supporting systems as indicated.
- G. Install work plumb, level, true and straight with no distortions. Scribe and cut work to fit adjoining work.
- H. Repair or replace damaged and defective woodwork as directed by Architect. Adjust joinery for uniform appearance. Clean woodwork.

3.2 CLEANING, ADJUSTING AND PROTECTION

- A. Clean and Prepare for Finishing: Comply with AWI Quality Standards, Section 1500, for preparations for finishing.
- B. Clean, lubricate and adjust hardware.
- C. Clean woodwork on exposed and semiexposed surfaces. Touch-up shop-applied finishes to restore damaged or soiled areas.

- D. Provide final protection and maintain conditions, in a manner acceptable to Fabricator and Installer, which ensures architectural woodwork being without damage or deterioration at time of Substantial Completion.

3.3 HARDWARE SCHEDULE

THE FOLLOWING ARE COMMON SELECTIONS, BUT NOT OFFICE STANDARDS. MODIFY TO SUIT PROJECT.

A. Cabinet Drawers

1. Drawer Slides: Accuride No. 3832 by length required to permit drawer to open to full extension; 1 pair per drawer; or equivalent products of Grant or Stanley.

SELECT ONE OF THE FOLLOWING PULLS OR MODIFY TO SUIT PROJECT.

2. Pulls: Stanley No. 4484 satin anodized aluminum with matching grommets, or equivalent products of EPCO.
3. Pulls: HEWI No. nylon plastic with fasteners concealed by escutcheon.
4. Pulls: Sugatsune America Lamp 2-61/64-inch solid brass oval profile pulls, as follows:
 - a. "Oval-80DCR" (dull chrome finish).
 - b. "Oval-80SMK" (smoke finish).
 - c. "Oval-80PB" (polished brass finish).

B. Cabinet Doors

1. Hinges: Blum "Clip" or "Modul" concealed, screw-attached, 110 deg opening, self-closing hinges, or equivalent products of Grass.
2. Pulls: Stanley No. 4484 satin anodized aluminum with matching grommets.
3. Pulls: HEWI No. nylon plastic with fasteners concealed by escutcheon.
4. Pulls: Sugatsune America Lamp 2-61/64-inch solid brass oval profile pulls, as follows:
 - a. "Oval-80DCR" (dull chrome finish).
 - b. "Oval-80SMK" (smoke finish).
 - c. "Oval-80PB" (polished brass finish).

C. Shelving in Casework

1. Support Standards: Knape-Vogt No. 255ZC recessed, slotted standards, or equivalent products of Stanley.
2. Support Clips: Knape-Vogt No. 256R rubber tipped clips, or equivalent products of Stanley.

D. Wall Mounted Shelving:

1. Support Standards: Knape-Vogt No. 85-185 double slotted standards, or equivalent products of Stanley.
2. Support Brackets: Knape-Vogt No. 185 support brackets, or equivalent products of Stanley.

E. Computer Cable Grommets:

NOTE THAT OTHER SIZES AND CHROME PLATED UNITS ARE ALSO AVAILABLE.

1. Black plastic units 2-1/2-inches in diameter complete with cover plates. Suggested source:
Baer Supply Company
Forest Edge Drive
Vernon Hills, Illinois
Phone: 1-800-289-2237

F. Sliding-Door Hardware for Wood Cabinet Doors:

1. EPCO No. 821 extruded aluminum bottom track, No. 752 nylon roller assembly, and No. 48A34 extruded aluminum top guide; or equivalent products of Stanley.

SPECIFICATION DIVISION 7

NUMBER SECTION DESCRIPTION

DIVISION 07 THERMAL AND MOISTURE PROTECTION

SECTION 071025 - UTILITY TUNNEL WATERPROOFING

END OF CONTENTS TABLE

DIVISION 07 THERMAL AND MOISTURE PROTECTION
SECTION 071025 - UTILITY TUNNEL WATERPROOFING

PART 1 - PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.

1.2 SUMMARY

- A. This Section includes the furnishing and installation of waterproofing over concrete utility tunnel structures and related areas.

1.3 REFERENCES

- A. Except as herein specified or as indicated on the Drawings, the work of this Section shall comply with the following:
1. ASTM Standard Specifications, Methods, Test Methods and Classifications.
 - a. C272 - Water Absorption of Core Materials for Structural Sandwich Construction.
 - b. C719 - Adhesion and Cohesion of Elastomeric Joint Sealants under Cyclic Movement (Hockman Cycle).
 - c. C794 - Adhesion-in-Peel of Elastomeric Joint Sealants.
 - d. C836 - Specification for High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course.
 - e. C898 - Guide for Use of High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane with Separate Wearing Course.
 - f. C920 - Elastomeric Joint Sealants.
 - g. C1193 - Guide for Use of Joint Sealants.
 - h. D412 - Test Methods for Rubber Properties in Tension.
 - i. D570 - Test Method for Water Absorption of Plastics.
 - j. D1621 - Compression Properties of Rigid Cellular Plastics.
 - k. D1970 - Self Adhered Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection and Waterproofing.
 - l. D4258 - Practice of Cleaning Concrete for Coatings.
 - m. D4259 - Practice for Abrading Concrete.
 - n. D4263 - Indicating Moisture in Concrete by the Plastic Sheet Method.
 - o. D5385 - Hydrostatic pressure Resistance of Waterproofing Membranes.
 - p. D5957 - Guide for Flood Testing Horizontal Waterproofing Installations.
 - q. D6135 - Application of Self-Adhering Modified Bituminous Waterproofing.

- r. E96 - Test Methods for Water Vapor Transmission of Materials.
- s. E154 - Methods of Testing Materials for Use as Vapor Barriers Under Concrete Slabs and as Ground Cover in Crawl Spaces.
- t. G21 - Recommended Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

1.4 SUBMITTALS

- A. Manufacturer's Literature: For waterproof membrane, vapor retardant and protection board to include:
 - 1. Technical data to demonstrate compliance with Specifications.
 - 2. Manufacturer's recommended installation procedures, including details and dimensions.
- B. Shop Drawings:
 - 1. Show locations and extent of waterproofing.
 - 2. Include details for substrate joints and cracks, sheet flashing, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

1.5 QUALITY ASSURANCE

- A. Fabrication and Installation Personnel Qualifications:
 - 1. Trained and experienced in the fabrication and installation of the materials and equipment.
 - 2. Knowledgeable of the design and the reviewed Shop Drawings.
 - 3. Authorized by Manufacturer to install Manufacturer's products.
- B. Manufacturer's Services: Provide Manufacturer's field service.
- C. Source Limitation: Obtain waterproofing materials through one source from a single Manufacturer.
- D. Submit warranty signed by Contractor, and officer of the applicator firm, and the materials Supplier, in which the signatories state and affirm:
 - 1. The work of this Section was completed in accordance with the requirements of the Contract Documents.
- E. Pre-Installation Conference:
 - 1. Conduct conference at Project Site to comply with requirements of Division 01.
 - 2. Review requirements for waterproofing, including surface preparations specified under other Sections.
 - 3. Review substrate condition and pre-treatment, minimum curing period, weather conditions, special details, sheet flashing, installation procedures, testing and inspection procedures, and protection and repair procedures.

1.6 DELIVERY, STORAGE AND HANDLING

- A. All materials shall be delivered in original, unbroken, brand marked containers or wrapping as applicable.

- B. Handle and store materials in accordance with Manufacturer's directions in a manner which will prevent deterioration or damage, contamination with foreign matter, and damage by weather or elements. Store rolls according to Manufacturer's written instructions. Protect stored material from direct sunlight.
- C. Reject damaged, deteriorated or contaminated material and immediately remove from the Site. Replace rejected materials with new materials at no addition cost to Owner.

1.7 WARRANTY

- A. Upon completion of this portion of the work, and as a condition of acceptance, deliver to Owner 2 copies of a warranty signed by Contractor, and officer of the applicator firm, and the materials Supplier, in which the signatories state and affirm:
 - 1. The work of this Section was completed in accordance with the requirements of the Contract Documents.
 - 2. Should water penetrate through the work of this Section within 5 years following date of Substantial Completion of the Work, and promptly upon receipt of notice from Owner to that effect, the materials Supplier will provide such additional waterproofing and protection board materials as are required, and Contractor and applicator will provide such equipment, labor, and other materials as are required, to properly repair the area through which water penetrated.
 - 3. Should the water penetration be due to faulty original workmanship or materials of this Section, the equipment, labor, and materials will be provided at no additional cost to Owner.
 - 4. Should the water penetration not be due to faulty original workmanship or materials of this Section, the equipment, labor, and materials provided under this Article will be paid for promptly by Owner at the current rates of Contractor, applicator, and materials Supplier.

PART 2 - PART 2 - PRODUCTS

2.1 SELF ADHERED SHEET WATERPROOFING

- A. Membrane shall be one of the following products or approved equivalent:
 - 1. Bituthene by W.R. Grace and Company
 - 2. Mel-Rol by W.R. Meadows, Inc.
 - 3. CCW-701 by Carlisle Coatings and Waterproofing Div.
 - 4. Duramem 700 SM by Pecora Corporation
- B. Membrane:
 - 1. 60-mil thick, self-adhering sheet consisting of 56 mils of rubberized laminated to 4-mil thick polyethylene film release liner on adhesive side.
 - 2. Physical Properties:
 - a. Tensile Strength: 250 psi minimum in accordance with ASTM D412, Die C, modified.

- b. Elongation: 300% minimum in accordance with ASTM D412, Die C, modified.
- c. Flexibility: Pass at minus 20 deg F in accordance with ASTM D1970.
- d. Crack Cycling: Unaffected after 100 cycles of 1/8-inch movement as tested by ASTM C836.
- e. Puncture Resistance: 40 lbf minimum in accordance with ASTM E154.
- f. Hydrostatic Head Resistance: 150 feet minimum in accordance with ASTM D5385.
- g. Water Absorption: 0.15% weight gain maximum after 48-hr immersion at 70 deg F in accordance with ASTM D570.
- h. Vapor Permeance: 0.05 perms in accordance with ASTM E96, Water Method.

C. Auxiliary Materials:

- 1. Primer: Liquid primer recommended for substrate by sheet waterproofing Manufacturer.
- 2. Surface Conditioner: Liquid waterborne conditioner recommended for substrate by sheet waterproofing Manufacturer.
- 3. Concealed Strip Flashing: Self adhering, rubberized asphalt composite sheet of same material and thickness as waterproofing membrane.
- 4. Substrate Patching Membrane: Low viscosity, 2-component, asphalt modified coating.
- 5. Mastic, Adhesives, and Tape: Manufacturer's standard products compatible with membrane used.
- 6. Metal Termination Bars: Galvanized steel or aluminum bars 1-inch wide by 1/8-inch thick pre-drilled at 9-inch centers.
- 7. Protection Course: Fan-folded, with a core of extruded polystyrene board insulation sandwiched between 2 sheets of plastic film, Manufacturer's standard nominal thickness, with compressive strength of 15 psi in accordance with ASTM D1621 and maximum water absorption by volume of 0.4% in accordance with ASTM C272.

PART 3 - PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with installer present, for compliance with requirements and other conditions affecting performance:
 - 1. Verify that concrete has cured and aged minimum of 7 days.
 - 2. Verify that substrate is visibly dry and free of moisture: Test for capillary moisture by plastic sheet method according to ASTM D4263.
- B. Environmental Limitations:
 - 1. Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing Manufacturer.
 - 2. Do not apply waterproofing in snow, rain, fog, or mist.

- C. Maintain adequate ventilation during preparation and application of waterproofing materials.

3.2 PREPARATION

- A. Substrate Preparation:
 - 1. Clean and prepare substrate according to Manufacturer's written instructions:
 - 2. Provide clean, dust-free, and dry substrate for waterproofing application.
- B. Protection:
 - 1. Mask off adjoining surfaces not receiving waterproofing to prevent spillage or overspray affecting other construction.
 - 2. Close off drains and other wall and floor penetrations to prevent spillage and migration of waterproofing fluids.
- C. Cleaning:
 - 1. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
 - 2. Abrasive blast clean concrete surfaces uniformly to expose top surface of fine aggregate according to ASTM D4259 with a self-contained, recirculating, blast-cleaning apparatus.
 - 3. Remove material to provide a sound surface free of laitance, glaze, efflorescence, curing compounds, concrete hardeners, or form-release agents.
 - 4. Remove remaining loose material and clean surfaces according to ASTM D4258.
- D. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.
- E. Joints and Cracks:
 - 1. Prepare, fill, prime, and treat joints and cracks in substrate.
 - 2. Remove dust and dirt from joints and cracks according to ASTM D4258.
 - 3. Install sheet strips and center over non-moving joints and cracks exceeding 1/16-inch in width.
 - 4. Bridge and cover expansion joints and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips:
 - a. Invert and loosely lay first sheet strip over center of joint.
 - b. Firmly adhere second sheet strip to first and overlap to substrate.
- F. Corners:
 - 1. Prepare, prime, and treat inside and outside corners according to ASTM D6135.
 - 2. Install membrane strips centered over vertical inside corners.
 - 3. Install 3/4-inch fillets of liquid membrane on horizontal inside corners and as follows:
 - a. At footing-to-wall intersections, extend liquid membrane each direction from corner or install membrane strip centered over corner.

- b. At plaza deck-to-wall intersections, extend liquid membrane or sheet strips onto deck waterproofing and to finished height of sheet flashing.
- G. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing, and at drains and protrusions according to ASTM D6135.

3.3 INSTALLATION OF SELF ADHERED SHEET WATERPROOFING

- A. Install self-adhered sheets according to Manufacturer's written instructions and recommendations in ASTM D6135.
- B. Primers:
 - 1. Apply primer to walls or deck at required rate and allow to dry.
 - 2. Limit priming to areas that will be covered by sheet waterproofing insame day.
 - 3. Re-prime areas exposed for more than 24 hours.
- C. Membrane Application:
 - 1. Apply and firmly adhere sheets over area to receive waterproofing from low point up to high point to ensure that side laps shed water.
 - 2. Accurately align sheets and maintain uniform 2-1/2-inch minimum lap widths and end laps.
 - 3. Overlap and seal seams and stagger end laps to ensure watertight installation.
 - 4. Apply continuous sheets over sheet strips bridging substrate cracks and construction joints.
 - 5. Seal exposed edges of sheets with mastic or sealant at terminations not concealed by metal counter-flashing or ending in reglets.
 - 6. If waterproofing ties into other waterproofing, install sheets and auxiliary materials so that systems are fully watertight.
- D. Repairs:
 - 1. Repair tears, voids, and lapped seams in waterproofing not complying with these Specifications.
 - 2. Slit and flatten fishmouths and blisters, and cover with patches extending 6 inches beyond repaired areas in all directions.
 - 3. Correct deficiencies in or remove waterproofing that does not meet requirements, repair substrates, reapply waterproofing, and repair sheet flashing.
- E. Install protection course with butted joints over waterproofing before starting subsequent operations.

3.4 FIELD QUALITY CONTROL

- A. Do not place backfill or concrete until Engineer has inspected finished waterproofing.

3.5 PROTECTING AND CLEANING

- A. Cure waterproofing according to Manufacturer's written recommendations, taking care to prevent contamination and damage during application stages and curing.
- B. Do not permit foot or vehicular traffic on unprotected waterproofing.
- C. Protect waterproofing from damage and wear during remainder of construction.
- D. Protection of Insulation:
 - 1. Protect installed board insulation from damage due to ultraviolet light, harmful weather exposure, physical abuse, and other causes.
 - 2. Provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction after installation.
- E. Prior to acceptance of the work of this Section, thoroughly clean all related areas.

NUMBER SECTION DESCRIPTION

DIVISION 08 OPENINGS

SECTION 081113 - HOLLOW METAL DOORS AND FRAMES

END OF CONTENTS TABLE

DIVISION 08 OPENINGS

SECTION 081113 - HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of steel doors and frames is indicated on drawings and in schedules.
 - B. Types of hollow metal work includes:
 - 1. Steel doors.
 - 2. Steel door frames.
 - 3. Steel window frames.
- USUALLY OMIT BELOW AND INCLUDE LOUVERS IN THIS SECTION, OR
ELIMINATE IF NONE.*
- C. Work of Other Sections: Door louvers provided under Division 08 Section "Louvers and Vents".

1.2 SUBMITTALS

- A. Product Data: Mfr's standard details and specifications for steel doors and door and window frames.
- B. Shop Drawings: Indicate application of products to project.

1.3 QUALITY ASSURANCE

- A. Standards: Comply with Steel Door Institute (SDI) "Recommended Specifications for Standard Steel Doors and Frames" for materials quality, metal gages, and construction details for Grades and Models indicated in Part 2 of this Section.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide products of one of the following:
 - 1. Ceco Door; ASSA ABLOY.
 - 2. Curries Company; ASSA ABLOY.
 - 3. Pioneer Builders Products Corporation
 - 4. Republic Builders Products
 - 5. Steelcraft; an Allegion brand.

2.2 STEEL DOORS AND FRAMES

- A. Materials: Steel doors and frames; hot-rolled, pickled and oiled per ASTM A 569 and A 568; cold-rolled per ASTM A 366 and A 568.

*DELETE BELOW IF NO EXTERIOR DOORS/FRAMES OR INTERIOR FRAMES
REQUIRING CORROSION PROTECTION*

1. Steel for exterior doors and frames, including their anchors, and interior doors and frames indicated as galvanized: ASTM A653/A653M, commercial quality, G90 coating designation.
- B. Steel Doors, General: Provide doors complying with material and construction requirements of ANSI/SDI-100 for the indicated Grades and Models:

GENERALLY SELECT GRADE BELOW - NOTE THAT GRADE I CAN BE SUBSTITUTED FOR CHEAPNESS, OR TEMPORARY OR VERY LIGHT-DUTY USE.

1. Grade II, heavy-duty (Level B); 1-3/4-inch thick; min. 18 gage face sheets.

INCLUDE BELOW ONLY FOR VERY HEAVY-DUTY USE.

2. Grade III, Extra Heavy-duty (Level A); 1-3/4-inch thick; min. 16 gage face sheets.

USUALLY SELECT MODEL BELOW

3. Model 3, Seamless - Hollow Steel Construction; or Model 4, Seamless - Composite Construction as standard with door manufacturer or to comply with other specified requirements of this Section.

CONSIDER MODEL BELOW FOR RAPID-DELIVERY, OR CHEAPER DOOR

4. Model 1, Full Flush - Hollow Steel Construction, except vertical edge seams shall be of mechanical interlock type.

INCLUDE BELOW FOR EXTERIOR DOORS

5. Provide steel doors located in exterior walls (exposed to weather) with thermally insulating core.

- C. Steel Frames, General: Provide frames complying with material and construction requirements of ANSI/SDI-111A, and as follows:

1. Metal Thickness: Min. 16 gage.

USUALLY SELECT ABOVE AND DELETE BELOW. SDI RECOMMENDS 18 GAGE ONLY FOR USE WITH GRADE I DOORS.

2. Metal Thickness: Min. 18 gage.
3. Type: Welded (masonry walls and partitions).

DELETE EITHER ABOVE OR BELOW, OR RETAIN BOTH TO SUIT PROJECT

4. Type: Drywall Slip-On (drywall walls and partitions).

DELETE BELOW IF NO FIRE-RATED ASSEMBLIES

- D. Fire-rated Assemblies: Provide units that are labeled and listed for rating indicated, by Underwriters' Laboratories or Warnock-Hersey.

- E. Anchors and Accessories: Manufacturer's standard units. Use galvanized items for units built into exterior walls, complying with ASTM A 153.

2.3 FABRICATION

- A. Fabricate units to be rigid, neat in appearance, and free from defects, warp or buckle. Weld exposed joints continuously, grind, dress, and make smooth, flush and invisible.

THE FOLLOWING IS A MICHIGAN BARRIER FREE CODE REQUIREMENT (REF. 4.13.14).

- B. Cut-Outs: Regardless of cut-out locations shown on Drawings, provide flush panel at the bottom 10 inches of each door, in compliance with State of Michigan barrier-free requirements.
- C. Prepare steel doors and frames to receive mortised and concealed finish hardware, including cutouts, reinforcing, drilling and tapping, complying with ANSI A 115 "Specifications for Door and Frame Preparation for Hardware".
1. Prepare frames to receive 3 silencers on strike jambs of single-swing frames and on heads of double-swing frames.
 2. Provide 26-gage steel mortar boxes, welded to frame, at back of hardware cutouts where installed in concrete, masonry or plaster openings.
- D. Locate finish hardware per DHI "Recommended Locations for Builder's Hardware".
- E. Shop paint exposed surfaces of doors and frame units, including galvanized surfaces, using mfr's standard baked-on rust inhibitive primer.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Placing Frames: Comply with provisions of SDI 105, unless otherwise indicated. Set frames, with spreaders, accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is completed, remove temporary braces and spreaders, leaving surfaces smooth and undamaged.

1. Except for frames located in existing concrete, masonry, or gypsum board assembly construction, place frames before constructing enclosing walls and ceilings.

DELETE BELOW IF NO NEW MASONRY CONSTRUCTION.

2. In masonry construction, install at least 3 wall anchors per jamb adjacent to hinge location on hinge jamb and at corresponding heights on strike jamb. Acceptable anchors include masonry wire anchors and masonry T-shaped anchors.

DELETE BELOW IF NO EXISTING MASONRY CONSTRUCTION.

3. At existing concrete or masonry construction, install at least 3 completed opening anchors per jamb adjacent to hinge location on hinge jamb and at corresponding heights on strike jamb. Set frames and secure to adjacent construction with bolts and masonry anchorage devices.

DELETE BELOW IF NO NEW STEEL STUD/GYPSUM BOARD PARTITIONS.

4. In steel-stud partitions, install at least 3 wall anchors per jamb at hinge and strike levels; attach wall anchors to studs with screws.

DELETE BELOW IF NO EXISTING STEEL STUD/GYPSUM BOARD PARTITIONS.

5. In in-place gypsum board partitions, install knock-down, slip-on, drywall frames.

DELETE BELOW IF NO FIRE-RATED FRAMES.

6. Install fire-rated frames according to NFPA 80.

- B. Door Installation: Fit hollow-metal doors accurately in frames, within clearances specified in ANSI/SDI 100.

1. Fitting Clearances for Non-Rated Doors: Provide 1/8-inch at jambs and heads; 1/16-inch per leaf at meeting stiles for pairs of doors; and 1/2-inch from bottom of door to top of decorative floor finish or covering. Where threshold is shown or scheduled, provide 1/8-inch clearance from bottom of door to top of threshold.

DELETE BELOW IF NOT APPLICABLE.

2. Fire-Rated Doors: Smoke and draft control door assemblies must be tested in accordance with UL 1784. Provide fitting clearances as required to meet the testing requirements of UL 1784 without the use of applied gasketing. Installation and clearances shall be in accordance with NFPA 80.
3. Smoke-Control Doors: Comply with NFPA 105.

3.2 ADJUSTING AND CLEANING

- A. Prime Coat Touchup: Immediately after erection, sand smooth any rusted or damaged areas of prime coat and apply touchup of compatible air-drying primer.
- B. Protection Removal: Immediately before final inspection, remove protective wrappings from doors and frames.

NUMBER SECTION DESCRIPTION

DIVISION 08 OPENINGS

SECTION 081416 - FLUSH WOOD DOORS

END OF CONTENTS TABLE

DIVISION 08 OPENINGS
SECTION 081416 - FLUSH WOOD DOORS

PART 1 - GENERAL

SEPTEMBER, 2005 - EXTENSIVE REVISIONS TO UPDATE QUALITY STANDARDS AND MANUFACTURERS, REALIGN STANDARDS FOR DOOR VENEERS, AND MODIFY INFORMATION ABOUT CORE CONSTRUCTION.

1.1 SUMMARY

- A. Work of this Section includes new solid core wood flush doors.

DELETE BELOW IF FACTORY FINISH IS DESIRED - FACTORY FINISH REQUIRES PRE-FIT DOORS.

- B. Work of Other Sections:

1. Hollow metal door frames are provided under Division 08 Section "Hollow Metal Doors and Frames."
2. Door hardware is provided under Section Division 08 Section "Door Hardware".

OMIT BELOW IF NO OTHER GLAZING IS INCLUDED IN PROJECT. IF ONLY INTERIOR GLAZING IS INCLUDED, CHANGE SECTION 088000 "GLAZING" AND SECTION 088010 "GLAZING (INTERIOR APPLICATIONS)."

3. Glass view panels in doors provided under Division 08 Section "Glazing".
4. Field finishing of wood doors is included in Division 09 Section "Painting".

USUALLY OMIT BELOW AND INCLUDE LOUVERS IN THIS SECTION, OR ELIMINATE IF NONE.

5. Door louvers provided under Division 08 "Louvers and Vents".

1.2 QUALITY ASSURANCE

- A. Woodworking Standards: In addition to requirements specified, comply with the latest edition of AWI "Architectural Woodwork Quality Standards Illustrated".

RETAIN PARAGRAPH BELOW IF FIRE-RATED DOORS ARE REQUIRED.

- B. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252.
- C. Manufacturer: Obtain doors from a single manufacturer to ensure uniformity in quality of appearance and construction, unless otherwise indicated.

1.3 SUBMITTALS

- A. Product Data: Mfr's literature indicating compliance with requirements and installation instructions.

- B. Shop Drawings: Provide schedules and drawings indicating location, size, fire ratings, face materials, core construction, finishes, and elevations for each door required.

DELETE BELOW IF NO GLASS LITES OR OTHER CUTOUTS IN WOOD DOORS.

- 1. Coordination Drawings: Provide coordination drawings for each wood door. Indicate size and location of mortises and cut-outs, including those required for door hardware preparation, glass lites, louvers, and similar openings. Indicate any conditions that would violate manufacturer's special product warranty.
- C. Provide AWI Quality Certification Labels or an AWI letter of licensing for Project indicating that doors comply with requirements of grades specified.
- D. Samples for Verification: Factory finishes applied to actual door materials, approximately 8 by 10 inches, for each material and finish. For each wood species and transparent finish, provide set of 3 samples sharing typical range of color and grain to be expected in the finished work.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Protect wood doors during transit, storage, and handling to prevent damage, soiling and deterioration. Comply with requirements of referenced ANSI standard, as well as with manufacturer's instructions.

1.5 PROJECT CONDITIONS

- A. Environmental limitations: Do not deliver or install doors until conditions for temperature and relative humidity have been stabilized and will be maintained in storage and installation areas during the remainder of the construction period to comply with requirements of the referenced quality standard.

1.6 SPECIAL PRODUCT WARRANTY

- A. Provide the following special product warranty:
 - 1. On door mfr's standard form, signed by mfr, Installer and Contractor, agreeing to repair or replace defective doors as defined by referenced standards.
 - 2. Warranty shall be in effect during life of installation.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:
 - Algoma Hardwoods Inc.
 - Eggers Industries, Architectural Products Div.
 - Haley Brothers, Inc.
 - Ipik Door Co.

Marshfield Door Systems Inc.
Mohawk Flush Doors Inc.
Oshkosh Architectural Door Co.
VT Industries, Inc.
Custom millwork firm complying with indicated requirements.

2.2 WOOD DOORS, GENERAL

BELOW FOR DOORS WITH TRANSPARENT FINISH. INCLUDE "B" BELOW FOR DOORS WITH PAINT GRADE FACES.

A. Provide solid core interior flush doors for transparent finish and as follows:

1. Construction: AWI Custom, unless noted otherwise.
2. Exposed Surfaces: Same veneer on both faces of each door, and as follows:

SELECTIONS BELOW REPRESENT COMMONLY AVAILABLE VENEERS WITH A REASONABLE BALANCE BETWEEN APPEARANCE AND COST. SELECT ONE OR MORE PARAGRAPHS BELOW OR MODIFY SPECIES FOR A DIFFERENT APPEARANCE, BUT BE AWARE THAT UPGRADES MAY SIGNIFICANTLY ADD TO COST. BALANCED IN LIEU OF RUNNING MATCH CAUSES SUBSTANTIAL UPCHARGE DUE TO WASTE; AND RIFT OR QUARTER SAWN IN LIEU OF PLAIN SLICED OR ROTARY CUT MAY RESULT A SIGNIFICANT UPCHARGE.

- a. Faces: Plain sliced Red Oak veneer, A Grade; running; book or slip matched.
- b. Faces: Plain sliced White Maple, A Grade; running; book or slip matched.
- c. Faces: Plain sliced Walnut, A Grade; running; book or slip matched.
- d. Faces: Rotary cut White Birch (all sapwood); running; book or slip matched).

SELECT ONE OF THE FOLLOWING EDGE TYPES.

- e. Edges: Manufacturer's standard hardwood.
- f. Edges: Hardwood species matching faces.

SELECT APPROPRIATE CORE CONSTRUCTION TYPES FROM LIST BELOW. NOTE SPECIAL DOOR FOR LARGE CUT-OUTS LISTED BELOW.

3. Core Construction: Provide doors fabricated with core construction types as follows:

SELECT BELOW FOR MOST PROJECTS FOR SMOOTHER FACES, STANDARD MATCHING HARDWOOD EDGES, FINER EDGE DETAIL (2-PLY SKIN VS 3-PLY SKIN), AND BONDED CORE.

- a. Core Construction: PC-5 (Particleboard core, 5 ply); ANSI A208.1, Grade 1-LD-2.

DELETE ABOVE AND SELECT BELOW IF ECONOMY IS OF PARAMOUNT IMPORTANCE FOR PROJECT. PC-7 IS CONSIDERED TO BE LOWER QUALITY CONSTRUCTION.

- b. Core Construction: PC-5 or -7 (Particleboard core, 5-ply or 7-ply, at Contractor's option); ANSI A208.1, Grade 1-LD-2.

- c. Provide doors with structural-composite-lumber cores instead of particleboard cores for doors indicated to receive exit devices.

FOR DOORS WITH LARGE GLASS LITES SELECT CORE BELOW AND VERIFY AVAILABILITY WITH MANUFACTURERS. MOST PARTICLEBOARD CORE DOORS HAVE LIMITED GLASS SIZES AS A REQUIREMENT TO MAINTAIN WARRANTY.

- d. Core Construction: SCL-5 with special warranty for full glass application (Structural Composite Lumber, 5-ply).

BELOW FOR HOSPITAL PROJECTS ONLY.

- e. Core Construction: SCL-5 or -7 (Structural Composite Lumber, 5 or 7 ply).

DELETE BELOW IF NO WOOD FIRE DOORS.

- f. Fire Door Core Construction: Noncombustible mineral product complying with requirements of referenced quality standard and testing and inspecting agency for fire-protection rating indicated.
 - 1) Blocking: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated as needed to eliminate through-bolting hardware.
 - 2) Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.

DELETE ANY PARAGRAPHS BELOW WHICH DO NOT APPLY.

- 3) Fire Core Construction: FD 1-1/2 (90 min. fire door).
- 4) Fire Core Construction: FD 3/4 (45 min. fire door).
- 5) Fire Core Construction: FD 1/3 (20 min. fire door).

INCLUDE BELOW FOR PAINT-GRADE DOORS.

- B. Provide solid core interior flush doors for painted finish and as follows:

- 1. AWI Grade: Paint.
- 2. Exposed Surfaces: Medium Density Overlay.
- 3. Core Construction: PC-5 or -7 (Particleboard core, 5 or 7-ply).

DELETE BELOW IF NO FIRE-RATED PAINT-GRADE DOORS.

- 4. Fire Door Core Construction: Noncombustible mineral product complying with requirements of referenced quality standard and testing and inspecting agency for fire-protection rating indicated.
 - a. Blocking: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated as need to eliminate through-bolting hardware.

- b. Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.

DELETE ANY PARAGRAPHS BELOW WHICH DO NOT APPLY.

- 1) Fire Core Construction: FD 1-1/2 (90 min. fire door).
- 2) Fire Core Construction: FD 3/4 (45 min. fire door).
- 3) Fire Core Construction: FD 1/3 (20 min. fire door).

2.3 LOUVERS AND LIGHT FRAMES

DELETE THE FOLLOWING IF NO LOUVERS OR LIGHT FRAMES ARE REQUIRED. RETAIN APPLICABLE TYPES. COORDINATE DRAWINGS IF MORE THAN ONE TYPE IS REQUIRED.

- A. Wood Louvers: Door manufacturer's standard solid wood louvers, species and finish to match door veneer, unless otherwise indicated, and of size indicated.
- B. Metal Louvers: Size, type, and profile shown and fabricated from the following:

SELECT APPLICABLE MATERIAL. DELETE OTHERS.

- 1. Galvanized Steel: 0.0396 inch (1.0 mm) thick; hot dip, zinc coated, and factory primed for paint finish.
- 2. Natural Aluminum: Extruded aluminum with natural-anodized finish complying with AA-M12C22A31, Class II.
- 3. Color-Anodized Aluminum: Extruded aluminum with AA-M12C22A32/34, Class II finish.
 - a. Color: Standard aluminum industry color(s) as indicated.

RETAIN APPLICABLE COLOR SELECTION ABOVE OR BELOW, OR DELETE BOTH AND INSERT SELECTED FINISH.

- b. Color: Match Architect's sample.

INSERT REQUIREMENTS FOR OTHER KINDS OF LOUVERS, GRILLES, AND VENTS AS REQUIRED.

- C. Metal Frames for Light Openings in Fire-Rated Doors: Manufacturer's standard frame formed of 0.0478-inch- (1.2-mm-) thick cold-rolled steel sheet, factory primed for paint finish, and approved for use in doors of fire-protection rating indicated.

DELETE ABOVE OR BELOW OR BOTH IF NO LIGHT OPENINGS. IF FRAMES FOR NON-FIRE-RATED DOORS ARE REQUIRED, INSERT REQUIREMENTS. OTHER TYPES OF FRAMES ARE AVAILABLE FROM SOME MFRS. SEE EVALUATIONS.

- D. Wood-Veneered Beads for Light Openings in Fire-Rated Doors: Manufacturer's standard wood-veneered non-combustible beads matching veneer species of door faces and approved for use in doors of fire-protection rating indicated.

2.4 FABRICATION

A. Fabricate flush wood doors in sizes indicated. Produce doors complying with following requirements:

1. Produce doors for job-site fitting, except as otherwise required for fire-rating labeling.

RETAIN BELOW FOR PREFINISHED DOORS AND FIRE-RATED DOORS. FOR NON-RATED NON-PREFINISHED DOORS, FACTORY FITTING IS OPTIONAL.

IF BOTH JOB-SITE FITTED AND FACTORY-PREFIT AND PREMACHINED DOORS ARE INCLUDED, BE SURE TO SPECIFY TYPE FOR EACH DOOR IN THE DOOR SCHEDULE.

2. Factory-prefit and premachine fire-rated doors and other doors as indicated to fit frame opening sizes indicated.
 - a. Comply with requirements in NFPA 80 for fire-rated doors. Smoke and draft control door assemblies must be tested in accordance with UL 1784. Provide fitting clearances as required to meet the testing requirements of UL 1784 without the use of applied gasketing.

COORDINATE SIZES OF LIGHT OPENINGS WITH REQUIREMENTS OF MANUFACTURERS' WARRANTY. USE SCL CORE FOR OPENINGS EXCEEDING THE FOLLOWING:

DOOR LITE IS LESS THAN 42-INCHES ABOVE FLOOR AND DOOR STILE IS LESS THAN 10-INCHES WIDE.

CUT-OUT IS MORE THAN 40 PERCENT OF THE DOOR SURFACE AREA.

ANY CUT-OUT IS MORE THAN 54-INCHES IN LENGTH.

3. Openings: Cut and trim openings through doors in factory to comply with applicable requirements of referenced standards for kinds of doors required. Trim light openings with hardwood moldings of species matching door veneer and mfr's standard profile, except where metal trim is required for indicated fire rating.

FOR FIRE-RATED DOORS, ALWAYS RETAIN PARAGRAPH BELOW. FOR NON-RATED DOORS, FACTORY GLAZING IS RECOMMENDED.

- a. Factory install glazing.

THE FOLLOWING IS A MICHIGAN BARRIER FREE CODE REQUIREMENT.

- b. Regardless of cut-out locations shown on Drawings, provide flush panel at the bottom 10 inches of each door, in compliance with State of Michigan barrier-free design requirements.

RETAIN THIS ARTICLE IF FACTORY-FINISHING IS NOT REQUIRED FOR OPAQUE DOORS. FACTORY FITTING IS RECOMMENDED TO MINIMIZE DAMAGE TO SHOP-PRIMED DOORS.

2.5 SHOP PRIMING

- A. Doors for Opaque Finish: Shop prime doors with one coat of wood primer specified in Division 09 Section "Painting". Seal all four edges, edges of cutouts, and mortises with primer.

DELETE ARTICLE BELOW IF FACTORY FINISHING IS NOT REQUIRED. FACTORY PRE-FINISH CAN RESULT IN SUPERIOR QUALITY AND COVERAGE.

2.6 FACTORY FINISHING

- A. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.

- 1. Finish faces, all four edges, edges of cutouts and mortises. Stains and fillers may be omitted on bottom edges, edges of cutouts and mortises.

- B. Finish wood doors at factory.

BELOW IS FOR TRANSPARENT FINISH. OPAQUE FINISH ALSO AVAILABLE - SEE AIA MASTERSPEC.

- C. Transparent Finish: Comply with requirements indicated for grade, finish system, staining effect, and sheen.

- 1. Grade: Custom.
- 2. Finish: AWI System TR-6 catalyzed polyurethane.

SELECT 1 REQUIREMENT FROM 2 BELOW.

- 3. Staining: None required.
- 4. Staining: Match approved sample for color.

SELECT 1 REQUIREMENT FROM 2 BELOW. USUALLY RETAIN FILLED FINISH.

- 5. Effect: Open-grain finish.
- 6. Effect: Filled finish.

SELECT 1 REQUIREMENT FROM 2 BELOW.

- 7. Sheen: Satin.
- 8. Sheen: Semigloss.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine doors and installed door frames before hanging doors.
 - 1. Verify that frames comply with indicated requirements for type, size, location and swing characteristics and have been installed with level heads and plumb jambs.
 - 2. Reject doors with defects.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Hardware: For installation, see Division 08 Section "Door Hardware."
- B. Install wood doors to comply with manufacturer's instructions, referenced AWI standard, and as indicated.
 - 1. Install doors after installation of carpeting or other flooring materials.
 - 2. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.

INCLUDE THE FOLLOWING FOR MOST PROJECTS.

- C. Job-Fit Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer. Machine doors for hardware. Seal cut surfaces after fitting and machining.

RETAIN BELOW IF NON-FIRE-RATED DOORS ARE INCLUDED IN PROJECT.

- 1. Fitting Clearances for Non-Rated Doors: Provide 1/8-inch maximum at jambs, heads and at meeting stiles for pairs of doors; 1/2-inch maximum from bottom of door to top of decorative floor finish or covering; and 3/4-inch maximum from top of non-combustible floor unless otherwise indicated. Where threshold is shown or scheduled, provide 3/8-inch clearance from bottom of door to top of threshold.
- 2. Bevel non fire-rated doors 1/8 inch in 2 inches at lock and hinge edges.
- 3. Fitting Clearances for Fire-Rated Doors: Smoke and draft control door assemblies must be tested in accordance with UL 1784. Provide fitting clearances as required to meet the testing requirements of UL 1784 without the use of applied gasketing. Installation and clearances shall be in accordance with NFPA 80.

USUALLY DELETE BELOW - RETAIN IF DOORSE VERY RARE FOR UNIVERSITY WORK.

- D. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
- E. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING AND PROTECTION

- A. Operation: Rehang or replace doors which do not swing or operate freely.
- B. Protect doors as recommended by door manufacturer to ensure that wood doors will be without damage or deterioration at time of Substantial Completion.

NUMBER SECTION DESCRIPTION

DIVISION 08 OPENINGS

SECTION 083113 - ACCESS DOORS AND FRAMES

END OF CONTENTS TABLE

DIVISION 08 OPENINGS

SECTION 083113 - ACCESS DOORS AND FRAMES

THIS SECTION DOES NOT INCLUDE ALL AVAILABLE PRODUCTS. FIRE-RATED AND NON FIRE-RATED CEILING PANELS ARE AVAILABLE, AS WELL AS A WIDE VARIETY OF PANELS FOR SPECIAL APPLICATIONS. REFER TO MANUFACTURER'S CATALOGS FOR FULL PRODUCT LINES.

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of access doors is indicated on drawings.
- B. Type of access doors include:
 - 1. Standard metal units (for masonry and drywall walls).
 - 2. Flush metal units (for drywall walls).
 - 3. Fire-rated metal units (for masonry and drywall walls).

1.2 SUBMITTALS

- A. Product Literature: Provide manufacturer's product literature indicating compliance with requirements.
- B. Shop Drawings: Indicate application of access doors to project, including door sizes and locations, and details of construction and installation not otherwise included in product literature.

INCLUDE BELOW IF FIRE-RATED UNITS ARE SPECIFIED.

1.3 QUALITY ASSURANCE

- A. Fire-Resistance Ratings: Provide each fire rated access door assembly with panel, door, frame, hinge and latch from manufacturer listed in Underwriter's Laboratories Inc's, "Building Materials Directory" for rating shown.
 - 1. Provide UL label on each fire rated access door.

PART 2 - PRODUCTS

2.1 METAL ACCESS DOORS

UNIT BELOW SUITABLE FOR INSTALLATIONS IN MASONRY OR DRYWALL WALLS.

- A. Standard Metal Access Door: Provide standard units for mounting in masonry or drywall with integral one-piece frame, and as follows:

SELECT STEEL OR STAINLESS STEEL BELOW.

- 1. Door: Minimum 16 gage steel.
- 2. Door: Minimum 16 gage stainless steel.

SELECT FRAME MATERIAL.

3. Frame: Minimum 16 gage steel.
4. Frame: Minimum 16 gage stainless steel.

MODIFY DIMENSIONS BELOW TO SUIT PROJECT - REFER TO CATALOG.

5. Door Size: 24-inches wide by 24-inches high.
6. Hinges: Concealed spring type, removable from chase side only.

INCLUDE APPLICABLE TYPE BELOW.

7. Lock: Screwdriver operated steel cam type.
8. Lock: Phillips head screwdriver operated steel cam type.
9. Lock: Allen wrench operated steel cam type.
10. Lock: Key operated cam type with removable cylinder core.

SELECT APPLICABLE TYPE BELOW.

11. Finish: Prime painted.
12. Finish: Satin finish stainless steel.

SUBSTITUTE STYLE "MS" FOR LISTED STYLE "M" BELOW IF STAINLESS STEEL UNITS SELECTED.

13. Manufacturer/Model: Provide Milcor style "M", or subject to compliance with requirements, equivalent units of Bar-Co, Cesco Products, J.L. Industries, Karp Associates Inc., or Nystrom Inc.

UNIT BELOW SUITABLE FOR INSTALLATION IN DRYWALL WHERE LESS OBTRUSIVE APPEARANCE IS DESIRED. NYSTROM MANUFACTURES A PRODUCT WITH RECESSED DOOR ALLOWING PLASTER OR DRYWALL TO COVER DOOR.

- B. Flush Panel Metal Access Door: Provide flush panel units for mounting in drywall with integral drywall bead configuration outer frame, and as follows:

1. Door: Minimum 16 gage stainless steel.
2. Drywall Bead: Galvanized steel.

SELECT FROM BELOW TO SUIT PROJECT.

3. Door Size: 10-inches wide by 10-inches high.
4. Door Size: 14-inches wide by 14-inches high.
5. Door Size: 22-inches wide by 22-inches high.
6. Door Size: 24-inches wide by 24-inches high.

RETAIN HINGE TYPE BELOW.

7. Hinges: Double-acting concealed spring type.

INCLUDE APPLICABLE TYPE BELOW.

8. Lock: Screwdriver operated steel cam type.
9. Lock: Phillips head screwdriver operated steel cam type.
10. Lock: Allen wrench operated steel cam type.
11. Lock: Key operated cam type with removable cylinder core.

SELECT APPLICABLE TYPE BELOW.

12. Finish: Prime painted.

13. Manufacturer/Model: Provide Milcor style "DW", or subject to compliance with requirements, equivalent units of Bar-Co, Cesco Products, J.L. Industries, Karp Associates Inc., or Nystrom Inc.

UNIT BELOW IS FIRE RATED.

- C. Fire-rated Metal Access Door: Provide UL listed and labeled fire-rated units with integral one-piece frame, automatic panel closers, and as follows:

1. Fire-rating: B-label (1-1/2 hr.)

SELECT ONE MATERIAL BELOW.

2. Door: Minimum 20 gage steel.
3. Door: Minimum 20 gage stainless steel.

SELECT ONE MATERIAL BELOW.

4. Frame: Minimum 16 gage steel.
5. Frame: Minimum 16 gage stainless steel.

MODIFY DIMENSIONS BELOW TO SUIT PROJECT - REFER TO CATALOG

6. Door Size: Approximately 24-inches wide by 24-inches high.
7. Hinges: Continuous steel hinge with stainless steel pin, removable from chase side only.

INCLUDE APPLICABLE TYPE BELOW.

8. Latch: Self-latching type with knurled knob.
9. Lock: Cylinder lockset with self-latching action and with removable cylinder core.

SELECT APPLICABLE TYPE BELOW.

10. Finish: Prime painted.
11. Finish: Satin finish stainless steel.
12. Manufacturer/Model: Provide products of Milcor, or subject to compliance with requirements, equivalent products of Bar-Co, Cesco Products, J.L. Industries, Karp Associates Inc., or Nystrom Inc.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with manufacturer's installation instructions for application indicated.
 1. Install fire-rated units in compliance with applicable codes and regulations to provide fully fire-rated finished assembly.
- B. Anchor frame to existing construction with expansion anchors to masonry substrate. Position anchors in concealed frame flange.
- C. Test and adjust doors after installation to eliminate rubbing and binding. Remove and reinstall units if necessary to provide proper door operation.

SPECIFICATION DIVISION 8

NUMBER SECTION DESCRIPTION

DIVISION 08 OPENINGS

SECTION 084113 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

END OF CONTENTS TABLE

DIVISION 08 OPENINGS

SECTION 084113 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including Standard General Conditions, Supplemental General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, apply to this Section.
- B. Related Sections:
 - 1. Division 07 Section: Air Barriers.
 - 2. Division 07 Section: Flashing and Sheet Metal.
 - 3. Division 08 Section "Glazed Aluminum Curtain Walls".

1.2 SUMMARY

- A. Section Includes:

DELETE PRODUCT TYPES NOT REQUIRED FROM THE LIST BELOW.

- 1. Storefront-type framing system.
- 2. Exterior entrance doors.
- 3. Vestibule doors matching entrance doors.
- 4. Flush Panel FRP Doors

DELETE BELOW IF CURTAIN WALL IS INCLUDED IN PROJECT TO INSURE THAT THE CURTAIN WALL INSTALLER IS THE PRIME CONTRACTOR.

- B. Work Provided Under This Section But Specified Under Other Sections:
 - 1. The Work of this Section and applicable portions of the work of the following Sections, that are related to this Section, shall be performed by a Prime contractor providing aluminum storefront products, to establish single source responsibility for aluminum storefront products and associated components.
 - a. Division 07 Section "Joint Sealants".
 - b. Division 08 Section "Aluminum Windows".
 - c. Division 08 Section "Door Hardware".
 - d. Division 08 Section "Glazing".

1.3 SUBMITTALS

- A. Product data for each aluminum entrance and storefront system required, including:
 - 1. Manufacturer's standard details and fabrication methods.
 - 2. Data on finishes.
 - 3. Hardware and accessories.
 - 4. Recommendations for maintenance and cleaning of exterior surfaces.
- B. Shop drawings for each aluminum entrance and storefront system required, including:

1. Layout and installation details, including relationship to adjacent work.
2. Plans at 1/4-inch scale.
3. Elevations at 1/4-inch scale.
4. Detail sections of typical composite members.
5. Anchors and reinforcement.
6. Hardware mounting heights.
7. Provisions for expansion and contraction.
8. Glazing details.
9. Locations of field glazing where permitted.

COORDINATE HARDWARE WITH FINISH HARDWARE SECTION. THRESHOLDS, HINGES, WEATHERSTRIPPING, AND REMOVABLE MULLIONS, ARE USUALLY PROVIDED WITH ALUMINUM FRAMING. OTHER HARDWARE SHOULD BE SPECIFIED IN SECTION 087100 "DOOR HARDWARE".

- C. Hardware Schedule: Submit hardware schedule organized into sets for hardware specified in this section. Coordinate hardware with Door Hardware Section to ensure proper function, and finish. Include item name, name of the manufacturer and complete designations of every item required for each door opening.
- D. Samples for Initial Selection: Indicating factory-applied color finishes.

DELETE "SAMPLES FOR INITIAL SELECTION" PARAGRAPH ABOVE IF COLORS AND OTHER CHARACTERISTICS ARE PRESELECTED AND SPECIFIED OR SCHEDULED. ALWAYS RETAIN FOLLOWING 2 PARAGRAPHS WITH OR WITHOUT ABOVE PARAGRAPH.

- E. Samples for Verification: For each type of exposed finish required, in minimum 8-inch lengths.
1. Include 3 or more units in each sample set showing the extreme limits of variations expected in color and texture of finish.

RETAIN PARAGRAPH BELOW TO VERIFY DETAILS OF ASSEMBLY.

- F. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch lengths of full-size components and showing details of the following:

REVISE LIST BELOW TO SUIT PROJECT.

1. Joinery, including concealed welds.
 2. Anchorage.
 3. Expansion provisions.
 4. Glazing.
 5. Flashing and drainage.
- G. Delegated-Design Submittal: Submit analysis data signed and sealed by the qualified Professional Engineer employed by the curtain wall manufacturer who is responsible for their preparation.
1. Show section moduli of wind-load-bearing members and calculations of stresses and deflections. Provide material properties and other information needed for structural analysis including computations.

2. Submit statement by the Professional Engineer attesting that all materials provided under this section, and related Sections, meet specified requirements.
- H. Energy Performance Certificates: Forstorefront, accessories, and components, from manufacturer.
 1. Basis for Certification: NFRC-certified energy performance values for glazed aluminum storefront.
 - I. Test Reports: Provide certified test reports from a nationally recognized qualified independent testing laboratory showing that aluminum entrance and storefront systems have been tested in accordance with specified test procedures and comply with performance characteristics indicated.
 - J. Field quality-control reports are submitted by Owner's Independent testing Agency.
 - K. Warranties: Signed original warranty documents from the curtain wall manufacturer indicating the specified terms and conditions for each curtain wall and component.
 - L. Maintenance Data for Curtain walls to include in maintenance manuals.

1.4 QUALITY ASSURANCE

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards and test methods contained in the following documents; latest editions, unless noted otherwise.
 1. Applicable standards of the American Architectural Manufacturers Association (AAMA), including but not limited to:
 - a. AAMA/WDMA/CSA 101/I.S.2/A440 Voluntary Performance Specification for Windows, Skylights and Glass Doors - A North American Fenestration Standard.
 - b. AAMA 2605 Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.
 - c. AAMA 611 Voluntary Specification for Anodized Architectural Aluminum.
 - d. AAMA 910 Voluntary Life Cycle Specifications and Test Methods for AW Class Architectural Windows and Doors.
 - e. AAMA 1503 Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections
 2. Glass Association of North America (GANA) "Glazing Manual."
 3. Standards of ASTM International which are referenced in other Articles in this Section.
 4. National Fenestration Rating Council (NFRC) Documents and Rating System, including, but not limited to:

- a. NFRC 100 Procedure for Determining Fenestration Product U-factors.
 - b. NFRC 200 Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.
 - c. NFRC 500-2010 Procedure for Determining Fenestration Product Condensation Resistance Values.
- C. Delegated Design: A qualified Professional Engineer registered in Michigan, employed by the storefront manufacturer, shall design storefront assemblies, including aluminum windows where applicable, doors, glazing and all accessories for this project. The storefront assembly shall be manufactured, assembled and installed to withstand the structural load requirements as specified in this Section, the Building Code, and expected loads calculated for the building, based data indicated on the Drawings. Refer to Part 2 Performance Requirements for additional information.
- D. Installer Qualifications: Engage an experienced Installer who has completed installation of aluminum storefront framing similar in design and extent to those required for the project and whose work has resulted in construction with a record of successful in-service performance.
- E. Manufacturer's Preconstruction Testing Agency Qualifications: Qualified according to ISO/IEC 17025 and accredited by ICC-ES for preconstruction testing indicated.
- F. Field Testing: The Owner's Testing Laboratory will validate testing of installed storefront in the building walls.
- G. Single Source Responsibility: Obtain aluminum entrance and storefront systems from one source and from a single manufacturer.

1.5 MANUFACTURER TESTING

REVISE EXAMPLE TEST METHODS AND SEQUENCE IN SUBPARAGRAPH BELOW TO SUIT PROJECT AND COORDINATE WITH TESTS REQUIRED IN "PERFORMANCE REQUIREMENTS" ARTICLE. CONSULT MANUFACTURERS AND TESTING AGENCIES FOR GUIDANCE ON APPROPRIATE REQUIREMENTS FOR PROJECT.

- A. Preconstruction Testing Program: Perform tests specified in "System Performance Requirements" Article on manufacturer's laboratory samples in the following order:
- 1. Structural-performance preloading at 50 percent of the specified wind-load design pressure when tested according to ASTM E 330.
 - 2. Air infiltration when tested according to ASTM E283.
 - 3. Water penetration under static pressure when tested according to ASTM E 331.
 - 4. Structural performance at design load when tested according to ASTM E 330.
 - 5. Repeat air filtration when tested according to ASTM E 283.
 - 6. Repeat water penetration under static pressure when tested according to ASTM E 331.

7. Structural performance at maximum 150 percent of positive and negative wind-load design pressures when tested according to ASTM E 330.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Check openings by accurate field measurement before fabrication. Show recorded measurements on shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of the work.
 1. Where necessary, proceed with fabrication without field measurements, and coordinate fabrication tolerances to ensure proper fit.

REVISE WARRANTY PER PROJECT AND SPECIFIED MANUFACTURERS. KAWNEER PROVIDES A LIMITED LIFETIME WARRANTY ON ENTRANCE DOORS. FOLLOWING WARRANTY ON FRAMING IS OFFERED BY KAWNEER.

1.7 WARRANTY

- A. Provide a complete parts and labor warranty for a minimum of two years from the date of Substantial Completion.
- B. Refer to Glazing Section for glass warranties.
- C. Fluoropolymer Finish Warranty: Manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied fluoropolymer finishes within specified warranty period.

COORDINATE COLOR FADING AND CHALKING LIMITS WITH FINISHES RETAINED IN PART 2.

1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

VERIFY AVAILABLE WARRANTIES AND WARRANTY PERIODS FOR FINISHES WITH MANUFACTURERS LISTED IN PART 2 ARTICLES. FLUOROPOLYMER FINISHES ARE ELIGIBLE FOR 10 YEAR WARRANTIES.

2. Warranty Period: 10 years from date of Substantial Completion.
- D. Anodized Finish Warranty: Manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied anodized finishes within specified warranty period. Any forming or welding must be done prior to finishing.

COORDINATE COLOR FADING AND CHALKING LIMITS WITH FINISHES RETAINED IN PART 2.

1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Delta-E Hunter units (square root of the sum of square Delta L, Delta a, and Delta b) as determined by ASTM D 2244.

- b. Chalking in excess of a No.8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, flaking, or blistering.
2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

USUALLY RETAIN ALL MANUFACTURERS LISTED IN EACH APPLICABLE CATEGORY BELOW. DELETE INAPPLICABLE CATEGORIES.

A. Entrance Door and Storefront Manufacturers:

- 1. EFCO Corporation.
- 2. Kawneer Company, Inc.
- 3. Oldcastle BuildingEnvelope
- 4. Tubelite Inc.
- 5. Wausau Window and Wall Systems.

B. Flush Panel FRP Door Manufacturers:

- 1. Commercial Door Systems
- 2. Kawneer Company, Inc.
- 3. Rebco, Inc.
- 4. Special-Lite, Inc.

C. Fluoropolymer Coating Manufacturers:

- 1. PPG Industries.
- 2. Valspar Corp.
- 3. Akzo Nobel.

REVISE "SYSTEM PERFORMANCE REQUIREMENTS" ARTICLE BELOW IF ENTRANCES WILL BE INSTALLED IN BUILDING INTERIORS ONLY.

2.2 SYSTEM PERFORMANCE REQUIREMENTS

- A. Provide aluminum entrance and storefront assemblies that comply with performance characteristics specified, as demonstrated by testing the manufacturer's corresponding stock assemblies according to test methods indicated.
- B. Thermal Movement: Design the aluminum entrance and storefront framing systems to provide for expansion and contraction of the component materials. Entrance doors shall function normally over the specified temperature range.
 - 1. The system shall be capable of withstanding a metal surface temperature range of 180 deg F (100 deg C) without buckling, failure of joint seals, undue stress on structural elements, damaging loads on fasteners, reduction of performance, stress on glass, or other detrimental effects.
- C. Structural Design: Provide aluminum entrance and storefront systems that comply with structural performance, air infiltration, and water penetration requirements indicated.

VERIFY WIND LOAD FOR CONDITIONS AT UM. WIND LOADS SHOULD BE CALCULATED BY THE STRUCTURAL ENGINEER AND INDICATED ON THE DRAWINGS.

1. Structural Loads: As indicated on Drawings.
2. Structural Performance: Conduct tests for structural performance in accordance with ASTM E 330.
 - a. Uniform Load: At the static air design load applied in the positive and negative direction in accordance with ASTM E 330, there shall be no deflection in excess of L/175 of the span of any framing member.
 - b. At a structural test load equal to 1.5 times the specified design load, no glass breakage or permanent deformation of main framing members in excess of 0.2 percent of their clear spans shall occur.

D. Energy Performance

1. Air leakage for framing and doors shall be tested and determined in accordance with NFRC 400 and ASTM E 283.
 - a. Air Infiltration Storefront Framing System: Air leakage shall not exceed 0.06 CFM per sq. ft. at minimum static-air-pressure difference of 6.24 psf.
 - b. Air Infiltration Aluminum Entrance Doors: Air leakage shall not exceed 1.0 CFM per sq. ft. at a static-air-pressure differential of 6.24 psf.
2. Water Penetration under Static Pressure: No evidence of water penetration through fixed glazing and framing areas, as defined in AAMA 501, when tested according to ASTM E 331 at a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 12 pounds per square foot.
3. Thermal Transmittance: Provide systems which comply with the following criteria. Test in accordance with NFRC 100.
 - a. Framing Systems: Overall U-factor of not more than 0.45 BTU/hr. x sq. ft. x deg. F.
 - b. Entrance Doors (glazed): Overall U-factor of not more than 0.80 BTU/hr. x sq. ft. x deg. F.

DELETE PARAGRAPH BELOW IF NO OPAQUE ENTRANCE DOORS.

- c. Entrance Doors (opaque): Overall U-factor of not more than 0.70 BTU/hr. x sq. ft. x deg. F.
 - d. Operable Window Glazing and Framing Areas: Overall U-factor of not more than 0.55 BTU/hr. x sq. ft. x deg. F.
4. Solar Heat Gain Coefficient (SHGC): Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than 0.40 as determined according to NFRC 200.

CRF SHOWN IS MINIMUM VALUE BASED ON PRODUCTS MEETING OTHER SPECIFICATION REQUIREMENTS. ESTABLISH CRF BASED ON BUILDING OCCUPANCY FACTORS ACCORDING TO MECHANICAL DESIGN GUIDELINES. VERIFY AVAILABILITY FROM MANUFACTURERS. IF HIGHER CRF IS NEEDED, CONSIDER USING CURTAIN WALL.

5. Condensation Resistance: Provide units tested for thermal performance in accordance with AAMA 1503 showing condensation resistance factor (CRF) of not less than 56.
6. Air Infiltration:
 - a. Not more than 1.0 cfm/sq. ft. for glazed swinging entrance doors.

- b. Not more than 0.4 cfm/sq. ft. for all other locations.
7. Labeling: Per ANSI/ASHRAE 90.1-2007, provide a permanent nameplate, installed by the manufacturer, listing the U-factor, SHGC, and air leakage rate. The label may be the NFRC energy performance label or the AAMA performance label.

2.3 MATERIALS

DELETE MATERIALS NOT REQUIRED FOR FABRICATION OR INSTALLATION FROM THIS ARTICLE.

- A. Aluminum Members: Alloy and temper recommended by the manufacturer for strength, corrosion resistance, and application of required finish; comply with ASTM B 221 for aluminum extrusions, ASTM B 209 for aluminum sheet or plate, and ASTM B 211 for aluminum bars, rods and wire.

USE WHEN REQUIRED. SYSTEMS SHALL BE NO HIGHER THAN 12 FEET.

- B. Carbon steel reinforcement of aluminum framing members shall comply with ASTM A 36 for structural shapes, plates and bars, ASTM A 611 for cold rolled sheet and strip, or ASTM A 570 for hot rolled sheet and strip.
- C. Panel Core Material: Rigid, closed-cell polyurethane insulation.
- D. Fasteners: Provide fasteners of nonmagnetic stainless steel, compatible with aluminum components, hardware, anchors and other components.
1. Reinforcement: Where fasteners screw-anchor into aluminum members less than 0.125 inches thick, reinforce the interior with aluminum or nonmagnetic stainless steel to receive screw threads, or provide standard noncorrosive pressed-in splined grommet nuts.
 2. Exposed Fasteners: Do not use exposed fasteners except for application of hardware. For application of hardware, use Phillips flat-head machine screws that match the finish of member or hardware being fastened.
- E. Concealed Flashing: 0.0187-inch (26 gage) minimum dead-soft stainless steel, or 0.026-inch-thick minimum extruded aluminum of alloy and type selected by manufacturer for compatibility with other components.
- F. Brackets and Reinforcements: Provide high-strength aluminum brackets and reinforcements; where use of aluminum is not feasible provide nonmagnetic stainless steel or hot-dip galvanized steel complying with ASTM A 123.
1. Concrete and Masonry Inserts: Provide hot-dip galvanized steel inserts complying with ASTM A 123.

2.4 FRAMING SYSTEMS

THE FRAMING SYSTEM IN THE NEXT PARAGRAPH MAY BE USED FOR BOTH STOREFRONT AND ENTRANCE FRAMES. EXTERIOR GLAZING IS MORE COMMON BECAUSE REGLAZING FROM THE INTERIOR IS DIFFICULT AFTER THE BUILDING IS COMPLETED.

- A. Storefront Framing System: Provide storefront and entrance framing systems fabricated from extruded aluminum members of size and profile indicated. Include subframes and other reinforcing members of the type indicated. Provide for flush glazing storefront from the exterior on all sides without projecting stops. Shop-fabricate and preassemble frame components where possible. Provide storefront frame sections without exposed seams.
1. Mullion Configurations: Provide pockets at the inside glazing face to receive resilient elastomeric glazing. Mullions and horizontals shall be one piece. Make provisions to drain moisture accumulation to the exterior.
 2. Exterior Locations: Provide manufacturer's thermal break construction with two separations consisting of a two-part chemically curing, high-density polyurethane, which is mechanically and adhesively joined to aluminum storefront sections.
 3. Interior Locations: Where indicated, provide non-thermal break construction.

FOLLOWING ARE TYPICAL FRAMING DIMENSIONS AND GLAZING DETAIL.

4. System Dimensions - Nominal face width and Depth: 2 inches by 4-1/2 inches.

SELECT GLAZING OPTIONS FROM AVAILABLE FRAMING SYSTEMS.

5. Glass: Center Plane.
6. Glass: Inside Glazed.
7. Glass: Outside.

- B. Entrance Door Frames: Provide tubular and channel frame entrance door frame assemblies, as indicated, with welded or mechanical joints in accordance with manufacturer's standards. Reinforce as necessary to support required loads. Provide units with applied stops; blade stops are not acceptable.

1. Exterior Doors: Manufacturer's standard replaceable compressible weatherstripping molded expanded EPDM or neoprene gaskets complying with ASTM C 509, Grade 4 or molded PVC complying with ASTM D 2287.
2. Interior Doors: Provide manufacturer's bulb gasket weatherstripping on stops to prevent metal-to-metal contact.

2.5 GLAZING

- A. Glazing: As specified in Glazing section.

2.6 ENTRANCE DOOR SYSTEMS

- A. Stile-and-Rail Type Entrance Doors: Provide tubular frame members, fabricated with mechanical joints using heavy inserted reinforcing plates and concealed tie-rods or j-bolts.

SELECT STILE AND DOOR DESIGN. COORDINATE EXIT DEVICE SELECTION IN FINISH HARDWARE SECTION WITH STILE WIDTH AND DOOR DESIGN.

GENERALLY SPECIFY MEDIUM STILE DOORS UNLESS APPROVED BY DESIGN MANAGER.

1. Door Design: Medium stile; 3-1/2-inch nominal width.

2. Door Design: Wide stile; 5-inch nominal width.

KICK SURFACE BELOW IS A REQUIREMENT OF THE ADA AND MICHIGAN BUILDING CODE. DO NOT REVISE OR DELETE.

3. Kick Surface: Provide an insulated-core, smooth surface, flush aluminum panel, extending the full width of the door, 10 inches high measured from the bottom of the door. Fabricate panel from not less than 0.125-inch thick aluminum sheet and finish to match door framing members.
4. Glazing: Fabricate doors to facilitate replacement of glass or panels, without disassembly of stiles and rails.
5. Provide manufacturer's snap-on extruded aluminum glazing stops, preformed gaskets, with exterior stops anchored for nonremoval.

B. FRP Flush Panel Doors

FLUSH PANEL DOORS ARE PREFERRED BY HOUSING FOR MANY APPLICATIONS. MANUFACTURER OF FOLLOWING SPECIFIED MATERIAL IS SPECIAL-LITE.

1. Flush Panel-Type FRP Skin Doors: Provide flush panel-type doors fabricated with tubular or extruded frame members with reinforced mechanical or welded joints; limit frame exposure to 1/2-inch maximum width on door faces. Fill core with foamed-in-place urethane.

DELETE BELOW IF NO FRP FACE SHEETS

- a. Face Sheets: Provide 0.120-inch thick fiberglass reinforced polyester (FRP) face sheets with mechanically interlocked with frame members and laminated to framing with waterproof glue.

BELOW IS OPTIONAL FOR ADDED VANDAL RESISTANCE

- 1) FRP Sheet Surface Texture: Embossed in manufacturer's standard random (stucco) pattern.

SELECT COLOR BELOW: SPECIAL-LITE STANDARD COLORS INCLUDE WHITE, BLACK, LIGHT GRAY, DARK GRAY, BEIGE, BLUE, AND GREEN

- 2) Face Sheet Color: Dark Bronze.

DELETE THE NEXT PARAGRAPH IF NO LIGHTS ARE INCLUDED IN THE DESIGN.

- b. Lights: Provide glazed openings as indicated, with aluminum moldings and stops. Provide nonremovable stops on the exterior.

C. Door sweeps:

1. Exterior Doors: Provide EPDM or vinyl-blade gasket weatherstripping in bottom door rail, adjustable for contact with threshold.

D. Reinforcing: Provide hardware reinforcing as required by the finish hardware scheduled in Division 08 Section "Door Hardware".

2.7 **HARDWARE**

- A. Provide hardware units as indicated, scheduled, or required for operation of each door as specified in Division 08 Section "Door Hardware". Include sizes, number, and types recommended by manufacturer for service required; finish to match door.

2.8 **FABRICATION**

- A. General: Fabricate aluminum entrance and storefront components to designs, sizes and thicknesses indicated and to comply with indicated standards. Sizes and profile requirements are indicated on the drawings. Variable dimensions are indicated, with maximum and minimum dimensions required, to achieve design requirements and coordination with other work. Provide thermal break construction at exterior locations, and where indicated. Provide non thermal break construction only at interior locations where indicated.
 - 1. Thermal Break Construction: Fabricate storefront framing system with an integrally concealed, low-conductance thermal barrier, located between exterior materials and exposed interior members to eliminate direct metal-to-metal contact. Use manufacturer's standard construction that has been in use for similar projects for period of not less than 3 years.
- B. Prefabrication: Complete fabrication, assembly, finishing, hardware application, and other work to the greatest extent possible before shipment to the Project site. Disassemble components only as necessary for shipment and installation.
 - 1. Perform fabrication operations, including cutting, fitting, forming, drilling and grinding of metal work to prevent damage to exposed finish surfaces. Complete these operations for hardware prior to application of finishes.
 - 2. Do not drill and tap for surface-mounted hardware items until time of installation at project site.
 - 3. Preglaze door and frame units to greatest extent possible.
- C. Welding: Comply with AWS recommendations. Grind exposed welds smooth to remove weld spatter and welding oxides. Restore mechanical finish.
 - 1. Welding behind finished surfaces shall be performed in such a manner as to minimize distortion and discoloration on the finished surface.
- D. Reinforcing: Install reinforcing as required for hardware and as necessary for performance requirements, sag resistance and rigidity.
- E. Dissimilar Metals: Separate dissimilar metals with bituminous paint, or a suitable sealant, or a nonabsorptive plastic or elastomeric tape, or a gasket between the surfaces. Do not use coatings containing lead.
- F. Continuity: Maintain accurate relation of planes and angles with hairline fit of contacting members.

1. Uniformity of Metal Finish: Abutting extruded aluminum members shall not have an integral color or texture variation greater than half the range indicated in the sample pair submittal.

G. Fasteners: Conceal fasteners wherever possible.

2.9 FINISHES, GENERAL

A. Comply with referenced AAMA Voluntary Specifications for detailed finish requirements.

DELETE BELOW IF NO CURTAIN WALL

TYPICALLY SPECIFY FINISHES IN CURTAIN WALL SECTION.

B. Finish aluminum entrance and storefront to match other adjacent glazed aluminum curtain wall components, when applicable. Refer to Division 08 Section "Glazed Aluminum Curtain Walls" for finish requirements.

DELETE 2 ARTICLES BELOW IF SPECIFIED IN CURTAIN WALL SECTION.

2.10 FLUOROPOLYMER ALUMINUM FINISHES

RETAIN AND EDIT FINISHES IN PARAGRAPHS BELOW TO SUIT PROJECT. FLUOROPOLYMER FINISHES ARE PREFERRED BY THE U OF M.

IF RETAINING MORE THAN ONE, INDICATE LOCATION OF EACH ON DRAWINGS BY TYPE. COORDINATE WITH DESIGNATIONS IN THIS SECTION. ALUMINUM-FRAMING SYSTEMS ARE AVAILABLE WITH DUAL FINISHES, ALLOWING DIFFERENT INTERIOR AND EXTERIOR COLOR FINISHES. REFER TO STOREFRONT FRAMING MANUFACTURER'S DATA FOR ADDITIONAL INFORMATION.

RETAIN ONE OF TWO PARAGRAPHS BELOW; IF BOTH ARE REQUIRED, INDICATE LOCATION OF EACH SYSTEM ON DRAWINGS, IN SCHEDULES, OR BY INSERTS. IF SPECIFIC PRODUCTS ARE REQUIRED, NAME COATING MANUFACTURERS AND PRODUCTS.

A. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to metal surfaces to comply with coating and resin manufacturers' written instructions.

USUALLY SPECIFY 3-COAT SYSTEM FOR ENTRANCE FRAMING AND DOORS IN AREAS OF HUMAN CONTACT. INCLUDE LESS EXPENSIVE 2-COAT SYSTEM FOR FRAMING ELEMENTS NOT IN CONTACT WITH PEOPLE.

B. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer's written instructions.

SELECT COLORS AS APPROVED BY THE OWNER.

- C. Color and Gloss: Non-metallic solid color, dark bronze; low gloss, as selected by the Owner.
- D. Field Touch-up Materials: Fluoropolymer coating produced specifically for field touch-up work by same manufacturer as shop applied coating.

2.11 ANODIC ALUMINUM FINISHES

- A. Class I Clear Anodized Finish: Anodic Coating: Class I Architectural, clear film thicker than 0.7 mil) complying with AAMA 611.

RETAIN THE PARAGRAPH ABOVE IF CLEAR FINISH IS REQUIRED, OR THE PARAGRAPH BELOW IF A COLOR ANODIZED FINISH IS DESIRED.

- B. Class I Color Anodized Finish: Class I Architectural, film thicker than 0.7 mil with integral color or electrolytically deposited color, complying with AAMA 611.
 - 1. Color: Dark bronze.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and supports, with the Installer present, for compliance with requirements indicated, installation tolerances, and other conditions that affect installation of aluminum entrances and storefronts. Correct unsatisfactory conditions before proceeding with the installation.
 - 1. Do not proceed with installation until unsatisfactory conditions are corrected.

3.2 INSTALLATION

- A. Comply with manufacturer's instructions and recommendations for installation.
- B. Set units plumb, level, and true to line, without warp or rack of framing members, doors, or panels. Install components in proper alignment and relation to established lines and grades indicated. Provide proper support and anchor securely in place.
- C. Construction Tolerances: Install aluminum entrance and storefront to comply with the following tolerances:
 - 1. Variation from Plane: Do not exceed 1/8 inch in 12 feet of length or 1/4 inch in any total length.
 - 2. Offset from Alignment: The maximum offset from true alignment between two identical members abutting end to end in line shall not exceed 1/16 inch.
 - 3. Diagonal Measurements: The maximum difference in diagonal measurements shall not exceed 1/8 inch.
 - 4. Offset at Corners: The maximum out-of-plane offset of framing at corners shall not exceed 1/32 inch.

- D. Separate aluminum and other corrodible metal surfaces from sources of corrosion or electrolytic action at points of contact with other materials.
 - 1. Zinc or cadmium plate steel anchors and other unexposed fasteners after fabrication.
 - 2. Paint dissimilar metals where drainage from them passes over aluminum.
 - 3. Paint aluminum surfaces in contact with mortar, concrete or other masonry with alkali resistant coating.
 - 4. Paint wood and similar absorptive material in contact with aluminum and exposed to the elements or otherwise subject to wetting, with two coats of aluminum house paint. Seal joints between the materials with sealant as specified in the Joint Sealants section.
- E. Drill and tap frames and doors and apply surface-mounted hardware items. Comply with hardware manufacturer's instructions and template requirements. Use concealed fasteners wherever possible.
- F. Set sill members and other members in bed of sealant as indicated, or with joint fillers or gaskets as indicated to provide weathertight construction. Comply with requirements of Division 07 for sealants, fillers, and gaskets.
- G. Install thresholds by field scribing around frame members, including door stops, to provide a continuous surface between across the full width of each opening from jamb to jamb.
- H. Refer to the Division 08 Section "Glazing" for installation of glass and other panels indicated to be glazed into doors and framing. Preglaze door and frame units to greatest extent possible.

REVIEW WHETHER THE AMOUNT OF STOREFRONT FRAMING REQUIRES FIELD TESTING. DELETE ARTICLE BELOW IF STOREFRONT WORK IS LIMITED TO DOORS.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency for witnessing field testing, determining that the tests are performed correctly and making the final determination whether the storefront framing system has successfully passed the tests.
- B. Testing Activities: Testing and inspecting of representative areas of aluminum entrance and storefront system as installation proceeds to determine compliance of installed assemblies with specified requirements. Owner will determine locations and timing of testing.
- C. Contractor shall coordinate with Testing Agency and provide the materials, equipment and labor necessary to complete the testing.

EDIT TEST AREAS AS REQUIRED.

- D. The following tests will be performed in accordance with the methods and standards specified in the Performance Requirements article in Part Two of this Section:

1. Air Infiltration Tests.
 2. Water Penetration Tests.
 3. Water Spray Test: Before installation of interior finishes has begun.
- E. Storefront framing will be considered defective if it does not pass tests and inspections.
- F. If test area fails to meet the specified air infiltration or water penetration requirements, Contractor shall submit description of proposed remedial work for Owner and Architect's information.
1. Remedial work shall be incorporated into the test specimen for retesting.
 2. For each area which fails field testing, one additional area of equal size shall be tested for both air infiltration and water penetration.
 3. Cost of retesting shall be responsibility of Contractor.
- G. Testing agency shall submit copies of test reports to Owner, Architect and Contractor within 48 hours after date of test.
- H. The Owner reserves the right to select additional test areas as required, without limitation, subject to correction and remediation as specified herein.

3.4 COMMISSIONING

- A. Perform the commissioning activities as outlined in the Division 01 Section "Full Project Commissioning" or "Project Commissioning for Small Projects" and other requirements of the Contract Documents.

3.5 ADJUSTING, CLEANING, PROTECTION

- A. Adjust operating hardware to function properly, for smooth operation without binding, and for weathertight closure.
- B. Clean the completed system, inside and out, promptly after installation, exercising care to avoid damage to coatings.
- C. Clean glass surfaces after installation, complying with requirements contained in the Glazing Section for cleaning and maintenance. Remove excess glazing and sealant compounds, dirt and other substances from aluminum surfaces.
- D. Institute protective measures required throughout the remainder of the construction period to ensure that aluminum entrances and storefront will be without damage or deterioration, other than normal weathering, at time of acceptance.

NUMBER SECTION DESCRIPTION

DIVISION 08 OPENINGS

SECTION 087100 - DOOR HARDWARE

END OF CONTENTS TABLE

DIVISION 08 OPENINGS
SECTION 087100 - DOOR HARDWARE

REVISION HISTORY

APRIL 2005 - UPDATED SWEEP SEALS, JAMB SEALS AND THRESHOLDS.

FEBRUARY 2007 - UPDATED TO REMOVE SPECIFIC REFERENCES TO RICK HADDEN. QUESTIONS REGARDING CORE TYPE, KEYING, AND BUILDING STANDARDS SHOULD BE DIRECTED TO A LOCKSMITH AT THE KEY OFFICE. IN GENERAL, AVOID USE OF SPECIFIC CONTACT NAMES IN SPECIFICATION.

DECEMBER 2008 - ADDED SUBMITTAL REQUIREMENTS, ADDED ACCESS CONTROL PRODUCTS AND UPDATED PRODUCT NUMBERS.

JANUARY 2013 REVISED FORMATTING AND CONTENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including Standard General Conditions, Supplemental General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, apply to this Section.

EDIT BELOW TO SUIT PROJECT.

- B. Related Sections:
1. Division 6 Section: Architectural Woodwork.
 2. Division 8 Section: Aluminum Entrances and Storefront.
 3. Division 12 Section: Laboratory Casework and Fixtures.
 4. Division 28 Section: Access Control and Monitoring System.

1.2 SUMMARY

- A. Section Includes: Door hardware as indicated on drawings and in schedules

EDIT BELOW TO SUIT PROJECT.

Hinges.
Closers.
Double-acting closer/pivot sets.
Door Operators.
Small Format Interchangeable Cores (SFIC).
Locks and latches.
Strikes.
Latches.
Stops.
Silencers.
Push/pull sets.
Exit device (panic set).
Astragals.
Flush bolts.

Coordinators.
Trim protector bars.
Kickplates.
Sweep seals.
Jamb seals.
Automatic door bottoms.
Electrically activated hold-open devices.
Thresholds.
Removable Mullion.
Concealed power transfer.
Door position switch.
Request to exit sensor.

TYPICALLY DELETE BELOW. INCLUDE FOR PROJECTS WITH ALUMINUM ENTRANCES AND STOREFRONT.

- B. Products specified under this section but provided under sections:
1. 08410: Aluminum Entrances and Storefront.

1.3 SUBMITTALS

A. Submittals: Submit the following:

1. Manufacturer's product literature.
2. Schedule of hardware showing application to project.
3. Furnish templates to each fabricator of doors and frames, as required for preparation to receive hardware.

INCLUDE PARAGRAPHS 4 & 5 BELOW FOR PROJECTS WITH ELECTRIFIED HARDWARE.

4. Wiring Diagrams: For power, signal, and control wiring and including the following:
 - a. Details of interface of electrified door hardware and building safety and security systems.

RETAIN FOUR SUBPARAGRAPHS BELOW IF ELECTRIFIED DOOR HARDWARE IS COMPLEX. IF ONLY ELECTRIC STRIKES ARE REQUIRED, THIS LEVEL OF DETAIL MIGHT NOT BE NECESSARY.

- b. Schematic diagram of systems that interface with electrified door hardware.
 - c. Point-to-point wiring.
 - d. Risers.
 - e. Elevations doors controlled by electrified door hardware.
5. Operation Narrative: Describe the operation of doors controlled by electrified door hardware. Include description of how the opening is to function at all times, including normal operation, upon activation of the building fire alarm system, and upon loss of power.

TYPICALLY DELETE BELOW -- INCLUDE FOR PROJECTS IN BFS BUILDINGS WITH SPECIAL LOCKING ARRANGEMENTS THAT IMPEDE EGRESS (I.E. DELAYED EGRESS, DOOR INTERLOCKS)

6. Special locking arrangements in buildings under the jurisdiction of the State of Michigan Bureau of Fire Services (BFS) require submission of the following documents to BFS for door locking review:
 - a. Floor plan showing door locations to be locked and type of hardware and equipment scheduled for installation.
 - b. A description of the "sequence of operations" of the door locking system outlining operation during normal operation, upon activation of the building fire alarm system, and upon loss of primary power the fire alarm system.
 - c. Product literature for the door hardware and related equipment, including locks, control equipment, accessory equipment, power supplies, and any other hardware used.

1.4 QUALITY ASSURANCE

INCLUDE PARAGRAPHS A AND B IN EVERY SPECIFICATION SECTION. EDIT THE REFERENCE STANDARDS FOR PROJECT REQUIREMENTS.

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
 1. NFPA 70: National Electrical Code.
 2. NFPA 80: Standard for Fire Doors and Other Opening Protectives
 3. NFPA 252: Standard Methods of Fire Tests of Door Assemblies.
 4. ANSI A 156 series standards applicable to each particular type of hardware.

PART 2 - PRODUCTS

THE HARDWARE INCLUDED IN THIS SECTION MAY NOT BE SUITABLE FOR SPECIALIZED FIRE-RATED DOORS - I.E. FRP DOORS, LARGE WOOD DOORS, EXTENSIVE GLASS, ETC. CONSULT WITH DOOR AND HARDWARE MFRS TO DETERMINE UL LISTED HARDWARE. COORDINATE SPECIALIZED HARDWARE WITH KEY OFFICE TO ENSURE MAINTAINABILITY.

2.1 HARDWARE, GENERAL

- A. Standards: Where base material and quality of finish are not otherwise specified, comply with ANSI A 156 series standards applicable to each particular type of hardware.
- B. Fire-Rated Door Assemblies: Where fire-rated door assemblies are indicated, provide door hardware rated for use in assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C, unless otherwise indicated.

- C. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.

2.2 HINGES

- A. Provide 5-knuckle, 2 ball-bearing hinges; swaged; inner leaf beveled; with square corners; nonremovable pin, complete with set screw (knurled pin not acceptable); and as follows:

SELECT FULL MORTISE UNLESS OTHERWISE REQUIRED.

1. Type: Full-mortise.
2. Type: Half-surface.
3. Type: Half-mortise.
4. Type: Full surface.

TYPICALLY SELECT STEEL FOR INTERIOR DOORS AND FOR ALL FIRE RATED OPENINGS. STEELS IS APX HALF THE COST OF BRASS

SELECT BRASS FOR EXTERIOR DOORS, OR WHERE CORROSION IS EXPECTED (HIGH HUMIDITY, POOL AREAS, ETC.) BRASS IS MORE DURABLE THAN STAINLESS FOR THESE EXPOSURES.

5. Base Metal: Steel.
6. Base Metal: Stainless Steel.
7. Base Metal: Brass.

SELECT FROM VARIOUS FINISHES, OR RETAIN THE FOLLOWING. FINISH METALS ARE PLATED OVER STEEL OR BRASS, OR IN THE CASE OF STAINLESS STEEL AND BRASS, THE BASE METAL MAY BE FINISHED.

8. Finish: To match "Finishes" requirements of this Section.
9. Size and Weight: Provide hinges sized as follows:

BELOW FOR MOST STANDARD DOORS.

- a. Doors not wider than 3 feet 6 inches nor taller than 7 feet 6 inches:
 - 1) Size: 4-1/2 inches by 4-1/2 inches; 0.180-inch thick.

ABOVE FOR HEAVY, HIGH-FREQUENCY DOORS. BELOW IS ECONOMICAL HINGE FOR MEDIUM WEIGHT, AVERAGE FREQUENCY DOORS.

- 2) Size: 4-1/2 inches by 4-1/2 inches; 0.134-inch thick.

BELOW FOR EXTRA LARGE DOORS.

- b. Doors wider than 3 feet 6 inches or taller than 7 feet 6 inches:
 - 1) Size: 5 inches by 4-1/2 inches; 0.190-inch thick.

ABOVE FOR HEAVY, HIGH-FREQUENCY DOORS. BELOW IS ECONOMICAL HINGE FOR MEDIUM WEIGHT, AVERAGE FREQUENCY DOORS.

- 2) Size: 5 inches by 4-1/2 inches; 0.145-inch thick.

DELETE BELOW UNLESS 1-3/8 INCH THICK INCLUDED. NOTE THAT BELOW SELECTION IN FOR AVERAGE FREQUENCY SERVICE DOORS - MODIFY VALUE TO .180 FOR HIGH FREQUENCY DOORS

- c. Doors 1-3/8 inches thick and not wider than 3 feet nor taller than 7 feet: 4-1/2 inches by 4 inches; 0.134-inch thick.
- 10. Manufacturer: Hager, Ives, McKinney, or Stanley.

USE BELOW FOR ALL ALUMINUM STOREFRONT DOORS, EXTERIOR HOLLOW METAL DOORS AND VERY HIGH FREQUENCY AND/OR HEAVY INTERIOR DOORS. ALSO USE AS STANDARD FOR HOUSING WORK.

- B. Continuous Gear Hinges: Provide units designed for heavy-duty, high-traffic use in new applications. Fabricate units of Class I anodized, 6063 T6 aluminum alloy with polyacetal thrust bearings.
 - 1. Color: Clear anodized
 - 2. Color: Dark bronze anodized.

BELOW IS STANDARD. ALSO AVAILABLE ARE RETROFIT UNITS THAT COVER BUTT CUT OUTS ON EXISTING FRAMES, AND A VARIETY OF FULL- AND HALF-SURFACE UNITS - SEE PRODUCT CATALOGS

- 3. Manufacturer/Model: Select Products Limited, SL-11HD, or equivalent products of Hager-Roton or Pemko.

2.3 CLOSERS

- A. Provide closers with field-adjustable, full-range sizing feature capable of complying with manufacturer's size recommendations for application indicated; and complying with applicable portions of the Americans with Disabilities Act (ADA).
 - 1. Manufacturer/Model: LCN, 4000 Series "Smoothee" or Sargent no substitutions.
 - a. Interior doors:
 - 1) Closer mounted on pull side of door:
 - a) Regular: LCN 4011 REG or Sargent 281 O
 - b) Hold open: LCN 4011 H or Sargent 281 H
 - 2) Closer mounted on the push side of door
 - a) Regular: LCN 4110 EDA or Sargent 281 P10
 - b) Hold open: LCN 4110 H-EDA or Sargent 281 PH10
 - c) Stop arm: LCN 4110 CUSH or Sargent 281 PS
 - 3) Closer mounted on the non-door side of the frame:
 - a) Regular: LCN 4021 REG or Sargent 281 OZ
 - b. Exterior doors
 - 1) Closer mounted on push side of door
 - a) Regular: LCN 4021 REG or Sargent 281 OZ
- B. Unless otherwise indicated, mount closer bodies on room side (not corridor side) of doors. Refer doubtful conditions to Architect for decision.

THE FOLLOWING CLOSER/PIVOT SET CAN BE USED TO HANG AND CONTROL DOUBLE-ACTING DOORS OF WOOD, ALUMINUM OR HOLLOW METAL CONSTRUCTION. SIMPLE DOUBLE-ACTING HINGES CAN ALSO BE USED, BUT REQUIRE LARGE CLEARANCES TO WORK PROPERLY.

2.4 DOUBLE-ACTING CLOSER/PIVOT SETS

- A. Provide concealed, double-acting closer for installation in hollow metal frame, and adequately sized in accordance with manufacturer's recommendations to suit door type, size and application.
 - 1. Provide units with manufacturer's standard adjustable auxiliary stops.
 - 2. Manufacturer/Model:
 - a. LCN No. 6030. No substitutions.
- B. Accessory Hinges: Provide manufacturer's standard center pivot sets designed specifically for use with indicated closer.
 - 1. Manufacturer/Model: Ives No. 7255. No substitutions.

THE FOLLOWING IS THE UNIVERSITY STANDARD ADA DOOR OPERATOR. NOTE THE FOLLOWING:

IF A DOOR OPERATOR IS USED IN LIEU OF PHYSICAL OPERATING CLEARANCES ON THE EGRESS SIDE, IT MUST BE CONNECTED TO EMERGENCY POWER (I.E. BUILDING GENERATOR). BATTERY BACKED OPTIONS ARE NOT AVAILABLE. (NFPA 80)

ON ALL FIRE RATED DOORS, DOOR OPERATORS ARE REQUIRED TO BE CONNECTED TO THE BUILDING FIRE ALARM SYSTEM (NFPA 80). IF DOOR IS TIED TO BUILDING FIRE ALARM SYSTEM, COMMUNICATE RELATED OPERATIONAL ISSUES TO BUILDING MANAGER. COORDINATE WITH DESIGN MANAGER.

2.5 DOOR OPERATORS

- A. General: Of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated.
 - 1. Type: Low-energy power operated, complying with ANSI/BHMA A156.19.
 - 2. Connections: For power and control wiring.
 - 3. Adjustment Features: Fully adjustable without removing entrance doors, including
 - 4. On/Off Feature: On/off/hold-open switch controls electric power to operator.
- B. Electrohydraulic automatic operators: Self-contained overhead units, with closing speed controlled by gear train and dynamic braking action of electric motor and with manual operation and spring closing when power is off.
 - 1. Closing Mechanism: Power-assisted spring operated.
 - 2. Mounting: Surface mounted
 - 3. Manual Operation: Requires less than 15 lbf to set door in motion when power is off, according to ANSI/BHMA A156.19.
 - 4. Activation Device: Manufacturer's standard 4-inch diameter round stainless steel push-plate switch with contrasting-colored, engraved message. International symbol of accessibility and "Push to Open."

EDIT BELOW TO BE PROJECT SPECIFIC.

- C. Manufacturer/Model: LCN, Model 4642 (for push side mount) or 4631 (for pull side mount). No substitutions.

INCLUDE THE FOLLOWING FOR DOORS CONNECTED TO BUILDING FIRE ALARM SYSTEM.

- D. Provide acrylic sign adjacent to door actuator:
 - 1. Copy: "Push button disabled during fire alarm"
 - 2. Color, font, and details to match building standard room signs.

2.6 SMALL FORMAT INTERCHANGABLE CORES (SFIC)

RETAIN BELOW IF DEMOLISHING EXISTING DOORS

- A. Salvage existing cores and reinstall in new devices.

FOR CONSISTENCY AND EASE IN KEYING IN EXISTING BUILDINGS, VERIFY WHICH MANUFACTURER'S CORES ARE USED IN THAT BUILDING. SPECIFY CORES FROM SAME MANUFACTURER AND KEYWAY FOR NEW DOORS. CALL KEY OFFICE TO OBTAIN CORE TYPE AND KEYWAY INFORMATION.
- B. Provide small format 7-pin removable cores to match building standard.
 - 1. Manufacturers:
 - a. Best Coremax.
 - b. Medeco Keymark.
 - c. Schlage Everest.
- C. Provide keying in a masterkey system to be designed by Owner. Keying is the responsibility of the Contractor; and shall be performed by the cylinder supplier. Deliver keyed cores to the University of Michigan Key Office for installation by Owner. Contact the Owner's Key Office (764-3481) for questions concerning keying.

RETAIN BELOW FOR PROJECTS WITH EXTERIOR DOORS OR LARGE INTERIOR AREAS. COORDINATE WITH CM.

- D. Construction Locks: In each exterior door, provide temporary cylinders, installed simultaneously with the lock. Temporary cylinders shall remain for the duration of construction.

2.7 LOCKS AND LATCHES

- A. General:
 - 1. BHMA A156.13 (mechanical); A156.25 (electromechanical), grade 1.
 - 2. Provide mortise type, lever handle locksets equipped to receive SFIC.
 - 3. Manufacturer/Model of Locksets: Unless noted otherwise for specific function noted, provide one of the following:
 - a. Sargent 8200 Series.
 - b. Corbin Russwin ML2200 series.
 - c. Schlage L Series.

BELOW IS TYPICAL OF MANY BUILDINGS BUT NOT ALL, CONFIRM BUILDING STANDARD WITH KEY OFFICE

4. Lever style: Sargent J-style tubular lever or equivalent by or equivalent model by Schlage or Corbin Russwin
5. Rose style: 2" diameter
6. Thumbturn: For all locksets with thumb turn functionality, provide oversized ADA style thumb turns.
 - a. Sargent LB thumbturn
 - b. Schlage EZ turn: L583-363
 - c. Corbin Russwin Ergonomic Thumbturn: 707F58
7. Knurled handle: Provide on locksets to hazardous areas, including mechanical rooms, elevator machine rooms, electrical closets and substation rooms, and stairways.

B. Mechanical Locksets:

BELOW ARE EXAMPLES OF TYPICAL UNITS. VERIFY TRIM STYLE DESIRED. LNJ NOTED BELOW IS TUBULAR LEVER ARM WITH SMALL ROUND ETCHUTSION. GENRALLY, MATCH STYLES IN ADJACENT PORTIONS OF BUILDING. CONTACT A LOCKSMITH AT THE KEY OFFICE FOR INFORMATION ON EXISTING LOCK STYLES.

ANSI FUNCTION CODES LISTED BELOW IF AVAILABLE. USE CODE TO DETERMINE EQUIVALENCE BETWEEN MANUFACTURERS DURING SUBMITTAL PHASE.

- a. Office Lockset with thumb turn: ANSI function F04
 - 1) Sargent 8205.
 - 2) Schlage L9050
 - 3) Corbin Russwin ML2054

ALL CLASSROOMS SHOULD BE LOCKABLE FROM INSIDE THE ROOM AND PROVIDE VISUAL INDICATION OF DOOR STATUS ON CLASSROOM SIDE. REVIEW DESIRED FUNCTION WITH USER - SHOULD THE DOOR REVERT TO LOCKED OR REVERT TO UNLOCKED STATE AFTER IT IS OPENED?

- b. Office Locksets for Classroom use:
 - 1) Office Lockset: ANSI function F04; Schlage L9050 with locked/unlocked indicator on room side L283-711 or equivalent model by Sargent or Corbin Russwin.
 - 2) Office Lockset with Automatic unlocking: Schlage L9056 with locked/unlocked indicator on room side L283-711 or equivalent model by Sargent or Corbin Russwin.
- c. Passage Lockset: ANSI function F01
 - 1) Sargent 8215.
 - 2) Schlage L9010.
 - 3) Corbin Russwin ML2010.

THE FOLLOWING SPACES SHOULD HAVE STORE ROOM FUNCTION SETS: PHONE CLOSETS AND TELECOMMUNICATION ROOMS, MECHANICAL ROOMS, ELEVATOR MACHINE ROOMS, SUBSTATIONS AND TUNNEL DOORS.

- d. Service/Store Room Lockset: ANSI function F07
 - 1) Sargent 8204.
 - 2) Schlage L9080
 - 3) Corbin Russwin ML2057.
- e. Privacy Lockset with "Occupied" Indicator and coin turn override: Schlage L9044 with L283-722 indicator or equivalent model by Sargent or Corbin Russwin.

- C. Electromechanical Locks: Solenoid driven; mortise latchbolt; with strike that suits frame; keyed override, with request to exit and door position switches.

BELOW IS ELECTRICALLY UNLOCKED DEVICE FOR ACCESS CONTROL INSTALLATIONS - FAIL SECURE (LOCKED). MECHANICAL EGRESS ALWAYS AVAILABLE. INCLUDES REQUEST TO EXIT SWITCH (RX) AND DOOR POSITION SENSOR (DPS). COORDINATE WITH ELECTRICAL FOR RELATED WORK.

1. Electromechanical (Fail Secure): Schlage L9092 RX DPS or equivalent model by Sargent or Corbin Russwin.

- D. Digital Locksets

USE BELOW FOR ALL ANIMAL HOLDING ROOM APPLICATIONS. FOR OTHER USES, ANOTHER LOCK FUNCTION MAY BE NEEDED. PROGRAMMING IS DONE AT THE LOCKSET; SPECIAL HANDHELD PROGRAMMER/SOFTWARE IS NOT NEEDED.

1. Battery-powered, self-contained electronic locks; consisting of complete lockset, mounting hardware, SFIC, strike, and with features and accessories indicated. Provide key override, low-battery detection and warning, LED status indicators, and ability to program at the lock.

PART NUMBER BELOW IS KEYPAD ONLY WITH LEVER STYLE TO MATCH SARGENT J-STYLE LEVER.

- a. Manufacturer/Model: Schlage only; Model CO-100-MS-70-KP with TLR Tubular lever style. No substitutions.

USE BELOW FOR LSA CLASSROOM AND SOME LAB APPLICATIONS. COORDINATE FUNCTION WITH LSA REP AND CLASSROOM OPERATIONS. PROGRAMMING IS DONE AT THE DOOR VIA SOFTWARE AND HANDHELD PROGRAMMER. HAS INCREASED FUNCTIONALITY OVER CO-100 DEVICE ABOVE. VERIFY WITH USER THAT THEY HAVE THE PROGRAMMING DEVICE

2. Battery-powered, self-contained electronic locks; consisting of complete lockset, mounting hardware, SFIC, strike, and with features and accessories indicated. Provide key override, low-battery detection and warning, LED status indicators, and ability to program at the lock.

NOTE THAT SCHLAGE OFFERS BOTH CO-200 AND AD-200 LOCKSETS. THE AD LOCKSET PROVIDES FUTURE NETWORKING CAPABILITY AND IS THE CURRENT STANDARD.

PART NUMBERS BELOW INCLUDES LEVER STYLE TO MATCH SARGENT J-STYLE LEVER.

PART NUMBER BELOW IS KEYPAD ONLY

- a. Manufacturer/Model: Schlage only; Model AD-200-MS-70-KP with TLR Tubular lever style. No substitutions.

PART NUMBER BELOW IS MAG STRIPE AND KEYPAD. NOTE THAT THIS DOES NOT AUTOMATICALLY REQUIRE USERS TO USE BOTH KEYPAD AND CARD.

- b. Manufacturer/Model: Schlage only; Model AD-200-MS-70-MGK with TLR Tubular lever style. No substitutions.

2.8 STRIKES

- A. General: With each lockset, furnish companion strike as indicated, for installation on door jamb.
- B. Mechanical Strikes: Provide handed-type strike plates with curved lip; flat (non-handed) strikes are not permitted.

USUALLY RETAIN THE FOLLOWING UNLESS CERTAIN THAT EXTENDED LIPS ARE NOT REQUIRED.

- 1. Provide strike plates with extended lips where required to protect door frame and trim from being marred by latchbolt. Provide strike plates that project not more than 1/8 inch beyond door frame trim at single doors; and flush with face of doors at double (pair) door applications.
- 2. Provide custom-fabricated strike plates at existing door frames if required for compatibility with new lockset or latchset units. Fabricate units of base metal and finish specified. Provide units manufactured by Accurate Hardware Inc., or equivalent.

USE THE FOLLOWING ELECTRIC STRIKE FOR SINGLE ACCESS CONTROL DOORS THAT ARE NOT RATED. TYPICALLY KEY OFFICE PREFERS USE OF ELECTROMECHANICAL MORTISE LOCKSET OR PANIC DEVICE.

NOTE THAT ELECTRIC STRIKES REQUIRE USE OF PASSIVE INFRARED REQUEST TO EXIT DEVICE (PIR RTE). COORDINATE WITH ELECTRICAL.

- C. Electric Strikes: Provide electric door strikes of the appropriate model for the associated door's lock.
 - 1. Manufacturer/Models:
 - a. Von Duprin, 6000 series (6112 or 6215).
 - b. HES, 1006, 9600, and 9400 series.

BELOW FOR LOW FREQUENCY CLOSET DOORS ONLY.

2.9 LATCHES

- A. Touch latches: Latch unit consists of concealed, integral latching mechanism and spring that releases and springs door into open position when face of door is pushed.
 - 1. Manufacturer/Model: Ives No. CL12, complete with related strike.
- B. Roller latches: Forged bronze roller latches with rubber roller. Furnish units designed to be mortised into door, and with adjusting screws on face of latch. With each roller latch, furnish companion strike for installation on jamb.
 - 1. Manufacturer/Model: Ives model no. RL30, or equivalent products of Rockwood or Door Controls International.

2.10 STOPS

- A. Provide rubber exposed resilient parts; size and mount units to comply with manufacturer's recommendations for the exposure condition. Reinforce the substrate as recommended.

SELECT ONE OF THE FOLLOWING.

1. Color of Resilient Parts: Black.
2. Color of Resilient Parts: Gray.
3. Manufacturer/Model: Rockwood model indicated, or equivalent products of Brookline, Builder's Brass Works, Ives, Stanley, Door Controls International.

SELECT ONE OF THE FOLLOWING TO SUIT PROJECT AND SUBSTRATE.

- a. Model No.: 442 (floor mounted).
- b. Model No.: 440 (floor mounted, limited door bottom clearance).
- c. Model No.: 409 (wall mounted, hollow wall expansion anchor).
- d. Model No.: 410 (wall mounted, plastic).
- e. Model No.: 411 (wall mounted, expansion shield).

CONSIDER BELOW FOR APPLICATIONS WHERE FIXED STOP IS IMPRACTICAL. TYPICALLY RETAIN FOR HOSPITAL PROJECTS.

VERIFY THAT STOP IS COMPATIBLE WITH CLOSER SPECIFIED. NOTE THAT INTEGRAL STOPS ARE AN OPTION FOR SOME CLOSERS.

B. Concealed overhead door stops: BHMA A156.8

1. Manufacturers/Models:
 - a. Glynn-Johnson 410 series.
 - b. Rixson 6 series.
 - c. Rockwood 14000 series.

2.11 SILENCERS

A. Provide manufacturer's standard profile silencers of 1/8-inch thick hard rubber for metal door frames as follows:

1. Manufacturer: Ives or Rockwood.

2.12 PUSH/PULL SET

A. Provide pull handles and push plates with concealed mounting fasteners wherever possible, and as follows:

SELECT BELOW AS APPROPRIATE TO PROJECT.

1. Material: Solid stainless steel.
2. Material: Solid brass.
3. Material: Solid nylon plastic.

SELECT ONE FINISH BELOW.

4. Finish: Satin.
5. Finish: Polished.
6. Finish: Gloss.

SELECT ONE COLOR OPTION BELOW.

7. Color: Clear and transparent.
8. Color: INSERT COLOR
9. Manufacturers:
 - a. Rockwood models indicated.
 - b. Baldwin.
 - c. Brookline.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID

087100 - 11

- d. Builder's Brass Works.
- e. Corbin Russwin.
- f. Ives
- g. Stanley.

BELOW ARE EXAMPLE ONLY, NOT UM STANDARDS

- 10. Model numbers:
 - a. Push Plates: Rockwood; No. 71 (6 inches by 15 inches)
 - b. Pull: Rockwood; No. 112 (13 inches by 1 inch diameter).
 - c. Pull: No. 71 (6 inches by 15 inches) base plate.

EXIT DEVICES BELOW ARE TOUCH PAD STYLE FOR STEEL AND WOOD DOORS ONLY. DEVICES LISTED MAY NOT BE APPROPRIATE FOR ALUMINUM DOORS. REVIEW MANUFACTURER CATALOGS PRIOR TO SELECTION. TUBULAR STYLE DEVICES ARE ALSO ACCEPTABLE (VONDUPRIN 55/88 SERIES).

FOR ACCESS CONTROL APPLICATIONS, TYPICALLY SPECIFY VON DUPRIN QEL TYPE DEVICES OR EQUIVALENT FROM SARGENT. QEL DEVICES OBTAIN POWER FROM POWER SUPPLIES AT THE ACCESS CONTROL PANEL ASSEMBLIES AND DO NOT NEED LOCAL POWER SUPPLIES.

2.13 EXIT DEVICE (PANIC SET)

EXIT DEVICES LISTED BELOW ARE APPROVED BY PLANT DEPARTMENT. USE RIM TYPE DEVICES EXCEPT AT MULLIONLESS DOUBLE DOOR OPENINGS.

APPLICATION: SINGLE DOOR OR DOUBLE DOOR WITH MULLION, WOOD OR STEEL, NON-FIRE-RATED.

- A. Non-Fire-Rated Rim Type Exit Device: Rim type units activated by a partial-width touch-bar, complete with accessories, including strike and hex-key operated dogging device mounted on mechanism housing to hold the touch-bar depressed and the latch bolt in the open position.

IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.

BELOW IS UNIT WITH OUTSIDE KEY CYLINDER RETRACTING LATCH BOLT, AND WITH OPTIONAL PULL HANDLE. POSSIBLE USE IN PUBLIC BUILDING ENTRANCE AND SECURE CORRIDOR-TO-ROOM ENTRANCE.

- a. Manufacturer/Model of Exit Devices: Von Duprin model 98NL with 990NL-R trim; or equivalent products of Sargent only.

BELOW IS UNIT WITH NO OUTSIDE CYLINDER, BUT WITH PULL HANDLE. POSSIBLE USE IN SERIES OF MULLIONED OPENINGS WHERE ANOTHER DOOR HAS CYLINDER FOR ENTRY.

- b. Manufacturer/Model of Exit Devices: Von Duprin model 98DT with 990DT trim; or equivalent products of Sargent only.

BELOW IS UNIT WITH NO OUTSIDE CYLINDER AND NO PULL HANDLE. POSSIBLE USE IN SECURED EXIT ONLY FOR BUILDING.

- c. Manufacturer/Model of Exit Devices: Von Duprin model 98EO; or equivalent products of Sargent only.

BELOW IS UNIT WITH OUTSIDE CYLINDER. PULL HANDLE MUST BE SPECIFIED SEPARATELY (OPTIONAL VON DUPRIN OR HEWI, FOR EXAMPLE). USE SIMILAR TO FIRST EXAMPLE ABOVE.

- d. Manufacturer/Model of Exit Devices: Von Duprin model 98NL-OP with 110NL trim; or equivalent products of Sargent only.

BELOW IS ELECTROMECHANICAL UNIT WITH OUTSIDE CYLINDER AND RIGID LEVER TRIM. OTHER OPTIONS ARE AVAILABLE. NOTE THAT THIS DEVICE CANNOT BE USED FOR FIRE RATED DOORS. SELECT 98 SERIES E-TYPE DEVICE.

- 2. Electromechanical exit device
 - a. Manufacturer/Model of Exit Devices:
 - 1) Von Duprin model 35A series as follows:
 - a) QEL latch retraction
 - b) Less dogging
 - c) Request to exit switch
 - d) Dummy trim 03 lever trim.
 - 2) Equivalent products of Sargent only.

APPLICATION: SINGLE DOOR OR DOUBLE DOOR WITH MULLION, WOOD OR STEEL, FIRE-RATED.

- B. Fire-Rated Rim Type Exit Device: Fire-rated, UL listed, rim type units activated by a partial-width touch-bar, complete with accessories including strike.

IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.

BELOW IS UNIT WITH OUTSIDE CYLINDER RETRACTING LATCH BOLT, AND WITH OPTIONAL (RIGID) LEVER HANDLE. POSSIBLE USE IN ELECTRICAL SUBSTATIONS.

- a. Manufacturer/Model of Exit Devices: Von Duprin model 98NL-F, 992L-rigid trim, and optional no. 03 lever; or equivalent products of Sargent only.

BELOW IS UNIT WITH DOUBLE CYLINDER. POSSIBLE USE IN RATED, SECURED, CORRIDOR-TO-ROOM ENTRANCE.

- b. Manufacturer/Model of Exit Devices: Von Duprin model 98L-F, 992L-double cylinder function trim and standard no. 06 lever; or equivalent products of Sargent only.

BELOW IS UNIT WITH NO OUTSIDE CYLINDER. POSSIBLE USE IN STAIR DOOR APPLICATIONS.

- c. Manufacturer/Model of Exit Devices: Von Duprin model 98L-F-BE, 992L-R with optional no. 03 lever; or equivalent products of Sargent only.

APPLICATION: DOUBLE DOORS WITHOUT MULLION, WOOD OR STEEL, NON-FIRE-RATED.

- C. Non-Fire-Rated Surface Mounted Vertical Rod Type Exit Device: Surface mounted, vertical rod type units activated by a partial-width touch-bar, complete with accessories including strike. Equip units with hex-key operated dogging device mounted on mechanism housing to hold the touch-bar depressed and the latch bolt in the open position. Omit bottom rods unless otherwise indicated.

IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.

BELOW IS UNIT WITH OUTSIDE CYLINDER RETRACTING LATCH BOLT (NIGHT LATCH FUNCTION) AND STANDARD PULL HANDLE. LIMIT USE TO MECHANICAL, ELECTRICAL OR SIMILAR SERVICE ROOMS THAT CAN ACCEPT NIGHT-LATCH FUNCTION - OTHERWISE USE MORTISE TYPE DEVICE WITH DOUBLE CYLINDER (SEE SUBSEQUENT PARA BELOW). USE IN CONJUNCTION BLANK ESCUTCHEON FUNCTION DEVICE BELOW ON OTHER DOOR OF PAIR.

- a. Manufacturer/Model of Exit Devices: Von Duprin model 9827NL, 990NL-V trim; or equivalent products of Sargent only.

BELOW IS UNIT WITH BLANK ESCUTCHEON AND STANDARD PULL HANDLE. USE IN CONJUNCTION WITH NIGHT LATCH FUNCTION UNIT ABOVE.

- b. Manufacturer/Model of Exit Devices: Von Duprin model 9872NL-BE, 990NL-V trim; or equivalent products of Sargent only.

BELOW IS UNIT WITH BLANK ESCUTCHEON AND OPTIONAL LEVER HANDLE. USE IN CONJUNCTION WITH NON-FIRE-RATED MORTISE UNIT (SEE SUBSEQUENT PARA BELOW).

- c. Manufacturer/Model of Exit Devices: Von Duprin model 9827L-BE, 992L-rigid trim; or equivalent products of Sargent only.

APPLICATION: DOUBLE DOORS WITHOUT MULLION, WOOD OR STEEL, FIRE-RATED.

- D. Fire-Rated Surface Mounted Vertical Rod Type Exit Device: Fire-rated, UL listed, surface mounted, vertical rod type units activated by a partial-width touch-bar, complete with accessories including strike.

IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.

BELOW IS UNIT WITH OUTSIDE CYLINDER RETRACTING LATCH BOLT, AND WITH OPTIONAL (RIGID) LEVER HANDLE (PULL COULD ALSO BE USED - SPEC 9827NL-F). LIMIT USE TO MECHANICAL, ELECTRICAL OR SIMILAR SERVICE ROOMS THAT CAN ACCEPT NIGHT-LATCH FUNCTION - OTHERWISE USE MORTISE TYPE DEVICE WITH DOUBLE CYLINDER (SEE SUBSEQUENT PARA BELOW). USE IN CONJUNCTION WITH EXIT ONLY FUNCTION DEVICE (9827EO-F) ON OTHER DOOR OF PAIR.

- a. Manufacturer/Model of Exit Devices: Von Duprin model 9827L-F, 992L-rigid trim with optional no. 03 lever; or equivalent products of Sargent only.

BELOW IS UNIT WITH NO OUTSIDE TRIM FOR EXIT ONLY. USE THIS UNIT IN CONJUNCTION WITH EITHER VERTICAL SURFACE ROD DEVICE IMMEDIATELY ABOVE OR MORTISE UNIT WITH DOUBLE CYLINDER DESCRIBED IN SUBSEQUENT PARA BELOW.

- b. Manufacturer/Model of Exit Devices: Von Duprin model 9827EO-F; or equivalent products of Sargent only.

APPLICATION: DOUBLE DOORS WITHOUT MULLION, WOOD OR STEEL, NON-FIRE-RATED. THE ONLY SANCTIONED USE OF THE MORTISE DEVICE BELOW IS IN A MULLIONLESS OPENING AS PART OF A PAIR, WITH THE OTHER DEVICE A VERTICAL SURFACE ROD TYPE.

- E. Non-Fire-Rated Mortise Type Exit Device: Surface mounted, vertical rod type units activated by a partial-width touch-bar, complete with accessories including strike. Equip units with hex-key operated dogging device mounted on mechanism housing to hold the touch-bar depressed and the latch bolt in the open position. Omit bottom rods unless otherwise indicated.

IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.

BELOW IS UNIT WITH OUTSIDE CYLINDER RETRACTING LATCH BOLT, AND WITH OPTIONAL DOUBLE CYLINDER INSTALLED INSIDE ON LATCH HEAD. THIS COMBINATION IMPROVES LOCKING FUNCTION FLEXIBIITY AND IS PREFERRED BY PLANT. USE AS ONE OF A PAIR IN A MULLIONLESS OPENING, WITH THE OTHER DOOR EQUIPPED WITH DEVICE HAVING VERTICAL SURFACE RODS AND BLANK ESCUTCHEON FUNCTION INDICATED IN NON-FIRE-RATED DEVICE PARA ABOVE (9827NL-BE OR 9872L-BE).

- a. Manufacturer/Model of Exit Devices: Von Duprin model 9875L, 992L-M-double cylinder trim, and with optional no. 03 lever; or equivalent products of Sargent only.

BELOW IS UNIT SAME AS ABOVE, EXCEPT FOR APPLICATIONS THAT DO NOT REQUIRE SECURED (LOCKABLE) DOORS. USE AS ONE OF A PAIR IN A MULLIONLESS OPENING, WITH THE OTHER DOOR EQUIPPED WITH DEVICE HAVING VERTICAL SURFACE RODS AND BLANK ESCUTCHEON FUNCTION INDICATED ABOVE (9827NL-BE OR 9872L-BE).

- b. Manufacturer/Model of Exit Devices: Von Duprin model 9875L-F-BE, and with optional no. 03 lever; or equivalent products of Sargent only.

APPLICATION: DOUBLE DOORS WITHOUT MULLION, WOOD OR STEEL, FIRE-RATED. THE ONLY SANCTIONED USE OF THE MORTISE DEVICE BELOW IS IN A MULLIONLESS OPENING AS PART OF A PAIR, WITH THE OTHER DEVICE A VERTICAL SURFACE ROD TYPE. WHERE THE SELECTIONS INDICATED WOULD INTERFERE WITH TWO-WAY CORRIDOR TRAFFIC, AND A MULLIONED OPENING CANNOT BE SUBSTITUTED, CONSIDER PROVIDING ELECTRIC HOLD-OPEN DEVICES.

- F. Fire-Rated Mortise Type Exit Device: Fire-rated, UL listed, mortise type units activated by a partial-width touch-bar, complete with accessories including strike.

IT IS STRONGLY RECOMMENDED THAT YOU SELECT APPROPRIATE UNITS AND TRIM FROM CATALOG. USE CHOICES BELOW ONLY FOR VERY SIMPLE PROJECTS.

BELOW IS UNIT WITH OUTSIDE CYLINDER RETRACTING LATCH BOLT, AND WITH OPTIONAL DOUBLE CYLINDER INSTALLED INSIDE ON LATCH HEAD. THIS COMBINATION IMPROVES LOCKING FUNCTION FLEXIBIITY AND IS PREFERRED BY PLANT. USE AS ONE OF A PAIR IN A MULLIONLESS OPENING, WITH THE OTHER DOOR EQUIPPED WITH DEVICE HAVING VERTICAL SURFACE RODS AND EXIT-ONLY FUNCTION (9827EO-F).

- a. Manufacturer/Model of Exit Devices: Von Duprin model 9875L-F, 992L-M-double cylinder trim, and with optional no. 03 lever; or equivalent products of Sargent only.

BELOW IS UNIT SAME AS ABOVE, EXCEPT FOR APPLICATIONS THAT DO NOT REQUIRE SECURED (LOCKABLE) DOORS. USE AS ONE OF A PAIR IN A MULLIONLESS OPENING, WITH THE OTHER DOOR EQUIPPED WITH DEVICE HAVING VERTICAL SURFACE RODS AND EXIT-ONLY FUNCTION (9827EO-F).

- b. Manufacturer/Model of Exit Devices: Von Duprin model 9875L-F-BE, 992L-M trim and with optional no. 03 lever; or equivalent products of Sargent only.

2.14 ASTRAGALS

- A. Manufacturer/Model of Astragals: EXAMPLE Pemko; No. 357SP, or equivalent products of National Guard, Reese, Zero.

2.15 FLUSH BOLTS

DO NOT EDIT WITHOUT PRODUCT CATALOG.

- A. Manual Flush Bolts: Mortise units, UL listed and rated for indicated application, with spring loaded snap action levers for manual operation.

USE BELOW ON RATED DOORS WHERE INACTIVE LEAF NOT REQUIRED FOR EGRESS.

1. Manufacturer/Model of Manual Flush Bolts: Provide Ives model numbers indicated or equivalent products of Rockwood or Door Controls International, as follows:

DELETE INAPPROPRIATE TYPES BELOW.

- a. Metal Doors: FB458, both top and bottom bolts.
b. Wood Doors: FB358, both top and bottom bolts.

SELECT ONE OF THE FOLLOWING.

- c. Dust Proof Strike: DP1 (threshold mounting).
d. Dust Proof Strike: DP2 (floor or threshold mounting).

USE BELOW FOR EASIER OPERATION AND WHERE INACTIVE LEAF IS NOT REQUIRED FOR EGRESS.

B. Constant Latching Flush Bolts: Mortise units, UL listed and rated for indicated application, with automatically retracting bottom bolt, and manually released top bolt when active leaf is opened.

1. Manufacturer/Model of Constant Latching Flush Bolts: Provide Ives model numbers indicated or equivalent products of Rockwood or Door Controls International, as follows:

DELETE INAPPROPRIATE TYPES BELOW.

- a. Metal Doors: FB51P (includes both top and bottom bolts).
- b. Wood Doors: FB61P (includes both top and bottom bolts).

SELECT ONE OF THE FOLLOWING

- c. Dust Proof Strike: DP1 (threshold mounting).
- d. Dust Proof Strike: DP2 (floor or threshold mounting).

USE BELOW WHERE INACTIVE LEAF IS REQUIRED FOR EGRESS.

C. Automatic Flush Bolts: Mortise units, UL listed and rated for indicated application, automatically retracting when active leaf is opened.

1. Manufacturer/Model of Automatic Flush Bolts: Provide Ives model numbers indicated or equivalent products of Rockwood or Door Controls International, as follows:

DELETE INAPPROPRIATE TYPES BELOW.

- a. Metal Doors: FB31P, (includes both top and bottom bolts).
- b. Wood Doors: FB41P, (includes both top and bottom bolts).

SELECT ONE OF THE FOLLOWING.

- c. Dust Proof Strike: DP1 (threshold mounting).
- d. Dust Proof Strike: DP2 (floor or threshold mounting).

2.16 COORDINATOR

DO NOT EDIT WITHOUT PRODUCT CATALOG.

A. Device coordinating pair of doors with astragals ensuring proper closing sequence. Provide coordinators complete with carry-bar and UL listed and rated for indicated application.

1. Manufacturer/Model of Coordinator: Ives model numbers indicated, or equivalent products of Rockwood or Door Controls International, as follows:

MODEL NUMBERS BELOW ARE FOR TYPICAL APPLICATIONS. CONSULT PRODUCT CATALOG FOR SIZES NOT LISTED BELOW.

USE BELOW FOR PAIR OF 2'-6" DOORS IN 5'-0" OPENING OR UNEQUAL PAIR OF DOORS IN 4'-0" OPENING (3'-0" ACTIVE LEAF WITH 1'-0" INACTIVE LEAF).

- a. Model: COR-42.

USE BELOW FOR PAIR OF 3'-0" DOORS IN 6'-0" OPENING.

- b. Model: COR-52.

USE BELOW FOR PAIR OF 3'-6" DOORS IN 7'-0" OPENING.

- c. Model: COR-60.

2.17 TRIM PROTECTOR BARS

- A. Provide type 304 stainless steel bent bar shape fabricated of 3/8-inch thick, 1-1/2-inch wide stock. Fabricate units 12-inches long overall with 4-inch long straight section for under-lever mounting.

MOST COMMON UNITS LISTED BELOW - OTHER SHAPES AND MOUNTING CONDITIONS ARE AVAILABLE.

- 1. Manufacturer/Model of Trim Protector Bars: Subject to compliance with requirements provide the following:
 - a. Solid Core Wood Doors: R110LPB; Rockwood Products Incorporated.
 - b. Hollow Metal Doors: R111LPB; Rockwood Products Incorporated.
 - c. Hollow Core Wood Doors: R112LPB; Rockwood Products Incorporated.

2.18 KICKPLATES

- A. Provide solid metal units as follows:

SELECT ONE MATERIAL BELOW.

- 1. Material: Stainless steel.
- 2. Material: Brass satin.

SELECT ONE FINISH BELOW.

- 3. Finish: Polished.
- 4. Finish: Satin.
- 5. Size: 1 1/2 inches less than door width on push side, 1/2 inch less than door width on pull side, by 8 inches high, by 0.050-inch thick.
- 6. Manufacturer/Model of Kickplates: EXAMPLE Rockwood K1050 series, 8 inches high or equivalent by any BHMA member.

THE FOLLOWING PRODUCT IS NOT UL LISTED FOR FIRE RATED DOORS.

- B. Provide non-colored, transparent acrylic plastic units as follows:

- 1. Size: 1 1/2 inches less than door width on push side, 1/2 inch less than door width on pull side, by 8 inches high, by 1/4 inch thickness.
- 2. Manufacturer/Model of Kickplates: EXAMPLE Rockwood K4125, 8 inches high or equivalent products by any BHMA member.

2.19 SWEEP SEALS

- A. Provide manufacturer's standard weatherstripping of type, size and profile indicated, continuous at bottom edges of each indicated door. Provide non-corrosive fasteners.

SUFFIX BELOW IS FOR CLEAR ANODIZED ALUMINUM FINISH. CHANGE SUFFIX TO "D" FOR DARK BRONZE ANODIZED ALUMINUM.

1. Manufacturer/Model Sweep Seals: EXAMPLE Pemko; No. 18062CNB, or equivalent products by any BHMA member.

2.20 JAMB SEALS

BELOW FOR STANDARD LIGHT-TIGHT DOORS - CONSIDER INCLUDING THRESHOLD FOR ADDITIONAL LIGHT-TIGHTNESS.

- A. Provide manufacturer's standard weatherstripping of type, size and profile indicated, continuous at head and jamb edges of each indicated door opening. Provide non-corrosive fasteners.

"CR" SUFFIX BELOW IS FOR CLEAR ANODIZED ALUMINUM FINISH. CHANGE TO "DR" SUFFIX FOR DARK BRONZE ANODIZED ALUMINUM.

1. Manufacturer/Model Jamb Seals: EXAMPLE Pemko; No. 315CR, or equivalent products by any BHMA member.

BELOW FOR SOUND-PROOFING - CONSIDER INCLUDING THRESHOLD TO ASSIST SOUND-PROOFING.

- B. Provide manufacturer's standard sound attenuating jamb and head seals of type, size, and profile indicated, continuous at head and jamb edges of scheduled door openings. Provide units with noncorrosive fasteners.

1. Manufacturer/Model: Pemko No. 350 CSR, or equivalent products by any BHMA member.

2.21 AUTOMATIC DOOR BOTTOM

NOTE THAT AUTOMATIC DOOR BOTTOMS CAN INCREASE DOOR OPENING FORCE REQUIREMENTS AND IMPEDE LATCHING IF NOT PROPERLY ADJUSTED. USE ONLY WHEN REQUIRED FOR SOUND ATTENUATION, RODENT ROOMS AND OTHER SPECIFIC APPLICATIONS. TYPICALLY, LIGHT SEALS CAN BE SATISFACTORILY ACCOMPLISHED USING A SWEEP SEAL/THRESHOLD COMBINATION. AVOID SPECIFYING FULLY MORTISED UNITS (DIFFICULT TO MAINTAIN) AND SURFACE MOUNTED UNITS (NOT ADA COMPLIANT)

- A. Provide manufacturer's standard units of type, size and profile indicated, continuous at bottom of indicated door opening. Provide non-corrosive fasteners.

BELOW IS NON-HANDED SEMI-MORTISED UNIT WITH SPONGE NEOPRENE SEAL. BE SURE TO INCLUDE LOW PROFILE THRESHOLD WHEN SPECIFYING A DOOR BOTTOM OVER CARPET.

"C" SUFFIX BELOW IS FOR CLEAR ANODIZED ALUMINUM FINISH. CHANGE TO "D" SUFFIX FOR DARK BRONZE ANODIZED ALUMINUM.

1. Manufacturer/Model Automatic Door Bottoms: EXAMPLE Semi-mortised Pemko; No. 4301CRL, or equivalent products by any BHMA member.

2.22 **ELECTRICALLY ACTIVATED MAGNETIC HOLD-OPEN DEVICE**

COORDINATE THIS EQUIPMENT WITH ELECTRICAL ENGINEER. ELECTRICAL SHEETS SHOULD SHOW WIRING, CONDUIT AND BOXES REQUIRED FOR AUTOMATIC HOLD-OPEN DEVICES.

A. Provide units consisting of a silently-operating wall-mounted electromagnet in electrical box with cover plate and door-mounted contact plate. Provide contact plate with swivel adjustment that adjusts to door contact angle indicated on drawings. Provide units that UL and FM listed.

1. Minimum holding force: 25 lbs.
2. Operating Voltage: 24 V. AC.
3. Finish: Brushed zinc on all visible components.

SELECT ONE OF THE FOLLOWING.

4. Manufacturer/Model:
 - a. Surface-mounted: LCN model SEM7830, Sargent 1560, Rixson 900 series.
 - b. Flush-mounted: LCN model SEM7840, Sargent 1561, Rixson 900 series.

2.23 **THRESHOLDS**

A. Provide manufacturer's standard, extruded, anodized aluminum units of type, size, and profile indicated, and complying with applicable portions of the Americans with Disabilities Act (ADA). Provide units continuous across bottom of door openings. Provide noncorrosive fasteners.

MODEL NUMBER BELOW IS FOR A LATCHING PANIC THRESHOLD. LATCHING PANIC THRESHOLDS ARE DESIGNED TO WORK IN CONJUNCTION WITH SURFACE APPLIED VERTICAL ROD EXIT DEVICES. THEY ARE ALSO USED TO PROVIDE A DOOR STOP AND SEAL AT THE BOTTOM OF THE DOOR FOR LIGHT AND SOUND ATTENUATION.

CONSULT MANUFACTURER'S CATALOG FOR OTHER APPLICATIONS: CHANGE IN FLOOR LEVEL, THERMAL BARRIER, ETC

1. Manufacturer/Model: Pemko No. 2005AT, or equivalent products by any BHMA member.

MODEL NUMBER BELOW IS A LOW PROFILE THRESHOLD FOR USE WITH AN AUTOMATIC DOOR BOTTOM OVER CARPET.

2. Manufacturer/Model: Pemko No. 2364A, or equivalent products by any BHMA member.

CONSIDER REMOVABLE MULLIONS BELOW WHERE FIXED MULLIONS CANNOT BE PROVIDED. COORDINATE WITH ALUMINUM ENTRANCES AND STOREFRONTS SECTION.

2.24 REMOVABLE MULLION

BELOW IS NON-KEYED REMOVABLE MULLION FOR ALUMINUM ENTRANCES. MODEL LISTED IS NOT COMPATIBLE WITH ELECTRIC STRIKES.

- A. Aluminum mullion: Provide removable mullion with weatherstripping, stabilizer set, and indicated door strikes.

SELECT FINISH. DARK BRONZE ANODIZED IS TYPICALLY APPLICABLE TO ALUMINUM ENTRANCES.

1. Finish: 313AN dark bronze anodized.
2. Manufacturer/Model:

BELOW IS NON-RATED DEVICE

- a. Von Duprin 5654, with weatherstripping and 154 stabilizer set or equivalent by Sargent.

BELOW IS KEYED ROBUST MULLION FOR HIGH TRAFFIC OPENINGS. IT DOES NOT HAVE WEATHERSTRIPPING FOR INFILTRATION/NOISE REDUCTION.

- B. Galvanized steel mullion: Provide units with keyed mechanism for quick removal of mullion; mortised cylinder equipped with space for building standard 7-pin SFIC. Unit shall self-lock upon reinstallation.

SELECT FINISH. DARK BRONZE COLOR AND FLUOROPOLYMER IS APPLICABLE TO ALUMINUM ENTRANCES

1. Finish: SP313 dark bronze painted finish.
2. Finish: Two-coat fluoropolymer finish as selected by Architect to match framing.
3. Manufacturer/Model:

BELOW IS NON-RATED DEVICE

- a. Von Duprin KR4954, with 154 stabilizer set or equivalent by Sargent.

BELOW IS RATED DEVICE. NOTE THAT THIS MULLION IS NOT EASILY REMOVED.

- b. Von Duprin KR9954, with 154 stabilizer set or equivalent by Sargent.

2.25 CONCEALED POWER TRANSFER

INCLUDE BELOW TO TRANSFER POWER FROM FRAME TO DOOR FOR DOORS WITH ELECTRIFIED MORTISE LOCKSET OR EXIT DEVICE. ELECTRIFIED HINGES ARE TYPICALLY NOT USED. COORDINATE WITH ELECTRICAL ENGINEER.

NOTE THAT EPT WILL VOID RATING OF EXISTING RATED DOOR / FRAME ASSEMBLY. IF RATING IS REQUIRED, SHOULD BE SPECIFIED WITH NEW DOORS AND FRAMES ONLY.

- A. Provide mortised electric power transfer device that is completely concealed when the door is in the closed position. Device shall be equipped with sufficient number and gage of conductors to accommodate function for hardware specified.

1. Manufacturer/Model:
Securitron EPT
Von Duprin EPT
- B. Armored door cords, electric hinges and other power transfer devices are not permitted.

2.26 WIRING HARNESS

INCLUDE BELOW TO CONNECT POWER FROM CONCEALED POWER TRANSFER TO ELECTROMECHANICAL LOCKSET.

- A. Provide manufacturer's quick connect wiring harness between concealed power transfer and electromechanical locking device. Harness shall have connectors on the lockset end, crimped pins on the other. Size harness as needed for door.
 1. Manufacturer/Model:
Allegion Connect

2.27 DOOR POSITION SWITCH

TYPICALLY DELETE BELOW - SPECIFIED IN DIV 28 ACCESS CONTROL SPEC. COORDINATE WITH ELECTRICAL.

- A. Provide low voltage recessed position sensor with ABS plastic enclosure.
 1. Manufacturer/Model: UTC Interlogix 1078 Series only.

2.28 FINISHES

- A. Provide finishes complying with BHMA A156.18 as follows.

SELECT FINISHES FROM LIST BELOW, OR REVISE TO SUIT PROJECT. GENERALLY MATCH HARDWARE FINISH OF ADJACENT WORK IN BUILDING. CONTACT A LOCKSMITH AT THE KEY OFFICE WITH QUESTIONS REGARDING SPECIFIC FINISH FOR EACH BUILDING.

1. US 10 (satin bronze).
 2. US 10B (oil rubbed bronze)
 3. US 26D (dull chrome).
 4. US 32D (satin stainless).
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 - C. Appearance of Finished Work: Noticeable variations in the same piece are not acceptable.
 - D. Standards: Where base material and quality of finish are not otherwise specified, comply with ANSI A 156 series standards applicable to each particular type of hardware.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Install each hardware item to comply with manufacturer's printed installation instructions and recommendations for application indicated, unless otherwise indicated by referenced standard or by provisions of this Section.
- B. Hardware Mounting Heights: Door and Hardware Institute "Recommended Locations for Builder's Hardware for Custom Steel Doors and Frames".

DELETE THE FOLLOWING IF NO NEW HARDWARE INSTALLED ON EXISTING DOORS OR ON NEW DOORS IN EXISTING FRAMES.

- C. Hardware at Existing Doors and Frames:
 - 1. Match existing hardware preparation heights on door or frame to be reused.

DELETE THE FOLLOWING PARA AND SUBPARAS IF NEW LOCKSETS OR LATCHSETS ARE NOT INSTALLED IN CONJUNCTION WITH EXISTING FRAMES.

- 2. Where new locksets are indicated to be installed at openings with an existing door frame, verify the compatibility of the existing strike plate and cut-out locations with the new hardware.
 - a. Where no existing strike exists, or where the new lockset cannot be located at a height matching the existing strike, cut out metal frames and provide new insert tabs, or rout out wood frames, as required to fully mortise the new strike plate.

DELETE SUBPARA ABOVE OR BELOW IF NOT APPLICABLE TO PROJECT.

- b. Where an existing strike plate and cut-out is not of suitable size or configuration to ensure proper operation of the lockset, including protection of frame finish, modify or replace strike plate, as practicable. Where new strike plates are required, modify frame as required for a fully mortised installation and install custom-fabricated replacement strike plates to accurately fit within existing mortise cut-outs.
- D. Sound-Attenuating Seals and other Acoustic Barrier Components: Install complete length of door edges, with tight joints to components on adjacent door edges. No gaps at any point around the door perimeter are allowed. Coordinate closer selection and installation (if applicable) to ensure compatibility with seals.
- E. Silencers: Install silencers as follows:
 - 1. Single Door Frames: Install three, equally spaced silencers on the latch jamb of new hollow metal door frames.

DELETE ABOVE AND BELOW TO SUIT PROJECT.

- 2. Double Door Frames: Install two silencers on the head of each new hollow metal double door frame.

DELETE BELOW IF NOT APPLICABLE, OR MODIFY TO SUIT PROJECT CONDITIONS.

3. Existing Door Frames: Where new doors are scheduled to be installed in new frames, or where new hardware is scheduled to be installed on existing doors, inspect existing silencers and replace damaged and defective units.

ALWAYS INCLUDE BELOW FOR PROJECTS WITH ACCESS CONTROL AND EXIT DEVICES.

F. Coordination with access control installation:

1. Electrified exit devices:

INCLUDE BELOW FOR RETROFIT APPLICATIONS ONLY

- a. Coordinate installation of electrified exit devices / electrification kits with access control system installation such that system is immediately ready to support electrified locking / unlocking of the device.

RETAIN BELOW IF ADDING ACCESS CONTROL TO EXISTING DOORS WITH EXIT DEVICES.

2. Exit device dogging:
 - a. Remove dogging capability and provide replacement cover plate on existing door hardware added to access control system.

INCLUDE BELOW FOR PROJECTS WITH ACCESS CONTROL.

3.2 COMMISSIONING

- A. Perform the commissioning activities as outlined in the Division 1 Section titled Commissioning and other requirements of the Contract Documents.

3.3 ADJUSTING

- A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended.

EDIT BELOW TO SUIT PROJECT REQUIREMENTS.

1. Electric Strikes: Adjust horizontal and vertical alignment of keeper to properly engage lock bolt.
2. Door Closers: Adjust sweep period and operating force to comply with accessibility requirements and ensure proper door function.

NOT REQUIRED FOR MOST SMALL PROJECTS. REVIEW WITH KEY OFFICE, CLIENT AND CM IF RETAINED TO ENSURE ENFORCEMENT.

- B. Post occupancy adjustment: Return to project one month after Owner's occupancy, and adjust hardware to proper operation and function. Instruct Owner's personnel in proper maintenance and adjustment.

SPECIFICATION DIVISION 8

NUMBER SECTION DESCRIPTION

DIVISION 08 OPENINGS

SECTION 088010 - GLAZING (INTERIOR APPLICATIONS)

END OF CONTENTS TABLE

DIVISION 08 OPENINGS

SECTION 088010 - GLAZING (INTERIOR APPLICATIONS)

*UPDATED TO CORRELATE WITH LANGUAGE IN SECTION 088000 AND
MANUFACTURERS UPDATED - 5/05.*

UPDATED TO INCLUDE FIRE-RATED GLAZING PRODUCTS - 5/04.

*THIS SECTION HAS BEEN PRE-EDITED TO APPLY ONLY TO SMALL
INTERIOR PROJECTS. USE MASTER SPECIFICATION SECTION 088000
"GLAZING") FOR EXTERIOR GLASS.*

*RATHER THAN USING THIS SECTION, CONSIDER INCLUDING VERY SMALL,
NON-COMPLEX GLASS ITEMS IN RELATED SECTIONS. EXAMPLE: GLASS
LITES IN DOORS IN STEEL OR WOOD DOOR SECTIONS; GLASS LIGHTS IN
SIDELITES IN STEEL FRAME OR FINISH CARPENTRY SECTION.
HOWEVER, IF INCLUDING THIS SECTION FOR ANY APPLICATION,
INCLUDE ALL GLAZING APPLICATIONS WITHIN IT.*

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of glass and glazing work is indicated on drawings.

1.2 SUBMITTALS

- A. Product Data: Submit manufacturer's technical data for each glazing material and fabricated glass product required, including installation and maintenance instructions.
- B. Certificate: Submit certificates from respective manufacturers attesting that glass and glazing materials furnished for project comply with requirements.

1.3 DEFINITIONS

- A. Deterioration of Laminated Glass and Gel-Filled Dual-Glazed Units: Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning glass units contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1.4 QUALITY ASSURANCE

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated.
 - 1. GANA Publications:
 - a. GANA's "Glazing Manual."

DELETE OPTION IN SUBPARAGRAPH BELOW IF NO LAMINATED GLASS IS SPECIFIED FOR PROJECT.

- b. GANA Laminated Division's "Laminated Glass Design Guide" and

DELETE BELOW IF NO SAFETY GLAZING IS REQUIRED. COORDINATE WITH PART 2 ARTICLES SPECIFYING MONOLITHIC, INSULATING AND LAMINATED GLASS PRODUCTS.

- B. Safety Glazing Standard: Comply with the following:
 - 1. Provide safety glass where indicated and where otherwise required by the Michigan Building Code.

REVISE PARAGRAPH BELOW FROM CATEGORY II MATERIALS TO CATEGORY I MATERIALS IF GLASS PANES ARE STATIONARY OR IN SWINGING DOORS AND ARE LESS THAN 9 SF IN AREA. REFER TO [HTTP://WWW.ACCESS.GPO.GOV/NARA/CFR/WAISIDX_03/16CFR1201_03.HTML](http://www.access.gpo.gov/nara/cfr/waisidx_03/16CFR1201_03.html) FOR COMPLETE DESCRIPTION OF CATEGORY I AND CATEGORY II MATERIALS.

- 2. Where safety glass is indicated, provide type of products indicated which comply with ANSI Z97.1 and testing requirements of 16 CFR Part 1201 for category II materials.
 - a. Subject to compliance with requirements, provide safety glass permanently marked with certification label of Safety Glazing Certification Council (SGCC) or other certification agency acceptable to Owner.
- C. Fire Resistance Rated Wire Glass: Provide wire glass products that are identical to those tested per ASTM E 163 (UL 9) and are labeled and listed by Underwriters Laboratories (UL) or other testing and inspecting agency acceptable to Authorities Having Jurisdiction.
- D. Glazing for Fire-Rated Door Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by UL or Intertek/Warnock Hersey, for fire-protection ratings indicated, based on testing according to NFPA 252.

RETAIN PARAGRAPH ABOVE FOR DOORS AND PARAGRAPH BELOW FOR WINDOWS IF WIRED GLASS OR ANOTHER FIRE-RESISTIVE GLAZING PRODUCT IS SPECIFIED IN PART 2.

- E. Glazing for Fire-Rated Window Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by UL or Intertek/Warnock Hersey, for fire ratings indicated, based on testing according to NFPA 257.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Protect glass and glazing materials during delivery, storage, and handling to comply with manufacturer's directions. Prevent damage to glass and glazing materials.

DELETE THE WARRANTY BELOW UNLESS MULTI-LITE LAMINATED OR GEL-FILLED UNITS IN PART TWO ARE INCLUDED.

1.6 WARRANTY

- A. Manufacturer's Special Warranty on Fire-Rated Laminated Glass and Gel-Filled, Dual-Glazed Units: Manufacturer's standard form, made out to Owner and signed by manufacturer agreeing to replace units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
 - 1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

SELECT APPROPRIATE APPLICATIONS BELOW.

- B. Primary Glass:
 - AFG Industries.
 - Guardian Industries Corp.
 - Pilkington Group
 - PPG Industries, Inc.
 - Visteon.
- C. Wire and Patterned Glass:
 - AFG Industries.
 - Guardian Industries.
 - Pilkington Group.
- D. Laminated Glass:
 - AFG Industries.
 - Guardian Industries Corp.
 - Interpane Glass Company.
 - PPG Industries, Inc.
 - Oldcastle Glass Group.
- E. Fire Rated Glazing:
 - EDIT LIST AFTER SELECTING TYPE OF FIRE-RATED GLAZING TO BE USED. NOT ALL TYPES OF PRODUCTS ARE MADE BY EACH OF THE MANUFACTURERS LISTED.**
 - 1. Glaverbel S.A.; distributed by Interedge Technologies.
 - 2. Interedge Technologies.
 - 3. R. Four Ltd.; distributed by Technical Glass Products.
 - 4. Nippon Electric Glass Co., Ltd.; distributed by Technical Glass Products.
 - 5. Pilkington Group; distributed by Technical Glass Products.
 - 6. SAFTI; a Division of O'Keefe's, Inc.
 - 7. Vetrotech Saint Gobain North America.

2.2 GLASS PRODUCTS

SELECT FROM UNITS BELOW. REFER TO AIA MASTERSPEC FOR ADDITIONAL GLASS TYPES.

- A. Clear Float Glass: ASTM C 1036 Type I (transparent glass, flat), Class 1 (clear), Quality q3 (glazing select).
- B. Tinted Float Glass: ASTM C 1036 Type I (transparent glass, flat), Class 2 (tinted heat absorbing and light reducing), Quality q3 (glazing select) and as follows:
 - 1. Gray: Manufacturer's standard tint.

WIRED GLASS IS NOT RECOGNIZED AS SAFETY GLAZING IN THE 2006 MBC, WHICH REQUIRES SAFETY GLAZING IN DOORS EXCEPT IN OPENINGS THROUGH WHICH A 3-INCH SPHERE IS UNABLE TO PASS.

USE OF WIRED GLASS IS ALSO LIMITED TO OPENINGS WITH A FIRE RATING OF 45 MIN. OR LESS.

THE USE OF WIRE GLASS IS NOT RECOMMENDED, PARTICULARLY IN ATHLETIC AND CHILD CARE FACILITIES.

- C. Wired Glass: ASTM C 1036 Type II (patterned and wired glass, flat), Class 1 (clear), Quality q6; complying with ANSI Z97.1; 1/4 inch thick; of form and mesh pattern indicated below:

SELECT ONE BELOW.

- 1. Polished Wire Glass: Form 1 (wired, polished both sides), Mesh m1 (diamond).
- 2. Polished Wired Glass: Form 1 (wire, polished both sides) Mesh m2 (square).
- D. Patterned Glass: ASTM C 1036 Type II (patterned and wired glass, flat), Form 3 (patterned), Quality q8 (glazing), Finish f1 (patterned one side), of thickness, pattern and class indicated below:

BELOW ARE TWO EXAMPLES. OTHER PATTERNS ARE AVAILABLE FROM MANUFACTURERS LISTED IN 2.1.D.

- 1. Pattern p2 (geometric): 1/4 inch thick; Class 1 (translucent).
 - a. Manufacturer/Product: Subject to compliance with requirements, one of the following: "Burlap"; Hordis Brothers. "Flax"; AFG.
- 2. Pattern p3 (random): 1/4 inch thick; Class 1 (translucent).
 - a. Manufacturer/Product: Subject to compliance with requirements, one of the following: "Industrex"; AFG.

THE FOLLOWING ARE SAFETY GLAZING MATERIALS.

- E. Clear Tempered Float Glass: ASTM C 1048 Condition A (uncoated surfaces), Type I (transparent glass, flat), Class I (clear), Quality q3 (glazing select), Kind FT (fully tempered).

- F. Laminated Safety Glass: ASTM C 1172, two panes of glass of equal thickness, laminated together with interlayer, and complying with requirements indicated below:
1. Thickness: Nominal 1/4 inch.
 2. Glass Characteristics: Float glass, Class 1 and clear for both panes; 1/8 inch thick for both panes.
 3. Interlayer: Clear PVB plastic, not less than 0.030 inches thick, unless specified otherwise in this Section.

2.3 FIRE-RATED GLAZING ASSEMBLIES

IF RETAINING ONE OR MORE PRODUCTS IN THIS ARTICLE, ALSO RETAIN APPLICABLE "GLAZING FOR FIRE-RATED DOOR ASSEMBLIES" OR "GLAZING FOR FIRE-RATED WINDOW ASSEMBLIES" PARAGRAPHS IN PART 1 "QUALITY ASSURANCE" ARTICLE.

NOTE THAT ALL OF THE PRODUCTS LISTED BELOW ARE REQUIRED TO BE INSTALLED AS PART OF AN APPROVED ASSEMBLY, AND THAT THE ASSEMBLY IS TESTED AS A UNIT.

- A. General: Products described in this article consist of tested assemblies containing both glazing material and manufacturer's approved framing systems.

PRODUCTS DESCRIBED IN FIRST PARAGRAPH AND ASSOCIATED SUBPARAGRAPHS BELOW DO NOT QUALIFY AS SAFETY GLAZING.

- B. Assemblies Containing Monolithic Ceramic Glazing Material: Proprietary product in the form of clear flat sheets of 3/16-inch nominal thickness weighing 2.5 lb/sq. ft., and as follows:

MODIFY SPECIFIED FIRE RATING AS REQUIRED FOR PROJECT. PRODUCTS LISTED BELOW CAN HAVE UP TO A 90-MINUTE RATING.

1. Fire-Protection Rating: 45 minutes, and permanently labeled by UL or Intertek/Warnock Hersey.
2. Product: Subject to compliance with requirements, provide one of the following:

DO NOT SELECT "PREMIUM FIRELITE" UNLESS APPEARANCE IS VERY IMPORTANT. PREMIUM IS CONSIDERABLY MORE EXPENSIVE THAN STANDARD, BUT PROVIDES BETTER OPTICAL CLARITY AND CLEARER COLOR.

- a. "Premium FireLite" (polished on both surfaces) by Nippon Electric Glass Co., Ltd., and distributed by Technical Glass Products.
- b. "Standard FireLite" (unpolished on both surfaces) by Nippon Electric Glass Co., Ltd., and distributed by Technical Glass Products.
- c. SGG Keralite FR-R (unpolished on both surfaces) by Vetrotech Saint Gobain North America.

PRODUCTS DESCRIBED IN PARAGRAPH AND ASSOCIATED SUBPARAGRAPHS BELOW DO QUALIFY AS SAFETY GLAZING.

FOR APPLICATIONS WHERE OPTICAL CLARITY IS EXTREMELY IMPORTANT, CHANGE "UNPOLISHED" TO "POLISHED" IN PARAGRAPH BELOW AND

DELETE KERALITE, WHICH IS ONLY AVAILABLE UNPOLISHED. COST FOR POLISHED PRODUCT WILL BE CONSIDERABLY HIGHER.

- C. Assemblies Containing Film-Faced Ceramic Glazing Material: Proprietary Category II safety glazing product in the form of a **3/16-inch**-thick, ceramic glazing material unpolished on both surfaces, faced on one surface with a clear glazing film, and as follows:

MODIFY SPECIFIED FIRE RATING AS REQUIRED FOR PROJECT.

1. Fire-Protection Rating: 45 minutes, and permanently labeled by UL or Intertek/Warnock Hersey.
2. Product: Subject to compliance with requirements, provide one of the following:
 - a. "FireLite NT" by Nippon Electric Glass Co., Ltd., and distributed by Technical Glass Products.
 - b. SGG Keralite FR-F by Vetrotech Saint Gobain North America.

PRODUCTS DESCRIBED IN PARAGRAPH AND ASSOCIATED SUBPARAGRAPHS BELOW ARE LAMINATED AND QUALIFY AS SAFETY GLAZING, WITH SIMILAR PERFORMANCE TO PRODUCTS ABOVE. THEY MAY BE MORE DURABLE BECAUSE THERE IS NO EXPOSED FILM WHICH COULD BE DAMAGED. HOWEVER, THEY ARE MORE EXPENSIVE THAN THE PRODUCTS ABOVE.

- D. Assemblies Containing Laminated Ceramic Glazing Material: Proprietary Category II safety glazing product in the form of 2 lites of clear ceramic glazing material laminated together to produce a laminated lite of **5/16-inch** nominal thickness; polished on both surfaces; weighing **4 lb/sq. ft.**; and as follows:

MODIFY SPECIFIED FIRE RATING AS REQUIRED FOR PROJECT. BOTH ARE AVAILABLE WITH UP TO A 3-HOUR RATING IN DOORS (SIZE LIMITATIONS APPLY) AND UP TO 90 MINUTES IN OTHER LOCATIONS.

1. Fire-Protection Rating: 45 minutes, and permanently labeled by UL or Intertek/Warnock Hersey.
2. Product: Subject to compliance with requirements, provide one of the following:
 - a. "FireLite Plus" (polished on both surfaces) by Nippon Electric Glass Co., Ltd., and distributed by Technical Glass Products.
 - b. SGG Keralite FR-L (unpolished on both surfaces) by Vetrotech Saint Gobain North America.

PRODUCT IN FIRST PARAGRAPH AND SUBPARAGRAPHS BELOW DOES NOT PASS HOSE-STREAM TEST, BUT DOES QUALIFY AS SAFETY GLAZING. CONSIDER USING IN 20-MINUTE DOORS IN LIEU OF WIRED GLASS.

- E. Assemblies Containing Specially Tempered Monolithic Glass: Proprietary Category II safety glazing product in the form of a specially tempered **1/4-inch**-thick monolithic lite, and as follows:

1. Fire-Protection Rating: 20 minutes, and permanently labeled by UL or Intertek/Warnock Hersey.
2. Product: Subject to compliance with requirements, provide one of the following:
 - a. "SuperLite" by SAFTI; a Division of O'Keeffe's Inc.

- b. "PyroEdge-20" by Interedge Technologies.
- c. "Fireglass 20" by Technical Glass Products.
- d. "PyroSwiss Extra" by Vetrattech Saint-Gobain.

THE FOLLOWING TWO CATEGORIES OF FIRE-RESISTANT GLAZING ARE CONSIDERABLY THICKER THAN 1/4" AND WILL REQUIRE SPECIAL FRAMING TO FIT IN A DOOR OR WINDOW. CONSIDER USE ONLY WHERE A BARRIER TO RADIANT HEAT PER ASTM E119 IS REQUIRED.

F. Assemblies Containing Laminated Glass with Intumescent Interlayers: Proprietary Category II safety glazing product in the form of multiple lites of Condition A (uncoated surfaces), Type I (transparent glass, flat), Class 1 (clear), Kind FT (fully tempered) float glass laminated with intumescent interlayers; and as follows:

- 1. Fire-Protection Rating: 60 minutes, and permanently labeled by UL or Intertek/Warnock Hersey.

MODIFY FIRE-PROTECTION RATING ABOVE AND PRODUCT NUMBER BELOW TO CORRESPOND WITH FIRE RATING REQUIRED FOR THE ASSEMBLY. THE THREE PRODUCTS BELOW MAY BE SEPDIIFIED WITH UP TO A 2-HOUR RATING, AND THEY QUALIFY AS A RADIANT AND CONDUCTIVE HEAT BARRIER.

- 2. Product: Subject to compliance with requirements, provide one of the following:
 - a. "PyroStop" by Pilkington Building Products North America and distributed by Technical Glass Products.
 - b. "Pyrobel-60-25" by Glaverbel S.A. and distributed by Interedge Technologies.
 - c. SGG Swissflam 60-N2 by Saint Gobain North America.

G. Assemblies Containing Gel-Filled, Dual-Glazed Units: Proprietary Category II safety glazing product in the form of two lites of Condition A (uncoated surfaces), Type I (transparent flat glass), Class 1 (clear), Kind FT (fully tempered) float glass; with a perimeter metal spacer separating lites and dual-edge seal enclosing a cavity completely filled with clear, fully transparent, heat-absorbing gel.

- 1. Fire-Protection Rating: 60 minutes, and permanently labeled by a testing and inspecting agency acceptable to authorities having jurisdiction.

THE FOLLOWING PRODUCT IS 1 1/8" THICK. MODIFY FIRE-PROTECTION RATING ABOVE AND PRODUCT NUMBER BELOW TO CORRESPOND WITH FIRE RATING REQUIRED FOR ASSEMBLY. ALSO AVAILABLE IN 45-MINUTE, 90-MINUTE AND 120-MINUTE RATINGS.

- 2. Product: Subject to compliance with requirements, "SuperLite II-XL 60 minute" by SAFTI; a Division of O'Keeffe's Inc.

2.4 MISCELLANEOUS GLAZING MATERIALS

- A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Edge Blocks and Setting Blocks: Neoprene, EPDM or silicone as required for compatibility with glazing sealants; of size shape and hardness recommended by manufacturer.
- C. Perimeter Insulation for Fire-Resistive Glazing: Identical to product used in test assembly to obtain fire-resistance rating.

2.5 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Require Glazier to inspect work of framing erector for compliance with manufacturing and installation tolerances and for effective sealing of joinery. Do not allow glazing work to proceed until unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members to receive glass, immediately before glazing.
- B. Comply with combined printed recommendations of glass manufacturers, of manufacturers of sealants, tapes, and other glazing materials, except where more stringent requirements are indicated, including those of referenced glazing standards.

3.3 GLAZING

- A. General: Comply with combined written instructions of manufacturers of glass, sealants, gaskets and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Provide edge and setting blocks to comply with requirements of referenced glazing standard, except where otherwise required by glass unit manufacturer.
- C. Set units of glass in each series with uniformity of pattern, draw, bow and similar characteristics.

- D. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could when installed, could weaken glass and impair performance and appearance.
- E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- F. Provide spacers for glass lites where length plus width is larger than 50 inches.
- G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

3.4 PROTECTION AND CLEANING

- A. Protect glass from contact with contaminating substances resulting from construction operations.
- B. Remove and replace glass which is broken, chipped, cracked, abraded or damaged in other ways during construction period, including natural causes, accidents and vandalism.
- C. Wash glass on both faces by method recommended by glass manufacturer immediately before date of Substantial Completion.

SPECIFICATION DIVISION 8

NUMBER SECTION DESCRIPTION

DIVISION 08 OPENINGS

SECTION 089000 - LOUVERS AND VENTS

END OF CONTENTS TABLE

DIVISION 08 OPENINGS
SECTION 089000 - LOUVERS AND VENTS

COORDINATE WITH MECHANICAL FOR LOUVER REQUIREMENTS AND LOCATION IN SPECIFICATION. ON SOME PROJECTS, MECHANICAL INCLUDES LOUVERS IN SECTION 233100.

THIS SECTION SPECIFIES EXTERIOR LOUVERS. USUALLY SPECIFY DOOR LOUVERS IN APPROPRIATE WOOD OR METAL DOOR SECTIONS. IF DOOR LOUVERS SPECIFIED HERE, INCLUDE APPROPRIATE CROSS REFERENCES IN BOTH DOOR AND LOUVER SECTIONS.

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of louvers is indicated on drawings.
- B. Type of louver is exterior wall mounted, drainable blade louver.

1.2 QUALITY ASSURANCE

- A. Standards: Provide units whose ratings have been determined in compliance with AMCA Standard 500. Comply with "Architectural Sheet Metal Manual" recommendations for fabrication, construction and installation procedures.
- B. Field Measurements: Verify size of louver units prior to fabrication.

1.3 SUBMITTALS

- A. Product Data: Mfr's literature indicating compliance with requirements.
- B. Samples for Initial Selection: Submit manufacturer's brochure indicating full range of manufacturer's standard finishes.

PART 2 - PRODUCTS

COORDINATE PRODUCT SELECTION WITH M/E.

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturer/Model: Ruskin Manufacturing Co./ELF 375D, or (subject to compliance with requirements of this Section) products of one of the following:
The Airolite Co.
American Warming and Ventilating Co.
Construction Specialties, Inc.
Industrial Louvers, Inc.
Tuttle and Bailey Co.

2.2 STATIONARY, DRAINABLE BLADE LOUVER

- A. Provide units with aluminum extrusions not less than 0.081" thick, and with the following characteristics:
 - 1. Free Area: Not less than 60 percent for 48 inch by 48 inch size.
 - 2. Maximum Static Pressure Loss: 0.08 inch w.g. at 2100 cfm.

2.3 FABRICATION

- A. Fabricate frames, including sills to suit adjacent construction and provide mullions at spacing no further apart than recommended by mfr.
- B. Louver Screens: Inside mounted, galvanized steel bird screens, 1/2 inch by 1/2 inch grid, mounted in removable anodized aluminum frame.
- C. Flanges: Provide flanged edges for duct connection.
- D. Metal Finishes: Comply with NAAMM "Metal Finishes Manual" to provide uniformly finished products:
 - 1. Inhibitive thermo-cured primer, 0.2 mil dry film thickness; thermo-cured fluorocarbon coating, 1.0 mil min. dry film thickness; "Kynar 500" based coatings. Color as selected by Architect from mfr's standard colors.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install plumb, level, in proper alignment with adjoining work, and in accordance with mfr's instructions. Use non-ferrous metal or galvanized anchors and inserts. Coat surfaces of aluminum in contact with dissimilar metals, concrete, or masonry with zinc chromate primer or bituminous paint.
 - 1. Provide concealed gasket, flashings and joint fillers as indicated, and as required to make installation weather-tight.
- B. Repair damaged finishes leaving no evidence of corrective work.

SPECIFICATION DIVISION 9

NUMBER SECTION DESCRIPTION

DIVISION 09 FINISHES

SECTION 092116 - GYPSUM BOARD ASSEMBLIES

END OF CONTENTS TABLE

DIVISION 09 FINISHES
SECTION 092116 - GYPSUM BOARD ASSEMBLIES

THIS SECTION HAS BEEN PRE-EDITED TO APPLY ONLY TO SMALL RENOVATION PROJECTS. USE AIA MASTERSPEC SECTION OF SAME NAME AND NUMBER FOR SUCH ASSEMBLIES AS SUSPENDED GYP. CEILINGS HUNG BY MEANS OTHER THAN STUDS, CURVED WALLS, THERMALLY INSULATING WALLS AND WORK IN NEW STRUCTURES. USE SECTION 092913 "GYPSUM BOARD SHAFT-WALL ASSEMBLIES" FOR SHAFT-WALLS AROUND STAIRS AND ELEVATORS.

12/1/2017 - ADDED IDENTIFICATION REQUIREMENTS.

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Gypsum board assemblies, including nonload-bearing steel framing.

DELETE BELOW IF NO WATER-RESISTANT GYPSUM DRYWALL BACKERS FOR TILE.

2. Water-resistant gypsum drywall backer units installed with gypsum board assemblies.

DELETE BELOW IF NO CEMENTITIOUS BACKERS FOR TILE.

3. Cementitious backer units installed with gypsum board assemblies.

DELETE BELOW IF NO SHAFT WALL ASSEMBLIES.

4. Gypsum board shaft-wall assemblies.

1.2 ASSEMBLY PERFORMANCE REQUIREMENTS

DELETE BELOW IF STC-RATED ASSEMBLIES ARE NOT REQUIRED. IF RETAINING PARA, INDICATE STC RATINGS ON DRAWINGS.

A. Sound Transmission Characteristics: Where STC ratings are indicated, provide assemblies with STC ratings determined and classified in accordance with ASTM E 90 and ASTM E 413, respectively.

DELETE BELOW IF NO FIRE-RATED GYPSUM BOARD ASSEMBLIES.

B. Fire Resistance: Provide gypsum board assemblies with fire-resistance ratings indicated.

DELETE BELOW IF NO SHAFT WALL IS INCLUDED IN PROJECT.

- C. Shaft-Wall Performance Requirements: Provide gypsum board shaft-wall assemblies that are composed of proprietary gypsum board panels and metal components designed for erection from outside the shafts, and that comply with performance requirements specified as determined from testing manufacturers' standard assemblies representing those indicated for this Project.

1.3 SUBMITTALS

- A. Product data for each type of product specified.

1.4 QUALITY ASSURANCE

DELETE BELOW IF NO FIRE-RATED ASSEMBLIES. INDICATE RATING, TESTING AGENCY, AND TESTING AGENCY'S DESIGN DESIGNATION ON DRAWINGS.

- A. Fire-Test-Response Characteristics: Provide assemblies identical to those specified by indicated GA File Numbers in GA-600 "Fire Resistance Design Manual" or design designations in UL "Fire Resistance Directory," and that have been tested for fire resistance according to ASTM E 119 by an independent testing and inspecting agency.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1. Gypsum Board and Related Products:
 - a. CertainTeed Saint-Gobain
 - b. Georgia-Pacific Corp.
 - c. Lafarge North America.
 - d. National Gypsum Co.
 - e. United States Gypsum Co.
- 2. Steel Framing and Furring:
 - a. Clark Dietrich Building Systems.
 - b. Jaimes Industries. Inc.

DELETE BELOW IF NO TILE BACKER PANELS.

- 3. Gypsum Backer Units:
 - a. Georgia-Pacific.
- 4. Cementitious Backer Units:
 - a. FinPan, Inc.
 - b. Georgia-Pacific Corp.
 - c. National Gypsum Co.
 - d. United States Gypsum Co.

DELETE BELOW IF NO SHAFT-WALL.

- 5. Gypsum Board Shaft-Wall Assemblies:
 - a. Dietrich Industries, Inc.
 - b. Georgia-Pacific Corp.
 - c. National Gypsum Co.
 - d. United States Gypsum Co.

2.2 STEEL FRAMING FOR SUSPENDED CEILINGS

DELETE ARTICLE IF NO SUSPENDED OR FURRED CEILINGS.

- A. General: Provide components complying with ASTM C 754 for conditions indicated.

DELETE BELOW IF NO STEEL STUDS USED FOR CEILING/SOFFIT FRAMING.

- B. Steel Studs for Ceiling Furring Channels: ASTM C 645, complying with the following requirements:

MODIFY BELOW TO 0.0329 INCH IF DESIRED.

1. Minimum Base (Uncoated) Metal Thickness: 0.027 inch, unless otherwise indicated.
2. Depth: 2-1/2 inches, unless otherwise indicated.
3. Protective Coating: ASTM A 653, G 40 hot-dip galvanized coating.

2.3 STEEL FRAMING FOR WALLS AND PARTITIONS

- A. General: Provide framing shapes as indicated, and with the following finish:

1. Protective Coating: Manufacturer's standard corrosion-resistant coating.

USUALLY RETAIN ABOVE AND DELETE BELOW. RETAIN BELOW IF MOISTURE RESISTANCE IS IMPORTANT (WET LABS, TOILETS, ANIMAL ROOMS, EXTERIOR AREAS, ETC.).

2. Protective Coating: ASTM A 653, G 40 hot-dip galvanized coating.

- B. Steel Studs and Runners: ASTM C 645, Manufacturer's standard profiles, and complying with the following requirements:

MODIFY BELOW TO 0.0329 INCH IF DESIRED.

1. Minimum Base (Uncoated) Metal Thickness: As indicated on drawings, or if not indicated, 0.0329 inch.

REVISE BELOW IF REQUIRED. COMMON ALTERNATIVES INCLUDE 1-5/8", 2-1/2", 4", AND 6".

2. Minimum Depth: 3-5/8 inches, unless otherwise indicated.

BELOW IS PROPRIETARY DEFLECTION-TOLERANT TOP TRACK SYSTEM FOR FIRE-RATED PARTITIONS UP TO UNDERSIDE OF METAL ROOF DECKS, OR OTHER CONDITIONS WHERE DEFLECTION OF MORE THAN ABOUT 1/4-INCH IS EXPECTED. NOTE THAT TYPICAL PERIMETER RELIEF JOINT DETAILS ARE LIMITED TO 1/2-INCH MAXIMUM WIDTH.

- C. Deflection and Firestop Track: Top runner designed to allow partition heads to expand and contract with movement of structure above while maintaining continuity of the assembly. Comply with requirements of ASTM C 645 except configuration, of thickness indicated for studs and width to accommodate depth of studs indicated with flanges offset at midpoint to accommodate gypsum board thickness.

1. Offset Configuration: Shadow-line design with offset projecting out from depth of stud.
2. Product: Subject to compliance with requirements, a product that may be incorporated in the Work includes, but is not limited to, "Fire Trak" manufactured by Fire Trak Corp.

BELOW IS PROPRIETARY TOP TRACK SYSTEM FOR PARTITIONS UP TO UNDERSIDE OF SUSPENDED CEILINGS. DELETE IF WALLS PENETRATE CEILINGS.

- D. Prefinished Top Track: Proprietary, pre-finished stud receptor track mounted to suspended ceiling grid. ASTM C 645, 25 gage galvanized steel; and as follows:
1. Accessories: Manufacturer's standard applied trim accessories for outside corners, wall ends and similar conditions requiring additional trim for a complete, finished appearance.
 2. Finish: Baked-on polyester paint in color to match suspended ceiling grid manufacturer's standard white.
 3. Product: Eliminator Track; Pro Products Mfg.
- E. Steel Rigid Furring Channels: ASTM C 645, hat shaped, depth and 0.0179 inch minimum thickness of base (uncoated) metal, unless otherwise indicated. Provide furring brackets if recommended by manufacturer for application indicated.

INCH DEPTH FOR BELOW IS ALSO AVAILABLE.

1. Depth: 7/8 inch.

RETAIN BELOW IF STEEL SHEET BLOCKING OR BRACING IS REQUIRED. INDICATE LOCATIONS, LENGTHS, AND WIDTHS ON DRAWINGS OR ADD A DETAILED DESCRIPTION TO TEXT.

- F. Steel Flat Strap and Backing Plate: Steel sheet for blocking and bracing, length and width as indicated, complying with ASTM A 653 or ASTM A 568, as follows:
1. Base (Uncoated) Metal Thickness: 0.0598 inch unless otherwise indicated.

2.4 GYPSUM BOARD PRODUCTS

- A. General: Provide gypsum board of types indicated in maximum lengths available that will minimize end-to-end butt joints.
- B. Gypsum Wallboard: ASTM C1396 and regular type for vertical surfaces, sag resistant for horizontal surfaces, Type X where required for fire-resistance-rated assemblies.
1. Thickness: Unless otherwise indicated, provide units that are 5/8 inch thick for all applications except 1/2 inch thick for ceilings and soffits.

DELETE ARTICLE IF NO SHAFT-WALL REQUIRED FOR PROJECT.

- C. Gypsum Liner Panels: Proprietary liner panels as required for the specific fire-resistant-rated gypsum board shaft-wall assemblies indicated, with moisture-resistant paper facings.

DELETE BELOW IF CEMENTITIOUS BACKER UNITS ARE EXCLUSIVELY SPECIFIED AS BASE FOR TILE.

- D. Glass-Mat, Water-Resistant Gypsum Backing Board: ASTM C 1178, of type and thickness indicated below:
 - 1. Type and Thickness: Regular, 1/2 inch (12.7 mm) thick, unless otherwise indicated.
 - 2. Type and Thickness: Type X, 5/8 inch (15.9 mm) thick, where required for fire-resistance-rated assemblies and where indicated.
 - 3. Products: Subject to compliance with requirements, provide "Dens-Shield Tile Backer" manufactured by Georgia-Pacific Corp.

2.5 CEMENTITIOUS BACKER UNITS

DELETE ARTICLE IF CEMENTITIOUS BACKER UNITS ARE NOT REQUIRED FOR PROJECT OR IF SPECIFIED IN ANOTHER SECTION.

- A. Provide cementitious backer units complying with ANSI A118.9 and in maximum lengths available to minimize end-to-end butt joints.
 - 1. Thickness: Manufacturer's standard thickness, but not less than 7/16 inch, unless otherwise indicated.
 - 2. Width: Manufacturer's standard width, but not less than 32 inches.

2.6 TRIM ACCESSORIES

- A. Accessories: Formed steel sheet zinc coated by hot-dip process, or rolled zinc, complying with the requirements of ASTM C 1047 for cornerbead, L, LC, U shapes.
- B. One-piece control joint formed from rolled zinc with V-shaped slot and removable strip covering slot opening.

ADD ACCESSORIES FOR CURVED EDGES HERE, IF ANY - SEE AIABAS.

2.7 JOINT TREATMENT MATERIALS

- A. General: Provide joint treatment materials complying with ASTM C 475 and the recommendations of both the manufacturers of sheet products and of joint treatment materials.

BELOW IS ONLY DRYING TYPE COMPOUND. SPECIFY SETTING-TYPE JOINT COMPOUNDS WHERE FAST ONE-DAY FINISHING IS REQUIRED, OR WHERE RAPID DRYING CONDITIONS WOULD CAUSE DRYING-TYPE JOINT COMPOUNDS TO SHRINK AND LOSE SURFACE STRENGTH. SEE AIABAS FOR LANGUAGE AND DETAILS.

- B. Joint Treatment for Gypsum Board: Provide paper reinforcing tape; and factory-packaged, vinyl-based, jobsite- or factory-mixed products. At Contractor's option, provide either specifically formulated taping and topping compounds or all-purpose compounds.

RETAIN BELOW IF CEMENTITIOUS BACKER UNITS ARE SPECIFIED IN THIS SECTION.

- C. Joint Treatment Cementitious Backer Units: Tape and compound as recommended by cementitious backer unit manufacturer.

2.8 MISCELLANEOUS MATERIALS

DELETE PRODUCTS NOT NEEDED. EDIT PART 3 FIRST AND RETAIN APPLICABLE PRODUCTS IN THIS ARTICLE.

- A. Acoustical Sealant for Exposed and Concealed Joints: Latex sealant complying with ASTM C 834; and subject to compliance with requirements, one of the following products:
 - 1. PL Acoustical Sealant; ChemRex, Inc.; Contech Brands.
 - 2. AC-20 FTR Acoust. and Insul. Sealant; Pecora Corp.
 - 3. SHEETROCK Acoustical Sealant; USG Co.
- B. Laminating Adhesive: Special adhesive or joint compound recommended for laminating gypsum panels.
- C. Spot Grout: ASTM C 475, setting-type joint compound recommended for spot-grouting hollow metal door frames.
- D. Foam Gaskets: Closed-cell vinyl foam adhesive-backed strips, 1/8 inch thick, in width to suit metal stud size.
- E. Sound-Attenuation Blankets: Unfaced mineral-fiber blanket insulation produced by combining glass fibers with thermosetting resins to comply with ASTM C 665 for Type I (blankets without membrane facing).

CHANGE BELOW TO ASTM C 954 IF GYPSUM WILL BE ATTACHED TO COLD-FORMED STEEL FRAMING SPECIFIED IN DIVISION 5.

- F. Fasteners: Provide size and type of screws recommended by manufacturer for application indicated, and as follows:
 - 1. Metal and Gypsum Board: Steel drill screws complying with ASTM C 1002 and of size, corrosion resistance and holding power required to fasten steel framing and furring members securely to substrates involved.

RETAIN BELOW IF CEMENTITIOUS BACKER UNITS ARE SPECIFIED IN THIS SECTION.

- 2. Cementitious Backer Units: Corrosion-resistant screws recommended by panel manufacturer.

BELOW IS FOR ATTACHING STEEL FRAMING INTO CONCRETE.

- 3. Powder-Actuated Fasteners in Concrete: Corrosion-resistant materials suitable for application and capable of sustaining, without failure, a load equal to 5 times that imposed by ceiling construction, as determined by testing according to ASTM E 1190.

DELETE ARTICLE BELOW IF NO SHAFT-WALL.

2.9 SHAFT-WALL BASIC ASSEMBLY DESCRIPTION

- A. Cavity Shaft-Wall Assemblies: Provide assemblies constructed of proprietary gypsum liner panels inserted between steel tracks at each end of studs; with specially shaped steel studs engaged in tracks and fitted between gypsum liner panels; and with gypsum board on finished side or sides applied to studs in the number of layers, thicknesses and arrangement indicated.
 - 1. Gypsum Liner Panel Thickness: As standard with manufacturer for gypsum board shaft-wall assemblies indicated.
 - 2. Stud Shape and Depth and Thickness: As standard with manufacturer for gypsum board shaft-wall assemblies indicated; but not less than 0.0284-inch minimum base metal thickness.
 - 3. Room-Side Finish: As indicated.

PART 3 - EXECUTION

3.1 INSTALLING STEEL FRAMING, GENERAL

- A. Steel Framing Installation Standard: Comply with ASTM C 754 and with ASTM C 840 requirements that apply to framing installation.

DELETE BELOW IF NONE. WHERE ITEMS TO BE SUPPORTED ARE NOT SHOWN ON DRAWINGS (SUCH AS OWNER'S LAB EQUIPMENT AND BINDER BINS FOR MOVABLE FURNITURE), CONSIDER SCHEDULING LOCATIONS AND SIZES OF SUPPORT PANELS IN "SCHEDULING" ARTICLE AT END OF SECTION, OR ON DRAWINGS.

- B. Install supplementary framing, blocking, and bracing at terminations to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction. Comply with details shown or, if not shown, with USG Co.'s "Gypsum Construction Handbook."
- C. Isolate steel framing from building structure at the following locations:

BELOW ARE EXAMPLES ONLY. RETAIN OR REVISE TO SUIT PROJECT.

- 1. In ceilings where building structure abuts ceiling perimeter or penetrates ceiling.
- 2. Where partition framing and wall furring abut structure, except at floor.

INCLUDE DETAILS ON DRAWINGS SHOWING CONTROL- AND EXPANSION-JOINT CONSTRUCTION AND LOCATIONS FOR BOTH FIRE-RESISTANCE-RATED AND NONRATED ASSEMBLIES.

- D. Independently frame both sides of joints at building control and expansion joints.

3.2 INSTALLING STEEL FRAMING FOR SUSPENDED CEILINGS

DELETE THIS ARTICLE IF NO SUSPENDED CEILINGS/SOFFITS.

A. Install suspended steel framing components in sizes and at spacings indicated, but not less than that required by the referenced steel framing installation standard.

1. Do not connect or suspend steel framing from ducts, pipes, or conduit, or attach to steel roof deck.
2. Framing Channel Spacing: 16 inches o.c.

USUALLY DELETE BELOW AND RETAIN ABOVE.

3. Framing Channel Spacing: 24 inches o.c.

B. Installation Tolerances: Install with cross-furring members level to within 1/8 inch in 12 feet as measured both lengthwise on each member and transversely between parallel members.

3.3 INSTALLING STEEL FRAMING FOR WALLS AND PARTITIONS

A. Install runners (tracks) at floors and ceilings, and structural walls and columns where gypsum board stud assemblies abut other construction.

RETAIN BELOW IF STUDS WILL ABUT MASONRY OR DISSIMILAR METALS AT EXTERIOR WALLS.

1. Where studs are installed directly against exterior walls, install foam gaskets between studs and wall.

B. Installation Tolerances: Install each steel framing and furring member so that fastening surfaces do not vary more than 1/8 inch from the plane formed by the faces of adjacent framing.

C. Extend partition framing to height indicated. Continue framing over frames for doors and openings and frame around ducts penetrating partitions above ceiling to provide support for gypsum board.

EDIT PARA BELOW TO SUIT PROJECT CONDITIONS. BE SURE TO SHOW PERIMETER RELIEF DETAIL ON DRAWINGS - ONE CAN BE FOUND IN THE "USE OF MANUAL" CHAPTER OF THE GYPSUM ASSOCIATION "FIRE RESISTANCE AND SOUND CONTROL MANUAL."

1. Terminate partition framing as shown on Drawings; or if not shown, as follows:

SELECT ONE BELOW.

- a. At suspended ceilings.

DELETE IF NOT REQUIRED. SEE DISCUSSION UNDER "PRODUCTS" PART IN THIS SECTION.

- 1) Install proprietary prefinished top track.
- b. 6-inches above exposed face of suspended acoustic ceiling panels.
- c. Full height to structural supports or substrates above suspended ceilings, if any. Cut studs 1/2 inch short of full height to provide perimeter relief.

EDIT BELOW TO SUIT PROJECT, OR DELETE IF NOT REQUIRED. SEE DISCUSSION UNDER "PRODUCTS" PART IN THIS SECTION.

- 1) Install proprietary deflection and firestop track at fire-rated partitions, and as otherwise indicated.

RETAIN, REVISE OR DELETE BELOW TO SUIT PROJECT.

- 2. For STC-rated and fire-resistance-rated partitions that extend to the underside of floor/roof slabs and decks or other continuous solid structural surfaces to obtain ratings, install framing around structural and other members extending below floor/roof slabs and decks, as needed, to support gypsum board closures needed to make partitions continuous from floor to underside of solid structure.

D. Install steel studs and furring in sizes and at spacings as follows:

- 1. Maximum spacing between studs: 16-inches o.c., unless otherwise indicated.

SELECT EITHER ABOVE OR BELOW. USE 16-INCH MINIMUM SPACING FOR CEMENTITIOUS BACKER UNITS.

- 2. Maximum spacing between studs: 24-inches o.c., unless otherwise indicated.

E. Frame openings to comply with GA-219, and with applicable published recommendations of gypsum board manufacturer, unless otherwise indicated. Attach vertical studs at jambs with screws either directly to frames or to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.

- 1. Install 2 studs at each jamb, unless otherwise indicated.

ADD REQUIREMENTS FOR INSTALLATION OF THERMAL INSULATION AND VAPOR BARRIERS HERE. SEE AIABAS FOR DETAILS.

3.4 APPLYING AND FINISHING GYPSUM BOARD, GENERAL

- A. Gypsum Board Application and Finishing Standards: Install and finish gypsum panels to comply with ASTM C 840 and GA-216.
- B. Install gypsum panels with face side out.
- C. Locate both edge or end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Avoid joints other than control joints at corners of framed openings where possible.

DELETE BELOW IF HOLLOW METAL DOOR FRAMES ARE NOT USED IN STEEL-FRAMED PARTITIONS.

- D. Spot grout hollow metal door frames for solid-core wood doors, hollow metal doors, and doors over 32 inches wide. Apply spot grout at each jamb anchor clip and immediately insert gypsum panels into frames.
- E. Form control and expansion joints at locations indicated and as detailed, with space between edges of adjoining gypsum panels, as well as supporting framing behind gypsum panels.

- F. Isolate perimeter of gypsum board partitions at structural abutments, except floors, with 1/4- to 1/2-inch-wide spaces and trim edges with LC-bead edge trim where edges of gypsum panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

DELETE BELOW IF NO SOUND-RATED PARTITIONS.

- G. Where STC-rated gypsum board assemblies are indicated, seal construction at perimeters, behind control and expansion joints, openings, and penetrations with a continuous bead of acoustical sealant including a bead at both faces of the partitions. Comply with ASTM C 919 and manufacturer's recommendations for location of edge trim and closing off sound-flanking paths around or through gypsum board assemblies, including sealing partitions above acoustical ceilings.
- H. Space fasteners in gypsum panels according to referenced gypsum board application and finishing standard and manufacturer's recommendations.
 - 1. Space screws a maximum of 12 inches o.c. for vertical applications.

DELETE BELOW IF NO TILE BACKER BOARD.

- I. Space fasteners in tile substrate panels a maximum of 8 inches o.c.

3.5 GYPSUM BOARD APPLICATION METHODS

- A. Install gypsum wallboard panels on ceilings prior to wall/partition board application and at right angles to framing.
- B. On partitions/walls, apply gypsum panels horizontally (perpendicular to framing), unless parallel application is required for fire-resistance-rated assemblies. Use maximum-length panels to minimize end joints. Stagger abutting end joints not less than one framing member in alternate courses of board.
 - 1. On Z-furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.

DELETE PARA AND SUBPARAS BELOW IF NONE.

- C. Wall Tile Substrates: For substrates indicated to receive thin-set ceramic tile and similar rigid applied wall finishes, comply with the following:

DELETE BELOW IF WATER-RESISTANT GYPSUM BOARD IS RETAINED BELOW.

- 1. Install cementitious backer units to comply with ANSI A108.11 at showers, and where indicated.

DELETE BELOW IF CEMENTITIOUS BACKER UNITS ARE RETAINED ABOVE. DRAWINGS SHOULD SHOW SEALANT INSTALLED IN 1/4-INCH GAP.

- 2. Install water-resistant gypsum backing board panels at showers, tubs, and where indicated. Install with 1/4-inch open space where panels abut other construction or penetrations.

**RETAIN BELOW IF REGULAR GYPSUM BOARD IS ACCEPTABLE AS WALL-TILE
SUBSTRATE FOR DRY LOCATIONS.**

3. Install gypsum wallboard panels with tapered edges taped and finished to produce a flat surface except at showers, tubs, and other locations indicated to receive water-resistant panels.

D. Apply gypsum panels to supports with screws.

E. Direct-Bonding to Substrate: Where gypsum panels are indicated as directly adhered to a substrate (other than studs, joists, furring members, or base layer of gypsum board), comply with gypsum board manufacturer's recommendations, and temporarily brace or fasten gypsum panels until fastening adhesive has set.

3.6 INSTALLING TRIM ACCESSORIES

A. General: Fasten trim accessories according to accessory manufacturer's directions for type, length, and spacing of fasteners.

**BELOW ARE EXAMPLES OF UNIVERSAL SCOPE DEFINITIONS FOR USING TRIM.
REVISE AS DESIRED OR SHOW ON DRAWINGS.**

B. Install cornerbead at external corners.

C. Install edge trim where edge of gypsum panels would otherwise be exposed. Provide edge trim type with face flange formed to receive joint compound, except where other types are indicated.

D. Install control joints according to ASTM C 840 and manufacturer's recommendations and in specific locations approved by Architect for visual effect.

DELETE BELOW IF NO SHAFT-WALL INCLUDED IN PROJECT.

3.7 INSTALLATION OF GYPSUM BOARD SHAFT-WALL ASSEMBLIES

A. General: Install gypsum board shaft-wall assemblies to comply with performance and other requirements indicated as well as with manufacturer's installation instructions and ASTM C 754 for installing steel framing.

B. Do not bridge building expansion joints with shaft-wall assemblies; frame both sides of joints with furring and other support as indicated.

C. At penetrations in shaft wall, maintain fire-resistance rating of entire shaft-wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices similar items.

3.8 FINISHING GYPSUM BOARD ASSEMBLIES

A. Levels of Gypsum Board Finish: Provide the following levels of gypsum board finish per GA-214.

DELETE LEVELS BELOW THAT DO NOT APPLY TO PROJECT.

1. Level 1 for ceiling plenum areas, concealed areas, and where indicated, unless a higher level of finish is required for fire-resistance-rated assemblies and sound-rated assemblies.
2. Level 4 for gypsum board surfaces, unless otherwise indicated.

BELOW REQUIRES SKIM COAT OVER ENTIRE SURFACE. RETAIN IF RIGID TRIM IS INSTALLED ON SHORT WALL SEGMENTS TO AVOID GAPS BEHIND TRIM THAT OCCUR BETWEEN TWO CLOSELY SPACED, BUILT UP EDGES.

3. Level 5 for gypsum board the following surfaces where wood, stone, or cast plastic trim or base are indicated:
 - a. At gypsum column enclosures.
 - b. Where wall segments are less than 48-inches wide.
 - c. Where indicated.

- B. Where Level 1 gypsum board finish is indicated, embed tape in joint compound.

PARA BELOW ASSUMES LEVEL 4 FINISH IS DEFAULT REQUIREMENT. IF NOT, REVISE OR DELETE PARA TO SUIT PROJECT.

- C. For Level 4 gypsum board finish, embed tape in joint compound and apply first, fill (second), and finish (third) coats of joint compound over joints, angles, fastener heads, and accessories. Touch up and sand between coats and after last coat as needed to produce a surface free of visual defects and ready for decoration.

DELETE BELOW IF LEVEL 5 IS NOT REQUIRED FOR PROJECT.

- D. Where Level 5 gypsum board finish is indicated, after application of embedding, fill and finish coats, apply a thin, uniform skim coat of joint compound over entire surface. Touch up and sand between coats and after last coat as needed to produce a surface free of visual defects, tool marks, and ridges and ready for decoration.

DELETE BELOW IF NO CEMENTITIOUS BACKER UNITS OR IF SPECIFIED IN DIVISION 9 SECTION "TILE."

- E. Finish cementitious backer units to comply with unit manufacturer's directions.

3.9 IDENTIFICATION

- A. Provide permanent identification of all assemblies requiring opening protectives including fire walls, fire barriers, fire partitions, and smoke barriers.
- B. Install in accordance with the requirements of Michigan Building Code chapter 7.
- C. Location:
 1. Locate in accessible concealed spaces above finished ceiling. In locations without accessible concealed location, coordinate location with architect.
 2. Locate within 15 feet of the end of each wall and at intervals not exceeding 30 feet measured horizontally along the assembly.
- D. Signage requirements:
 1. Lettering:
 - a. 3-inch minimum; 3/8-inch stroke width.

- b. Color: Red on white background
- 2. Verbiage incorporating project specific hourly rating. Refer to life safety plan for rating requirements:
 - a. FIRE RATED ASSEMBLY (__HR) - PROTECT ALL OPENING
 - b. SMOKE BARRIER - PROTECT ALL OPENINGS

3.10 CLEANING AND PROTECTION

- A. Promptly remove any residual joint compound from adjacent surfaces.

SPECIFICATION DIVISION 9

NUMBER SECTION DESCRIPTION

DIVISION 09 FINISHES

SECTION 093000 - TILING

END OF CONTENTS TABLE

DIVISION 09 FINISHES
SECTION 093000 - TILING

THIS SECTION HAS BEEN PRE-EDITED TO APPLY ONLY TO SMALL RENOVATION PROJECTS USING UNGLAZED CERAMIC TILE. EDIT THIS SECTION USING THE TCA HANDBOOK (OR WEBSITE). USE AIA MASTERSPEC SECTION OF SAME NAME AND NUMBER FOR COMPLEX PROJECTS.

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of ceramic tile is shown on Drawings.
- B. Types of ceramic tile include:
 - 1. Unglazed ceramic mosaic tile.

1.2 SUBMITTALS

- A. Product Data: Mfr's product data and installation instructions for tile work.
- B. Samples for Initial Selection: Submit 1 sample card for each type of ceramic tile, showing full range of manufacturer's standard colors, textures and patterns.

DELETE BELOW IF NO COLORED GROUT.

- 1. Provide color sample kit for tinted grout.

1.3 QUALITY ASSURANCE

- A. Standards: Comply with referenced ANSI and ASTM materials standards, and with referenced installation methods and materials of referenced Tile Council of America (TCA) Handbook numbers.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturers: Subject to compliance with specified performance requirements, provide product of one of the following:

American Olean Tile.
Dal-Tile.
Mannington.
Winburn Tile Mfg. Co.

BELOW FOR UNGLAZED PORCELAIN CERAMIC TILE ONLY. CONSULT MANUFACTURER'S LITERATURE FOR OTHER TILE CHOICES.

2.2 UNGLAZED CERAMIC MOSAIC TILE

- A. Factory-mounted flat tile and as follows:

1. Type: Porcelain.
2. Tile Grade: "Standard".
3. Wearing Surface: Without abrasive content.
4. Face: Plain with all purpose edges.
5. Size and Thickness: Modular 2 inch by 2 inch square; 1/4 inch thick.
6. Trim: Continuous cove base at floor perimeter; bullnose and cove trim where around projections.
 - a. Trim Shapes: Same material, size, color, and texture as field tile.
7. Colors, Textures, and Patterns: Selected by Architect from mfr's standard smooth texture, solid color range.

DELETE FOLLOWING IF NOT REQUIRED. BRASS STRIP AVAILABLE FOR SAME PURPOSE IF DESIRED.

2.3 THRESHOLDS

- A. Marble Thresholds: Group "A"; ASTM C 503, for exterior use with minimum hardness of 10.0 per ASTM C 241; white with honed finish, unless otherwise indicated.

2.4 MORTAR AND GROUT MATERIALS

THE FOLLOWING MATERIALS ARE EXAMPLES ONLY - FIRST EDIT PART 3 TO DETERMINE TCA INSTALLATION METHODS AND THEN EDIT THIS PORTION TO INCLUDE APPROPRIATE MATERIALS.

- A. Comply with the following requirements:
 1. Portland Cement: ASTM C 150 Type 1
 2. Sand: ASTM C 144
 3. Water: Potable

ALSO CONSIDER USING PROPRIETARY PRODUCT SUCH AS MAPEI OR LATICRETE, AS APPLICABLE.

 4. Mortar: As follows:
 - a. Floors: Latex-portland cement conforming to ANSI A118.4.
 - b. Walls, and single unit shower stall floors: Job mixed, material proportions as indicated.
 5. Bond Coat: Dryset mortar or latex-modified portland cement as determined by TCA recommendations.
 6. Grout: ANSI A118.6, Latex modified portland cement.
- B. For indicated application, provide the following additional materials:
 1. Walls:
 - a. Membrane: 4 mil polyethylene.
 - b. Lath: Galvanized or painted metal.
 - c. Lime: ASTM C 206, type S; or ASTM C 207, type S.
 2. Single unit Shower Stalls:
 - a. Reinforcing: ASTM A82 and A185, 2 inch by 2 inch by 16/16 gage welded wire mesh.

PART 3 - EXECUTION

INCLUDE BELOW FOR THINSET TILE.

3.1 PREPARATION

- A. In presence of Installer, inspect substrate conditions for compliance with ceramic tile manufacturer's requirements, and suitability for indicated TCA installation method. Report, in writing, deleterious conditions to Owner's Representative.

USUALLY INCLUDE BELOW.

- 1. Obtain Architect's written approval before beginning installation.

3.2 INSTALLATION

- A. In general, strictly comply with current Tile Council of America Handbook methods as follows:

EDIT FOLLOWING WITH TCA BOOKLET.

- 1. Over new and existing masonry walls: TCA Method W222.
 - 2. Over new and existing concrete floors: TCA method F113.
 - 3. In single shower stall floors: TCA method B414.
- B. Joint Pattern: Use grid pattern with 1/16" wide joints.
 - 1. Floor Installations: Align parallel and perpendicular to walls.
 - 2. Wall Installations: Align vertical and level.
 - C. Install marble thresholds where shown on Drawings, and whether or not shown on Drawings as follows:
 - 1. At edges of ceramic tile installation abutting dissimilar flooring materials (e.g. concrete, carpet, and quarry tile).

3.3 CLEANING AND PROTECTION

- A. Clean tile in accordance with applicable ANSI standard for type of tile and method of installation used and mfr's instructions.
- B. Apply heavy kraft paper or other heavy protective covering to prevent surface damage during construction operations.

DIVISION 09 FINISHES

SECTION 095100 - ACOUSTICAL CEILINGS

END OF CONTENTS TABLE

DIVISION 09 FINISHES
SECTION 095100 - ACOUSTICAL CEILINGS

5/19/2014 -- UPDATED TO INCLUDE LATEST PRODUCT INFORMATION.

REMOVED DIRECT ADHERED TILES. CONSULT MANUFACTURER LITERATURE AND AIA MASTERSPEC FOR DIRECT ADHERED ACOUSTICAL TILE APPLICATIONS

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of acoustical ceilings is indicated on Drawings and schedules.

FIRE-RATED CEILINGS ARE NOT INCLUDED IN THIS MASTER. CONSULT CATALOGS FOR PRODUCTS AND INSTALLATION REQUIREMENTS.

- B. Types of acoustical ceiling products include the following:

EDIT BELOW TO SUIT PROJECT REQUIREMENTS.

1. Acoustical lay-in panels of the following types:
 - a. Standard acoustic panels.
 - b. Premium acoustic panels.
 - c. Router-cut patterned acoustic panels.
 - d. Gypsum core acoustic panels.
2. Suspended grid systems, specialty trim and accessories.

INCLUDE ARTICLE BELOW IF DEMOLITION OPERATIONS WILL RECYCLE ACOUSTICAL PANELS. NOTE THAT NOT ALL ACOUSTICAL MATERIAL IS ABLE TO BE RECYCLED. ASBESTOS-CONTAINING PRODUCTS CANNOT BE RECYCLED, AND FOIL-BACKED AND FIBERGLASS PRODUCTS WILL NOT BE ACCEPTED BY MANUFACTURERS FOR RECYCLING.

1.2 RELATED SECTIONS

- A. Refer to Division 02 Section "Selective Demolition" for requirements for recycling demolished acoustical ceiling products.

1.3 SUBMITTALS

- A. Product Data: Submit manufacturer's literature, including certification by a recognized independent testing laboratory, indicating compliance with requirements.

INCLUDE BELOW FOR ALL PROJECTS.

- B. Affidavits of Compliance to be included in final inspection manual:
1. Provide manufacturer's letter of certification showing compliance with finish testing and classification requirements referenced by current adopted NFPA 101 "Life Safety Code".

2. Letter shall include project number, project name, and building name.

1.4 QUALITY ASSURANCE

- A. Standards: Comply with the following:
 1. Acoustical Materials: ASTM E 1264.
 2. Suspension Systems: ASTM C 635 for materials; ASTM C 636 for installation.
 3. Surface Burning Characteristics: Flame spread: 25 or less; smoke developed: 50 or less; per ASTM E 84. UL listed and marked.
 4. Seismic Standard: Comply with Ceilings and Interior Systems Contractors Association (CISCA) "Recommendations for Direct-Hung Acoustical Tile and Lay-in Panel Ceilings--Seismic Zones 0-2."
- B. Source Limitations: Obtain each type of acoustic panel and related grid system from one source and by a single manufacturer.

1.5 PROJECT CONDITIONS

DELETE PARAGRAPH BELOW IF ONLY HUMIDITY-TOLERANT ACOUSTICAL MATERIALS (I.E., "CLIMAPLUS" BY USG OR "HUMIGUARD" BY ARMSTRONG) ARE BEING SPECIFIED FOR THE PROJECT.

- A. Do not install ceilings until ambient temperature and humidity conditions can be continuously maintained at values near those intended for final occupancy.
- B. Building areas to receive ceiling shall be free of construction dust and debris.

PART 2 - PRODUCTS

THIS PART IS ORGANIZED BY PANEL AND SUSPENSION GRID TYPE. ALL POSSIBLE COMBINATIONS COULD NOT BE LISTED HERE, SO CONSULT CATALOGS FOR ADDITIONAL POSSIBILITIES WITH DIFFERENT PERFORMANCE, APPEARANCE OR COST.

FIRE-RATED CEILINGS ARE NOT INCLUDED IN THIS MASTER. CONSULT CATALOGS FOR PRODUCTS AND INSTALLATION REQUIREMENTS.

BELOW IS STANDARD PLAIN PANEL AND GRID SYSTEM.

2.1 STANDARD ACOUSTIC PANELS

- A. Smooth surface, humidity-tolerant, mineral composition panels with washable surface; and as follows:
 1. Surface: Perforated.
 2. Edges: Rabbeted for 15/16-inch grid.

SELECT EDGE TYPE ABOVE OR BELOW.
 3. Edges: Square.
 4. Size: 24 inches by 24 inches by 5/8 inch thick.

SELECT PANEL SIZE ABOVE OR BELOW.

5. Size: 24 inches by 48 inches by 5/8 inch thick.
6. LR: Not less than .82.
7. NRC: Not less than .55.
8. CAC: Not less than 33.
9. Color: White.
10. Manufacturer/Style: Provide one of the following:
 - a. "Fine Fissured"; Armstrong World Industries, Inc.
 - b. "Fine Fissured"; CertainTeed Saint-Gobain.
 - c. "Radar ClimaPlus"; U.S. Gypsum.

BELOW IS ROUTINE GRID FOR THIS PANEL TYPE - OTHERS ARE AVAILABLE - CONSULT CATALOGS.

11. Related Suspension Grid: Standard 15/16-inch Panel Suspension System in compliance with requirements of "Suspension Systems" Article of this Section.

2.2 PREMIUM ACOUSTIC PANELS

SELECTIONS BELOW HAVE APPEARANCE SIMILAR TO USG "FROST".

- A. Smooth surface, humidity-tolerant, mineral composition panels with washable surface, and as follows:

1. Surface: Finely perforated.
2. Edges: Rabbeted and beveled for 9/16-inch grid.
3. Size: 24 inches by 24 inches by 3/4 inch thick.
4. Color: White.
5. LR: Not less than .85.
6. NRC: Not less than .70.
7. CAC: Not less than 35.
8. Manufacturer/Style: Provide one of the following:
 - a. "Cirrus"; Armstrong World Industries, Inc.
 - b. "Cashmere High NRC"; CertainTeed Saint-Gobain.
 - c. "Eclipse ClimaPlus"; U.S. Gypsum.

THE ABOVE THREE PRODUCTS ARE WATER FELTED OR NODULAR. "FROST" IS SIMILAR IN APPEARANCE AND ACOUSTICAL PERFORMANCE, BUT IT IS A CAST/MOLDED PRODUCT (MORE DURABLE).

- d. "Frost ClimaPlus"; U.S. Gypsum.

BELOW IS ROUTINE GRID FOR THIS PANEL TYPE - OTHERS ARE AVAILABLE - CONSULT CATALOGS.

9. Related Suspension Grid: Narrow Bolt-Slot 9/16-inch Panel Suspension System in compliance with requirements of "Suspension Systems" Article of this Section.

SPECIALTY TRIM BELOW REFERS TO USG COMPASSO OR SIMILAR SYSTEMS. MODIFY TO SUIT PROJECT REQUIREMENTS OR DELETE IF NONE.

- a. Provide specialty trim systems where indicated on Drawings.

BELOW IS USG "MILLENA" PANEL AND ARMSTRONG COMPETITOR.

- B. Smooth surface, humidity-tolerant, mineral composition panels with washable surface, and as follows:

1. Surface: Finely perforated.
2. Edges: Rabbeted and beveled for 9/16-inch grid.
3. Size: 24 inches by 24 inches by 3/4 inch thick.
4. LR: Not less than .85.
5. NRC: Not less than .70.
6. CAC: Not less than 35.
7. Color: White.
8. Manufacturer/Style: Provide one of the following:
 - a. "Ultima"; Armstrong World Industries, Inc.
 - b. "Symphony m"; CertainTeed Saint-Gobain.
 - c. "Mars ClimaPlus"; U.S. Gypsum.

BELOW IS ROUTINE GRID FOR THIS PANEL TYPE - OTHERS ARE AVAILABLE - CONSULT CATALOGS.

9. Related Suspension Grid: Narrow Bolt-Slot 9/16-inch Panel Suspension System in compliance with requirements of "Suspension Systems" Article of this Section.

SPECIALTY TRIM BELOW REFERS TO USG COMPASSO OR SIMILAR SYSTEMS. MODIFY TO SUIT PROJECT REQUIREMENTS OR DELETE IF NONE.

- a. Provide specialty trim systems where indicated on Drawings.

USE PRODUCT BELOW ONLY WHEN ATTEMPTING TO MATCH EXISTING ACOUSTICAL PANELS. ARMSTRONG IS THE ONLY MFR. WHO IS MAKING THIS PRODUCT.

2.3 ROUTER-CUT PATTERNED PANELS

SPECIFIC PRODUCT NOT LISTED. DOZENS OF PATTERN VARIATIONS ARE AVAILABLE - CONSULT CATALOGS.

- A. Smooth surface, router-cut pattern, mineral composition panels with washable surface; and as follows:

UPDATE BELOW BASED ON TILE SELECTED

1. Surface: Finely perforated.
2. Pattern: Linear scored with border.
3. Edges: Rabbeted for 9/16-inch grid.
4. Size: 24 inches by 24 inches by 3/4 inch thick.
5. LR: Not less than .85.
6. NRC: Not less than .70.
7. CAC: Not less than 35.
8. Color: White.
9. Manufacturer/Style:

INSERT SELECTED TILE MFR AND STYLE

10. Related Suspension Grid: Standard 9/16-inch Panel Suspension System in compliance with requirements of "Suspension Systems" Article of this Section.

2.4 GYPSUM CORE PANELS

BELOW IS USG GYPSUM CORE PANEL AND CELOTEX COMPETITOR (NO ARMSTRONG PRODUCT). THESE ARE SUITABLE FOR USE IN KITCHENS

AND SIMILAR APPLICATIONS, BUT NOT CLEAN ROOMS. DUST-FREE CLEAN ROOM PANELS ARE AVAILABLE FROM ALL THREE MFRS., BUT THEY ARE MUCH MORE EXPENSIVE.

A. Smooth surface, humidity resistant, gypsum core panels with vinyl facing, and as follows:

1. Composition: Gypsum board core with vinyl overlay.
2. Surface: Unperforated.
3. Edges: Square.
4. Size: 24 inches by 24 inches by 1/2 inch thick.

SELECT PANEL SIZE ABOVE OR BELOW.

5. Size: 24 inches by 48 inches by 1/2 inch thick.
6. LR: Not less than .77.
7. CAC: Not less than 35.
8. Color: White.
9. Manufacturer/Style: Provide one of the following vinyl-clad gypsum board panels:
 - a. "Aquarock"; CertainTeed Saint-Gobain.
 - b. "Gridstone"; National Gypsum Co.
 - c. "Sheetrock Lay-In ClimaPlus Ceiling Panels"; U.S. Gypsum.
10. Related Suspension Grid: Moisture-Resistant 15/16-inch Panel Suspension System in compliance with requirements of "Suspension Systems" Article of this Section.

RETAIN OR DELETE BELOW TO SUIT PROJECT REQUIREMENTS SELECT PANEL SIZE ABOVE OR BELOW.

11. Related Accessories: Manufacturer's standard hold-down clips designed to prevent air pressure uplift of acoustic panels.

2.5 SUSPENSION SYSTEMS

A. Suspension Systems, General: As required to support acoustical units, electrical and mechanical fixtures and other components as indicated, including anchorages, hangers, runners, cross runners, splines, clips, moldings, fasteners and other members, devices and accessories. Comply with requirements of ASTM C 635.

1. Hanger Wire: Not less than 12 gage (0.106 inch) galvanized steel.
2. Type: Exposed Direct-Hung Steel Suspension System
3. Structural Class: Medium-Duty System.

BELOW IS STANDARD WIDE FACE, STEEL CAPPED PRODUCT.

B. Standard 15/16-inch Panel Suspension System: Suspension system with exposed faces painted.

1. Face Width: 15/16-inch wide.
2. Product/Manufacturer: Provide the following:
 - a. "Prelude XL 15/16": Armstrong World Industries, Inc.
 - b. "Classic Stab System"; CertainTeed Saint-Gobain.
 - c. "Donn DX"; U.S. Gypsum.

BELOW IS NARROW FACE, STEEL CAPPED PRODUCT. CONSIDER SPECIALLY SHAPED EDGE ANGLES - CONSULT CATALOGS FOR RANGE OF POSSIBILITIES.

C. Standard 9/16-inch Panel Suspension System: Suspension system with exposed faces painted.

1. Face Width: 9/16-inch wide.
2. Product/Manufacturer: Provide the following:
 - a. "Suprafine 9/16"; Armstrong World Industries, Inc.
 - b. "Elite Narrow Stab"; CertainTeed Saint-Gobain.
 - c. "Centricitee DXT"; U.S. Gypsum

BELOW IS STEEL SLOT-TYPE GRID. SLOT WIDTHS VARY AND COLOR INSERTS MAY BE ADDED. CONSULT CATALOGS FOR FULL EXTENT OF POSSIBILITES.

D. Narrow Bolt-Slot 9/16-inch Panel Suspension System: Suspension system with exposed faces painted and slotted.

1. Face Width: 9/16-inch wide with 1/8-inch wide reveal.
2. Product/Manufacturer: Provide the following:
 - a. "Silhouette XL-1/8 Reveal 9/16 Bolt Slot"; Armstrong World Industries, Inc.
 - b. "SmoothLine Bolt Slot System"; CertainTeed Saint-Gobain.
 - c. "Fine-Line 1/8"; U.S. Gypsum

BELOW IS FOR GYPSUM CORE PANELS IN SEMI-WET LOCATIONS (SUCH AS ANIMAL FACILITIES). ALL-ALUMINUM SYSTEMS AND PVC SYSTEMS ARE ALSO AVAILABLE.

E. Moisture-Resistant 15/16-inch Panel Suspension System: Suspension system with G60 hot-dip galvanized exposed faces with rolled, painted, aluminum caps.

1. Face Width: 15/16-inch wide.
2. Product/Manufacturer: Provide the following:
 - a. "Prelude Plus XL Fireguard"; Armstrong World Industries, Inc.
 - b. "Protectone Aluminum Fire-Rated Capped System"; CertainTeed Saint-Gobain.
 - c. "Donn ZXLA"; U.S. Gypsum

2.6 SPECIALTY TRIM SYSTEMS

BELOW IS CUSTOM "FLOATING" APPEARANCE TRIM SYSTEM.

A. Custom Exposed Edge and Perimeter Trim System: Manufacturer's custom designed, painted steel trim system for fully exposed edge conditions; integrated with manufacturer's suspension system to create a free-floating installed appearance. Provide units of depth with 9/16 inch horizontal legs and with hems for attachment to suspension system.

1. Depth: 4-inches unless otherwise indicated.
2. Product/Manufacturer: Provide the following:
 - a. "Axiom"; Armstrong World Industries, Inc.
 - b. "Infinity"; Chicago Metallic Corp.
 - c. "COMPASSO"; U.S. Gypsum

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with ASTM C636 and seismic design requirements indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
- B. Layout: Balance ceiling borders on opposite sides, using more-than-half width acoustical units, except where otherwise dimensioned or indicated.
 - 1. Tolerance: 1/8 inch in 12 feet level tolerance.
 - 2. Pattern Direction: One-way, align joints.
- C. Suspension System: Secure to building structure, free from contact with objects within the ceiling plenum, with hangers spaced 48 inches on center along supported members; provide hangers not more than 8 inches from ends of each member.
 - 1. Where interference with ducts or suspended equipment prevents direct connection of suspension elements to building structure, provide steel channel members (Unistrut or equivalent) hung from structural members with threaded rods with appropriate fasteners; and adequately sized for suspension system capacity. Secure suspension system to steel channels. Connection to ductwork or equipment is not permitted.
 - 2. Do not fasten ceiling suspension members to metal roof deck.

INCLUDE BELOW FOR RABBETED PANELS.

- D. Rabbeted Panels: Rabbet panel edges that have been field cut to fit non-modular suspension grid shapes at room perimeter, columns, and similar obstructions. Use router or other factory-approved rabbeting method.
- E. Edge Moldings: Secure to substrate with screw anchors spaced 16 inch on center. Set with concealed bead of acoustical sealant. Miter corner joints. Cope exposed flanges of intersecting suspension members for flush intersections.

DELETE ARTICLE BELOW IF NO HOLD-DOWN CLIPS REQUIRED FOR FIRE-RESISTIVE CEILINGS OR AIR-PRESSURE-RESISTANT CEILINGS.

- F. Provide hold-down clips at each acoustic panel in systems indicated for Animal Facility application. Install in accordance with manufacturer's recommendations for an air pressure uplift-resistant installation.

DELETE ARTICLE BELOW IF NO SPECIALTY TRIM INCLUDED.

3.2 SPECIALTY TRIM INSTALLATION

- A. Exposed Edge and Perimeter Trim System: Install units in accordance with manufacturer's printed instructions for specific Project application.

3.3 CLEANING AND REPAIR

- A. Clean suspension grid and panels. Remove and replace panels and grid that are defective, or that have been damaged.
- B. Touch-up paint field-cut edges of factory painted tile that are exposed to view in finished installation, including horizontal and vertical surfaces at perimeter of ceilings where panels are cut for rabbeted edge molding.

SPECIFICATION DIVISION 9

NUMBER SECTION DESCRIPTION

DIVISION 09 FINISHES

SECTION 096500 - RESILIENT FLOORING

END OF CONTENTS TABLE

DIVISION 09 FINISHES
SECTION 096500 - RESILIENT FLOORING

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of resilient flooring and accessories is indicated on Drawings and schedules.
- B. Types of resilient flooring and accessories include the following:

EDIT BELOW TO SUIT PROJECT.

- 1. Vinyl composition tile.
- 2. Sheet vinyl flooring.
- 3. Rubber stair treads.
- 4. Wall base.

1.2 SUBMITTALS

- A. Product Data: Manufacturer's literature and installation instructions.
- B. Samples for Initial Selection: Submit sample of each type, color and pattern of resilient flooring and accessories.

INCLUDE BELOW FOR ALL PROJECTS.

- C. Affidavits of Compliance to be included in final inspection manual:
 - 1. Provide manufacturer's letter of certification showing compliance with finish testing and classification requirements referenced by current adopted NFPA 101 "Life Safety Code".
 - 2. Letter shall include project number, project name, and building name.

PART 2 - PRODUCTS

WARNING: CHECK SAMPLES FOR SUITABILITY BEFORE SELECTING ANY OF THE PRODUCTS LISTED BELOW.

2.1 VINYL COMPOSITION TILE

BELOW DESCRIBES STANDARD VCT - ADD AMTICO, AZROCK, OR KENTILE WHERE "THRU-CHIP" PERFORMANCE (DURABILITY) IS NOT REQUIRED.

- A. Vinyl Composition Tile: ASTM F 1066 Composition 1, Class 2; 12-inch by 12-inch by 1/8-inch thick.
 - 1. Vinyl Composition Tile Manufacturer/Style: Subject to compliance with requirements provide one of the following:

CONSULT SAMPLES FOR COLOR/PATTERN SUITABILITY FOR THE PROJECT. SELECTION BELOW IS MINIMAL AND DOES NOT REPRESENT FULL AVAILABLE RANGE OF TILE.

- a. "Imperial Excelon"; Armstrong, Inc.
- b. "Inspirations"; Mannington, Inc.
- c. "Expressions"; Tarkett, Inc..

RETAIN BELOW UNLESS COLOR AND PATTERN HAS BEEN PRE-SELECTED AND INCLUDED WITH PRODUCT DESCRIPTION ABOVE.

2. Color/Pattern: Selected from manufacturer's standard range for products indicated.

BELOW DESCRIBES STANDARD SHEET VINYL WITH BACKING. ALL LISTED PRODUCTS BELOW ARE ACCEPTABLE TO THE UNIVERSITY'S MAINTENANCE DEPT. MULTI-LAYERED SOLID VINYL (SMARAGD AND ARMSTRONG TRANSLATIONS) AND LINOLEUM HAVE NOT BEEN APPROVED.

2.2 VINYL SHEET FLOORING

BACKED PRODUCTS ARE GENERALLY LESS EXPENSIVE AND MAY BE MORE SUITABLE FOR APPLICATION OVER SLABS-ON-GRADE.

- A. Vinyl Sheet with Backing: Vinyl sheet with pattern and color extending through full thickness, complying with FS L-F-475A, Type II, Grade A. Manufacturer's standard width rolls.

1. Wear Layer Thickness: 0.050-inch.
2. Overall Thickness: Not less than 0.080-inch.
3. Vinyl Sheet Manufacturer/Style: Subject to compliance with requirements, provide one of the following:
 - a. "Classic Corlon"; Armstrong, Inc.

ABOVE IS STANDARD VINYL SUITABLE FOR CHEMICALLY WELDED SEAMING - BELOW HAS CHEMICAL RESISTANCE PERFORMANCE SIMILAR TO REGULAR MEDINTECH BUT WITH BACKING AND CAN HAVE EITHER CHEMICAL- OR HEAT-WELDED SEAMS.

- b. "Medintech Tandem"; Armstrong, Inc.

THE PRODUCTS BELOW MAY HAVE EITHER CHEMICAL- OR HEAT-WELDED SEAMS, BUT DO NOT HAVE MEDINTECH'S CHEMICAL RESISTANCE. CHECK SUITABILITY FOR USE ON SLABS ON GRADE. CHECK SAMPLES TO ENSURE DESIRABILITY OF COLORS/PATTERNS.

- c. "Possibilities"; Armstrong, Inc.
- d. "Fields"; Mannington, Inc.
- e. "Images"; Tarkett, Inc.

RETAIN BELOW UNLESS COLOR AND PATTERN HAS BEEN PRE-SELECTED AND INCLUDED WITH PRODUCT DESCRIPTION ABOVE.

4. Color/Pattern: Selected from manufacturer's standard range for products indicated.

BELOW DESCRIBES HOMOGENOUS SHEET VINYL WITH HEAT WELDABLE SEAMS FOR "SEAMLESS" FLOOR. THESE FLOORS ARE MORE DURABLE THAN THE BACKED TYPE. IN ADDITION, MEDINTECH HAS PROVEN RELATIVELY STAIN AND CHEMICAL RESISTANT.

B. Vinyl Sheet Without Backing: Vinyl sheet with pattern and color extending through full thickness, complying with ASTM E 84 (75 or less), and ASTM E 662 (NBS Smoke 450 or less). Manufacturer's standard width rolls.

1. Thickness: 0.080-inch.
2. Vinyl Sheet Manufacturer/Style: Subject to compliance with requirements, provide one of the following:
 - a. "Medintech"; Armstrong, Inc.

BELOW IS CLAIMED BY MANUFACTURER TO BE EQUIVALENT TO MEDINTECH FOR CHEMICAL RESISTANCE. SAMPLES HAVE NOT BEEN CHECKED BY UM. SELECT WITH CAUTION.

- b. "Biospec"; Mannington Inc.
- c. "Expressions" "Eminent/Optima/Collage Optima"; Tarkett, Inc.

RETAIN BELOW UNLESS COLOR AND PATTERN HAS BEEN PRE-SELECTED AND INCLUDED WITH PRODUCT DESCRIPTION ABOVE.

3. Color/Pattern: Selected from manufacturer's standard range for products indicated.

2.3 RUBBER STAIR TREAD

BELOW DESCRIBES STANDARD RUBBER STAIR TREAD UNITS.

A. Preformed Rubber Stair Treads: Homogenous vulcanized rubber composition units complying with Fed. Spec. RR-T-650D, Composition A, Type 2; with raised, slip-resistant pattern on tread surface, reinforced nose, of manufacturer's standard thickness for indicated pattern, and as follows:

SELECT ONE OF THE FOLLOWING.

1. Pattern: Raised disk.
2. Pattern: Straight ribs.
3. Pattern: Diagonal grid (diamond).

BELOW ARE EXAMPLES ONLY. CHECK SAMPLES FOR WIDER SELECTION. AVOID BLACK STAIR TREAD (LIGHTING PROBLEMS UNDER EMERGENCY FIXTURE OPERATION). IT IS ALSO BEST TO AVOID WHITE AND BLACK TREAD DUE TO CLEANING PROBLEMS.

4. Color: Gray.
5. Color: Tan.
6. Color: Selected from manufacturer's standard range.

DELETE BELOW IF NOT DESIRED. ADDITIONAL COST MAY NOT BE JUSTIFIED IN TYPICAL SERVICE STAIRS.

7. Provide 1/8-inch gage coved rubber risers matching tread composition and color.
8. Manufacturers: Subject to compliance with requirements, one of the following:
 - Armstrong.
 - Flexco.
 - Musson.
 - Johnsonite.
 - Nora
 - RCA.

Roppe.
VPI.

2.4 RESILIENT WALL BASE

BELOW DESCRIBES 100% VULCANIZED RUBBER COVE BASE - STANDARD FOR MOST UNIVERSITY PROJECTS AND ALL MED SCHOOL PROJECTS. COLOR IS HOMOGENOUS

- A. Rubber Base: ASTM F 1861, Type TS (rubber, vulcanized thermoset), Group I (solid, homogeneous).

SELECT STYLE FROM OPTIONS BELOW. TYPICALLY SELECT "COVE (BASE WITH TOE)"

1. Style: Cove (base with toe).
2. Style: Straight (flat or toeless).
3. Style: Butt to (fit-to-floor).
4. Minimum Thickness: 0.125 inch.

SELECT HEIGHT FROM OPTIONS BELOW. 4 INCHES IS TYPICAL. OTHER OPTIONS ARE AVAILABLE.

5. Height: 2-1/2 inches.
6. Height: 4 inches.
7. Height: 6 inches.

BELOW ARE EXAMPLES ONLY. CHECK SAMPLES FOR WIDER SELECTION.

8. Color: Black.
9. Color: Dark brown.
10. Color: Selected from manufacturer's standard range.
11. Furnish cove base in continuous length rolls.

USUALLY RETAIN ABOVE AND DELETE BELOW, UNLESS COST AND DELIVERY TIME IS PARAMOUNT.

12. Furnish cove base in standard 6-foot lengths.

DELETE BELOW IF NOT DESIRED.

13. Provide matching end stops and preformed corner units.
14. Manufacturers: Subject to compliance with requirements, one of the following:
Burke Mercer.
Flexco.
Roppe.

BELOW DESCRIBES THERMOPLASTIC RUBBER COVE BASE (RUBBER / VINYL BLEND). DISADVANTAGES INCLUDE DECREASED DURABILITY AND VISIBILITY OF SCRATCHES. ADVANTAGES INCLUDE MORE MRFS, SLIGHTLY LOWER COST AND WIDER COLOR SELECTION.

TYPICALLY CHOOSE GROUP II, GROUP I IS NOT AVAILABLE IN ALL LISTED MRFS.

- B. Rubber Base: ASTM F 1861, Type TP (rubber, thermoplastic), Group I (solid, homogeneous) or Group II (layered).

SELECT STYLE FROM OPTIONS BELOW. TYPICALLY SELECT "COVE (BASE WITH TOE)"

1. Style: Cove (base with toe).

2. Style: Straight (flat or toeless).
3. Style: Butt to (fit-to-floor).
4. Minimum Thickness: 0.125 inch.

SELECT HEIGHT FROM OPTIONS BELOW. 4 INCHES IS TYPICAL. OTHER OPTIONS ARE AVAILABLE.

5. Height: 2-1/2 inches.
6. Height: 4 inches.
7. Height: 6 inches.

BELOW ARE EXAMPLES ONLY. CHECK SAMPLES FOR WIDER SELECTION.

8. Color: Black.
9. Color: Dark brown.
10. Color: Selected from manufacturer's standard range.
11. Furnish cove base in continuous length rolls.

USUALLY RETAIN ABOVE AND DELETE BELOW, UNLESS COST AND DELIVERY TIME IS PARAMOUNT.

12. Furnish cove base in standard 6-foot lengths.

DELETE BELOW IF NOT DESIRED.

13. Provide matching end stops and preformed corner units.
14. Manufacturers: Subject to compliance with requirements, one of the following:
 - Armstrong.
 - Burke Mercer.
 - Flexco.
 - Johnsonine.
 - Nafco by Tarkett.
 - Roppe.
 - VPI.

BELOW DESCRIBES STANDARD VINYL BASE. DRAWBACKS INCLUDE REDUCED DURABILITY. COLOR IS NOT HOMOGENOUS. DISADVANTAGES INCLUDE DECREASED DURABILITY AND VISIBILITY OF SCRATCHES. ADVANTAGES INCLUDE MORE MRFS, LOWER COST AND WIDER COLOR SELECTION.

- C. Vinyl Wall Base: ASTM F 1861, Type TV (vinyl, thermosplastic), Group II (layered).

SELECT STYLE FROM OPTIONS BELOW. TYPICALLY SELECT "COVE (BASE WITH TOE)"

1. Style: Cove (base with toe).
2. Style: Straight (flat or toeless).
3. Style: Butt to (fit-to-floor).
4. Minimum Thickness: 0.125 inch.

SELECT HEIGHT FROM OPTIONS BELOW. 4 INCHES IS TYPICAL. OTHER OPTIONS ARE AVAILABLE.

5. Height: 2-1/2 inches.
6. Height: 4 inches.
7. Height: 6 inches.

BELOW ARE EXAMPLES ONLY. CHECK SAMPLES FOR WIDER SELECTION.

8. Color: Black.
9. Color: Dark brown.

10. Color: Selected from manufacturer's standard range.
11. Furnish cove base in continuous length rolls.

USUALLY RETAIN ABOVE AND DELETE BELOW, UNLESS COST AND DELIVERY TIME IS PARAMOUNT.

12. Furnish cove base in standard 6-foot lengths.

DELETE BELOW IF NOT DESIRED.

13. Provide matching end stops and preformed corner units.
14. Manufacturers: Subject to compliance with requirements, one of the following:
 - Armstrong.
 - Burke Mercer.
 - Flexco.
 - Johnsonine.
 - Nafco by Tarkett.
 - Roppe.
 - VPI.

INCLUDE BELOW FOR INTEGRAL COVE BASE ON WELDABLE SHEET VINYL FLOORS.

- D. Integral Cove Base Accessories: Provide the following accessory items for integral sheet vinyl cove base installations.
 1. Cap Trim: Provide aluminum or stainless steel flash-cove capping trim at top edge of integral base.

BELOW OPTIONAL - USUALLY DELETE. CORNERS COMMONLY FORMED FROM FLOORING MATERIALS.

2. Corner Trim: Provide aluminum or stainless steel corner trim at inside and outside corners of flash-coving.

USUALLY RETAIN BELOW FOR INTEGRAL COVERED BASE APPLICATIONS.

3. Cove Stick: At each wall/floor intersection, provide wood or plastic cove stick materials manufactured specifically for use as back-up for flash-coving.

2.5 ACCESSORIES

- A. Transition (Reducer) Strips: Provide units fabricated of solid rubber or vinyl as required to match specified topset cove base materials.
- B. Adhesives: Provide Manufacturer's recommended non-asbestos-containing adhesive for each type of flooring, wall base and substrate indicated.

DELETE THE FOLLOWING IF NO HEAT WELDED SEAMS.

- C. Welding Rods: Provide manufacturer's welding rods for heat-welded seam installations.
 1. Color: Selected from manufacturer's standard range to coordinate with flooring.

BELOW AVAILABLE FROM ARMSTRONG FOR MEDINTECH PRODUCTS.

2. Color: Selected from manufacturer's patterned, premium grade rods designed to blend with color and pattern of flooring for a near-invisible joint.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. In presence of Installer, inspect substrate conditions for compliance with resilient flooring manufacturer's installation recommendations. Report, in writing, deleterious conditions to Owner's Representative.

USUALLY INCLUDE BELOW.

1. Obtain Architect's written approval before beginning installation.

3.2 PREPARATION

- A. In general: Prepare substrates as required to receive new materials. Remove dirt and debris from substrate. Adhesive removal is included in Division 2 Section "Selective Demolition."
- B. Where uneven floor levels or holes occur, fill, patch, and provide underlayment as required to level surface prior to installation of finished floor material. Underlayment may be latex cement as applicable.

REQUIREMENT BELOW IS INTENDED TO LIMIT CLAIMS FOR EXTRAS. INCREASE OR DECREASE AREA PERCENT BASED ON YOUR JUDGMENT, OR DELETE ENTIRELY FOR NEW CONCRETE FLOORS.

1. Patching is required for approximately [not less than] 20 percent of the gross floor area of the Project.

INCLUDE BELOW FOR LARGE AREAS OF PATCHING OR LEVELING. COORDINATE WITH "CONCRETE FLOOR UNDERLAYMENT" SECTION.

2. Floor patching and leveling is included in Division 3 Section "Hydraulic Cement Underlayment."

- C. Clean floors and apply substrate primer (if recommended by flooring manufacturer) in accordance with flooring manufacturer's instructions.

3.3 INSTALLATION, GENERAL

- A. Comply with flooring manufacturer's recommendations for type(s) of materials, project conditions, and intended use.
- B. Place resilient flooring continuously under locations of the following:

MODIFY THE FOLLOWING TO SUIT PROJECT.

1. Movable partition systems.
2. Laboratory casework.

INCLUDE BELOW FOR ALL MEDICAL SCHOOL PROJECTS.

- C. Apply continuous bead of sealant along perimeter edge of installation and around all floor penetrations prior to installing wall base.

3.4 SHEET VINYL INSTALLATION

INCLUDE BELOW FOR STANDARD SHEET VINYL PRODUCTS - CHEMICAL WELDING IS NOT IMPLY SEAMLESS FLOORING.

- A. Chemically Welded Vinyl Sheet: Manufacturer's standard chemical joint adhesive system.

DELETE ABOVE AND INCLUDE BELOW FOR HEAT-WELDED "SEAMLESS" FLOORING ONLY.

- B. Vinyl Sheet with Heat Welded Seams: Manufacturer's standard seam sealing system with seam edges heated and fused with specifically compounded vinyl welding rods, resulting in a seamless installation.

3.5 TILE INSTALLATION

- A. Lay out tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half of a tile at perimeter.

- 1. Lay tiles square with room axis, unless otherwise indicated.

DELETE SUBPARA ABOVE OR BELOW, OR REVISE IF FLOOR GEOMETRY OR PATTERN DICTATES ANOTHER RELATIONSHIP OF TILES WITH ROOM AXIS.

- 2. Lay tiles at a 45-degree angle with room axis, unless otherwise indicated.

- B. Match tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Cut tiles neatly around all fixtures. Discard broken, cracked, chipped, or deformed tiles.

RETAIN ONE SUBPARA BELOW OR INSERT REQUIREMENTS TO SUIT PROJECT.

- 1. Lay tiles with grain running in one direction.
 - 2. Lay tiles in basket-weave pattern with grain direction alternating in adjacent tiles.
 - 3. Lay tiles in pattern of colors and sizes indicated on Drawings.

IF ANY BUILT-IN ITEMS ARE REQUIRED TO BE SET ON TOP OF TILE, INDICATE ON DRAWINGS AND REVISE PARA BELOW ACCORDINGLY.

- C. Scribe, cut, and fit tiles to butt neatly and tightly to vertical surfaces and permanent fixtures, including built-in furniture, cabinets, pipes, outlets, edgings, door frames, thresholds, and nosings.

- D. Extend tiles into toe spaces, door reveals, closets, and similar openings.

- E. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use chalk or other nonpermanent, nonstaining marking device.

DELETE PARA BELOW IF NO COVERS.

- F. Install tiles on covers for telephone and electrical ducts, and similar items in finished floor areas. Maintain overall continuity of color and pattern with pieces of flooring installed on covers. Tightly adhere edges to perimeter of floor around covers and to covers.

REVISE PARA BELOW IF OTHER THAN FULL-SPREAD ADHESIVE METHOD IS RECOMMENDED BY TILE MFR FOR SUBSTRATE AND TILE PRODUCTS SELECTED.

- G. Adhere tiles to flooring substrates using a full spread of adhesive applied to substrate to comply with tile manufacturer's written instructions, including those for trowel notching, adhesive mixing, and adhesive open and working times.
 - 1. Provide completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

DELETE BELOW IF ROLLING IS NOT REQUIRED FOR PRODUCTS SELECTED.

- H. Hand roll tiles according to tile manufacturer's written instructions.

3.6 WALL BASE INSTALLATION

COORDINATE THE FOLLOWING WITH LABORATORY CASEWORK SPECIFICATIONS, CONCERNING PROVISION OF BASE ON CASEWORK.

- A. Apply wall base in lengths as long as practicable to walls, columns, and all permanent fixtures and where indicated. Mitered outside corners not acceptable.

RETAIN BELOW WITH CASEWORK.

- B. Apply base to fixed cabinetry as follows:
 - 1. Base cabinet toe spaces.
 - 2. Exposed sides of base cabinets.
 - 3. Filler and closure panels extending to floor.

DELETE ABOVE AND INCLUDE BELOW FOR SHEET VINYL FLOORS WITH INTEGRAL COVE BASE.

- C. Form flooring material into continuous cove base at walls, columns, and permanent fixtures (including fixed casework) and where indicated. Heat weld all seams.
 - 1. Provide metal cap trim at exposed edges of base, and where base is formed into outside corners. Mitered and welded outside corners without metal trim are not acceptable.
 - 2. Apply base to fixed laboratory cabinetry as follows:
 - a. Base cabinet toe spaces.

- b. Exposed sides of base cabinets.
 - c. Filler and closure panels extending to floor.
- D. On masonry or other irregular surfaces, fill voids behind base and along top edge with manufacturer's recommended adhesive filler.

3.7 CLEANING

- A. Clean floors and accessories after installation in accordance with flooring manufacturer's instructions.
 - 1. Do not polish floors.

DIVISION 09 FINISHES

SECTION 096813 - TILE CARPETING

END OF CONTENTS TABLE

DIVISION 09 FINISHES
SECTION 096813 - TILE CARPETING

*SECTION WRITTEN FOR PROJECTS WITH SELECTED CARPET PRODUCTS /
COMPETITIVELY BID INSTALLATION.*

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.
- B. Related Sections:
 - 1. Section 035416 - Hydraulic Cement Underlayment
 - 2. Section 096500 - Resilient Flooring
 - 3. Section 096816 - Sheet Carpeting

1.2 SUMMARY

- A. Section Includes:
 - 1. Modular carpet tile.
 - 2. Resilient base.
- B. Work Provided under this section but specified under other sections:
 - 1. Resilient wall base.
 - 2. Resilient transitions strips.

1.3 SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
 - 2. Include installation recommendations for each type of substrate.
 - 3. For installation adhesive, documentation including printed statement of VOC content.

*INCLUDE BELOW FOR LEED PROJECTS. NOTE THAT REQUIREMENTS ARE
BASED ON LEED 2009*

- B. LEED Submittals:
 - 1. Product Data for Credit EQ 4.3:
 - a. For carpet tile, documentation indicating compliance with testing and product requirements of CRI's "Green Label Plus" program.
 - b. For installation adhesive, documentation including printed statement of VOC content.
- C. Shop Drawings: Show the following:

1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
 2. Carpet tile type, color, and dye lot.
 3. Type of subfloor.
 4. Type of installation.
 5. Pattern of installation.
 6. Pattern type, location, and direction.
 7. Pile direction.
 8. Type, color, and location of insets and borders.
 9. Type, color, and location of edge, transition, and other accessory strips.
 10. Transition details to other flooring materials.
- D. Samples: For each of the following products and for each color and texture required.
1. Carpet Tile: Full-size Sample.
 2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch-long Samples.

INCLUDE BELOW FOR ALL PROJECTS

- E. Affidavits of Compliance to be included in final inspection manual:
1. Provide manufacturer's letter of certification showing compliance with finish testing and classification requirements referenced by current adopted NFPA 101 "Life Safety Code".
 2. Letter shall include project number, project name, and building name.

1.4 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:
1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
 2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

COORDINATE WITH OCCUPANT PRIOR TO INCLUDING BELOW.

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd.

1.6 QUALITY ASSURANCE

- A. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.

1. Reference Standards:

REFER TO MICHIGAN BUILDING CODE FOR FURTHER REQUIREMENTS CONCERNING CLASS, FLAME SPREAD AND SMOKE DEVELOPED RATINGS.

- a. Carpet Flammability: Pass pill test, ASTM D 2859 (DOC FF-1-70).

MODIFY TO CLASS II IF ALLOWABLE BY CODE AND REQUIRED BY CARPET SELECTION

- b. Radiant Panel Test: Meet NFPA 253 Class I.

EDIT AND INCLUDE IF REQUIRED BY PROJECT

- c. Static Electricity: 3.0 KV max. at 70 deg. F and 20% RH, AATCC 134.

1.7 FIELD CONDITIONS

- A. Comply with CRI 104 for temperature, humidity, and ventilation limitations.

DELETE BELOW FOR TYPICAL INTERIOR RENOVATION WORK.

- B. Environmental Limitations: Do not deliver or install carpet tiles until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at occupancy levels during the remainder of the construction period.

RETAIN BELOW FOR PROJECTS WITH NEW CONCRETE.

- C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.

RETAIN BELOW FOR PROJECTS WITH DEMOUNTABLE PARTITIONS.

- D. Where demountable partitions or other items are indicated for installation on top of carpet tiles, install carpet tiles before installing these items.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

EDIT AFTER CARPET IS SELECTED. MATERIALS AND CONSTRUCTION NOT INCLUDED. ASSUMES A SINGLE SELECTION IS MADE FOR EACH TYPE BASED ON MANUFACTURER AND PATTERN AND THAT ALTERNATIVE CARPETS ARE NOT BID.

- A. Acceptable Manufacturers:
 - 1. Carpet type no. 1: [Manufacturer Name]
 - a. Style:
 - b. Color:

INCLUDE MATERIALS, CONTRUCTIONS IF COMPEDITIVELY BIDDING MATERIALS AND INSTALLATION. NOT REUIQRED IF ONLY BIDDING INSTALLATION.

2.2 INSTALLATION ACCESSORIES

DELETE BELOW IF SECTION 035416 - HYDRAULIC CEMENT UNDERLAYMENT IS INCLUDED.

- A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.

BELOW IS TYPICAL. COORDINATE WITH INTERIOR DESIGN.

- B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and is recommended by carpet tile manufacturer for releasable installation.

RETAIN FOR ALL PROJECTS

1. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

RETAIN "METAL EDGE/TRANSITION STRIPS" PARAGRAPH BELOW UNLESS RESILIENT EDGE STRIPS FOR CARPET TILE ARE SPECIFIED IN SECTION 096513 "RESILIENT BASE AND ACCESSORIES." IF RETAINING, REVISE FINISH OR DESCRIPTION TO SUIT PROJECT AND SHOW WIDTH REQUIREMENTS ON DRAWINGS.

- C. Metal Edge/Transition Strips: Extruded aluminum with mill finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.

2.3 WALL BASE

- A. Provide wall base for each area scheduled to receive carpet. Comply with the requirements for wall base specified in Division 9 Section "Resilient Flooring".

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, adhesive and floor coating removal, installation tolerances, and other conditions affecting carpet tile performance. Examine carpet tile for type, color, pattern, and potential defects.

RETAIN "CONCRETE SUBFLOORS" PARAGRAPH BELOW IF PRODUCTS ARE ADHESIVELY ATTACHED TO CONCRETE SUBFLOORS.

- B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:

REVISE FIRST SUBPARAGRAPH BELOW TO INCLUDE SPECIFIC TESTS IF APPLICABLE TO PROJECT.

1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet tile manufacturer.

INCLUDE BELOW NEW SLABS

2. Subfloor finishes comply with requirements specified in Section 033000 "Cast-in-Place Concrete" for slabs receiving carpet tile.
3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.

COORDINATE REQUIREMENTS BELOW WITH ACCESS FLOORING.

- C. Raised access flooring systems: Verify the following:

1. Access floor substrate is compatible with carpet tile and adhesive if any.
2. Underlayment surface is flat, smooth, evenly planed, tightly jointed, and free of irregularities, gaps greater than 1/8 inch, protrusions more than 1/32 inch, and substances that may interfere with adhesive bond or show through surface.

- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. General: Comply with CRI 104, Section 6.2, "Site Conditions; Floor Preparation," and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile installation.

RETAIN OR REVISE FIRST PARAGRAPH BELOW TO SUIT PRODUCT AND PROJECT; DIMENSIONS ARE RECOMMENDED BY CRI.

- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider and protrusions more than 1/32 inch unless more stringent requirements are required by manufacturer's written instructions.

REQUIREMENT BELOW IS INTENDED TO LIMIT CLAIMS FOR EXTRAS. INCREASE OR DECREASE AREA PERCENT BASED ON YOUR JUDGMENT, OR DELETE ENTIRELY FOR NEW CONCRETE FLOORS.

1. Patching is required for approximately [not less than] 20 percent of the gross floor area of the Project.

INCLUDE BELOW FOR LARGE AREAS OF PATCHING OR LEVELING. COORDINATE WITH "HYDRAULIC CEMENT UNDERLAYMENT" SECTION.

2. Floor patching and leveling is included in Division 03 Section "Hydraulic Cement Underlayment."

RETAIN BELOW FOR NEW CONCRETE SURFACES

- C. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet tile manufacturer.

RETAIN BELOW FOR EXISTING CONCRETE SURFACES

- D. Remove existing adhesives per Division 02 Section "Selective Demolition." Remove other coatings as recommended in writing by carpet tile manufacturer.
- E. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.3 INSTALLATION

- A. General: Comply with CRI 104, Section 14, "Carpet Modules," and with carpet tile manufacturer's written installation instructions.

SELECT ITEM B OR C BELOW.

- B. Installation Method: As recommended in writing by carpet tile manufacturer.

COORDINATE SPECIFIC "INSTALLATION METHOD" REQUIREMENTS WITH INTERIOR DESIGN AND EDIT BELOW. NOTE THE FOLLOWING GENERAL GUIDELINES

FULL-SPREAD, GLUE-DOWN INSTALLATION IS APPROPRIATE FOR WHEEL TRAFFIC.

PARTIAL GLUE-DOWN INSTALLATION IS APPROPRIATE FOR CARPET TILES OF MODERATE DIMENSIONAL STABILITY, WEIGHT, AND MASS.

FREE-LAY INSTALLATION IS APPROPRIATE FOR DIMENSIONALLY STABLE CARPET TILES WITH HEAVY BACKINGS. REVISE SECOND OPTION BELOW IF SPOT-GLUED INSTALLATION IS RECOMMENDED BY MANUFACTURER AND SUITS PRODUCT AND PROJECT.

- C. Installation Method: [Glue down; install every tile with full-spread, releasable, pressure-sensitive adhesive] [Partial glue down; install periodic tiles with releasable, pressure-sensitive adhesive] [Free lay; install carpet tiles without adhesive].
- D. Maintain dye lot integrity. Do not mix dye lots in same area.
- E. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.
- F. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.

H. Pattern:

1. General: Install pattern parallel to walls and borders.

SELECT OPTION FROM BELOW OR CONSIDERING SHOWING ON DRAWING FOR COMPLICATED PATTERNS OR MULTIPLE CARPETS WITH DIFFERENT REQUIREMENTS.

2. Monolithic.
3. Quarter-turn.
4. Ashlar.

DELETE BELOW IF NO RAISED ACCESS FLOORING SYSTEMS. ADHESIVE IN SEAMS MAY IMPEDE PANEL REMOVAL AND REPLACEMENT.

I. Stagger joints of carpet tiles so carpet tile grid is offset from access flooring panel grid. Do not fill seams of access flooring panels with carpet adhesive; keep seams free of adhesive.

DELETE ARTICLE BELOW IF NO WALL BASE INCLUDED OR IF SPECIFIED IN OTHER SECTION.

3.4 WALL BASE INSTALLATION

A. Apply wall base in lengths as long as practicable to walls, columns, and all permanent fixtures and where indicated. Mitered outside corners not acceptable. Apply base to fixed laboratory cabinetry as follows:

1. Base cabinet toe spaces.
2. Exposed sides of base cabinets.
3. Filler and closure panels extending to floor.

3.5 CLEANING AND PROTECTION

A. Perform the following operations immediately after installing carpet tile:

1. Remove excess adhesive and other surface blemishes using cleaner recommended by carpet tile manufacturer.
2. Remove yarns that protrude from carpet tile surface.
3. Vacuum carpet tile using commercial machine with face-beater element.

B. Protect installed carpet to comply with CRI 104, Section 16, "Protecting Indoor Installations."

C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF CONTENTS TABLE

DIVISION 09 FINISHES
SECTION 096816 - SHEET CARPETING

*SECTION WRITTEN FOR PROJECTS WITH SELECTED CARPET PRODUCTS /
COMPETTIVELY BID INSTALLATION.*

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.
- B. Related Sections:
 - 1. Section 035416 - Hydraulic Cement Underlayment
 - 2. Section 096500 - Resilient Flooring
 - 3. Section 096813 - Tile Carpeting

1.2 SUMMARY

MODIFY TO SUIT PRODUCT SELECTIONS.

- A. Section Includes:
 - 1. Tufted carpet.
 - 2. Woven carpet.
 - 3. Carpet cushion.
- B. Work Provided under this section but specified under other Sections:
 - 1. Resilient wall base.
 - 2. Resilient transition strips.

1.3 SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
 - 2. Include installation recommendations for each type of substrate.
 - 3. For installation adhesive, documentation including printed statement of VOC content.

*INCLUDE BELOW FOR LEED PROJECTS. NOTE THAT REQUIREMENTS ARE
BASED ON LEED 2009*

- B. LEED Submittals:
 - 1. Product Data for Credit EQ 4.3:
 - a. For carpet, documentation indicating compliance with testing and product requirements of CRI's "Green Label Plus" program.

b. For installation adhesive, documentation including printed statement of VOC content.

C. Shop Drawings: Show the following:

1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet.
2. Carpet type, color, and dye lot.
3. Layout and seaming diagrams.
4. Type of subfloor.
5. Type of installation.
6. Pattern of installation.
7. Pattern type, location, and direction.
8. Pile direction.
9. Type, color, and location of insets and borders.
10. Type, color, and location of edge, transition, and other accessory strips.
11. Transition details to other flooring materials.

D. Samples: For each of the following products and for each color and texture required.

1. Submit 18 inch by 27 inch samples of each type, color, pattern and texture of carpet.
2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch long samples.

INCLUDE BELOW FOR ALL PROJECTS.

E. Affidavits of Compliance to be included in final inspection manual:

1. Provide manufacturer's letter of certification showing compliance with finish testing and classification requirements referenced by current adopted NFPA 101 "Life Safety Code".
2. Letter shall include project number, project name, and building name.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of carpet to include in maintenance manuals. Include the following:

1. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
2. Precautions for cleaning materials and methods that could be detrimental to carpet.

COORDINATE WITH OCCUPANT PRIOR TO INCLUDING BELOW.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Carpet: Full-width rolls equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd.

1.6 QUALITY ASSURANCE

- A. Reference Standards: Products in this Section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.

1. Reference Standards:

REFER TO MICHIGAN BUILDING CODE FOR FURTHER REQUIREMENTS CONCERNING CLASS, FLAME SPREAD AND SMOKE DEVELOPED RATINGS.

- a. Carpet Flammability: Pass pill test, ASTM D 2859 (DOC FF-1-70).

MODIFY TO CLASS II IF ALLOWABLE BY CODE AND REQUIRED BY CARPET SELECTION

2. Radiant Panel Test: Meet NFPA Class I.

EDIT AND INCLUDE IF REQUIRED BY PROJECT

3. Static Electricity: 3.0 KV max. at 70 deg. F and 20% RH, AATCC 134.

1.7 FIELD CONDITIONS

- A. Comply with CRI 104 for temperature, humidity, and ventilation limitations.

DELETE BELOW FOR TYPICAL INTERIOR RENOVATION WORK.

- B. Environmental Limitations: Do not deliver or install carpet until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at occupancy levels during the remainder of the construction period.

RETAIN BELOW FOR PROJECTS WITH NEW CONCRETE.

- C. Do not install carpet over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive, and concrete slabs have pH range recommended by carpet manufacturer.

RETAIN BELOW FOR PROJECTS WITH DEMOUNTABLE PARTITIONS.

- D. Where demountable partitions or other items are indicated for installation on top of carpet, install carpet before installing these items.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

EDIT AFTER CARPET IS SELECTED. MATERIALS AND CONSTRUCTION NOT INCLUDED. ASSUMES A SINGLE SELECTION IS MADE FOR EACH TYPE OF

CARPET BASED ON MANUFACTURER AND PATTERN AND THAT ALTERNATIVE CARPETS ARE NOT BID.

A. Acceptable Manufacturers:

1. Carpet type no. 1: [Manufacturer Name]
 - a. Style:
 - b. Color:

2.2 INSTALLATION ACCESSORIES

DELETE BELOW IF SECTION 035416 - HYDRAULIC CEMENT UNDERLAYMENT IS INCLUDED.

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet manufacturer.

BELOW IS TYPICAL. COORDINATE WITH INTERIOR DESIGN.

B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet and is recommended by carpet manufacturer for installation.

RETAIN FOR ALL PROJECTS

1. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

RETAIN "METAL EDGE/TRANSITION STRIPS" PARAGRAPH BELOW UNLESS RESILIENT EDGE STRIPS FOR CARPET ARE SPECIFIED IN SECTION 096513 "RESILIENT BASE AND ACCESSORIES." IF RETAINING, REVISE FINISH OR DESCRIPTION TO SUIT PROJECT AND SHOW WIDTH REQUIREMENTS ON DRAWINGS.

C. Metal Edge/Transition Strips: Extruded aluminum with mill finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.

D. Seam Adhesive: Hot-melt adhesive tape or similar product recommended by carpet manufacturer for sealing and taping seams and butting cut edges at backing to form secure seams and to prevent pile loss at seams.

2.3 WALL BASE

A. Provide wall base for each area scheduled to receive carpet. Comply with the requirements for wall base specified in Division 9 Section "Resilient Flooring".

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, adhesive and floor coating removal, installation tolerances, and other conditions affecting carpet performance. Examine carpet for type, color, pattern, and potential defects.

RETAIN "CONCRETE SUBFLOORS" PARAGRAPH BELOW IF PRODUCTS ARE ADHESIVELY ATTACHED TO CONCRETE SUBFLOORS.

- B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:

REVISE FIRST SUBPARAGRAPH BELOW TO INCLUDE SPECIFIC TESTS IF APPLICABLE TO PROJECT.

1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet manufacturer.

INCLUDE BELOW FOR NEW SLABS

2. Subfloor finishes comply with requirements specified in Section 033000 "Cast-in-Place Concrete" for slabs receiving carpet.
3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.

- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. General: Comply with CRI 104, Section 7.3, "Site Conditions; Floor Preparation," and with carpet manufacturer's written installation instructions for preparing substrates.

RETAIN OR REVISE FIRST PARAGRAPH BELOW TO SUIT PRODUCT AND PROJECT; DIMENSIONS ARE RECOMMENDED BY CRI.

- B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider and protrusions more than 1/32 inch unless more stringent requirements are required by manufacturer's written instructions.

REQUIREMENT BELOW IS INTENDED TO LIMIT CLAIMS FOR EXTRAS. INCREASE OR DECREASE AREA PERCENT BASED ON YOUR JUDGMENT, OR DELETE ENTIRELY FOR NEW CONCRETE FLOORS.

1. Patching is required for approximately [not less than] 20 percent of the gross floor area of the Project.

INCLUDE BELOW FOR LARGE AREAS OF PATCHING OR LEVELING. COORDINATE WITH "HYDRAULIC CEMENT UNDERLAYMENT" SECTION.

2. Floor patching and leveling is included in Division 03 Section "Hydraulic Cement Underlayment."

RETAIN BELOW FOR NEW CONCRETE SURFACES

- C. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet manufacturer.

RETAIN BELOW FOR EXISTING CONCRETE SURFACES

- D. Remove existing adhesives per Division 02 Section "Selective Demolition." Remove other coatings as recommended in writing by carpet manufacturer.
- E. Broom and vacuum clean substrates to be covered immediately before installing carpet.

3.3 CARPET INSTALLATION

- A. General: Comply with CRI 104 and with carpet manufacturer's written installation instructions for the following:

COORDINATE SPECIFIC "INSTALLATION METHOD" REQUIREMENTS WITH INTERIOR DESIGN AND EDIT BELOW. BELOW ARE COMMONLY USED EXAMPLES. OTHER EXAMPLES ARE LISTED IN AIA MASTERSPEC 096816.

1. Carpet Seam Edge Preparation: Comply with CRI 104, Section 8, "Carpet Seam Edge Preparation."
 2. Direct-Glue-Down Installation: Comply with CRI 104, Section 9, "Direct Glue-Down Installation."
 3. Stair Installation: Comply with CRI 104, Section 13, "Carpet on Stairs" for [~~stretch-in~~] [~~glue-down~~] installation.
- B. Comply with carpet manufacturer's written recommendations and Shop Drawings for seam locations and direction of carpet; maintain uniformity of carpet direction and lay of pile. At doorways, center seams under the door in closed position.
 - C. Pre-plan installation for proper sequencing with other work.
 - D. Do not bridge building expansion joints with carpet.
 - E. Cut and fit carpet to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet manufacturer.
 - F. Extend carpet into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
 - G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.

RETAIN FIRST PARAGRAPH BELOW IF CARPET HAS A PATTERN OR MODIFY TO SUIT PROJECT.

- H. Install pattern parallel to walls and borders to comply with CRI 104, Section 15, "Patterned Carpet Installations" and with carpet manufacturer's written recommendations.

**RETAIN BELOW FOR HIGH TRAFFIC SEAMS. NOTE THAT SEALED SEAMS
MAY NOT BE TOTALLY INVISIBLE.**

- I. Sealing Edges - Prior to seaming, both trimmed edges of the carpet sections to be joined must be sealed with an manufacturer's recommended seam adhesive. Apply seam adhesive in a manner that encapsulates both primary and secondary backings without contaminating face yarns
- J. Save carpet scraps, defined as mill ends less than 9 feet long and pieces larger than 3 sq. ft. in area and wider than 8 inches, and deliver to Owner's storage space as directed. Dispose of smaller pieces.

**DELETE ARTICLE BELOW IF NO WALL BASE INCLUDED OR IF SPECIFIED
IN ANOTHER SECTION.**

3.4 WALL BASE INSTALLATION

- A. Apply wall base in lengths as long as practicable to walls, columns, and all permanent fixtures and where indicated. Mitered outside corners not acceptable. Apply base to fixed laboratory cabinetry as follows:
 - 1. Base cabinet toe spaces.
 - 2. Exposed sides of base cabinets.
 - 3. Filler and closure panels extending to floor.

3.5 CLEANING AND PROTECTING

- A. Perform the following operations immediately after installing carpet:
 - 1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet manufacturer.
 - 2. Remove yarns that protrude from carpet surface.
 - 3. Vacuum carpet using commercial machine with face-beater element.
- B. Protect installed carpet to comply with CRI 104, Section 16, "Protecting Indoor Installations."
- C. Protect carpet against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet manufacturer and carpet adhesive manufacturer.

DIVISION 09 FINISHES

SECTION 099110 - ELECTROSTATICALLY APPLIED COATING

END OF CONTENTS TABLE

DIVISION 09 FINISHES

SECTION 099110 - ELECTROSTATICALLY APPLIED COATING

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of electrostatically applied coating is indicated on Drawings, schedules and by provisions of this Section.
- B. Type of electrostatically applied coating includes field application of electrostatically charged, sprayed paint coating, over existing metal casework.
- C. Colors: Color selection process is as follows:
 - 1. Colors will be selected by Architect from manufacturer's standard range of colors.

DELETE EITHER ABOVE OR BELOW.

- 2. Color selections are included in "Schedule" article of this Section.

1.2 SUBMITTALS

- A. Product Data: Submit manufacturer's literature including descriptive data and recommendations for mixing, application, and curing.

INCLUDE BELOW IF SELECTION WILL BE MADE AFTER BIDDING.

- B. Samples for Initial Selection: Manufacturer's color sample booklet showing full range of standard colors, with not less than 25 colors.

CONSIDER INCLUDING BELOW IF EXACT COLOR MATCHING IS REQUIRED.

- C. Samples for Verification: Two cards, not less than 3-inches by 5-inches, of actual paint sample of selected color. Provide additional card sets for each separate color.

1.3 QUALITY ASSURANCE

- A. Provide written certification attesting that applicators have been factory trained, and that application equipment used complies with manufacturer's requirements.

1.4 DELIVERY AND STORAGE

- A. Deliver materials to job site in new, original, and unopened containers bearing mfr's name, trade name, and label analysis. Store materials in protected area at a temperature not less than 50 F and in accordance with other mfr's instructions.

1.5 JOB CONDITIONS

- A. Apply coatings only when environmental temperature can be maintained above 50 deg. F. during application and drying period.
- B. Provide work areas free of excessive dust. and with illumination adequate to apply special coatings.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Manufacturer: Provide products of Cascoat Electrostatic, Inc. (Telephone 313/771-9040) or, subject to compliance with requirements, equivalent products of other manufacturers.

2.2 MATERIALS

- A. General: Provide coatings specifically compounded by manufacturer for electrostatic spray application. Where primers are indicated or required, provide only primers that are approved by manufacturer for use with finish coating materials.
- B. Material Quality: Materials which do not display Manufacturer's identification will not be acceptable.
- C. Mix, prepare, and store materials according to Manufacturer's latest printed instructions. Manually mix coating materials; power mixing devices are not permitted. Do not add thinner or other agents to coating materials.

IF COLOR WILL BE SPECIFIED IN SCHEDULE AT END OF SECTION, DELETE PARAGRAPHS BELOW.

- D. Color: Provide color as follows:
 - 1. Selected by Architect from manufacturer's standard range of colors.

RETAIN ABOVE FOR ARCHITECT SELECTION. RETAIN BELOW FOR ARCHITECT-SELECTED CUSTOM COLOR

- 2. Custom color to match Architect's sample.

RETAIN BELOW FOR COLOR SELECTED DURING DESIGN.

- 3. Match selection.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine surfaces to be coated and report any conditions that would adversely affect the appearance or performance of the coating systems and which cannot be put into an acceptable condition by specified preparation.

- B. Do not proceed with surface preparation and application until the surface is acceptable or authorization to proceed is given by the Owner.

3.2 PREPARATION

- A. Protect work of other trades and adjacent surfaces not scheduled to be coated. Prepare and clean in strict accordance with coating mfr's instructions.
- B. Sand, or chemically clean as appropriate, all abraded surfaces, corroded areas and other imperfections in surfaces to be coated. Fill or feather edges of sanded areas to produce for a smooth transition to bare metal.

3.3 APPLICATION

- A. Apply prime and finish materials in accordance with mfr's directions. Apply each material at not less than the mfr's recommended spreading rate. Use special equipment, applicators, and techniques recommended by mfr as best suited for the particular applications.
- B. Apply additional coats beyond scheduled requirements when undercoating, stains or other conditions show through final paint coat until the special coating is of uniform finish, color and appearance.

3.4 CLEANING

- A. Remove paint spatters from any adjoining surfaces. Repair any damage to coatings or surfaces caused by cleaning operations. Remove debris from job site and leave area clean.

3.5 SCHEDULE OF SURFACES TO BE COATED

- A. Base Cabinets: Prepare and coat each of the following surfaces:
 - 1. Surfaces exposed to view in existing construction, including all edges of doors and drawer fronts, regardless of exposure condition.

SELECT ONE OF THE FOLLOWING OR DELETE ALL.

- a. Color: selection.
- b. Match existing color.
- c. Match color of new laboratory casework.

INCLUDE BELOW IF PAINTED INTERIORS ARE DESIRED.

- 2. Interior surfaces of cabinet drawers and doors, and sides, back and bottom of cabinet shell.

SELECT ONE OF THE FOLLOWING OR DELETE ALL.

- a. Color: selection.
- b. Match existing color.
- c. Match color of new laboratory casework.

- B. Wall Mounted Cabinets: Prepare and coat each of the following surfaces:

1. Surfaces exposed to view in existing construction, including all edges of doors, regardless of exposure condition.

SELECT ONE OF THE FOLLOWING OR DELETE ALL.

- a. Color: selection.
- b. Match existing color.
- c. Match color of new laboratory casework.

MODIFY BELOW TO SUIT DESIRED LIMIT OF PAINTING. USUALLY RETAIN BELOW IF NO CABINET DOORS OR IF DOORS HAVE WINDOWS.

2. Shelves, including edges and underside.
 - a. Color: Match cabinet interior surfaces.
3. Interior surfaces of cabinet doors, and sides, back and bottom of cabinet shell.

SELECT ONE OF THE FOLLOWING OR DELETE ALL.

- a. Color: selection.
- b. Match existing color.
- c. Match color of new laboratory casework.

C. File Cabinets: Prepare and coat each of the following surfaces:

1. Surfaces exposed to view in existing location, including all edges of drawer fronts, regardless of exposure condition.

SELECT EITHER ABOVE OR BELOW.

MODIFY REQUIREMENT BELOW TO COVER ONLY THOSE SURFACES DESIRED.

2. Move file cabinets as required to expose sides and back. Coat exterior surfaces of front, sides and back of units, including all edges of drawer fronts, regardless of exposure condition.
3. Color: Provide coatings of the following color:

SELECT ONE OF THE FOLLOWING OR DELETE ALL.

- a. Color: selection.
- b. Match existing color.

DIVISION 10 SPECIALTIES

SECTION 101100 - VISUAL DISPLAY UNITS

END OF CONTENTS TABLE

DIVISION 10 SPECIALTIES
SECTION 101100 - VISUAL DISPLAY UNITS

JUNE, 2005 - UPDATED TO CHANGE TO 1997 NFPA "LIFE SAFETY CODE".

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of visual display boards is indicated on drawings.

EDIT THE FOLLOWING TO SUIT PROJECT.

- B. Types of visual display boards include the following:
1. Chalkboards.
 2. Markerboards.
 3. Multi-purpose visual display units.

1.2 SUBMITTALS

- A. Product Data: Submit mfr's product literature, indicating compliance with requirements.
- B. Shop Drawings: Indicate elevation, sections of trim members, and installation details.
- C. Samples for Initial Selection: Manufacturer's sample booklet of not less than 7 colors for porcelain enamel surfaces, and not less than 10 fabrics.

INCLUDE BELOW FOR ALL PROJECTS.

- D. Affidavits of Compliance to be included in final inspection manual:
1. Provide manufacturer's letter of certification showing compliance with finish testing and classification requirements referenced by current adopted NFPA 101 "Life Safety Code".
 2. Letter shall include project number, project name, and building name.

PART 2 - PRODUCTS

THE FOLLOWING IS MULTI-PURPOSE DISPLAY UNIT.

2.1 GRAPHIC PRESENTATION BOARD

- A. Plastic laminate board and screen housing, and board cover doors. Self-edged plastic laminate construction, with concealed hinges, and as follows:
1. Size: 4 feet by 4 feet.
 2. Accessories:
 - a. Glass-beaded projection screen.

- b. Markerboard and marker tray.
 - c. Door mounted drawing paper pads with min. 50 sheets each.
3. Manufacturer: Subject to compliance with requirements, products of one of the following:
 Cig-Jan Products, Ltd.
 Da-Lite.
 Egan Visual.
 Marsh Chalkboard Co.; Div. Marsh Lumber Co.
 Polyvision Corp.

BELOW IS STANDARD MARKERBOARD UNIT FOR SPECIAL FELT TIP MARKERS.

2.2 MARKERBOARDS, PORCELAIN ENAMEL

- A. Markerboards: Provide markerboard units with concealed mechanical fastening devices for wall mounting to indicated substrates, and complete with the following:

SELECT ONE OF THE FOLLOWING - "C" CHANNEL TYPE (MOST COMMON) IS USED WITH PARTICLEBOARD BACKING (MOUNTING CLIPS ATTACH TO PARTICLEBOARD). MOUNTING CLIPS WITH SNAP-ON TRIM ARE USED WITH GYPSUM BOARD BACKING.

- 1. Frames: Aluminum "C" channel type with concealed fasteners.
- 2. Frames: Mounting clip type with extruded aluminum snap-on trim.

SELECT SOLID EXTRUSION BELOW WITH "C" CHANNEL TRIM - HOLLOW TYPE IS MORE SUBSTANTIAL AND MORE EXPENSIVE.

- 3. Markertray: Solid aluminum extrusion type.
- 4. Markertray: Hollow extruded aluminum box type.

INCLUDE BELOW IF DESIRED.

- 5. Map Rail: Aluminum extrusion with tackable cork insert.

- B. Balanced, high pressure laminated porcelain enamel markerboards of 3 ply construction consisting of facing sheet, core material, and backing.

- 1. Facing Sheet: Enameling steel or iron sheet with low metaloid and copper content, able to withstand temperature of over 1,400 degrees as used in coating porcelain on steel for architectural purposes, and as follows:
 - a. Minimum Thickness: 0.299-inch (22 gage).
 - b. Chemically bathe steel sheets in potassium hydroxide and sodium metal silicate solution and rinse prior to enameling.
 - c. Apply minimum 0.0025-inch thick spray coat of nickel cobalt primer and silica to face opposite writing surface for adhesion of laminate.
 - d. Aluminum and aluminized cold-rolled steel are not acceptable.
- 2. Markerboard Cover Coat: Mfr's special writing surface with gloss finish intended for use with erasable liquid felt tipped markers, and as follows:

- a. Apply minimum 0.0025-inch thick spray coat of nickel cobalt primer to facing sheet. Writing surface to be minimum 0.003-inch thick fired porcelain frits. Panel edges at butt joints to be porcelain same as fronts. Low fired organic (paint) coated writing surfaces are not acceptable.
- b. Provide final writing surface with uniform texture, with reflectance factor between 15 and 20 percent, and with not less than 6.0 hardness on Moh's Scale. Writing surface shall not become slick and shiny through normal use.

CONSULT CATALOG FOR ADDITIONAL AVAILABLE COLORS - USUAL SELECTION IS WHITE.

- c. Color: White.
 - d. Color: Silver.
 - e. Color: Selected by Architect from Manufacturer's standard range.
- 3. Core: 1/2-inch thick gypsum board.
 - 4. Backing Sheet: Mfr's standard aluminum foil.
 - 5. Laminating Adhesive: Moisture-resistant, thermoplastic type.

- C. Manufacturers: Subject to compliance with requirements, provide products of one of the following:

Cig-Jan Products, Ltd.
 Claridge Products and Equipment, Inc.
 Marsh Chalkboard Co.; Div. Marsh Lumber Co.
 Polyvision Corp.

BELOW IS STANDARD CHALKBOARD.

2.3 PORCELAIN ENAMEL CHALKBOARDS

- A. Chalkboards: Provide chalkboard units with concealed mechanical fastening devices for wall mounting to indicated substrates, and complete with the following:

SELECT ONE OF THE FOLLOWING - "C" CHANNEL TYPE (MOST COMMON) IS USED WITH PARTICLEBOARD BACKING (MOUNTING CLIPS ATTACH TO PARTICLEBOARD). MOUNTING CLIPS WITH SNAP-ON TRIM ARE USED WITH GYPSUM BOARD BACKING.

- 1. Frames: Aluminum "C" channel type with concealed fasteners.
- 2. Frames: Mounting clip type with extruded aluminum snap-on trim.

SELECT SOLID EXTRUSION BELOW WITH "C" CHANNEL TRIM - HOLLOW TYPE IS MORE SUBSTANTIAL AND MORE EXPENSIVE.

- 3. Chalktray: Solid aluminum extrusion type.
- 4. Chalktray: Hollow extruded aluminum box type.

INCLUDE BELOW IF DESIRED.

- 5. Map Rail: Aluminum extrusion with tackable cork insert.
- B. Balanced, high pressure laminated porcelain enamel chalkboards of 3 ply construction consisting of facing sheet, core material, and backing.

1. Facing Sheet: 24 gage enameling steel sheet especially processed for temperatures used in coating porcelain on steel Fuse cover and ground coats to the steel at the manufacturer's standard firing temperature.
2. Exposed Face: 3 coat process (primer, ground coat and color cover coat).
3. Concealed Face: 2 coat process (primer and ground coat).
4. Proprietary Facing Sheet: At the Contractor's option, provide 24 gage, "Vitracite" porcelain enamel clad aluminized steel facing sheet, as manufactured by Claridge Products and Equipment, Inc.
5. Chalkboard Cover Coat: Mfr's standard matte finish cover coat.

SELECT FROM CHOICES BELOW OR CONSULT MANUFACTURER'S CATALOG.

- a. Color: Dark Green.
 - b. Color: Black.
 - c. Color: Dark Brown.
 - d. Color: Selected by Architect from Manufacturer's standard range.
6. Core: Mfr's standard 3/8 inch thick particleboard core material complying with ANSI A208.1, Grade 1-M-1.
 7. Backing Sheet: Mfr's standard 0.015 inch thick aluminum backing sheet.
 8. Laminating Adhesive: Mfr's standard moisture-resistant, thermoplastic type adhesive.
- C. Manufacturers: Subject to compliance with requirements, provide products of one of the following:
- Cig-Jan Products, Ltd.
 Claridge Products and Equipment, Inc.
 Marsh Chalkboard Co.; Div. Marsh Lumber Co.
 Polyvision Corp.

2.4 BULLETIN BOARDS

- A. Bulletin Boards: Provide bulletin board units with concealed mechanical fastening devices for wall mounting to indicated substrates, and complete with the following:

SELECT ONE OF FOLLOWING.

1. Frames: Aluminum "C" channel type with concealed fasteners.
2. Frames: Incorporate bulletin boards in chalk/markerboard frames.

SELECT ONE OF THE BOARD TYPES BELOW.

- B. Tackable, nominal 1/4-inch thick, resilient linoleum homogenous with integral color through board.
1. Product: Bulletin Board Cork; Forbo North America.
 - a. Color: SELECT COLOR .
- C. Vinyl fabric on fire retardant resilient tackable backing board; ASTM E-84, Class A.
1. Fabric: Tackboard manufacturer's standard.
 - a. Fabric Pattern: Burlap.

- b. Color: insert selection .
- D. Polyester cloth fabric, plain weave with edges wrapped on fire retardant resilient tackable backing board; ASTM E-84, Class A.
 - 1. Fabric Manufacturer: Guilford of Maine Div. Interface Co.
 - a. Color: insert selection .
- E. Manufacturers: Subject to compliance with requirements, provide products of one of the following:
 - Cig-Jan Products, Ltd.
 - Claridge Products and Equipment, Inc.
 - Marsh Chalkboard Co.; Div. Marsh Lumber Co.
 - Polyvision Corp.

*INCLUDE BELOW WITH EITHER CHALKBOARD OR MARKERBOARD SURFACES -
MODIFY OR DELETE ALL FOR PROJECTS WITH BULLETIN BOARDS ONLY*

2.5 ACCESSORIES

- A. Metal Trim: 0.062 inch thick aluminum, manufacturer's standard channel size and shape; minimize number of joints. Miter corners to a neat, hairline closure.

DELETE PARAGRAPH ABOVE OR BELOW

- B. Field-Applied Trim: Mfr's standard snap-on trim, with no visible screws or exposed joints.
- C. Clear Anodized Finish: Mfr's standard color anodized satin finish with hardcoat anodic coating AA Class I integral Color Coating (AA-442), color as selected.
- D. Chalk/Markertray: Mfr's standard continuous, box type aluminum with slanted front and cast aluminum end closures.

INCLUDE THE FOLLOWING IF MARKERBOARDS HAVE BEEN SELECTED

- E. Erasable Liquid Markers: Provide a carton containing not less than 5 markers, each a different color, of type recommended by markerboard manufacturer.

2.6 FABRICATION

- A. Factory assemble units with a minimum number of joints balanced about the center of units, as acceptable to the Architect.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with mfr's print instructions. Include grounds, clips, backing materials, brackets and anchors, trim and accessories required for a complete installation.
- B. Clean units and repair or replace defective and damaged components to the satisfaction of the Architect.

SPECIFICATION DIVISION 10

NUMBER SECTION DESCRIPTION

DIVISION 10 SPECIALTIES

SECTION 102113 - TOILET COMPARTMENTS

END OF CONTENTS TABLE

DIVISION 10 SPECIALTIES
SECTION 102113 - TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of toilet compartments is indicated on drawings.
- B. Types of toilet compartments include the following:
 - EDIT THE FOLLOWING TO SUIT PROJECT.*
 - 1. Floor supported.
 - 2. Wall supported.
 - 3. Ceiling-hung.
- C. Support steel for ceiling-hung units is specified in Division 05 Section "Metal Fabrications".

1.2 SUBMITTALS

- A. Product Data: Mfr's product literature indicating compliance with requirements, and installation instructions.
 - INCLUDE BELOW IF STATE FIRE MARSHAL WILL REVIEW PROJECT.*
- B. Affidavits of Compliance to be included in final inspection manual:
 - 1. Provide manufacturer's letter of certification showing compliance with finish testing and classification requirements referenced by current adopted NFPA 101 "Life Safety Code".
 - 2. Letter shall include project number, project name, and building name.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide metal toilet partitions manufactured by one of the following:
 - All American Metal Corp.
 - Bradley Corporation
 - Flush-Metal Partition Corp.
 - Global Partitions
 - Hadrian Manufacturing Inc.

2.2 MATERIALS

- A. Sheet Steel: ASTM A 591, Class C, galvanized-bonderized, of following minimum thicknesses:
 - EDIT BELOW TO SUIT PROJECT.*
 - 1. Pilasters: 18 gage.

2. Panels and Screens: 22 gage.
 3. Doors: 22 gage.
 4. Concealed Reinforcement for Anchorages: 12 gage.
 5. Concealed Reinforcement for Tapping: 14 gage.
- B. Core Materials: Mfr's standard sound-deadening, honeycomb, impregnated Kraft paper core.
- C. Stirrup Brackets: Mfr's standard, non-ferrous alloy with satin chrome finish.

2.3 HARDWARE AND ACCESSORIES

- A. Provide Mfr's standard, ADA compliant, heavy-duty operating hardware and accessories, non-ferrous cast alloy with satin chrome finish.
- B. Anchorages and Fasteners: Mfr's standard theft-proof exposed fasteners, finish to match hardware.

2.4 FABRICATION

- A. Pressure laminate face sheets to core, edges sealed with continuous locking strip or lapped and formed edges. Miter and weld corners with welds ground smooth.
1. Furnish units with cut-outs, drilled holes, and internal reinforcement to receive partition mounted hardware, accessories, and grab bars, as indicated.
- B. Doors and Panels: Not less than 1 inch thick units, size shown.
1. For wall-supported units, fabricate panels of two sheets of steel with internal reinforcing to form a "V" shaped unit approximately 6 inch wide at wall edge and tapered to approximately 1 inch wide at pilaster edge.
- C. Ceiling-Hung Pilasters: 1-1/4 inch thick units with galvanized steel anchorage devices for securing to overhead support. Provide 3 inch stainless steel top trim piece, finished to match hardware.

SELECT ABOVE OR BELOW.

- D. Floor Mounted Pilasters: 1-1/4 inch thick units with stainless steel anchorage devices for securing to floor. Provide 3 inch stainless steel bottom trim piece, finished to match hardware.
- E. Hardware and Accessories: Chromium-plated finish, unless otherwise indicated. Apply the following accessories to panels and doors, one each compartment unless otherwise indicated:
1. Hinges: Either surface-mounted or cutout inset type, Adjustable to hold door open at any angle up to 90 degrees.
 2. Latch and Keeper: Recessed latch unit, with combination rubber-faced door strike and keeper.
 3. Barrier-Free Latch and Keeper: At each outswinging partition door, in addition to standard hinges, coat hook and other specified hardware, provide manufacturer's standard ADA-compliant latch and keeper. In addition, provide the following:

- a. Handles: Provide manufacturer's standard ADA-compliant pull handles on both the interior and exterior sides of partition doors.
 - 4. Coat Hook and Bumper: Mfr's standard unit, rubber tipped.
 - 5. Door Pulls: Mfr's standard, exterior of standard stall doors; and both sides of barrier-free stall doors.
- F. Baked Enamel Finish: As selected from mfr's standard colors.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install partitions rigid, straight, plumb and level in accordance with mfr's printed instructions. Set units with not more than 1/2 inch between pilasters and panels, and not more than 1 inch clearances between panels and walls.
- B. Hardware Adjustments: Adjust and lubricate hardware for proper operation after installation.
 - 1. Set hinges on in-swing doors to hold doors open approximately 30 degrees from the closed position when unlatched.
 - 2. Set hinges on out-swing doors to return to fully closed position.
- C. Cleaning and Final Adjustments: Perform final adjustments to leveling devices, door hardware, and other operating parts. Clean exposed surfaces and touch up minor finish imperfections using materials and methods recommended by partition mfr.
 - 1. Replace damaged units which cannot be satisfactorily field repaired, as directed by Architect.

SPECIFICATION DIVISION 10

NUMBER SECTION DESCRIPTION

DIVISION 10 SPECIALTIES

SECTION 102239 - FOLDING PANEL PARTITIONS

END OF CONTENTS TABLE

DIVISION 10 SPECIALTIES
SECTION 102239 - FOLDING PANEL PARTITIONS

1.1 SUMMARY

- A. This Section includes manually operated, acoustically rated assemblies, consisting of the following:

SELECT APPROPRIATE TYPE BELOW, USUALLY CONTINUOUS SEQUENCE.

1. Individual, unlinked panels.
 2. Panels hinged in pairs.
 3. Panels hinged in continuous sequence.
- B. Related Sections: The following sections contain requirements that relate to this Section:
1. Division 05 Section "Metal Fabrications" for miscellaneous framing and supports.
 2. Plenum barriers are specified in Division 09 Section "Gypsum Board Assemblies"

1.2 SUBMITTALS

- A. Product data on physical characteristics, durability, resistance to fading, and flame spread characteristics for each type of folding fabric partition and accessory specified.
- B. Shop drawings showing location and extent of folding panel partitions. Include plans, elevations, large-scale details of anchorages, and accessory items. Indicate unit conditions at openings, typical and special details, and location and installation requirements for hardware. Indicate direction of travel and static and dynamic loading on the building structure.
- C. Template drawings prepared by manufacturer showing location of items supported or anchored by permanent construction.
- D. Samples for verification purposes of each type of material exposed to view. Include samples of each panel facing material selected.
- E. Acoustical Certification from an independent testing agency stating that product and materials furnished comply with specified requirements. Include certified laboratory testing data indicating that panels and materials meet specified test requirements. Include STC and NRC ratings and square foot weight of panel.
- F. Affidavits of Compliance to be included in final inspection manual:
1. Provide manufacturer's letter of certification showing compliance with finish testing and classification requirements referenced by current adopted NFPA 101 "Life Safety Code".
 2. Letter shall include project number, project name, and building name.

1.3 SYSTEM PERFORMANCE REQUIREMENTS

A. Acoustical Performance: Provide folding panel partitions tested by independent testing laboratory acceptable to Owner, for the following acoustical properties, according to the test methods indicated:

1. Sound Transmission Requirements: Folding panel partition assembly tested in a full-scale opening (14 feet by 9 feet) for laboratory sound transmission loss performance in accordance with ASTM E 90, determined by ASTM E 413 and rated for a STC plus or minus 1 as indicated:

INSERT APPLICABLE RATING.

2. Sound Transmission Class (STC): 49.

3. Noise Reduction Requirements: Folding panel partition assembly tested by a qualified independent laboratory for compliance with ASTM C 423 and rated for a NRC as indicated:

INSERT APPLICABLE RATING.

a. Noise Reduction Coefficient (NRC): INSERT .

1.4 QUALITY ASSURANCE

A. Single-Source Responsibility: Provide units and accessories of a single manufacturer.

1.5 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to project site in original factory wrappings and containers, clearly labeled with identification of manufacturer, brand name, quality or grade, and lot number.

B. Store panels only on edge, blocked off ground to prevent sagging and warping in original undamaged packages and containers, inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

C. Comply with instructions and recommendations of manufacturer for special delivery, storage, and handling requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:

- Folddoor/Holcomb and Hoke Mfg. Co.
- Hufcor, Inc. (Hough Mfg. Corp.)
- Modernfold, Inc.
- Panelfold, Inc.

2.2 PANEL CONSTRUCTION

- A. Face Sheets: Top reinforcing as required to support suspension components. Internal insulation as required to achieve specified acoustical rating.

THE FOLLOWING VARY WITH MANUFACTURER - CONSULT AIA MASTERSPEC FOR GENERIC MINIMUM VALUES.

1. Face Sheets for Steel Frames: Minimum 0.838 inch (21 gage) cold-rolled steel welded to minimum 1.390 inch (16 gage) steel channel frame, factory-fabricated panels, free of joints in faces.
2. Panel Thicknesses: 3 inches.
3. Panel Weight: 12 psf maximum as determined by panel construction, surface covering, and accessories.
4. Hardware: Manufacturers standard, finished to match exposed hardware on partition.

2.3 SUSPENSION SYSTEMS

- A. Carriers: Four wheel at lead post and two wheel at intermediate spacing as required for size and weight of partition for ease of operation.
- B. Suspension Tracks: Heavy-duty steel or aluminum, with overhead supports of adjustable steel hanger rods; heavy-duty, ball-bearing, trolley system supports specifically designed for use with size and type folding panel partition assembly indicated. Track deflection independent of structural support system no more than 1/360th of opening width.

2.4 FINISH SURFACE

- A. Finish Face: Manufacturer's standard primed steel.
- B. Materials: Manufacturer's standard mildew resistant vinyl, complying with FS CCC-W-408A for Type 1 material.

2.5 POSTS AND SEALS

- A. Lead posts and jamb posts formed to provide rigidity for partition and light seal at adjacent construction.
1. Post Type: Floating or attached multiple meeting post with 2-way meeting arrangements.
- B. Sound Seals: Perimeter sweep strips for each side, top, and bottom; providing continuous contact with head and sill surfaces for positive light and sound seal. Include manufacturer's standard male and female sound and light seal at lead posts and jambs.
- C. Vertical Seals: Deep nesting, interlocking astragals with continuous vinyl acoustical seal.
- D. Horizontal Top Seals: continuous contact extruded vinyl or mechanical retractable vinyl-faced seal exerting positive pressure on track when extended.

- E. Horizontal Bottom Seals: Retractable seal exerting positive pressure downward assuring horizontal and vertical sealing and resisting panel movement. Minimum clearance between retractable seal and floor finish shall be 1 inch.
 - 1. Extension/retraction of bottom seal by operating handle or built-in operating mechanism. Holes in panel faces not permitted. Include 2 handles per partition.
- F. Final Closure: Positive mechanical closure expanding from panel edge to create positive acoustical seal.
 - 1. Type: Jamb hinged closure.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine flooring for compliance with requirements for installation tolerances and other conditions affecting performance of folding partitions. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install folding panel partitions and accessories in compliance with ASTM E 557 after other finishing operations including painting, have been completed.
- B. Install folding panel partitions in conformance with drawings and approved shop drawings and in strict compliance with manufacturer's written installation instructions.
- C. Match folding panel partitions for color and pattern by installing partitions from cartons in same sequence as manufactured and packaged, if so numbered. Broken, cracked, chipped or deformed partitions are not acceptable.
- D. Repair or replace folding panel partitions within areas where test results indicate partitions do not comply with requirements and retest partitions.

3.3 ADJUSTING

- A. Lubricate bearings and sliding parts; adjust to ensure smooth, easy operation.

3.4 CLEANING

- A. Clean all folding partition surfaces and clean adjacent surfaces soiled by work of this section. Avoid use of abrasive cleaners or solutions containing corrosive solvents. Use cleaning materials recommended by manufacturer.

DIVISION 10 SPECIALTIES

SECTION 102800 - TOILET AND BATH ACCESSORIES

END OF CONTENTS TABLE

DIVISION 10 SPECIALTIES
SECTION 102800 - TOILET AND BATH ACCESSORIES

REVISION HISTORY:

SEPT. 04 - UPDATED MANUFACTURERS AND CHANGED TOILET PAPER AND PAPER TOWEL DISPENSERS PRODUCT INFO. TO REFLECT THAT THESE ARE PROVIDED BY OWNER.

APRIL 05 - ADDED DIAPER CHANGING STATIONS.

MAY 07 - CHANGED SOAP DISPENSER PRODUCT INFO. TO REFLECT THAT THESE ARE PROVIDED BY OWNER.

PART 1 - GENERAL

GENERAL EDITING / COORDINATION NOTES:

TOILET PAPER, PAPER TOWEL, AND SOAP DISPENSERS ARE TYPICALLY PROVIDED BY BUILDING SERVICES FOR CONTRACTOR INSTALLATION. THIS ASSURES THAT UNIT SUPPLIED IS COMPADIBLE WITH PAPER / SOAP PRODUCTS PURCHASED FOR MAINTENANCE. IF OTHER UNITS ARE SELECTED, COORDINATE WITH DESIGN MANAGER TO COMMUNICATE MAINTENANCE REQUIREMENTS TO USER.

USING OWNER SUPPLIED UNITS DOES NOT ALLEVIATE ARCHITECT OF THE RESPONSIBILITY TO COORDINATE WALL MOUNTED ITEMS WITH ALL ADA REQUIREMENTS AND COMMUNICATING THOSE INSTALLATION REQUIREMENTS TO THE CONTRACTOR.

CATALOG NUMBERS USED IN THIS SECTION DO NOT REPRESENT AN EXHAUSTIVE LISTING OF ALL POSSIBLE UNITS. CONSULT MANUFACTURERS CATALOG WHEN EDITING THIS SECTION.

1.1 SUMMARY

- A. Extent of toilet accessories is shown on drawings.
- B. Types of toilet accessories include the following:

EDIT BELOW TO SUIT PROJECT.

Grab bars.
Soap dispensers.
Toilet paper dispenser.
Paper roll towel dispenser.
Electric hand dryers
Fold-down shower seats.
Shower curtain rods.
Sanitary napkin/tampon dispensers.
Folding purse shelf.
Sanitary napkin/tampon disposal units.
Stainless steel shelves.
Janitorial utility shelves.
Mirror units.

- C. Waste paper baskets are included in Division 12 Section "Furnishing Accessories."
- D. For accessories noted in Products section as provided by Owner, coordinate with Owner's Representative to obtain from UM Plant Building Services.

1.2 SUBMITTALS

- A. Product Data: Submit mfr's literature indicating compliance with requirements, and installation instructions.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide products of one of the following:
 - 1. Toilet Accessories:
 - American Specialties, Inc.
 - Bobrick Washroom Equip., Inc.
 - Bradley Corp.
 - Elcoma Metal Fabricating (grab bars and shower seats only).
 - Gamco (except for shower seats and counter soap dispensers)
 - Koala Kare Products, a division of Bobrick

2.2 TOILET ACCESSORIES

- A. General: Provide toilet accessories as indicated or scheduled. Install units at locations and heights as indicated, plumb and level, firmly anchored, in accordance with mfr's instructions.

2.3 MATERIALS

- A. Stainless Steel: AISI Type 3-2/304, with polished No. 4 finish, 22 gage minimum, unless otherwise indicated.
- B. Fasteners: Screws, bolts, and other devices of same material as accessory unit or of galvanized steel where concealed.

2.4 FABRICATION

- A. General: Stamped names or labels on exposed faces of toilet accessory units are not permitted. Wherever locks are required for particular type of accessory, provide same keying throughout project. Furnish two keys for each lock, properly identified.
- B. Surface-Mounted Accessories: Fabricate units with tight seams and joints, exposed edges rolled. Hang doors or access panels with continuous piano hinge or minimum of two 1-1/2 inch long pin hinges of same metal as unit cabinet.

DELETE ABOVE OR BELOW OR RETAIN BOTH TO SUIT PROJECT.

- C. Recessed Accessories: Fabricate units of all welded construction, without mitered corners. Hang doors or access panels with full-length stainless steel piano hinge. Provide anchorage which is fully concealed when unit is closed.

2.5 GRAB BARS

NOTE: ICC/ANSI A117.1 2003 REQUIRES BOTH VERTICAL AND HORIZONTAL BARS.

PART NUMBER LISTED BELOW IS A SERIES NUMBER AND IS AVAILABLE IN MULTIPLE CONFIGURATIONS AND LENGTHS. PROVIDE ELEVATIONS ON DRAWINGS SHOWING CONFIGURATION, TYPES OF BARS, LOCATIONS, AND MOUNTING HEIGHTS. COORDINATE WITH TOILET PAPER DISPENSER AND OTHER WALL MOUNTED ITEMS IN ROOM / STALL.

- A. Provide stainless steel grab bars with wall thickness not less than 18 gage and as follows:
1. Mounting: Concealed.
 2. Gripping Surface: Manufacturer's standard non-slip texture.
 3. Size: Outside diameter 1-1/2 inch by dimensions indicated.
 4. Product: Bobrick B-6806 series of configuration and dimensions shown; or, subject to compliance with requirements, equivalent products of other approved mfrs.

2.6 WALL MOUNTED SOAP DISPENSERS

WALL MOUNTED SOAP DISPENSERS ARE PROVIDED BY BLDG. SERVICES FOR INSTALLATION BY THE CONTRACTOR. ARCHITECT IS RESPONSIBLE TO VERIFY COMPLIANCE WITH PROJECT REQUIREMENTS AND PROVIDE INSTALLATION INFORMATION, INCLUDING MOUNTING HEIGHTS AND LOCATIONS. PM ORDERS DURING CONSTRUCTION. THE FOLLOWING IS STANDARD MODEL FROM SPARTAN:

FOAM DISPENSER (ADA COMPLIANT IF PROPERLY LOCATED): 9756

- A. Wall mounted liquid soap dispensers are provided by Owner for installation by Contractor.

2.7 COUNTER-MOUNTED SOAP DISPENSERS

OPTIONS FOR UNIT BELOW INCLUDE POLISHED BRASS COVER AND SPOUT, 4-INCH LONG SPOUT, AND 20-OZ. RESEVOIR. SEE CATALOG FOR APPROPRIATE MODEL NUMBER.

NOTE THAT BUILDING SERVICES DOES NOT FILL UNITS THAT THEY DO NOT SUPPLY.

- A. Liquid soap dispenser for counter mounting, complete with 4-inch long shank, and optional 6-inch spout. Capable of filling from top. Stainless steel spout/cover and 34 oz. capacity polyethylene reservoir. Provide units with matching stainless above-counter shank extension if required to suit application.
1. Product: Bobrick B-8226; or, subject to compliance with requirements, equivalent products of other approved mfrs.

2.8 TOILET PAPER DISPENSERS

TOILET PAPER DISPENSERS ARE PROVIDED BY BLDG. SERVICES FOR INSTALLATION BY THE CONTRACTOR. ARCHITECT IS RESPONSIBLE FOR SELECTING UNITS FROM BELOW THAT MEET PROJECT AND ADA REQUIREMENTS AND COMMUNICATING SELECTIONS TO DM / PM. ARCHITECT IS ALSO RESPONSIBLE FOR PROVIDING INSTALLATION INFORMATION, INCLUDING MOUNTING HEIGHTS AND LOCATIONS. PM ORDERS DURING CONSTRUCTION. THE FOLLOWING ARE STANDARD MODELS FROM KIMBERLY-CLARK:

JUMBO JRT CORED DISPENSER (TYPICAL PREFERRED TYPE, 2 ROLLS SIDE BY SIDE): 09551 -- 1 OF THE 2 ROLLS CAN BE ADA COMPLIANT IF PROPERLY LOCATED

CORELESS JRT (2 ROLLS SIDE BY SIDE - USE ONLY IF STANDARD PAPER IN BUILDING IS CORELESS, NOT TYPICAL): 09608 -- 1 OF THE 2 ROLLS CAN BE ADA COMPLIANT IF PROPERLY LOCATED

STACKED DOUBLE ROLL DISPENSER (NOT RECOMMENDED IN PUBLIC RESTROOMS, ADA COMPLIANT IF PROPERLY LOCATED): 09021

- A. Toilet paper roll dispensers are provided by Owner for installation by Contractor.

2.9 PAPER ROLL TOWEL DISPENSER

PAPER TOWEL DISPENSERS ARE PROVIDED BY BLDG. SERVICES FOR INSTALLATION BY THE CONTRACTOR. ARCHITECT IS RESPONSIBLE FOR SELECTING UNITS FROM BELOW THAT MEET PROJECT AND ADA REQUIREMENTS AND COMMUNICATING SELECTIONS TO DM / PM. ARCHITECT IS ALSO RESPONSIBLE FOR PROVIDING INSTALLATION INFORMATION, INCLUDING MOUNTING HEIGHTS AND LOCATIONS. PM ORDERS DURING CONSTRUCTION. THE FOLLOWING ARE STANDARD MODELS FROM KIMBERLY-CLARK:

ROLL TOWEL DISPENSER (LEVER HANDLE OPERATED, ADA COMPLIANT IF PROPERLY LOCATED): 09736

TOUCH FREE DISPENSER (MECHANICAL UNIT, NOT ADA COMPLIANT): 09990

NOTE 10-1/2" DEPTH AND COORDINATE WITH ADA REQUIREMENTS.

- A. Paper roll towel dispensers are provided by Owner for installation by Contractor.

2.10 ELECTRIC HAND DRYERS

REMOVED DISCONTINUED PRODUCT PREVIOUSLY LISTED. A&E IS REVIEWING POTENTIAL MODELS FOR INCLUSION IN THIS SECTION. CONSIDER ADA COMPLIANCE, NOISE, DRY TIME, AND AIR DISTRIBUTION PATTERN WHEN SELECTING DEVICES. USER EXPERIENCE IN OTHER BUILDINGS HAVE INDICATED THAT DRIERS IN THE 80-90 DBA RANGE ARE TOO LOUD AND SOME AIR DISTRIBUTION PATTERNS CAUSE MAINTENANCE PROBLEMS ON THE ADJACENT WALLS.

NOTE THAT BUILDING SERVICES DOES NOT PROVIDE ELECTRIC HAND DRIERS.

2.11 SHOWER SEAT

- A. Padded, fold-down seat constructed with Type 304 stainless steel framing and with self-locking mechanism. For units on wood stud framing, provide concealed backing at screw points.
1. Product: Bobrick B-517 (right hand) or B-518 (left hand) as indicated; or subject to compliance with requirements, equivalent products of other approved mfrs.

2.12 SHOWER CURTAIN ROD

- A. Extra-heavy-duty; 18-gauge type 302 stainless steel tubing with satin finish; 1-1/4 inch outside diameter; 1/8 inch thick die-cast, single piece flange; length as shown on drawings, or if not shown, 36 inches.
1. Product: Bobrick B-6047; or subject to compliance with requirements, equivalent products of other approved mfrs.

INCLUDE BELOW IF DESIRED BY CLIENT. NOTE THAT THEY ARE NOT MAINTAINED BY PLANT BUILDING SERVICES.

2.13 SANITARY NAPKIN/TAMPON DISPENSERS

- A. General: Type 304 stainless steel construction; minimum 22 gage cabinet and 18 gage door. Return door edges and equip with tumbler lockset. Provide graphic identification indicating "Napkins" and "Tampons" at coin slots; brand name advertising is not allowed. Capacity not less than 30 napkins and 20 tampons.
1. Coin mechanism: 25-cent coin operation, with locked coin box keyed separately. Wrong coins by-pass mechanisms and drop into product tray. Provide graphic showing indicated coin denomination.
 - a. Cost: 25-cents
 2. Operation: ADA compliant push button dispensing. All operations shall be mechanical.

BELOW FOR RECESSED UNITS (REQUIRES FULL 4 TO 5-1/2 INCH DEEP CAVITY). UNIT BELOW IS ADA COMPLIANT IF LOCATED PROPERLY.

3. Product: Bobrick B-3706 series (recessed or semi-recessed); or, subject to compliance with requirements, equivalent products of other approved mfrs.

BELOW FOR SURFACE MOUNTED UNITS. UNIT BELOW PROTRUDES FROM WALL 8" AND IS NOT ADA COMPLIANT IF LOCATED ALONG A PATH OF TRAVEL.

4. Product: Bobrick B-2706 (surface mounted); or, subject to compliance with requirements, equivalent products of other approved mfrs.

2.14 FOLDING PURSE SHELF

- A. Shelf and bracket fabricated of heavy cast Zamak with bright chrome plated finish, for partition mounting.
 - 1. Product: Bobrick B-287; or, subject to compliance with requirements, equivalent products of other approved manufacturers.

2.15 SANITARY NAPKIN/TAMPON DISPOSAL UNITS

COORDINATE WITH OTHER WALL MOUNTED ITEMS, PARTICULARLY IN ACCESSIBLE STALLS / ROOMS.

- A. Type 304 stainless steel construction, with piano-hinged door.
 - BELOW FOR PARTITION MOUNTED UNITS*
 - 1. Product: Bobrick B-354 (double sided, for through-partition mounting); or, subject to compliance with requirements, equivalent products of other approved mfrs.
 - BELOW FOR WALL MOUNTED UNITS. SELECT RECESSED OR SURFACE MOUNTED UNITS AS APPLICABLE. MAINTENANCE PREFERS RECESSED WHENEVER POSSIBLE.*
 - 2. Product: Bobrick B-353 (recessed); or, subject to compliance with requirements, equivalent products of other approved mfrs.
 - 3. Bobrick B-254 (surface mounted); or, subject to compliance with requirements, equivalent products of other approved mfrs.

2.16 STAINLESS STEEL SHELVES

- A. Type 304 stainless steel construction, 18 gauge thickness with polished satin finish. Pan type construction with edges turned down not less than 3/4 inches on all sides; and complete with integrally welded stainless steel brackets at manufacturer's standard spacing.
 - 1. Depth: 6 inches.
 - LENGTHS FROM 16 INCHES TO 96 INCHES AVAILABLE IN 2-INCH INCREMENTS - CONSULT CATALOG.*
 - 2. Length: 24 [SPECIFY OTHER] inches.
 - 3. Product: Bobrick B-296 series; or, subject to compliance with requirements, equivalent products of other approved mfrs.

2.17 JANITORIAL UTILITY SHELVES

- A. Type 304 stainless steel construction, 18 gauge thickness with polished satin finish; 8-inch depth. Pan type construction with edges turned down not less than 1-1/2 inches on all sides, and complete with rag bar, rag hooks, mop hooks, and integrally welded stainless steel brackets.
 - 1. Length: 30 inches; not less than 3 mop holders and 2 rag hooks.
 - 2. Length: 36 inches; not less than 4 mop holders and 3 rag hooks.
 - 3. Length: 48 inches; not less than 6 mop holders and 5 rag hooks.
 - 4. Product: Bobrick B-224 series; or, subject to compliance with requirements, equivalent products of other approved mfrs.

2.18 MIRRORS

A. Provide framed glass mirror units of standard or custom sizes as indicated, and as follows:

1. Frames: Provide glass mirror units with UNS 30302/30304 stainless steel channel frames, 1/2-inch by 1/2-inch, no. 4 finish, and with mitered corners.

BELOW IS TEMPERED GLASS. ANNEALED AND LAMINATED ARE ALSO AVAILABLE. CONSIDER LESS EXPENSIVE ANNEALED GLASS ALTERNATIVE FOR NON-STUDENT, NON-PUBLIC AREAS.

2. Mirror: Provide units with 1/4 inch thick tempered glass, Type I, Class 1, Quality q2, conforming to FS DD-G-451, with silvering, copper coating, and protective organic coating complying with FS DD-M-411.

DELETE BELOW IF NO STAINLESS STEEL MIRRORS. USE WHERE SECURITY OR IMPACT DAMAGE ARE CONSIDERATIONS.

3. Mirror: Bright polished, 22 gage, UNS 51430 stainless steel sheet.

DELETE BELOW IF NO SHELF. SHELF TYPICALLY CONFLICTS WITH FAUCETS WHEN MIRRORS ARE SET AT ADA HEIGHT.

4. Mirror Shelf: Where indicated on drawings, provide 4 inch deep, satin finished stainless steel units, full length of mirror.

B. Product: Provide the following product, or equivalent products of other approved manufacturers:

1. Bobrick B-165 series.

DELETE BELOW IF NO SHELF.

2. Bobrick B-166 series (with shelf.)

VERTICAL WALL MOUNTED BABY CHANGING STATION ALSO AVAILABLE FOR TIGHT SPACES. SEE MANUFACTURER'S CATALOG. HORIZONTAL MODEL PREFERRED.

2.19 DIAPER-CHANGING STATION:

A. Description: Horizontal unit that opens by folding down from stored position and with replaceable child-protection strap.

1. Engineered to support a minimum of 250-lb static load when opened.
2. Comply with ASTM F2285 Standard Consumer Safety Performance Specification for Commercial Use.

B. Mounting: Surface mounted, with unit projecting not more than 4 inches from wall when closed.

C. Operation: By pneumatic shock-absorbing mechanism.

SELECT ONE OF THE FOLLOWING MATERIALS. STAINLESS IS MORE EXPENSIVE BUT MORE DURABLE - CONSIDER IN HIGH USE AREAS.

- D. Material and Finish: Stainless steel, No. 4 finish (satin), with replaceable insulated polystyrene tray liner and rounded plastic corners.
- E. Material and Finish: Blow-molded high-density polyethylene, cream color, with antimicrobial additive, with reinforce full length steel-on-steel hinge and 11 gauge steel mounting plates.
- F. Liner Dispenser: Built in.
- G. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Brocar Products, Inc.
 - 2. Koala Care Products, a division of Bobrick.
 - 3. Synergy Management.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Install toilet accessory units in accordance with mfr's instructions, using fasteners appropriate to substrate and recommended by mfr of unit. Install units plumb and level, firmly anchored in locations indicated. Secure mirrors to walls in tamperproof manner with special hangers, toggle bolts, or screws.
- B. Adjust toilet accessories for proper operation and verify that mechanisms function smoothly.
- C. Clean and polish all exposed surfaces after removing protective coatings. Clean exposed surfaces of mirror units in compliance with mfr's recommendations.

CONSIDER INCLUDING THE SCHEDULE BELOW IF HELPFUL.

3.2 SCHEDULE

- A. In each toilet room marked "Men's Toilet" on plans, provide the following toilet accessory units:
 - 1. Grab Bars: Configuration as shown in toilet marked "Handicap".
 - 2. Soap Dispenser: 1 at each sink.
 - 3. Toilet Paper Dispenser: 1 in each toilet stall.
 - 4. Paper Roll Towel Dispenser: 1 within room.
 - 5. Stainless Steel Shelf: 1 within room.
 - 6. Mirror Units: 1 over each sink.

IF DESIRED BY CLIENT, ADD DIAPER CHANGING STATION.

 - 7. Diaper Changing Station: 1 within room.
- B. In each toilet room marked "Women's Toilet" on plans, provide the following toilet accessory units:
 - 1. Grab Bars: Configuration as shown in toilet marked "Handicap".
 - 2. Soap Dispenser: 1 at each sink.
 - 3. Toilet Paper Dispenser: 1 in each toilet stall.
 - 4. Paper Roll Towel Dispenser: 1 within room.
 - 5. Sanitary Napkin/Tampon Dispenser: 1 within room.

6. Folding Purse Shelf: 1 in each toilet stall.
7. Sanitary Napkin Receptacles: As indicated on drawings, but with access to one in each toilet stall.
8. Stainless Steel Shelf: 1 within room.
9. Mirror Units: 1 over each sink.

IF DESIRED BY CLIENT, ADD DIAPER CHANGING STATION.

10. Diaper Changing Station: 1 within room.
- C. In each room marked "Janitor's Closet" on plans, provide the following toilet accessory units:
1. Janitorial utility shelves: 1 unit within room.

DIVISION 10 SPECIALTIES

SECTION 104400 - FIRE PROTECTION SPECIALTIES

END OF CONTENTS TABLE

DIVISION 10 SPECIALTIES
SECTION 104400 - FIRE PROTECTION SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

- A. Types of fire extinguishers include the following:
 - 1. ABC multipurpose dry chemical.
 - 2. BC carbon dioxide.
 - 3. Water under pressure.
- B. Locations of fire extinguishers are shown on drawings.

1.2 SUBMITTALS

- A. Product Data: Manufacturers literature indicating compliance with requirements, and installation instructions.

1.3 QUALITY ASSURANCE

- A. Provide new UL-listed fire extinguishers bearing UL "Listing Mark" for type, rating, and classification of extinguishers indicated.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:
Badger Fire Protection.
Buckeye Fire Equipment Co.
General Fire Extinguisher Corp.
Kidde Co.
Larsen's Manufacturing Co.
Potter-Roemer Inc.

SELECT APPROPRIATE TYPES OF FIRE EXTINGUISHER UNITS. NOTE THAT THERE ARE OTHER TYPES THAN LISTED BELOW.

SELECT BELOW FOR STANDARD LABORATORY AND OTHER TYPICAL APPLICATIONS, INCLUDING ELEVATOR MACHINE ROOMS.

2.2 MULTI-PURPOSE DRY CHEMICAL TYPE

- A. Provide UL-rated 4-A; 60-BC, 10-lb. nominal capacity, in enameled steel container.

SELECT BELOW ONLY AFTER VERIFYING THAT IT MEETS CODE FOR CONTEMPLATED USAGE.

2.3 CARBON DIOXIDE TYPE

- A. Provide UL-rated 10-BC, 10-lb. nominal capacity, enameled metal container.

2.4 MATERIALS

- A. Provide units with metal valve assemblies, discharge levers and carrying handles and with rubber hoses. Plastic is not permitted. Provide metal brackets for wall mounting units where cabinets are not indicated.

INCLUDE THE FOLLOWING WHERE DESIRED - USUALLY NOT IN LABS OR EQUIPMENT ROOMS.

2.5 FIRE EXTINGUISHER CABINETS

- A. Provide fire extinguisher cabinets at locations indicated on drawings.

BELOW IS EXAMPLE ONLY - SEMI-RECESSED AND SURFACE MOUNTED TYPES ARE AVAILABLE. CONSULT CATALOGS FOR MFR AND MODEL DESIRED. FULLY RECESSED REQUIRED 6" STUD DEPTH

1. Type: Fully recessed with trim.
2. Size: To suit type of unit being housed.
3. Door and Frame Finish: Satin stainless steel.
4. Window: Approx. 2 inches by 24 inches, 1/4 inch clear acrylic.
5. Manufacturer/Model: Potter-Roemer Inc.; No. 1704, or equivalent products of Samson Metal Products, Larsen's Mfg Co.
6. Signage: Identify extinguisher cabinets with manufacturer's standard red lettering applied to cabinet door, spelling "FIRE EXTINGUISHER". Letter size, style and location selected by Architect.

DELETE BELOW IF NO BRACKET-MOUNTED EXTINGUISHERS.

2.6 ACCESSORIES FOR BRACKET MOUNTED EXTINGUISHERS

- A. Mounting Brackets: Provide units designed to hold specified extinguishers. Mount brackets with expansion anchors to withstand a 200 pound load applied in any direction.
- B. Signage: Identify bracket-mounted extinguishers with red letter decals with clear backgrounds, spelling "FIRE EXTINGUISHER" applied to wall surface. Letter size, style and location selected by Architect and indicating "FIRE EXTINGUISHER".

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install in accordance with manufacturer's directions for type of mounting required at height and locations indicated, or if not indicated, to comply with applicable regulations of governing authorities.
 - 1. Coordinate installation of fire extinguisher cabinets with wall system installers.

SECTION 115313 - LABORATORY FUME HOODS

END OF CONTENTS TABLE

SUBSTANTIAL REVISIONS INCORPORATED INTO THIS SECTION - MAY 9, 2011, BY LAB SUSTAINABILITY TEAM AND A&E ARCHITECTURAL DEPARTMENT.

REVISED NOV. 8, 2013 TO REFLECT NEW ANSI Z9.5 2012 VERSION AND TO SPECIFY THE MINIMUM HOOD AIR FLOW RATE TO BE 375 ACH. D. KARLE, PER LAB SUSTAINABILITY TEAM.

DIVISION 11 EQUIPMENT
SECTION 115313 - LABORATORY FUME HOODS

CONSULT WITH MECHANICAL ENGINEER TO DETERMINE APPROPRIATE TYPE OF FUME HOOD AND VENTILATION REQUIREMENTS. SECTION 115313 "LABORATORY FUME HOODS" AND SECTION 230920 LABORATORY TERMINAL AIRFLOW UNITS AND CONTROLS MUST BE COORDINATED WITH EACH OTHER. SEE U-M DESIGN GUIDELINE 230920 FOR ADDITIONAL INFORMATION REGARDING HOODS AND LAB DESIGN. INVOLVE OSEH EARLY IN THE PLANNING OF PROJECTS WHICH WILL UTILIZE FUME HOODS.

THIS SPECIFICATION COVERS BENCH TOP STYLE HOODS. FLOOR MOUNTED (SOMETIMES REFERRED TO AS "WALK-IN" HOODS) REQUIRE SPECIAL CONSIDERATIONS AND ARE NOT SPECIFIED BELOW. SEE THE U-M LAB VENTILATION DESIGN GUIDELINE FOR REQUIREMENTS FOR FLOOR MOUNTED WALK IN HOODS.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including Standard General Conditions, Supplemental General Conditions, Division 01 Specification Sections, and other applicable Specification Sections, apply to this Section.
- B. Related Sections:
 - 1. Division 01 Sections "Project Commissioning for Small Projects" and "Full Project Commissioning".
 - 2. Division 12 Section: "Laboratory Casework".
 - 3. Division 22 Section: Basic Piping Materials and Methods
 - 4. Division 22 Section: Mechanical Identification
 - 5. Division 23 Section: Laboratory Terminal Airflow Units and Controls
 - 6. Division 23 Section: Laboratory Airflow Controls-DDC
 - 7. Division 26 Section: Electrical

1.2 SUMMARY

- A. Section Includes

ADD FULL BYPASS CONSTANT VOLUME TYPE IF INCLUDED ON YOUR PROJECT. FULL BYPASS CONSTANT VOLUME HOODS ARE NOT TYPICALLY USED AT U-M AND ARE THUS NOT SPECIFIED IN THIS SPECIFICATION (ALTHOUGH THEY ARE DEFINED IN THE "DEFINITIONS" SECTION, FURTHER BELOW).

- 1. Chemical Fume Hoods of the following types:
 - a. Partial Bypass Constant Volume
 - b. Restricted Bypass Variable Volume
 - c. Reduced Face Velocity (RFV)
- 2. Fume Hood Understructures (base units, flammable and acid storage cabinets)
- 3. Fume Hood Plumbing Accessories
- 4. Fume Hood Electrical Accessories

1.3 SUBMITTALS

- A. Samples: Submit samples of exterior finish colors and interior liner material for Architect's initial selection.
- B. Shop Drawings: Submit shop drawings for fume hoods showing plans, elevations, ends, cross-sections, service run spaces, location and type of service fixtures; details and location of anchorages and fitting to floors, walls, and base; layout of units with relation to surrounding walls, doors, windows, and other building components; connection to hood exhaust system; location of access doors.
 - 1. Coordinate shop drawings with other work involved.
 - 2. Provide roughing-in drawings for mechanical and electrical services, including location of cut-off valves and junction boxes, where pre-plumbed or pre-wired units are required.
 - 3. Quantify net free area of fume hood opening with Sash Height in fully open position and at sash stop height.
 - 4. Provide static pressure drop at 100 fpm face velocity with fume hood sash in full open position.
- C. Certification of Performance As Manufactured: Provide for each hood type and size indicating hood meets or exceeds the ASHRAE 110 As Manufactured (AM) requirements specified in Part 2.
- D. Certification of Performance, Field: Provide certification of performance signed by Installer, verifying that each unit has been field tested in accordance with the provisions of Part 3 "Field Quality Control" article, and is operating in compliance with specified requirements.
- E. Shipping, handling, and storage instructions.
- F. Installation and start-up instructions.
- G. Project specific maintenance and operating data, and recommended spare parts list.

1.4 QUALITY ASSURANCE

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

USUALLY RETAIN BELOW - DELETE/REVISE ONLY IF FUME HOOD BASE CABINETS DO NOT NEED TO MATCH ADJACENT LAB BENCH BASE CABINETS, OR FOR OTHER CIRCUMSTANCES.

- B. Laboratory fume hoods, casework, tops, sinks, service fixtures, and related furniture shall be provided by the same distributor who shall be fully responsible for coordinating all such components. All fume hoods shall be supplied from the same hood manufacturer.
 - 1. For projects using both RFV and standard fume hoods, fume hoods from a maximum of two manufacturers may be provided.
- C. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise:

1. Comply with provisions of Michigan Building Code .
2. Scientific Equipment and Furniture Association, SEFA 1 Laboratory Fume Hoods.
3. Scientific Equipment and Furniture Association, SEFA 8 Laboratory Furniture, Casework, Shelving and Tables.
4. Scientific Equipment and Furniture Association, SEFA 2.3 Installation of Scientific Laboratory Furniture and Equipment.
5. Underwriters Laboratories, UL 1805 Laboratory Hoods and Cabinets.
6. American Society of Heating, Refrigeration and Air-conditioning Engineers, ANSI/ASHRAE 110-1995 Method of Testing Performance of Laboratory Fume Hoods.
7. ANSI/AIHA Z9.5-2012 Laboratory Ventilation.
8. National Fire Protection Association NFPA 45 Flammable and Combustible Liquids Code 2004.

1.5 DEFINITIONS

A. Hood- Full Bypass Constant Volume Type

1. With the sash at sash stop height, the air flowing through the bypass and the air flowing through the Working Area are essentially equal in volume (the free area of the bypass and the free area of the Working Area are essentially the same).
2. With the sash at any other position, including fully opened or fully closed, the total air volume (bypass + Working Area) entering the hood remains essentially unchanged. The face velocity through the Working Area remains constant, regardless of sash position.

B. Hood-Partial Bypass Constant Volume Hood

1. With the sash at sash stop height, the air flowing through the bypass is essentially zero.
2. With the sash at any position between sash stop height and fully closed, the bypass opens in proportion to the sash closing, such that the face velocity through the Working Area remains essentially constant.
3. With the sash at any position between sash stop height and fully open, the air volume exiting the hood remains unchanged, therefore as the sash is opened the face velocity through the Working Area decreases proportionally with the sash position. When the sash is fully open, the face velocity through the Working Area is approximately half what it was when the sash was at sash stop height (assuming a typical maximum Sash Height of approximately 28").

C. Hood- Restricted Bypass Variable Volume Hood

1. Regardless of sash position, the face velocity through the Working Area remains constant. The air flowing through the bypass is only enough such that the hood maintains the minimum air change rate when the sash is fully closed. Thus "restricted bypass" means there is nearly zero bypass.

- D. **Sash Height:** The distance from the bottom of the sash to the working surface of the hood. Not from the bottom of the sash to the top of the airfoil vane(unless the top of the air foil vane and the top of the working surface are at the same height).
- E. **Working Area:** The area bounded by the Sash Height and the net width of the hood opening.

1.6 DELIVERY, STORAGE, AND HANDLING

ADD BELOW IF LABORATORY CASEWORK SECTION INCLUDED

- A. Coordinate delivery of fume hood with delivery of other laboratory casework components.
- B. Protect finished surfaces from soiling and damage during handling and installation. Keep covered with polyethylene film or other protective covering.

1.7 WARRANTY

- A. Provide a complete parts and labor warranty for a minimum of 1 year from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Chemical fume hoods, all types except Reduced Face Velocity type:
 - 1. Air Master; Air master Systems Corp.
 - 2. BMC
 - 3. Hamilton Scientific
 - 4. Kewaunee Scientific Corp.
 - 5. Mott Manufacturing, Ltd.
 - 6. Labconco Corp.
- B. Reduced Face Velocity type chemical fume hoods (bench top models only):
 - 1. Labconco Protector Xstream
 - 2. Kewaunee Supreme Air LV

2.2 FUME HOODS, GENERAL

- A. Provide UL 1805 labeled fume hoods that provide proper exhaust volume and operate in a safe, efficient manner, within the tolerances for face velocities specified. Dead air pockets and reverse air currents shall not occur along the surface of hood interiors.
- B. Static Pressure Drop: Maximum of 0.35" (WG) at 100 FPM face velocity with fume hood sash in full open position.

THE MINIMUM 375 AIR CHANGE RATE PER HOUR SPECIFIED BELOW MAY NOT BE ADEQUATE TO PREVENT A HAZARD IF FLAMMABLE LIQUIDS, VAPORS, OR GASES WILL EXIST ALONG WITH AN IGNITION SOURCE, OR

BECAUSE OF OTHER CONCERNS OUTLINED IN Z9.5. WHEN IN DOUBT EVALUATE THE HAZARD WITH U-M OSEH, AND ADJUST ACCORDINGLY.

- C. Hood minimum air flow rate (any sash position): Sufficient to prevent hazardous concentrations of contaminants within the hood and in compliance with ANSI Z9.5-2012, no less than 375 hood air changes per hour.
- D. Splay or radius the top and sides of the face opening with configuration proven to provide an aerodynamic section to ensure smooth, even flow of air into hood.
- E. Provide air foil vane at work surface. Air foil vane shall not be mounted more than 3" above the hood working surface. Air foil vane shall prevent backflow of air and shall direct positive flow of air across work surface.
- F. Control System Components: Coordinate with Related Section "Laboratory Terminal Airflow Units and Controls" and "Laboratory Airflow Controls-DDC". Provide cutout in side of sash opening for the fume hood monitor to allow it to be flush or surface mounted, as required for the project. Also make provisions to allow mounting of sash sensors, sash alarm, and other devices provided by Related Section.

ALWAYS INCLUDE THE REQUIRED HOOD PERFORMANCE CRITERIA. THE PERFORMANCE CRITERIA BELOW IS TYPICALLY ADEQUATE FOR U-M LABS. HOODS INVOLVING HIGHLY TOXIC CHEMICALS, HIGH PRODUCTION VOLUMES, HIGH-HAZARD RADIOACTIVE MATERIALS, OR OTHER UNIQUE CIRCUMSTANCES MAY REQUIRE MORE STRINGENT CRITERIA. U-M OSEH SHOULD BE CONSULTED IN SUCH CASES.

FIELD "AS INSTALLED" (AI) TESTING MAY BE APPROPRIATE IN SOME CASES. IF REQUIRED, REVISE BELOW IF NECESSARY AND CORRESPONDING PART 3 PARAGRAPH.

2.3 HOOD PERFORMANCE CRITERIA

- A. Chemical fume hoods shall meet or exceed the following ASHRAE 110 As Manufactured (AM) performance criteria. Performance criteria shall be met with the sash raised to the height of the sash stop (unless noted otherwise), and at any face velocity within +/- 10 FPM of the average face velocity indicated.
 - 1. All Hood Types shall pass the Local Flow Visualization and Large Volume Visualization challenges.
 - 2. Chemical fume hoods except Reduced Face Velocity (RFV) type shall be tested at 100 FPM average face velocity. Tracer gas concentrations, including Sash Movement Effect, shall not exceed 0.01 PPM at 4 LPM tracer gas release rate (4AM0.01 and 4SME-AM0.01). VAV Hoods shall also achieve this performance at the full open sash position.

3. Chemical fume hoods RFV type shall be tested at 60 FPM average face velocity. Tracer gas concentrations, including Sash Movement Effect, shall not exceed 0.01 PPM at 6 LPM tracer gas release rate (6AM0.01 and 6SME-AM0.01). The vertical position of the detector port shall be located 12" above the hood working surface during testing. All other detector positions (horizontal positions, distance from sash) shall match ASHRAE 110 requirements.
- B. The above performance criteria shall also be met when field ASHRAE 110 testing is specified.

SELECT ONE OR MORE OF THE FOLLOWING STANDARD HOOD TYPES, OR REVISE TO SUIT PROJECT. IF YOU HAVE A VARIETY OF LINING OR TOP TYPES IN YOUR PROJECT, BE SURE TO CAREFULLY INDICATE ON DRAWINGS WHAT MATERIALS BELONG IN WHICH HOODS

ALWAYS CONSULT WITH THE MECHANICAL ENGINEER AND U-M OSEH REGARDING THE APPROPRIATE HOOD TYPE TO SPECIFY. CLEARLY DELINEATE THE HOOD TYPES REQUIRED FOR THE PROJECT EITHER IN THIS SPECIFICATION OR ON THE DRAWINGS (PREFERRED).

CONSTANT VOLUME HOODS OF ANY TYPE ARE NOT SAFE WITH COMBINATION SASH ARRANGEMENTS BECAUSE CORRECT FACE VELOCITY CAN'T BE ASSURED AS THE HORIZONTAL SASH IS ADJUSTED. IF COMBINATION SASHES ARE REQUIRED, SPECIFY RESTRICTED BYPASS VAV HOODS, AND ASSURE THE MECHANICAL ENGINEER SPECIFIES A CORRESPONDING VAV TYPE LAB TERMINAL AIR FLOW UNIT.

FULL BYPASS CONSTANT VOLUME HOODS ARE NOT SPECIFIED BELOW AS THEY ARE NOT TYPICALLY USED AT U-M. IF YOUR PROJECT REQUIRES A HOOD OF THIS TYPE, ADD BELOW.

2.4 PARTIAL BY-PASS CONSTANT VOLUME CHEMICAL FUME HOOD

- A. Equip units with compensating by-pass above the sash which functions automatically as the vertical sash is operated, to provide air flow control as described in the Definitions article.
1. Provide vertical rising sashes only.

DEPENDING ON ROOM MINIMUM AIR CHANGE RATES, VAV HOODS MAY SAVE ENERGY. THEY SHOULD NOT BE INDISCRIMINATELY SPECIFIED UNLESS THE MECHANICAL ENGINEER HAS DONE AN ANALYSIS DETERMINING ENERGY SAVINGS WILL ACTUALLY OCCUR. AN EXCEPTION IS COMBINATION SASHES; IF THESE ARE REQUIRED, ALWAYS SPECIFY A VAV HOOD AND ASSURE THE MECHANICAL ENGINEER SPECIFIES A CORRESPONDING VAV TYPE LAB TERMINAL AIR FLOW UNIT.

IF YOUR PROJECT REQUIRES VAV HOODS, EDIT BELOW OR INDICATE ON A DRAWING SCHEDULE (PREFERRED) WHICH TYPE SASH IS REQUIRED: VERTICAL RISING OR COMBINATION.

2.5 RESTRICTED BYPASS, VARIABLE AIR VOLUME (VAV) CHEMICAL FUME HOOD

- A. Provide hoods specifically designed for VAV application which provide air flow control as described in the Definitions article.
 - 1. Provide vertical rising or combination sashes, as indicated.

RFV HOODS ARE RESTRICTED TO ONLY THE MODEL AND MFR. LISTED UNDER THE ARTICLE "APPROVED MANUFACTURERS". BY U-M OSEH RULING, RFV HOODS:

ARE LIMITED TO 6' MAXIMUM WIDTH. NOTE THE FOLLOWING FOR SPACE PLANNING. SEE FUME HOOD CUT SHEETS FOR MORE DETAILED INFORMATION:

8'-6" MINIMUM CEILING HEIGHT

OVERALL HOOD DEPTH IS GREATER THAN STANDARD.

ARE TO BE BALANCED TO PROVIDE 70 +/- 5 FPM AVERAGE FACE VELOCITY AND SHALL ALARM AT 60 FPM FACE VELOCITY. THIS AIR BALANCE INFORMATION MUST APPEAR IN THE MECHANICAL DOCUMENTS-COORDINATE WITH MECHANICAL ENGINEER.

IF YOUR PROJECT REQUIRES RFV HOODS, EDIT BELOW OR INDICATE ON A DRAWING SCHEDULE (PREFERRED):

WHICH TYPE SASH IS REQUIRED: VERTICAL RISING OR COMBINATION.

IF THE RFV HOODS ARE PARTIAL BYPASS CONSTANT VOLUME OR VAV TYPE.

2.6 REDUCED FACE VELOCITY CHEMICAL FUME HOOD

- A. Provide bench top type hoods specifically designed for reduced face velocity (RFV) operation of model and manufacturer listed under Acceptable Manufacturers, and which provide air flow control as described in the Definitions article.
 - 1. RFV hoods shall be partial bypass constant volume or VAV type, as indicated.
 - a. Provide vertical rising sash on constant volume type.
 - b. Provide vertical rising or combination sashes, as indicated, on VAV type.
 - 2. Maximum over-all hood depth: 36".

2.7 HOOD SUPERSTRUCTURE CONSTRUCTION

USUALLY RETAIN ALL FOLLOWING REQUIREMENTS

- A. General: Design hoods to be chemical and flame resistant, for collection, retention and disposal of hazardous fumes with complete safety, minimum expenditure of purging air from room supply, and minimum turbulence within chamber.
- B. Framework: Heavy-gage steel members, reinforced, braced and assembled to insure strength and rigidity.

- C. Body Construction: Superstructure shall have double wall construction. Exterior shall be of minimum 18 gage cold-rolled steel with component parts screwed together to allow removal of end panels, front end fascia pieces, top fascia and air foil strips, and to allow access to plumbing lines and service fixtures. Apply manufacturer's standard acid and alkali resistant baked-on or powder-coated finish to interior and exterior surface of component parts prior to final assembly.

SELECT COLOR

1. Color: Selected by Architect from manufacturer's standard range.
- D. Ends: Double-wall end panels (enclosing sash counter-balance weights and all utilities) without projecting corner posts or other obstructions to interfere with smooth, even flow of air.
- E. Rear Baffle: Provide non-adjustable baffle at rear of hood with openings located to purge the upper and lower area of the hood. Baffle is to be fabricated of the same material as the hood liner.

USUALLY SELECT ABOVE AND DELETE BELOW FOR TEACHING LABS (WHERE USERS ARE LESS LIKELY TO BE KNOWLEDGEABLE ABOUT FUME HOODS AND TO HAVE NEED FOR THE FLEXIBILITY OF ADJUSTABLE BAFFLES). FOR RESEARCH LABS AND LABS USED FOR CHEMICAL DISPENSING, SELECT BELOW AND DELETE ABOVE IN CONSULTATION WITH MECHANICAL ENGINEER AND OSEH.

- F. Rear Baffle: Provide baffle at rear of hood with manually adjustable openings at top and bottom to allow adjusted flow of air through hood to compensate for type of gas, apparatus, or heat source used. Fabricate unit to be easily removable for cleaning behind baffle, and of same material as hood lining.
- G. Plenum Chamber: Adequate volume for hood dimensions, extending full width of hoods to equalize incoming air flow, of same material as hood lining. Provide corrosion resistant duct stub of proper dimension for connection to exhaust duct assembly.
- H. By-Pass Grilles: When air is required to be taken from room other than through hood sash opening, provide suitable by-pass grilles having required free opening but concealing plenum behind.
- I. Sash: Provide an operable sash fabricated with minimum 18 gage steel four-sided frame with corners welded and ground smooth. Glaze with laminated safety glass set into chemical resistant rubber glazing channels, held in place with removable stops. Sash lifting system (cable or chain) shall hold sash at any position without creep and prevent sash drop in the event of a cable failure. Sash and counter balance mechanism design shall be life cycle tested to withstand a minimum of 100,000 full travel cycles without signs of fatigue.

14" IS THE STANDARD SASH HEIGHT AT U-M AND RARELY IF EVER SHOULD BE CHANGED. SEE U-M DESIGN GUIDELINE 230920 FOR ADDITIONAL INFORMATION. THE DESCRIPTION BELOW FOR SASH STOP LOCATION WHEN VANES ARE LOCATED MORE THAN 2" ABOVE THE HOOD WORKING SURFACE IS NECESSARY TO ACCOMMODATE CERTAIN HOOD MFR.S.

1. Sash Stops: Install integral sash stops on fume hoods 14 inches above the hood working surface. For hoods with air foil vanes located more than 2" above the hood working surface, locate sash stop 12" above top of vane.
 - a. Example- The vane is located 3" above the working surface: sash stop to be 12" above vane, 15" above working surface.
 - b. The stops shall be of the type that can be temporarily bypassed to allow the sash to be raised to the full open position for equipment/experiment set-up and removal.
2. Vertical Rising Sash: Provide sliding single-hung, full-view sash.

SELECT ABOVE OR BELOW OR BOTH IF BOTH TYPES OF SASH ARE REQUIRED. IF BOTH, INDICATE THE SASH TYPE REQUIRED AT EACH SPECIFIC HOOD LOCATION. CAREFULLY REVIEW ADDITIONAL SPEC EDITORS NOTES AT ARTICLES 2.3, 2.4 AND 2.5 BEFORE SELECTING SASH TYPES. VERTICAL SASH HAS LESS EXPENSIVE FIRST COST AND ARE PREFERRED BY U-M OSEH AND PLANT. COMBINATION SASH PROVIDES ADDITIONAL FLEXIBILITY FOR USERS BUT REQUIRES THAT MORE EXPENSIVE VAV FUME HOODS AND VAV CONTROLS BE SPECIFIED AS WELL.

3. Combination Sash: Provide sliding single-hung sash with dual-track system at top and bottom of glazing opening for individual, horizontally sliding safety glass panes.

MODIFY PARAGRAPH BELOW IF DIFFERENT CONFIGURATION IS DESIRED.

- a. Panel Arrangement: Provide sash with 4 individual sliding glass panes.
4. Counterbalance vertical sliding sash with sash weight and cable/chain system. Provide stainless steel or monel metal cable/chain, ball-bearing sheaves/sprockets, plastic glides in stainless steel guides, and stainless steel lift handles. Provide rubber bumpers at top and bottom of each sash unit.
5. Safety Glazing: Two sheets of double strength "B" quality, clear sheet glass permanently laminated with a sheet of clear, plasticized polyvinyl butyl.

- J. Closure Strips: Wood or metal, as required to matching adjoining materials and finishes. Provide where required to close openings between fume hood base cabinet and superstructure and adjacent building wall construction.

INCLUDE BELOW FOR IMPROVED APPEARANCE WITH SUSPENDED CEILINGS. USUALLY NOT APPROPRIATE FOR USE IN ROOMS WITHOUT SUSPENDED CEILINGS

- K. Enclosure Panels: Provide removable metal panels matching hood superstructure. Enclose area from top of hood to underside of suspended ceiling unless indicated otherwise.
- L. Holes: Provide holes for passage of piping and conduit and for fixtures furnished in this Section or under Related Sections.
- M. Fasteners: Provide stainless steel fasteners wherever exposed to fumes in hood.

2.8 INTERIOR LINER PANELS AND WORKING SURFACE

USUALLY RETAIN BELOW LINER PANEL PARAGRAPH; MODIFY IN THE RARE CASE WHERE ONLY STAINLESS STEEL INTERIORS ARE REQUIRED, OR IF EPOXY RESIN LINER IS REQUIRED. AT THIS TIME ONLY KEWAUNEE AND MOTT OFFER EPOXY RESIN LINER AS AN OPTION.

- A. Liner Panels: Interior lining shall be flush, cut to fit size of hood interior and securely held in place with fasteners. Provide back baffles of the same material as liner panels. Fabricate liner panels with cut-outs in hood side panels to provide access to plumbing lines and to receive service fixtures at side of hood, as indicated. Furnish removable plug buttons for holes not used for indicated fixtures. Liner material shall be as follows:

EPOXY RESIN ALSO AVAILABLE FROM SOME MANUFACTURERS. PROVIDES INCREASED HEAT AND CHEMICAL RESISTANCE. USE CAUTION WHEN SPECIFYING. TYPICAL THICKNESS IS 1/4" - EPOXY RESIN AT THIS THICKNESS IS SUSCEPTIBLE TO DAMAGE DURING SHIPPING.

GLASS FIBER REINFORCED EPOXY RESIN AND CELLULOSE FIBER REINFORCED PHENOLIC RESIN IS ALSO AVAILABLE FROM SOME MANUFACTURERS WHICH ALSO PROVIDES INCREASED CHEMICAL RESISTANCE WITHOUT THE ISSUES OF BREAKAGE FOR EPOXY RESIN. VERIFY AVAILABILITY PRIOR TO SPECIFYING.

1. Glass Reinforced Polyester: 1/4-inch thick, press-molded, heat-converted, catalyzed glass reinforced polyester sheet. Color: Manufacturer's standard white.

ALWAYS INCLUDE BELOW.

2. Liner shall have a flame spread rating of 25 or less when tested in accordance with ASTM E-84.

INCLUDE BELOW FOR STANDARD BLACK EPOXY RESIN WORKING SURFACE IN HOOD.

- B. Epoxy Resin Working Surface: 1-1/4-inch thick, dished to retain spillage.

1. Conform to specifications for epoxy resin top material properties outlined in Division 12 Section "Laboratory Casework".

IF RESIN TOPS ARE NOT SPECIFIED IN LAB CASEWORK SECTION: DELETE PARAGRAPH ABOVE AND RETAIN TWO PARAGRAPHS BELOW

2. Color: Black.

IF RESIN TOPS ARE SPECIFIED IN LAB CASEWORK SECTION: RETAIN TWO PARAGRAPHS ABOVE AND DELETE PARAGRAPH BELOW.

3. Physical Properties: Flexural strength - 4000 psi; compressive strength - 14,000 psi; hardness, Rockwell M-197; water absorption in 24 hours - 0.05%; heat distortion point - 400 deg. F; resistant to thermal shock.
 - a. Workmanship: Cast surfaces very smooth, with factory cut-outs for sinks, drip grooves, and service fixtures. Plain butt type joints assembled with epoxy adhesive.

RETAIN BELOW FOR ISOTOPE-TYPE STAINLESS STEEL INTERIORS AND PERCHLORIC ACID HOODS. NOTE THAT MOST LOW-LEVEL RADIOISOTOPE WORK CAN BE CARRIED OUT IN REGULAR FUME HOODS. THEREFORE, IF RADIOISOTOPES ARE TO BE USED, CONSULT WITH OSEH TO DETERMINE WHICH TYPE OF HOOD TO SPECIFY.

PERCHLORIC ACID HOODS ALSO REQUIRE A WASH-DOWN SYSTEM FOR THE HOOD, EXHAUST DUCTWORK, AND EXHAUST FAN.

MODIFY LANGUAGE IN PARAGRAPH BELOW (I.E., CHANGE "RADIOISOTOPE" TO "PERCHLORIC" OR DELETE REFERENCE TO RADIOISOTOPE FOR NON-ISOTOPE HOODS).

- C. Radioisotope (RI) Type Stainless Steel Liner and Work Surface: For applications where highly radioactive materials will be used with lead brick shielding, furnish seamless welded construction of the work surface with intersecting rear and interior end panels, and as follows:
 - 1. Stainless Steel Lining: Radius corners, weld, grind smooth and polish to eliminate cracks and crevices.
 - a. Punch hood side panels to receive remote controls and service fixtures at side of hood, as indicated. Furnish removable plug buttons for holes not used for indicated fixtures.
 - b. Interior corners: 1/2 inch radius, seamless, coved.
 - c. Stainless steel: 16 gage, AISI Type 302/304, with no. 4 finish.
 - 2. Stainless Steel Working Surface: 14 gage, AISI Type 302/304, with no. 4 finish and 1/2 inch high raised "marine edge" around perimeter to retain spillage.

RETAIN THE FOLLOWING IF CUPSINK WILL BE INCLUDED IN STAINLESS STEEL TOP.

- a. Integrally weld stainless steel cupsinks to stainless steel work surfaces. Also see Plumbing Accessories article, below.

FOLLOWING REQUIREMENT PROVIDES SUFFICIENT LOAD CAPACITY FOR MOST LEAD BRICK SHIELDING ARRANGEMENTS - USUALLY RETAIN

- b. Reinforce to provide min. 200 lbs. per sq. ft. load capacity.

SELECT EITHER METAL OR WOOD UNDERSTRUCTURES FROM BELOW

2.9 FUME HOOD UNDERSTRUCTURES

- A. Products: Subject to compliance with indicated requirements, provide products manufactured by one of the following:
 - 1. Metal Units:
 - a. Airmaster; Airmaster Systems Corp.
 - b. BMC
 - c. Kewaunee Scientific Equipment Corp.
 - d. Mott Manufacturing
 - e. Thermo Scientific: Hamilton Laboratory Furniture and Fume Hoods
 - 2. Wood Units:

- a. Kewaunee Scientific Equipment Corp.
- b. Mott Manufacturing
- c. Thermo Scientific Hamilton Laboratory

- B. In general, provide metal base units complying with the following:
- 1. Toe Space: Approximately 4 inches high by 3 inches deep, closed metal with no open pockets. Open channel formations are not permitted.

DELETE BELOW IF NO METAL CABINETS

- 2. Exterior Metal: Mfr's standard with acid and alkali resistant baked-on finish. Match fume hood color.

DELETE BELOW IF NO WOOD CABINETS

- C. In general, provide wood base units complying with the following:
- 1. Finish: Mfr's standard with acid and alkali resistant finish. Color to be selected by Architect from mfr's standard range of finishes.

DELETE THE FOLLOWING TWO REQUIREMENTS FOR FLAMMABLE STORAGE UNITS

- 2. Provide base cabinets with removable backs in cupboard areas to provide openings for access to plumbing lines and shut-off valves.
- 3. Provide space, cut-outs, and holes for pipes, conduits and fittings and cabinet bodies to accommodate services and their support-strut assemblies.

TYPICALLY PROVIDE BOTH FLAMMABLE STORAGE CABINET AND ACID STORAGE CABINET BELOW FUME HOOD.

NOTE THAT FLAMMABLE STORAGE CABINETS ARE NOT REQUIRED TO BE VENTED. IF THEY ARE VENTED, DO NOT VENT THROUGH HOOD, BUT USE A SEPARATE NON-FLAMMABLE VENT PIPE FROM THE CABINET DIRECTLY CONNECTED TO THE EXHAUST DUCT. INCLUDE A DETAIL ON THE DRAWINGS TO SHOW THE VENTING.

- D. Flammable Liquid Storage Cabinets: Provide flammable liquid storage type constructed in compliance with NFPA 30 and UL or FM labeled. Requirements of NFPA 30 supersede other indicated requirements.

- 1. Label door exterior: "FLAMMABLE - KEEP FIRE AWAY".

ACID STORAGE CABINETS ARE REQUIRED TO BE VENTED. COORDINATE WITH MECHANICAL ENGINEER TO ENSURE THAT VENTING DETAIL IS INCLUDED ON DRAWINGS. DELETE REFERENCE TO METAL OR WOOD AS APPROPRIATE.

- E. Vented Metal and Wood Acid Storage Cabinets: Provide vented acid storage cabinets as indicated. Do not vent acid storage cabinets through hood. Provide all required vent piping and connections for direct connection to fume hood exhaust duct.

- 1. Minimum cabinet ventilation: 10 air changes per hour.

2. Line interior of acid storage cabinets with manufacturer's standard chemical-resistant polyethylene lining.
3. Label door exterior: "ACIDS"

2.10 PLUMBING ACCESSORIES

EDIT THIS ARTICLE BASED ON WHETHER RELATED SECTION "LABORATORY CASEWORK AND ACCESSORIES" IS INCLUDED.

ALWAYS RETAIN PARAGRAPH BELOW. IN THE UNUSUAL CIRCUMSTANCE THAT THERE IS MEDICAL GAS PIPING IN THE HOOD IT WILL REQUIRE A SPECIAL PIPING SPECIFICATION.

A. Plumbing, General: Refer to Related Sections and as follows:

1. Provide complete factory plumbing for hoods. Use materials as specified in Related Section. All natural gas piping shall be threaded black steel, Schedule 40.
2. Plumbing Fixtures: Remote controlled from face of hood.

IF CUPSINKS ARE REQUIRED, SELECT EPOXY RESIN TYPE UNLESS A RADIOISOTOPE HOOD WITH WELDED STAINLESS STEEL INTERIOR IS REQUIRED.

3. Cup Sinks: Cast epoxy resin, 3 inch by 6 inch with raised rim. Rim height to match the fume hood's working surface indented (dished edge) height. Coordinate cup sink location to avoid interference with dished edge of work surface.
4. Cup Sinks: Integrally welded 3 inch by 9 inch, Type 304 stainless steel, raised rim. Rim height to match the fume hood's working surface indented (dished edge) height. Coordinate cup sink location to avoid interference with dished edge of work surface.

INFORMATION BELOW MAY BE REDUNDANT WITH INFORMATION IN THE U-M LAB CASEWORK SECTION. EDIT PARAGRAPHS BELOW UP TO "ELECTRICAL ACCESSORIES" IF A LAB CASEWORK SECTION WILL BE INCLUDED IN THE PROJECT'S SPECIFICATIONS AND THAT SECTION COVERS HOOD PLUMBING FIXTURES.

B. Plumbing Service Fixtures: Provide pre-piped units complete with washers, locknuts, unions, nipples and other accessories for positive mounting to hood superstructures. Include wall flanges, escutcheons, handle extension rods, remote valves, and similar items required. Fabricate units to withstand test pressure of 100 psig.

1. Service fixtures are indicated on drawings by symbols, with design type of each fixture indicated by letter and number reference marks.
2. Material and Finish: Cast or forged red brass containing a minimum of 81 percent copper.
3. Exposed surfaces (including fittings and escutcheons): Acid and solvent resistant baked-on plastic coating of mfr's standard color. Fixtures fabricated of plastic are not acceptable except for use as high purity water faucets.

4. Service Outlets Identification: Provide colored plastic index disks with embossed identification letters at each service fixture handle or knob. Secure disks to fixture handles to be tamperproof.
5. Handles: Provide 3 arm or 4 arm forged brass handles for remote controls.
6. Valves and Faucets: Provide indicated fixtures with renewable barrel locked in valve body. Barrel shall contain all wearing parts, with renewable disks.
 - a. Remote Control Valves: Provide valves controlled from face of hood. Use angle valves where required.

SELECT ONE OF THE OPTIONS BELOW

- b. Faucets: Wall-mounted, gooseneck style faucets.
- c. Faucets: Wall-mounted, hose cock water outlets.

ALWAYS INCLUDE BELOW

- d. Vacuum breaker: Provide in-line vacuum breaker complying with codes, installed on front face of hood.

2.11 ELECTRICAL ACCESSORIES

COORDINATE THIS ARTICLE WITH RELATED SECTION "LABORATORY CASEWORK AND ACCESSORIES". INFORMATION BELOW MAY BE REDUNDANT WITH INFORMATION IN THE U-M LAB CASEWORK SECTION. EDIT PARAGRAPHS BELOW IF A LAB CASEWORK SECTION WILL BE INCLUDED IN THE PROJECT'S SPECIFICATIONS AND THAT SECTION COVERS HOOD ELECTRICAL FIXTURES.

- A. Electrical Fixtures, General: Refer to Related Sections and as follows:
 1. Electrical Receptacles: Provide each hood with two duplex receptacles.
 2. Lights: Provide each hood with a two-lamp light fixture of longest practicable length. Equip each fixture with two T-8, 32 watt, straight tube, rapid-start, multi-phosphor fluorescent lamps with a medium bi-pin base, color temperature of 3500 deg K, and a CRI of not less than 82.
 - a. Shield light from hood interior by 1/4 inch thick safety glass or 1/8 inch thick tempered glass panel, sealed air tight into hood body with chemical resistant rubber channels. Set units so that lamps are easily replaceable from outside hood.
 - b. Provide switch marked "Fume Hood Light" on face of hood.
 - c. Provide only fixtures which carry the Underwriter's Laboratory (UL) label.
- B. Internal Electrical Wiring: Provide complete factory wiring for hoods. Comply with requirements of the National Electrical Code.
 1. Wire duplex receptacles and light to a single gang junction box for connection to Owner's 120V, single phase, 20 amp, AC supply.
 2. Where fume hood is supplied with an air flow monitor or similar controls, wire monitor components together and to a second single gang junction box for connection to Owner's second 120V, single phase, 20 amp AC supply.

3. Provide wiring with a green ground conductor. Conduit shall not be used for ground.
4. Install all wiring in metallic conduit.

INFORMATION BELOW MAY BE REDUNDANT WITH INFORMATION IN THE U-M LAB CASEWORK SECTION. EDIT PARAGRAPHS BELOW IF A LAB CASEWORK SECTION WILL BE INCLUDED IN THE PROJECT'S SPECIFICATIONS AND THAT SECTION COVERS HOOD ELECTRICAL FIXTURES.

C. Electrical Service Fixtures: Provide units complete with box; necessary receptacles, terminals, switches, device plates, and fittings and gaskets required for mounting on casework. Provide only fixtures with UL label.

1. Service fixtures are indicated on drawings by symbols, with design type of each fixture indicated by letter and number reference marks.
2. Cover Plates: Provide stainless steel cover plates for AC receptacles and devices.
 - a. Cover Plate Material: Stainless steel, Type 302, satin finish, with formed beveled edges.
3. Mark the following devices whether shown on drawings or not.
 - a. AC receptacles, other than standard 120 volt duplex, grounding type. Indicate voltage and phase.
 - b. Switches: Indicate equipment being controlled (e.g., "Fume Hood Light").
4. Finishes for Service Fixture Components: Furnish boxes with mfr's standard finish. Provide galvanized finish on ferrous fittings.

MODIFY BELOW IF USER REQUIRES 208 V. RECEPTACLES OR SPECIAL TYPE OF OUTLETS.

5. Receptacles: 125 volt, 20 amp, 2 pole, 3 wire, NEMA Type 5-20R, ground fault circuit interrupter type (at all locations), UL extra heavy duty grounding type with nylon or Lexan bodies.
 - a. Ground fault circuit interrupter receptacles shall be rated for 2000 amps interrupting capacity and trip in 25 milliseconds or less when ground currents exceed 5 milliamps.

SELECT ONE OF THE FOLLOWING

- b. Color: Dark brown.
- c. Color: Ivory.
- d. Products: Subject to compliance with requirements, provide products of one of the following:
Arrow Hart.
Bryant.
Hubbell.
Leviton.
Pass and Seymour.

USUALLY RETAIN BELOW FOR LIGHT SWITCH

6. Switches: Rated 120-277 volts AC and 20 amps, unless otherwise indicated, UL extra heavy duty.
 - a. Furnish pilot light adjacent to toggle switch, where noted as "PL" adjacent to switch identification.

SELECT ONE OF THE FOLLOWING

- b. Color: Dark brown.
- c. Color: Ivory.
- d. Products: Subject to compliance with requirements, provide products of one of the following:
Arrow Hart.
Bryant.
Hubbell.
Leviton.
Pass and Seymour.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Install fume hoods plumb level, rigid, securely anchored to building and adjacent furniture in proper location, in accordance with manufacturer's instructions. Install closures neatly. Securely attach access panels, but provide for easy removal and secure re-attachment.
 - 1. Coordinate sequence of work with Mechanical and Electrical trades and with laboratory casework and fixtures specified in Related Sections.

ALWAYS INCLUDE THE COMMISSIONING ARTICLE BELOW.

3.2 COMMISSIONING

- A. Perform the commissioning activities as outlined in Division 01 Section "Full Project Commissioning" or "Project Commissioning for Small Projects" and other requirements of the Contract Documents.

3.3 FIELD QUALITY CONTROL

- A. Field test each fume hood after completion of installation to verify proper operation of hoods in accordance with SEFA 1 Guidelines

USUALLY DELETE BELOW. CONSIDER AS INSTALLED TESTING ONLY FOR LARGE PROJECTS, AND AFTER CONSULTATION WITH U-M OSEH AND MECHANICAL ENGINEER. ADJUST PERCENTAGE OF FUME HOODS TO BE TESTED IF APPROPRIATE, AND INDICATE TYPES TO BE TESTED IF MULTIPLE TYPES ARE USED ON THE PROJECT.

- B. Perform As Installed Containment Testing per ASHRAE 110 on 10% of installed fume hoods. Hoods shall be selected by the Commissioning Agent in consultation with U-M OSEH.
 - 1. Demonstrate that hoods meet the performance criteria specified in Part 2. Remedy failing hoods and retest until hoods meet the performance criteria.
 - 2. Provide a complete test report to the Commissioner immediately after each test.

3.4 ADJUST AND CLEAN

- A. Moving Parts: Carefully check to insure: smooth, near-silent, and accurate operation; sash operation with one hand with uniform contact of rubber bumpers; counterbalance operation without interference.
- B. Clean surfaces, including both sides of glass.
- C. Damaged Work: Repair equal to new undamaged work, or replace with new units, as directed by Architect.

END OF CONTENTS TABLE

DIVISION 11 EQUIPMENT
SECTION 115314 - FUME HOOD REFURBISHMENT

USE THIS SECTION FOR ROUTINE CHECK AND REPAIR OF EXISTING FUME HOODS

PART 1 - GENERAL

1.1 SUMMARY

- A. Work includes cleaning, painting, and routine maintenance as follows:

NOTE: OSEH REQUIRES REFURBISHED AND UPGRADED HOODS TO BE PROVIDED WITH FLOW ALARMS (ALARMS ARE WORK OF DIV. 23 AND 26). REMEMBER TO TELL ENGINEERS OF ALARM REQUIREMENT.

1. Provide electrostatic painting of Owner's existing fume hood superstructure exterior and existing fume hood base cabinet interior and exterior.
 2. Remove existing hood work surface materials. Install new 1-1/4-inch thick epoxy resin work surface with raised "marine" edge. Color: Black.
 3. Coat hood lining with epoxy paint.
 4. Provide routine maintenance as follows:
 - a. Lubricate moving parts.
 - b. Check and adjust sash alignment; replace pulleys and cable.
 - c. Check and adjust baffle operation.
- B. Mechanical and Electrical work are specified in Division 22, 23 and 26 sections respectively.
- C. Fume hood vent connections (from hood collar to hood exhaust system) is the work of Division 23 Sections.
- D. Clean Surfaces, including both sides of glass.

DIVISION 12 FURNISHINGS

SECTION 122000 - WINDOW TREATMENT

END OF CONTENTS TABLE

DIVISION 12 FURNISHINGS
SECTION 122000 - WINDOW TREATMENT

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of window treatment is indicated on drawings.

EDIT THE FOLLOWING TO INCLUDE VERTICAL BLINDS OR OTHER WINDOW TREATMENT REQUIRED

- B. Types of window treatment include:

1. Venetian blinds.
2. Room darkening roller shades.

MODIFY THE FOLLOWING FOR BLIND POCKETS FABRICATED OF WOOD, OR DELETE IF NO BLIND POCKETS

- C. Sheet metal blind pockets are included in Division 05 Section "Metal Fabrications".

1.2 SUBMITTALS

- A. Product Data: Manufacturer's literature indicating compliance with requirements.
- B. Samples: Submit samples of materials and finishes.
- C. Shop Drawings: Submit shop drawings for installations not fully detailed in product data.

1.3 QUALITY ASSURANCE

- A. Provide complete assemblies produced by one mfr for each type required including hardware, accessory items, mounting brackets, and fastenings.
- B. Provide units which comply with NFPA 701 flammability test requirements.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide products of one of the following:
1. Venetian Blinds:
Levolor Window Fashions
Hunter Douglas
Springs Window Fashions; Bali
 1. Roller Shades:
Springs Window Fashions; Bali
Draper Inc.; Flexshade
OpenLight

MechoShade Systems, Inc.
Roll Ease, Skyline Series
SRF Enterprises, Inc.

2.2 HORIZONTAL BLINDS

BELOW DESCRIBES "RIVIERA" QUALITY BLINDS. BOTH LOWER AND HIGHER QUALITY BLINDS ARE AVAILABLE - REFER TO MANUFACTURER'S CATALOGS

- A. Mfr's standard vertical lifting and horizontal tilting units complete with headrail, bottom rail, slats, and accessories as follows:
1. Headrail formed from sheet steel, min. 0.025 inch thick, into channel shaped section housing tilting mechanism; with top and end braces, top cradles, cord lock and required accessories; finished to match slats.
 2. Bottom rail formed from sheet steel into tubular shape, with end caps, finished to match slats.
 3. Aluminum slats formed from 0.0075-inch thick, spring-tempered aluminum; coated with manufacturer's standard baked enamel finish, resulting in nominal 0.0085-inch finished thickness; and as follows:
 - a. Slat Width: 1 inch narrow slats.
 - b. Ladders: Braided polyester cord with braided ladder rungs.
 - c. Coverage: Not less than 15.7 slats per vertical foot.
 - d. Color: As shown or as selected by Architect from mfr's standards.
- B. Provide lifting mechanism consisting of crash-proof cord locks with cord separators, braided polyester or nylon lift cords, and cord equalizers.
- C. Provide installation brackets including mounting hardware as recommended by mfr for installation indicated. In general, provide required fasteners, tracks, accessories required for a complete installation.
- D. Operation: Provide full-tilting slats rotating approximately 180 degrees with operating controls on the left side; full height raising with lifting cord locks and cords on right hand side of units unless otherwise indicated.

2.3 ROOM DARKENING ROLLER SHADES

- A. Fabric: Close-woven fiberglass; completely opaque. Provide horizontally seamless shades.
1. Color: White.
- B. Support Hardware and Trim: Painted steel or aluminum fascia panel and end caps. Provide units with side and sill channels.
1. Color: White.
- C. Roller Tube: Manufacturer's standard steel or aluminum units.
- D. Operation: Manual, spring roller operation.

- E. Bottom Weight: Manufacturer's standard aluminum unit.
- F. Provide installation brackets including mounting hardware as recommended by manufacturer for installation indicated. In general, provide required fasteners tracks, accessories required for a complete installation.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with manufacturer's recommended installation procedures for indicated installation conditions.
- B. Provide adequate clearance between sash and blinds to permit unencumbered operation of sash hardware.
- C. Isolate metal parts from concrete and mortar to prevent galvanic action. Use tape or thick coating or other means recommended by manufacturer to effect separation.

SECTION 122200 - CURTAINS AND DRAPES

END OF CONTENTS TABLE

DIVISION 12 FURNISHINGS
SECTION 122200 - CURTAINS AND DRAPES

PART 1 - GENERAL

1.1 SUMMARY

- A. Types of curtains include:
 - 1. Manually operated, room dividing, lightproof curtains.
 - 2. Manually operated, lightproof curtains over wall openings.

1.2 RELATED WORK OF OTHER SECTIONS

- A. Division 05 Section "Metal Fabrications" for sheet metal valences and trim.
- B. Division 06 Section "Interior Architectural Woodwork" for wood trim.

1.3 SUBMITTALS

- A. Product Data: Manufacturer's literature indicating compliance with requirements.
- B. Samples: Submit samples of materials and finishes.
- C. Shop Drawings: Submit shop drawings for installations not fully detailed in product data.

1.4 QUALITY ASSURANCE

- A. Provide complete assemblies produced by one mfr for each type required including hardware, accessory items, mounting brackets, and fastenings.
- B. Provide units that are fire retardant treated to comply with NFPA 701 flammability test requirements.

PART 2 - PRODUCTS

2.1 CURTAIN FABRIC

- A. Fabric, General: Fire-retardant treated rayon-acetate blend with vinyl backing. For all applications, provide double faced curtains with fabric material on both sides.
- B. Room Dividing Curtains: Provide 2 curtains, both fabricated to cover half the room width plus 1-1/2 feet, resulting in 3-foot total overlap. Fabricate curtains without pleats.
 - 1. Accessories: Provide Velcro male and female fastening strips for wall ends of curtain units, Apply continuous Velcro fasteners to wall ends of curtain units and on walls as shown, to provide positive, lightproof seal.

- C. Curtains at Wall Openings: Fabricate curtains to cover opening widths plus 4 feet, resulting in 2-foot overlap at both sides of opening. Fabricate curtains without pleats.

BELOW EXAMPLE DESCRIBES A LIGHTPROOF CURTAIN FABRIC. MODIFY TO SUIT PROJECT.

- D. Manufacturer/Product: Coral Co; "Stoplight II".
 - 1. Color: "Flax".

2.2 TRACKS AND CARRIERS

- A. Provide Manufacturer's standard anodized aluminum or painted steel units without splices.
 - 1. Provide ball bearinged carrier and hook assemblies.

BELOW EXAMPLE DESCRIBES A CURTAIN TRACK. MODIFY TO SUIT PROJECT.

- B. Manufacturer/Model: Provide products as follows:
 - 1. Tracks: Graber; model 9-8191.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Examine support work for tracks in presence of Installer. Correct conditions that would result in improper operation of curtain units.
- B. Comply with manufacturer's recommended installation procedures for indicated installation conditions, and as indicated on drawings.

SECTION 123553 - LABORATORY CASEWORK

END OF CONTENTS TABLE

DIVISION 12 FURNISHINGS
SECTION 123553 - LABORATORY CASEWORK

11/03 CHANGED SPECIFICATIONS FOR EYE WASHES.

9/11: ADDED SOLID PHENOLIC (TRESPA) SHELVES, TACK STRIPS AND CUSTOM DRYING RACK ASSEMBLY.

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent of laboratory casework and fixtures is shown on drawings and schedules, and indicated by the provisions of this Section.

EDIT BELOW TO SUIT PROJECT.

- B. Types of laboratory casework include:

Base cabinets.
Wall cabinets.
Storage cabinets.
Tables.
Shelf units.
Tops and curbs.
Sinks.
Mechanical and electrical service fixtures shown on drawings.
Other units as indicated.

DELETE BELOW IF NO P.LAM. CASEWORK.

- C. Plastic laminate casework is included in Division 06 Section "Interior Architectural Woodwork".

DELETE BELOW IF NO FUME HOODS.

- D. Fume hoods are included in Division 11 Section "Laboratory Fume Hoods".

DELETE BELOW IF NO ENVIRONMENTAL ROOMS.

- E. Shelving in environmental room is specified in Division 13, "Controlled Environmental Rooms".

DELETE ONE OR BOTH BELOW IF NO MECHANICAL OR ELECTRICAL FITTINGS ARE INCLUDED.

- F. Installation of plumbing fixtures supplied under this Section are included in Division 22 sections.

- G. Installation of electrical fixtures supplied under this Section are included in Division 26 sections.

1.2 SUBMITTALS

- A. Product Data: Submit mfr's product data indicating compliance with requirements.

B. Samples for Initial Selection: Submit sample cards of actual finishes to be used showing manufacturer's standard range of colors/finishes for the following:

1. Paint coating for metal furniture.

DELETE ABOVE IF NO METAL CASEWORK. DELETE BELOW IF NO WOOD CASEWORK.

2. Stains for wood furniture.

DELETE BELOW IF NO P.LAM TOPS, SHELVES, PRIVACY SCREENS, ETC.

3. Plastic laminate for accessory items.

USUALLY DELETE BELOW EXCEPT FOR CUSTOM FINISHES TO MATCH ARCHITECT'S SAMPLE.

C. Samples for Verification: Samples of each specified color/finish applied to each applicable type of substrate material. Provide samples sized not less than 4-inches by 4-inches and consisting of the actual materials specified for the final product.

D. Shop Drawings: Submit shop drawings for laboratory furniture showing plans, elevations, ends, cross-sections, service run spaces, location and type of service fixtures and as follows:

1. Layout of units with relation to surrounding walls, doors, windows, and other building components.

2. Details and location of anchorages and fitting to floors, walls, and base.

3. Details of shelf standard and bracket attachments, fittings, and fasteners, including relationship to laboratory tops, walls, ceilings, and other attachment points.

4. Coordinate shop drawings with other work involved.

E. Material Certificate: Provide manufacturer's certificate indicating compliance with specified requirements for stainless steel Type and Grade.

F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating compliance of laboratory casework finishes and countertops with requirements specified for chemical and physical resistance.

1.3 QUALITY ASSURANCE

A. Source Limitations: Obtain laboratory casework, including countertops, sinks, service fittings, and accessories, through one source from a single manufacturer.

B. Product Standard: Comply with SEFA 8, "Laboratory Furniture--Casework, Shelving and Tables--Recommended Practices."

C. Catalog Standards: Mfr's catalog numbers are shown on drawings for convenience in identifying certain equipment. Unless modified by notation on drawings or otherwise specified, mfr's current catalog description for indicated number constitutes requirements for each such unit.

1. Provide cabinet door swings as indicated on drawings.

2. Use of catalog numbers and specific requirements set forth in drawings and specifications, does not preclude the use of equivalent products by other listed approved mfrs, but are given for the purpose of establishing a standard of design, quality of materials, product content, construction, and workmanship.
3. Numbers on drawings refer to products of the following:

SELECT ONE OF THE FOLLOWING, OR EDIT TO SUIT SELECTED PRODUCT CATALOG.

Thermo Scientific: Hamilton Laboratory Furniture
Kewaunee Scientific Equipment Corporation.

- D. Flammable Liquid Storage Cabinets: Provide flammable liquid storage type constructed in compliance with NFPA 30 and UL or FM labeled.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.4 DELIVERY, STORAGE AND HANDLING

DELETE TWO REQUIREMENTS BELOW FOR MOST RENOVATION WORK.

- A. Deliver wood laboratory furniture only after wet operations in building are completed.
- B. Store completed wood laboratory furniture in a ventilated place, protected from the weather, with relative humidity therein of 50% or less, at 70 degrees F (22 degrees C).
- C. Protect finished surfaces from soiling and damage during handling and installation. Keep covered with polyethylene film or other protective covering.

1.5 PROJECT CONDITIONS

- A. Field Measurements: Check actual space available by accurate field measurement before fabrication. In addition to dimensions for clearance, check for obstructions, including columns, piping, ducts and conduits. Show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of work.
 1. Where construction of new structures and systems is not complete, proceed with fabrication without field measurements, and coordinate fabrication tolerances to ensure proper fit of laboratory casework items without field modification.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide the products of one of the following:

DELETE BELOW IF NO METAL CASEWORK. USUALLY RETAIN ALL MANUFACTURERS/SUPPLIERS LISTED BELOW

- B. Metal Casework; associated suppliers:

1. Air Master Systems Cor., Millenia Series.
2. BMC Laboratory Cabinets; R.D. Landstra Associates.
3. Kewaunee Scientific Equipment Corp.; Farnell Equipment Co.
4. Laboratory Design & Supply; mfr. direct.
5. Mott Manufacturing Ltd.; Sigma Systems; Detroit Technical Equipment Company.

DELETE BELOW IF NO WOOD CASEWORK. USUALLY RETAIN ALL SUPPLIERS LISTED BELOW.

- C. Wood Casework; associated suppliers:

1. Kewaunee Scientific Equipment Corp.; Farnell Equipment Co.
2. Mid Canada Millwork.
3. Mott Manufacturing Ltd.; Detroit Technical Equipment Company.

MANUFACTURER BELOW HAS ONLY FLUSH OVERLAY TYPE PRODUCTS. DO NOT INCLUDE IF PROJECT MUST INCLUDE ONLY LIPPED OVERLAY CASEWORK.

4. Laboratory Design & Supply; mfr. direct.

BELOW ARE NEW TO PML. INCLUDE FOR PROJECTS WITH ESTIMATED CASEWORK VALUE LESS THAN \$100,000

5. CIFLab L-Line (lipped overlay) and E-line (full overlay); Stonecreek Interior Systems, LLC
6. Diversified Casework; R.D. Landstra Associates.
7. Wood-Metal Industries; Division of Wood-Mode, Inc.; Farnell Contracting.

USUALLY RETAIN ALL BELOW.

- D. Resin Tops and Sinks:

Kewaunee Scientific; "Kemresin"
Durcon Co.; Durcon-IIA"
Epoxy Products "Epoxy"

- E. Stainless Steel Sinks and Tops:

Elkay Co.
Just Manufacturing

- F. Fiberglass Sinks:

Kreolab, Inc.

- G. Solid Phenolic Shelves:

Kewaunee Scientific
Resistop

Trespa Athelon

H. Shelf Standards and Brackets:

Cooper B-Line, Inc.

Flex-Strut, Inc.

Kewaunee Scientific Equipment Corporation

Nu-Strut framing channel system, Kumar Industries, Inc.

Unistrut Corp.

I. Service Fittings:

Chicago Faucet

SPS (distilled water faucets)

T & S Brass

Watersaver

Wolverine Brass

DELETE THE ARTICLE BELOW IF NO METAL LABORATORY CASEWORK IN PROJECT.

2.2 METAL LABORATORY CASEWORK

A. Metal: Prime furniture steel, stretcher or roller leveled, free of scales, buckles, or other defects; ASTM A 366, Class 1 (matte) finish. Provide steel laboratory furniture components of following minimum U.S. Standard gages:

1. Back panels, inner door panels, drawer outer pan, inner pan and body, and shelves: 20 gage. Add reinforcement or use 18 gage material for shelves over 36" long.
2. Sides, ends, fixed backs, bottoms, tops, soffits, outer door pans, and other items not otherwise specifically noted: 18 gage. Bottoms may be 20 gage if reinforced.
3. Intermediate horizontal rails, table frame aprons and cross rails, center posts, top gussets: 16 gage.
4. Drawer runners, sink supports: 14 gage.
5. Leveling and corner gussets: 12 gage.

B. Casework Fabrication: Provide units which are square, fully reinforced with angles, gussets, and channels, integrally framed and welded to form a dirt and vermin retardant enclosure; and as follows:

1. Flange metal upward on three sides of cabinet bottoms.
2. Where applicable, reinforce base cabinets for heavy sink support.
3. Maintain uniform clearance around door and drawer fronts, not exceeding 3/32-inch.
4. Fabricate laboratory furniture to dimensions, profiles, and details shown.
5. Assemble units in shop in as large components as practicable to minimize field jointing.
6. Provide base cabinets with removable backs in cupboard areas to provide openings for access to plumbing lines and shut-off valves.
7. Fabricate units on precision dies to provide field interchangeability of drawers, hinged doors, and similar pieces.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 123553 - - 5

C. Cabinet Components: Provide cabinets with the following, as applicable to selected units:

1. Flush Doors: Outer pan and inner pan formed and telescoped into box formation, with channel reinforcements full height on center of each pan. Fill doors solid with fire-resistant, sound-deadening material.
2. Glazed Doors: Hollow metal stiles and rails of similar construction as flush doors, with glass held in resilient channel or gasket material.
3. Hinged Doors: Mortise at flanges for hinges and reinforce with minimum 16 gage angle, welded inside inner pan at hinge edge. Provide nylon roller catches and stainless steel strike welded to door assembly.
4. Drawers: Assemble fronts from telescoping inner and outer pans, designed to eliminate raw edge of steel at top. Fabricate sides, back, and bottom of one piece, with rolled or formed top of sides for stiffening and comfortable grasp or drawer removal. Weld drawer front to sides, back, and bottom to form a single, integral unit. Provide drawers and rubber bumpers, runners and positive stops to prevent metal-to-metal contact or accidental removal.
5. Adjustable Shelves: Sides and ends formed down, and returned to front and back.
6. Glass for Glazed Doors: Double strength "B" quality.
7. Drawer Guides: Provide nylon rollers with metal guide channels, with integral stops to eliminate accidental removal of drawer. Include provisions to prevent rebounding action when doors are closed.
8. Filler Strips: Provide where required for closing space between cabinets and walls and ceilings, of same material and finish as cabinets. Hem exposed edges. Job fabricated fillers not acceptable.
9. Utility Space: Provide space, cut-outs, and holes for pipes, conduits and fittings and cabinet bodies to accommodate services and their support-strut assemblies.
10. Toe Space: Approximately 4" high by 3" deep, closed metal with no open pockets. Open channel formations are not permitted.
 - a. Provide base cabinets with individual, integral toe kick bases. Separate toe kick bases independent of base cabinets are not permitted.

D. Steel Cabinet Finish: Coat metal casework as follows:

1. Pretreatment: After assembly, thoroughly clean surfaces of grease, dirt, oil, flux and other foreign matter by physical and chemical means. Treat entire unit with metallic phosphate process leaving surfaces with uniform, fine-grained, crystalline phosphate coating providing bond for subsequent finish.
2. Prime and Finish Coats: One coat high-bake primer followed by one or more coats of high-bake chemical-resistant enamel, to provide a hard and smooth, satin luster finish, applied to treated surfaces.

- a. In concealed areas, including inside of doors and drawers, behind cross rails and mullions, inside of sub-base members, inside front and rear posts, and behind adjustable shelf front and back edges, provide rust inhibiting coating.

MODIFY BELOW FOR CUSTOM COLOR TO MATCH ARCHITECT'S SAMPLE, IF REQUIRED.

- 3. Colors: Unless otherwise indicated, color to be selected by Architect from mfr's standard palette of at least 5 colors.

DELETE THE ARTICLE BELOW IF NO WOOD CASEWORK IN PROJECT.

2.3 WOOD LABORATORY CASEWORK

- A. Definitions: The following definitions apply to wood laboratory casework units:

- 1. Exposed portions of casework include surfaces visible when doors and drawers are closed. Bottoms of cases more than 4 feet above floor shall be considered as exposed. Visible members in open cases or behind glass doors shall be considered as exposed portions.

COORDINATE THE FOLLOWING REQUIREMENT WITH OWNER.

- a. Sides to be concealed in final installation shall be considered exposed for purpose of determining material and finish requirements.
- 2. Semi-exposed portions of casework include those members behind opaque doors, such as shelves, divisions, interior faces and ends, case back, drawer sides, backs and bottoms, and back face of doors.
 - a. Tops of cases 6 feet, 6-inches or more above floor, and drawer sides and back, shall be considered semi-exposed for purpose of material selection; concealed for purpose of finish selection.
- 3. Concealed portions of casework include sleepers, web frames, dust panels, interior faces and ends of cabinets with drawers only, and other surfaces not usually visible after installation, except as otherwise indicated.

- B. Materials: Provide units fabricated of the following:

- 1. Exposed Materials: Do not use exposed faces of lighter-than-average color joined with exposed faces of darker-than-average color. Do not use two adjacent faces which are noticeably dissimilar in grain, figure and natural character markings.
 - a. Solid Lumber: Clear, dry, sound, selected from compatible grain and color, no defects, and of same species as plywood panel exposed face veneer.

- b. Plywood: Provide panels of 7-ply construction, with face veneer clear, selected for grain and color compatible with exposed solid lumber, and with no defects. Provide solid crossbandings without voids. Except for doors and drawer faces, edgeband exposed edges with solid wood of same species as face veneer. Provide panels with the following veneer for exposed faces:

SELECT RED OAK BELOW UNLESS MATCHING EXISTING CABINETS.

- 1) Species: Plain sliced red oak.
 - 2) Species: Plain sliced white oak.
 - 3) Species: Rotary cut birch.
- 2. Semi-Exposed Materials:
 - a. Solid Lumber: Dry, sound, selected to eliminate appearance defects. Any species of hardwood, or softwood of similar color and grain to exposed portions.
 - b. Plywood: Hardwood, PS-51, Good Grade (1), or softwood PS-1/ANSI A199.1, Group 1, A-A, INT, of species to resemble color and grain of exposed members.
 - 3. Concealed Members:
 - a. Solid Lumber or Plywood: Any species, with no defects affecting strength or utility.
 - b. Hardboard: ANSI A135.4, Class 1, tempered; for use as drawer bottom, base cabinet interior bottom, and cabinet backs.
 - 4. Unacceptable Materials: The following veneered materials are not permitted in cabinetry construction, regardless of exposure condition:
 - a. Particleboard (pressboard or flakeboard).
 - b. Oriented strand board (OSB).
 - c. Laminated solid lumber panels.
 - d. Tempered hardboard, except as otherwise indicated.
- C. Wood Casework Fabrication: Fabricate laboratory furniture with manufacturer's standard dimensions, profiles, and details shown, unless otherwise indicated. Assemble units in the shop in as large components as practicable to minimize field jointing.
- 1. Provide units with manufacturer's standard door and drawer configuration, and as follows:

USUALLY SELECT LIPPED OVERLAY TYPE BELOW. NOT ALL MANUFACTURERS HAVE FLUSH OVERLAY OPTION.

- a. Lipped overlay type with rounded edges.
- b. Flush overlay type with square edges.

USUALLY SELECT GRAINING BELOW.

- c. Grain Pattern: Horizontal on drawers, vertical on doors.

BELOW IS OFFERED BY FISHER HAMILTON - USUALLY DELETE.

- d. Grain Pattern: Vertical, unmatched doors and drawer fronts.

FISHER-HAMILTON OFFERS ALL-VERTICAL OPTIONS ABOVE AND BELOW. BELOW REQUIRES FLUSH OVERLAY DOORS/DRAWERS.

- e. Grain Pattern: Vertical, matched doors and drawer fronts.
- 2. Cabinet Bodies: Fabricate units with full (4-sided) top frame, and with horizontal intermediate rails between each door and drawer. Fabricate wood-framed glass doors (if included) with solid lumber frames.
- 3. Shelves Within Cabinets: Fabricate units of 3/4-inch thick plywood, with the following configurations for the indicated cabinet types included in Project:
 - a. Full depth in wall and counter-mounted units; half depth in base units.

COMMON PRACTICE IS TO SELECT ABOVE AND DELETE TWO OPTIONS BELOW. IF SPLIT-DEPTH SHELF OPTION IS SELECTED, SHOW ON DRAWINGS OR REVISE PARAGRAPH TO DESCRIBE DESIRED COMBINATION.

- b. Full depth in base, wall and counter-mounted units.
 - c. Full depth in wall and counter-mounted units; split depth in base units as indicated on drawings.
- D. Clear Wood Finish:
- 1. General: Apply laboratory casework manufacturer's standard two or three-coat, chemical-resistant, transparent finish consisting of sealer and catalyzed topcoat(s). After installation, touch up to refinish damaged portions equal to original factory finish.
 - 2. Chemical and Physical Resistance of Finish System: Finish complies with acceptance levels of cabinet surface finish tests in SEFA 8 for Laboratory Grade Casework. Acceptance level for chemical spot test shall be no more than four Level 3 conditions.
 - 3. Preparation: Sand exposed and semi-exposed components, using machine and hand methods. Machine marks, cross sanding, tool marks or other surface blemishes are not acceptable.
 - 4. Exposed Portions: Carefully sand finishes after each surface treatment. Apply finishes as follows:
 - a. Sealer coat, if required.

SELECT 1 OF THE 3 STAINS FOLLOWING

- b. Stain: None.
- c. Stain: Selected from mfr's standard range of tones.
- d. Stain: Non-standard, custom tone selected by Architect.
- e. Mineral filler: for open grained wood, if required.
- f. Multiple coats of highly chemical resistant finish, heat dried and sanded between each coat to produce a smooth, satin luster free of imperfections.
- 5. Semi-Exposed Portions: Apply sealer coat, stained to resemble exposed portions, and follow with heavy application of clear, water repellent finish coat to provide a smooth, washable surface.
- 6. Concealed Portions: One heavy coat of water repellent finish.

REMAINING PORTION OF THIS SECTION IS APPLICABLE TO BOTH WOOD AND METAL CASEWORK.

2.4 CASEWORK ACCESSORIES

A. Leg Shoes: Extruded vinyl or rubber, black, open bottom type.

DELETE BELOW IF BASE INCLUDED IN FLOORING SECTION.

B. Base Cabinet Molding: Extruded vinyl or rubber, black, 4-inches high. Provide as indicated on drawings, on casework items in contact with floor, and in the following locations:

- 1. Base and floor standing cabinet toe spaces.
- 2. Exposed sides of base and floor standing cabinets.
- 3. Filler and closure panels extending to floor.

C. Grilles: Provide clear anodized aluminum grilles and frames in sizes and at locations shown on drawings, and as follows:

- 1. CT-16; Titus, or equivalent.

D. Glass: ASTM C 1036 Type I (transparent glass, flat), Class 1 (clear), Quality q3 (glazing select); double strength.

USUALLY RETAIN ABOVE AND DELETE BELOW.

E. Tempered Glass: ASTM C 1048 Condition A (uncoated surfaces), Type I (transparent glass, flat), Class I (clear), Quality q3 (glazing select), Kind FT (fully tempered); 1/8-inch thick.

2.5 CASEWORK HARDWARE

A. Install hardware uniformly and precisely after final finishing is complete. Set hinges snug and flat in mortises unless otherwise indicated. Turn screws to flat seat. Adjust and align hardware so that moving parts operate freely and contact points meet accurately. Allow for final field adjustment after installation.

USUALLY SELECT BELOW AND DELETE OTHER HINGE OPTIONS.

- 1. Hinges: Manufacturer's standard 5-knuckle hinge with US26D satin chrome finish.
- 2. Hinges: Manufacturer's standard 5-knuckle, US32D stainless steel hinge with satin finish.

HINGE BELOW IS AVAILABLE WITH FLUSH OVERLAY STYLE ONLY.

- 3. Hinges: Manufacturer's standard concealed hinge for 170 deg. minimum swing.

USUALLY SELECT BELOW AND DELETE OTHER PULL OPTIONS.

- 4. Pulls: Manufacturer's standard surface mounted units of brushed aluminum.
- 5. Pulls: Manufacturer's standard surface mounted units of wire stock satin stainless steel.
- 6. Pulls: Manufacturer's standard flush recessed units of brushed aluminum.

BELOW NOT AVAILABLE FROM ALL MANUFACTURERS AND IN ALL STYLES - VERIFY BEFORE SELECTION.

- 7. Pulls: Manufacturer's standard flush recessed units of hardwood matching door/drawer face veneer species.
- 8. Catches: Manufacturer's standard mechanical roller type units. Magnetic catches are not acceptable.

9. Adjustable Shelf Supports (within cabinets): BHMA B84072, wrought steel, mortise mounted; or drilled holes with metal or plastic plug-type shelf supports.
10. Drawer Slides: Manufacturer's standard wood keel or metal ball bearing drawer slides. Where metal drawer metal slides are provided, comply with the following requirements:

INCLUDE ALL BELOW. ADJUST CAPACITY AS DESIRED. VOLUMES ROUGHLY CORRESPOND TO 18"W. BY 4"H. FOR 2100 CU. IN. AND 36"W. BY 8"H. FOR 4,600 CU. IN. INTENT IS TO ESTABLISH 100 LBF CAPACITY FOR ALL BUT VERY SMALL OR VERY LARGE AS DRAWERS.

- a. Minimum Rated Capacity: 75 lbs. for drawers with interior volumes of 2,100 cu. inches or less.
- b. Minimum Rated Capacity: 100 lbs. for drawers with a volume of more than 2,100 cu. inches, but less than or equal to 4,600 cu. inches.
- c. Minimum Rated Capacity: 150 lbs. for drawers with a volume of more than 4,600 cu. inches.

DELETE BELOW IF NO LOCKS REQUIRED. MEDICAL SCHOOL REQUIRES ONE LOCKED DRAWER OR CUPBOARD PER BENCH RUN AND 1 EACH SIDE OF ISLAND UNITS. MODIFY BELOW TO ADD "BEST" UNITS FOR RE-KEYABLE CORE, GREATER SECURITY, OR KEYING WITH BUILDING. MODIFY KEYING REQUIREMENT TO SUIT PROJECT.

11. Drawer/Door Locks: Manufacturer's standard factory keyed, 5-pin lock. Provide 2 keys for each lock. Key each drawer separately, unless otherwise indicated.

DELETE BELOW IF NO LABEL HOLDERS.

12. Label Holders: Manufacturer's standard, surface applied [brass] [chrome] units, approximately 2-1/2-inches by 1-inch with exposed fasteners in matching finish.

2.6 TOPS

- A. Tops, and Curbs: Provide smooth, clean, exposed tops and edges, in uniform plane, free of defects. Make exposed edges and corners uniformly rounded.

1. Top Sizes: Furnish tops in maximum practicable lengths.
2. Top Thicknesses: As indicated, with tolerance not exceeding plus or minus 1/32". Provide front and end overhang of 1" over base cabinets, formed with continuous drip groove on under surface 1/2" from edge.

- B. Top Materials:

SELECT THE FOLLOWING TOP MATERIAL TYPES APPLICABLE TO PROJECT.

1. Cast Epoxy Resin: Factory molded tops of modified epoxy resin formulation, uniform mixture throughout full thickness. Provide indented, "Marine" edge tops as indicated.
 - a. Finish: Non-glare black.
 - b. Thickness: 1-inch.
 - c. Physical Properties:
 - 1) Flexural strength - 4000 psi
 - 2) Compressive strength - 14,000 psi
 - 3) Hardness, Rockwell M-197

- 4) Water absorption in 24 hours - 0.05%
- 5) Heat distortion point - 400 deg. F (204 deg, C)
- 6) Resistant to thermal shock.
- d. Workmanship: Cast surfaces very smooth, with factory cut-outs for sinks, drip grooves, and service fixtures.
- 2. Resin Impregnated Sandstone: Natural quarried hard sandstone with uniform grain and texture, free of seams and veins. Using manufacturer's standard vacuum process, impregnate stone throughout with multiple coats of thermo-setting resin. Bake coating at high temperature to ensure complete polymerization of resin and permanent bond with substrate. Apply additional coats to tops and edges to ensure required chemical resistance. Configure units with top and corner edges rounded to a 1/4 inch radius, and with bottom and abutting side edges broken.
 - a. Finish: Non-specular smooth jet-black.

SELECT ONE BELOW

- b. Thickness: 1-1/4 inch.
- c. Thickness: 1 inch.
- d. Physical Properties: Density - 140 pcf; modulus of rupture - 3,200 psi; compressive strength - 15,900 psi; Brinnel hardness - 84.
- e. Workmanship: Complete machining, cutouts, drilling, grooving, sizing, and similar operations before impregnation.
- 3. Stainless Steel: 16 gage, ANSI type 304 with No. 4 satin finish, unless otherwise indicated.
 - a. Weld shop joints, grind smooth and polish to become practically invisible. Provide hair-line butt jointed field joints, mechanically bolted through continuous channels welded to underside at edges. Keep field jointing to a minimum. Apply reinforcing channels to underside of top where necessary to insure rigidity without deflection.
 - b. Extend top down to provide 1-1/4 inch thickness and 1/2 inch return flange under frame. Sound deaden entire under-surface with heavy build mastic coating.
 - c. Form backsplash with 1/4 inch cove, integral with top surface.
 - d. Provide 1/4 inch indented "marine edge" around perimeter of countertops throughout, except provide 1 inch high raised tops where indicated. In tops with sinks, pitch top surface two ways to bowl to provide adequate drainage without channeling or grooving.
- 4. Plastic Laminate (P. Lam.): Provide plastic laminate sheet, black color through entire thickness with satin finish, complying with NEMA LD-3, and as follows:
 - a. Flat Tops: General purpose grade; 0.050 inches thick.
 - b. Formed Tops: Post-forming grade; 0.042 inches thick.
 - c. Sub-top: 3/4 inch thick sub-top of hardwood faced plywood, medium density overlaid plywood, or 45 pound phenolic resin bonded particleboard.
 - d. Shop-bond laminate to sub-top with fully waterproof bond glue. Smooth sand surfaces to which plastic laminate is to be bonded. Apply standard phenolic backing sheet to back of panels.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 123553 - - 12

- e. Build up exposed edges of tops to 1-1/2 inch thickness. Self-edge exposed edges of top, splash, and openings with same plastic laminate used for tops.
- f. Unless otherwise indicated, construct top and back splash of one piece with intersection coved. Intersections of end splash with top and back splash need not be coved.

2.7 SHELVES, STANDARDS AND BRACKETS

A. Acid Resistant Plastic Laminate Shelves:

CHANGE TO 1-1/4 IF DESIRED. 1" IS STANDARD FROM KEWAUNEE.

- 1. Core material: 1 inch thick particleboard, 40-50 pound density particleboard according to ANSI A208.1-2009, grade M-2 specifications.
- 2. Finish: Chemical Resistant high-pressure decorative laminate on both faces and all edges.
 - a. Manufacturers:
 - 1) Wilsonart; Chemsurf
 - 2) Formica Group; Chemtop2
- 3. Color: Black.

B. Solid phenolic shelves:

- 1. Material: Solid phenolic core chemical and stain resistant panels. Material shall be a natural kraft paper based, saturated / impregnated with phenolic resin and processed under high heat and pressure to form a composite panel, to provide a work surface with high chemical resistant and abrasion resistant properties. Finished material shall be extremely hard and resistant to scratches and abrasion.
 - a. Finish: Non-glare black.
 - b. Thickness 1-inch.
 - c. Edge: Standard edge with 3/16" Radius or Bevel Finish
 - d. Physical Properties:
 - 1) Flexural strength: MD 23,000 psi / CD 15,000 psi
 - 2) Compressive strength: MD 31,000 psi / CD 25,000 psi
 - 3) Hardness, Rockwell M-95 to 115
 - 4) Water absorption in 24 hours - 0.35%

C. Cast Epoxy Resin Shelves: Provide epoxy resin shelving units conforming to epoxy resin top and curb specifications.

- 1. Thickness: 1 inch.

D. Shelf Support Structures: Fabricate wall-mounted, bench top mounted, ceiling-suspended, and other shelf support structures, including standards, brackets and other elements as shown on drawings. Provide manufacturer's standard pre-fabricated steel structural system, complete with connections, braces, fasteners, and anchorage devices as shown, or if not shown, as required to construct complete fabricated units that are tight, secure and capable of resisting expected loads without damage or permanent deformation.

BELOW IS EXAMPLE ONLY. MODIFY FOR VERY LIGHT OR HEAVY LOADING.

1. Expected Shelf Loads: Self-weight of shelf section plus live-loads as follows for size indicated:
 - a. Less than 10-inches deep: 25 lbf per lineal foot.
 - b. 10-inches deep to 14-inches deep: 50 lbf per lineal foot.
 - c. Over 14-inches deep to 18-inches deep: 75 lbf per lineal foot.
 - d. Over 18-inches deep: 100 lbf per lineal foot.

BELOW IS UNISTRUT'S PERMAGREEN FINISH. DELETE IF ANOTHER FINISH IS REQUIRED.

2. Finish: Factory applied standard paint coating.

DELETE BELOW IF PRIMED-ONLY FINISH ABOVE IS RETAINED.

3. Finish: Factory applied primer and alkyd paint finish coats.
 - a. Finish Color: Match casework finish.
 - b. Finish Color: Match fume hood exterior finish.
 - c. Finish Color: Custom color selected by Architect.
 - d. Finish Color: Selected by Architect from mfr's standard casework colors.

2.8 MISCELLANEOUS FABRICATIONS

DELETE BELOW IF NO WOOD PIPE CHASE COVER. REVISE TO SUIT PROJECT DETAILS. MODIFY FOR P.LAM. UNITS

- A. Wood Pipe Enclosure Covers: Fabricate units of red oak veneer plywood matching casework. Construct with chrome plated screw fasteners and grommets to allow removal of a single panel, providing access to pipes and conduit concealed by the enclosure.
 1. Provide indicated base trim as follows:
 - a. "Fry Reglet"; Shape No. 1680; 6063-T5, .050" thick aluminum with black, "Duranar" finish. Install with mitered joints, neatly cut and butted tight.

DELETE BELOW IF NO METAL PIPE CHASE COVER. REVISE TO SUIT PROJECT DETAILS.

- B. Metal Pipe Enclosure Covers: Fabricate units of metal materials matching casework. Provide chrome plated screw fasteners and grommets to allow removal of a single panel, providing access to pipes and conduit concealed by enclosure.

DELETE BELOW IF NO WOOD PRIVACY PANELS AT DESKS. MODIFY FOR P.LAM. UNITS

- C. Wood Privacy Panels: Fabricate units of red oak veneer plywood matching casework; and of dimensions and configuration shown. Use concealed fasteners where practicable.

THE FOLLOWING IS A UNISTRUT-AND-NYLON BELT SYSTEM SIMILAR TO UNITS IN DOW CHEMISTRY BUILDING

- D. Tank Restraints: Provide units as shown on drawings, complete with necessary fasteners and anchors, as required for a complete installation:

1. Nylon Strap: Provide 1 inch wide by 54 inch long nylon strap with brass buckle; equal to AGM Container Controls, Inc., Tuscon, Arizona <http://www.agmcontainer.com> (1-800-995-5590).

USUALLY MODIFY THE FOLLOWING TO ELIMINATE SPECIFIC MODEL NUMBERS. NUMBERS SHOULD BE INDICATED ON DRAWINGS.

2. Restraint Bracket: Provide continuous cold-rolled steel channel section equal to Unistrut P-3300. Provide P-1713 attachment brackets at both ends of nylon strap.
- E. Tack strips: Provide 2" aluminum rail with tackable tan cork insert and flat end stops. Mount per manufacturer's recommendation using concealed fasteners.
1. Manufacturers:
 - a. Cig-Jan Products, Ltd.
 - b. Claridge Products and Equipment, Inc.
 - c. Marsh Chalkboard Co.; Div. Marsh Lumber Co.
 - d. Polyvision Corp.
- F. Custom drying rack assembly: Refer to details on Drawings.

ADD DESCRIPTION HERE OF SPECIAL UNISTRUT FABRICATIONS.

2.9 SINKS

- A. Tub Sinks, General: Fabricate tub sinks of monolithic construction without seams, with bottoms pitched to drain outlets, and as follows:

THE FOLLOWING REQUIREMENTS ARE APPLICABLE TO MOST TUB SINKS. SELECT MATERIAL TYPES APPLICABLE TO PROJECT.

1. Sizes: as indicated or mfr's closest stock size of equal or greater volume, as acceptable to Architect.
2. Outlets: 1-1/2 inch diameter, 2 3/4" inch minimum length, fabricated of cast epoxy resin, or stainless steel; of same material as sink.

DELETE BELOW IF NO RESIN TUB SINKS.

- B. Cast Epoxy Resin Tub Sinks: Nonglare black, molded in one piece with surfaces smooth, corners coved and bottom sloped to outlet. Minimum physical properties and chemical resistance as specified for cast epoxy resin tops; 1/2-inch minimum thickness.

DELETE BELOW IF NO STAINLESS STEEL TUB SINKS.

- C. Stainless Steel Tub Sinks: 18 gage, Type 316, with No. 4 satin finish.
1. Fabricate with horizontal and vertical corners rounded to at least 5/8 inch radius. Slope sink bottoms to pitch to outlet.
 2. Provide double wall construction for sink partitions with top edge rounded to at least 1/2 inch diameter.
 3. Continuous butt weld joints and provide factory punching for fixtures.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 123553 - - 15

4. Apply approximately 1/8 inch thick heat resistant underseal to undersink surfaces for condensation prevention and sound deadening.
5. Where stainless steel sinks occur in stainless steel tops, factory assemble sinks and tops into one integral unit with welds ground smooth and polished to near invisibility.

DELETE BELOW IF NO CUP SINKS.

- D. Cup Sinks: Fabricate cup sinks of cast epoxy resin or stainless steel as indicated on drawings. Conform to requirements specified for materials as specified for tops or sinks.

DELETE BELOW IF NO STAINLESS STEEL SCULLERY SINKS.

- E. Stainless Steel Scullery Sinks: 18 gage, Type 316, with No. 4 satin finish.
1. Fabricate with horizontal and vertical corners rounded to at least 5/8 inch radius. Slope sink bottoms to pitch to outlet.
 2. Provide double wall construction for sink partitions with top edge rounded to at least 1/2 inch diameter.
 3. Continuous butt weld joints and provide factory punching for fixtures.
 4. Apply approximately 1/8 inch thick heat resistant underseal to undersink surfaces for condensation prevention and sound deadening.
 5. Where stainless steel sinks occur in stainless steel tops, factory assemble sinks and tops into one integral unit with welds ground smooth and polished to near invisibility.

REVIEW WITH MECHANICAL ENGINEER TO ENSURE THAT ALL LABORATORY SERVICE ITEMS ARE SPECIFIED AND COORDINATED. SPECIFICALLY, EMERGENCY SHOWERS AND EYEWASHES ARE SOMETIMES MISSED ON PROJECTS.

2.10 MECHANICAL SERVICE FIXTURES

- A. Service Fixtures, General: Provide units complete with washers, locknuts, unions, nipples and other accessories for positive mounting to supporting laboratory units. Include wall and deck flanges, escutcheons, handle extension rods, remote valves, and similar items required. Fabricate units to withstand test pressure of 100 psig, unless otherwise indicated.
1. Service fixtures are indicated on drawings by symbols, with design type of each fixture indicated by letter and number reference marks.
 2. Handles: Provide 3-arm or 4-arm forged brass handles for valves, stops, faucets, remote controls, and cocks, except for ground key cocks, and micro-adjustable needle cocks.
 3. Hand of Fixtures: Provide right hand fixtures.
 4. Service Outlets Identification: Provide colored plastic index disks with embossed identification letters at each service fixture handle or knob. Secure disks to fixture handles to be tamperproof.

- B. Material and Finish: Fabricate service fixtures from cast or forged red brass containing a minimum of 81 percent copper. Exposed surfaces including fittings and escutcheons: polished chrome plated finish. Fixtures fabricated of plastic are not acceptable in any application, except as follows:
1. Distilled Water Fixtures: As indicated.
 2. Fixtures Inside Fume Hoods: Solvent resistant plastic coated brass as indicated.

EDIT THE FOLLOWING TO SUIT PROJECT.

USE BELOW FOR ECONOMY GRADE UNITS. THESE CANNOT BE FINELY CONTROLLED AND ARE INTENDED FOR "ALL-ON" OR "ALL-OFF" USE.

- C. Ground Key Type Hose Cocks: Tapered core and handle of one piece forged brass, ground and lapped, held in place under constant spring pressure.

USE BELOW WHERE RESEARCHERS REQUIRE UNITS THAT CAN BE FINELY CONTROLLED.

- D. Needle Valve Type Hose Cocks: Provide units with renewable, self-centering floating cones and renewable seats of stainless steel or monel metal. Provide units designed for 100 psig operating pressure.

- E. Water Valves and Faucets: Provide units with renewable barrel locked in valve body. Barrel shall contain all wearing parts, with renewable disks.

1. Furnish all water faucets with integral vacuum breakers in goose neck, regardless of model number indicated on drawings.

INCLUDE ABOVE EXCEPT IN CHEMISTRY BUILDING.

2. Provide bench-top mounted gooseneck water faucets with fittings required to allow gooseneck to swivel 360 degrees.
3. Provide each fixture with an integral vacuum breaker, regardless of model number indicated on drawings or in schedules.

BELOW IS STANDARD DI UNIT. NOTE THAT THIS PARAGRAPH SPECIFIES MODEL NUMBERS, WHICH IS ATYPICAL. USUALLY DELETE MODEL NUMBERS HERE AND INCLUDE THEM ON DRAWINGS.

- F. Brass Distilled (Purified) Water Fixtures: Provide units fabricated of forged brass, with polypropylene internal construction, and with no metal parts in contact with water. Provide each fixture with self-closing valves (unless otherwise indicated), and with a polypropylene vacuum breaker:

1. Deck Mounted Fixtures: Model 7833SC-7110; Watersaver.

DELETE ABOVE OR BELOW, OR RETAIN BOTH TO SUIT PROJECT.

2. Panel Mounted Fixtures: Model 7834SC-7110; Watersaver.

DELETE TWO FIXTURES LISTED ABOVE AND SUBSTITUTE NON-SELF-CLOSING MODELS BELOW IF CLIENT WILL NOT ACCEPT THE SELF-CLOSING MODEL. FIRST FIXTURE LISTED IS DECK-MOUNTED AND SECOND FIXTURE IS PANEL-MOUNTED.

3. Deck Mounted Fixtures: Model 7833-7110; Watersaver.
4. Panel Mounted Fixtures: Model 7834-7110; Watersaver.

DELETE DI UNITS ABOVE AND INCLUDE ALL-PLASTIC CONSTRUCTION UNIT BELOW FOR ECONOMY AT REQUEST OR CLIENT.

- G. PVC Distilled (Purified) Water Fixtures: Provide units fabricated of PVC, with no metal parts in contact with water. Provide each fixture with self-closing lever valve (unless otherwise indicated), and with a PVC vacuum breaker:
1. Product: Subject to compliance with requirements, provide Filterchem SVG-50"; Special Plastics Systems, Alhambra, Ca.

DELETE BELOW IF NONE.

- H. Fixtures in Fume Hoods: Provide valves controlled from face of hood. Use angle valves where required.

SELECT ONE OF THE FOLLOWING FAUCET TYPES

1. Faucets: Provide wall-mounted gooseneck style faucets in hoods.
2. Faucets: Provide wall-mounted, hose cock water outlets in hoods.
 - a. Backflow Preventer: Provide manufacturer's standard in-line backflow preventer (vacuum breaker) installed outside hood interior between valve body and outlet for each water faucet.
3. Hose Cocks: Provide units with acid and solvent resistant baked-on plastic coating in mfr's standard color.

DELETE BELOW IF NONE. NOTE THAT THIS PARAGRAPH SPECIFIES MODEL NUMBERS, WHICH IS ATYPICAL. USUALLY DELETE MODEL NUMBERS HERE AND INCLUDE THEM ON DRAWINGS.

- I. Deck Mounted Emergency Eyewash: Provide swinging dual-head units activated by pulling the arm into position for use. Unit to have plastic heads and polished chrome arm:
1. Deck Mounted Unit: Model 7610; Haws.

SELECT ABOVE OR BELOW OR BOTH TO SUIT PROJECT. ABOVE IS MOUNTED AT THE REAR OF THE SINK ADJACENT TO THE FAUCET AND PULLS DOWN AND FORWARD FOR USE. BELOW IS MOUNTED ON THE SIDE OF THE SINK AND PULLS FORWARD HORIZONTALLY FOR USE. IF HANDICAP ACCESSIBILITY IS REQUIRED, A DIFFERENT TYPE OF FIXTURE MAY BE REQUIRED.

2. Deck Mounted Unit: Model 7611; Haws.

2.11 ELECTRICAL SERVICE FIXTURES

- A. Service Fixtures: Provide units complete with metal housing or box; necessary receptacles, terminals, switches, pilot lights, device plates, and fittings and gaskets required for mounting on casework. Provide only fixtures with Underwriter's Laboratories label.

1. Service fixtures are indicated on drawings by symbols, with design type of each fixture indicated by letter and number reference marks.
- B. Pedestal Type Fixtures: Cast aluminum housing complete with cover plates, neoprene gasket under base, and with specification grade receptacles or other devices indicated. Fabricate units with sloped single face or double face, as indicated, and concealed mounting holes in base for attaching to casework. Provide holes tapped for conduits.
- C. Recessed Type Fixtures: Galvanized steel outlet box, size as required complete with cover plate and receptacles or other devices as indicated.
- D. Cover Plates: Provide stainless steel cover plates for AC outlets and devices.
 1. Stainless Steel, Type 302, satin finish, with formed beveled edges.
- E. Mark the following devices whether shown on drawings or not.
 1. AC receptacles, other than standard 120 volt duplex, grounding type. Indicate voltage and phase.

BELOW USUALLY NOT REQUIRED FUME HOOD LIGHT SWITCHES ARE INCLUDED IN FUME HOOD SECTION.

2. Switches: Indicate equipment being controlled (e.g., "PUMP OUTLET"). Provide units with pilot lights when located remotely from associated equipment or switch, where function is not obvious. Indicate equipment or circuit being energized.
- F. Finishes for Electric Service Fixture Components: Mfr's standard finish. Provide galvanized finish on ferrous fittings.
- G. Receptacles: Furnish AC receptacles for AC circuits, 125 volt, 20 amp, 2 pole, 3 wire, NEMA Type 5-20R, specification grade, extra heavy duty grounding type with nylon or Lexan bodies.
 1. Provide GFCI (ground fault circuit interrupter) receptacles within fume hoods and within 6 feet of sink units. GFCI receptacles shall be rated for 2000 amps interrupting capacity and trip in 25 milliseconds or less when ground currents exceed 5 milliamps.

SELECT ONE OF THE FOLLOWING.

2. Color: Dark brown.
3. Color: Ivory.
4. Products: Subject to compliance with requirements, provide products of one of the following:
 - Arrow Hart.
 - Bryant.
 - Hubbell.
 - Leviton.
 - Pass and Seymour.

RETAIN BELOW FOR FUME HOOD SWITCHES, AND OTHER AUXILLIARY EQUIPMENT SWITCHES (SUCH AS OUTLETS ON THE FACE OF, OR INSIDE, CABINETS).

H. Switches: Furnish single pole, double pole, or 3-way switches, as required, rated 120-277 volts AC and 20 amps, unless otherwise indicated.

1. Furnish pilot light adjacent to toggle switch, where noted as "PL" adjacent to switch identification.

SELECT ONE OF THE FOLLOWING.

2. Color: Dark brown.
3. Color: Ivory.
4. Products: Subject to compliance with requirements, provide products of one of the following:
Arrow Hart.
Bryant.
Hubbell.
Leviton.
Pass and Seymour.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. General: Install plumb, level, true, and straight with no distortions. Shim as required, using concealed shims. Where laboratory furniture abuts other finished work, scribe and apply filler strips for accurate fit with fasteners concealed where practicable.
- B. Base Cabinets: Set cabinets straight, plumb, and level. Adjust sub-tops within 1/16" of a single plane. Bolt continuous cabinets together. Unless otherwise noted, secure individual cabinets with not less than 2 fasteners into floor, where they do not adjoin other cabinets.
 1. Where required, assemble units into one integral unit with joints flush, tight, and uniform. Align similar adjoining doors and drawers to a tolerance of 1/16.
- C. Legs and Aprons: Install with exposed surfaces of legs approximately 1/8 in front of apron faces. Legs set flush or behind apron faces at conditions exposed-to-view are not permitted.
- D. Fillers and Closure Panels: Provide matching filler panels at openings between cabinets and adjacent walls, whether or not indicated on drawings. Provide closure panels at openings into service chases below aprons, whether or not indicated on drawings. Fasten fillers at ends of island benches and all closure panels with Phillips-head screws set in matching grommets, for easy removal.
- E. Wall Cabinets: Securely fasten to solid supporting material. Anchor, adjust, and align wall cabinets as specified for base cabinets.

RETAIN OR DELETE BELOW AS APPLICABLE TO PROJECT.

1. Where reinforcing of metal stud wall system is required, reinforcement is the work of other trades, but responsibility for accurate location and sizing of reinforcement is part of this work.
2. Adjust casework and hardware so that doors and drawers operate smoothly without warp and bind. Lubricate operating hardware as recommended by mfr.

3.2 INSTALLATION OF TOPS

- A. Field Jointing: Where practicable, make in same manner as factory jointing using dowels, splines, adhesives, and fasteners recommended by mfr. Locate field joints as shown, factory prepared so there is no job site processing of top and edge surfaces.
- B. Solid Hardwood, Stainless Steel and Plastic Laminate Tops: Use concealed clamping devices for field joints, locate within 6 inches of front, at back edges and at intervals not exceeding 24 inches. Tighten in accordance with mfr's instructions to exert a constant, heavy clamping pressure at joints.
- C. Natural Stone and Epoxy Tops: Secure to cabinets with epoxy cement applied at each corner and along perimeter edges at not more than 48 inches on center.
- D. Workmanship: Abut top and edge surfaces in one true plane, with internal supports placed to prevent deflection, and as follows:
 1. Solid Hardwood, Stainless Steel and Plastic Laminate: Provide flush hairline joints in top units using clamping devices.
 2. Natural Stone and Epoxy Resin: Use mfr's recommended adhesives and holding devices to provide joint widths not more than 1/16 inch wide at any location, completely filled and flush with abutting edges.
- E. Where necessary to penetrate tops with fasteners, countersink heads approximately 1/8 inch and plug hole flush with material equal in chemical resistance, color, hardness, and texture to top surface.
- F. After installation, carefully dress joints smooth, remove any surface scratches, clean and polish entire surface.
- G. Provide holes and cutouts as required for mechanical and electrical service fixtures.
- H. Provide scribe moldings for closures at junctures of top, curb and splash with walls as recommended by mfr for materials involved. Use chemical resistant, permanently elastic sealing compound where recommended by mfr.

3.3 INSTALLATION OF SHELVING UNITS

- A. Erect steel channel support system using manufacturer-recommended connectors, fasteners and anchors. Where not otherwise indicated, anchor into concrete structure using expansion bolts designed for the condition encountered. Lay shelves into support structure and fasten each shelf from underside with wood screws.

3.4 INSTALLATION OF SINKS

- A. Coordinate installation of sinks with work of Division 22.
 - 1. Underside Installation: Use mfr's recommended adjustable support system for table-type and cabinet-type installations. Set top edge of sink unit firmly pressed to counter top, set in mfr's recommended chemical resistant sealing compound to produce a tight and fully leakproof joint. Adjust sink and securely support to prevent movement.
 - 2. Semi-flush Installation: Use stainless steel sink frame, complete with clamping lugs and pads. Before setting, apply a full coat of mfr's recommended sealant under rim lip and along top. Omit sink frame in sinks fabricated with integral rim seal.

3.5 INSTALLATION OF ACCESSORIES

- A. Install in a precise manner in accordance with manufacturer's directions. Turn screws to a flat seat; do not drive into place. Adjust moving parts to operate freely without excessive bind.

3.6 CLEANING, ADJUSTING AND REPAIR

- A. Cleaning: Perform the following cleaning operations not more than 7 days prior to substantial completion:
 - 1. Clean shop-finished surfaces, and touch-up as required by Architect, and remove or refinish damaged or soiled areas.
 - 2. Clean glass surfaces installed under this section.
 - 3. Remove construction debris from drawers and cabinet interiors. Clean drawer and cabinet interiors as required to remove dirt, grease, dust and film.
 - 4. Dust exposed surfaces of casework and equipment; polish tops and curbs.
- B. Adjust drawer and door operation of each unit to provide smooth operation, positive latching, and close fit within specified tolerances.
- C. Repair, or remove and replace defective work as directed upon completion of installation.

SPECIFICATION DIVISION 13

NUMBER SECTION DESCRIPTION

DIVISION 13 SPECIAL CONSTRUCTION

SECTION 132100 - CONTROLLED ENVIRONMENT ROOMS

END OF CONTENTS TABLE

DIVISION 13 SPECIAL CONSTRUCTION
SECTION 132100 - CONTROLLED ENVIRONMENT ROOMS

SPECIAL ATTENTION SHOULD BE GIVEN TO COORDINATING WORK OF THIS SECTION WITH SECTION 123553 LABORATORY CASEWORK AND MECHANICAL AND ELECTRICAL WORK. SECTION 055000 "METAL FABRICATIONS" MAY BE REQUIRED TO SUPPORT EXTERIOR MOUNTED CONDENSER UNITS.

PART 1 - GENERAL

1.1 SUMMARY

- A. Extent and type of controlled environment room are indicated on Drawings and by provisions of this Section.
- B. Work included in this Section:
 - 1. Plumbing and wiring related to lighting, alarm, control and refrigeration systems, ready for hook-up to building services are included in this Section.

DELETE BELOW IF HUMIDITY CONTROL SYSTEM NOT INCLUDED.

- 2. Plumbing and wiring related to humidity control system, complete and ready for hook-up to building services, are included in this Section.

USUALLY RETAIN BELOW. REVISE IN COORDINATION WITH ELECTRICAL ENGINEER IF THIS WORK WILL BE PERFORMED UNDER DIVISION 26.

- 3. An electrical panel, receptacles and related conduit, surface raceways, wiring, boxes, and connections are included in this Section.
 - 4. Cutting and patching of penetrations in insulated sandwich panels for connection of plumbing and electrical services work of Divisions 22 and 26, is included in this Section.

DELETE BELOW IF SHELVING NOT INCLUDED IN THIS SECTION

- 5. Floor and wall mounted wire shelving are included in this Section.

- C. Related Sections: The following Sections contain requirements that relate to this Section:

INCLUDE BELOW IF ROOM WILL BE INCLUDED AS AN ALTERNATE.

- 1. Division 01 Section "Alternates" for additional requirements related to this Section.

DELETE BELOW IF NONE. IF PARA RETAINED, MODIFY TO SUIT PROJECT.

- 2. Division 12 Section "Laboratory Casework" for laboratory furniture, tops, sinks, faucets and service fittings.

COORD. BELOW WITH ARTICLE "MECHANICAL AND ELECTRICAL SYSTEMS AND ACCESSORIES."

- 3. Division 22 for plumbing services and connections to sink and service fittings within controlled environment room.

COORDINATE BELOW WITH ELECTRICAL ENGINEER. REVISE BELOW AND COORDINATE WITH PLUMBING AND WIRING ARTICLE ABOVE IF OUTLETS ARE REQUIRED TO BE RECESSED IN WALLS.

4. Division 26 for connection of equipment to building electrical service.

1.2 QUALITY ASSURANCE

- A. Fire-Rating: Panel construction shall meet UL flame spread rating of 25.
- B. Sanitary Construction: Provide unit with National Sanitation Foundation (NSF) seal on door.
- C. Personnel Safety: Comply with Occupational safety and Health Administration regulations regarding personnel alarms and equipment location.
- D. Plumbing Systems: Comply with the requirements of the "Michigan Plumbing Code 20033.
- E. Ventilation Systems: Comply with the requirements of the Michigan Building Code 2003 and Michigan Mechanical Code 2003 with respect to minimum ventilation requirements.
- F. Electrical Equipment and Wiring:
 1. Comply with requirements of the "National Electrical Code" of the National Fire Protection Association (NFPA).
 2. Provide electrical components, including, but not limited to refrigeration equipment, lighting, receptacles, and heated door section listed and labeled by Underwriter's Laboratories, Inc. (UL) for electrical safety.
 3. Provide control panels and electrical panels listed and labeled by UL, ETL, MET, or CSA.

1.3 SUBMITTALS

- A. Product Data: Submit Manufacturer's literature indicating compliance with requirements, and the following:
 1. Installation instructions.
 2. Operating and maintenance instructions for each item of equipment.
- B. Shop Drawings: Showing construction of box and ancillary equipment, including component data sheets, control diagrams, and operating sequence information.
 1. Provide a detailed power riser diagram specific to the controlled environmental room to be supplied.
- C. Pre-Training Submittals: Submit start-up, functional test, and performance test reports not less than 2 weeks prior to conducting training session.
- D. Product Warranties: Submit manufacturer's standard written warranty for each environmental room covering, at minimum, one year, parts and labor.

1.4 DESIGN REQUIREMENTS

*DELETE BELOW IF UNIT WILL NOT BE USED FOR CRYSTALLIZATION
(WHICH REQUIRE VIBRATION RESTRICTIONS).*

- A. Crystallization Room: In environmental rooms designated "crystallization room", provide units with the following special features:
1. Provide quiet switches in lieu of standard mechanical relays and solenoids.
 2. Provide self-closing, self-sealing doors.
 3. Provide remote mounted compressor and condenser units.
 4. Provide refrigeration system piping mounted on vibration isolators and not mounted along walls.

*DELETE BELOW IF UNIT WILL NOT BE USED FOR ANIMAL HOLDING
(WHICH REQUIRE NOISE RESTICTIONS).*

- B. Animal Room: In environmental rooms designated "animal room", provide the following special feature:
1. Provide quiet switches and relays in lieu of standard mechanical relays and solenoids.

1.5 PROJECT CONDITIONS

- A. Existing Clearances: Clear headroom above the unit is restricted by piping and ductwork. Maximum clear dimension from the finished floor to underside of the lowest obstruction is as follows:

MODIFY EXMPLE BELOW TO SUIT ACTUAL PROJECT CONDITIONS.

1. feet, 9 inches.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Manufacturer: Subject to compliance with requirements, provide products of one of the following:

Bahnson Environmental Specialties
Environmental Growth Chambers
Harris Environmental Systems, Inc.
Insulated-Structure, Ltd.
Nor-Lake, Inc.

2.2 ENVIRONMENTAL ROOM ENCLOSURE

- A. Size: Environmental room dimensions are indicated on Drawings. Provide rooms of manufacturer's standard sizes, but within 12-inches of dimensions indicated on drawings.

*IF HEIGHT NOT INDICATED ON DRAWINGS, INCLUDE ONE OF THE
FOLLOWING. NOTE THAT IT WILL BE DIFFICULT OR IMPOSSIBLE TO
INSTALL A GRID CEILING IN ROOMS LOWER THAN 8'-7".*

1. Room Height: 7 feet, 7 inches outside dimension.

2. Room Height: 8 feet, 1 inch outside dimension.
3. Room Height: 8 feet, 7 inches outside dimension.
4. Room Height: 9 feet, 7 inches outside dimension.

B. Wall and Ceiling Panels: Manufacturer's standard rigid, foamed-in-place urethane insulation core with metal panel skins adhered to exterior and interior sides. Provide all mechanical latching devices, gasketing and trim required for positive seal between panels and neat finished appearance.

1. Panel Thickness: 4-inches
2. Thermal Performance: U-value of assembled panels not less than 0.29.
3. Panel Skins: Provide metal panel skins of indicated materials. Paint metal panels in areas exposed to view in finished construction.
 - a. Exterior Floor and Ceiling: 14 gage galvanized steel.

BELOW IS TYPICAL, BUT OPTIONS INCLUDE STAINLESS STEEL AND GALVANIZED STEEL - CONSULT MFR'S LITERATURE.

- b. Exterior Wall Panels: 0.040-inch thick, stucco embossed, aluminum.
- c. Interior Wall Panels: 0.040-inch thick, stucco embossed, aluminum.
- d. Colors: Provide white interior and white exterior.

DELETE BELOW IF WALL-MOUNTED SHELVING, OR IF FLOOR-TO-CEILING UNISTRUT SUPPORTS WILL BE PROVIDED. COORDINATE BELOW WITH DRAWINGS.

4. Reinforcing: Provide reinforcing in the form of wood blocking or heavy-gage steel stripping, concealed within walls at locations indicated to receive wall mounted casework, shelving or equipment.

DELETE BELOW IF NO ELEVATED CO2 ROOMS

5. Panel Sealants for Elevated CO2 Room: In addition to requirement of mechanical latching device (cam-lock panels), provide silicone sealant at all panel joints for redundantly sealed, air-tight construction.

C. Doors: Provide units with the following characteristics:

1. Size: 36-inches by 78-inches.

USUALLY SELECT SWINGING TYPE BELOW.

2. Type: Flush mounted, swinging type.
3. Type: Sliding type.

SELECT SELF-SEALING FOR CRYSTALLIZATION ROOMS.

4. Operation: Self-closing hinges.
5. Operation: Self-closing, self-sealing.

MODIFY BELOW TO SUIT PROJECT REQUIREMENTS.

6. Observation Window: 12-inches by 12-inches (approximate dimension) triple pane observation window.

MODIFY BELOW TO SUIT PROJECT REQUIREMENTS.

- a. Electrically heat windows in freezer doors.

MODIFY BELOW TO SUIT PROJECT REQUIREMENTS.

7. Latching Hardware: Positive latching hardware with door handle and inside safety release. Provide cylinder locks in door handles, except in freezer unit (if applicable).

LIMIT KEYING INFORMATION TO BELOW. DO NOT INCLUDE SPECIFIC DEPARTMENTAL KEYING INFORMATION IN THIS SECTION.

- a. Manufacturer/Model of Cylinders: Best Co., only. Contact University of Michigan Key Office at (734) 764-3481 for cylinder and keying requirements.

RETAIN ALL BELOW.

8. Gaskets and Seals: Replaceable magnetic gaskets on sides and top, and adjustable sweep seals on bottom. Provide openings with stainless steel threshold.
9. Heat opening perimeter as required to prevent condensation.

INSULATED FLOORS BELOW MAY BE OMITTED IN WARM ROOMS AND COLD ROOMS WHERE NECESSARY FOR BARRIER-FREE APPLICATION OR HEIGHT RESTRICTIONS. IN COLD ROOMS, THIS CAN RESULT IN CONDENSATION ON UNDERSIDE OF THE SLAB, SO IT IS BEST TO CONSIDER ELIMINATING INSULATED FLOORS ONLY IN SLAB-ON-GRADE CONSTRUCTION.

- D. Floors: Insulated panels of construction similar to wall panels, except able to withstand floor loads of 600 psf.

1. Panel Thickness: 3-1/2 inches, minimum.
2. Floor Finish: 14 gage galvanized steel.
3. Floor Covering: 1/8-inch thick diamond tread PVC mat in manufacturer's standard color.

INSULATED FLOORS REQUIRE RAMPS (UNLESS A DEPRESSED SLAB CAN BE PROVIDED). RAMPS CREATE BARRIERS TO ACCESS THAT MUST BE DEALT WITH - SEE NOTES BELOW.

- E. Ramps: Provide ramp of type indicated, fabricated of minimum 1/8-inch thick Type 6061-T6 aluminum tread plate with diamond-check pattern, or flat aluminum plate with durable, non-skid coating. Provide fire-retardant-treated wood substructure designed to support structural loads equal to, or greater than, those specified for the insulated floor structure. Provide ramp of width indicated on Drawings, or if not indicated, 48 inches wide; and of indicated length or slope.

1. Fixed Exterior Ramp: Provide where indicated on Drawings, or if not indicated, one unit at each door where a transition from insulated floor to building floor occurs.

SELECT ABOVE OR BELOW.

2. Portable Exterior Ramp: Provide where indicated on Drawings, or if not indicated, one unit at each door where a transition from insulated floor to building floor occurs.

INCLUDE ONE LENGTH OPTION BELOW FOR EITHER OF THE ABOVE TYPES. ALL DISCUSSIONS ASSUME A 4-INCH TOTAL RISE.

OPTION BELOW WILL NOT COMPLY WITH STATE ACCESSIBIITY CODES OR ADA. 36 INCHES IS MFR STANDARD, BUT UM HAS HAD SUCCESS OBTIANING VARIANCES WITH THE 42-INCH EXTERIOR RAMP OPTION BELOW. THE STATE PREFERS THE 42-INCH LENGTH, WHICH GIVES THE CODE-REQUIRED 1:10 SLOPE FOR MAX. 6-INCH RISE (EXCEPTION MUST BE REQUESTED FOR THE MISSING LANDING AT DOOR).

- a. Length: 42 inches.

OPTION BELOW DOES NOT NEED LANDING, ACCORDING TO MICHIGAN BUILDING CODE (LESS THAN 1:12), AND DOES NOT REQUIRE VARIANCE. USE THIS IF SPACE IS AVAILABLE.

- b. Length: 50 inches.

USUALLY DELETE BELOW AND RETAIN ABOVE - MOST USERS DO NOT WANT AN INTERIOR RAMP SINCE IT CREATES A TRIPPING HAZARD. USE ONLY WHERE EXTERIOR RAMP CANNOT BE PROVIDED BECAUSE OF SPACE CONSIDERATIONS. AN EXCEPTION FOR RAMP LENGTH AND MISSING LANDING IS REQUIRED.

- 3. Fixed Interior Ramp: Maximum 20-inches long, provided at door. Include non-skid PVC mat.

F. Trim Strips and Closure Panels: Provide closure and trim pieces as indicated. Use materials and finishes matching exterior panel skins.

G. Ceiling Plenum: No plenum within room.

SELECT EITHER ABOVE OR BELOW. NOTE THAT GRID CEILING MATERIAL WILL REDUCE AVAILABLE HEADROOM TO BELOW THE BOTTOM OF THE LOWEST MECHANICAL ELEMENT (USUALLY THE CONDENSATE DRAIN LINE OUT OF THE FAN COIL UNIT IN ROOM). DO NOT SELECT PLENUM OPTION WITH ROOMS SHORTER THAN 8'-7" UNDER ANY CIRCUMSTANCES.

GRID IS PREFERRED BY MED. SCHOOL WHICH MAY REQUIRE VERY HIGH AIR VELOCITIES DUE TO ELECTRICAL LOAD REQUIREMENTS. BE SURE TO INVESTIGATE AND RESOLVE POTENTIAL CONFLICTS BETWEEN AVAILABLE HEADROOM AND GRID.

H. Ceiling Plenum: Provide white acrylic plastic, 1/2-inch square, "open cell" grid type ceiling supported by medium duty, painted steel suspension system to form plenum for distribution of air and light. Secure grid to T-bar supports to prevent rattling.

FOR PROJECTS WITH MULTIPLE ENVIRONMENTAL ROOMS, CREATE SEPARATE "OPERATING REQUIREMENT" ARTICLES FOR EACH TYPE OF ROOM AND RE-TITLE ACCORDINGLY. EXAMPLE: "COLD ROOM OPERATING REQUIREMENTS" AND "WARM ROOM OPERATING REQUIREMENTS"; OR "ROOM TYPE NO. 1"/"ROOM TYPE NO. 2". ENSURE CONSISTANT NOMENCLATURE ON DRAWINGS.

2.3 ENVIRONMENTAL ROOM OPERATING REQUIREMENTS

- A. System Operation, General: Provide units that are capable of maintaining selected set point(s), within indicated temperature and humidity control and uniformity ranges, when operated under the indicated maximum and minimum thermal loading conditions. Provide units with compressor running continuously, and with evaporator unit fan operating on demand. Size compressor and related components to operate under both minimum and maximum loading conditions without "short cycling," excessive wear on the compressor, or throttling of the hot gas bypass valve. Design units to operate without excessive compressor noise, and without high air velocities within the occupiable space of the room.

REVIEW THE FOLLOWING VALUE WITH ELECTRICAL ENGINEER.

1. Available Building Power Supply: 208V, 3 phase, 4 wire plus ground.

- B. Environmental Control: Provide environmental rooms complying with the following temperature and humidity control requirements:

TEMPERATURE SET POINT OR RANGE MUST BE DETERMINED BY CLIENT.

BELOW DESCRIBES STANDARD COLDROOM WITH A FIXED SET POINT.

1. Temperature Set Point: 4 degrees C., constant.

BELOW DESCRIBES A ROOM CAPABLE OF A RANGE OF TEMPERATURES FROM WARM TO COLD.

2. Temperature Range: 0 to 60 degrees C., constant.

BELOW IS NOT RECOMMENDED PRACTICE. ELEVATED CO2 POSES HEALTH RISK.

3. to 60 degree C., elevated CO2 environment.
4. Temperature Control Range: Provide units capable of maintaining temperature within the following range, when measured at a single point within the room over time:

RETAIN ONE OF THE FOLLOWING VALUES IN CONSULTATION WITH CLIENT - USUALLY +/- 0.5 DEG C. IS ACCEPTABLE. NOISE ASSOCIATED WITH THE OPERATION OF THE VALVE TYPE REQUIRED FOR +/- 0.2 DEG. C. ABOVE HAS PROVED ANNOYING TO OCCUPANTS.

- a. +/- 0.2 deg. C.
 - b. +/- 0.5 deg. C.
5. Uniformity Range: +/- 0.5 degree C, or better, when measured between a variety of points anywhere within the room, excluding areas of the room within 12 inches of walls, floor, and ceiling.
 6. Humidity Range: As follows:

BELOW IS MOST COMMON. HUMIDITY CONTROL SYSTEMS ADD CONSIDERABLE COST AND COMPLICATIONS TO UNITS.

- a. Uncontrolled, except that room supplier is responsible for providing system which ensures that condensation will not form on horizontal or vertical surfaces within the room.

BELOW WILL KEEP CONDENSATION FROM FORMING ON COLD SURFACES OF TYPICAL 4 DEG. C. ROOM.

b. Less than 20 grains/lb.

RETAIN BELOW OR MODIFY FOR SPECIFIC REQUIREMENT OF RESEARCH BEING CONDUCTED.

c. Ambient to 90 percent RH.

USUALLY DELETE BELOW - ELEVATED CO2 ROOMS ARE RARE.

7. CO2 Range: 0 to 10 percent.

C. Thermal Loads: Provide environmental rooms capable of maintaining indicated controlled temperature and humidity conditions when operating under the following thermal loads:

CLIENT MUST DETERMINE DOOR OPENINGS BELOW. 8 PER HOUR IS A FAIRLY HIGH FREQUENCY OF USE.

1. Door Openings: Maximum of 8 per hour, for 8 working hours per day.

a. Temperature and humidity range recovery time for a 5-second door open condition: Not more than 5 minutes.

CLIENT MUST DETERMINE OCCUPANTS BELOW. 2 IS USUALLY THE MAXIMUM.

2. Number of Occupants: Maximum of 2, for 8 working hours per day.

3. Lighting: As indicated in "Electrical Systems and Accessories" Article of this Section.

CONSULT WITH CLIENT TO DETERMINE APPROPRIATE HEAT LOAD FROM EQUIPMENT EXPECTED TO OPERATE WITHIN THE ROOM, AND DURATION.

4. Owner's Equipment: Minimum thermal load from Owner's movable equipment within the room is a continuous zero-load condition. Maximum thermal load from Owner's movable equipment within the room is as follows:

SELECT VALUES BELOW IN COORDINATION WITH OWNER. NOTE THAT 1 KW IS FREQUENTLY ACCEPTABLE. NOTE THAT POSSIBLE THERMAL LOAD CANNOT EXCEED AVAILABLE ELECTRICAL POWER, AND IS FREQUENTLY MUCH LESS THAN THAT VALUE. CONSULT WITH MECHANICAL ENGINEER IF IN DOUBT.

a. kilowatts, operating for 24 hours per day.

b. kilowatts, operating for 8 hours per day.

c. kilowatts, operating for 8 hours per day.

IF HUMIDITY CONTROL IS REQUIRED, ADD HUMIDITY-AFFECTING EQUIPMENT SUCH AS WATER BATHS HERE.

5. Ambient Conditions Exterior to Room: 60 to 80 deg. F.

DELETE BELOW IF NO FREEZER UNIT

2.4 FREEZER ROOM OPERATING REQUIREMENTS

A. System Operation, General: Provide units that are capable of maintaining selected set point, within the indicated temperature control and uniformity ranges, when operated under the indicated maximum and minimum thermal loading conditions.

- B. Environmental Control: Provide freezer rooms complying with the following temperature control requirements:
1. Temperature Set Point: Minus 20 degrees C., constant.
 2. Temperature Control Range: +/- 0.5 deg. C., when measured at a single point within the room over time.
 - a. +/- 0.5 deg. C.
 3. Uniformity Range: +/- 0.5 deg. C, or better, when measured between a variety of points anywhere within the room, excluding areas of the room within 12 inches of walls, floor, and ceiling.
 4. Humidity: Uncontrolled.
- C. Thermal Loads: Provide freezer rooms capable of maintaining indicated controlled temperature when operating under the following thermal loads:
1. Door Openings: 4 per hour, during 8 working hours per day.
 2. Number of People: Maximum of 1, for a duration of 5 minutes or less.
 3. Lighting: As indicated in "Electrical Systems and Accessories" Article of this Section.

BELOW IS AN EXAMPLE ONLY. VERIFY WITH CLIENT AND EDIT TO SUIT ACTUAL CONDITIONS.

4. Product Load: Approximately 1 gallon of room temperature liquid introduced at 24 hour intervals.
5. Ambient Conditions Exterior to Room: 60 to 80 deg. F.

2.5 PLUMBING AND REFRIGERATION SYSTEMS AND ACCESSORIES

- A. Refrigeration, General: Provide units with factory installed refrigeration systems, complying with indicated requirements of "Operating Requirements" Article of this Section, and as follows:
1. Plumbing: Provide factory-and-field installed equipment, including piping, fittings and connections required to provide a complete, ready-to-operate refrigeration system.
 - a. Use pre-charged coolant lines where possible.
 2. Electrical: Provide factory-and-field installed conduit, wiring, fittings and connections (including compressor disconnect switch) required to provide a complete, ready-to-operate refrigeration system. Terminate wiring in power panel as indicated in "Electrical Systems and Accessories" Article of this Section.
- B. Condensing Unit: Factory assemble compressor/condenser units using UL listed or recognized components. Compressor shall be of semi-hermetic type. Use manufacturer's standard non-CFC refrigerant for condition of use. Pre-wire and factory pipe units.

CONSULT WITH MECHANICAL ENGINEER WHEN SELECTING SYSTEM TYPE. CURRENT PREFERENCE IS FOR WATER-COOLED SYSTEMS.

RETAIN BELOW FOR WATER-COOLED SYSTEMS. THESE SYSTEMS REQUIRE EITHER A BUILDING DOMESTIC WATER OR CHILLED WATER SUPPLY. BELOW IS FOR CHILLED WATER SUPPLY WITH DOMESTIC WATER BACK-UP.

1. System Type: Provide controlled environment room with water-cooled refrigeration system, for connection to building chilled water supply with domestic water back-up system. Include a control valve to throttle chilled water based on demand, and designed for a 10 deg. F. temperature rise.

MODIFY BELOW IN CONSULTATION WITH MECHANICAL ENGINEER.

- a. Chilled Water Temperature: Approximately 45 deg. F.
- b. Domestic Water Temperature: Approximately 65 deg. F.

SELECT ONE MOUNTING LOCATION FROM THREE CHOICES BELOW - CRYSTALLIZATION ROOMS MUST HAVE REMOTE MOUNTED EQUIPMENT. INSTALLATIONS ON COLDROOM ROOF MAY BE NOISY. A CLEAR, WRITTEN DESCRIPTION OF THE LOCATION MAY BE SUBSTITUTED HERE FOR A LOCATION DRAWING.

- c. Mounting Location: Mount unit on roof of cold room.
- d. Mounting Location: Building interior, as indicated on Drawings.
- e. Mounting Location: Building exterior, as indicated on Drawings.

USUALLY INCLUDE BELOW, EXCEPT FOR REMOTE INSTALLATIONS WHERE NOISE AND VIBRATION TRANSMISSION ARE NOT CRITICAL.

- f. Mounting Type: Mount system components on a single steel frame. Mount compressor on spring isolators sized for specific equipment provided.

RETAIN BELOW FOR AIR-COOLED SYSTEMS. THESE SYSTEMS REQUIRE MOUNTING THE CONDENSER UNIT OUTSIDE THE BUILDING AND SHOULD NOT BE RUN MORE THAN 50-75 FEET FROM THE ROOM.

2. System Type: Provide controlled environment room with an air-cooled refrigeration system.

SELECT ABOVE OR BELOW MOUNTING LOCATION - NOTE THAT CRYSTALLIZATION ROOMS SHOULD HAVE REMOTE MOUNTED REFRIGERATION EQUIPMENT

- a. Mount refrigeration system on building exterior as shown. Provide exterior mounted refrigeration units with all-weather hood and low-ambient controls, suitable for local climate.

USUALLY DELETE BELOW FOR EXTERIOR INSTALLATIONS, UNLESS NOISE AND VIBRATION CONTROL ARE IMPORTANT.

- b. Mounting Type: Mount system components on a single steel frame. Mount compressor on spring isolators sized for specific equipment provided.

BELOW MAKES DRAIN PIPE FROM CONDENSATION PAN A RESPONSIBILITY OF THE ROOM MANUFACTURER. SHOW OR NOTE ROUTE OF DRAIN PIPE (USUALLY TO A SINK OR OTHER WASTE WITHIN THE ROOM) ON DRAWINGS. IF NO SINKS ARE INCLUDED IN THE ROOM, CONSULT WITH MECHANICAL ENGINEER AND POSSIBLY INCLUDE SUBPARA BELOW TO LIMIT ROOM MANUFACTURER'S RESPONSIBILITY TO STUB-OUT ONLY.

C. Evaporator Unit: Provide forced-air type, designed for ceiling installation, complete with condensation collection pan, drain pipe, and, where necessary, condensate pump; and terminated with an air gap at location shown on Drawings, unless otherwise indicated. Provide evaporator units which are UL listed or recognized.

1. Provide units with defroster with automatic, programmable, timed operation.

USUALLY DELETE BELOW, UNLESS COORD. WITH MECHANICAL ENGINEER RESULTS IN DIVISION 15 BEING RESPONSIBLE FOR THE PLUMBING.

2. Stub out drain pipe from condensation collection pan for connection under Division 22.

PRIOR TO EDITING THE PARAGRAPH BELOW, DETERMINE WHETHER ROOM WILL BE OCCUPIED (DEFINED AS ONE OR MORE PERSONS SPENDING ONE HOUR OR MORE CONTINUOUSLY IN THE ROOM AT ANY GIVEN TIME). IF ROOM IS OCCUPIED, INCLUDE THE STANDARD BELOW. IF THE ROOM IS DETERMINED TO BE UNOCCUPIED, ELIMINATE PARAGRAPH BELOW.

D. Ventilation: Built-in fresh-air ventilation system. Comply with the standards below:

BELOW DESCRIBES A SYSTEM IN WHICH VENTILATION AIR IS SUPPLIED FROM THE ROOM IN WHICH THE ENVIRONMENTAL ROOM IS LOCATED. IT ASSUMES THAT THE AIR HANDLING UNIT IS PROVIDING 100% OUTSIDE AIR. IF THE AHU IS PROVIDING LESS THAN 100% O.A., THE MECHANICAL ENGINEER SHOULD MODIFY THE SPECIFICATIONS ACCORDINGLY.

1. Ventilation air supplied from the room within which the package environmental room is located and routed directly to the evaporator inlet. Return air shall be vented through a relief damper in the roof. System shall have an electrically driven centrifugal type ceiling fan. Blade type fans are not acceptable: Minimum 20 cfm per person.

SELECT OPTION BELOW IF ROOM WILL BE UNOCCUPIED OR WILL BE A FREEZER ROOM. IF THIS OPTION IS RETAINED BE SURE TO DESIGNATE ON DRAWINGS WHICH ROOMS MEET THE CRITERIA BELOW. IF NO VENTILATION IS TO BE PROVIDED, BE SURE TO NOTIFY THE CLIENTS THAT THE FOLLOWING SIGN MUST BE POSTED ON THE OUTSIDE OF THE ENVIRONMENTAL ROOM: "NOT FOR USE WITH FLAMMABLE SOLVENTS IN QUANTITIES GREATER THAN 1 L."

E. Omit ventilation in freezer rooms and in unoccupied storage rooms which are designated thus on the Drawings.

F. Humidification System: Manufacturer's standard, electrically powered steam generator, for direct injection of steam into room supply air stream ahead of cooling coils. Provide unit ready for connection to building purified water system, and capable of meeting humidity set point and control range indicated under "Operating Requirements" Article of this Section, and as follows:

A CLEAR, WRITTEN DESCRIPTION COULD BE SUBSTITUTED HERE FOR A LOCATION DRAWING.

1. Location: As shown on Drawing.

2. Duct the humidifier output through the evaporator unit mounted to the environmental room ceiling.
3. Interlock humidifier and cooling controls as required to provide stable interior temperature and humidity ranges.

DELETE BELOW IF NO DEHUMIDIFICATION SYSTEM REQUIRED. MODIFY TO INDICATE TITLE OF DIVISION 15 SECTION REFERENCED IN PARA.

- G. Dehumidification System: Manufacturer's standard desiccant-type air dryer system complete with required sheet metal ductwork between controlled environment room and dehumidifier unit. Connect unit to exhaust duct, specified in Division 23 Section ". Provide unit capable of meeting humidity range control indicated under "Operating Requirements" Article of this Section, and the following:

A CLEAR, WRITTEN DESCRIPTION COULD BE SUBSTITUTED HERE FOR A LOCATION DRAWING.

1. Location: As shown on Drawing.
2. Duct the dehumidifier output through evaporator unit mounted to the environmental room ceiling.
3. Interlock dehumidifier and cooling controls as required to provide stable interior temperature and humidity ranges.
4. Acceptable Models: Subject to compliance with requirements, provide units manufactured by one of the following:
 - a. Munters Cargocaire.
 - b. Brye-Aire.
 - c. Low-Humidity Systems.

USUALLY DELETE BELOW - MAY BE INCLUDED FOR FREEZER ROOMS TO PERMIT DEFROSTING.

- H. Floor Drain: Provide indicated floor drain and cover in environmental room.

DELETE BELOW IF NO ELEVATED CO2 ROOM.

- I. CO2 Sensor and Injection System: Provide CO2 Injection System with digital CO2 Controller with Thermistor Thermal Conductivity Cell and as follows:

1. Operation: Device measuring electrical conductivity of CO2, with factory installed sensors located for optimum performance. Interlock with control mechanism for release of CO2 into air supply of room. Release of CO2 shall be intermittent and only as required to maintain desired CO2 levels. Continuous flow devices are not permitted.
2. Controller Range: 0 to 20 percent.
3. Controller Sensitivity: +/- 0.1 percent.
4. Display: Digital readout of CO2 concentration in environmental room control panel.
5. Fabrication: Factory pre-assemble and test unit in presence of Owner's representative. Notify Owner at least 15 days before test.

2.6 ELECTRICAL SYSTEMS AND ACCESSORIES

- A. General: Provide factory installed conduit, wiring, switches, fittings and connections for each electrically powered accessory and item of equipment required by provisions of this Section. Terminate wiring in an electrical panel as indicated in this Article.

CONTROLLER BELOW IS ALWAYS REQUIRED.

- B. Controllers: Manufacturer's standard digital electronic control unit with lighted digital display and controls and as follows:

DELETE BELOW IF NO ANIMAL OR CRYSTALLIZATION ROOMS.

1. Mechanical relays are not permitted.

SELECT ONE OF THE FOLLOWING TO SUIT PROJECT.

2. Type: Temperature controller.
3. Type: Temperature and humidity controller.

RECORDER BELOW MAY BE OMITTED FOR SMALL SAVINGS IF APPROVED BY THE CLIENT.

- C. Recorders: Manufacturer's standard chart recorder with seven day movement and 10-inch diameter chart for recording conditions within the environmental room. Provide 100 additional papers for future use.

1. Type: Temperature recorder with single pen.

ABOVE IS FOR ENVIRONMENTAL ROOM WITHOUT HUMIDITY CONTROL. BELOW IS FOR HUMIDITY-CONTROLLED ROOMS.

2. Type: Temperature and humidity recorder with dry and wet bulb sensing for recording temperature and humidity, respectively. Provide a dual-pen unit for independent record of temperature and relative humidity conditions.

- D. Lighting: Fluorescent lighting with vapor proof fixtures and electrical components and cold weather ballasts capable of operation for indicated room condition without perceivable light flickering.

USUALLY RETAIN BELOW.

1. Cold Rooms and Combination Warm-and-Cold Rooms: Design lighting to provide light level of 70 foot-candles at 40 inches above finished floor at 4 deg. C.

DELETE BELOW IF NO FREEZER ROOMS.

2. Freezer: Design lighting to provide light level of 40 foot-candles at 40 inches above finished floor at minus 20 deg. C.

DELETE BELOW IF NO WARM-ONLY ROOMS.

3. Warm Rooms: Design lighting to provide light level of 70 foot-candles at 40 inches above finished floor at 30 deg. C.

- E. Switches for Light Fixtures and Outlets: Furnish single pole, double pole, or 3-way switches, as required, rated 120-277 volts AC and 20 amps, unless otherwise indicated. Locate light fixture switches as indicated on Drawings, or if not otherwise indicated, within room next to the latch side of the door.

DELETE BELOW IF NO SWITCHED OUTLETS. COORD. "PL" DESIGNATION ON DRAWINGS.

1. Furnish pilot light adjacent to toggle switch, where noted as "PL" adjacent to switch identification.

SELECT ONE OF THE FOLLOWING.

2. Color:
 - a. Brown.
 - b. Ivory.
 - c. White.
3. Products: Subject to compliance with requirements, provide products of one of the following:
 - Arrow Hart.
 - Bryant.
 - Eagle (industrial spec grade only).
 - Hubbell.
 - Leviton.
 - Pass and Seymour.

RETAIN OR DELETE BELOW IN CONJUNCTION WITH ELECTRICAL ENGINEER. THIS MASTER SPECIFICATION SECTION HAS BEEN PREPARED ASSUMING THAT BELOW WILL BE RETAINED.

- F. Electrical Power Wiring and Accessories: Factory install conduit, wiring, fittings, and connections for electrical receptacles indicated on Drawings and by provisions of this Section. Provide a sufficient number of 20 amp circuits to accommodate the maximum power requirements of Owner's movable equipment within the room indicated in the "Operating Requirements" Article of this Section. Recess conduit and wiring devices within environmental room walls. Provide a junction box to serve each surface-mounted raceway indicated on Drawings.

RETAIN OR DELETE BELOW IN CONJUNCTION WITH ELECTRICAL ENGINEER. THIS MASTER SPECIFICATION SECTION HAS BEEN PREPARED ASSUMING THAT BELOW WILL BE RETAINED.

- G. Surface Raceways: Provide 2-7/8-inch wide, 1-7/8-inch deep, single-channel, surface mounted, wire raceways complete with base, cover, and duplex receptacle covers.
1. Products: Provide 0.60-inch thick, 6063-T5 alloy aluminum extrusions with a clear satin anodized finish, and including base, cover, fittings, duplex receptacle cover, and other fittings as required for a complete installation.
 - a. ALA 3800 Series; The Wiremold Company.
 - b. SWA3200 Series ; Mono-Systems.

RETAIN OR DELETE BELOW IN CONJUNCTION WITH ELECTRICAL ENGINEER. THIS MASTER SPECIFICATION SECTION HAS BEEN PREPARED ASSUMING THAT BELOW WILL BE RETAINED.

H. Power Receptacles: Duplex receptacles shall be rated 125 volt, 20 amp, 2-pole, 3-wire, NEMA Type 5-20R, specification grade, extra-heavy duty, grounding type, with nylon or Lexan bodies and faces of indicated color.

1. Receptacle Spacing: 24-inches on center, unless otherwise indicated.
2. Circuiting: Feed receptacles from 2 dedicated 20 amp circuits, with adjacent receptacles wired to alternate circuits, unless otherwise indicated.
3. Provide GFCI (ground fault circuit interrupter) receptacles within 6 feet of sink units. GFCI receptacles shall be rated for 2000 amps interrupting capacity and trip in 25 milliseconds or less when ground currents exceed 5 milliamps.
4. Receptacle Face Color:

SELECT DESIRED COLOR BELOW.

- a. Brown.
 - b. Ivory.
 - c. White.
5. Products: Subject to compliance with requirements, provide products of one of the following:
Arrow Hart
Bryant.
Eagle (industrial spec grade only).
Hubbell.
Leviton.
Pass and Seymour.

I. Data Outlets: Where data outlets are indicated on the Drawings furnish and install "standard faceplate bracket" (similar to Panduit #T70DB-X) only. Jacks and final faceplate shall be provided by Owner (ITcom). "Hanging Boxes" are not acceptable.

1. Furnish and install one 1" conduit for data wiring from the surface raceway to a 4"x4" box outside the cold room. Furnish and install nylon pull cord. Box shall be accessible so the Owner (ITcom) so the 1" conduit can be extended to the existing cable tray. All conduits shall have plastic bushings.

PANEL BELOW IS ALWAYS REQUIRED

J. Control Panel: Provide a factory-installed control panel housing temperature and humidity controllers and recorders, as applicable; alarm controls; and other devices requiring periodic adjustment or access by the user. Multiple control panels may be provided where a single control panel is not large enough to accommodate all required devices. Control panel may be standard unit of the Manufacturer of the environmental room, but shall be provided with the following characteristics:

1. Panel Door: Secure, metal-framed unit, with clear, laminated safety-glass window permitting an unobstructed view of all displays, settings, charts, and condition lights when the door is in the closed position.

BELOW IS STANDARD WITH MEDICAL SCHOOL, BUT MAY NOT BE REQUIRED IN ALL CASES. DISCUSS WITH CLIENT.

2. Door Lock: The same keyable, 7-pin tumbler, Best Co. cylinder lock specified for the environmental room door in "Environmental Room Enclosure" Article of this Section.

DISCUSS BELOW WITH ELECTRICAL ENGINEER. THIS APPROACH WILL RESULT IN A CLEAN ELECTRICAL INSTALLATION.

- K. Electrical Panel: Provide a factory-installed electrical panel of single power drop design, rated 208/120V, 3-phase, 4-wire. The ampere ratings shall be suitably sized to meet the power requirements of the controlled environment room, but not less than 60A. Panel shall be of "load center" construction with main lugs only (MLO) and shall include all necessary circuit breakers of the appropriate size and pole number. Branch circuit breakers shall feed all loads including, but not necessarily limited to, receptacles, lighting, evaporator unit, compressor unit, and control panels.

1. Locate the electrical panel as indicated on the Drawings, or if not otherwise indicated, next to the control panel. Roof- or remote-mounted panels are not acceptable. The electrical panel may be incorporated into the control panel, as standard with the Manufacturer.
2. Products: Subject to compliance with requirements, provide products of one of the following:
Cutler-Hammer/Westinghouse.
General Electric.
Siemens.
Square D.

- L. Alarm Systems: Provide the following alarm systems:

BELOW IS STANDARD ALARM APPLICABLE TO BOTH WARM AND COLD ROOMS.

1. Temperature Set point Deviation Alarm: Audible and visible warning device mounted on exterior of environmental room indicating temperature rise or fall outside of design parameters.

DELETE BELOW IF NO COMBINATION COLD ROOM/FREEZER ROOMS.

- a. Provide a separate, distinctly marked alarm for the freezer.

BELOW IS ALARM APPLICABLE COLD ROOMS ONLY. SO FAR, IT HAS BEEN REQUESTED BY MED. SCHOOL ONLY. REVIEW WITH CLIENT FOR INCLUSION IN PROJECT.

2. High-Pressure Refrigeration System Failure Alarm: Audible and visible warning device mounted on exterior of environmental room, and actuating upon failure of the high-pressure refrigeration system. System failure is defined as a 25 percent or greater increase in refrigerant pressure beyond normal operating parameters.

BELOW IS ALARM APPLICABLE COLD ROOMS ONLY. REVIEW WITH CLIENT FOR INCLUSION IN PROJECT. BELOW COULD ALSO BE RE-WRITTEN FOR ELECTRICAL RESISTANCE HEAT IN WARM ROOMS.

3. Compressor Power Failure Alarm: Audible and visible warning device mounted on exterior of environmental room, and actuating upon failure of power supply to the compressor.

DELETE BELOW IF NO FREEZER ROOMS.

4. Manually Activated Personnel Alarm: Provide personnel alarm system in freezer, activated by "mushroom" type emergency push button on interior door jamb (latch side of door). Provide separate audible alarm with distinct tone mounted on exterior of environmental room.

DELETE 2 PARAGRAPHS BELOW IF NO ELEVATED CO2 ROOMS.

5. CO2 Set point Deviation Alarm: Provide audible and visible warning device mounted on exterior of environmental room indicating CO2 set point deviation outside of selected parameters.
6. Automatic CO2 Safety Alarm: Provide personnel safety alarm system in environmental room with time-delay feature. Alarm shall be activated by delay switch connected to pre-set timer. Include both audible and visual alarm indications on exterior of environmental room.

THE FOLLOWING IS AN OPTION. DISCUSS WITH THE OWNER BEFORE INCLUDING IN PROJECT.

7. Trouble Alarm Contact: Provide a general trouble alarm SPDT dry relay contact rated 125 VAC, 5 amps minimum, that actuates upon any of the above alarms for use with Owner's remote alarm system.

DELETE BELOW IF NO FURNISHINGS, OR MODIFY TO SUIT PROJECT.

2.7 FURNISHINGS AND EQUIPMENT

- A. Wall Mounted Shelving: Provide min. 18 gage, AISI Type 302/304 stainless steel wire shelves mounted on manufacturer's standard-and-bracket system with height adjustable in 1-inch increments. Manufacturer's standard units in configurations indicated on drawings.
 1. Size: 14 inches wide by lengths shown on drawings.
 2. Load Capacity: Not less than 50 pounds per lineal foot.
 3. Product: Super Erecta; Metro.
- B. Free-Standing Shelving: Provide free-standing, adjustable-height, wire post-and-shelf system of dimensions and in configuration indicated Drawings. Provide units with components fabricated of AISI Type 302/304 stainless steel. Include necessary fasteners and foot plates for each unit.
 1. Shelves: 14 inches wide by lengths shown on Drawings; position adjustable in 1-inch increments.
 2. Posts: 74-5/8 inches tall.
 3. Product: Super Erecta; Metro.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Field assemble environmental room components following manufacturer's printed instructions.
- B. Provide all required cutting and patching of openings required for mechanical and electrical penetrations of room.
- C. Field plumb and wire the various system components that cannot be factory plumbed and wired. Comply with referenced building codes and requirements of authorities having jurisdiction.

3.2 FIELD TESTING

- A. Perform start-up, functional test, and performance tests not less than 2 weeks prior to conducting training session. Perform tests in the presence, and to the satisfaction, of the Project Representative.
- B. Prepare a written report documenting satisfactory completion of start-up activities, and not less than 2 weeks of recorded data indicating compliance with requirements for maintaining temperature range, including tests of temperature recovery time.

3.3 TRAINING

- A. Provide not less than 8 hours of training, by a qualified manufacturer's technician, for Owner's personnel in the proper operation and maintenance of the controlled environmental room. Training shall include a general operation and maintenance course for the end users, and a detailed operation and maintenance course for the Owner's Plant Department Maintenance and Services group.

END OF SECTION 132100

SPECIFICATION DIVISION 14

NUMBER SECTION DESCRIPTION

DIVISION 14 CONVEYING SYSTEMS

SECTION 142400 - HYDRAULIC ELEVATORS

END OF CONTENTS TABLE

DIVISION 14 CONVEYING SYSTEMS
SECTION 142400 - HYDRAULIC ELEVATORS

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes:
 - 1. Hydraulic Elevator
- B. Related Requirements:
 - 1. Division 01 Section "Alternates."
 - 2. Division 02 Section "Selective Demolition."
 - 3. Division 02 Section "Regulated Construction Waste Remediation."
 - 4. Division 02 Section "Asbestos Remediation."
 - 5. Division 02 Section "Lead Remediation."
- C. General Conditions:
 - 1. The Contractor under this Division of work (elevator contractor) is referred to the Contract Forms and General Conditions of these specifications, all of which apply to this Division.

1.2 SCOPE OF WORK

- A. The work of this division shall consist of the complete removal and replacement (except items specifically noted to be reused) of **number** hydraulic elevator(s) with a new hydraulic elevator(s) in the Building. Bidders shall include labor, materials, permits, and services required for the complete installation of the elevator system and hoistway equipment as herein specified.
 - 1. In all cases where a device or part of the equipment is herein referred to in the singular, it is intended that such reference shall apply to as many of such devices or parts as are required to make a complete installation.
 - 2. Refer to architectural, mechanical and electrical drawings and specifications, be familiar with their work scope, and coordinate accordingly.

3. Material Disposal: The disposal of all materials shall be in compliance with applicable state and federal regulations. The contractor shall pay for waste characterization sampling, which shall be coordinated through the University of Michigan - Department of Environment, Health & Safety (EHS). The Owner shall obtain the necessary waste disposal approval, sign waste disposal manifests and pay the necessary disposal and transport fees for used oil, contaminated soils, and drilling slurries. The disposal of regulated waste materials shall be coordinated through EHS - Hazardous Materials Management (HMM) Program at 763-4568. Regulated waste materials include, but are not limited to: Used oil and hydraulic fluid, contaminated soils, drilling slurries, any used chemical products or solvents including chemical and solvent mixtures, greases, degreasers, unused paints, residues, contaminated or oily rags, and unused cleaning products. When appropriate, copies of manifests shall be provided to EHS in advance for review, approval, and signature.
4. The Contractor shall provide EHS with Material Safety Data Sheets for all chemicals used during the project.
5. The Contractor is to coordinate related work with Owner and notify the Owner, through the U-M project manager, for waste characterization sampling and container removal from the site.
 - 1) Labeling
 - 2) All containers of used oil or used hydraulic fluid shall be marked with the words "Used Oil".
 - 3) All waste containers must have either a Hazardous Waste label or a Non-RCRA Regulated Waste label, as appropriate.
 - 4) Labels are available from the EHS-HMM Program.
6. Container Usage: All waste containers shall be kept tightly closed when not being actively filled and shall be inspected daily for leaks, container integrity and proper labeling. Labels shall remain visible so they are easily read.
 - a. Drilling cuttings and fluids may be placed into a frac tank. Upon notification by the Contractor that the tank is either full or that filling of the tank is complete, EHS or its representative shall collect a waste characterization sample.
 - b. Drilling cuttings (excavated soils) and slurries/fluids may be placed into separate 55-gallon drums. Upon notification by the Contractor that filling of all drums is complete, EHS or its representative shall collect waste characterization sample(s).
 - c. Contractor shall use EHS-supplied 55-gallon drums. Contractor shall adhere to the following process to have drums delivered to or removed from the site.
 - 1) For drum delivery, contact EHS at 734-763-4568 five business days in advance of when drums need to be delivered.
 - 2) Contractor shall IMMEDIATELY notify the U-M project manager when drums are ready to be sampled or picked up. Waste characterization sampling may take up to two weeks for results. EHS shall remove drums from the site after sample analytical results are obtained.

- 3) Containers shall be staged in an area easily accessible by EHS-HMM staff, such that drums may be removed using a two wheeled cart. Drums should be stored on a hard surface such as asphalt or concrete.
 - 4) Any costs incurred from cleanup of spills or contamination resulting from improperly sealed drums, residual oils on the outside of the drums, and/or Contractor negligence will be charged back to the Contractor. Promptly clean up all spills. For any spills that are beyond the capabilities of the contractor to clean up, contact EHS-HMM for assistance.
7. Refer to Architectural and Electrical drawings and specifications, and coordinate accordingly.
- B. Two weeks prior to removal of any equipment, elevator contractor must notify U-M elevator personnel at 734-647-2059. U-M elevator personnel will tag any parts to be salvaged. Contractor shall remove tagged parts, transport parts to building loading dock, and notify U-M elevator personnel which in turn shall remove salvaged parts from site. All other equipment will become property of contractor who will remove from site in accordance with all codes and regulations.
- C. Cost of drilling for hydraulic cylinders into the existing ground shall include any anticipated rocks or other obstructions in the ground. Requests for additional cost to owner will not be considered.
- D. Related Sections and Work of Other Trades:
1. Outline of work by University of Michigan's EHS Department:
 - a. Analysis and testing for any soil contamination.
 - b. Transportation to remove contaminated soil if any, to a dumping site with MDEQ permit which shall be at contractor cost.
 - c. Contact number at EHS is obtainable from project manager.
 - d. Cost of contaminated soil and materials management, shall not include any requests for additional cost to owner.
 2. The elevator contractor shall include all work and materials, for a complete new state-certified hydraulic system.
 3. Elevator contractor shall coordinate work of other trades in the pit, hoistway and elevator machine room. They shall also be available to operate the elevator as a running "platform" and accompany other trades in all restricted spaces, to allow other trades to complete their work.
 4. All telephone cable and conduit between machine room controller terminals and car shall be provided by elevator contractor.
 5. Final cleaning: Refer to Architectural specifications section 017700, Part 1, and this specification Part 3.

1.3 SUBMITTALS

- A. Before beginning fabrication and work, the elevator contractor shall prepare drawings that show the arrangement of the elevator equipment. Approval of drawings and other data (submit minimum of one electronic set), which are to be submitted by the elevator contractor to the owner representative, must be approved by U-M engineer/architect. Before proceeding with fabrication and installation of the equipment. Field verify existing conditions and sizes prior to preparation of drawings.
- B. Submit provisions for delivery of drilling machine into building and setting it in place to provide the drilling process.
- C. Shop Drawings:
 - 1. Submit one electronic set of Shop Drawings as required showing the general and detailed arrangement of all elevator equipment. Show ceiling, platform construction, lighting, signal fixtures, and smoke detectors including routing of exposed conduit and all material.
 - 2. Show dimensions, weights, and indicate who will perform the work of each item.
 - 3. Submit one electronic set of all coordination drawings showing work of all trades.
 - 4. Statements to the effects of work by other shall not be accepted; you must identify who is responsible for the work.
 - 5. Refer to Specifications Section 013300 for full language on Submittals.
 - 6. Provide a power report for the elevator controller that states a minimum circuit ampacity, voltage, and required fuse size, and maximum over-current protection.
 - 7. Participate in the Coordination Drawing process noted on drawings and in Specifications Section 013100.
- D. Samples:
 - 1. Submit samples of car wall panel, car floor tile, and enamel paint colors.
 - 2. Do not proceed with orders until samples are approved by U-M Engineer/Architect.
- E. Product Data: Submit the manufacturers' specification and data sheets, and standard details. Include pictures, catalog cuts, or other suitable illustrations of all elevator equipment that will be exposed in the finish work, including car, hoistway entrance, and signal and control apparatus. Also include these items in the O&M set.
- F. Certificates:
 - 1. Furnish without cost to the Owner all certificates necessary as evidence that the elevator conforms to the applicable laws, ordinances, and requirements.
 - 2. Provide a copy of certificate, State permit and permit applications to the elevator department.
- G. Operation & Maintenance Manuals:

1. At completion of work provide project and specification sets (bound and properly arranged) of the parts lists and operator's manuals, copies of approved shop drawings: two sets bound and properly arranged and one copy on USB flash drive, prior to receiving final payment. Following is a brief summary of items:
 - a. Legible schematic wiring diagrams including all changes made during installation.
 - b. Description of operation of elevator system installed.
 - c. Pump Package: Including motor, jack unit, PVC line, shut-off valve, isolation coupling, pump and accessories.
 - d. Buffers.
 - e. Guide Rollers on Car.
 - f. Controller and Selector: Including parts information on Relays, Printed Circuit Boards, Reverse Phase Relays, Switches, Lamps, Electrical Cables, Monitors, Modems, Diagnostic Hardware, Diagnostic Software, and Overload Protection Devices.
 - g. Door Assemblies: Including Hangers, Rollers, Door Motor, Door Operator, Door Clutch Assembly, Door Closers, Door Drive Arms, Related Hardware, Sheaves, Door Guides, Interlocks, Safety Door Edge.
 - h. Signal Equipment: Including Car Station, Hall Stations, Position Indicators, Direction Indicators, Fire Service Panel, Smoke Detectors, Key switches, and Pushbutton Assemblies.
 - i. Car Top Inspection Station, Limit Switches, Solid State Leveling Control Units, Leveling Switches, Cabs, Doors Sling, Platform, and Alarm Bell.
 - j. Provide a copy of certificate and State permit.
 - k. Provide emergency phone number for phone inside elevator car.
2. Maintenance records shall document compliance with ASME A17.1 section 8.6 including maintenance control program.
3. Refer to Specification Section 017823 O&M Manual for more details on format and schedule for the manual.
4. A hard copy of O&M manuals will be required per each machine room. This requirement is in addition to electronic copies required in Specification Section 013300 Submittals.

1.4 CODES AND REGULATORY AGENCIES

- A. Applicable elevators codes shall be in effect based on the time the permit is drawn and shall govern the installation process.
- B. Provide a copy of testing documents to the elevator department at the time of testing.
- C. Perform work in accordance with applicable codes, the State of Michigan Elevator Code, the National Electrical Code, and the American Society Mechanical Engineering Safety Code for Elevators and Escalators, ASME A17.1 as adopted by the State of Michigan, as referenced therein and all of the provisions in the University of Michigan's Standard General Conditions.

- D. Give necessary notices, obtain State and Municipal permits, pay fees in connection with the installation, including sales and use taxes as applicable, and make tests as are called for by the regulations of such authorities. These test(s) or inspection(s) shall be made in the presence of the authorized representative of such authorities and the owner's representative.
 - 1. It is the responsibility of the elevator contractor to acknowledge and follow any variances the owner previously obtained during design phase from the Governing Authority that could be necessary for a complete acceptable elevator installation. It is further the responsibility of the elevator contractor to obtain any variances from the Michigan Elevator Safety Division that could be necessary for a complete acceptable elevator installation that arise after contract award.
- E. "Elevator Guidelines to Ensure Accessibility by People with Disabilities".
 - 1. Elevators shall meet the guidelines of the Americans with Disabilities Act using the sections relevant to elevators as the technical requirements.
 - 2. Elevators shall meet the requirements of the State of Michigan Department of Labor Building Code relevant to barrier free design and elevators.

1.5 SAFETY AND SECURITY REQUIREMENTS

- A. Refer to Division 1 sections 011400, 015000, and 017329 and the Standard General Conditions for all U-M requirements.

1.6 SCHEDULING OF OPERATIONS

- A. Contractor must note that the building may be occupied at all times and work with the general contractor to follow restrictions defined in Specification Section 011400.
- B. Construction scheduling is of utmost importance. During the progress of the work, elevator contractor's attendance at job meetings with the Owner's representatives and the General Contractor's representatives will be required often for the purposes of schedule coordination and consideration of technical and construction matters. The elevator contractor's representative shall be the job superintendent or other person who is authorized to act as the agent of that contractor.
- C. The elevator contractor shall be responsible to repair and to maintain in service the operational car(s) while working on any car in the group.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Company / individuals licensed by the State of Michigan for elevator installations.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, and handle materials, components and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.9 WARRANTY

- A. The elevator contractor shall guarantee all labor, materials and workmanship of the apparatus installed by them to meet the specification, and that they will repair any defects not due to ordinary wear and tear or improper use or care, which may develop within the warranty period from date of final payment, or the length of the new product service period, if it is extended beyond twelve (12) months. Refer to details in specification section below, New Product Service Warranty.

1.10 NEW PRODUCT SERVICE WARRANTY

- A. After completion of the installation, warranty and 24-hour callback service for the equipment furnished under this specification shall be provided for a period of twelve (12) months as part of this Contract. This service shall also include regular monthly examinations. Provide a minimum of twelve (12) inspections in the one-year period. In the event the twelve (12) site visitations are not completed the elevator contractor will extend their warranty covering all callbacks, repairs, parts, testing, labor and any other item necessary to keep the elevator in like-new condition until the twelve warranty site visitations have been completed. Advise U-M elevator department each time before and after completion of service of the installation during regular working hours by trained employees of this Contractor, and shall include all necessary adjustments, greasing, oiling, cleaning, supplies and parts to keep the equipment in proper operation, except parts made necessary by misuse, accidents or neglect caused by others. Contractor shall provide written record of work performed signed by the U-M elevator department after each visit. Documentation for visits will not be accepted more than one week past work date. Visits without documentation will not count toward the twelve (12) required visits.
- B. The elevator contractor shall be responsible to service and maintain all elevator emergency circuits (including the fire service circuit, related equipment and sensors) as part of the regular elevator warranty services contract.
- C. All warranty services must be performed by the installing contractor and not by any other service agency. The installer must have an established maintenance and service organization available for performance on the applicable U-M campus (Ann Arbor, Dearborn, or Flint) that can provide regular and emergency service, 24 hours a day, every day of the year.
- D. The warranty services start after the car is approved for use by the State Elevator Inspector, or in multiple car projects, the last car is approved.

- E. Call back response time on site shall not exceed (1) one hour during warranty service period.
- F. It is the responsibility of the U-M elevator department to respond to any emergency regarding elevators. In the event that someone is trapped in an elevator that is under contracted warranty, the U-M elevator department will respond to free the passengers as soon as possible to minimize the inconvenience to users. It is within the right of the University to remove covers, open doors, install monitoring equipment, etc.; however, this work will be performed by elevator journey-person licensed by the State of Michigan.
 - 1. A detailed record of work performed by University elevator mechanics is maintained in the elevator department. Contractors shall contact U-M elevator department to review work performed by University elevator journey-persons.
- G. Include and maintain an oil log in the elevator machine room.

PART 2 - PRODUCTS

2.1 ACCEPTABLE PRODUCTS / MANUFACTURERS:

- A. Cab Manufacturers:
 - 1. G & R Elevator Mfg.
 - 2. Havenstein Burmeister
 - 3. Gunderland
 - 4. Columbia
- B. Fixtures (Car Operating Panel, Hall Call Station, Traveling Lantern, and Hall Position Indicator): PTL Performer or Innovation Industries. All shall be vandal resistant.
- C. Micro-Processor B Controller with soft start features to limit inrush current and remote diagnostics (for hydraulic elevators): Pixel, SmartRise controllers, or Virginia Controls.
- D. Door Operator & Equipment: GAL Manufacturing Corp. MOVFR Operator, car and hall door tracks, car and door hangers with roller assemblies. All interlocks, pickup rollers and operating linkage manufactured by GAL.
- E. Pump Package: Standard dry type pump unit that complies with all duty requirements of this Section consisting of Delaval Imo pump with Maxton Valve and all required accessories.
- F. Door Protective Device: ICU/Gatekeeper 3D from Adams Elevator Equipment Company or Janus 3D.
- G. In-Car Telephone: RATH Microtech 2100-907-RA telephone integral of car operating panel with RATH 2100-Alarm.
- H. Roller Guides: Elsco Model "B" on car and Model "C" on counterweight.

- I. Car Top Inspection Station: Adams Model A-912CG or as approved by elevator controller manufacturer.
- J. Floor Announcement System: Shall be through chime and voice announcements, by Adams or approved by elevator controller manufacturer and shall be approved by University of Michigan engineer.
- K. Door Guides: NYLUBE.
- L. Limit Switch: Adams Elevator Equipment Co.
- M. Buffers: Shall be supplied by jack manufacturer.
- N. Hydraulic Jack: EECO.

2.2 SCHEDULE OF NEW ELEVATOR EQUIPMENT

- A. Elevator Number: Existing State Number: [enter number]
- B. Type of Service: Passenger, Service or Freight
- C. Elevator Type: Direct plunger, roped hydraulic, Telescopic, or Holeless.
- D. Elevator Machine Location: Located on number floor (room number)
- E. Quantity of Cars: number
- F. Capacity: number pounds [for elevator #1, ----- pounds for elevator #2, etc.]
- G. Speed: Minimum number FPM [for elevator #1, ----- FPM for elevator #2, etc.]
- H. Travel Distance: ?'-?'" , +/- Field Verify [for elevator #1, ----- for elevator #2, etc.]
- I. Number of Stops: number [for elevator #1, ----- for elevator #2, etc.]
- J. Number of Door Openings: number [for elevator #1, ----- for elevator #2, etc. Note if Rear or Side if applicable.]
- K. Floors Served: list all numbers ?, ?, ? [for elevator #1, ----- for elevator #2, etc. Note if Rear or Side if applicable.]
- L. Main Egress Floor: number; Alternate Egress Floor: number.
- M. Hoistway Size: --'----" long x --'----" wide Field Verify [for elevator #1, --'----" long x --'----" wide Field Verify for elevator #2, etc.]
- N. Pit Dimension: --'----" long x --'----" wide x --'----" deep Field Verify

- O. Platform Size (width x depth): ??" long x ??" wide or size to be maximum allowable but at minimum match the existing
- P. Car Interior Dimensions: --'---" long x --'---" wide x --'---" high (dimensions to match existing) Field Verify
- Q. Car Door Size: --'---" wide x --'---" high [for elevator #1, ----- for elevator #2, etc. Note if Rear or Side if applicable.]
- R. Door Opening Type: Side Slide or Center Opening [for elevator #1, ----- for elevator #2, etc. Note if Rear or Side if applicable.]
- S. Door Speed: [1-speed], [2-speed], [3-speed, etc] [for elevator #1, ----- for elevator #2, etc. Note if Rear or Side if applicable.]
- T. Power Supply: --- Volts/ 3 Phase/ 60 Cycle; Motor Horsepower: --- [for elevator #1, ----- for elevator #2, etc.]
- U. Fire Fighter Service: Yes
- V. Independent Service Operation: Yes
- W. Load Bypass Operation: [Yes] or [No]
- X. Anti-nuisance Feature: [Yes] or [No]
- Y. Special Floor Access:
 1. Key switch(es): Yes. Refer to fixture drawing in mechanical trade for required floors.
 2. Card reader: Yes.

2.3 HYDRAULIC ELEVATOR

- A. Oil Hydraulic Machine: The power unit shall be of a compact, self-contained design including pump, drive motor, oil control unit assembly, oil storage tank, removable drip pan a rigid structural steel frame with storage tank and neoprene vibration isolators. Refer to detail on drawings.
- B. Pump: The pump shall be a positive displacement screw type, for maximum smoothness and quietness and shall be belt drive by the motor. Do not use pumps mounted in the oil and shall be belt driven to the motor.
- C. Motor: The drive motor shall be of premium efficiency meeting NEMA 12.6C table and have a duty rating use with hydraulic elevator systems.

- D. Oil Control Unit: The oil control unit shall consist of electrically actuated and hydraulically operated valves with adjustments accessible without removing the assembly from the oil lines. An automatic bypass valve shall provide smooth starting and stopping in the up direction and shall give regulated up leveling speed under varying load conditions in the car. The lowering and down leveling valve shall be fully adjustable for smoothness and speed of operation and shall be designed to close automatically if the power fails. Operation of a manual valve shall permit the car to be lowered at slow speed in the event of power failure. A safety check valve shall hold the car when the pump is at rest and a relief valve shall be provided which is capable of bypassing the entire output of the pump without increasing the system pressure more than 25% above the normal working pressure. Permanently install a liquid filled pressure gage on oil control unit.
- E. Oil Storage Tank: The oil storage tank shall be of sufficient capacity for the full travel of the car with a reserve of not less than 10 gallons and shall have a drain connection, means of isolating oil in the tank for servicing of pump and valves, an effective pump suction strainer and a removable cover. The cover shall be designed for low velocity breathing with a protected vent opening to prevent entry of liquids or debris into the tank. Tanks with single small vent openings shall be guarded against accidental blockage, which may cause collapse of the tank during operation of the elevator in the up direction. Tank to be located in elevator equipment room.
- F. Oil: Sufficient specially prepared hydraulic oil with greater than 400 degrees F. flashpoint and of proper viscosity and lubricating qualities shall be provided.
- G. Sound Reduction With Isolating Panels And Muffler: In addition to selection of individual components to minimize noise generation, a blow-out proof muffler for absorption of hydraulic pulsations shall be installed in the oil line between the pump and the cylinder, and the hydraulic machine shall be provided with rubber isolation pads to prevent transmission of noise and vibration to the building structure. Sheet steel panels lined with sound-deadening material shall enclose the motor and pump location area of the hydraulic machine for reduction of air-borne noise.
- H. All Hydraulic Supply Piping: Shall be at least schedule 80 black steel pipe. Threaded pipe only. No grooved fittings are allowed. The system must be free from seepage at joints.
- I. Shut-Off Valve: Manually operated valves shall be provided and installed in the oil supply line to isolate the cylinder and plunger unit from the hydraulic machine. Provide two valves-one in pit near jack assembly and another one in the Machine Room near machine.

- J. Oil Strainer: A self-cleaning strainer shall be provided and installed in the oil line between the hydraulic machine and the cylinder plunger unit to protect the oil control valves during downward travel of the elevator. The strainer shall have a 40-mesh screen for removal of solid particles and a magnetic drain plug for removal of ferrous materials. The strainer assembly shall be constructed for at least 600 psig working pressure.
- K. Isolation Coupling(s): Isolation coupling(s) shall be provided to abate the transmission of noise produced by the vibration of the pumping unit. Proper location of the isolation coupling(s), in the oil delivery line, shall be determined by the elevator subcontractor.
- L. Cylinder and Plunger Unit:
1. The cylinder shall be fabricated of steel pipe, closed at the bottom and provided with a removable cylinder head and packing gland at the top. The cylinder head shall have a bronze, babbitt or phenolic-lined bearing and an integral drip ring. Packing shall be of the self-adjusting type not requiring external adjustment and shall allow operation of the plunger with minimum friction. The packing gland shall be arranged to return automatically to the reservoir any oil, which may escape the packing ring. Structural steel shapes shall be provided to support the cylinder and to transmit vertical loads to the pit floor.
 2. The exterior of the cylinder shall be treated with a corrosion resistant compound and double-lap wrapped with a commercial grade wrapping, such as Scotchwrap or Tapecoat, before installation.
 3. The plunger shall be constructed of seamless steel pipe or tubing turned true and smooth and polished to a fine finish. A stop plate to prevent the plunger from leaving the cylinder shall be welded to the bottom of the plunger.
 4. Grey cast iron or other brittle materials shall not be used and the cylinder and plunger unit shall be factory tested at not less than 600 psi, or as per ASME A17.1 and State of Michigan Elevator Code, for strength and freedom from leakage. Units of multiple section construction shall be securely joined by couplings. Cylinder couplings shall have all joints welded before installation to prevent leakage.
 5. The well hole for the cylinder shall be provided by the Elevator Contractor, including drilling and dirt removal at no additional cost to the owner.
 6. Provide outer cylinder casing and related schedule 40 PVC protective covering. Casing shall be schedule as per Michigan Elevator Code requirements, with welded joints and welded steel bottom.
 7. Provide a stainless steel drip pan (at pit floor) or drip ring around cylinder with scavenger pump, oil piping between pump and oil storage tank and all related power wiring.

2.4 PROGRAMMABLE CONTROLLERS FOR HYDRAULIC ELEVATOR

- A. Controller Description:

1. The elevator controller shall utilize a microprocessor based logic system and shall comply with ASME 17.1 safety code for elevators and escalator. The system shall provide comprehensive means to access the computer memory for elevator diagnostic purposes without need for any external devices, and shall have permanent indicators to indicate important elevator status as an integral part of the controller. Systems that require hookup of external devices for troubleshooting are not acceptable. The elevator control equipment shall be provided such that at least three (3) elevator service companies can maintain the equipment. Immediate availability of replacement parts shall be guaranteed and no special proprietary diagnostic devices will be utilized. An O.E.M. control, serviceable only by the O.E.M. will not be accepted. Controller shall be provided with the capability of in-the field changes for certain variables such as door time. These changes should be stored permanently using non-volatile memory. Thus if the power to the unit is disconnected, the system will maintain the programmed variables. The Car Diagnostic Display shall have the capability of selecting either the operational or programming modes and/or displaying the status of all inputs and outputs and capability of remote diagnostics to be interfaced with U-M's elevator department's existing IBM compatible computer system.
2. Failure of any single magnetically operated switch, conductors, or relay to release in the intended manner; or the occurrence of a single accidental ground or short circuit shall not permit the car to start or run if any hoistway door or gate interlock is UNLOCKED or if any hoistway door or car door or gate contact is not in the made position. Furthermore, while on car top inspection or hoistway access operation, failure of any single magnetically operated switch, conductors or relay to release in the intended manner; or the occurrence of a single accidental ground shall not permit the car to move even with the hoistway door locks and car door contacts in the closed or made position.
3. Provide a dedicated permanent status indicators on the controller to indicate when the safety string is open, when the door locks are open, when the elevator is running at high speed, when the elevator is on independent service, when the elevator is on fireman's service, when the elevator out of service timer has elapsed or when the motor limit timer or valve limit timer has elapsed. When duplex operation is provided a switch, shall select which of the two cars statuses is to be displayed on the indicators, in addition, provide means of displaying other special or error conditions that are detected by the microprocessor.
4. The elevator shall not require the functioning or presence of the microprocessor to operate normally during car top inspection operation or hoistway access operation in order to provide a reliable means to move the car if the microprocessor fails.

5. Provide a motor limit timer function which in the event of the pump motor being energized longer than a predetermined time, shall cause the car to descend to the lowest landing, open the doors automatically and then re-close them and the elevator shall then be rendered unresponsive to any automatic operation car door open pushbutton shall remain operational. Operation may be restored by cycling the power disconnect switch or putting the car on access or inspection operation.
6. Provide a valve limit timer function which in the event of the pump motor being energized longer than a predetermined time, shall cause the car to descend to the lowest landing, open the doors automatically and then re-close them and the elevator shall then be rendered unresponsive to any automatic operation car door open pushbutton shall remain operational. Operation may be restored by cycling to power disconnect switch or putting the car on access or inspection operation.
7. Low Oil Control:
 - a. A low oil control feature shall protect the hydraulic components if the elevator fails to complete its upward travel in the normal time.
 - b. Actuation of the low oil control circuit shall stop the pump and lower the car to the lowest landing. Power-operated doors shall open to permit passengers to depart and shall then close. Car door open pushbutton shall remain operational. The car shall remain parked at that landing completely removed from demands for service.
 - c. To return the car to normal service, the malfunction shall be corrected and the elevator controls reset in the machine room.
8. Provide an out of service timer (T.O.S.) which will automatically take the car out of service if the car is delayed in leaving the landing while there are calls existing in the building. The car shall not respond to hall calls while in this mode of operation.
9. Provide door protection timers for both the open and close directions which will help protect the door motor and which will help prevent the car from getting stuck at a landing. The door open protection timer shall cease attempting to open the door after a predetermined time in the event that the door is prevented from reaching the open position. The door close protection timer will reopen the doors for a short time in the event that the door-closing attempt fails to close the door locks after predetermined time.
10. Provide a minimum of three different door standing open times. A car call time value shall predominate when a car call only is cancelled. A hall call time value shall predominate whenever a hall call is cancelled. In the event of a door reopen from the safety edge, photo eye, a separate short door time value shall predominate.
11. Provide a Door Timing - Separate adjustable timing means to establish independent minimum passenger transfer time for car stops, hall stops, main lobby stops, and door reversal operations (short door time).

12. Hall call or car call registration and lamp acknowledgment shall be by means of a single wire per call besides the power busses. Systems that register the call with one wire and light the call acknowledgment lamp with a separate wire are not acceptable. Phase I emergency recall operation, and Phase II emergency in-car operation shall be provided within the controller according to ASME A17.1 and applicable local codes.
13. Independent service operation shall be provided such that actuation of a key switch in the car-operating panel will cancel any existing car calls, and hold the doors open at the landing. The car will then respond only to car calls and will ignore hall calls. Car and hoistway doors will only close by constant pressure on car call buttons or a door close button until the car starts to move. While on independent service any hall arrival lanterns or jamb mounted arrival lanterns and gongs shall be inoperative.
14. The car shall be equipped with two-way leveling to automatically bring the car within plus or minus 1/4 inch of exact level at any landing regardless of load up to maximum capacity.
15. A selector switch shall be provided on the controller to select high or low speed during access or inspection operation as long as speed does not exceed 150 feet per minute.
16. A test switch shall be provided. In the "test" position, this switch shall allow independent operation of the elevator without any door open functioning for purposes of adjustment or testing the elevator. The elevator shall not respond to hall calls and shall not interfere with the other car in a duplex installation.
17. A timer shall be provided to limit the amount of time a car is held at a floor due to a defective hall call or car call including stuck pushbuttons. Call demand at another floor shall cause the car to eventually ignore the defective call and continue to provide service in the building.
18. Door Timing: Separate adjustable timing means shall be provided to establish independent minimum passenger transfer time for car stops, hall stops, main lobby stops, and door reversal operations (short door time).
19. Automatic Operation of the Car Lighting shall be provided meeting the requirements of ASME A17.1. The Feature shall allow the car lights to be turned off when the following conditions exist for not less than five minutes: the car is at a floor, the doors are closed, there is no demand for service and the car is on automatic operation. Momentary interruption of any of these conditions will cause the car lights to be turned on. The Automatic Operation Feature shall be able to be turned on or off as desired by the owner from the Elevator Controller.

20. Simplex selective collective automatic operation shall be provided for the single car installations. Operation of one or more car call or hall call buttons shall cause the car to start and run automatically provided the hoistway door interlocks and car door contacts are closed. The car shall stop at the first car call or hall call set for the direction of travel of car. Stops shall be made in the order in which the car calls or hall calls set for the direction of operation of the elevator are reached, irrespective of the order in which they were registered. If only hall calls set for the opposite direction of travel of the elevator exist ahead of the car, the car shall proceed to the most distant hall call, reverse direction, and start collecting the calls.
 21. Collective Operation:
 - a. Operation shall be automatic by means of the car and landing buttons. Stops registered by the momentary actuation of the car or landing buttons shall be made in the order in which the landings are reached in each direction of travel after the buttons have been actuated. All stops shall be subject to the respective car or landing button being actuated sufficiently in advance of the arrival of the car at that landing to enable the stop to be made.
 - b. If all calls in the system have been answered, the car shall park at the last landing served or the pre-determined home landing.
 22. Home landing operation shall be provided and, if no calls are registered shall cause the car to travel to a predetermined home landing floor and stop without providing a door operation. The ability to change home landing feature shall be provided.
 23. If the car is en-route to the home landing and a call appears from the direction opposite to which the car is traveling, the car shall slow down, stop, and then accelerate in the opposite direction, toward the call. The home landing function shall cease instantly upon the appearance of a normal call and the car shall proceed non-stop in response to any normal call.
 24. Ventilation fans shall be part of controller cabinet.
 25. Elevator controller shall be Smartrise Engineering, Virginia Controls, or Elevator Controls Inc. Elevator controller shall be modified to include all features noted above including soft start features to limit inrush current and remote diagnostics and shall be compatible with the existing U-M system. All systems shall have remote diagnostics.
 26. Controller cabinet to have a swing open door on a continuous / piano hinge, and latch with a lever-style handle. Lift-off controller covers are not acceptable.
 27. Phase Protection: Provide 3-phase power monitor for elevator power supply, which monitors phase loss, low voltage, phase reversal, phase unbalance, and has manual and automatic reset. Level in manual position.
 28. Elevator controller is to be factory equipped with provisions for emergency power connections.
- B. Auxiliary Operations:
1. Firefighter's Service:
 - a. The following operation is for the use of firemen and other authorized personnel per ASME A17.1.

- b. Automatic passenger elevators shall conform to the following:
- 1) Provide a three position (on, off, and by-pass) key-operated switch at the main floor for each single elevator or each group of elevators. The key shall be removable only in the "on" and "off" positions. When the switch is in the "on" position, the elevators controlled by this switch and which are on automatic service shall return non-stop to the main floor, and the doors shall open and remain open.
 - 2) An elevator traveling away from the main floor shall reverse at the next available floor without opening its doors.
 - 3) Elevators equipped with automatic power-operated doors and standing at a floor other than the main floor, with doors open, shall close the doors without delay and proceed to the main floor.
 - 4) Door reopening devices for power-operated doors, which are sensitive to smoke, heat or flame shall be rendered inoperative.
 - 5) All car and corridor call buttons shall be rendered inoperative and all call registered lights and direction lanterns shall be extinguished and remain inoperative.
 - 6) A car stopped at a landing shall have its "Emergency Stop Switch" rendered inoperative as soon as the doors are closed and it starts toward the main floor. A moving car, traveling to or away from the main floor, shall have its "Emergency Stop Switch" rendered inoperative immediately.
 - 7) A sensor in each elevator lobby, which when activated prevents car from stopping at that floor, shall not be substituted for the above requirements.
 - 8) The university elevator department will supply to the installing contractor a "Security Box" (key box) for installation at the egress floor.
- c. Sensing Devices: In addition to the key-operated switch required in "b" above, heat and smoke or products of combustion sensing devices shall be furnished and installed by fire alarm contractor in each elevator lobby at each floor and the main floor (Note - refer to Section 2.2 for egress floor and the alternate egress floor numbers). The activation of a sensing device in any elevator lobby shall cause all cars in all groups that serve that lobby to return non-stop to the main floor. The key operated switch when moved to the "by-pass" position, shall restore normal service independent of the sensing devices. Sensors at each floor shall be connected separately from sensors at main floor.

- d. Provide a three position (off-hold-on) key-operated switch in each car operating panel per ASME A17.1 Fire Service Key Switch and shall be effective only when the egress floor key-operated switch is in the "on" position or a sensor has been activated and the car has returned to the egress floor or other approved level. The key shall be removable in all positions, and shall not change the operation until the car is at a floor with doors fully opened.
 - e. The operation of elevators on Fire service shall be as follows:
 - 1) An elevator shall be operable only by a person in the car.
 - 2) Elevators shall not respond to elevator corridor calls.
 - 3) The opening of power-operated doors shall be controlled only by continuous pressure "open" buttons or switches. If the switch or button is released prior to the doors reaching the fully open position, the doors shall automatically re-close. Open doors shall be closed by continuous pressure on "Door Close" switch or button.
 - 4) Means shall be provided to cancel registered car calls.
 - 5) When the switch is in the 'hold' position, the car shall remain at the floor with its doors open.
 - 6) Elevators can be removed from individual car fire service by moving the key-operated switch to the "off" position and the car is at the main floor or other approved level.
 - f. The switches required above shall be operated by the same key but are not a part of a building master key system. There shall be a key for the main floor switch and for each elevator in the group and these keys shall be kept on the premises by persons responsible for maintenance and operation of the elevators, in a location readily accessible to authorized persons, but not where they are available to the public. TURN OVER ALL KEYS TOU-M Elevator Program Manager. These keys shall be Adams Fire Service Keying System.
 - g. Instructions of operation shall be provided as required by code.
2. Elevators arranged for dual operation shall:
- a. Conform to the automatic operation described above when on automatic operation.
 - b. When firefighter's emergency operation is activated and the elevator is on independent or inspection operation the elevator shall be provided with a signal system consisting of both visual and audible types to alert the attendant to close the door and return non-stop to the main floor or other approved level. Provisions shall be made to alert the attendant in the same manner when a heat and smoke or products of combustion sensing device is activated.
- C. Load Bypass Operation:

1. To automatically delete hallway calls when car is loaded to its limit. Load bypass operation shall be adjustable from the controller to adjust the load at which to bypass hall calls and not delete them.

D. Anti-Nuisance Feature:

1. Provide an anti-nuisance operation to prevent the elevator control system from responding to a faster than normal rate or registration of car calls. The "normal" rate of registration of car calls shall be programmable on an individual elevator basis within the group.
2. If the anti-nuisance monitor determines that the rate of registration of car calls is excessive as compared to the pre-programmed rate of car calls, all car calls shall be canceled and shall be required to be reregistered.

E. Independent Service Operation:

1. Independent service operation shall permit one or more elevators to be removed from the group control and used without interfering with the normal operation of the remainder of the group.
2. Provide a two-position switch in the car-operating panel for each elevator.
3. When the switch is placed in the independent service position, the mode of operation shall be amended as follows:
 - a. The car is disconnected from the group supervisory system.
 - b. Existing car calls shall be canceled.
 - c. The cars shall bypass landing calls.
 - d. Continuous pressure on the car button of the selected floor shall close the doors and start the car toward the selected floor. Pressure shall be required on the button until the car starts. Releasing the car button before the car starts shall cause the doors to automatically reopen.
 - e. After the car has arrived at the floor and the doors have automatically opened, the cars shall remain until another car button is pressed or until the key switch is returned to the normal position.
 - f. Should all cars be put on independent service, all hall calls registered shall be canceled. Further registration of hall calls shall be limited.

F. Emergency Power Panel:

1. Emergency switch and annunciation panel shall be a 12"x12" brushed stainless steel, with lockable cover, fully recessed panel to be located on the egress floor where indicated on drawings. The panel shall have indicating red lights showing locations of cars during emergency power condition.
2. Provide key-switches for auto and manual operation, followed by the elevator for each elevator in the group.
3. The panel shall be labeled as "Elevator Emergency Panel".
4. See details on mechanical drawings.

G. Machine Finish and Painting:

1. All exposed surfaces of machines and motors, and controllers, shall be repainted after field installation and before acceptance by owner with rust resisting gloss enamel paint of light gray color.

2.5 HOISTWAY EQUIPMENT & HOISTWAY ENTRANCES

A. Provisions for Hoistway Access:

1. Elevator door safety plug-lock- Keyway - Furnish and install hoistway door unlocking devices at all landings with Tri-lock MFG. & MAINT. CORP. key NO. 6950 in accordance with requirements of the latest Edition of the American Standard Safety Code for Elevators, Dumbwaiters, and Escalators, and as permitted by the Local Code.
2. The hoistway door-unlocking device shall unlock and permit the opening of the hoistway door from any floor irrespective of the position of the car. The design of the device shall be such as to prevent unlocking the door with common tools. The means for unlocking the door shall be available and used only by inspectors, maintenance, and repair personnel.
3. Access Switches - Furnish and install hoistway access switches and associated devices (at the top and bottom landings in accordance with requirements of the latest Edition of the American Standard Safety Code for Elevators, and Escalators, and as permitted by the Local Code.

B. Hoistway Doors:

1. New doors shall be flush hollow metal panels fabricated of No. 16 U.S. gauge steel, minimum. The doors shall be 1-1/4" thick and reinforced with continuous members. Panels shall have sound deadening insulation. Doors shall have removable non-metallic gibs to run in the sill guideway with minimum clearance. Door panels shall conform to the National Elevator Code ASME A17.1 and the Underwriter's Laboratories 1-1/2 hour fire test requirement. Door unlocking devices shall be provided at all floors and as required by local codes. Sight guards shall be provided for all entrances. Provide new hoistway doors at all landing. The doors shall be equipped with Nylube door guides.
2. Hoistway landing interior finish shall be painted white.
3. Hoistway landing doors exterior finish shall be stainless steel.

C. Top of Car Operating Device:

1. An operating device shall be provided on the top of the car located in the front between the car crosshead and hoistway door, complete with an Emergency Stop Switch, GFCI plug, fire service lamp and buzzer, lamp and guard, a Selections Switch, UP, DOWN and safety operating buttons. This device shall comply with ASME A17.1 and local codes. Using Adams model A-912CG or as required by controller manufacturer, with Light guard.
2. Operation from the top of the car shall not be permissible unless all electric door contacts are closed.

3. Elevator shall be provided with at least two LED light fixtures and one GFCI convenience outlet fixture on the car top. The two light fixtures combined shall provide an illumination level of not less than 10fc at the car top. The light fixture shall be permanent and be of the fixed or portable type and shall be equipped with guards. The light switch shall be accessible from the landing when accessing the car top.

D. Pit Stop Switch:

1. A switch or switches shall be located in each elevator pit, in accordance with ASME A17.1 and local codes, which when turned to the "off" position will cause the electric power to remove from the elevator pump motor. This switch shall be lockable in the "off" position.

E. Emergency Alarm Bell:

1. Provide an alarm bell with its own battery source and recharging unit for emergency power unit, mounted on the car. When the emergency alarm bell button in the car is pressed, it shall illuminate and the alarm bell shall sound. Operation and decibel level shall be in accordance with ASME A17.1 and the State of Michigan Elevator Code.

F. Guide Rails

1. Provide steel tee guide rails to meet ASME A17.1 requirements, including suitable brackets and clamps for attachment to the building structure. The guide rails and car frame shall be so located that the car is in balance with the guides. The machined tongue and groove joints shall be fitted with machined fishplates fastened to each rail with at least 4 through bolts. Rails are to be cleaned of any shipping or protective coatings at time of installation.
2. All joints shall be located free of interference with supporting clamps and brackets. Shims used to obtain rail alignment shall be designed to remain in position, even though the fastening bolts may be loosened.
3. The guide rails shall be installed and aligned with their machined faces plumb within one-eighth of an inch from top to bottom of the hoistway.
4. Minimum Rail Size shall be 16 pounds per foot. Upgrade rails based on application.
5. The car and counterweight guide rails shall be realigned, refinished and cleaned so that the faces of the rails are plumb within one-sixteenth (1/16) of an inch in 100 feet of travel. Refinish rails for smooth operation and paint back plains with black paint.

G. Buffers:

1. Buffers shall be installed in the pit to meet ASME A17.1 requirements. These buffers shall be fastened to steel channels furnished and installed by the Elevator Contractor.
2. Existing buffers shall be reused. Clean, refurbish and test operation. Buffer stands and pit channels shall be repainted light grey.

H. Normal Stopping Devices:

1. Slow-down and normal stopping devices shall be furnished and installed for each car. These devices shall be so arranged that, as the car approaches either terminal landing, a roller with noiseless tread, mounted on a movable arm, shall come into contact with cams located in the car. Through the operation of the stopping device, bring the car automatically to a smooth stop at the terminal landing. The full width of the roller tread shall engage the cam surface. The emergency car stopping system shall comply with the ASME A17.1 requirements.
- I. Landing System:
1. This landing system shall provide high speed stepping signals, one-floor-run stepping signals, leveling, and door zone signals. Each output signal shall be electrically isolated and shall be capable of reliably operating at 120 VAC.
 2. The leveling and stopping accuracy of the system shall be within 1/4 inch of the floor level and shall correct for over travel or under travel to within the same accuracy, regardless of load variations or direction of travel.
 3. Landing system shall be as provided by the elevator controller manufacturer.
- J. Entrance Frames:
1. New unit frame shall be fabricated of No. 14 U.S. gage steel comprising the head and side jamb sections, which shall be securely bolted to form one piece unit construction and shall be securely fastened to the sills and hanger supports. They shall be returned on the hoistway side to present a neat appearance.
 2. To be reused, sand, fill in dents Refer to Architectural Division 9 for painting information.
 3. Wrap existing frame with material specified on drawings. Wraps are to completely cover all surfaces of existing frame.
- K. Sills:
1. Sills shall be extruded aluminum construction with a nonslip wearing surface. They shall be supported on steel brackets and securely fastened to the floor. Grooves for the door guides shall have minimum clearance for the guides. The sills must be suitable for "class C3" loading.
 2. To be reused, clean and polish sills.
- L. Struts:
1. A 3"x 3" x 1/4" steel angle struts shall extend from the sill to the building beam above and shall be securely fastened to ensure rigidity and adequate support for the header.
 2. To be reused sand, prime and paint black.
- M. Door Headers (in hoistway):
1. Headers shall be constructed of 3/16" formed steel to provide support for the frame and hangers.
 2. To be reused, sand, prime and paint black.
- N. Hanger Covers:

1. Hanger covers shall be fabricated of No. 14 gauge steel extending the full width of the hanger pocket. A section shall be easily removable from inside the car for servicing the hanger.
2. To be reused, sand, prime and paint black, and replace any that are missing or damaged.

O. Fascia, Covers, and Toe Guards:

1. Fascia, including hanger covers, toe guards and dust covers shall be fabricated of No. 16 U.S. gauge steel. Fascia shall span the width of the opening plus 6 inches. Dust cover extends a minimum of 8 inches above the header and the toe guard shall extend a minimum 8' below the sill. Both shall return to the wall at 60 deg. Angle.
2. Finish:
 - a. Struts, headers, hanger cover, fascia, dust covers, and toe guards shall have matte black finish. New entrance frames (existing) shall be finished in stainless steel of color selected by owner. All landing doors shall be new and finished in enamel of color selected by owner.
 - b. All existing heads and jambs shall be stripped to bare metal, prepared with primer and finished with two coats of enamel paint.
3. To be reused. All existing heads and jambs shall be stripped to bare metal, prepared with primer and finished with two coats of black enamel paint.

2.6 CAR EQUIPMENT & CAR ENCLOSURE

A. Power Door Operation:

1. The car and hoistway doors shall be operated quietly and smoothly by an electric operator, which shall open and close the car door and respective hoistway door simultaneously. The doors shall open automatically when the car is leveling at the respective floor and, when operating without an attendant, shall close after a predetermined time has elapsed. Momentary pressure on the "Open Door" button in the car shall cause the doors to remain open or, if closing, to reopen and reset the time interval.
2. The doors shall be opened at rated speed and the closing speed shall be per Code. Door closing force shall be as allowed by code.
3. An electric contact for the car doors shall be provided which shall prevent elevator movement away from the floor unless the door is in the closed position as defined by code.
4. Each hoistway door shall be equipped with a sill mounted auxiliary door closing device and a positive electro-mechanical interlock to prevent the operation of the elevator until the interlock circuit is established and the doors are locked and closed.
5. Car doors shall be provided with zone locking.

B. Landing Door Hangers:

1. Each hoistway door shall be suspended by two (2) sheave type hangers. Each hanger shall consist of a polyurethane tread on a metal hub equipped with precision ball bearings mounted onto a steel bracket. The hanger sheaves shall not be less than 3-1/4 inches in diameter. The track shall be so shaped as to permit free movement of sheaves without regard to vertical adjustment of the sheave brackets. An up-thrust roller shall be provided beneath the track and each sheave wheel, capable of withstanding a vertical thrust equal to the carrying capacity of the upper sheave. The up-thrust roller shall be adjustable for fine vertical adjustment and the face of the roller shall be so shaped as to conform to the bottom face of the hanger track. Doors closers shall be sill mounted.
- C. Provide door protection and reopening device.
- D. Adaptive Door Timing:
1. Door open times will be varied subject to the call situation causing the stop:
 - a. Shortest timing, when car call only causes stop.
 - b. Longer timing, when hall call only causes stop.
 - c. Longest timing, when coincident hall and car calls exist.
 - d. All timing shall meet ADA guidelines as a minimum.
 2. The door opening time, measured from the instant the doors start to open until within 1" of fully open position, shall not exceed code standard.
 3. Long door and short door "hold open" times shall be set at 4.0 and 2.5 second respectively and shall be ADA complainant.
- E. Car Frames:
1. Car frame shall consist of structural steel members that are securely welded or bolted together and the frame shall be so reinforced and braced as to relieve the car enclosure of undue strains. Steel bumper plates shall be provided to engage the buffers.
- F. Car Platforms and Flooring:
1. Each passenger type car platform shall consist of a structural steel frame with a wood and metal composite floor (i.e. one layer of 3/4" marine grade plywood plus 14 gauge steel plate plus 3/4" thick marine grade plywood plus finish flooring). Top finish flooring on car shall be furnished and installed by Elevator Contractor, shall be as described in Car Enclosures section below.
 2. Each passenger type platform shall be equipped with an extruded aluminum threshold and a steel toe guard at the loading edge. The underside of the platform shall be fireproofed to comply with local codes.
 3. The platform shall be capable of the capacity of the car being loaded in one-piece across the entrance of the car and landing.
- G. Car Isolation:
1. The steel platen plate used to secure the car frame to the plunger shall be provided with rubber pads to effectively prevent transmission of vibration from the plunger to the complete car frame, platform and car enclosure.

H. Roller Guides for Car:

1. Each roller guide shall consist of three wheels (minimum roller diameter - 6") tired with a durable resilient material; each rotating on ball bearings having sealed-in lubrication; all assembled on a substantial metal base and so mounted as to provide continuous contact of all wheels with the corresponding rail surface under all conditions of loading and operations. The wheels shall run on three finished rail surfaces. The roller guides shall be properly secured at top and bottom on each side of car frame. Provide roller guides at top and bottom of car.
2. The roller guides shall run on dry guide rails.

I. Interior Car Doors:

1. Provide car doors with flush hollow steel panels. Panels shall have sound deadening insulation. Doors shall have removable non-metallic gibs to run in the sill guide way with minimum clearance. Door panels shall conform to the National Elevator Code ASME A17.1 and the Underwriter's Laboratories 1-1/2 hour fire test requirements. Door unlocking devices shall be provided as required by local codes. The door shall be equipped with Nylube door guides.
2. Car door hangers and tracks shall be provided similar to hoistway doors.
3. Door finish shall be #4, brushed stainless steel.

J. Car Enclosures:

1. All cab material, design, lighting, ventilation and exits shall comply with "American National Standard Safety Code for Elevators, ASME A17.1 and/or local codes. Where codes conflict the more stringent shall apply.
2. Wall panels and reveals shall be of Rigidized 316 stainless steel construction and applied to a steel shell.
3. Returns shall be of stainless steel construction and have a #4 brushed finish. Cutouts shall be provided for operating elements and fixtures. Minimize thickness of return to maximize clear floor area.
4. Canopy shall be constructed from formed and reinforced 16 gauge steel finished in white enamel paint and shall have an overall height of 8'-0" from the finished floor. An emergency exit shall be provided which is locked from the top of the car.
5. Provide (1) or (2) continuous LED strip light fixtures at the top of both side walls of the car. Upper light to be located 3" below ceiling canopy with the lower light 3" below.
 - a. LED linear fixtures approx. $\frac{3}{4}$ " x $\frac{3}{4}$ ", with beveled profile, installed to cast light down onto floor of car. Total lighting level must equal or exceed 10 foot-candles at floor level in car. Power supply unit to have 115 VAC input voltage.
 - 1) Manufacturer / Model: Man-D-Tec, 4590, Mounting Style C, or equivalent if approved in advance by architect.
 - 2) Finish: Mill Finish Aluminum.
 - 3) Color Temperature: 3000K Warm White.
6. Entrance columns shall be #4 brushed stainless steel finish. Columns shall run from floor to canopy, be finished in a vertical grain, and shall be integral to the returns.

7. Entrance transom shall be #4 brushed stainless steel finish. Columns shall run from floor to canopy. Transom shall run the full width of the car and be finished in a horizontal grain.
8. Doors shall be of hollow stainless steel construction with #4 brushed finish, suitably reinforced and sound deadened. Equipped with Nylube door guides.
9. A single speed fan shall be provided that matches the ceiling and is mounted to the canopy. Air intake to the fan shall be through the 3/8" diameter holes (adequate in number to allow free passage of required air quantity) drilled in canopy. Submit shop drawing of canopy for approval prior to fabrication. CFM as required per ASME A17.1. Sound level is to be 45 DBA max.
10. A 3/8" x 2" bar handrail with radiused ends of #4 brushed stainless steel finish shall be provided to meet code requirements on side and back walls but shall not interfere with car operating panel.
11. A 3/8" x 4" bar crash rail with radiused ends of #4 brushed stainless steel finish shall be provided low to protect on side and back walls, but shall not interfere with car operating panel.
12. Car sills shall be extruded aluminum.
13. Finished floor covering shall be furnished and installed by the elevator contractor. Flooring shall be homogenous thermoset rubber tile, and meet all codes for elevator car materials.
 - a. Product: Mannington, Color Anchor Rubber Collection, ColorSpec style. Size to be 18"x18", texture to be "sculptured," and color to be selected by owner from manufacturer's standards. Utilize adhesives recommended by the manufacturer.
 - b. Attic Stock: Contractor is to provide one (1) unopened box of tile in addition to any remaining open box(es) as attic stock, turned over to the owner after installation is complete. Product to be delivered to the elevator machine room(s).
14. Finish floor covering shall be a quarter inch thick with a matte finish and raised diamond shapes, 10-gauge aluminum
15. Provide removable protective wall pads with padlocks inside elevator car to protect the wall panels. Pads shall meet all codes for elevator car enclosures.
 - a. Product: Palmer "PalmTuff Vinyl Pads", West Coast, or equal approved by designer. Color to be selected by owner from manufacturer's standards.
16. Pad storage cabinet: Contractor is to provide a lockable two-door metal storage cabinet of a size adequate to hold all of the pads for one (1) elevator in a single cabinet. If the project is for multiple elevators, discuss in advance with owner whether one or multiple cabinets are preferred.

2.7

CAR OPERATING PANEL:

1. The operating panel in the car shall consist of a vandal resistant stainless steel control panel. (Taper all projected sides of car panel back to return panel for a neat appearance. Submit drawings for approval prior to fabrication.) The main control panel shall contain a series of push buttons with illuminated call registration devices, numbered to correspond to the various landings serviced. It shall include a Car Stop Switch, Fire Service Compartment, Alarm Button (connected to a bell located on the car) and a Door Close, Door Open button for each entrance. Alarm bell shall be operated from its own independent battery pack power supply and recharging system. The control panel shall also contain separate key operated switches for Access, Independent Service, Car Lights, Car Fan, Emergency Light and Test Switch. Emergency phone shall be hand free type. Panel shall also accommodate hand free phone and digital car position indicator. All key switch cylinders shall be standard Adams keying system.
2. Engrave on the COP the State Serial No., rated load capacity, and the locally used name or number of the elevator (provided by U-M).
3. Buttons shall be made of brushed stainless steel with LED for illumination, with translucent floor designations, with Braille.
4. Provide emergency light in car-operating panel with rechargeable nickel cadmium batteries and recharging system compliant with code.
5. Provide engraved fire services instruction and security keys per ASME A17.1.
6. Acceptable Manufacturers: Refer to Part 1 of this Section.
7. Floor Passing Chime:
 - a. Provide a floor-passing chime and voice annunciation to meet ADA requirements. Mount in main car operating panel.
8. Acceptable Manufacturer: Refer to Part 1 of this Section.
 - a. Refer to detail on drawings.

B. Hall Call Station:

1. ADA compliant vandal resistant illuminating LED type hall call station shall be installed at each floor to permit waiting passengers to call the elevator to the floor.
2. Fixtures shall have up and down buttons with Braille adjacent to the button on the left at intermediate floors and single buttons at top and bottom floors.
3. Buttons shall be made of vandal resistant stainless steel and shall illuminate to indicate a call has been registered. Button shall remain illuminated until the call has been answered. Provide oversized vandal resistant brushed stainless steel cover plates at all push button stations to cover all openings (including the openings that result from removal of existing hall push button stations or any other devices). The Braille signage adjacent to the directional button requires at least half inch lettering denoting the direction of the button
4. Provide engraved graphic per ASME A17.1 emergency sign and illustration on all hall call station plates: "IN CASE OF FIRE USE STAIRWAY FOR EXIT, DO NOT USE ELEVATOR".
5. Acceptable Manufacturers: Refer to Part 1 of this Section.
6. Refer to details on drawing.

7. Hall call station panel may accommodate the hall position indicator (HPI).

C. Communication System (Telephone):

1. Provide hands-free vandal resistant emergency telephone in the car, with wiring (shielded pairs) to terminals on control panel in machine room. Engraved per ASME A17.1 requirements.
2. Phone shall keep working during power failure. Coordinate work with U-M ITCOM. Phone shall be one push button to talk type and flash when call is answered. Telephone shall be an integral part of the car panel.
3. Annunciator Interface, Auxiliary Relay and 24V LED Board: The board shall be mounted behind the phone in the elevator car operating panel which contains an auxiliary relay that can be tied to DDC panel. The connection from the elevator controller to the DDC panel shall be provided by electrical contractor. When the board is programmed correctly, DDC will receive an alarm whenever the RATH phone detects the phone line has failed. Note that the car traveling cable containing the phone line must be expanded to contain a pair of wires for connection to the nearest DDC panel.
4. Unit shall be mounted in the designated floor elevator lobby per elevator code ASME A17.1 as part of the egress floor hallway push button and shall be wired to the phone in the car operating panel. The alarm unit will contain the code required local alarm light, sounder and a momentary key switch on a label back plate. The traveling cable containing the phone line and pair of wires for the DDC circuit must be expanded to contain a pair of wires from the phone to the alarm unit.
5. Manufacturer: Refer to Part 1 of this Section.

D. Car Traveling Lantern:

1. Provide on both sides of car door jambs and shall be ADA compliant.
2. Manufacturer: Refer to Part 1 of this Section.
3. Refer to detail on mechanical drawings.

E. Car Position Indicator:

1. A LED (Light Emitting Diode) vandal resistant digital type position indicator shall be provided inside car, as part of main car operating panel (COP). It shall indicate the floor at which the car is stopped or passing and the direction the car is traveling. The cover plates shall be #4, brushed Stainless Steel.
2. Manufacturer: Refer to Part 1 of this Section.
3. Refer to detail on mechanical drawings.

F. Special Floor Access:

1. Key Switches: Provide (1) master for access on & off, and (1) for momentary override. Keys shall be keyed to U of M's Key System and shall be coordinated with Key Office through Project Manager.
2. Provide card reader per U-M standard, coordinate with the U-M Key Office and ITS through Project Manager.

G. Hall Position Indicator:

1. Provide at each floor in elevator lobby or hallway. Follow specification for Car Position Indicator.

2.8 **ELECTRIC WIRING**

- A. Complete insulated wiring shall be furnished and installed to connect all parts of the equipment furnished by the elevator contractor. Wiring shall conform to the requirements of the latest edition of the National Electrical Code. Include rigid conduit or EMT, at least 1/2" diameter, and short lengths of flexible conduit. Conduit or EMT shall terminate in junction boxes. Conduit, EMT, wiring duct, conduit fittings, enclosures and junction boxes shall be galvanized steel or aluminum.
- B. All wiring shall have a flame retarding moisture resisting outer cover and shall be run in metal conduit, flexible metallic tubing, or wire ducts.
- C. Traveling cables shall have flame retarding and moisture resisting outer cover. They shall be flexible and suitably suspended to relieve strains in the individual conductors. Provide the required quantity plus at least 10 percent spares. All wiring between telephone in car and a junction box in elevator machine room shall be provided by the elevator contractor. Conductors shall be numbered to correspond to numbered terminals at the car and machine room.
- D. Terminal blocks shall be coded to identify the circuits. Multi-conductor cables shall have the conductor color coded and numbered.
- E. The elevator car shall be provided with a suitable GFCI duplex receptacle fitted with a wire lamp guard on top of the car and a suitable duplex plug receptacle.
- F. Unless otherwise specified, control wiring shall be minimum size #18 AWG. Wire size shall be large enough so that the voltage drop under inrush conditions will not adversely affect operation of the controls.
- G. Electrical Receptacle in Car: Provide always accessible GFCI duplex electrical receptacle in car below COP. Locate receptacle approximately 2" above finished floor. Provide face plate on receptacle to wall match panel material.
- H. Execution:
 1. Install all power wiring in raceway systems. No exposed wiring or conduit shall be run in finished areas without prior written approval of owner.
 2. Splice cables and wires only in outlet boxes, junction boxes or pull boxes. (Note - No wire splicing allowed in raceway or wire ducts).
 3. Install cable supports for all vertical feeders in accordance with the NEC. Provide Kellum GRIP type supports, which firmly clamp each individual cable and tighten due to cable weight.

- I. All terminal strip connections shall be identified with corresponding reference numbers from cable termination chart and electrical straight-line diagrams.

2.9 DIAGNOSTIC TOOLS

- A. Provide all required service diagnostic tools and sundries necessary for diagnostic evaluations, system monitoring and field adjustments. The cost to the Owner of these tools and accessories shall be included in the quoted price of the equipment and be specifically listed in the proposal.
 - 1. Diagnostic service tools may be hand held devices or they may be on-board integral components of the vertical transportation equipment controllers.
 - 2. Tools and instructions for the operation of the tools, as pertains to all functions relating to the equipment, shall be provided to the Owner upon completion of the project, .
 - 3. The Elevator Contractor shall maintain and update all diagnostic tools, accessories and instructions provided to the Owner. Should the Elevator Contractor's contract for installation or for subsequent continuing maintenance service be cancelled for any reason by either the Owner or the elevator contractor, the Elevator Contractor shall be obligated to provide continuing maintenance and updating of the diagnostic tools to the Owner at the Elevator Contractor's direct cost plus a reasonable charge for profit and overhead for labor and materials.
 - a. Labor charges shall not exceed the Elevator Contractor's standard elevator mechanic hourly billing rates. In addition, the Elevator Contractor shall provide field and technical assistance and instruction to the Owner or Owner's representatives or elevator maintenance company, upon the Owner's request within a reasonable time following the Owner's request, and be compensated in a similar manner as previously described.

PART 3 - EXECUTION

3.1 ACCEPTABLE ELEVATOR INSTALLERS

- A. Acceptable installers: Subject to compliance with the requirements specified herein, installers offering product approved by the owner are limited to the following listed companies. Elevator installer for project must provide the equipment as specified.
 - 1. Elevator Service, Inc.
 - 2. Kone Elevator Co.
 - 3. Lardner Elevator Co.
 - 4. Otis Elevator Co.
 - 5. Schindler Elevator Inc.
- B. Above is not a list of elevator manufacturers; it is a list of INSTALLERS only. Elevator installer must provide the equipment specified.

3.2 EXAMINATION

- A. Inspect all surfaces, and required embedded anchorage devices, and verify that they are in proper condition to receive the work of this section. Verify that field measurements are as indicated on approved shop drawings.
 - 1. Prior to preparation of drawings, the contractor shall examine the hoistway, pit area, and machine room areas and verify that nothing will adversely affect the execution of the work.
 - 2. No exposed wiring or conduit shall be run in finished areas without prior written approval of owner.
- B. Beginning of installation means acceptance of existing conditions.

3.3 PERFORMANCE

- A. Contract speed: Actual speed shall vary no more than +/- 5% from speed specified under any loading condition or direction of travel.
- B. Leveling accuracy: Consistently level within +/- 1/4" under all loading conditions.

3.4 PERFORMANCE GUARANTEE

- A. The elevator contractor shall assume full responsibility to furnish and provide a complete and functional elevator and to obtain and furnish the University final State Elevator Inspection approval. All costs necessary to correct code deficiencies cited by the State Elevator Inspector will be paid by the elevator contractor as part of this Contract at no additional cost to the Owner.

3.5 TECHNICAL TRAINING

3.6 ELEVATOR ACCEPTANCE DEMONSTRATION AND PERFORMANCE TEST (COMMISSIONING BY U OF M)

- A. Demonstrate to Owner, or Owner's designated representative, the operation of the elevator system. Demonstration shall include:
 - 1. Installation compliance with specifications.
 - 2. Contract speed, capacity, and floor-to-floor performance compliance with specifications.
 - 3. Stopping accuracy and car ride compliance with specifications.
 - 4. Operation of signal fixtures and operation of supervisory or dispatching system.
 - 5. Promptly remove all work rejected by the Engineer for failure to meet specifications and replace to comply with requirements, at no additional cost to the Owner. All expenses of repairing work of other Trades damaged by this replacement shall be borne by Contractor.
 - 6. Rejected work which is not made good within a reasonable time, determined by the Engineer, may be corrected by the Owner at Contractor's expense.

7. Upon completion of installation and before final acceptance, conduct a running speed test with full design load to verify compliance with performance requirements in code.
- B. Operating Instructions: Provide instructions to the Owner's personnel, including safety procedures, proper operation of the equipment, and routine maintenance procedures.

3.7 CLEANUP

- A. Keep work areas orderly and free of debris on a daily basis.
- B. Remove filings and loose materials resulting from work from hoistways.
- C. Clean all dirt, oil and grease from machine room and pit equipment and floors.
- D. Clean car, car enclosures, entrances, hoistways, operating and signal fixtures and trim of dirt, oil, grease, and finger marks.
- E. Polish all stainless steel components.

END OF SECTION 142400

SPECIFICATION DIVISION 14

NUMBER SECTION DESCRIPTION

DIVISION 14 CONVEYING SYSTEMS

SECTION 142100 - ELECTRIC TRACTION ELEVATOR

END OF CONTENTS TABLE

12-13-23: SUBSTANTIALLY REVISED MASTER SPECIFICATION

DIVISION 14 CONVEYING SYSTEMS
SECTION 142100 - ELECTRIC TRACTION ELEVATOR

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes:
 - 1. Electric Traction Elevator
- B. Related Requirements:
 - 1. Division 01 Section "Alternates"
 - 2. Division 02 Section "Selective Demolition"
 - 3. Division 02 Section "Regulated Construction Waste Remediation"
 - 4. Division 02 Section "Asbestos Remediation"
 - 5. Division 02 Section "Lead Remediation"
- C. General Conditions:
 - 1. The Contractor under this Division of work (elevator contractor) is referred to the Contract Forms and General Conditions of these specifications, all of which apply to this Division.

1.2 SCOPE OF WORK

- A. The work of this division shall consist of the complete removal and replacement (except items specifically noted to be reused) of traction elevator(s) in the building. Bidders shall include all labor, materials, permits, and services required for the complete installation of the elevator and hoistway equipment as herein specified.
 - 1. In all cases where a device or part of the equipment is herein referred to in the singular, it is intended that such reference shall apply to as many of such devices or parts as are required to make a complete installation.
 - 2. Elevator installer to obtain all approvals for any required code variances to accommodate this renovation/installation from Michigan Elevator Safety Division at no additional cost to Owner prior to starting construction.
 - 3. Refer to architectural, mechanical and electrical drawings, be familiar with their work scope, and coordinate accordingly.
- B. Two weeks prior to removal of any equipment, elevator contractor must notify U-M elevator personnel at 734-647-2059. U-M elevator personnel will tag any parts to be salvaged. Contractor to remove tagged parts, transport parts to building's loading dock, and notify U-M elevator personnel which in turn shall remove salvaged parts from site. All other equipment will become property of contractor who will remove from site in accordance with all codes and regulations.
- C. Elevator Contractor shall coordinate with all other trades working in hoistway, machine rooms and be available to operate the elevator in a running "Platform" manner to allow other trades to complete their work.

1. All telephone cable and conduit between machine room terminals, controller and car shall be provided by elevator contractor.
2. Final Cleaning: Refer to Architectural Specifications Section 017700, part 1, and this specification Part 3.

1.3 SUBMITTALS

- A. Before beginning fabrication and work, the elevator contractor shall prepare drawings that show the arrangement of the elevator equipment. Approval of drawings and other data (submit minimum of one electronic set), which are to be submitted by the elevator contractor to the Owner Representative, must be approved by U-M Engineer/Architect. Before proceeding with fabrication and installation of the equipment. Field verify existing conditions and sizes prior to preparation of drawings.
- B. Submit provisions for delivery of drilling machine into building and setting it in place to provide the drilling process
- C. Shop Drawings:
 1. Submit one electronic set of Shop Drawings as required showing the general and detailed arrangement of all elevator equipment. Show ceiling, platform construction, lighting, signal fixtures, and smoke detectors including routing of exposed conduit and all material.
 2. Show dimensions, weights, and indicate who will perform the work of each item.
 3. Submit one electronic set of all coordination drawings showing the work of all trades.
 4. Statements to the effects of work by other shall not be accepted; you must identify who is responsible for the work.
 5. Refer to Specifications Section 013000 for full language on Submittals.
 6. Provide a power report for the elevator controller that states a minimum circuit ampacity, voltage and required fuse size, and maximum over current protection.
 7. Participate in the Coordination Drawings process noted on drawings and in Specification Section 013100.
- D. Samples:
 1. Submit samples of car wall panel, car floor tile, and enamel paint colors.
 2. Do not proceed with orders until samples are approved by U-M Engineer/Architect.
- E. Product Data: Submit the manufacturers' specification and data sheets, and standard details. Include pictures, catalog cuts, or other suitable illustrations of all elevator equipment that will be exposed in the finish work, including car, hoistway entrance, and signal and control apparatus. Also include these items in the O&M set.
- F. Certificates:
 1. Furnish without cost to the Owner all certificates necessary as evidence that the elevator conforms to the applicable laws, ordinances, and requirements.

2. Provide a copy of certificate, State permit and permit applications to the elevator department.

G. Operation & Maintenance Manuals:

1. At completion of work provide project and specification sets (bound and properly arranged) of the parts lists and operator's manuals, copies of approved shop drawings: two sets bound and properly arranged and one copy on USB flash drive, prior to receiving final payment. Following is a brief summary of items:
 - a. Legible schematic wiring diagrams including all changes made during installation.
 - b. Description of operation of elevator system installed.
 - c. Hoisting machine: Including Motor, Brake, Geared Machine and associated devices such as Tach Motors or Monitors.
 - d. Deflector Sheaves, Governor and Governor Tail Sheaves, Safeties, Buffers.
 - e. Counterweight Assembly, Guide Rollers on Counterweight and Car, Cable Shackles. Safeties and rope brake or other approved emergency stopping device.
 - f. Controller and Selector: Including parts information on Relays, Printed Circuit Boards, Reverse Phase Relays, Switches, Lamps, Electrical Cables, Monitors, Modems, Diagnostic Hardware, Diagnostic Software, and Overload Protection Devices.
 - g. Door Assemblies: Including Hangers, Rollers, Door Motor, Door Operator, Door Clutch Assembly, Door Closers, Door Drive Arms, Related Hardware, Sheaves, Door Guides, Interlocks, Safety Door Edge.
 - h. Signal Equipment: Including Car Station, Hall Stations, Position Indicators, Direction Indicators, Fire Service Panel, Smoke Detectors, Key switches, And Pushbutton Assemblies.
 - i. SCR Drive Units, Transformers, Chokes.
 - j. Car Top Inspection Station, Limit Switches, Solid State Leveling Control Units, Leveling Switches, Cabs, Door Sling, Platform, and Alarm Bell.
 - k. Provide a copy of certificate and State permit
 - l. Provide emergency phone number for phone inside elevator car.
2. Maintenance records shall document compliance with ASME A17.1 Section 8.6 including maintenance control program.
3. Refer to Specification Section 017823 O&M Manual for more details on format and schedule for the manual.
4. A hard copy of O&M manuals will be required per each machine room. This requirement is in addition to electronic copies required in Specification Section 013300 Submittals.

1.4 CODES AND STANDARD OF REGULATORY AGENCIES

- A. Applicable elevators codes that are in effect based on the time the permit is drawn shall govern the installation process.
- B. Provide a copy of testing documents to the elevator shop at the time of testing.

- C. Perform work in accordance with applicable codes, the State of Michigan Elevator Code, the National Electrical Code, and the American Society Mechanical Engineering Safety Code for Elevators, and Escalators ASME A17.1 as adopted by the State of Michigan as referenced therein and all of the provisions in the University of Michigan's Standard General Conditions.
- D. Give necessary notices, obtain State and Municipal permits, pay fees in connection with the installation, including sales and use taxes as applicable, and make tests as are called for by the regulations of such authorities. These test(s) or inspection(s) shall be made in the presence of the authorized representative of such authorities and the Owner's Representative.
 - 1. It is the responsibility of the elevator contractor to acknowledge and follow any variances the Owner previously obtained during design phase from the Governing Authority that could be necessary for a complete acceptable elevator installation. It is further the responsibility of the elevator contractor to obtain any variances from the Governing Authority that could be necessary for a complete acceptable elevator installation that arise after contract award. Also refer to part 3 of this section.
- E. Elevator Guidelines to Ensure Accessibility by People with Disabilities.
 - 1. Elevators shall meet the guidelines of the Americans with Disabilities Act using the sections relevant to elevator as the technical requirements.
 - 2. Elevators shall meet the requirements of the State of Michigan Department of Labor Building Code relevant to barrier free design and elevators.

1.5 SAFETY AND SECURITY REQUIREMENTS:

- A. Refer to Division 1 Sections 011400, 015000, and 017329 and the Standard General Conditions for all U-M requirements.

1.6 SCHEDULING OF OPERATIONS

- A. Contractor must note that the building may be occupied at all times and work with the general contractor to follow restrictions defined in Specification Section 011400.
- B. Construction scheduling is of utmost importance. During the progress of the work, elevator contractor's attendance at job meetings with the Owner's representatives and the General Contractor's representatives will be required often for the purposes of schedule coordination and consideration of technical and construction matters. The elevator contractor's representative shall be the job superintendent or other person who is authorized to act as the agent of that contractor.
- C. The elevator contractor shall be responsible to repair and to maintain in service the operational car(s) while working on any car in the group.

1.7 QUALITY ASSURANCE

- A. Installer Qualifications: Company / individuals licensed by the State of Michigan for elevator installations.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of the ground, under cover, and in a dry location.

1.9 WARRANTY

- A. The elevator contractor shall guarantee all labor, materials and workmanship of the apparatus installed by them to meet the specification, and that they will repair any defects not due to ordinary wear and tear or improper use or care, which may develop within the warranty period from date of final payment, or the length of the new product service period, if it is extended beyond twelve (12) months. Refer to details in specification section below, New Product Service Warranty.

1.10 NEW PRODUCT SERVICE WARRANTY

- A. After completion of the installation, warranty and 24-hour callback service for the equipment furnished under this specification shall be provided for a period of twelve (12) months as part of this Contract. This service shall also include regular monthly examinations. Provide a minimum of twelve (12) inspections in the one-year period. In the event the twelve (12) site visitations are not completed the elevator contractor will extend their warranty covering all callbacks, repairs, parts, testing, labor and any other item necessary to keep the elevator in like-new condition until the twelve warranty site visitations have been completed. Advise U-M Elevator Program Manager each time before and after completion of service of the installation during regular working hours by trained employees of this Contractor, and shall include all necessary adjustments, greasing, oiling, cleaning, supplies and parts to keep the equipment in proper operation, except parts made necessary by misuse, accidents or neglect caused by others. Contractor shall provide written record of work performed signed by the U-M Elevator Program Manager after each visit. Documentation for visits will not be accepted more than one week past work date. Visits without documentation will not count toward the twelve (12) required visits.
- B. The elevator contractor shall be responsible to service and maintain all elevator emergency circuits (including the fire service circuit, related equipment and sensors) as part of the regular elevator warranty services contract.

- C. All warranty services must be performed by the installing contractor and not by any other service agency. The installer must have an established maintenance and service organization available for performance on the applicable U-M campus (Ann Arbor, Dearborn, or Flint) that can provide regular and emergency service, 24 hours a day, every day of the year.
- D. The warranty services start after the car is approved for use by the State Elevator Inspector, or in multiple car projects, the last car is approved.
- E. Call back response time on site shall not exceed one (1) hour during warranty service period.
- F. It is the responsibility of the U-M elevator personnel to respond to any emergency regarding elevators. In the event that someone is trapped in an elevator that is under contracted warranty, the University elevator personnel will respond to free the passengers as soon as possible to minimize the inconvenience to users. It is within the right of the University to remove covers, open doors, install monitoring equipment, etc.; however, all of this work shall be performed by elevator journey person(s) licensed by the State of Michigan.
 - 1. A detailed record of work performed by University elevator mechanics is maintained in the elevator department. Contractors shall contact U-M elevator personnel to review work performed by University elevator journey-persons.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS / PRODUCTS

- A. Cab Manufacturers:
 - 1. G & R Elevator Mfg.
 - 2. Haunstein Burmeister
 - 3. Gunderland
 - 4. Columbia
- B. Car Top Inspection Station: Car Top Inspection Station: Adams Model A-912CG or as approved by elevator controller manufacturer.
- C. Controller: SmartRise controllers or Virginia control or Elevator Controller Pixel Controllers.
- D. Door Operator & Equipment: GAL Manufacturing Corp. MOVFR Operator, car and hall door tracks, car and door hangers with roller assemblies. All interlocks, pickup rollers and operating linkage manufactured by GAL.
- E. Door Protective Device: ICU/Gatekeeper 3D from Adams Elevator Equipment Company or Janus 3D.
- F. Door Guide: Nylube.
- G. Elevator Hoist and Governor Ropes: Bethlehem Wire Rope.

- H. Fixtures (Car Operating Panel, Hall Call Station, Traveling Lantern, and Hall Position Indicator): PTL Performer or Innovation Industries. All shall be vandal resistant.
- I. Floor Announcement System: Shall be through chime and voice announcements, by Adams or approved elevator controller manufacturer and shall be approved by University of Michigan engineer.
- J. Hoist Machine: Manufacturer's standard that complies with all duty requirements of this Section and manufactured by one of the following:
 - 1. Gearless Acceptable Manufacturers:
 - a. Hollister Whitney
 - b. Imperial Electric
 - c. Titan.
 - 2. Geared Acceptable Manufacturers:
 - a. Hollister Whitney
 - b. Titan.
 - 3. MRL Hoisting Machine Acceptable Manufacturers:
 - a. Hollister Whitney
 - b. Imperial Electric.
 - c. [Other as approved by University of Michigan F&O Elevator Program Manager].
- K. Key Switches: All key switch cylinders shall be standard Adams keying system.
- L. Roller Guides: ElSCO Model "A" on car and Model "B" on counterweights.
- M. Telephone: In-Car Telephone: RATH Microtech 2100-907-RATELEPHONE integral of car operating panel with RATH 2100-Alarm.
- N. Variable Speed Drives: With all applicable options, or as approved by controller manufacturer.
- O. Wedge Type Sockets: Hollister Whitney or Imperial.

2.2 SCHEDULE OF NEW EQUIPMENT

- A. Elevator Number: Existing State Number: [enter number]
- B. Type of Service: Passenger/ Freight
- C. Elevator Machine Type / Location: Overhead, Basement, Side Wall Mount. Elevator Machine located on ___ floor (Room number _____)
- D. Quantity of Cars: _____
- E. Capacity: _____ pounds [for elevator #1, _____ pounds for elevator #2, etc.]
- F. Speed: Minimum _____ FPM [for elevator #1, _____ FPM for elevator #2, etc.]

- G. Travel Distance: +/- Field verify [for elevator #1, for elevator #2, etc.]
- H. Number of Stops: [for elevator #1, for elevator #2, etc.]
- I. Number of Door Openings: [for elevator #1, for elevator #2, etc. Note if Rear or Side if applicable.]
- J. Floors Served: [for elevator #1, for elevator #2, etc. Note if Rear or Side if applicable.]
- K. Main Egress Floor: ; Alternate Egress Floor: .
- L. Hoistway Size: ' " long x ' " wide Field Verify [for elevator #1, ' " long x ' " wide Field Verify for elevator #2, etc.]
- M. Pit Dimensions: ' " long x ' " wide x ' " deep Field Verify
- N. Platform Size: ' " long x ' " wide or size to be maximum allowable but at minimum match the existing
- O. Car Interior Dimensions: ' " long x ' " wide x ' " high (dimensions to match existing) Field Verify
- P. Car Door Size: ' " wide x ' " high [for elevator #1, for elevator #2, etc. Note if Rear or Side if applicable.]
- Q. Door Opening Type: Side Slide or Center Opening [for elevator #1, for elevator #2, etc. Note if Rear or Side if applicable.]
- R. Door Speed: [1-speed], [2-speed], [3-speed, etc] [for elevator #1, for elevator #2, etc. Note if Rear or Side if applicable.]
- S. Machine Type: [Geared] or [Gearless PMAC] [for elevator #1, for elevator #2, etc.]
- T. Power Supply: Volts/ 3 Phase/ 60 Cycle; Motor Horsepower: [for elevator #1, for elevator #2, etc.]
- U. Fire Fighter Service: Yes
- V. Independent Service Operation: Yes
- W. Load Bypass Operation: [Yes] or [No]
- X. Anti-nuisance Feature: [Yes] or [No]
- Y. Special Floor Access:
 1. Key switch(es): Yes. Refer to fixture drawing in mechanical trade for required floors.
 2. Card reader: Yes.

2.3 **ELECTRIC TRACTION MACHINE (GEARLESS PMAC)**

- A. Gearless Machine "PMAC":
 - 1. The machine shall be a Permanent Magnet, Synchronous Design, and AC Gearless Traction Elevator Machine.
 - 2. The traction driving sheave and brake drum shall be mounted to the motor shaft. Motor will be mounted to a structural bed plate of sufficient design for compliance with ASME A17.1.
 - 3. Machine should be totally enclosed, self-cooling without the use of auxiliary fan(s) for cooling.
 - 4. Gearless machine demountable drive sheave shall be cast from the best grade of hard cast iron, semi steel or cast steel of approved composition and shall be machined with grooves, providing maximum traction with a minimum of cable and sheave wear. The surface of sheaves shall be tested individually for hardness and the actual hardness to be plainly stamped next to the grooves on the sheave rim. The hardness must measure between 220 and 240 Brinell.
 - 5. The diameters of the Gearless machine driving sheave shall be not less than forty (40) times the diameter of the hoisting rope.
- B. Motor: The motor shall be designed for elevator service. Motor shall be one hour rated, class F insulation. As specified by elevator controller manufacturer.
- C. Brake: Provide machine with a spring applied and electrically released electromechanical brake so designed as to be effective to the extent of stopping the car during emergency stop and holding the car under all conditions of loading or operation. Design brake electromagnet for quick release to provide smooth and gradual application of the brake shoes. Brake shall be individually controlled and able to hold 125% of rated capacity. The brake drum must have the wearing surface and edge of flange turned smooth, and the wearing surface must run true within a minimum variation of .005 inch. Brake shoes are to be lined with non-asbestos bonded type linings. Brake plunger rod shall be polished steel with surface free of machine marks. An emergency brake or rope brake shall be provided as per ASME A17.1.
- D. Machine Location and Foundation/Bedplate: The elevator machine shall be placed directly over the hoistway upon structural steel beams. The bedplate shall consist of structural steel members fabricated into a rigid unit designed to minimize deflection.
- E. Isolation: The machine bedplate shall rest on isolation pads of proper density to effectively isolate the machine from the building structure.
- F. All exposed surfaces of machine, motors and governor shall be painted with rust-resisting gloss, gray color enamel after installation.
- G. Machine shall not have any name or logo printed or other than University of Michigan made a part of any device supplied under these specifications.

2.4 ELECTRIC TRACTION ELEVATOR (GEARED)

- A. Geared Machine:
1. The machine shall be of the single worm geared traction type with motor, brake, gearing and driving sheave mounted in proper alignment on a cast iron or structural steel bedplate.
 2. The worm shall be of forged steel, integral with the worm shaft and provided with a ball bearing thrust designed to take the end thrust of the worm in both directions. Thrust shall be removable without dismantling machine or require the removal and re-installation of the brake pulley. The worm gear shall be hobbled from a bronze rim, which shall be accurately fitted and bolted to the gear spider.
 3. The driving sheave shall be grooved for the proper number and size of hoist ropes and so designed as to maintain constant traction. The driving sheave shall be of the renewable traction sheave rim type.
 4. The adjustable roller or anti-friction metal bearings shall include adequate means for lubrication.
- B. Motor: The motor shall be coupled to the worm shaft, and specifically designed for elevator service. Motor shall be one hour rated, class F insulation, premium, efficiency, and shall be suitable for variable speed operation.
- C. Brake: A disk or double-shoe brake of the cushioned short-stroke adjustable type shall be provided. The brake shall be designed to stop and hold the car with 125% of the rated load per code requirements. The brake shall be designed so it is instantly and automatically applied in the event of power failure. An emergency brake or rope break shall be provided as per A17.1-2000. Each brake arm shall be equipped with a switch wired to controller so that it confirms the brakes statues cars will not attempt to run if brake not picked.
- D. Machine Location and Foundation/Bedplate:
1. Overhead: The elevator machine shall be placed directly over the hoistway upon structural steel beams. The bedplate shall consist of structural steel members fabricated into a rigid unit designed to minimize deflection.
 2. Basement: The elevator machine shall be placed directly on base plate or housekeeping pad adjacent to hoistway. The bedplate shall consist of structural steel members fabricated into a rigid unit designed to minimize deflection.
- E. Isolation: The machine bedplate shall rest on isolation pads of proper density to effectively isolate the machine from the building structure.
- F. All exposed surfaces of machine, motor and governor shall be painted with rust-resisting gloss, gray color enamel after installation.
- G. Machine shall not have name or logo printed on or other than University of Michigan made a part of any device supplied under these specifications.

2.5 MACHINE ROOM-LESS "MRL":

- A. Machine: The machine shall be a Permanent Magnet, Synchronous Design, and AC Gearless Traction Elevator Machine. The traction driving sheave and brake drum shall be mounted to the motor shaft. Motor will be mounted to a structural bed plate of sufficient design for compliance with ASME A17.1. Machine should be totally enclosed, self-cooling without the use of auxiliary fan(s) for cooling. Gearless machine demountable drive sheave shall be cast from the best grade of hard cast iron, semi steel or cast steel of approved composition and shall be machined with grooves, providing maximum traction with a minimum of cable and sheave wear. The surface of sheaves shall be tested individually for hardness and the actual hardness to be plainly stamped next to the grooves on the sheave rim. The hardness must measure between 220 and 240 Brinell. The diameters of the Gearless machine driving sheave shall be not less than forty (40) times the diameter of the hoisting rope.
- B. Motor: The motor shall be designed for elevator service. Motor shall be one hour rated, class F insulation. As specified by elevator controller manufacturer.
- C. Brake: Provide machine with a spring applied and electrically released electromechanical brake so designed as to be effective to the extent of stopping the car during emergency stop and holding the car under all conditions of loading or operation. Design brake electromagnet for quick release to provide smooth and gradual application of the brake shoes. Brake shall be individually controlled and able to hold 125% of rated capacity. The brake drum must have the wearing surface and edge of flange turned smooth, and the wearing surface must run true within a minimum variation of .005 inch. Brake shoes are to be lined with non-asbestos bonded type linings. Brake plunger rod shall be polished steel with surface free of machine marks. An emergency brake or rope brake shall be provided as per ASME A17.1.
- D. Machine Location and Foundation/Bedplate:
 - 1. Machine Room Less (MRL): per manufacturer standard.
- E. Isolation: The machine bedplate shall rest on isolation pads of proper density to effectively isolate the machine from the building structure.
- F. Machine Access:
 - 1. Hoistway:
 - a. External: Provide a ladder and working platform with code compliant access door.
 - b. Internal: Provide access ladder and working platform, refer to drawings. All clearances shall comply with code.
- G. All exposed surfaces of machine, motors and governor shall be painted with rust-resisting gloss, gray color enamel after installation.
- H. Machine shall not have any name or logo printed or other than University of Michigan made a part of any device supplied under these specifications.

2.6 PROGRAMMABLE CONTROLLERS FOR AC TRACTION ELEVATORS:

A. Controller Description:

1. The controller shall use a variable voltage variable frequency drive or flux vector for the control of three phase AC induction motors.
2. The drive shall use a three-phase, full-wave bridge rectifier and capacitor bank to provide a bus for the solid-state inverter.
3. The drive shall use power semiconductor devices and pulse width modulation, with a carrier frequency of not less than 2kHz, to synthesize the three-phase, variable voltage variable frequency output to operate the hoist motor in an essentially synchronous mode.
4. The drive shall have the capability of being adjusted or programmed to achieve the required motor voltage, current and frequency, in order to properly match the characteristics of the AC elevator hoist motor.
5. The drive shall not create excessive audible noise in the elevator machine motor.
6. The drive shall limit the total harmonic distortion (THD) reflected back into the power system to the following values at any motor speed from 50 to 100 percent.
 - a. Drive input voltage waveform: Less than 3 percent THD.
 - b. Drive input current waveform: Less than 100 percent THD.
7. The elevator contractor shall provide at no additional cost any additional devices required to meet the above THD limits.
8. The drive shall be a heavy-duty type, capable of delivering sufficient current required to accelerate the elevator to contract speed with rated load. The drive shall provide speed regulation appropriate to the motor type.
9. The regenerated power from the elevator shall be of benefit to the building. The regenerative power shall not be dissipated in a resistor bank but will be returned to the building electrical system. Steps shall be taken to provide equipment so the regenerated power does not adversely affect other equipment in the facility, steps such as the use of the filter network and or isolation transformer shall be used.
10. A contactor shall be used to disconnect the hoist motor from the output of the drive each time the elevator stops. This contactor shall be monitored and the elevator shall not start again if the contactor has not returned to the de-energized position when the elevator stops.
11. All power feed lines to the brake shall be opened by an electro-mechanical switch. A single ground, short circuit or solid-state control failure shall not prevent the application of the brake.
12. The controller shall provide stepless acceleration and deceleration and provide smooth operation at all speeds.
13. The power control shall be arranged to continuously monitor the performance of the elevator in such a way that if the car speed exceeds 150fpm during access, inspection or leveling, the car shall shut down immediately, requiring a reset operation.
14. The controller shall be arranged to continuously monitor the performance of the elevator in such a way that the car speed shall not exceed 150fpm during travel down from the -- floor to the Basement floor for elevators ----.

15. The automatic leveling zone shall not extend more than 12" (304.8mm) above or below the landing level nor shall the doors begin to open until the car is level with the landing. In addition, the inner leveling zone shall not extend more than 3" (76.2mm) above or below the landing. The car shall not move if it stops outside the inner leveling zone unless the doors are fully closed and locked.
16. The system shall use an automatic two-way leveling device to control the leveling of the car to within 1/4" (6.35mm) or better above or below the landing sill. Overtravel or undertravel shall be compensated for and the car brought level to the landing sill.
17. The landing system shall be supplied by the controller manufacturer.
18. Automatic Operation of the Car Lighting shall be provided meeting the requirements of ASME A17.1. The feature shall allow the car lights to be turned off when the following conditions exist for not less than five minutes: the car is at a floor, the doors are closed, there is no demand for service, and the car is on automatic operation. Momentary interruption of any of these conditions will cause the car lights to turn on. The Automatic Operation Feature shall be able to be turned on or off as desired by the Owner from the elevator controller.

B. Specifics For Closed Loop System:

1. Provide a closed loop tachometer feedback control. The control system shall continuously monitor the elevator speed signal from a velocity transducer and compare it with the intended speed signal to verify proper and safe operation of the elevator and to correct the actual speed to match the intended speed.

C. Specifics For VVVF Drives (For speeds of 150fpm or below):

1. NOTE: For VVVF applications, the AC motor shall have slip specifications between 8 percent and 12 percent, or a NEMA rating of "D".
2. The VVVF drive shall be capable of providing a braking pulse to use in the stopping sequence of the elevator. The braking pulse shall take the form of an adjustable DC current pulse applied to the AC motor for an adjustable period of time (0 to .75 second).
3. The VVVF drive shall be able to be programmed with different volts per hertz patterns, which shall be used to adjust the drive control characteristics.

D. Specifics For Flux Vector Drive (For speeds over 150fpm) NOTE:
For flux vector applications, the AC motor shall have slip specifications of 5 percent or less, or a NEMA rating of "A" or "B".

1. The flux vector drive shall be capable of producing full torque at zero speed.
2. The flux vector drive shall not require DC injection braking in order to control the stopping of the car.
3. The flux vector drive shall utilize encoder feedback to regulate hoist motor speed. The encoder shall be mounted to the motor shaft.

E. The controller shall be UL, ETL or CSA listed, and shall not interfere with local radio frequencies.

- F. Provide LED lighting at the front inside the controller cabinet. Ventilation fans shall be part of the controller cabinet.
- G. Drives: Provide as recommended and approved by controller manufacture.
- H. Elevator controller is to be factory equipped with provisions for emergency power connections and be able to prevent regenerative power back into line.
- I. Phase protection: Provide 3-phase power monitor for elevator power which monitors phase loss, low and high voltage, phase reversal, phase unbalance, and has both manual and automatic reset. Leave in manual position.
- J. Emergency Power: When emergency power is detected, cars shall sequentially return to the main lobby one elevator at a time, and remain there with doors open. While each car is being returned, all other cars shall be shut down so as not to overload the emergency power generator. Once all cars have been returned to the lobby, one car may be selected to run under emergency power. Selection of the car that runs under emergency power shall be done automatically by the group system. This automatic selection may be overridden through manual selection. Refer to Mechanical drawings.
- K. Auxiliary Operations:
 - 1. Firefighter's Service:
 - a. The following operation is for the use of firemen and other authorized personnel per ASME A17.1.
 - b. Automatic passenger elevators shall conform to the following:
 - 1) Provide a three position (on, off, and re-set) key-operated switch at the main floor for each single elevator or each group of elevators. The key shall be removable only in the "on" and "off" positions. When the switch is in the "on" position, the elevators controlled by this switch and which are on automatic service shall return non-stop to the main floor, and the doors shall open and remain open.
 - 2) An elevator traveling away from the main floor shall reverse at the next available floor without opening its doors.
 - 3) Elevators equipped with automatic power-operated doors and standing at a floor other than the main floor, with doors open, shall close the doors without delay and proceed to the main floor.
 - 4) Door reopening devices for power-operated doors, which are sensitive to smoke, heat or flame shall be rendered inoperative.
 - 5) All car and corridor call buttons shall be rendered inoperative and all call register lights and direction lanterns shall be extinguished and remain inoperative.
 - 6) The University Elevator Program will supply to the installing contractor a "Security Box" (key box) for installation at the egress floor.

- 7) A car stopped at a landing shall have its "Emergency Stop Switch" rendered inoperative as soon as the doors are closed and it starts toward the main floor. A moving car, traveling to or away from the main floor, shall have its "Emergency Stop Switch" rendered inoperative immediately.
 - 8) A sensor in each elevator lobby, which when activated prevents cars from stopping at that floor, shall not be substituted for the above requirements.
- c. Sensing Devices: In addition to the key-operated switch required in "b" above, heat and smoke or products of combustion sensing devices shall be furnished and installed by fire alarm contractor in each elevator lobby at each floor, and the main floor (Note - Egress floor is --- floor) alternate floor for the elevator is --- floor. The activation of a sensing device in any elevator lobby shall cause all cars in all groups that serve that lobby to return non-stop to the main floor. The key operated switch when moved to the "Re-set" position, shall restore normal service independent of the sensing devices. Sensors at each floor shall be connected separately from sensors at main floor. Smoke detectors shall be photoelectric type, supplied by fire alarm contractor. Submit drawings showing locations of smoke heads and exposed conduit for Owner's approval prior to installation.
- d. Provide a three position (off-hold-on) key-operated switch in each car fire service compartment per ASME A17.1 and shall be effective only when the main floor key-operated switch is in the "on" position or a sensor has been activated and the car has returned to the egress floor or other approved level. The key shall be removable in all positions, and shall not change the operation until the car is at a floor with doors fully opened.
- e. The operation of elevators on Fire service shall be as follows:
- 1) An elevator shall be operable only by a person in the car.
 - 2) Elevators shall not respond to elevator corridor calls.
 - 3) The opening of power-operated doors shall be controlled only by continuous pressure "open" buttons or switches. If the switch or button is released prior to the doors reaching the fully open position, the doors shall automatically re-close. Open doors shall be closed by continuous pressure on "Door Close" switch or button.
 - 4) Means shall be provided to cancel registered car calls.
 - 5) When the switch is in the 'hold' position, the car shall remain at the floor with its doors open.
 - 6) Elevators can be removed from individual car fire service by moving the key-operated switch to the "off" position and the car is at the main floor or other approved level.

- f. The switches required above shall be operated by the same key but are not a part of a building master key system. There shall be a key for the main floor switch and for each elevator in the group and these keys shall be kept on the premises by persons responsible for maintenance and operation of the elevators, in a location readily accessible to authorized persons, but not where they are available to the public. TURN OVER ALL KEYS TO PROJECT MANAGER or ELEVATOR PROGRAM MANAGER.
 - g. Instructions of operation shall be provided as required by code.
2. Elevators arranged for dual operation shall:
- a. Conform to the automatic operation described above when on automatic operation.
 - b. When firefighter's emergency operation is activated and the elevator is on independent or inspection operation the elevator shall be provided with a signal system consisting of both visual and audible types to alert the attendant to close the door and return non-stop to the main floor or other approved level. Provisions shall be made to alert the attendant in the same manner when a heat and smoke or products of combustion sensing device is activated.
 - 1) Floor Fire Service:
 - 2) Alternate Floor Fire Service:
 - 3) The activation of a sensing device at the lobby (Item 2. above) shall cause all elevators to return non-stop to the alternate floor and the doors shall open and remain open. (The alternate fire service floor shall be defined as any building floor other than the main fire service floor) which will be the floor indicated in the section above.
 - 4) Operation of the elevators shall conform to "Firefighters Service". When sensing devices are activated, the elevators shall return non-stop to the designated main floor and the doors shall open and remain open. When building sensors activate at the main fire service floor, elevators shall automatically be dispatched to that building's designated "alternate" fire service floor as indicated in the section above, where the elevator doors shall open and remain open.
- L. Independent Service Operation:
- 1. Independent service operation shall permit one or more elevators to be removed from the group control and used without interfering with the normal operation of the remainder of the group.
 - 2. Provide a two-position switch in the car-operating panel for each elevator.
 - 3. When the switch is placed in the independent service position, the mode of operation shall be amended as follows:
 - a. The car is disconnected from the group supervisory system.
 - b. Existing car calls shall be canceled.
 - c. The cars shall bypass landing calls.

- d. Continuous pressure on the car button of the selected floor shall close the doors and start the car toward the selected floor. Pressure shall be required on the button until the car starts. Releasing the car button before the car starts shall cause the doors to automatically reopen.
 - e. After the car has arrived at the floor and the doors have automatically opened, the cars shall remain at the floor until another car button is pressed or until the key switch is returned to the normal position.
 - f. Should all cars be put on independent service, all hall calls registered shall be canceled. Further registration of hall calls shall not be acknowledged.
- M. Load Bypass Operation:
- 1. Shall automatically delete hallway call buttons when car is loaded to its limit. Load bypass operation shall be adjustable from the controller to adjust the load at which to bypass hall calls not delete them.
- N. Emergency Power Panel For Fire Service:
- 1. Emergency switch and annunciation panel shall be a 12"x12" brushed stainless steel, with lockable cover, fully recessed panel to be located on the egress floor where indicated on drawings. The panel shall have indicating red lights showing locations of cars during emergency power condition.
 - 2. Provide key switches for auto and manual operation, followed by the elevator number for each elevator in the group.
 - 3. The panel shall be labeled as "Elevator Emergency Panel".
 - 4. See details on mechanical drawings.
- O. Anti-Nuisance Feature:
- 1. Provide an anti-nuisance operation to prevent the elevator control system from responding to a faster than normal rate or registration of car calls. The "normal" rate of registration of car calls shall be programmable on an individual elevator basis within the group.
 - 2. If the anti-nuisance monitor determines that the rate of registration of car calls is excessive as compared to the pre-programmed rate of car calls, all car calls shall be canceled and shall be required to be reregistered.
- P. Automatic Two-Way Car Leveling:
- 1. Each elevator car shall have two-way leveling to automatically bring the car to a stop approximately level with any floor for which a stop has been initiated, regardless of load, rope stretch, or direction of travel.
 - 2. Automatic leveling control shall permit the synchronization of door opening with the stopping of the car at a floor.
- Q. Machine Finish and Painting: All exposed surface of machines, motors and controllers shall be cleaned of rust and repainted after field installation and before acceptance by Owner with rust resisting gloss enamel light gray paint.
- R. Remote Monitoring For Elevator Controller Diagnostics:
- 1. Web based monitoring system shall be installed and operational by elevator contractor.
- S. Elite PI (Position Indicator) Computer Specs:

1. The display shall be an active matrix TFT screen and be powered by a computer with enough memory to support customer specific text and graphics. The display must interface with the elevator controls to support position, direction and status of the car and or bank. In addition the display must be able to support customer programmable scheduled messages in text or graphic format. The system must have software that allows the customer to change the design and transfer to each display individually.
2. Specification minimums for the computer (furnished by end user) to interface with a C.E. Electronics, Inc. Elite PI Display:
 - a. Windows XP or better.
 - b. Pentium/Celeron 2 GHZ or better.
 - c. 512 MB of RAM.
 - d. 100 MB free drive space.
 - e. Network connection.
 - f. USB ports-2.
 - g. CD drive.
 - h. Keyboard & mouse.
3. Monitor:
 - a. 800x600 resolution or better.
 - b. 16 bit color or better.
 - c. 15 inch or larger.
 - d. Orientation: as shown on Mechanical drawing detail.
4. Specs on the Elite's:
 - a. Processor: Intel Celeron M processor 800 MHz.
 - b. Ram: 256 MB Ram DDR-SO-DIMM.
 - c. Chipset: Intel 82852GM, 400MHz FSB, integrated graphicsM
 - d. Video Controller: Intel Extreme Graphics2 controller,
 - e. Storage: 40 GB notebooks hard drive.
 - f. OS: XP Embedded services pack 2.

2.7 HOISTWAY EQUIPMENT & HOISTWAY ENTRANCES

- A. Provisions for Hoistway Access:
 1. Elevator door safety plug-lock- Keyway - Furnish and install hoistway door unlocking devices at all landings with Tri-lock MFG. & MAINT. CORP. key NO. 6950 in accordance with requirements of the latest Edition of the American Standard Safety Code for Elevators, Dumbwaiters, and Escalators, and as permitted by the Local Code.
 2. The hoistway door-unlocking device shall unlock and permit the opening of the hoistway door from any floor irrespective of the position of the car. The design of the device shall be such as to prevent unlocking the door with common tools. The means for unlocking the door shall be available and used only by inspectors, maintenance, and repair personnel.
 3. Access Switches - Furnish and install hoistway access switches and associated devices (at the top and bottom landings in accordance with requirements of the latest Edition of the American Standard Safety Code for Elevators, and Escalators, and as permitted by the Local Code.
- B. Top of Car Operating Device:

1. An operating device shall be provided on the top of the car located in the front between the car crosshead and hoistway door, complete with an Emergency Stop Switch, GFCI plug, fire service lamp and buzzer, lamp and guard, a Selections Switch, UP, DOWN and safety operating Buttons. This device shall comply with ASME A17.1 and local codes. Approved by elevator manufacturer.
2. Operation from the top of the car shall not be permissible unless all electric door contacts are closed.
3. Elevator(s) shall be provided with at least two electric light fixtures and a convenience power outlet fixture on the car top. The two light fixtures combined shall provide an illumination level of not less than 10fc measured at the point of any elevator part or equipment, where maintenance or inspection is to be performed from the car top. The light fixtures shall be permanent and be of the fixed or portable type and shall be equipped with guards. The light switch shall be accessible from the landing when accessing the car top.

C. Pit Stop Switch:

1. A switch or switches shall be located in each elevator pit, in accordance with ASME A17.1 and local codes, which when turned to the "OFF" position will cause the electric power to be removed from the elevator motor and brake. This switch shall be lockable in the "OFF" position.

D. Emergency Alarm Bell:

1. Provide an alarm bell with its own battery source and recharging unit for emergency power unit, mounted on the car. When the emergency alarm bell button in the car is pressed, it shall illuminate and the alarm bell shall sound. Operation shall be in accordance with ASME A17.1 and the State of Michigan Elevator Code.
2. DBA level of the alarm bell shall be 80-85 DBA.

E. Hoisting And Governor Ropes:

1. Provide hoisting suspension means & ropes, specifically designed for elevator service, of sizes and numbers sufficient to comply with the requirements of the Code. The number and sizes of ropes proposed to be used shall be indicated on the shop drawings.
2. Governor ropes shall comply with the requirements of the Code, shall be at least 3/8 inch in diameter, and specifically designed for elevator service.
3. Use only wedge type sockets to fasten the ropes.

F. Counterweights and Roller Guides:

1. Elevator shall be suitably counter-balanced for smooth and economical operation by adjusting the quantity of weights. Weights shall be contained in a structural steel frame properly guided with suitable roller guides. The counterweights shall be equal to the weight of the complete elevator car and approximately 40% of the rated load.
2. The counterweight frame shall be equipped with roller guides. Each roller guide shall consist of three wheels, each a minimum of 6" inches in diameter, tired with a durable resilient material. The guides shall be designed as to maintain continuous contact with the guide rails.

3. If contractor desires to reuse existing counterweights and frame, he/she shall submit a certified letter by a professional structural engineer that they will meet the loads and reactions of the new elevator system and without any defect.

G. Guide Rails:

1. Provide steel tee guide rails to meet ASME A17.1 requirements, including suitable brackets and clamps for attachment to the building structure. The guide rails and car frame shall be located such that the car is in balance with guides. The machined tongue and groove joints shall be fitted with machined fishplates fastened to each rail with at least 4 through bolts.
2. All joints shall be located free of interference with supporting clamps and brackets. Shims used to obtain rail alignment shall be designed to remain in position, even though the fastening bolts may be loosened.
3. The guide rails shall be installed and aligned with their machined faces plumb within one-eighth of an inch from the top to the bottom of the hoistway.
4. Minimum Rail size shall be 15 pounds per foot for both car and counterweight guides. Upgrade rails based on application.
5. The car and counterweight guide rails shall be realigned, refinished and cleaned so that the faces of the rails are plumb within one-sixteenth (1/16) of an inch in 100 feet of travel. Refinish rails for smooth operation and paint back plains with black paint.

H. Buffers:

1. Provide oil type buffer for speed over 200 fpm, buffers shall be in accordance with ASME A17.1 code. The buffers shall be fastened to steel channels provided and installed by the elevator contractor.
2. Provide spring type buffer for under 200 fpm, buffers shall be in accordance with ASME A17.1 code. The buffers shall be fastened to steel channels provided and installed by the elevator contractor.
3. If contractor desires to reuse existing buffers, they shall clean, refurbish, and test that they will meet the loads and reactions of the new elevator system and without any defect.

I. Normal Stopping Devices:

1. Slow-down and normal stopping devices shall be furnished and installed for each car. These devices shall be so arranged that, as the car approaches either terminal landing, a series of activation devices mounted in the hoistway shall activate bi-stable magnetic reed switches mounted on the car and automatically bring the elevator to a smooth stop at the terminal floor.

J. Final Limit Switches:

1. In addition to the normal limit stops, a hoistway final limit switch shall be installed at the top and at the bottom of each hoistway. These final limit switches shall be operated by a fixed cam securely attached to the car. The switches shall be so located that they are operated should the car travel a predetermined distance above or below the upper or lower terminal floor. These limit switches shall be independent of any other stopping devices, shall be positively opened without the use of springs and shall cut off all power from the motors and brakes and prevent the operation of the car in either direction.
2. Final limit switches shall be so located that they open at or about the time the buffer is engaged by the car or counterweight.

K. Deflector Sheaves:

1. Deflector sheave: Provide new deflector sheaves to properly lead the hoisting ropes from the machine to the car and/or counterweight. Sheaves shall be cast iron, accurately machined and grooved for the diameter of ropes used and supported by steel beams furnished in place by the elevator contractor. The bearings shall be permanently lubricated type commonly referred to as (sealed) bearings (non-grease-able type).
2. Existing steel channels at top of hoistway may be reused if engineering data supplied by Elevator Contractor supports their reuse. Guards and beams if reused shall be stripped and repaint.
3. Deflector sheave guard: When deflector sheave extends below the bottom of machine beams, a substantial metal guard shall be provided below the sheave and attached to the sheave supports.

L. Landing System:

1. This landing system shall provide high speed stepping signals, one-floor-run stepping signals, leveling, and door zone signals. Each output signal shall be electrically isolated and shall be capable of reliably operating at 120 VAC.
2. Landing system shall be provided by the elevator controller manufacturer.
3. The leveling and stopping accuracy of the system shall be within 1/4 inch of the floor level and shall correct for over travel or under travel to within the same accuracy, regardless of load variations or direction of travel.

M. Hoistway Doors:

1. New doors shall be flush hollow metal panels fabricated of No. 16 U.S. gauge steel, minimum. The doors shall be 1-1/4" thick and reinforced with continuous members. Panels shall have sound deadening insulation. Doors shall have removable non-metallic gibs to run in the sill guideway with minimum clearance. Door panels shall conform to the National Elevator Code ASME A17.1 and the Underwriter's Laboratories 1-1/2 hour fire test requirement. Door unlocking devices shall be provided at all floors and as required by local codes. Sight guards shall be provided for all entrances. Provide new hoistway doors at all landings. The doors shall be equipped with Nylube door guides.

2. Hoistway landing interior finish shall be painted white.
3. Hoistway landing doors exterior finish shall be stainless steel.
4. Hoistway door unlocking devices at all landing shall be provided with TRI-Lock removable plugs with key number 6950.

N. Hoistway Doors (Freight):

1. The doors shall bear a 1 1/2 hr. UL Label.
2. Doors shall meet ASME A17.1 code requirements.
3. Doors shall be solid panels with resilient edges.
4. Doors construction to be "316" stainless steel.
5. Doors operation shall be power type. Each door shall be electrically operated with two motorized 2-speed door operators mounted on either side of the assembly. An automatic stay-open, feature shall assure that the door stays fully open. All operating mechanisms shall be entirely within the elevator shaft. The controls shall permit immediate emergency manual operation.
6. Rails for the doors shall be steel construction and have adjustable trucking sill stops.
7. Door sections shall be connected to each other with suitable roller chain running over grooved ball bearing sheaves.
8. Door shall be interlocked with the elevator controls to prevent normal operation of the elevator unless all doors are closed and locked, and to prevent door opening when elevator is in motion.
9. Door electrical characteristic is 208v, 3phase, 60cycle, with 30AMP circuit.
10. Refer to detail on Mechanical drawings.
11. Observation window is to be provided per ASME-A17.1.
12. Door shall be with automatic closing feature, with horn while it is closing. Operation shall be of the sequenced type.

O. Entrance Frames:

1. New unit frame shall be fabricated of No. 14 U.S. gage steel comprising the head and side jamb sections, which shall be securely bolted to from one piece unit construction and shall be securely fastened to the sill and hanger support. They shall be returned on the hoistway side to present a neat appearance.
2. To be reused, sand, fill-in dents. Refer to Architectural Division 9 for painting information.
3. Wrap existing frame with material specified on drawings. Wraps are to completely cover all surfaces of existing frame.

P. Sills:

1. Sills shall be of extruded aluminum construction with a non-slip wearing surface. They shall be supported on steel brackets and securely fastened to the floor. Grooves for the door guides shall have minimum clearance for the guides. The sills must be suitable for "class C3" loading.
2. To be reused, clean and polish each sill.

Q. Struts:

1. A 3"x3"x ¼" steel angle struts shall extend from the sill to the building beam above and shall be securely fastened to ensure rigidity and adequate support for the header.
2. To be reused sand, prime and paint black.

R. Headers:

1. Header shall be constructed of 3/16" formed steel to provide support for the frame and hangers.
2. To be reused sand, prime and paint black.

S. Fascia, Covers, and Toe Guards:

1. Fascia, including hanger covers, toe guards and dust covers shall be fabricated of No. 16 U.S. gauge steel. Fascia shall span the width of the opening plus 6 inches. Dust cover extends a minimum of 8 inches above the header and the toe guard shall extend a minimum 8' below the sill. Both shall return to the wall at 60 deg. angle.
2. Elevator contractor shall comply with variance obtained by the Owner from the State of Michigan Elevator Safety Division.
3. Finish:
 - a. Struts, headers, hanger cover, fascia, dust covers, and toe guards shall have matte black finish. New entrance frames (existing) shall be finished in stainless steel of color selected by Owner. All landing doors shall be new and finished in white enamel (to add reflectance in the hoistway).
 - b. All existing headers and jambs shall be stripped to bare metal, prepared with primer and finished with two coats of enamel paint.
4. To be reused sand, prime and paint black or provide new.
5. Finish:
 - a. All existing headers and jambs shall be stripped to bare metal, prepared with primer and finished with two coats of enamel paint.

2.8 CAR EQUIPMENT & CAR ENCLOSURES:

A. Power Door Operation:

1. The car and hoistway doors shall be operated quietly and smoothly by an electric operator, which shall open and close the car door and respective hoistway door simultaneously. The doors shall open automatically when the car is leveling at the respective floor and, when operating without an attendant, shall close after a predetermined time has elapsed. Momentary pressure on the "Open Door" button in the car shall cause the doors to remain open or, if closing, to reopen and reset the time interval.
2. The doors shall be opened at rated speed and the closing speed shall be per Code. Door closing force shall be as allowed by code.
3. An electric contact for the car doors shall be provided which shall prevent elevator movement away from the floor unless the door is in the closed position as defined by code.
4. Each hoistway door shall be equipped with an auxiliary door closing device and a positive electro-mechanical interlock to prevent the operation of the elevator until the interlock circuit is established and the doors are locked and closed.
5. Car doors shall be provided with zone locking.

B. Landing Door Hangers:

1. Each hoistway door shall be suspended by two (2) sheave type hangers. Each hanger shall consist of a polyurethane tread on a metal hub equipped with precision ball bearings mounted onto a steel bracket. The hanger sheaves shall not be less than 3-1/4 inches in diameter. The track shall be so shaped as to permit free movement of sheaves without regard to vertical adjustment of the sheave brackets. An up-thrust roller shall be provided beneath the track and each sheave wheel, capable of withstanding a vertical thrust equal to the carrying capacity of the upper sheave. The up-thrust roller shall be adjustable for fine vertical adjustment and the face of the roller shall be so shaped as to conform to the bottom face of the hanger track. Doors closers shall be sill mounted.
- C. Provide new door protection and reopening device.
- D. Adaptive door timing:
1. Door open times will be varied subject to the call situation causing the stop:
 - a. Shortest timing, when car call only causes stop.
 - b. Longer timing, when hall call only causes stop.
 - c. Longest timing, when coincident hall and car calls exist.
 - d. All timing shall meet ADA guidelines as a minimum.
 2. The door opening time, measured from the instant the doors start to open until within 1" of fully open position, shall not exceed code standard.
 3. Long door and short door "hold open" times shall be set at 4.0 and 2.5 second respectively and shall be ADA compliant.
- E. Car sling, safeties and governors:
1. Provide new car sling and safeties.
 2. The new safety, of type required by Code, shall be mounted on the bottom members of the car frame and shall be operated by a speed governor located over the hoistway. The safety shall be arranged to stop the car whenever excessive descending speed is attained and means shall be provided to cut off power from the motor and apply the brake prior to application of the safety.
- F. Car platforms and flooring:
1. Each passenger type car platform shall consist of a structural steel frame with a wood and metal composite floor (i.e. one layer of 3/4" marine grade plywood plus 14 gauge steel plate plus 3/4" thick marine grade plywood plus finish flooring). Top finish flooring on cars shall be furnished and installed by elevator contractor and shall be as described in Car Enclosures Section below.
 2. Each passenger type platform shall be equipped with an extruded aluminum threshold and a steel toe guard at the loading edge. The underside of the platform shall be comply with local codes.
 3. The platform shall be capable for handling the capacity of the car being loaded in one-piece across the entrance of the car and landing.
- G. Platform isolation:

1. Each passenger type platform shall be mounted on rubber pads supported on an auxiliary steel frame fastened to the car frame. This arrangement shall form an isolating cushion between the car and the steel car frame.

H. Car roller guides:

1. The car system shall be provided with roller guides. The guides shall be designed so as to maintain continuous contact with the guide rails.
2. The elevator frame shall be provided with roller guides. Each roller guide wheel shall be 6" in diameter, tired with a durable resilient material. The guides shall be designed so as to maintain continuous contact with the guide rails.

I. Interior car doors:

1. Provide car Doors flush hollow stainless steel panels. Panels shall have sound deadening insulation. Doors shall have removable non-metallic gibs to run in the sill guideway with minimum clearance. Door panels shall conform to the National Elevator Code ASME A17.1 and the Underwriter's Laboratories 1-1/2 hour fire test requirement. Door unlocking devices shall be provided as required by local codes. The doors shall be equipped with door guides.
2. Car door hangers and tracks shall be provided similar to hoistway doors.

EDITOR: THIS OUR STANDARD FINISH. MODIFY SECTION BELOW TO MATCH CUSTOM DESIGN. Doors finish shall be #4, brushed stainless steel.

J. Car Enclosures:

1. All cab material; design, lighting, ventilation and exits shall comply with "American National Standard Safety Code for Elevators, ASME A17.1 and/or local codes. Where codes conflict the more stringent shall apply.
2. Wall panels and reveals shall be of rigidized 316 stainless steel constructions and applied to a steel shell.
3. Returns shall be of stainless steel construction and have a #4 brushed finish. Cutouts shall be provided for operating elements and fixtures. Minimize thickness of return to maximize clear floor area.
4. Canopy shall be constructed from formed and reinforced 16 gauge steel finished in white enamel paint and shall have an overall height of 8'0" from the finished floor. An emergency exit shall be provided which is locked from the top of the car.
5. Entrance columns shall be #4 brushed stainless steel finish. Columns shall run from floor to canopy, be finished in a vertical grain, and shall be integral to the returns.
6. Entrance transom shall be #4 brushed stainless steel finish. Columns shall run from floor to canopy. Transom shall run the full width of the car and be finished in a horizontal grain.
7. Doors shall be of hollow stainless steel construction with #4 brushed finish, suitably reinforced and sound deadened. Equipped with Nylube door guides.
8. A 3/8" x 2" bar handrail with radiused ends of #4 brushed stainless steel finish shall be provided to meet code requirements, on side and back walls but shall not interfere with car operating panel.

9. A 3/8" x 4" bar crash rail with radiused ends of #4 brushed stainless steel finish shall be provided to meet code requirements on side and back walls but shall not interfere with car operating panel
10. Car sills shall be extruded aluminum. Car sills for elevator in parking structures shall be nickel silver.
11. Provide (1) or (2) continuous LED strip light fixtures at the top of both side walls of the car. Upper light to be located 3" below ceiling canopy with the lower light 3" below.
 - a. LED linear fixtures approx. 3/4" x 3/4", with beveled profile, installed to cast light down onto floor of car. Total lighting level must equal or exceed 10 foot-candles at floor level in car. Power supply unit to have 115 VAC input voltage, and 20 VDC output.
 - 1) Manufacturer / Model: Man-D-Tec, 4590, Mounting Style C.
 - 2) Finish: Mill Finish Aluminum.
 - 3) Color Temperature: 3000K Warm Light.
12. A single speed fan shall be provided that matches the ceiling and is mounted to the canopy. Air intake to the fan shall be through the 3/8" diameter holes (adequate in number to allow free passage of required air quantity) drilled in canopy. Submit shop drawing of canopy for approval prior to fabrication. CFM as required per ASME A17.1. Sound level is to be 45 DBA max.
13. Finished floor covering shall be furnished and installed by the elevator contractor. Flooring shall be homogenous thermoset rubber tile, and meet all codes for elevator car materials.
 - a. Product: Mannington, Color Anchor Rubber Collection, ColorSpec style. Size to be 18"x18", texture to be "sculptured," and color to be selected by Owner from manufacturer's standards. Utilize adhesives recommended by the manufacturer.
 - b. Attic Stock: Contractor is to provide one (1) unopened box of tile in addition to any remaining open box(es) as attic stock, turned over to the Owner after installation is complete. Product to be delivered to the elevator machine room(s).
14. Finish floor covering shall be a quarter inch thick with a matte finish and raised diamond shapes, 10-gauge aluminum.
15. Provide removable protective wall pads with padlocks inside elevator car to protect the wall panels. Pads shall meet all codes for elevator car enclosures.
 - a. Product: Palmer "PalmTuff Vinyl Pads", West Coast, or equal approved by designer. Color to be selected by Architect from manufacturer's standards.
16. Pad Storage Cabinet: Contractor is to provide a lockable two-door metal storage cabinet of a size adequate to hold all of the pads for one (1) elevator in a single cabinet. If the project is for multiple elevators, discuss in advance with Architect whether one or multiple cabinets are preferred.

2.9 OPERATING FIXTURES

- A. Car Operating Panel (COP):

1. The operating panel in the car shall consist of a vandal resistant stainless steel control panel. (Taper all projected sides of car panel back to return panel for a neat appearance. Submit drawings for approval prior to fabrication.) The main control panel shall contain a series of push buttons with illuminated call registration devices, numbered to correspond to the various landings serviced. It shall include a Car Stop Switch, Fire Service Compartment, Alarm Button (connected to a bell located on the car) and a Door Close, Door Open button for each entrance. Alarm bell shall be operated from its own independent battery pack power supply and recharging system. The control panel shall also contain separate key operated switches for Access, Independent Service, Car Lights, Car Fan, Emergency Light and Test Switch. Emergency phone shall be hand free type. Panel shall also accommodate hand free phone and digital car position indicator.
 2. Engrave on the COP the State Serial No., rated load capacity, and the locally used name or number of the elevator (provided by U-M).
 3. Buttons shall be made of brushed stainless steel with LED for illumination, with translucent floor designations, with adjacent tactile floor number and Braille tags.
 4. Provide emergency light in car-operating panel with rechargeable nickel cadmium batteries and recharging system.
 5. Provide engraved fire services instruction per ASME A17.1.
 6. Floor Passing Chime:
 - a. Provide a floor-passing chime and voice annunciation to meet ADA requirements. Mount in main car operating panel.
 - b. Refer to detail on Mechanical drawings.
- B. Hall Call Button Panel:
1. ADA compliant vandal resistant illuminating LED type hall push buttons shall be installed at each floor to permit waiting passengers to call the elevator to the floor.
 2. Fixtures shall have buttons with up and down and Braille tag adjacent to the button on the left at intermediate floors and single buttons at top and bottom floors.
 3. Buttons shall be made of vandal resistant stainless steel and shall illuminate to indicate a call has been registered. Button shall remain illuminated until the call has been answered. Provide oversized vandal resistant brushed stainless steel cover plates at all push button stations to cover all openings (including the openings that result from removal of existing hall push button stations or any other devices). The Braille signage adjacent to the directional button requires at least half inch lettering denoting the direction of the button.
 4. Provide engraved graphic per ASME A17.1 emergency sign and illustration on all hall call station plates: "IN CASE OF FIRE USE STAIRWAY FOR EXIT, DO NOT USE ELEVATOR".
 5. Hall push button panel shall accommodate the hall position indicator (HPI).
 6. Hallway push button shall be flush wall mounted fixture type.
 7. Refer to details on Mechanical drawing.
- C. Communication system (telephone):
1. Provide hands-free vandal resistant emergency telephone in the car, with wiring (shielded pairs) to terminals on control panel in machine room. Engraved per ASME A17.1 requirements.

2. Phone shall keep working during power failure. Coordinate work with U-M ITCOM. Phone shall be one push button to talk type and flash when call is answered. Telephone shall be an integral part of the car panel.
 3. Annunciator Interface, Auxiliary Relay and 24V LED Board: The board shall be mounted behind the phone in the elevator car operating panel which contains an auxiliary relay that can be tied to DDC panel in the future, if desired by Owner. When the board is programmed correctly, a local phone line will receive an alarm whenever the phone detects the line. Has failed. Note that the car traveling cable containing the phone line must be expanded to contain a pair of wires for connection to the nearest DDC panel for future use.
 4. Alarm unit shall be mounted in the designated floor elevator lobby per elevator code ASME A17.1 as part of the egress floor hallway push button and shall be wired to the phone in the car operating panel. The alarm unit will contain the code required local alarm light, sounder and a momentary key switch on a label back plate. The traveling cable containing the phone line and pair of wires for the DDC circuit must be expanded to contain a pair of wires from the phone to the alarm unit.
- D. Car traveling lantern:
1. Provide on both sides of car door jambs and shall be ADA compliant.
 2. Refer to detail on Mechanical drawings.
- E. Car Position Indicator:
1. A LED (Light Emitting Diode) vandal resistant digital type position indicator shall be provided inside car, as part of main car operating panel (COP). It shall indicate the floor at which the car is stopped or passing and the direction the car is traveling. The cover plates shall be #4, brushed Stainless Steel.
 2. Manufacturer: Refer to Part 1 of this Section.
 3. Refer to detail on Mechanical drawings.
- F. Special Key Feature:
1. Key Switches: Provide (1) master for access on & off, and (1) for momentary override. Keys shall be keyed to U of M's Key System and shall be coordinated with Key Office through Project Manager.
 2. Provide card reader per U-M standard, coordinate with the U-M Key Office and ITS through Project Manager.
- G. Hall Position Indicator:
1. Provide at each floor in elevator lobby over the doors. Follow specification for car position indicator.

2.10 ELECTRIC WIRING:

- A. Complete insulated wiring shall be furnished and installed to connect all parts of the equipment furnished by the elevator contractor. Wiring shall conform to the requirements of the latest edition of the National Electrical Code. Include rigid conduit or EMT, at least 1/2" diameter, and short lengths of flexible conduit. Conduit or EMT shall terminate in junction boxes. Conduit, EMT, wiring duct, conduit fittings, enclosures and junction boxes shall be galvanized steel or aluminum.
- B. All wiring shall have a flame retarding moisture resisting outer cover and shall be run in metal conduit, flexible metallic tubing, or wire ducts.
- C. Traveling cables shall have flame retarding and moisture resisting outer cover. They shall be flexible and suitably suspended to relieve strains in the individual conductors. Provide the required quantity plus at least 10 percent spares. All wiring between telephone cabinet in car and a junction box in elevator machine room shall be provided by the elevator contractor. Conductors shall be numbered to correspond to numbered terminals at the car and machine room.
- D. Terminal blocks shall be coded to identify the circuits. Multi-conductor cables shall have the conductor color coded and numbered.
- E. The elevator car top shall be provided with a suitable GFCI duplex plug receptacle. Car top lighting shall comply with State of Michigan Elevator Code requirements.
- F. Unless otherwise specified, control wiring shall be a minimum size of #18 AWG. Wire size shall be large enough so that the voltage drop under inrush conditions will not adversely affect operation of the controls.
- G. Electrical Receptacle in Car: Provide always accessible GFCI duplex electrical receptacle in car below COP. Locate receptacle approximately 4" above finished floor. Provide face plate on receptacle to wall match panel material.
- H. Execution:
 - 1. Install all power wiring in raceway systems. No exposed wiring or conduit shall be run in finished areas without prior written approval of Owner.
 - 2. Splice cables and wires only in outlet boxes, junction boxes or pull boxes. (Note - No wire splicing allowed in raceway or wire ducts).
 - 3. Install cable supports for all vertical feeders in accordance with the NEC. Provide Kellum GRIP type supports, which firmly clamp each individual cable and tighten due to cable weight.
 - 4. All terminal strip connections shall be identified with corresponding reference numbers from cable termination chart and electrical straight-line diagrams.

2.11 DIAGNOSTIC TOOLS

- A. Provide all required service diagnostic tools and sundries necessary for diagnostic evaluations, system monitoring and field adjustments. The cost to the Owner of these tools and accessories shall be included in the quoted price of the equipment and be specifically listed in the proposal.
1. Diagnostic service tools may be hand held devices or they may be on-board integral components of the vertical transportation equipment controllers.
 2. Tools and instructions for the operation of the tools, as pertains to all functions relating to the equipment, shall be provided to the Owner upon completion of the project.
 3. The Elevator Contractor shall maintain and update all diagnostic tools, accessories and instructions provided to the Owner. Should the Elevator Contractor's contract for installation or for subsequent continuing maintenance service be cancelled for any reason by either the Owner or the elevator contractor, the Elevator Contractor shall be obligated to provide continuing maintenance and updating of the diagnostic tools to the Owner at the Elevator Contractor's direct cost plus a reasonable charge for profit and overhead for labor and materials.
 - a. Labor charges shall not exceed the Elevator Contractor's standard elevator mechanic hourly billing rates. In addition, the Elevator Contractor shall provide field and technical assistance and instruction to the Owner or Owner's representatives or elevator maintenance company, upon the Owner's request within a reasonable time following the Owner's request and be compensated in a similar manner as previously described.

PART 3 - EXECUTION

3.1 ACCEPTABLE ELEVATOR INSTALLERS

- A. Acceptable installers: Subject to compliance with the requirements specified herein, installers offering product approved by the Owner are limited to the following listed companies. Elevator installer for project must provide the equipment as specified.
1. Elevator Service, Inc.
 2. Kone Elevator Co.
 3. Lardner Elevator Co.
 4. Otis Elevator Co.
 5. Schindler Elevator Inc.
 6. TK Elevator Co
- B. Note: Above is not a list of elevator manufacturers; it is a list of INSTALLERS only. Elevator installer must provide the equipment specified.

3.2 EXAMINATION

- A. Inspect all surfaces, and required embedded anchorage devices, and verify that they are in proper condition to receive the work of this Section. Verify that field measurements are as indicated on approved shop drawings.

1. Prior to preparation of drawings, the contractor shall examine the hoistway, pit, and machine room areas and verify that nothing will adversely affect the execution of the work.
 2. No exposed wiring or conduit shall be run in finished areas without prior written approval of Owner.
- B. Beginning of installation means acceptance of existing conditions.

3.3 PERFORMANCE

- A. Contact speed: Actual speed shall vary no more than +/- 5% from speed specified under any loading condition or direction of travel.
- B. Leveling Accuracy: Consistently level within +/- 1/4" under loading conditions.

3.4 PERFORMANCE GUARANTEE

- A. The elevator contractor shall assume full responsibility to furnish and provide a complete and functional elevator and to obtain and furnish the University final State Elevator Inspection approval. All costs necessary to correct code deficiencies cited by the State Elevator Inspector will be paid by the elevator contractor as part of this Contract at no additional cost to the Owner.

3.5 TECHNICAL TRAINING

- A. On-site technical training shall be held for the purpose of familiarizing Elevator Support Mechanics with operations and troubleshooting procedures. The session shall accommodate up to ten personnel in each session and consist of eight hours of training. Provide two 1-day sessions. Provide a third eight hour a day reserved for any additional diagnostic training. Training on equipment controller shall be provided only by trained factory service engineers of controller manufacturer through the elevator installer. Elevator acceptance demonstration and performance test (commissioning by u of m elevator DEPARTMENT).

3.6 ACCEPTANCE DEMONSTRATION AND PERFORMANCE TEST (COMMISSIONING BY U OF M)

- A. Demonstrate to Owner, or Owner's designated representative, the operation of the elevator system. Demonstration shall include:
1. Installation compliance with specifications.
 2. Contract speed, capacity, and floor-to-floor performance compliance with specifications.
 3. Stopping accuracy and car ride compliance with specifications.
 4. Operation of signal fixtures and operation of supervisory or dispatching system.

5. Promptly remove all work rejected by the Engineer for failure to meet specifications and replace the rejected work to comply with requirements, at no additional cost to the Owner. All expenses of repairing work of other Trades damaged by this replacement shall be borne by Contractor.
 6. Rejected work which is not made good within a reasonable time, determined by the Engineer, may be corrected by the Owner at Contractor's expense.
- B. Upon completion of installation and before final acceptance, conduct a running speed test with full design load to verify compliance with performance requirements. Also refer to Article 1.3 of this division.
 - C. Operating Instructions: Provide instructions to the Owner's personnel, including safety procedures, proper operation of the equipment, and routine maintenance procedures.

3.7 CLEANUP

- A. Keep work areas orderly and free of debris on a daily basis.
- B. Remove filings and loose materials resulting from this work from hoistways.
- C. Clean all dirt, oil and grease from machine room and pit equipment and floors.
- D. Clean car, car enclosures, entrances, hoistways, operating and signal fixtures and trim of dirt, oil, grease, and finger marks.
- E. Polish all stainless steel components.

END OF SECTION 142100

P000 0000

SPECIFICATION DIVISION 14

NUMBER SECTION DESCRIPTION

DIVISION 14 CONVEYING SYSTEMS

SECTION 144216 - WHEELCHAIR LIFT

END OF CONTENTS TABLE

DIVISION 14 CONVEYING SYSTEMS
SECTION 144216 - WHEELCHAIR LIFT

PART 1 - GENERAL

1.1 GENERAL CONDITIONS

- A. The Contractor under this Division (a lift or elevator contractor) is referred to the Contract Forms and General Conditions of these specifications, all of which apply to this Division.

1.2 SCOPE OF WORK

- A. The work of this division shall consist of the complete ADA-compliant Wheelchair Lift.
- B. Include manufacturer's enclosure.
- C. Install lift within site-built custom enclosure.
- D. Include manufacturer's doors [and / or gates] with frames.
- E. Doors [and / or gates] with frames by architectural trades.
- F. Elevator Contractor shall be familiar with the work by other divisions included in the contract. This must be done in accordance with the codes having Jurisdiction and approval drawings of the lift/elevator contractor.
 - 1. Architectural work- Refer to architectural drawings and specifications.
 - 2. Electrical work- Refer to electrical drawings and specifications.

1.3 SUBMITTALS

- A. Shop Drawings: Provide shop drawings that show a complete layout, including critical dimensions for installation, details, and anchorages for wheelchair lift. Include internal wiring diagram and requirements for connection to building electrical service.
- B. Samples: Submit finish paint color samples of manufacturer's full standard range of surface coating colors and textures in the form of (3) actual coating material samples applied to metal sample cards of approximately 3 inches wide by 5 inches long.
 - 1. If color is already specified on documents, provide (3) samples of that color only.
- C. Permits and Certificates: Submit one copy of each of the following:
 - 1. Installation permit required under Quality Assurance Article.
 - 2. Inspection and acceptance certificates required under Quality Assurance Article.
- D. Manufacturer's Instructions: Submit operation and maintenance manuals and parts list.

1.4 CODES AND REGULATORY AGENCIES

- A. Applicable elevator and lift codes in effect at the time the permit is drawn shall govern the installation process.
- B. Provide a copy of testing documents to the U-M elevator program manager at the time of testing.
- C. Perform work in accordance with applicable codes, the State of Michigan Elevator Code, the National Electrical Code, and the Safety Standard for Platform Lifts and Stairway Chairlifts, ASME A18.1 as adopted by the State of Michigan, as referenced therein and all of the provisions in the University of Michigan's Standard General Conditions.
- D. Give necessary notices, obtain State permits, pay fees in connection with the installation, including sales and use taxes as applicable, and make tests as are called for by the regulations of such authorities. These test(s) or inspection(s) shall be made in the presence of the authorized representative of such authorities and the owner's representative. It is the responsibility of the lift/elevator contractor to provide any variances from the Governing Authority that could be necessary for a complete acceptable lift/elevator installation.
- E. Lifts shall meet the guidelines of the Americans with Disabilities Act using the section relevant to wheelchair lift.
 - 1. Lifts shall meet the requirements of the State of Michigan Department of Labor Building Code relevant to barrier free wheelchair lift.

1.5 FIELD MEASUREMENTS

- A. Check actual space available by accurate field measurement before fabrication. Show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of work.
 - 1. Where necessary, proceed with fabrication without field measurements, and coordinate fabrication tolerances to ensure proper fit of lift units.

PART 2 - PRODUCTS

2.1 APPROVED MANUFACTURERS

- 1. Garaventa Lift.
- 2. Savaria.

2.2 WHEELCHAIR LIFT

- A. Wheelchair Lift, General: Provide vertical-travel wheelchair lift with roped hydraulic-type lift mechanism, with single-chair capacity, and with manufactured hoistway enclosure. Wheelchair lift, hoistway, components, hardware, and operational features shall comply with requirements of this Section and requirements of authorities having jurisdiction.
- B. Provide wheelchair lift with the following characteristics:

1. Lift Number: Existing Lift State Serial Number is _____.
2. Capacity: 750 lbs.
3. Rated Speed: 15 feet per minute.
4. Travel distance: --'--".
5. Platform size: --" W x ---" L. Field verify.
6. Operation: Constant pressure, anti-creep.
7. Power Supply: 120V, single phase, 20 AMP or as required by manufacturer.
8. Integral main power lockable disconnect switch.
9. Drive type: 1:2 cable hydraulic.
10. Emergency Operation: Rechargeable battery operated system, capable of completing a full up and down cycle.

2.3 CYLINDER AND PLUNGER

- A. The cylinder shall be constructed of steel pipe of a sufficient thickness and suitable safety margin. The top of the cylinder shall be equipped with a cylinder head with an internal guide ring and self-adjusting packing.
- B. The plunger shall be constructed of a steel shaft of a proper diameter machined true and smooth. The plunger shall be provided with a stop electrically welded to the bottom to prevent the plunger from leaving the cylinder.

2.4 PUMP UNIT AND CONTROLS

- A. The drive unit and controller shall be enclosed in the mast. The controller and pump unit shall be pre-wired and tested before shipment. Control circuitry is to be PCB mounted as an integral unit. The pump unit shall include the following features:
 1. Smooth stops at each landing shall be an inherent feature.
 2. Adjustable pressure relief valve.
 3. Manually operated DOWN valve to lower the lift in an emergency.
 4. Pressure gauge with quick connect fitting.
 5. Pressure gauge isolating valve (shut off valve) manually operated.
 6. Gate valve to isolate cylinder from the pump unit.
 7. Fixed pressure compensator flow control valve to set maximum DOWN direction speed regardless of load.
 8. Electrical solenoid for DOWN direction control.
 9. Emergency power raising and lowering by battery power.
- B. Normal Terminal Stopping Devices: Normal terminal stopping devices shall be electro-mechanically sensed at the top and bottom of runway to stop the car automatically.
- C. Final Mechanical Stopping Device: Provide a mechanical stopping device to stop the UP travel of the lift in the event that the Upper Normal Terminal Stopping Device fails.

2.5 NEGATIVE PRESSURE SWITCH

- A. Provide a negative pressure switch between the cylinder and the valve to prevent the operation of the lowering valve unless there is positive pressure at the top of the cylinder.

2.6 LEVELING DEVICE

- A. The lift shall be provided with an anti-creep device which will maintain the carriage level within 1/4" (6.35 mm) of the top landing.
- B. All limit switches and leveling device switches shall be located in a position to be inaccessible to unauthorized persons.

2.7 PIT SWITCH

- A. Switch to be located at the base of the mast that when tripped will remove electrical power to the control circuit and stop the operation of the car.

2.8 GUIDE RAILS AND BRACKETS

- A. Steel "T" guide rails and brackets shall be used to guide the platform and sling.
- B. Guide rails shall form part of the structural integrity of the unit and be integral to the enclosure, ensuring stability and minimum platform deflection when loaded.

2.9 CAR SLING

- A. Car sling shall be fabricated from steel members with adequate bracing to support the platform and car.
- B. Guide shoes shall be mounted on the top and bottom of the car sling to engage the guide rails.
- C. Guide shoes to be solid slipper type.
- D. The car sling arms shall be detachable.

2.10 CAR OPERATING PANEL AND CALL BUTTONS

- A. Shall consist of constant pressure illuminated and tactile buttons, an emergency stop switch, alarm button, and an ON/OFF key switch mounted on a removable stainless steel panel (type 304 #4 stainless steel finish). The key shall only be removable either position.
 - 1. Emergency Telephone: Platform shall be equipped with ADA compliant integrated telephone with a stainless steel faceplate. Telephone shall operate in the event of power failure. A telephone line shall be supplied to the lift site as specified in the electrical sections.
 - a. Use Rath model 2100-907-RA telephone. Do not use manufacturer standard phones.
- B. Hallway Call Buttons: ADA-compliant vandal resistant illuminating LED type hall push buttons shall be installed at each floor to permit waiting passengers to call the elevator to the floor.

2.11 DOORS AND GATES

- A. Doors and Gates shall have a baked powder-coated enamel finish and inserts. Inserts may be solid metal panels or Plexiglas to provide clear unobstructed view of the car while in operation. Provide complete with closer and interlock.
- B. Doors:
 - 1. Location(s): [Upper] [Lower] [and middle] landing(s).
 - 2. Size: [84" high x 35"] clear open width. Height of door frame to be [90 1/4"].
 - 3. Inserts: [Solid metal panel in lower portion and Plexiglas in upper] [All Plexiglas].
- C. Gates:
 - 1. Location(s): [Upper] [Lower] [and middle] landing(s).
 - 2.
 - 3. Size: [42 1/4" high x 35"] clear open width.
 - 4. Inserts: [Solid metal panel in lower portion and Plexiglas in upper] [All Plexiglas].

2.12 FINISH

- A. Paint Coating: Manufacturer's standard baked powder-coated enamel finish, beige. Alternate colors are available from the manufacturer.

2.13 COMPONENTS

- A. Doors: In addition to complying with regulatory requirements, provide doors that are self-closing, swinging type fabricated with internal noise deadening materials and with rubber bumper stops to prevent metal-to-metal contact with jambs.
 - 1. Provide doors with hydraulic door closers (spring hinges not permitted).
 - 2. Provide doors with power door operators.
- B. Seat: Side-mounted, spring loaded seat that in retracted position does not impinge on the required clear width of the platform.
- C. Platform entrance safety device: Photo-electric eye.
- D. Guards and Handrails: Provide guards on both sides of platform with handrails.
- E. Fused Safety-Disconnect: Provide unit in accordance with requirements of authorities having jurisdiction. Locate unit as indicated in Installation article of this Section.

2.14 ELECTRIC WIRING

- A. All wiring and electrical connections shall comply with applicable Codes, insulated wiring shall have flame retardant and moisture proof outer covering and shall be run in conduit or electrical wire ways.

PART 3 - EXECUTION

3.1 ACCEPTABLE LIFT/ELEVATOR INSTALLERS

- A. Acceptable installers: Subject to compliance with the requirements specified herein, installers offering product approved by the owner are limited to the following listed companies. Lift/Elevator installer for project must provide the equipment as specified.
 - 1. 101 Mobility of Ann Arbor
 - 2. Elevator Services, Inc.
 - 3. KONE.
 - 4. Lardner Elevator Co.
 - 5. Schindler Elevator Corp.
 - 6. TK Elevator.

3.2 EXAMINATION

- A. Inspect surrounding wall and floor surfaces before beginning installation. Verify that rough opening tolerances are correct and the landing construction is level. Do not proceed with installation until deficiencies have been corrected.
 - 1. Verify that depressed slab area dimensions and depth are correct.

3.3 INSTALLATION

- A. Comply with manufacturer's printed installation instructions for products and applications indicated, except where more stringent requirements apply. Comply with applicable requirements of authorities having jurisdiction, and the following:
 - 1. Securely fasten lifting structures to the structural floor using expansion anchors or similar devices.
 - 2. Field alteration of factory-fabricated structural elements, including platform and doors is not permitted.
 - 3. Locate fused safety-disconnect as indicated on Drawings, or if not indicated, in a location near the lift mechanism, but not in the hoistway and not in location accessible to the public.

3.4 ADJUSTING

- A. Test and adjust operation of wheelchair lift. Verify, and adjust as required, indicated dimensional tolerances related to enclosure and platform, and landing and platform. Ensure smooth, non-binding operation of platform, doors and other moving parts and assemblies. Ensure proper operation of safety devices and related interlocks. Adjust limit switches to ensure proper alignment with landings.

3.5 CLEANING

- A. Clean surface finishes promptly after installation of unit. Lubricate hardware and other moving parts.

3.6 TRAINING

- A. Training: Demonstrate proper operation to Owner's personnel. Provide not less than 4 hours of training, by a qualified manufacturer's technician, for Owner's personnel in the proper operation and maintenance of the wheelchair lift.

SPECIFICATION DIVISION 21

NUMBER SECTION DESCRIPTION

DIVISION 21 FIRE SUPPRESSION

SECTION 211313 - WET AND DRY PIPE SPRINKLER SYSTEMS

END OF CONTENTS TABLE

DIVISION 21 FIRE SUPPRESSION
SECTION 211313 - WET AND DRY PIPE SPRINKLER SYSTEMS

REVISIONS:

AUGUST 2018: INCORPORATED MICH MEDICINE SPECIFIC REQUIREMENTS (ANTI-LIGATURE HEADS, NO SCH. 10 SPRINKLER PIPE ALLOWED IN INPATIENT AREAS). REVISED B-FLY VALVE MODEL NUMBER TO 705 (708 NO LONGER AVAILABLE), ADD GIACOMINI AS APPROVED FOR FIRE PUMP TEST HEADERS. D. KARLE PER FP/PLMG MTT AND HOSPITAL FP&D.

APRIL 2018: REVISED TO LIST MFR.S FROM PML. R BENEDEK.

AUGUST 2016: REVISED TO ELIMINATE GALVANIZED PIPE AND FITTINGS FOR DRY PIPE SYSTEMS. D. KARLE PER FP/PLMG MTT.

AUGUST 2015: REVISE SPRINKLER HEAD MFR. FROM ANVIL TO TYCO TO REFLECT CORRECT MFR., PER B. BEGG/D. KING. D. KARLE.

APRIL 2015: REVISED TO SPECIFY FOR DRY PIPE SYSTEMS: MATERIAL TO BE SCH. 40 GALV. STEEL PIPE AND FITTINGS, INSTALL PIPE WITH WELD SEAM ABOVE HORIZONTAL CENTERLINE OF PIPE, DRAIN VALVES TO BE INSTALLED AT ALL LOW POINTS, ALL DRY PIPE PIPING TO BE PITCHED. ADDED SPEC FOR DRY PIPE VALVE. KARLE FOR FP/PLMG MTT.

SPEC EDITOR: IN ORDER FOR THE CONTRACTOR TO HYDRAULICALLY DESIGN SPRINKLER PIPING, BID DOCUMENTS MUST INCLUDE TEST DATA INCORPORATING THE LATEST FLOW TEST CONDUCTED BY FACTORY MUTUAL, FIRE PUMP LOCATION, LATEST FIRE PUMP TEST DATA, HYDRAULIC CALCULATIONS (IF AVAILABLE), AND AS-BUILT INFORMATION.

SPEC EDITOR: PRIOR TO ISSUING FIRE PROTECTION DRAWINGS FOR BID, THEY SHOULD BE SENT TO, REVIEWED AND APPROVED BY FACTORY MUTUAL.

SPEC EDITOR: FOR CLASSROOM BUILDINGS, PROJECT LEAD SHOULD SEND DRAWINGS TO STATE FIRE MARSHAL DURING SR. REVIEW, VIA DOUG KOEPEL.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections
 - 1. Section 220500 - Common Work Results for Mechanical
 - 2. Section 221113 - Piping Materials and Methods

1.2 SCOPE OF WORK:

- A. Provide piping, fittings, valves and specialties for automatic wet and dry sprinkler systems.

SPEC EDITOR: STANDPIPE SYSTEMS ARE TYPICALLY ONLY INCLUDED FOR BUILDINGS OF FIVE OR MORE STORIES.

- B. Provide piping, fittings, valves and specialties for standpipe systems.
- C. All wiring related to 211313 is covered under Division 26.

1.3 DRAWINGS:

- A. Deviations from the drawings, with the exception of minor changes in routing and other such incidental changes that do not affect the functioning or serviceability of the system, shall not be made without the written approval of the architect-engineer, and re-submitted to FM and the authority having jurisdiction for approval.

1.4 QUALITY ASSURANCE:

- A. Materials, installation and testing shall comply with the following:
 - 1. NFPA 13 - Installation of Sprinkler Systems.
 - 2. FM - Factory Mutual Approval Guide.
 - 3. NFPA 14 - Installation of Standpipe and Hose Systems.
 - 4. UL - Fire protection Equipment Directory.
 - 5. FM - Data Sheets.
 - 6. City of Ann Arbor requirements.
- B. Equipment and Components shall bear UL and FM label or marking and shall be FM approved for fire service.

1.5 SUBMITTALS:

- A. Submit data, drawings, and hydraulic calculations, as specified in Division 01.

SPEC EDITOR: SELECT ONE OF THE FOLLOWING:

- B. For Inpatient healthcare buildings, Ambulatory Surgery Centers or buildings containing classrooms: Submit shop drawings to Factory Mutual for approval first. Then, submit FM approved shop drawings to State of Michigan Bureau of Fire Services (BFS) for approval. Submit shop drawings bearing stamp of FM and OFS form 12A from State Office Of Fire Safety to the architect/ engineer for approval.
- C. For Non Bureau of Fire Services (BFS) Buildings: Submit shop drawings to Factory Mutual for approval prior to submitting to the architect/ engineer. Submit shop drawings bearing stamp of FM to the architect/ engineer for approval.

1.6 HYDRAULIC DESIGN CRITERIA:

- A. Locate mains and risers as indicated. Size piping per drawings, where indicated.
- B. Hydraulic calculations shall be per NFPA and FM requirements.

- C. Use latest FM water test to ascertain water supply parameters.
 - D. Density shall be as indicated (gallons/minute /square foot, gpm/sf). Size all piping to suit densities indicated below:
 - 1. Offices: Density of 0.15 gpm/sf over the most remote 2000 sq. ft. area, 168 sq. ft. per head maximum.
 - 2. Laboratories: Density of 0.18 gpm/sf over the most remote 2500 sq. ft., 130 sq. ft. per head maximum.
 - 3. Mechanical rooms: Density of 0.18 gpm/sf over the most remote 2500 sq. ft., 130 sq. ft. per head maximum.
- SPEC EDITOR: REVIEW STORAGE ROOMS WITH FM, AND CUSTOMIZE CRITERIA ACCORDINGLY. GENERALLY CRITERIA IS THE SAME AS FOR MECHANICAL ROOMS.**
- 4. Storage Rooms:
 - 5. Other rooms: Same as offices.
 - E. Include 250 gpm hose stream allowance at the floor of calculation.
 - F. Provide inspector's test connections per NFPA 13 and FM Data Sheets. Locate as indicated on the drawings.
 - G. Provide fire protection for soffit areas, void spaces, obstructions, top and bottom of ductwork above 4' wide, closets, and other spaces required by authority having jurisdiction, and at no additional cost to owner.

1.7 EXTRA MATERIALS:

- A. For projects requiring more than 30 sprinkler heads, provide extra sprinkler heads with metal cabinet and head wrench, per NFPA 13 and FM Data Sheets.

1.8 IMPAIRING FIRE PROTECTION SYSTEM:

- A. The University of Michigan Fire Alarm Shop shall impair existing fire protection system. Notify Fire Alarm Shop a minimum of 48 hours prior to required shutdown.
- B. Plan and coordinate work to minimize period of time which the system is impaired.
- C. In general, reactivate system at the end of each workday, under the supervision of the Fire Alarm Shop. System may be left impaired overnight only if explicitly authorized by the University and if contractor provides continuous fire watch in impaired areas.

PART 2 - PRODUCTS

2.1 GENERAL:

SPEC EDITOR: TOM TO CHECK ON FOLLOWING:

- A. All hose threads shall be National Standard.
- B. Pressure gauges: Liquid filled 6" dial, 0 to 150 psig range, 5 psig division, with gauge cock.
Manufacturers: Trerice Series 600, Weiss or Marsh

- C. All piping materials of a given type shall be manufactured by a single source, and supplied by a single supplier.

2.2 ABOVE GROUND PIPING MATERIAL:

SPEC EDITOR: THIS SPEC IS FOR SYSTEMS WITH MAXIMUM REQUIRED OPERATING PRESSURE OF 175 PSIG. REVISE TO SUIT NEEDS FOR HIGH-RISE BUILDINGS.

SPEC EDITOR: SELECT 2.2.A (DELETE 2.2.B) FOR INPATIENT FACILITIES. SCH 10 SPRINKLER PIPING IS NOT ALLOWED IN INPATIENT FACILITIES. SELECT 2.2.B (DELETE 2.2.A) FOR ALL OTHER LOCATIONS.

- A. Wet Pipe Systems in Inpatient Facilities: Schedule 40, ASTM A53, black steel pipe with screwed cast iron or malleable iron fittings (or match existing fittings in building) for sizes through 2", and grooved couplings for sizes 2-1/2" and larger.
- B. Wet Pipe Systems in non-Inpatient Facilities: Schedule 40, ASTM A53, black steel pipe with screwed cast iron or malleable iron fittings (or match existing fittings in building) for sizes through 2", and schedule 10, ASTM A135, black steel pipe with grooved couplings for sizes 2-1/2" and larger.
- C. Dry Pipe Systems: Schedule 40, ASTM A53, black steel pipe for all pipe sizes, with screwed cast or malleable iron fittings for sizes through 2", and grooved couplings for sizes 2- 1/2" and larger.
- D. All piping, fittings and accessories shall be rated for a minimum working pressure of 175 psig.
- E. Manufacturers: Victaulic Style 005 Rigid Firelock couplings with type "E" EPDM gasket, Tyco Grinnell.
- F. Pipe Hangers: Pipe hangers shall comply with requirements of related sections, be FM approved, and be spaced in accordance with NFPA 13 and FM.

SPEC EDITOR: FOR SYSTEMS OVER 175 PSIG, RESOLVE SYSTEM APPROACH WITH FM AND CUSTOMIZE SPECIFICATION ACCORDINGLY.

- G. For systems rated over 175 psig:

2.3 ABOVEGROUND ISOLATION VALVES:

- A. General: Provide where shown on drawings, and as required, with valve monitor switch, and means of padlocking open.
- B. Isolation valves 2-1/2" and larger: butterfly valve.
Manufacturers: Victaulic Series 705 (rated 300 PSI), Tyco Grinnell.
- C. Isolation valves 2" and smaller: gate or ball valve, brass body.
Manufacturers: Victaulic Series 727, Tyco Grinnell
- D. OS&Y type: Where specifically indicated on drawings, provide OS&Y type valves.
Manufacturers: Kennedy Figure 4068 (AWWA) or any other approved by the City of Ann Arbor Utilities Department Requirements, pages WM-1 & 2.

- E. Valve monitor switch: Isolation valves shall be supervised open. Provide 115 volt, single pole, double throw roller type monitor switch to signal valve closing.
Manufacturers: Tyco Grinnell, Anvil, Notifier

2.4 SPRINKLER HEADS:

SPEC EDITOR: INDICATE TYPE OF HEAD ON PLANS. 286F LINKAGE MAY BE REQUIRED IN CERTAIN AREAS.

NOTE THAT FULLY CONCEALED HEADS SHOULD BE SPECIFIED FOR ALL CLINICAL CARE AREAS WITH DROPPED CEILINGS.

- A. General: Provide brass sprinkler heads with wide angle spray, thermosensitive glass bulb with temperature rating of 155F to 165F, rated for 175 psig, standard response and orifice, except as otherwise specified, FM and UL approved. Install sprinkler head type as indicated on drawings.
- B. Sprinkler head guards: Provide red, wire mesh guards where damage to sprinkler heads may occur, such as stairways, loading docks or aisles. Manufacturers: same as sprinkler manufacturer.
- C. Semi-recessed pendant type: chrome plated brass, with chrome plated brass semi-recessed escutcheon.
Manufacturers: Reliable model G, Tyco, Viking model M., Victaulic
- D. Concealed pendant type: brass finish with cover to match ceiling.
Manufacturers: Reliable model G4FR, Tyco, Viking, Victaulic
- E. Upright type: brass finish.
Manufacturers: Reliable model G, Tyco, Viking, Victaulic
- F. Sidewall type: chrome plated brass, with deflector and chrome plated brass escutcheon.
Manufacturers: Reliable HSW1, Tyco, Viking, Victaulic
- G. Dry type (freezeproof): recessed with center strut, lever and solder capsule, unobstructed waterway.
Manufacturers: Tyco, Reliable Model G3, Viking, Victaulic
- H. Behavioral Health (anti-ligature) type: concealed pendant or sidewall, tamper-resistant. Manufacturers: Tyco Raven 5.6K (quick response style), Tyco TFP PH2 (standard response style).

2.5 TEST CONNECTIONS:

- A. Inspector's Test Connection: Provide per NFPA 13 4-7.4.2, and where indicated on drawings: minimum 1 inch piping and test valve, orifice equivalent to one sprinkler head, with chain and cap. Drain to sanitary waste or as indicated on drawings.
Manufacturers: Elkhart, Victaulic, Test Master

DESIGNER: DRAIN MUST BE ABLE TO HANDLE FULL FLOW OF INSPECTOR'S TEST. USE A 3" DRAIN OR EQUAL FOR 1" LINE. ROUTE TO A JANITORS CLOSET IF POSSIBLE.

- B. Zone Test and Drain Connection: Provide per detail on drawings and NFPA 13 4-7.4.2. Integrated test and drain valve assembly is acceptable.
Manufacturer: AGF Model 1000

2.6 FIRE PUMP TEST CONNECTIONS (HEADER):

SPEC EDITOR: CUSTOMIZE DETAIL TO HAVE APPROPRIATE NUMBER OF CONNECTIONS SHOWN, DEPENDING ON FIRE PUMP CAPACITY.

- A. Provide test connection per detail and NFPA 13 4-7.4.2. Cast brass body with end inlet, brass plate lettered PUMP TEST CONNECTION, with loose bonnets, 3-inch female NPT inlet x 2-1/2 inch male hose thread outlets to match local fire department connections. Provide cap and chain for each bonnet. Nipple connection between flush inlet body connection and snoot (exterior connections) shall be chrome-plated steel.
Manufacturers: Potter-Roemer Inc. 5800 series, Elkhart Brass Mfg. Co., W.D. Allen Mfg. Co, Giacomini.

2.7 FIRE DEPARTMENT CONNECTION (SIAMESE):

- A. Cast brass or bronze, flush wall mounted escutcheon plate type with polished brass finish, two 2-1/2 inch fire department inlets to match local fire department connections, double clapper check valves, lug caps and chains and cast-in function lettering.
Manufacturers: Elkhart Brass Mfg. Co., No. 166, Potter-Roemer Inc., No. 5020 Series, Seco Mfg. Inc., No. 261, W.D. Allen Mfg. Co., No. 276

2.8 ROOF FIRE DEPARTMENT CONNECTION:

SPEC EDITOR: DELETE IN SHORT SPEC; TOM WILL RESEARCH FURTHER

- A. Cast brass body with 4 inch NPT inlet and two (2), 2-1/2 inch NPT outlets to match local fire department connections. Provide 2-1/2 inch cast brass straight globe valve with red hand wheel. Valve shall have female NPT inlet x male hose thread outlet, rated for 300 psig. Provide cast-in function lettering.
Manufacturers: Elkhart Brass Mfg. Co., Potter-Roemer Inc., Model No. 5875 outlet with model 4115 valve, W.D. Allen Mfg. Co.

2.9 DETECTOR CHECK VALVE:

INCLUDE U-M STANDARD DETAIL "15300 001 - Fire Service System Detail", REVISED AS REQUIRED TO MAKE PROJECT SPECIFIC.

THIS IS USED TO MECHANICALLY DETECT SMALL VOLUMES OF WATER THAT PASS THROUGH THE FIRE PROTECTION MAIN. IT DOES NOT PROVIDE PROTECTION OF THE POTABLE WATER FROM POSSIBLE CONTAMINANTS IN THE FIRE PROTECTION SYSTEM. ASSEMBLY DOES NOT CONNECT TO THE FIRE ALARM SYSTEM.

- A. Provide valve assembly, including flanged detector check valve and bypass line. Detector check valve shall have galvanized or epoxy coated cast iron body, bronze clapper with resilient seal. Bypass line shall include City of Ann Arbor meter, isolation valves and check valve.
- B. Manufacturer: Ames 1000DCV or model 3000, Victaulic, Reliable, Viking, Hershey-Anvil

2.10 FIRE PROTECTION ZONE CONTROL VALVE

- A. Manufacturers: Victaulic, Milwaukee, Nibco, Stockham

2.11 FIRE DEPARTMENT HYDRANT VALVE:

SPEC EDITOR: DELETE IN SHORT SPEC

- A. Cast brass back outlet body with 4 inch NPT inlet and two (2) 2-1/2 inch male NPT outlets to match local fire department connection. Provide caps and chains and cast brass round wall plate lettered HYDRANT.
- B. Provide NRS gate valve with polished brass 7 inch plate lettered HYDRANT VALVE CONTROL with threaded 1-1/2 inch NPT lock nut, 30 inch long x 7/8 inch square steel extension rod with coupling for attachment to stem of gate valve.
- C. Manufacturers: Potter-Roemer Inc., Model No. 5840, Elkhart Brass Mfg. Co., W.D. Allen Mfg. Co.

2.12 DRAIN VALVE:

- A. Provide a brass ball valve, with hose thread outlet, and cap. Riser drains shall be 3/4" ball valve with hose thread outlet, and cap, unless otherwise noted on drawings.
Manufacturers: Victaulic Series 727, Tyco Grinnell, Anvil

DESIGNER: PIPE TO DRAIN CAPABLE OF TAKING FULL FLOW.

2.13 FIRE DEPARTMENT VALVE:

SPEC EDITOR: TYPICALLY USED IN STANDPIPE SYSTEMS

- A. Provide 2-1/2" cast brass straight globe valve with red hand wheel, female NPT inlet and 2 1/2" male hose thread outlet with cap, rated for 300 psig. Fire department valve shall meet local fire department standards. Provide with pressure restricting valve as required. Identify with words "FIRE DEPARTMENT VALVE" per NFPA requirements and the authorities having jurisdiction.
Manufacturers: Potter-Roemer Inc., Model 4115, Elkhart Brass Mfg. Co., W.D. Allen Mfg. Co.

2.14 ISOLATION, DRAIN AND TEST VALVES SIGNS:

- A. Provide permanent plastic or metal 6" x 6" signs for all isolation, drain and test valves describing purpose and location.
Manufacturer: Seton, Bramer

2.15 FLOW ALARM SWITCH:

- A. Provide flow alarm switches where indicated and as detailed on the drawings.

SPEC EDITOR: CHECK CATALOG ON PSI RATING 300?

- B. Each water flow switch shall be equipped with an adjustable recycling type retarding device designed to prevent false alarms due to pressure surges within the piping. The flow switch piping shall be suitable for 175 psig working pressures.
- C. Each flow alarm shall be provided with a set of contacts rated for 115V for connection by Electrical Trades.
- D. Manufacturer: Viking VSR-D, Reliable, Notifier, Victaulic, Anvil,

2.16 JOCKEY PUMP AND CONTROLLER:

- A. Provide jockey pump and controller package as detailed on drawings, including 1/3 HP, 115V motor, 1.6 gpm, 100 psig pump.

SPEC TEAM: NEED TO CHECK FOR MANUFACTURER

- B. Manufacturer/Supplier: Grundfos/Underwood Fire Equipment

2.17 PRESSURE RESTRICTING VALVE:

SPEC EDITOR: FIRE HOSES ARE NOT GENERALLY USED. BUT IF HOSES ARE USED, PRESSURE MUST BE LESS THAN 100 PSIG.

- A. Provide pressure-restricting valve on bottom of rack nipple or on male side of fire department valve to restrict water pressure at hose line. Valve shall be 1 1/2" swivel inlet with pin lugs X male outlet, cast brass. A removable breakable link shall permit adjustment of restriction.
Manufacturer: Crocker Model 5370-5375, Powhattan 16-255.

2.18 FIRE PUMP PRESSURE RELIEF VALVE:

SPEC EDITOR: THIS PRESSURE RELIEF VALVE IS REQUIRED WHEN FIRE PUMP CAN DEVELOP SHUT-OFF HEAD MORE THAN SYSTEM IS RATED FOR - TYPICALLY 175 PSIG.

DESIGNER: PIPE TO DRAIN.

- A. Provide UL and FM approved fire pump pressure relief valve: cast iron globe or angle valve body, bronze seat, Teflon coated stainless steel trim, hydraulically operated, cast bronze direct acting pilot control with stainless steel trim, adjustable spring loaded diaphragm. Relief pressure range factory set at 175 psig, adjustable 20 to 200 psig. Manufacturer: Claval 50B-4KG-1, size 6"

CAUTION: THE BELOW DRY PIPE SPECIFICATION WAS EXTRACTED FROM AIA MASTER SPEC, REQUIRES REVIEW AND EDIT AS REQUIRED TO MAKE PROJECT SPECIFIC. MAY NOT BE COMPLETE.

2.19 DRY PIPE VALVE AND ACCESSORIES:

- A. Provide dry pipe valve and all required trim and accessories including air maintenance device, air compressor, and accelerator device. Provide all UL listed and FM approved components with a rated minimum pressure of 175 or 300 PSIG to match system pressure rating.
- B. Valve: UL 260 differential-pressure type, cast or ductile iron, with flanged or grooved end connections. Include UL 1486, quick-opening device/accelerator, galvanized trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
- C. Automatic device to maintain minimum air pressure in piping: shall include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, with adjustable range.
- D. Air compressor: 120-V ac, 60 Hz, single phase.
- E. Approved Manufacturers: Viking, Reliable, Tyco, Victaulic

PART 3 - EXECUTION

3.1 GENERAL PIPING INSTALLATION REQUIREMENTS:

- A. Install piping in compliance with Section 221113, Article 3.1, with hanger spacing as dictated by NFPA and FM.
- B. Flush per NFPA 13 and FM requirements.
- C. Sleeve all piping passing through walls, floors and partitions per details and Section 220500.

3.2 DRY PIPE SYSTEMS

- A. Install all piping with the longitudinal weld seam located above the horizontal centerline of the pipe.
- B. Provide auxiliary drain valves terminated with a nipple and cap in all trapped sections of pipe, regardless of volume trapped. Drain valve size shall be per NFPA 13. Provide signage required by NFPA 13 at dry pipe or preaction valve indicating the number of low point drains and the location of each individual drain.
- C. Mains and branch lines shall be pitched to drain at least 1/2 in. per 10 ft in all locations, including non-refrigerated areas and areas not subject to freezing.

3.3 VALVE AND SPECIALTY INSTALLATION REQUIREMENTS:

- A. Inspector's Test Connections: Install where indicated, and if not indicated, at end of most hydraulically remote point for each zone.
- B. Isolation/ Control valves: Locate where readily accessible in emergency situations - in stairwells max 7' a.f.f.

- C. Drain Valves: Provide downstream of each flow alarm to facilitate testing, at low points trapping more than 5 gallons of water, at base of each riser. Provide metal air gap fittings for connection to the underground drainage system. Drain must be capable of taking full flow.
- D. Fire Department Connections: Locate with sufficient clearance from obstructions to allow full swing of fire department wrench handle.
- E. Pressure Gauges: Provide, with petcock valve, at the top of each standpipe, in readily visible location.

3.4 SPRINKLER HEAD INSTALLATION REQUIRMENTS:

- A. Locate heads per drawings, FM and NFPA 13, coordinated with lighting, building equipment layout, and other interferences. Aesthetically locate heads with respect to ceiling patterns, tile patterns, masonry bonds and similar constructions lines. Center heads in two directions in ceiling tile, with piping offsets as required.
- B. Protect heads, covers and escutcheons prior to painting. Remove protection after painting.

3.5 FIELD QUALITY CONTROL AND TESTING:

- A. Test equipment per the manufacturer's instructions, NFPA, and FM.
- B. Test piping systems per NFPA 13 and the requirements of Factory Mutual.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

**INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.**

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

1.2 SCOPE OF WORK:

- A. Provide a complete UL listed, FM approved, fire pump, jockey pump, and pump controllers as specified, detailed, and scheduled, meeting all of the applicable NFPA requirements.

1.3 QUALITY ASSURANCE:

- A. Provide listing/approval stamp, label, or other marking on equipment made to specified standards.
- B. Comply with local fire department/marshal standards pertaining to material, hose threads, and installation.
- C. Comply with the requirements of NFPA 20 "Centrifugal Fire Pumps" for fire pumps, drivers, controllers, accessories, materials, and installation.
- D. Comply with the requirements of NFPA 70-2005 "National Electrical Code" for electrical materials and installation.
- E. Fire pumps and controllers shall be UL listed.
- F. Comply with the requirements of FM "Approval Guide" as applicable to fire pumps, drivers, controllers, and accessories, and provide system capable of FM acceptance.
- G. Manufacturer's Factory Tests: Perform factory test of each fire pump.

1.4 MANUFACTURERS:

- A. The following fire pump manufacturers are acceptable:
 - 1. Allis-Chalmers
 - 2. Aurora
 - 3. Peerless
- B. The following controller manufacturers are acceptable:
 - 1. Joslyn Clark

- 2. Metron
 - 3. Hubbell
 - 4. Firetrol
- C. The drawings show the layout of equipment based on XXXXXXXXX units. Equipment by other approved manufacturers is acceptable provided it fits within the space allocated with adequate maintenance access space and meets all other requirements in the specifications and plans.

PART 2 - PRODUCTS

2.1 FIRE PUMP SYSTEMS - GENERAL REQUIREMENTS

- A. Horizontal fire pumps, except in line type, and drivers shall be factory assembled, mounted on same base, and connected with a flexible coupling having a guard.
- B. Fire Pumps: UL 448, base-mounted, factory-assembled, and factory-tested, of types, capacities, and characteristics indicated.
- C. Preparation for Shipping: After assembly and testing, clean flanges and exposed machined metal surfaces and treat with an anticorrosion compound. Protect flanges, pipe openings, and nozzles.
- D. Nameplates
 - 1. Fire Pump and Motor, Pressure Maintenance (Jockey) Pump and Motor: Provide nameplates, complete with motor horsepower, capacity, characteristics, and other pertinent data.
 - 2. Fire Pump and Pressure Maintenance (Jockey) Pump Controllers: Provide nameplate complete with capacity, electrical characteristics, approvals and listings, and other pertinent data, on enclosure door
- E. Factory Finish
 - 1. Fire Pump, Motor and Controllers: Red, enamel paint applied to assembled, tested units prior to shipping.
 - 2. Jockey Pump, Motor and Controllers: Manufacturer's standard color enamel paint applied to assembled, tested units prior to shipping.

2.2 AXIALLY-SPLIT-CASE FIRE PUMPS

- A. Fire pumps shall furnish not less than 150 percent of rated capacity at not less than 65 percent of total rated head. The shutoff head shall not exceed 120 percent of total rated head.
- B. Fire pumps shall be base-mounted, centrifugal, separately coupled, bronze-fitted, axially-split-case design, specifically labeled for fire service.
 - 1. Type: Horizontally mounted, single stage - double suction.

SPEC EDITOR: THE TYPE ABOVE COVERS MOST SITUATIONS. IF NECESSARY, CHOOSE ONE OF THE OTHER TYPES LISTED BELOW. DELETE OPTIONS NOT REQUIRED.

- 2. Type: Horizontally mounted, multistage - single suction.

3. Type: Vertically mounted, single stage - double suction.

- C. Casing: Axially-split-case centrifugal design; cast-iron pump casing with suction and discharge flanges machined to ANSI B16.1 dimensions, and 125-psi pressure rating, except where 250-psi rated flanges are indicated.
- D. Impeller: Statically and dynamically balanced, of construction to match type fire pump, fabricated from cast bronze, keyed to shaft.
- E. Wear Rings: Replaceable, bronze.
- F. Pump Shaft and Sleeve: Steel shaft, with bronze sleeve.
- G. Pump Shaft Bearings: Grease-lubricated double row ball thrust bearings contained in a cast-iron housing.
- H. Seals: Stuffing box consisting of a minimum of 4 rings of graphite-impregnated braided yarn with a bronze lantern ring between center 2 graphite rings, and a bronze packing gland.
- I. Pump Couplings: Flexible, capable of absorbing torsional vibration; complete with metal coupling guard.
- J. Fire Pump Electric Motor: NEMA MG 1, open drip proof, squirrel cage, induction motor, complying with NFPA 20 and NFPA 70, and wiring compatible with type controller used. Motor shall meet requirements of Section 220513 - Motors.

2.3 FIRE PUMP CONTROLLERS AND ALARM PANELS

- A. Combined automatic and non-automatic operation, UL listed and FM approved, factory-assembled and wired, and factory-tested, of types, capacities, electrical characteristics, and with features indicated.
- B. Enclosure: NEMA Type 12 (IEC IP55), drip proof, indoor, except where special-purpose enclosure is indicated.
- C. Provide controls, devices, alarms, functions, and operations listed in NFPA 20, as required for the type driver and controller used, and the specific items listed for each type controller.
- D. Provide mounting for enclosures as indicated:
 - 1. Full-Service Fire Pump Controller Mounting: Wall or floor stand type, as indicated, for field electrical connections.
 - 2. Alarm Panel Mounting: Wall type.
- E. Controller Sensing Pipes: Provide nonferrous metal sensing piping, 1/2-inch size, with 1/2-inch globe valves for testing mechanism of controller, from system to pump controller, as indicated. Provide bronze check valve with 3/32-inch orifice in clapper or ground-face union with non-corrosive diaphragm having 3/32-inch orifice.
 - 1. Fabricate pipe and fittings in accordance with NFPA 20.
- F. The controllers shall not require rear access for installation or maintenance. For ease of installation in tight corners and basement equipment rooms, the controllers shall be capable of being hand trucked through a standard three-foot door opening without being disassembled.

- G. All controllers' components, including circuit breakers and contactors, shall be front mounted, front wired and front accessible for maintenance. The circuit breaker interrupting capacity shall in no case be less than 18,000 AIC SYM. at 480 volts.
- H. The controller manufacturer, prior to shipment, shall hook up and test the entire controller as a complete assembly. This test shall include, but not be restricted to, each function the controller may be required to perform including remote alarms, remote start, auto start with manual shut down, remote deluge valve start, pressure drop, manual start-stop, etc. Additionally, the controller manufacturer shall set the instantaneous and longtime trips in the circuit breaker at these settings to see that the breaker trips within the current time requirements stated above. Advise Owner to enable witness of testing at Owner's option

2.4 ELECTRIC-MOTOR-DRIVE FIRE PUMP CONTROLLERS

- A. Motor Controllers: Controller specifically listed for electric motor drive fire pump service and service entrance.

SPEC EDITOR: SELECT CONTROLLERS FROM 6 OPTIONS BELOW. SEE EVALUATIONS FOR INFORMATION ON TYPES, APPLICATIONS, AND COSTS OF CONTROLLERS. EDIT TO SUIT PROJECT REQUIREMENTS WHERE MORE THAN ONE TYPE OF CONTROLLER IS REQUIRED. DELETE OPTIONS NOT REQUIRED.

SPEC EDITOR: ITEMS BELOW USUALLY USED FOR SMALL HP MOTORS AND WHERE HIGH INRUSH CURRENT IS ACCEPTABLE.

- 1. Type: Across the line.
 - 2. Type: Primary resistance.
 - 3. Type: Part winding.
 - 4. Type: Wye-delta (closed transition).
 - 5. Type: Autotransformer.
- B. Size controller for scheduled horsepower. Provide controller with short circuit withstand rating at least equal to short circuit current available at controller location, taking into account cable size and distance from substation or supply transformers.
 - 1. Standard: UL218, Standard for Fire Pump Controllers.
 - C. Provide controller capable of performing or containing the following features:
 - 1. Isolating means and circuit breaker.
 - 2. "Power On" pilot lamp.
 - 3. Fire alarm system connections for indicating motor running condition, loss of line power, and line power phase reversal.
 - 4. Automatic and manual operation, and minimum run time relay to prevent short cycling.
 - 5. Water pressure actuated switch having independent high and low calibrated adjustments responsive to water pressure in fire protection system.
 - 6. Manual and automatic shutdown.

SPEC EDITOR: CHOOSE ONE FOR THE FOLLOWING PARAGRAPHS (POWER TRANSFER SWITCH FOR GENERATOR SET EMERGENCY POWER SOURCE OR

POWER TRANSFER SWITCH FOR SECOND UTILITY EMERGENCY POWER SOURCE) DEPENDING ON TYPE OF EMERGENCY POWER SOURCE.

2.5 POWER TRANSFER SWITCH FOR GENERATOR SET EMERGENCY POWER SOURCE:

- A. The power transfer switch shall be housed within the fire pump controller enclosure or in a NEMA Type 12 (IEC IP55) drip-proof enclosure attached directly to the fire pump controller. Where the power transfer switch is provided in an attached enclosure, the enclosures shall be fitted so that the assembly constitutes a single unit. The fire pump controller/power transfer switch shall be factory assembled, wired and tested as a unit prior to shipment.
- B. The power transfer switch shall include a motor rated disconnect/isolating switch capable of interrupting the motor locked rotor current. The disconnect/isolating switch shall be mechanically interlocked so that the enclosure door cannot be opened with the handle in the ON position except by a hidden tool operated defeater mechanism. The disconnect/isolating switch shall be capable of being padlocked in the OFF position with up to three padlocks for installation and maintenance safety, and shall also be capable of being locked in the ON position. The enclosure door shall have a locking type handle and three-point cam and roller type vault hardware.
- C. Provide an auxiliary contact on the transfer switch to prevent starting of the emergency generator set when the transfer switch or the main fire pump controller are being serviced.
- D. The transfer switch circuitry shall be capable of sensing both the normal power source and the emergency power source. The normal power source pickup shall be set at 95 nominal voltage. The emergency power source shall be set to pick up at 90 nominal voltage and 95 nominal frequency. All voltage sensing, frequency sensing, and time delays shall be field adjustable to accommodate individual installation requirements. The transfer signal shall be delayed for one second, delaying the transfer and engine start signals so as to compensate for momentary, normal power outages. An automatic delay of three seconds shall be provided upon transfer to or from the emergency power source to allow the motor to slow sufficiently, preventing line disturbances that could trip either the generator set or fire pump circuit breakers.
- E. The transfer switch shall have TRANSFER SWITCH NORMAL, TRANSFER SWITCH EMERGENCY and EMERGENCY ISOLATING SWITCH OFF LED's, TEST and TRANSFER BYPASS switches, an audible alarm device and SILENCE ALARM pushbutton mounted on the flange of the enclosure. The power transfer switch shall be furnished with both normally open and normally closed auxiliary contacts for an engine start signal when normal power failure occurs. Auxiliary contacts shall also be provided and wired to terminals to indicate the transfer switch position. The transfer switch shall be electrically operated and mechanically held, and shall be capable of being operated by a manual transfer mechanism located on the switch.

2.6 POWER TRANSFER SWITCH FOR SECOND UTILITY EMERGENCY POWER SOURCE:

- A. The power transfer switch shall be housed within the fire pump controller enclosure or in a NEMA Type 12 (IEC IP55) drip-proof enclosure attached directly to the fire pump controller. Where the power transfer switch is provided in an attached enclosure, the enclosures shall be fitted so that the assembly constitutes a single unit. The fire pump controller/power transfer switch shall be factory assembled, wired and tested as a unit prior to shipment.
- B. The power transfer switch shall include a motor rated combination isolating disconnect switch/circuit breaker, mechanically interlocked and operated with a single, externally mounted handle. When moving the handle from OFF to ON, the interlocking mechanism shall sequence the isolating disconnect switch closed first, and then the circuit breaker. When the handle is moved from ON to OFF, the interlocking mechanism shall sequence the circuit breaker open first, and then the isolating disconnect switch.
- C. The isolating disconnect switch/circuit breaker shall be mechanically interlocked so that the enclosure door cannot be opened with the handle in the ON position except by a hidden tool operated defeater mechanism. The isolating disconnect switch/circuit breaker shall be capable of being padlocked in the OFF position for installation and maintenance safety, and shall also be capable of being locked in the ON position without affecting the tripping characteristics of the circuit breaker. The enclosure door shall have a locking type handle and three-point cam and roller type vault hardware.
- D. The circuit breaker trip curve adjustment shall be factory set, tested and sealed for the connected full load amps of the motor.
- E. The fire pump controller/power transfer switch shall have data logging capability for historical operation recording and to aid in annual test, service and trouble shooting. The data logging shall be accessible by front mounted interface panel and also by saving to file. The file shall be in text (.txt) format and easily readable by most common text editing or word processing software. The circuit breaker shall be capable of being field tested to verify actual pick up, locked rotor, and instantaneous trip points after field installation without disturbing incoming line and load conductors.
- F. The transfer switch circuitry shall be capable of sensing both the normal power source and the emergency power source. The normal power source pickup shall be set at 95 nominal voltage. The emergency power source shall be set to pick up at 90 nominal voltage and 95 nominal frequency. All voltage sensing, frequency sensing, and time delays shall be field adjustable to accommodate individual installation requirements. The transfer signal shall be delayed for one second, delaying the transfer signal so as to compensate for momentary, normal power outages. An automatic delay of three seconds shall be provided upon transfer to or from the emergency power source to allow the motor to slow sufficiently, preventing line disturbances that could trip either the transfer switch or fire pump circuit breakers.

- G. The transfer switch shall have TRANSFER SWITCH NORMAL, TRANSFER SWITCH EMERGENCY and EMERGENCY ISOLATING SWITCH OFF LED's, TEST and TRANSFER BYPASS switches, an audible alarm device and SILENCE ALARM pushbutton mounted on the flange of the enclosure. To aid servicing, no indicating lights or switch devices shall be mounted on the enclosure door. Auxiliary contacts shall be provided and wired to terminals to indicate the transfer switch position. The transfer switch shall be electrically operated and mechanically held, and shall be capable of being operated by a manual transfer mechanism located on the switch.

2.7 ALARM PANEL:

SPEC EDITOR: RETAIN THIS PARAGRAPH ONLY WHEN A REMOTE ALARM PANEL IS REQUIRED.

- A. NEMA ICS 6, Type 1 wall-mounting-type panel (or integral with main controller) with audible and visible alarms matching type controller used. Provide following features and manufacturer's standard features:
 - 1. Motor operating condition.
 - 2. Loss of line power.
 - 3. Phase reversal.
 - 4. Low water pressure alarm.

2.8 HORIZONTAL FIRE PUMP ACCESSORY FITTINGS

- A. Provide the following accessory fittings, matching fire pump suction and discharge ratings, as required for fire pump capacity rating:
 - 1. Automatic air release valve.
 - 2. Casing relief valve.
 - 3. Suction and discharge pressure gages.
 - 4. Eccentric tapered reducer at suction inlet.
 - 5. Concentric tapered reducer (increaser) at discharge outlet.

2.9 PRESSURE MAINTENANCE (JOCKEY) PUMPS

- A. Base-mounted, factory-assembled, and factory-tested, of pump types, capacities, and electrical characteristics indicated. Close-coupled pressure maintenance pumps are exempt from base-mounted requirement.
- B. Pressure maintenance pumps shall furnish not less than rated capacity at not less than total rated head indicated.
- C. Cast-iron pump casing with suction and discharge connections of size indicated, threaded, or flanged and machined to ANSI B16.1 dimensions, and 125-psi minimum pressure rating, except where 250-psi rated flanges are indicated.
 - 1. Impeller: Bronze or stainless steel.
 - 2. Shaft: Stainless steel.
 - 3. Seals: Mechanical.
- D. Multi-Stage Pressure Maintenance Pumps:

1. Multi-stage, centrifugal, vertical construction, base mounting.
- E. Electric Motor: NEMA MG 1, open drip proof, squirrel cage, induction motor, complying with NFPA 20 fire pump motor requirements and NFPA 70, and wiring compatible with controller. Motor shall meet requirements of Section 220513 - Motors.

2.10 PRESSURE MAINTENANCE (JOCKEY) PUMP CONTROLLERS

- A. Combined automatic and non-automatic operation, UL listed, factory-assembled and wired, and factory-tested, of types, capacities, electrical characteristics, and with features indicated, for electric motor drive pressure maintenance pump service.

1. Type: Across the line.

SPEC EDITOR: MODIFY PARAGRAPH BELOW AS REQUIRED. DELETE IF SYSTEM IS NOT UL.

2. Standard: UL 508.

SPEC EDITOR: MODIFY PARAGRAPH BELOW WHERE NEMA TYPE 1 ENCLOSURE TO BE ALLOWED.

- B. Enclosure: NEMA ICS 6, Type 2, wall mounted, for field electrical wiring.
- C. Provide controls, devices, alarms, functions, and operations listed in NFPA 20, and the specific items listed.
- D. Size controller for scheduled horsepower and provide the following items:

SPEC EDITOR: DELETE FEATURES BELOW NOT WANTED AND ADD OTHER OPTIONS WANTED. SEE MANUFACTURERS' CATALOG LITERATURE FOR VARIOUS OPTIONS.

1. Fusible disconnect switch.
2. Pressure switch.
3. "HAND-OFF-AUTO" selector switch.
4. Pilot light.
5. Running period timer.

- E. Mounting: Wall type for field electrical connections.
- F. Controller Sensing Pipes: Provide nonferrous metal sensing piping, 1/2-inch size, with 1/2-inch globe valves for testing mechanism of controller, from system to pump controller, as indicated. Provide bronze check valve with 3/32-inch orifice in clapper or ground-face union with non-corrosive diaphragm having 3/32-inch orifice.
1. Fabricate pipe and fittings in accordance with NFPA 20.

2.11 PRESSURE MAINTENANCE PUMP ACCESSORIES

- A. Provide following accessory fittings, matching pressure maintenance pump suction and discharge ratings, as required for pump capacity rating:
1. Casing relief valve.
 2. Suction and discharge pressure gages.

SPEC EDITOR: COORDINATE CONCRETE WORK WITH DIVISION 3. DELETE ARTICLE BELOW IF EQUIPMENT PADS ARE INCLUDED IN DIVISION 3. COORDINATE SIZE AND LOCATION OF CONCRETE PADS ON THE DRAWINGS. VERIFY STRUCTURAL REQUIREMENTS WITH A STRUCTURAL ENGINEER. VERIFY STRENGTH REQUIREMENTS FOR CONCRETE AND REINFORCING MATERIALS, SPACING, AND PLACEMENT.

2.12 EQUIPMENT BASES

- A. Construct concrete equipment pads of dimensions per manufacturers requirements, minimum 6" on all sides. Form concrete pads by using framing lumber with form release compounds. Chamfer top edge and corners of pad.
- B. Concrete: Portland cement mix, 4,000 psi:
 - 1. Cement: ASTM C 150, Type I.
 - 2. Fine Aggregate: ASTM C 33, sand.
 - 3. Course Aggregate: ASTM C 33, crushed gravel.
 - 4. Allow concrete to cure before installation of equipment.
- C. Reinforcement: Steel conforming to the following:
 - 1. Fabric: ASTM A 185, welded wire fabric, plain.
 - 2. Reinforcement Bars: ASTM A 615, Grade 60, deformed.
 - 3. Install reinforcing, tied to frame, and place anchor bolts and sleeves using manufacturer's installation template.

2.13 FLOW MEASURING SYSTEMS

SPEC EDITOR: DELETE BELOW WHERE FLOW MEASURING SYSTEMS ARE NOT ACCEPTABLE TO LOCAL AUTHORITIES FOR FLOW TESTS. U OF M PREFERENCE IS FOR 'ANNUAL' PITOT TESTS. USE IN APPROPRIATE AREAS.

- A. Fire pump flow measuring systems shall be FM approved, indicate flow in gpm to not less than 175 percent of fire pump rated capacity, and consist of a sensing element of size to match pipe, tubing, flow meter, and fittings.
- B. Pressure Rating: 175 psi minimum.
- C. Sensing Element: Venturi, annular probe, or orifice plate flow sensor.
- D. Flow Meter: Compatible with flow sensing element and direct reading in gpm; dial not less than 4-1/2 inches in diameter or equivalent.

SPEC EDITOR: SELECT FROM 2 OPTIONS BELOW.

- 1. Permanently Mounted: Flow meter suitable for wall mounting with copper tubing for connecting to flow sensing element.
 - 2. Portable: Flow meter, with two 12-foot hoses, in carrying case with handle.
- E. Provide flow-measuring systems complete with operating instructions.

2.14 SOURCE QUALITY CONTROL

- A. Factory Shop Tests: Hydrostatically test and test run each pump prior to shipment. Test at 150 percent of shut-off head plus suction head, but not less than 250 psig. Produce certified test curves showing head capacity and brake horsepower of each pump. Advise Owner to enable witnessing of the shop tests at Owner's option.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, equipment foundations, and conditions with Installer present, for compliance with requirements for installation and other conditions affecting performance of fire pumps. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Examine fire protection piping systems to verify actual locations of piping connections prior to installation.

3.2 INSTALLATION OF FIRE PUMPS

- A. Comply with the manufacturer's written installation and alignment instructions and with NFPA 20 and FM standards.
- B. Install pumps in locations indicated and arrange to provide access for periodic maintenance, including removal of motors, impellers, couplings, and accessories.
- C. Support pumps and piping independently so that the weight of the piping system does not rest on pumps.
- D. Set base-mounted pumps on concrete foundations. Disconnect coupling halves before setting. Do not reconnect couplings until alignment operations have been completed.
 - 1. Support pump base plate on rectangular metal blocks and shims, or on metal wedges having a small taper, at points near the foundation bolts to provide a gap of 3/4 to 1-1/2 inches between the pump base and the foundation for grouting.
 - 2. Adjust the metal supports or wedges until the shafts of the pump and driver are level. Check the coupling faces and suction and discharge flanges of the pump to verify that they are level and plumb.
- E. Provide piping accessories, hangers, supports and anchors, valves, meters and gages, and equipment supports as required for complete installation.
- F. Provide housekeeping pad for all floor mounted controllers.
- G. Electrical Wiring: Install electrical devices furnished by manufacturer but not specified to be factory-mounted. Furnish copy of manufacturer's wiring diagram submittal to Electrical Installer.

1. Verify that electrical wiring installation is in accordance with manufacturer's submittal and installation requirements of Division 26 sections. Do not proceed with equipment start-up until wiring installation is acceptable.

3.3 ALIGNMENT

- A. Align pump and driver shafts after complete unit has been leveled on foundation and after grout has set and foundation bolts have been tightened.
- B. After alignment is correct, tighten the foundation bolts evenly but not too firmly. Fill the base plate completely with non-shrink, nonmetallic grout, with metal blocks and shims or wedges in place. After grout has hardened, fully tighten foundation bolts. Check alignment and take corrective measures required.
- C. Make piping connections, check alignment, and take corrective measures required.
 1. Adjust alignment of pump and driver shafts for angular and parallel alignment by one of the two methods specified in the Hydraulic Institute "Centrifugal Pumps - Instructions for Installation, Operation and Maintenance."
 2. Alignment tolerances shall meet manufacturer's recommendations.

3.4 CONNECTIONS

- A. General: Install valves of types and at locations indicated, that are same size as the piping connecting the fire pump, bypass, test header, and other piping systems.
- B. Install suction and discharge pipe sizes equal to or greater than the diameter of fire pump nozzles.
- C. Install pressure gages on the suction and discharge of each pump at the integral pressure gage tappings provided.

SPEC EDITOR: OMIT PARAGRAPH BELOW IF FLOW MEASURING SYSTEMS ARE NOT USED.

- D. Install flow meters and sensing elements where indicated. Install connections, tubing, and fittings between flow sensing elements and meters as prescribed by manufacturer's installation instructions.
- E. Electrical wiring and connections are specified in Division 26 sections.

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Provide the services of a factory-authorized service representative to supervise field assembly of components, installation of fire pump units and pressure maintenance pump units, including piping and electrical connections, field acceptance tests, and to report test results in writing.
- B. Check suction lines connections for tightness to avoid drawing air into the pump.

SPEC EDITOR: MODIFY PARAGRAPH BELOW TO SUIT PROJECT REQUIREMENTS. HOWEVER; RETAIN COMPLIANCE WITH NFPA 20. NORMALLY FIELD ACCPTANCE TESTS ARE PERFORMED FOR OWNER, INSURANCE UNDERWRITER, LOCAL FIRE OFFICALS, AND REPRESENTATIVES OF THE AUTHORITY HAVING JURISDICTION, AND PUMP AND CONTROLLER REPRESENTATIVES.

- C. Perform field acceptance tests of each fire pump unit (fire pump, driver, and controller) and system piping, when installation of fire pump units is complete. Comply with operating instructions and procedures of NFPA 20 to demonstrate compliance with requirements. Where possible, field correct malfunctioning equipment, then retest to demonstrate compliance. Replace equipment that cannot be satisfactorily corrected or that does not perform as specified and as indicated, then retest to demonstrate compliance. Verify that each fire pump unit performs as specified and as indicated.

3.6 COMMISSIONING

- A. Start-Up Services, General: Provide the services of a factory-authorized service representative to provide start-up service and to demonstrate and train Owner's maintenance personnel as specified below. Training will not occur at time of start-up.

- 1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.
- 2. Train Owner's maintenance personnel on procedures and schedules related to start-up and shutdown, troubleshooting, servicing, and preventative maintenance.
- 3. Review data in Operating and Maintenance Manuals. Refer to Division 01 Section "Project Closeout."
- 4. Schedule training with at least 7 days' advance notice after factory-authorized service representative has performed start-up and forwarded a copy of the start-up report to the Owner.

SPEC EDITOR: WHERE FIRE PUMPS MUST BE TESTED AND WATER WASTED, A PLACE FOR DISPOSAL OF LARGE QUANTITIES OF TEST WATER MUST BE ARRANGED. IF SPECIFIED FLOW MEASURING SYSTEM WILL BE ADEQUATE FOR TESTS, THEN DELETE PARAGRAPH BELOW. DELETE TEST HEADER, MANIFOLD, AND FIRE HOSE VALVES IN PART 2 OF THIS SECTION, ONLY IF APPROVED BY LOCAL FIRE AUTHORITY. MODIFY BELOW TO SUIT PROJECT CONDITIONS. OWNER MAY WANT TO RETAIN FIRE HOSES. THEN FIRE HOSES SHOULD BE NEW, PARAGRAPH BELOW MUST BE EDITED, AND FIRE HOSES ADDED TO PART 2 OF THIS SECTION.

- 5. Provide fire hoses in number, size, and of length as required to reach a storm drain or other acceptable locations for the disposal of fire pump test water. These fire hoses are for use during field acceptance tests only and are not to become property of the Owner.
- B. Final Checks Before Start-Up: Perform the following preventative maintenance operations and checks before start-up:
 - 1. Lubricate oil-lubricated bearings.

2. Remove grease-lubricated bearing covers and flush the bearings with kerosene and thoroughly clean. Fill with new lubricant in accordance with the manufacturer's recommendations.
3. Disconnect coupling and check electric motor for proper rotation. Rotation shall match direction of rotation marked on pump casing.
4. Check that pump is free to rotate by hand. If the pump is bound or even drags slightly, do not operate the pump until the cause of the trouble is determined and corrected.

C. Starting procedure for pumps:

1. Prime the pump, opening the suction valve, closing the drains, and prepare the pump for operation.
2. Open the sealing liquid supply valve if the pump is so fitted.
3. Start motor.
4. Open the discharge valve slowly.
5. Observe the leakage from the stuffing boxes and adjust the sealing liquid valve for proper flow to ensure the lubrication of the packing. Do not tighten the gland immediately, but let the packing run in before reducing the leakage through the stuffing boxes.
6. Check the general mechanical operation of the pump and motor.

REVISED 'GRINNELL' TO 'ANVIL' IN PARA'S 2.3.A.3, 2.3.B.1.AAND 2.3.C.1, REMOVED POWDER ACTUATED FASTENERS, MOVED BELT DRIVES TO SECTION 233400 FANS. B. BEGG FOR PLMG MTT.

2017-08-02: REVISED TO DELETE REFERENCES TO 2009 MECH AND PLMG CODES, AND TO PROVIDE CORRECT LINK TO U-M DG CODE PAGE. D. KARLE FOR PLMG MTT.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
 - 1. Section 078413 - Penetration Firestopping

1.2 INTERPRETATION OF DRAWINGS:

- A. The Drawings show the location and general arrangement of equipment, piping, ductwork and related items. They shall be followed as closely as elements of the construction will permit. Examine the drawings of other trades and verify the conditions governing the work on the job site. Drawings are schematic in nature, and installation may require additional offsets and modifications, including fittings, traps, valves and accessories.
- B. The architectural and structural drawings take precedence in all matters pertaining to the building structure, mechanical drawings in all matters pertaining to mechanical trades and electrical drawings in all matters pertaining to electrical trades. Report conflicts or differences to the architect/ engineer for resolution.

1.3 PROJECT RECORD DOCUMENTS:

- A. For underground piping, record dimensions and invert elevations of all piping, including all offsets, fittings, cathodic protection and accessories. Locate dimensions from benchmarks that will be preserved after construction is complete.
- B. For fire protection systems, record actual locations of sprinkler heads, and valves and deviations of piping from drawings. Indicate drain and test locations.

1.4 DELIVERY, STORAGE AND HANDLING:

- A. Deliver, store and handle all materials to keep clean and protected from damage.
- B. Store products in shipping containers and maintain in place until installation. Provide temporary inlet and outlet caps. Maintain caps in place until installation.
- C. Protect equipment and other materials from damage after installed from construction debris and other damage.

1.5 QUALITY ASSURANCE:

- A. Regulatory Requirements: Comply with the following:
 - 1. Michigan Mechanical Code.
 - 2. Michigan Plumbing Code.
 - 3. Applicable City of Ann Arbor rules and regulations.
- B. Labeling requirement for packaged equipment:
 - 1. Electrical panels on packaged mechanical equipment shall bear UL label or label of other approved testing agency (ETL, CSA).
- C. Other referenced standards:
 - 1. Comply with codes and regulatory agency requirements as detailed in University of Michigan Design Guideline 1.0 Codes and Regulatory Agencies (<http://www.umaec.umich.edu/for-vendors/design-guidelines/1-0-codes-and-regulatory-agencies/>)

PART 2 - PRODUCTS

2.1 FIRE STOPPING:

- A. Provide UL classified firestopping system for mechanical penetrations through fire rated construction to maintain the fire rating. See Related Section for additional firestopping requirements, including approved manufacturers.

2.2 ACCESS PANELS:

SPEC EDITOR: COORDINATE USE OF ACCESS DOORS WITH ARCHITECT

- A. Furnish access panels to access valves, traps, control valves or devices, dampers, damper motors, etc. Access panels shall be sized as necessary for ample access, or as indicated on drawings, but no smaller than 12" x 12" where devices are within easy reach of operator, and at least 24"x24" when operator must pass through opening in order to reach the devices. Architectural Trades shall install access panels coordinated with Mechanical Trades.

- B. Access panels in fire rated walls or ceiling must be U.L. labeled for intended use. Unless otherwise indicated on plans, access doors shall be hinged flush type steel framed panel, 14 gauge minimum for frame, and with anchor straps. Only narrow border shall be exposed. Hinges shall be concealed type. Locking device shall be flush type and screw driver operated. Metal surfaces shall be prime coated with rust-inhibitive paint. Panels shall be compatible with architectural adjacent materials Manufacturer: Milcor, Bilco

2.3 BUILDING ATTACHMENTS FOR MECHANICAL WORK SUPPORTS:

SPEC EDITOR: PROJECT SPECIFIC DETAILS MUST ACCOMPANY SPECIFICATIONS.

SPEC EDITOR: SPEC TEAM IS CONTINUING TO RESEARCH BUILDING ATTACHMENTS. EDIT CAREFULLY

- A. General Requirements:
 - 1. Provide building attachments required for supporting mechanical work, suitably selected and installed for the loads applied with a minimum additional safety factor of 3.
 - 2. Where specified attachments are not suitable for conditions, submit to Engineer for approval, proposal for alternate building attachments.
 - 3. Approved Manufacturers: Anvil, or equivalent products by Michigan Hanger and B-Line.
 - 4. Provide supplemental trapeze supports where necessary. Design trapeze to support all trades. Coordinate loads, and supports with all trades. Size trapeze for maximum deflection of 1/64 of the span.
- B. Attachments to Structural Steel:
 - 1. Support mechanical work from building structural steel where possible and approved. No welding or bolting to structural steel is permitted unless authorized by Architect. C-clamps are not permitted.
 - a. Center beam clamp - for loads over 120 lb.: Malleable center hung Anvil Fig. 228.
 - b. Side beam clamp with retaining clips - for loads up to 120 lb.
- C. Cast in Place Concrete Inserts:

SPEC EDITOR: APPLICABLE FOR SUPPORTING FROM NEW CONCRETE ONLY.

 - 1. Provide inserts selected for applied load of present load plus 100% for future, and coordinated with concrete work. Except as detailed on drawings, inserts shall be Unistrut or Grinnell. Plan, lay out and coordinate setting of inserts prior to concrete pour. Use Anvil Fig. 285 lightweight concrete insert for loads up to 400# or Anvil Fig. 281 Wedge Type concrete insert for loads up to 1200#
- D. Drilled Insert Anchors:

SPEC EDITOR: APPLICABLE FOR SUPPORTING FROM NEW AND EXISTING CONCRETE. COORDINATE LOADING WITH STRUCTURAL ENGINEER. DEVELOP AND EDIT CRITERIA FOR PROJECT SPECIFIC REQUIREMENTS

1. Where mechanical work cannot be supported from structural steel, or cast in place concrete inserts, provide drilled concrete insert anchors. Submit for approval, project specific installation drawings for all loads over 100 lbs. Install inserts in web of beam if possible and approved. Insert depth shall not exceed two thirds the thickness of the concrete. Where existing concrete appears to be deteriorating, or where applied load at insert exceeds 1000 lbs., conduct test of concrete to determine derated capacity of insert. Anchors may be adhesive or expansion type up to 1000 lbs., and shall be adhesive type for loads over 1000 lbs.

Manufacturers: Hilti, Powers Fasteners

SPEC EDITOR: POWDER ACTUATED FASTENERS HAVE BEEN REMOVED FROM THIS SPECIFICATION. IF A DESIGN REQUIRES POWDER ACTUATED FASTENERS, DESIGNER TO DEVELOP AND ADD SPECIFICATION.

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS

- A. Install equipment and materials in accordance with manufacturer's written and illustrated instructions, as detailed on drawings and as described in these specifications. Bring discrepancies in installation methods to the attention of the owner and A/E.
- B. Install hanger rod straight, without bending.

3.2 REFRIGERANT HANDLING

- A. Refrigerant Installation and Disposal: Perform all work related to refrigerant contained in chillers, cooling coils, air conditioners, and similar equipment, including related piping, in strict accordance with the following requirements:
 1. ASHRAE Standard 15 and Related Revisions: Safety Code for Mechanical Refrigeration.
 2. ASHRAE Standard 34 and Related Revisions: Number Designation and Safety Classification of Refrigerants.
 3. United States Environmental Protection Agency (US EPA) requirements of Section 808 (Prohibition of Venting and Regulation of CFC) and applicable State and local regulations of authorities having jurisdiction.
- B. To assure the proper handling of refrigerant materials, the Owner has implemented a tracking procedure for all CFC and HCFC refrigerants. When new refrigeration equipment is installed, or when refrigerant is disposed of, the "Refrigerant Disposal Form" must be completed. A copy of the form has been included with the Project Bidding Requirements and General Conditions package. Alternatively, copies may be obtained from Owner's Plant Operations Air Conditioning Shop. Contact Air Conditioning Shop Foreman at (734) 647-2041. Submit completed forms to the Owner's Representative and Air Conditioning Shop Foreman.

- C. Recovered refrigerant is the property of the Contractor. Dispose of refrigerant legally, in accordance with applicable rules and regulations of authorities

SECTION 220513 - MOTORS

END OF CONTENTS TABLE

DIVISION 22
SECTION 220513 - MOTORS

REVISIONS:

3-1-09: REVISED BEARING REQUIREMENTS AND MOTOR FRAME REQUIREMENTS BY D. KARLE PER MECH TECH TEAM.

10-21-10: REVISED TO ADD GROUNDING RINGS FOR HOSPITAL MOTORS OPERATED ON VFDS BY L. RICHARDSON FOR MECH TECH TEAM.

12-09-2010 - REVISED PERFORMANCE REQUIREMENTS AND REVISED FORMAT.

08-30-2012: REVISED TO DROP REQUIREMENT FOR MOTORS TO COMPLY WITH ALL PARTS MG-1 PART 31 AND TO DROP REQUIREMENT THAT MOTOR LABELS STATE "INVERTER DUTY". UPDATED MG-1 REFERENCES FROM MG-1 2009 TO MG-1 2011. D. KARLE FOR HVAC MTT.

07-29-13: REVISED TO DELETE "CLASS B TEMPERATURE RISE" REQUIREMENT FOR A MOTOR USED WITH A VFD PER K. BIRRINGER. D. KARLE.

OCT. 2016: REVISED 2.4.K. TO REQUIRE SHAFT GROUNDING RINGS FOR ALL MOTORS, AND CERAMIC BEARINGS ON THE NON-DRIVE END OF MOTORS 100 HP AND ABOVE, IN ALL CASES AS OPPOSED TO JUST FOR HOSPITAL FUNDED PROJECTS. CHANGE DUE TO NEW EVIDENCE OF BEARING FAILURES FROM ELECTRICAL DISCHARGE, PER DECISION OF AD-HOC COMMITTEE ON MOTOR FAILURES CONVENED 10-13-16. PER THAT COMMITTEE, USE OF CERAMIC BEARINGS MAY BE DROPPED AT LATER DATE AFTER ADDITIONAL RESEARCH, SINCE CERAMIC BEARINGS MAY NOT BE EFFECTIVE. ADDITIONALLY IMPROVED SPECIFICATION LANGUAGE FOR MOTORS ON VFDS, INCLUDING DROPPING REQUIREMENT FOR "RATED INVERTER DUTY" SINCE THAT TERM IS UNDEFINED BY NEMA. D. KARLE

PART 1 - GENERAL3

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
 - 1. Division 26: Electrical.

1.2 SUMMARY

- A. Section includes:

1. Motors and requirements for factory or field installed motors, including but not limited to, air handling units, fans, pumps, and air compressors.

SPEC EDITOR: A/E MUST PROVIDE THE MOTOR SPECIFICATIONS FOR THE SPECIALIZED EQUIPMENT INDICATED BELOW. VERIFY IF THESE MOTORS ARE AVAILABLE IN EFFICIENCIES THAT COMPLY WITH NEMA MG-1 (2011) TABLE 12-12 AND SPECIFY AS SUCH, WHENEVER POSSIBLE.

- B. This section does not include motors for fire pumps, elevators, centrifugal chillers, sealed refrigeration equipment and vertical hollow or vertical solid shaft motors used with vertical turbine pumps.

1.3 SUBMITTALS

- A. Submit the following product data for approval:
 1. Manufacturer information.
 2. Dimensions and elevations.
 3. Complete NEMA nameplate electrical data including design type, insulation, service factor, and efficiency.
 4. Materials of construction.
 5. Bearing type, L10 life, and seal construction (open, single, or double shielded).
 6. Certification that VFD driven motors comply with NEMA MG-1 Part 31.

1.4 QUALITY ASSURANCE

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
- C. NFPA 70: National Electrical Code.
- D. NEMA Standards Publication MG 1 (2011): Motors and Generators.
- E. ABMA 9: American Bearings Manufacturers Association, Load Ratings and Fatigue Life for Ball Bearings.
- F. UL 1004: Motors, Electric.

1.5 WARRANTY

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable manufacturers of motors 1/2 HP and larger.

1. Reliance Electric.
2. Baldor Electric Company.
3. Dayton.
4. General Electric.
5. Toshiba Corporation.
6. U. S. Electrical Motors.
7. Leeson Electric.
8. Marathon Electric.

2.2 MOTORS - GENERAL REQUIREMENTS

SPEC EDITOR: THE FOLLOWING IS GENERALLY APPLICABLE. REVIEW AND EDIT TO SUIT PROJECT.

- A. Motors 1/2 HP and larger shall be three-phase, squirrel cage, induction type.
- B. Motors smaller than 1/2 HP shall be single-phase, permanent split capacitor type, with built-in overload protection.
- C. Frequency Rating: 60 Hz, alternating current.
- D. Voltage rating of motor shall be determined by voltage of circuit to which motor is connected.
 1. 120 V Circuit: 115 V motor rating.
 2. 208 V Circuit: 200 V motor rating.
 3. 240 V Circuit: 230 V motor rating.
 4. 480 V Circuit: 460 V motor rating.
- E. Motors shall be NEMA Design B.
- F. Provide Class B insulation, unless noted otherwise.
- G. Service Factor: 1.15, unless noted otherwise.
- H. Motors shall be nominal 1,800 rpm, unless noted otherwise.
- I. All disconnects and other electrical accessories shall comply with Division 26 requirements.

2.3 SINGLE PHASE MOTORS

- A. Use shaded pole motors only for motors smaller than 1/20 HP.
- B. Provide automatic reset type thermal over-load protection.
- C. Bearings: Sealed or regreasable ball or sleeve bearings, suitable for the radial and thrust loading of the application.
- D. Furnish with sliding base/slotted mounting holes adequate for proper belt tensioning and alignment of motor or motor/load.
- E. Nameplates may be printed-type glued to the motor.

2.4 THREE PHASE MOTORS

- A. Enclosure: Open Drip Proof (ODP) unless noted otherwise in equipment specifications or schedules, and as suitable for service and application.

SPEC EDITOR: ODP IS THE U-M STANDARD FOR MOST APPLICATIONS. TOTALLY ENCLOSED FAN COOLED (TEFC) MOTORS ARE SPECIFIED FOR COOLING TOWERS AND SOME OTHER APPLICATIONS. WHERE TEFC OR OTHER NON-ODP ENCLOSURES ARE REQUIRED, INCLUDE SPECIFIC REQUIREMENT IN EQUIPMENT SPECIFICATION SECTION AND/OR ON EQUIPMENT SCHEDULE.

- B. Motor Efficiency: Nominal (nameplate) full load efficiency and corresponding minimum efficiency shall be equal to or greater than that stated in NEMA MG-1 (2011) Table 12-12 - Full Load Efficiencies of 60hz NEMA Premium Efficient Electric Motors - 600 volts or Less
- C. Motors less than 3 HP: Steel or cast iron motor frames, cast aluminum, cast iron, or steel end plates, steel or cast iron terminal box, copper windings. Motor nameplates shall be steel, engraved-type, riveted to motor.
 - 1. Bearings: Regreasable with relief plugs, pre-lubricated ball bearings suitable for radial and thrust loading of the application, with grease fittings, selected for a minimum L-10 bearing life of 26,280 hours, for belted and direct drive.
- D. Motors 3 HP and above: cast iron motor frame and mounting feet, cast iron end plates (bells), steel or cast iron terminal box, copper windings. Motor nameplates shall be stainless steel engraved type, riveted to the motor.
 - 1. Bearings shall be regreasable with relief plugs, pre-lubricated ball bearings suitable for radial and thrust loading of the application, with grease fittings. Rated for an L-10 life of 40,000 hours (belted) or 130,000 hours (direct connected).
- E. Bearing life calculations shall be per ABMA 9, and for belted applications shall be based on the maximum external side load limits for belted applications per NEMA MG-1 Table 14-1A. L-10 life calculations for vertical motors and horizontal motors mounted in the vertical position shall consider the application's thrust loading.
- F. TEFC motors shall also include an external shaft slinger on drive end.
- G. Motors shall not exceed dBA levels listed in NEMA MG-1 54 PART 9 Tables 9-1 and 9-3, at all speeds.
- H. Motors shall be suitable for continuous duty at rated horsepower, with a maximum hot spot temperature that does not exceed the temperature limit of the insulation, when operated in an ambient temperature of 40 degrees C, except as otherwise indicated.
- I. Direct connected motors shall be furnished with adjustable base. Motors connected to driven equipment by belt or shaft shall be furnished with adjustable NEMA foundation sliding bases.
- J. Multi-Speed Motors: Separate windings shall be provided for each speed.
- K. For motors used with variable frequency drives, provide General Purpose NEMA Premium Efficiency Class motors complying with NEMA MG-1 Part 30 with windings that meet the requirements of NEMA MG-1 Part 31.4.4.2 and with minimum insulation of Class F.
 - 1. For all PWM VFD driven motors up to 100 HP:

- a. Provide a maintenance free, circumferential conductive micro fiber grounding ring installed on the AC motor to discharge shaft currents to ground. Grounding ring shall be AEGIS SGR (Shaft Grounding Ring).
- b. Motors protected by the AEGIS SGR shall be warranted for the term of the manufacturer's motor warranty from induced bearing current damage.
- 2. For all PWM VFD driven motors 100 HP & greater:
 - a. Provide a maintenance free, circumferential conductive micro fiber grounding ring installed on the drive end of the AC motor to discharge shaft currents to ground. Grounding ring shall be AEGIS SGR (Shaft Grounding Ring). In addition, all VFD driven motors 100 HP and larger shall utilize an insulated ceramic bearing assembly on the non-drive end of the motor, in conformance with the Aegis installation requirements.
- L. Explosion Proof motors:
 - 1. UL listed for application or duty.
 - 2. Motors shall conform to requirements defined in Article 500, 501, 502, and 503 of the National Electric Code.
 - 3. Motor nameplate shall be specifically marked "explosion proof."
 - 4. Sound power levels shall not exceed recommendations of NEMA MG-1 PART 9 Tables 9-1 and 9-3, at all speeds.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install and align motors in accordance with equipment manufacturer's recommendations.
- B. For VFD driven motors using a shaft grounding ring: Install grounding ring in accordance with the manufacturer's recommendations, including the application of a colloidal silver shaft coating on the motor shaft.

3.2 COMMISSIONING

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

3.3 ADJUSTING, CLEANING, PROTECTION

- A. Assure motor nameplate is legible and properly affixed.
- B. Verify that bearings are factory lubricated before starting motors. Lubricate per manufacturer's instructions. Do not over-lubricate bearings.
- C. Check motors for unusual heating, noise, or excess vibration during operation. Correct any such deficiencies.

1. Any motors with vibration exceeding specified limits, as noted in the Testing, Adjusting and Balancing Section, or manufacturer's recommendations, whichever is more stringent, shall be corrected, at no cost to Owner, until reduced below those limits.
- D. Clean the motor prior to start-up and immediately prior to final turn over to the Owner.

DIVISION 22 PLUMBING

SECTION 220514 - VARIABLE FREQUENCY DRIVES

END OF CONTENTS TABLE

DIVISION 22 PLUMBING
SECTION 220514 - VARIABLE FREQUENCY DRIVES

REVISIONS:

OCTOBER 2008: REVISED TO ADD TOTAL HARMONIC DISTORTION LIMITS, SUBMITTAL REQUIREMENTS, PID CONTROLLER, TIME CLOCK, AND MISC. OTHER CORRECTIONS AND CLARIFICATIONS BY D. KARLE FOR HVAC MECH TECH TEAM.

3-11-09: DELETE REQUIREMENT FOR MOTOR-ON-VFD PILOT LIGHT, DRIVE FAILURE PILOT LIGHT; CLARIFY REQUIREMENT FOR RUN PERMISSIVE, POWERED RUN MODE, AND POWERED RUN REQUEST CIRCUITS. BY D. KARLE FOR HVAC MECH TECH TEAM.

6-8-09: ADDED: RELAYS TO BE PLUG-IN STYLE, MAIN AND INVERTER DISCONNECT TO BE ACCESSIBLE W/O OPENING CABINET, FUSES TO BE IN FUSE BLOCKS. D. KARLE FOR HVAC MECH TECH TEAM.

10-15-09: ADDED: REQUIREMENT THAT WIRES ON THE SUBMITTAL DIAGRAMS SHALL BE LABELED WITH AN IDENTIFIER AND THAT WIRES BE CORRESPONDINGLY TAGGED IN THE DRIVE CABINET. D. KARLE FOR HVAC MECH TECH TEAM.

5-9-11: ABB ADDED AS APPROVED MFR. PER HVAC MTT (D.KARLE) .

9-10-12: ADDED REQUIREMENT THAT DRIVE BE IN A NEMA 1 OR NEMA 3R ENCLOSURE. D. KARLE FOR HVAC MTT.

01-24-13: ADDED REQUIREMENT AND EDITOR NOTE FOR SHORT CIRCUIT CURRENT RATING.

08-2017: GENERAL REVISION TO REDUCE FEATURES PER HVAC MTT. C. DUVALL, D. KARLE.

PROVIDE A COPY OF THIS SECTION TO THE ELECTRICAL ENGINEER FOR COORDINATION. INDICATE LOCATION OF VFD IN MECHANICAL PLANS AND ENSURE IT IS SHOWN IN ELECTRICAL PLANS. INCLUDE VFD SCHEDULE. SPECIFY 480V IN LIEU OF 208V WHERE EVER POSSIBLE, ESPECIALLY WHEN POWER SOURCE ALSO FEEDS COMPUTERS. ON RETROFIT PROJECTS, BE SURE THAT EXISTING MOTOR IS COMPATIBLE WITH THE NEW VFD.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

1.2 SCOPE OF WORK:

- A. Provide variable frequency drives (VFD) meeting the requirements contained herein and as indicated in the VFD schedule.

1.3 QUALITY ASSURANCE:

- A. VFD shall comply with NFPA 70 (National Electrical Code), IEEE 519, UL 508, NFPA 70, and FCC compliance for Radio Frequency Interference (RFI) and Electro- Mechanical Interference (EMI).

1.4 WARRANTY:

- A. Provide a minimum of 3 years parts and labor warranty from the date of final acceptance by the University.

1.5 ACCEPTABLE MANUFACTURERS:

- A. Variable speed drives shall be manufactured by one of the following: Danfoss, Toshiba, ABB. VFDs manufactured by parent companies or their subsidiaries are not acceptable.

1.6 SUBMITTAL DATA

- A. Submit for approval, the following product data:
 - 1. Dimensions and elevations.
 - 2. Complete product data listing all included features.
 - 3. The electrical rating for each VFD, matched to each piece of driven equipment.
 - 4. Short circuit current (withstand) rating.
 - 5. Project specific wiring diagrams indicating:
 - a. Line/load connection points
 - b. Main input and inverter input disconnect switches
 - c. VFD/bypass switch circuit
 - d. Fusing/circuit breakers
 - e. Auxiliary control transformer
 - f. Local/remote circuit
 - g. Hand-off-auto circuit
 - h. Safety interlock, run permissive, and drive initiated external circuits
 - i. Analog inputs and outputs
 - j. Pilot lights
 - k. Each wire on the wiring diagram shall be labeled with a distinct wire identifier.
 - 6. VFD panel face diagram indicating the location of the main and inverter disconnect switches, local/remote and H-O-A switches, VFD/bypass switch, pilot lights, digital display, keypad, and any other face mounted device, along with the panel face labeling.

PART 2 - PRODUCTS

HOSPITAL PROJECTS MAY REQUIRE 18 PULSE DRIVES. REVIEW THE HOSPITAL DESIGN GUIDELINES AND CONSULT WITH HOSPITAL FACILITIES AND ADJUST THE BELOW PARAGRAPH IF REQUIRED.

2.1 GENERAL:

- A. Provide minimum 6 pulse PWM type drives.
- B. VFDs designated for installation indoors shall have enclosures rated NEMA 1. VFDs designated for installation outdoors shall have enclosures rated NEMA 3R minimum. The same NEMA requirements shall be provided for enclosures housing a bypass or any other accessory.
- C. The VFD shall be capable of operation at the maximum ambient temperature at the drive location without derating.
- D. All device ends and termination points including fuse blocks, input/output wiring lugs, terminal strips, transformers, contactors, and other electrical devices inside the panel shall be provided with insulated "finger proof" covers to prevent contact with electrical energy when the front panel door is open.
- E. All relays shall be plug-in style base.

COORDINATE WITH THE ELECTRICAL ENGINEER AND INSERT THE REQUIRED MINIMUM SHORT CIRCUIT CURRENT RATING.

- F. The VFD (including bypass and other accessories) shall have an overall short circuit current (withstand) rating of _____ amps symmetrical minimum, and shall be marked with its short circuit current rating in compliance with UL.
- G. The unit, including all specified accessories, shall have a minimum efficiency of 85 percent at any speed from 50 to 100 %. The unit shall have a power factor of 0.9 or higher when operating at any speed from 50 to 100%.
- H. The VFD shall be variable torque type and shall provide full motor torque at any operating speed from 40% to 100%. Provide constant torque type for constant torque applications, including but not limited to energy recovery wheels. It is the responsibility of the VFD supplier to determine if the driven load requires a constant torque type VFD.
- I. Provide the drive with a main input disconnect switch, accessible without opening the drive cabinet, equipped with current limiting fuses and fuse rejection clips, or with circuit breakers. When the drive is equipped with a bypass, this disconnect shall control power to both the load and the VFD. All other fuse blocks with current limiting fuses installed shall be equipped with fuse rejection clips. It shall be possible to padlock the disconnect switch in the off position.

SPEC EDITOR: BYPASS MAY BE OMITTED FOR FULLY REDUNDANT EQUIPMENT. SEE U-M DESIGN GUIDELINES FOR FURTHER INFORMATION. DO NOT INDISCRIMINATELY REQUIRE BYPASSES. INSTALL A BYPASS FOR ALL LABORATORY FANS.

- J. Provide a factory mounted and wired manual bypass device as scheduled. The bypass device shall allow the load to run across-the-line while electrically isolating the VFD so that maintenance can be performed on the drive components. Provide the necessary electronics to avoid audible noise generated from motor due to frequency change. The unit shall not increase the motor audible noise by more than 3 dB above the motor's across the line noise at any motor speed from 50 to 100 %.

- K. The unit shall include self diagnostics with a digital display that identifies fault conditions and simplifies trouble shooting. Fault indication shall be retained even after a power outage or an input over-current protective device trip.
- L. Unit shall be provided with RFI/EMI filters.
- M. Unit shall be UL, CSA or ETL labeled.
- N. VFD shall include current sensors on all three output phases to accurately measure motor current.

SPEC EDITOR: THE ENGINEER MUST SPECIFY AS PART OF THE DIVISION 26 ELECTRICAL TESTING SECTION THAT THE CURRENT AND VOLTAGE THD BE MEASURED AT EACH DRIVE.

- O. Provide minimum 3 percent AC input line reactors and/or minimum 5 percent DC link reactors to limit the maximum current total harmonic distortion (THD) to not more than 100% of the VFD input current waveform at any VFD operating speed from 20% to 100%. Reactors shall be integral to the VFD. The reactor(s) shall not be active when the drive is in bypass mode. If testing reveals the maximum THD is exceeded, the manufacturer shall provide and install additional reactors at no cost to reduce the THD to within these specified limits.
- P. The unit shall have a dedicated terminal block for all external inputs and outputs.
- Q. Provide factory mounted and wired 115V, 1 phase, 60 Hz control power transformer sized for handling an additional 30 VA inductive load. Limit fuse size for the control transformer to 3 amps maximum.

SPEC EDITOR: 480V IS OUR STANDARD VOLTAGE FOR VFDS, EVEN IF POWER AVAILABLE IS 208V/3P. IN THOSE CASES, WORK WITH THE ELECTRICAL ENGINEER AND PROVIDE A STEP-UP TRANSFORMER. IF MOTOR MUST USE 208V FOR A SPECIFIC APPLICATION, COORDINATE WITH ELECTRICAL ENGINEER AND PROVIDE A DESIGN THAT SEGREGATES VFD FROM ANY FEEDER CIRCUIT OR PANEL THAT ALSO FEEDS COMPUTERS OR ELECTRONIC EQUIPMENT.

- ~~R.~~ The VFD voltage and phase shall match the line and load voltage and phase indicated on the drawings.

2.2 CONTROL FEATURES:

- A. The VFD shall be provided with the following control features:
 1. Factory mounted and wired Hand-Off-Auto selector switch that allows local or remote starting or stopping of the drive. Separate start and stop buttons, electronic circuits that "virtually" provide this capability, or other alternative devices are not acceptable.
 2. Factory mounted and wired VFD-Bypass switch, if bypass device is provided.
 3. Factory mounted and wired Local-Remote speed control switch, that allows either local or remote control of the drive speed. Key pad buttons are also acceptable provided that permanently labeled, dedicated buttons are provided for the local and the remote speed control functions.

4. Inverter input disconnect switch, accessible without opening the drive cabinet, if bypass device is provided.
5. Manual speed potentiometer or keypad control, for local speed control with the Local-Remote speed control switch in the Local position.
6. A VFD controller with a man/machine interface (MMI) consisting of a back-lit liquid crystal (LCD) display and labeled push buttons or a touch screen. The MMI shall provide access to view and set all drive functions, including the following required functions:
 - a. Adjustment of drive speed at the MMI, when the VFD controller is set for local control.
7. The controller/MMI shall display, at minimum, the following parameters:
 - a. Motor speed indication including RPM, GPM, CFM units.
 - b. kWh
 - c. Power
 - d. Horsepower
 - e. Output amperage, per phase
 - f. Output voltage
 - g. Output frequency
 - h. Input reference signal
 - i. Speed and start/stop controlled locally or remotely
 - j. Fault warning messages
 - k. Drive fault cause
 - l. Acceleration and deceleration rate
 - m. Frequency lock-outs
8. The VFD shall accept an input reference signal, 0-10 Vdc analog or 4-20 mA analog, as indicated in the VFD schedule, for remote speed control with the Local-Remote speed control switch in the Remote position. Provide input signal isolation to isolate input signal ground from VFD internal control ground.
9. A remote start/stop contact input that functions in the automatic mode only.
10. A safety interlock circuit that functions in drive and by-pass modes.
11. A run permissive circuit, separate from the safety interlock circuit, which prevents motor operation whether in drive or bypass mode. This circuit, via the customer's external contact device, signals the motor may run, provided the safety interlock contact(s) is made. A typical application would be for a time delay before motor start to allow some external event to occur. The run permissive circuit shall be jumpered from the factory.
12. Provide the following drive initiated external circuits:
 - a. Powered run mode: A circuit that is powered after the motor is started in drive or by-pass modes.
 - b. Powered run request: A circuit that is powered whenever the drive safety interlock contact(s) are closed, and the drive H-O-A is in hand, or the drive H-O-A is in auto and the remote start/stop contact is closed.
13. A standard USB port for direct connection of a Personal Computer (PC) to the VFD. The manufacturer shall provide PC software to allow complete setup and access to the VFD through the USB port. It shall be possible to communicate to the VFD through this USB port without interrupting VFD communications to the building management system

14. An integral PID controller that, when activated, controls drive speed to maintain a programmed setpoint based on a remote analog input signal.
 - a. The VFD shall be able to apply a scaling factor to the input signal.
 - b. The VFD shall be able to calculate the square root of the input signal so that a pressure sensor can be used to measure flow.
15. A real-time clock shall be an integral part of the VFD.
 - a. It shall be possible to use this to display the current date and time on the VFD's display.
 - b. The clock shall include a time clock function with 7 day programmability and a minimum of four programmable time periods per day, with individually selectable ON and OFF functions. The time clock function shall be programmable to control start/stop functions, constant speeds, PID parameter setpoints and output relays. The time clock function shall be programmable through the controller display and keypad, or by included software that allows programming via a PC and a USB connection.
16. VFD shall be capable of starting a coasting load.
17. VFD shall automatically attempt to restart a minimum of three (3) times during an adjustable time period of no less than 30 seconds after shutting off for any reason, except for short circuit or motor overload.
18. The VFD shall have adjustable motor acceleration and deceleration rates.
19. The VFD shall have the ability to lock-out a minimum of four critical frequency ranges to prevent the VFD from operating the load at a speed that causes vibration in the driven equipment.
20. Provide the ability to program a minimum of 12 preset speeds, selected by the drive, when started by a digital input.
21. Provide a minimum of one 4-20 mA analog output signal selectable to proportionally indicate drive output frequency, current, or power, or to indicate the VFD input reference signal, for monitoring by DDC

THE BELOW FEATURES ARE GENERALLY NOT REQUIRED. IF REQUIRED UNHIDE THE TEXT BELOW.

22. Provide the following additional contacts:
 - a. Provide an additional set of N.O. contacts on the VFD-Bypass switch that close when the switch is set to Bypass.
 - b. Provide one normally open and one normally closed auxiliary contacts to actuate when the motor is started in any mode.

2.3 INDICATORS:

- A. Indicating lamp for "POWER AVAILABLE" and for "MOTOR ON BYPASS". Lights shall be LED type.

2.4 SAFETIES:

- A. Provide status lights or digital display indication at the MMI of the cause of any shutdown.
- B. The VFD shall be provided with the following safety features:

1. VFD over voltage and under voltage protection and protection against temporary power outages.
2. VFD over temperature protection.
3. Motor over temperature protection per NEC 430.126(A)(2).
4. Short circuit and ground fault protection.
5. Separate motor overload protection functional in by-pass and normal operation. For VFD's controlling multiple motors, provide overload protection for each motor.
6. Adjustable current limiter.

2.5 LABELING:

- A. Provide engraved plastic labels permanently attached to the VFD panel face indicating the function of all switches and indicators, and the equipment served.
- B. Tag all wiring in the drive. Tag nomenclature shall match the corresponding wire identification nomenclature indicated on the approved drive submittal.
- C. For VFDs serving smoke purge, stair pressurization, or other smoke control systems, include an engraved permanently attached red faced label, minimum 6" x 6", with the following nomenclature: CAUTION: THIS VFD IS PART OF A LIFE SAFETY SMOKE CONTROL SYSTEM. NOTIFY U-M DEPARTMENT OF PUBLIC SAFETY PRIOR TO ANY CHANGE OR MAINTENANCE ACTIVITY TO THIS DRIVE.

PART 3 - EXECUTION

3.1 INSTALLATION:

- A. Unit installation, including mounting and supports, and wiring to motor shall be by the Electrical Contractor, in compliance with Division 26. Coordinate with the Electrical Trades and Control Trades as required.
- B. Install the VFD as close as possible to the motor. The load side power cables to the motor shall be kept as short as possible and shall not be run in the same conduit as the line side power cables. Control wiring shall be in separate conduit from power wiring. Where applicable, control wires from the motor disconnect early break contacts may be installed with the motor power wiring.
- C. Protect the unit from dirt, dust, water and physical damage prior to and during construction. If the inside of the unit becomes dirty or dusty before acceptance by the University, it shall be thoroughly cleaned by the unit manufacturer at the contractor's expense.

3.2 CHECK, TEST AND START:

- A. Provide the services of a factory trained and certified technician to supervise check, test and start. The contractor shall notify U of M representative 5 days in advance of the start-up.

3.3 TRAINING:

SPEC EDITOR: TRAINING IS NOT GENERALLY REQUIRED FOR VFDS WITH WHICH PLANT IS ALREADY FAMILIAR, BUT MAY BE REQUIRED FOR NEW MODELS. CONSULT THE U-M DESIGN MANAGER REGARDING IF TRAINING IS REQUIRED.

- A. Conduct a minimum of 4 hours training for maintenance staff on operation, programming and service of VFDS. Training shall be conducted by a factory trained service technician.
- B. Training shall not be performed until system is operational and functional and two (2) weeks after receiving approved job specific technical manuals.

SECTION 220516 - PIPE EXPANSION JOINTS

END OF CONTENTS TABLE

DIVISION 22 PLUMBING
SECTION 220516 - PIPE EXPANSION JOINTS

REVISIONS:

2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.

APRIL 2018: REVISED TO LIST MFR.S FROM PML. R BENEDEK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

1.2 SCOPE OF WORK:

- A. Provide expansion joints per plans and specifications in the following systems.
1. Steam and Condensate Pipe
 2. Heating Hot Water Piping
 3. Domestic Hot Water and Recirculation Piping

1.3 QUALITY ASSURANCE

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
1. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as $\leq 0.25\%$ weighted average lead content) (and/or NSF/ANSI-372) and Annex F. Applies to any item in contact with domestic (potable) water.
 2. U.S Safe Drinking Water Act (any item in contact with domestic (potable) water).

1.4 PRICE BASIS

- A. Base bid shall be based on "ADSCO" model RJ Rampack joints. Under Alternate x provide price, name and model for one other acceptable manufacturer.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS:

- A. For Slip Joints: ADSCO Manufacturing, Advanced Thermal Systems, Flexonics
- B. For Bellows Joints: ADSCO Manufacturing Corruflex, Metraflex, Flexonics, Microflex, Twin City Hose, Hose Master LLC.
- C. For slip type (packed) expansion joints only "ADSCO" model RJ Rampack is the acceptable manufacturer and model.

2.2 GENERAL

- A. Conform to the standards of the Expansion Joint Manufacturers Association and shall be pressure rated for 60 PSI for low-pressure (9 lbs.) systems and for 175 PSI for high-pressure (60 lbs.) systems.
- B. Expansion joints located in heating fin tube enclosures in the copper serpentine piping shall have bronze elements and external self-guide shell, bronze sweat ends and designed for 100 pounds of working pressure unless indicated otherwise.
- C. Expansion joints sizes 2" and smaller shall have screw threads, welding or sweat ends. Joints 2-1/2 " and larger shall have 150 pound ASA standard flange ends unless indicated otherwise.
- D. All bellows joints shall be pre-set at the factory and "held" with removable metal clips or strips tack welded across the flanges.
- E. Provide guides of the type indicated at locations indicated in the plans.
- F. All slip type expansion joints to be installed in the tunnels or main utility incoming lines shall be precompressed 1", to compensate for pipe contraction.

2.3 SLIP TYPE (PACKED) EXPANSION JOINTS

(USE FOR STEAM LINES IN TUNNELS AND UTILITY WORK.)

- A. Expansion joints shall be packed slip type permitting the addition of new packing while joint is in service under full line pressure, externally/internally guided, single or double as scheduled, 150 or 300 lb. with weld or flanged end with base, drain and service connections as required suitable, 600 F. maximum operating temperature, and traverse as scheduled. Single expansion joints with base shall be suitable for main anchor. The inner end of each ring shall have a limit stop to prevent slip disengagement should an anchor fail.

- B. Each expansion joint shall have a minimum of four (except 6" dia. or smaller) angle type extended packing gun or other special manufacturer recommended fittings to facilitate access to difficult to reach packing locations. These special packing fittings/extendors shall match existing in tunnels. Vendors are to visit the site or obtain a copy of previous shop drawing submittal from Owner. Provide "Van Stone" floating flanges at the slip end of joints.
- C. Packing shall be semi plastic injectable asbestos free Teflon based or graphite based as recommended by manufacturer of the joints for this application.
- D. Provide a shut off valve in the packing manifold in addition to the check valve.
- E. Where the new expansion joints replace existing joints or are being installed in an existing line, the successful Bidder's representative (before submitting shop drawings for approval) shall visit the job site and obtain necessary field data to verify pipe sizes, to match existing flange to flange dimensions and make sure the joints will physically fit and operate without relocating existing pipes. Joint base heights may have to be custom measured to suit existing pipe location. If this cannot be done the supplier shall advise the mechanical contractor, who shall include necessary funds in his bids to relocate existing pipes, adjust or replace existing supports, guides and anchors. Flanges shall be "floating flanges" type construction to eliminate bolt hole misalignment with existing matching flanges.
- F. Provide a drip connection and base for expansion joint as indicated in the plans.

2.4 EXPANSION COMPENSATORS: (BELLOWS TYPE JOINTS)

SPEC EDITOR: USE THESE IN SMALL SIZE BUILDING WORK: ECONOMICAL DESIGN

- A. Bellows type expansion joints for iron and steel piping for condensate system shall be constructed with two ply stainless steel bellows and carbon steel shrouds, and end fittings. ADSCO model FASSI or equal by other acceptable manufacturers.
- B. Bellows type expansion joints for hot water systems with copper piping shall be constructed from 2 ply phosphor bronze bellows, brass shrouds and end fittings. All internal parts shall be of non-ferrous metal. ADSCO model FASCBB or equal by other acceptable manufacturer

2.5 BELLOWS EXPANSION JOINTS (CONTROLLED FLEXING TYPE):

(USE THIS FOR CONDENSATE, DHW, AND DHWR LINES IN TUNNELS AND UTILITY WORK)

- A. Expansion joints shall be multiply stainless steel bellows (high convolute design, low convoute design is not acceptable), with mated neck rings. Bellows shall be welded with minimum number of longitudinal seams and no circumferential seams. The joints shall be single or double with center anchor base where indicated and scheduled, with Van Stone flanges and with internal sleeves(joints are to be insulated). The joints shall be rated for 125 lbs. operating pressure and 500 degree F maximum operating temperature.

PART 3 - EXECUTION

3.1 GENERAL

- A. The installations shall be in strict accordance with manufacturer's instructions.
- B. During the commissioning period record the initial and final position and record actual movement of the joint.

SECTION 220519 - THERMOMETERS, PRESSURE GAUGES, AND ACCESSORIES

END OF CONTENTS TABLE

DIVISION 22 PLUMBING

SECTION 220519 - THERMOMETERS, PRESSURE GAUGES, AND ACCESSORIES

REVISIONS:

2013-12-01: ADD MILJOCO, LEAD FREE FOR DOMESTIC, AND OTHER MINOR IMPROVEMENTS. D. KARLE FOR HYDRONICS/STM MTT.

2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.

2021-01-25: ADDED THE REQUIREMENT FOR A PRESSURE GAUGE ACROSS STRAINERS 2-1/2" AND ABOVE. D.KARLE FOR MTT.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

1.2 SCOPE OF WORK:

- A. Thermometers, pressure gauges, and accessories.

1.3 QUALITY ASSURANCE

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
 - 1. UL Compliance: Comply with applicable UL standards pertaining to meters and gauges.
 - 2. ASME and ISA Compliance: Comply with applicable portions of ASME and Instrument Society of America (ISA) standards pertaining to construction and installation of meters and gauges.
 - 3. ASME/ANSI B40.1, Pressure Gauge Standard.
 - 4. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as $\leq 0.25\%$ weighted average lead content) (and/or NSF/ANSI-372) and Annex F. Applies to any item in contact with domestic (potable) water.
 - 5. U.S Safe Drinking Water Act (any item in contact with domestic (potable) water).

PART 2 - PRODUCTS

2.1 THERMOMETERS:

SPEC EDITOR: "INDUSTRIAL" MERCURY TYPE THERMOMETERS HAVE BEEN REMOVED FROM THE MASTER SPECIFICATIONS BASED ON OSEH REQUIREMENT TO ELIMINATE UNNECESSARY USE OF MERCURY IN CONSTRUCTION. BI-METAL THERMOMETER DELETED PER HYDRONIC TEAM MEETING 10-19-01

SPEC EDITOR: CHOOSE BETWEEN THE TWO THERMOMETERS LISTED.

- A. Digital Thermometer: electronic, with LCD display and solar cell, clear plastic window, adjustable angle, separable socket.
 - 1. Range and accuracy: -40 to 300 deg.F, accuracy greater of (+/-) 1 deg.F or 1% of reading.
 - 2. Manufacturers: Weiss Model DVBM25 (vari-angle), Tech Controls, Miljoco Corp.

- B. Industrial Glass Thermometer: adjustable angle, scale to be 9" long with white aluminum back and black graduation, aluminum casing, blue appearing liquid tube, glass window. Stem for air duct shall be 6" long with protective aluminum slotted bulb guard and mounting flange. Stem for piping shall be 3-1/2" long aluminum, brass or stainless steel, stem to match specified thermometer well. Adjust stem length for insulation extension.
 - 1. Range and accuracy: (+/-) 1 scale div. Except where otherwise noted, select range for maximum precision for system served:
 - 2. Manufacturers: Ashcroft, H. O. Trerice, Marsh, Weksler, Weiss, Miljoco Corp.

SPEC EDITOR: VERIFY SPECIFIED RANGE FOR EACH PROJECT

Service	Range (deg. F)
Domestic Cold Water	30-130 or 0-120
Domestic Hot Water	30-180
Chilled Water / Condenser water	30-130 or 0-120
Heating Water	30-240
All other locations	shown on drawings

- C. Thermometer Wells: Brass or stainless steel, with neck extension for insulated piping, with cap and chain fastened to well. 3/4"NPT, 2 1/2" insertion length, and extension length as required to extend well to outside of insulation. Lead free when used for domestic water applications.

- D. Outdoor thermometers shall be ultraviolet proof and specifically manufactured for outdoor use.

2.2 PRESSURE GAUGES

SPEC EDITOR: THIS SPEC IS GEARED TOWARD MAINSTREAM HVAC APPLICATIONS. EDIT FOR CRITICAL APPLICATION. SOME DISCUSSION ON OPTIONS FOLLOW: STAINLESS MOVEMENT IS A BIT MORE EXPENSIVE THAN BRASS, BUT PROBABLY WORTHWHILE FOR ALL APPLICATIONS. BRASS SOCKET IS SUITABLE FOR ALL BUT VERY AGGRESSIVE SYSTEMS. STAINLESS STEEL IS ALSO AVAILABLE.

1/2" SOCKET WORKS WELL WITH 1/2" ISOLATION AND MANIFOLD WE TYPICALLY USE - ALSO LESS PRONE TO PLUGGING THAN 1/4".

2 1/2" AND 4 1/2" ARE MOST COMMONLY USED IN THE INDUSTRY, AND SUITABLE FOR MOST LOCATIONS, EXCEPT WHERE GAUGES ARE DIFFICULT TO GET TO AND READ.

ACCURACY (OF FULL RANGE) OF 2%, 1% AND 1/2% ARE AVAILABLE. COST INCREASES SIGNIFICANTLY WITH IMPROVED ACCURACY. 1% IS REASONABLE FOR MOST APPLICATIONS. SPECIFY 1/2% FOR CRITICAL APPLICATIONS ONLY.

GLYCERIN FILL HELPS REDUCE VIBRATION AT PUMP, BUT TURNS CLOUDY ABOVE 150 DEG. F, NECESSITATING THE USE OF NEEDLE VALVES TO DAMPEN ABOVE THAT TEMP. DAMPENERS ARE NOT TYPICALLY REQUIRED. THEY PREVENT PRESSURE SURGES WITH A SMALL ORIFICE. DAMPENERS ARE PRONE TO PLUGGING UP AND ARE THEREFORE NOT TYPICALLY SPECIFIED.

- A. Unless otherwise noted, provide all pressure gauges with clear glass window, cast aluminum, stainless steel or polypropylene case, black on white face, stainless steel wetted parts, brass 1/2" MPT socket, 1% full scale accuracy complying with ASME/ANSI B40-1 Grade 1A. Lead free when used for domestic water applications.
- B. Water and Compressed Air Services through 2" piping (Utility/Economy): 2 1/2" diameter face, stainless steel case, brass or stainless steel 1/4" MPT socket, 2% full scale accuracy.
- C. Water and Compressed Air Services over 2" piping: 4 1/2" diameter face, 6" diameter face for location more than 8 feet above floor, sealed glass window, glycerin filled for connections within 10 feet of pumps. For applications exceeding 145 deg. F, provide 316 stainless steel needle valves rated minimum 500 psi, in lieu of glycerin filled.
- D. Steam Service: 4 1/2" diameter face, 6" diameter face for location more than 8 feet above floor, sealed glass window, brass or stainless steel coil siphon tube with a minimum pressure rating of 1000 psi.

SPEC EDITOR: EDIT OR DELETE THE FOLLOWING

- E. Critical System Pressure Gauges: Stainless steel socket, 1/2% of full range accuracy, 6" diameter face, in accordance with AMSE/ANSI B40-1 Grade 2A. Applicable for the following locations:

SPEC EDITOR: LIST APPLICATIONS

SPEC EDITOR: EDIT OR DELETE THE FOLLOWING

- F. Differential Pressure Gauges: 4 1/2" diameter face, 6" diameter face for location more than 8 feet above floor, sealed glass window, glycerin filled for connections within 10 feet of pumps. For applications exceeding 145 deg. F, provide 316 stainless steel needle valves rated minimum 500 psi, in lieu of glycerin filled. Applicable for the following locations:

SPEC EDITOR: LIST APPLICATIONS

- G. Except where noted otherwise, select range for twice normal operating pressure:

Service	Range
Water (CW and HW)	0-100 psig
Steam(15#)	30" Hg vac. - 30 psig
Steam(60#)	30" Hg vac. - 100 psig
Comp. Air	0-100 psig

- H. Outdoor gauges shall be ultraviolet proof and specifically manufactured for outdoor use.
- I. Manufacturers: Ashcroft, H. O. Trerice, Marsh, Weksler, Weiss, Miljoco Corp.

2.3 PRESSURE/TEMPERATURE TEST PLUGS AND KITS:

- A. Provide 1/4" brass pressure and temperature test plugs where shown on drawings, with two core Nordel rated for 275 degrees and 300 psig.

SPEC EDITOR: THE FOLLOWING IS NOT TYPICALLY REQUIRED, BUT CAN BE INCLUDED ON LARGE PROJECTS.

- B. Provide one readout meter kit including required hoses with a minimum 3-1/2" dial differential pressure gauge. Gauge shall read 0 to 60 psig and have end connections to match both the flow valves and plugs. Included in the case shall be two pocket thermometers (25 to 125 and 0 to 220 degrees), one gauge adapter, and one pocket pressure gauge (0 to 160 psig). Meter shall become property of U of M (hand over to project engineer) after completion of work.
- C. Manufacturers:
 1. Plugs: Petes, Sisco, Schrader, Miljoco Corp.
 2. Meter: Auto Flow, Griswold

PART 3 - EXECUTION

3.1 THERMOMETERS INSTALLATION

- A. Install and orient wells and thermometers so thermometer can be read from the floor. Digital thermometers shall be located in areas with adequate light, where possible.
- B. Thermometer Wells: For piping 2" and below, install in piping tee where thermometers are indicated, in vertical position. For piping below 2 1/2" and above, "weldolets" may be used. Fill well with oil or graphite and secure cap.
- C. Install in the following locations and elsewhere as indicated:

SPEC EDITOR: EDIT LIST BELOW TO SUIT PROJECT REQUIREMENTS.

1. At inlet and outlet of each hydronic zone.
2. At inlet and outlet of each hydronic boiler and chiller.
3. At inlet and outlet of each hydronic coil in air-handling units over 5000 cfm.
4. At inlet and outlet of each hydronic heat exchanger.
5. At inlet and outlet of each hydronic heat recovery unit.
6. At inlet and outlet of each thermal storage tank.
7. At outside air intake ductwork.
8. At mixed air plenums.

9. At hot/cold deck plenums.
10. At each zone supply duct of multi-zone systems.
11. At supply duct of single zone systems.

3.2 INSTALLATION OF PRESSURE GAUGES

- A. Install pressure gauges with 1/2" isolation ball valve. Where needle valves are specified as a substitute for glycerin filled in Part 2, install the needle valve between the ball valve and the gauge. Locate gauges to be readable from the floor preferably at eye level. Mount gauges securely to prevent excessive vibration, adjust needle valve to dampen pulsations. Install syphon tubes for steam pressure gauges, connected after the isolation ball valve. Do not install pressure gauges on bottom of piping.

SPEC EDITOR: EDIT LIST BELOW TO SUIT PROJECT REQUIREMENTS.

- B. Install in the following locations, and elsewhere as indicated on drawings:
 1. At suction and discharge of each pump.
 2. At inlet and outlet of each pressure-reducing valve.
 3. At building water service entrance.
 4. At inlet and outlet of hydronic equipment (HW boilers, chillers, heat exchangers, filters).
 5. Across strainers 2-1/2" pipe size and larger. Unless indicated otherwise, provide one pressure gauge connected to a ball valve at the inlet and a ball valve at the outlet of the strainer.

3.3 INSTALLATION OF TEST PLUGS

- A. Test Plugs: Install in piping tee where indicated, located on pipe at most readable position. Secure cap.

3.4 ADJUSTING AND CLEANING

- A. Adjusting: Adjust faces of meters and gauges to proper angle for best visibility.
- B. Cleaning: Clean meters and gauges. Replace cracked and broken windows. Touch up scratches.

END OF CONTENTS TABLE

DIVISION 22
SECTION 220523 - VALVES

REVISIONS:

2013-12-17: REMOVED KEYSTONE AS APPROVED FOR HP BF VALVES DUE TO ON-GOING SHUT-OFF PROBLEMS REPORTED BY PLANT, D. KARLE FOR MTT.

2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.

2014-2-28: REVISED TO STRIKE BALL VALVE MODEL NUMBERS, WHICH WERE OUTDATED. JOMAR REMOVED PENDING REVIEW OF THEIR BRASS BALL VALVE OFFERING (JOMAR DOES NOT OFFER BRONZE BALL VALVES). JAMESBURY REMOVED, DON'T OFFER BALL VALVES OF TYPE SPECIFIED. D. KARLE FOR MTT.

2014-12-15: REVISED TO STRIKE BALL VALVE MFR.S NO LONGER APPROVED OR AVAILABLE, ADD SPECIFIC JOMAR MODEL NUMBER BALL VALVE AS APPROVED, STRIKE GRINNELL GHP SINCE IS THE SAME VALVE AS THE KEYSTONE THAT HAS PROVEN UNRELIABLE, AND RESTRICTED USE OF LEAD FREE VALVES TO POTABLE WATER SYSTEMS ONLY DUE TO SOLDERING CHALLENGES. D. KARLE FOR MTT.

2015-06-30: CLARIFIED THAT GROOVED BUTTERFLY VALVES ARE ONLY PERMITTED WHEN SPECIFICALLY INDICATED, H.P. BUTTERFLY VALVES ARE REQUIRED OTHERWISE, INCLUDING IN GROOVED PIPING. D. KARLE FOR PLMG. MTT.

2017-02-08: ADDED APPROVED MFRS - ABZ FOR HP B'FLY, VANESSA FOR METAL SEATED B'FLY AND APOLLO FOR GATE/GLOBE/CHECK. B. BEGG FOR PLMG. MTT.

2018-01-31: REVISED JOMAR BALL VALVE MODEL NUMBER, EXACT SAME VALVE PER JOMAR INCLUDING MATERIALS, THE MODEL NUMBER WAS ONLY UPDATED TO REFLECT ADDITIONAL LISTINGS. D. KARLE AS APPROVED BY PLMG. MTT.

APRIL 2018: REVISED TO LIST MFR.S FROM PML. R BENEDEK

OCT 2022: REMOVED JOMAR BALL VALVES AND ADDED PRATT HIGH PERFORMANCE BUTTERFLY VALVES

APRIL 2024: ADDED JOMAR BRONZE BALL VALVE & REVISED WORDING FOR MANUAL BALANCE VALVES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related sections:
 - 1. [220500 Common Work Results for Mechanical](#)
 - 2. [221113 Piping Materials & Methods](#)
 - 3. [331100 Water Distribution Piping](#)
 - 4. [336300 Steam and Condensate Distribution Systems](#)

1.2 SCOPE OF WORK:

- A. Provide valves as scheduled and specified for the following systems:
 - 1. Cold Water, Hot Water, Hot Water Return
 - 2. High Purity Water
 - 3. Compressed Air
 - 4. Lab Vacuum
 - 5. Natural Gas
 - 6. Hot Water Heating, Chilled Water, Condenser Water
 - 7. Steam and Condensate
 - 8. Others as indicated
 - 9. Refer to 336300 for steam and condensate valves in the utility tunnels.

1.3 QUALITY ASSURANCE:

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
 - 1. National Sanitation Foundation NSF/ANSI-61, including Annex G (listed as $\leq 0.25\%$ weighted average lead content)(and/or NSF/ANSI-372)and Annex F. Applies to any item in contact with domestic (potable) water.
 - 2. U.S Safe Drinking Water Act (any item in contact with domestic (potable) water).

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Store materials and accessories raised off the floor or ground on pallets and protected with coverings to prevent damage or contamination due to weather and construction activities. Provide temporary protective caps on pipe ends. Maintain caps installed at all times until just prior to assembly, and recap open pipe ends at the conclusion of each work day. Store in areas that prevent damage due to freezing and extreme temperatures or sunlight. Arrange coverings to provide air circulation to avoid damage from condensation or chemical build-up. Protect from damage, dirt and debris at all times.

PART 2 - -PRODUCTS

2.1 VALVE APPLICATION SCHEDULE:

SPEC EDITOR: EDIT 2.1 CAREFULLY TO SUIT PROJECT. CONSIDER USE OF LESS EXPENSIVE STANDARD BUTTERFLY VALVES FOR CW, HW, CHW AND HWH. COORDINATE VALVE SELECTION WITH PLANT. ADD SOLENOID VALVES UNDER SPECIALTY VALVES IF APPLICABLE, CONSIDER USE OF GROOVED BUTTERFLY VALVES. EDIT BALANCING VALVES TO SUIT PROJECT.

A. Cold Water, Hot Water and Hot Water Return System:

Isolation through 2": Ball Valve
Isolation 2 1/2" and larger: High Performance Butterfly Valve, All stainless steel.
Check: Swing Check through 2", Silent Check for 2 1/2" and up.
Balancing: Automatic Balancing Valve, Manual Balancing Valve

SPEC EDITOR: REFER TO SPEC SECTION 331100 FOR VALVES IN UTILITY TUNNELS.

SPEC EDITOR: ADD/ DELETE SPECIALTY VALVES IF APPLICABLE

Specialty Valves:

B. High Purity Water Systems (deionized, reverse osmosis, distilled):

Isolation through 2": High Purity Water Ball Valve

**C. Compressed Air System,
Lab Vacuum System:**

Isolation through 2": Ball Valve
Isolation 2 1/2" and larger: High Performance Butterfly Valve
Check: Swing Check Valve

D. Natural Gas System:

Isolation through 2": Ball Valve certified by UL or CSA for natural gas.
Isolation 2 1/2" and larger: Lubricated Plug Valve (Section 231123)

SPEC EDITOR: INSERT BELOW, THE REQUIREMENT FOR UNDERGROUND CHILLED WATER VALVES. IF INCLUDED IN A SEPARATE SPECIFICATION SECTION FOR UNDERGROUND CHW PIPING, REFERENCE THAT SPEC. SECTION.

**E. Hot Water Heating System,
Chilled Water System,
Condenser Water System:**

Isolation through 2": Ball Valve
Isolation 2 1/2" and larger: High Performance Butterfly Valve
Isolation - Underground chilled water:
Check: Swing Check through 2", Silent Check for 2 1/2" and up.
Balancing: Automatic Balancing Valve, Manual Balancing Valve

F. Steam and Condensate System through 60 psig (refer to 336330 for steam and condensate valves in the utility tunnels).

SPEC EDITOR: ON STEAM SYSTEMS, A WARM-UP BYPASS VALVE SHOULD BE INSTALLED ON SIZES 8" AND LARGER

METAL-TO-METAL BUTTERFLY VALVES ARE SPECIFIED FOR ALL STEAM SYSTEMS 2-1/2" AND LARGER, BASED ON THE ASSUMPTION THAT MOST STEAM SYSTEMS IN BUILDINGS ARE CONNECTED TO THE CENTRAL CAMPUS UTILITY TUNNEL SYSTEM AND SHOULD BE RATED FOR 600°F. IF YOUR PROJECT DOES NOT USE STEAM FROM THE UTILITY TUNNEL SYSTEM, A HIGH PERFORMANCE BUTTERFLY VALVE (RATED 150 PSIG/450°F) IN LIEU OF A METAL-TO-METAL MAY BE MORE APPROPRIATE; EDIT SPEC ACCORDINGLY.

Isolation through 2": Ball Valve
Isolation 2 1/2" and larger: Metal-to-Metal Seated Butterfly Valve
Check (condensate only): Swing Check through 2", Silent Check for 2 1/2" and up.

2.2 GENERAL VALVE REQUIREMENTS:

- A. All valves shall have seats, stem seals and disc materials compatible with intended fluid, temperature, pressure and service.
- B. All EPDM shall be peroxide cured. All wetted seals shall be made from materials that are immune from chloramine degradation.
- C. Valves in contact with domestic (potable) water shall be "lead free" NSF/ANSI-61 Annex G (and/or NSF/ANSI-372) labeled. Soldered lead free valves (all types) are restricted to use on domestic potable water systems only.
- D. Manually operated valves 4" and larger installed 10 feet A.F.F., or higher, shall have chain wheel operators.
- E. Gate and globe valves shall be repackable under pressure whether open or closed.
- F. Unless noted otherwise, valves shall be rated for a minimum of 125# WSP (working steam pressure)/ 250# WOG (cold water, oil, gas).
- G. Unless noted otherwise, all butterfly valves shall be full lug construction, suitable for bi-directional dead end service, and have open position memory stop. Manually operated butterfly valves 4" and larger shall have enclosed worm gear operators with position indicators.
- H. Provide extended valve stems for insulated piping.
- I. Where the valves are installed outdoors, all components including the gear operated wheel operators shall be weatherproofed.
- J. Unless noted otherwise, valves through 2" shall have screwed connections for steel piping and sweat connections for copper piping; valves 2-1/2" and larger shall be flanged.
- K. Unless noted otherwise, valves shall be same size as piping.

2.3 BALL VALVE:

- A. Two-piece, full port, bronze body, stainless steel ball and stem, Teflon seat, plastic coated lever handle and locking devices where noted in drawings.
 - 1. Valves for Natural Gas shall be UL or CSA approved for natural gas service.
- B. Manufacturers: Watts, Nibco, Apollo, Milwaukee, Hammond, Jomar.

2.4 HIGH PERFORMANCE BUTTERFLY VALVE:

SPEC EDITOR: STANDARD FOR MOST ISOLATION VALVES 2 1/2" AND LARGER. NOTE, STANDARD BUTTERFLY VALVES ARE NOT TYPICALLY ACCEPTABLE, AND HAVE BEEN REMOVED FROM THIS MASTER SPECIFICATION.

- A. Full lug, high performance type, carbon steel body, 316 stainless steel disc, stainless steel shaft and bearing, PTFE/RTFE seat, Teflon stem packing. Rated for 150 psi, 450 degrees F.

SPEC EDITOR: BRAY AND PRATT HAVE NOT BEEN APPROVED FOR CENTRAL POWER PLANT PROJECTS. PRATT HP SERIES HAS BEEN TESTED FROM FEB 2021 TO SEPT 2022 AND APPROVED FOR NON-CPP PROJECTS.

- B. Manufacturers: Bray - Braylok Series 41, Dezurik - BHP, Jamesbury - 815L, Milwaukee - HP Series, Tri-Seal Valve-Contromatics (formerly Watts/KF Contromatics), Xomox Pliaseal, ABZ ABZolute Seal Series 400, Pratt
- C. For domestic water systems, full lug, high performance type, 316 stainless steel body, 316 stainless steel disc, stainless steel shaft and bearing, (all wetted parts stainless steel) PTFE seat, Teflon stem packing. Rated for 150 psi, 250 degrees F.

2.5 BUTTERFLY VALVE - GROOVED:

SPEC EDITOR: FOR USE WITH GROOVED PIPING, NOT OUR STANDARD, USE ONLY UNDER SPECIAL CONDITIONS. NORMALLY HIGH PERFORMANCE BUTTERFLY VALVES ARE TO BE USED, EVEN IN GROOVED PIPING SYSTEMS, THEREFORE THIS SECTION SHOULD BE DELETED IN MOST CASES. SELECT APPLICABLE SECTION BELOW IF USED. NOT FOR USE IN TUNNELS

- A. Grooved ductile iron body, suitable for installation with grooved piping, EPDM coated steel disc and shaft, stainless steel hub bearing, EPDM seat, Teflon stem packing. Rated for 300 psi, 230 degrees F.

Manufacturer: Victaulic Vic-300

- B. Grooved Nylon coated ductile iron body, EPDM coated ductile iron disc, stainless steel shaft, bronze shaft bearing. MSS SP-67

Manufacturer: Anvil Gruvlock Series 7700.

- C. Grooved butterfly valves may be used only within grooved piping systems and only when specifically noted as permitted on the project drawings. Otherwise, high performance butterfly valves shall be provided, including for grooved piping systems.

2.6 HIGH PERFORMANCE METAL-TO-METAL SEATED BUTTERFLY VALVE:

- A. Full lug or short body flanged for end-of-line dead end service, bi-directional shutoff, triple offset type, single piece carbon steel body per ANSI B16.5 flange dimensions, carbon or stainless steel hardened abrasion-resistant disc keyed to stem with self-centering feature, stainless steel stem, hardened heavy duty stainless steel bearings with line debris ingress protection feature, stainless steel or Inconel seat and seal, bolted replaceable elastically resilient seal, high-temp graphite stem packing with blow-out proof design and adjustable gland. Pressure Class 150 rated for 140 psig, 600 degrees F. per ANSI/ASME B16.34. Valve tested for minimum 5000 cycles, with initial bubble-tight, zero leakage closure classification per FCI 70-2 or equivalent testing and fabricated per ISO 9001 QA program protocols. Operator to be lockable, low operational torque fully enclosed lifetime lubricated worm gear type, keyed to shaft with local position indicator, size based on seating and break away safety factor. Valve warranty shall be 36 months from substantial completion. Mounting taps to be tapered to aid bolt threading. Body to have quantity (4) tapped holes equally spaced around the body for mounting threaded lifting lugs to aid installation.

- B. Valve Flow Capacity: The minimum Cv value for various valve sizes in the full open position shall be as follows:
 - 1. 4 inch: 230
 - 2. 6 inch: 660
 - 3. 8 inch: 1500
 - 4. 10 inch: 2400
 - 5. 12 inch: 3600
 - 6. 14 inch: 5500
 - 7. 16 inch: 7600
 - 8. 18 inch: 10300
 - 9. 20 inch: 13000
 - 10. 24 inch: 20200

- C. Manufacturers: Bray Trilok, Metso/Neles Neldisc, Adams MAK, ABZ Extreme 6000 Series, Vanessa, Weir Tricentric, Zwick Tri-Con, Crane ChemPharma & Energy.

2.7 GATE VALVE - (FOR 2" AND SMALLER ONLY):

- A. General Service: Bronze body and trim, screwed, rising stem. de-zincification resistant.
 - 1. Description:
 - a. Standard: MSS SP-80
 - b. CWP Rating: 300 psig
 - c. SWP Rating: 150 psig
 - d. Body Material: Bronze ASTM B 62
 - e. Ends: Threaded
 - f. Stem: Silicon Bronze
 - g. Disc: Solid wedge, Bronze ASTM B 62
 - h. Packing: Asbestos free
 - i. Bonnet: screw in style, Bronze ASTM B 62
 - j. Handwheel: Malleable Iron

- k. For domestic water service: Per above, accept with non-rising stems and rated 200 psig CWP at 300°F. Solder end connections to 3/4 inch size, threaded ends for 1 inch and above.
- 2. Manufacturers: Nibco T-131 (T/S-113-LF lead free), Apollo, Crane, Grinnell, Stockham, Watts, Milwaukee, Hammond

2.8 SWING CHECK VALVE:

SPEC EDITOR: TYPICALLY USED FOR ALL SERVICES, 2" AND UNDER, SWING CHECK VALVES ARE NOT ACCEPTABLE FOR UTILITY TUNNELS

- A. Bronze body and trim.
- B. Minimum pressure of 200# WOG (cold water, oil, gas).
- C. Manufacturers: Milwaukee model 509, Crane model 37, Grinnell model 3300, Nibco, Apollo

2.9 SILENT CHECK VALVE:

SPEC EDITOR: TYPICALLY USED FOR ALL SERVICES, 2 1/2" AND OVER

- A. Spring loaded type check valves, stainless steel spring, iron body, and bronze trim.
- B. Minimum pressure of 200# WOG (cold water, oil, gas).
- C. Manufacturers:
 - 1. Wafer Style: Milwaukee - Series 1400, APCO - Series 300, Mueller, Metraflex.
 - 2. Globe Style: Milwaukee, APCO, Mueller, Metraflex, Apollo
 - 3. Condensate pump and pressure powered pump discharge: Durabula model SCV, stainless body

2.10 DRAIN VALVE:

- A. General Service: Ball valve with 3/4-inch hose threaded end fitting and cap.

2.11 AUTOMATIC BALANCING VALVE:

SPEC EDITOR: THIS SECTION STILL NEEDS SOME WORK - EDIT CAREFULLY

- A. Automatic flow control, pressure independent type, +/- 5 percent accuracy. 304 stainless steel cartridge, two P/T ports for flow reading. Valve size shall match pipe size. Refer to drawings for flow and pressure range.
- B. Manufacturers: Griswold, Autoflow, Bell and Gossett

2.12 MANUAL BALANCING VALVES:

SPEC EDITOR: THIS SECTION STILL NEEDS SOME WORK - EDIT CAREFULLY

- A. General Manual Balancing Valve Requirements: ports for measuring flow, memory stop, bubble tight shut-off, valve Cv characteristics suitable for throttling. Size valves to produce a readable design flow (within 10 percent accuracy) and have no more than a max. pressure drop of 3 feet.
- B. Through 2": bronze body, brass ball, calibrated.
Manufacturers: Bell & Gossett Circuit Setter Plus, Armstrong, Flow Design Inc., TACO, Victaulic
- C. Valves 2-1/2" and larger: cast iron body, brass ball or bronze disc, TFE seat rings, bronze seat, and stainless steel stem.
Manufacturers: Bell & Gossett Circuit Setter, Armstrong, Flow Design Inc., TACO, Victaulic

SPEC EDITOR: VERIFY PRESSURE DROPS AT DESIGN FLOWS AND INSURE THEY ARE MEASURABLE, IF NOT USE THE FOLLOWING.

- D. Venturi Style: bronze body, brass ball, and venturi flow measuring station. Manufacturers: Preso B Plus, Accusetter
- E. Provide gauge kit for projects requiring over 20 balancing valves. Gauge kits shall be capable of directly reading GPM, or shall include conversion chart from Cv and pressure.

2.13 HIGH PURITY WATER VALVE:

- A. Union body ball valve with Teflon seat and viton stem packing. Construction, material, pipe connections and size to match piping.
- B. Manufacturers: Harvel Plastics, Hayward, Watts

2.14 SOLENOID VALVES:

- A. Full port, bronze body, malleable iron coil enclosure, stainless steel plunger, valve stem, bonnet tube, and spring, Buna-N seal, rated for 500 psi. See drawings for voltage, size and position (NC or NO).
- B. Manufacturer: Magnetrol Figure No. 200-A, ASCO, Skinner

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

3.2 GENERAL VALVE INSTALLATION REQUIREMENTS:

- A. Install valves such that operator is completely operable, and the valve position indicator is discernible from the floor.
- B. Install valves with chain operators such that the chain hangs freely and shall reach to within 7'-0" of floor or operating platform, or within two feet of accessible ceiling.

3.3 SOLENOID VALVE INSTALLATION REQUIREMENTS:

- A. Provide a strainer before each solenoid valve. Provide a water hammer arrestor upstream of solenoid valves used for water service.

3.4 NATURAL GAS VALVE INSTALLATION REQUIREMENTS:

- A. Install valves in accessible locations, protected from physical damage. Do not locate valves in plenum ceilings.
- B. Install isolation valve upstream and within 6 feet of gas appliance. Install a union or flanged connection downstream from the valve to permit removal of controls.

SPECIFICATION DIVISION 22

NUMBER SECTION DESCRIPTION

DIVISION 22 PLUMBING

SECTION 220533 - HEAT TRACING FOR PIPING

END OF CONTENTS TABLE

DIVISION 22 PLUMBING
SECTION 220533 - HEAT TRACING FOR PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

1.2 SCOPE OF WORK

- A. Furnish and install a complete UL listed system of heaters, components, and controls to prevent pipelines from freezing. Refer to drawings for additional scope clarification.

1.3 COORDINATION

- A. The heat tracing and all the necessary accessories shall be furnished and installed by the Mechanical Contractor. Electrical Contractor shall provide power supply and related wiring by the per Division 26, and as shown on electrical drawings.

1.4 MANUFACTURERS

- A. Raychem.
- B. Thermon.
- C. Delta Therm Inc.
- D. Nelson Heat Trace

PART 2 - PRODUCTS

2.1 MATERIAL

- A. Electric heat tracing shall be self-limiting type suitable for temperature maintenance up to 40 degrees F.
- B. The heater shall have a self-regulating factor of at least 90 percent. (the percentage reduction, without thermostatic control, of the heater output going from 40 degrees F pipe temperature operation to 150 degrees F pipe temperature operation).
- C. The heater shall operate on line voltages of (select: 120, 208 or 220) volts without the use of transformers.
- D. The heater shall be sized according to this table. The required heater output rating is in watts per foot at 50 degrees F. (Heater selection based on 1" fiberglass insulation on metal piping).

Pipe Size	Min. Ambient - 10 deg.F	Temp. - 20 deg. F
3" or less	5 watt	5 watt
4"	5 watt	8 watt

6"	8 watt	8 watt	
8	2 strips - 5 watt	2 strips - 8 watt	
12" - 14"	2 strips - 8 watt	2 strips - 8 watt	

- E. Connectors and fittings, and indicator lights, and other required installation accessories shall be manufacturers standard recommended for the freeze protection application. The heater shall include a tinned copper braided shield, electrically bonded at splice locations, and bonded to the branch circuit ground conductor at the power connection point.
- F. All the components and system shall be U. L. listed.

2.2 ELECTRICAL PROTECTION

- A. Provide ground fault circuit breakers or other ground fault protection with a 30 mA ground fault trip level. See Division 26 for more details.

2.3 CONTROLS

- A. Provide heater system controls indicated below, and as shown in the drawings:
 1. Outdoor air thermostat control to prevent operation when outside air temperature is above 40F (adjustable).
 2. Heater failure alarm, using outdoor piping thermostats, and voltage detectors, with audible and visual alarm and alarm contact for remote monitoring by the owner's Energy Management System.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. The entire installation shall comply with the manufacturer's instructions and all the applicable sections of NEC, latest edition.
- B. The electrical and mechanical installation details shall strictly adhere to manufacturer's recommended practices. The manufacturer's representative shall supervise and test the installation and provide a letter to the Owner that the entire installation complies with their requirements, and the installation tested out satisfactorily.

3.2 TESTS

- A. After heater installation and before and after installing the thermal insulation, subject heater to testing using a 1000 VDC megger. Minimum insulation resistance shall be 20 megohms regardless of length. Test both heating cable bus wires to verify the connection of any splices or tees.
- B. After all megger testing and insulation is complete, manufacturer shall conduct functional performance test to ensure system is fully operational, and submit report.

DIVISION 22 PLUMBING

SECTION 220548 - VIBRATION CONTROL

END OF CONTENTS TABLE

DIVISION 22 PLUMBING
SECTION 220548 - VIBRATION CONTROL

REVISIONS:

FEBRUARY 2017 REVISIONS/ SIGNIFICANT CHANGES.

APRIL 2018: REVISED TO LIST MFR.S FROM PML. R BENEDEK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A IN EVERY SPECIFICATION SECTION.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

1.2 SCOPE OF WORK:

SPEC EDITOR: THIS SECTION SHOULD BRIEFLY DESCRIBE ALL THE MECHANICAL WORK TO ENABLE POTENTIAL SUBCONTRACTORS TO DECIDE WHETHER OR NOT TO OBTAIN A FULL SET OF DOCUMENTS AND TO BID. PARTICULAR CARE SHOULD BE USED WHEN SELECTING VIBRATION ISOLATION TYPES FOR HIGHLY VIBRATION SENSITIVE BUILDINGS

- A. Provide vibration control items for isolating vibration of mechanical equipment, piping and ductwork.
- B. Provide all hangers, isolators, bases, pads, sleeves and other devices specified, required, or detailed for the project. Include all vibration isolation system elements as recommended by the equipment manufacturer's representative to make a complete, correct and safe installation. Supply and install all incidental materials needed.

1.3 QUALITY ASSURANCE

- A. Work of this section shall be performed by skilled workers who are experienced in the necessary crafts to meet the requirements of this Section.
- B. Provide field supervision and inspection to assure proper installation, adjustment and performance. Replace any isolators that are found to resonate with the supported equipment.
- C. As a minimum provide vibration control per ASHRAE - 2015 - HVAC Applications, Chapter 48 - "Sound and Vibration Control".
- D. Isolators shall be selected, installed and adjusted to prevent the transmission of objectionable vibration and noise to the building structure.

- E. The size and number of mounts and hangers shall be chosen to meet these specifications, even if not specifically shown on the plans. Brackets, rails, bases, braces, etc., shall be provided as needed for a complete and correct installation.

1.4 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with the Contract Documents, manufacturers for products specified in this Section shall be one of the following:
 1. Vibration Eliminator Co.
 2. Mason Industries, Inc.
 3. Kinetics Noise Control
 4. Vibration Mounting and Controls (VMC)
 5. Amber Both
 6. Korfund
 7. Vibration Isolation Co.

PART 2 - PRODUCTS

2.1 FLEXIBLE DUCT CONNECTIONS

- A. Flexible sleeves for duct connections shall be fabricated from flexible, airtight, coated fabric. Each sleeve shall be installed with at least 3 inches slack across a clear metal to metal gap of at least 4 inches. That is, 7 inches of this fabric is required for each sleeve.

2.2 FLEXIBLE PIPE CONNECTORS

- A. Flexible connectors for pipes shall be neoprene Mason Type MFNC, MFTNC or as approved.

2.3 FLEXIBLE METAL HOSE CONNECTORS:

USE THIS IN HOT WATER, STEAM, CONDENSATE AND REFRIGERATION SYSTEMS AS REQUIRED

- A. Length and end fittings as shown in drawings, with an inner corrugated hose made of type 304, 321, or 316 stainless steel and outer braid made of 304 stainless steel. Manufacturers: Metraflex, Flexonics, Mason, Twin City Hose.
- B. For copper piping systems, use copper construction braided hoses. Approved Manufacturers: Anaconda, Flexonics, Mason, Metraflex, Twin City Hose.

SPEC EDITOR: USE THE FOLLOWING ARTICLES FOR TUNNELS ONLY

2.4 FLEXIBLE METAL HOSE CONNECTORS FOR TUNNELS:

- A. For steel piping systems, length and end fittings as shown in drawings, with an inner corrugated hose made of type 316 stainless steel and outer braid (double braided) made of 316 stainless steel. Dual floating flanges or one fixed and one floating flange may be used. Manufacturers: Metraflex, Flexonics, Mason.

- B. For copper piping systems, (up to 2" in size) use copper construction braided hoses. Manufacturers: Anaconda, Flex Hose Co., Flexonics, Mason, Metraflex. For sizes 2½" above, all stainless steel with an inner corrugated hose made of type 316 stainless steel and outer braid made of 316 stainless steel, with stainless steel flanges. Dual floating flanges or one fixed and one floating flange may be used. All wetted parts shall be stainless steel. Approved Manufacturers: Metraflex, , Flexonics, Mason, Twin City Hose.

2.5 FLEXIBLE CONNECTORS (RUBBER) :

SPEC EDITOR: USE THIS IN LARGE PUMP SYSTEMS

- A. Flexible connectors with neoprene and nylon type elements, with carbon steel or ductile iron floating flanges. Rated for 150 psig working pressure at 200°F, with peroxide cured EPDM liner and cover, ultraviolet resistant, hand wrapped, non-molded, multiple arch body, with control rods or cables. Approved Manufacturers: Mason Industries, Inc. Type SFDEJ, Mercer Rubber Co., Metraflex Type DS, Twin City Hose.

2.6 INERTIA BASES

- A. All mounts shall have leveling bolts rigidly secured to the equipment being isolated.
- B. Provide vibration isolation bases as indicated in the table in section 3.2.
- C. Base Type A
 - 1. Floor mounted equipment that is mounted directly to the floor, no inertia base is required.
- D. Base Type B
 - 1. Inertia base Type B (Steel Inertia Base) shall be a structural steel base frame with clearance holes located to correspond to the mounting bolt holes of the equipment mounted on the base.
 - 2. Bases shall have built-in motor slide rails and shall be reinforced as necessary to withstand belt pull without drive misalignment or base distortion. The bases shall be constructed with deep angle steel sections with a minimum vertical angle leg of 4 inches for motors of 7.5 hp or less, 5 inches for motors between 7.5 hp and 20 hp and 6 inches for motors over 20 hp.
 - 3. Mason Industries Type WFSL with unhoused spring isolators SL, or approved equal.
- E. Base Type C

1. Inertia base Type C (Concrete Inertia Base) shall have an integral rectangular structural steel form into which concrete is poured. Perimeter members shall be beams of depth equal to 10% of the longest span of the base, but not more than 12 inches nor less than 6 inches deep. Forms shall include motor slide base and all reinforcing steel. Where anchor bolt locations fall in concrete, the reinforcing steel shall include drilled members with sleeves welded below the steel to accept the anchor bolts. Height saving steel brackets shall be used in all mounting locations.
2. When the concrete base in "T" shaped, isolators shall be located under the projections as well as under the main body in order to prevent cantilever distortion.
3. Mason Industries Type BMK/KSL with unhoused spring isolators SL or approved equal.

2.7 VIBRATION ISOLATORS

- A. The static deflection of isolators shall be as specified below and in ASHRAE - 2015 Chapter 48.
- B. Vibration isolator sizes and layout shall be determined by the vibration isolator supplier.
- C. Provide vibration isolator types as indicated in the table in section 3.2.
- D. Isolator Mount Type 1
 - a. Type 1(Waffle Pads) shall be 3/8 inch thick neoprene pads ribbed or waffled on both sides. The pads shall be manufactured with quality neoprene and selected for a maximum durometer of 50 and designed for 15% strain. Where required, steel load-spreading plates shall be incorporated between the equipment and the neoprene pad.
 - b. If the isolator is bolted to the structure, a neoprene mounting sleeve shall be installed under the bolt head between the steel washer and the base plate.
 - c. Mason Industries Type Mini Super W or approved equal.
- E. Isolator Mount Type 2
 1. Type 2 (Double Deflection Neoprene Mounts) shall be laterally stable, double deflecting, molded neoprene isolators. All metal surfaces shall be covered with neoprene. The top and bottom surfaces shall be ribbed and bolt holes shall be provided in the base. The mounts shall have a leveling bolts rigidly secured to the equipment.
 2. The isolator shall be manufactured with bridge bearing quality neoprene and selected for a maximum durometer of 50 and designed for 15% strain. DDNM mounts shall be selected for a static deflection of 3/8 inch unless otherwise specified.
 3. Mason Industries Type ND or approved equal.
- F. Isolator Mount Type 3

1. Type 3 (Spring and Low Dynamic Stiffness Mounts) shall have a free-standing and laterally stable steel spring without any housing. Springs shall be designed so that the ratio of the horizontal to vertical spring constant is between one and two. The spring diameter shall be not less than 80% of the compressed height of the spring at rated load. Loaded springs shall have a minimum additional travel to solid equal to 50% of the specified static deflection.
2. Unless otherwise specified, the minimum static deflection of Type 3 isolators for equipment mounted on grade slabs shall be 1 inch and for the minimum static deflection for equipment mounted above grade level shall be 2 inches.
3. Two Type 3 isolation pads sandwiching a 16 gauge stainless or galvanized steel separator plate shall be bounded to the isolator baseplate.
4. Unless otherwise specified, isolators need not be bolted to the floor for indoor installations. If the base plates are bolted to the structure, a neoprene mounting sleeve shall be installed under the bolt head between the steel washer and the base plate.
5. Mason Industries Type SLF or approved equal.

G. Isolator Mount Type 4

1. Laterally stable, restrained spring type with housings and heavy top plates for supporting the equipment and resisting seismic and wind loading. Spring isolators shall be comprised of two interfacing but independent elements; a coil spring element and a seismically rated housing. Housings and springs shall be powder coated and hardware galvanized. The spring coil element shall be comprised of one or more coil assemblies having all of the characteristics of freestanding coil spring isolators.
2. The seismically rated housing shall be sized to meet or exceed the force requirements applicable to the project and have the capability of accepting coils of various sizes, capacities, and deflections as required to meet the desired isolation criteria. All spring forces will be contained within the coil/housing assembly and under no seismic load condition shall the restraint anchoring hardware be exposed to spring generated forces. Top plate and restraining bolts shall be out of contact with the housing during normal operation.
3. The restraint element shall incorporate a steel housing with elastomeric elements at all dynamic contact points. The restraint will allow a maximum of 1/4 in. (25 mm) motion in any direction from the neutral position. All elastomeric elements shall be replaceable.
4. The leveling nut or screw shall be accessible for adjustment with the use of a pneumatic or electric impact wrench. The spring element shall be replaceable without having to lift or otherwise remove the supported equipment.

H. Isolator Hanger Type 2

1. Type 2 (Double Deflection Low Dynamic Stiffness Hangers) shall consist of a molded low dynamic stiffness (LDS) isolating element in a steel hanger box. A LDS sleeve shall be provided where the lower hanger rod passes through the steel hanger box, such that the hanger rod cannot contact the steel hanger. The diameter of the clear hole in the hanger box shall be at least 3/4 inch larger than the diameter of the hanger rod and permit the hanger rod to swing through a 30° arc. When installed, the hanger box shall be allowed to rotate through a full 360° without encountering any obstructions.
2. The isolator shall be manufactured with quality LDS and selected for a maximum durometer of 50 and designed for 15% strain. Unless otherwise specified, the static deflection of Type 2 hangers shall be minimum of 0.3 inches.
3. Mason Industries Type HD or approved equal.

I. Isolator Hanger Type 3

1. Type 3 (Spring and Low Dynamic Stiffness Hangers) shall consist of a steel spring in a series with a low dynamic stiffness (LDS) isolating element. The spring shall have a minimum additional travel to solid equal to 50% of the specified deflection. The neoprene element shall have a static deflection of not less than 0.3 inches with a strain not exceeding 15%.
2. Unless otherwise specified, the static deflection of SPH hangers shall be 2 inches.
3. Spring diameter and hanger box hole size shall be large enough to permit the hanger rod to swing through a 30° arc. A neoprene sleeve shall be provided where the lower hanger rod passes through the steel hanger box, such that the hanger rod cannot contact the steel hanger. The diameter of the clear hole in the hanger box shall be at least 3/4 inch larger than the diameter of the hanger rod. When installed the spring element shall not be cocked and the hanger box shall be allowed to rotate through a full 360° arc without encountering any obstructions.
4. Mason Industries Type 30N or approved equal.

PART 3 - EXECUTION

3.1 GENERAL

- A. All equipment mounted on vibration isolators shall have a minimum operating clearance of 1 inch between the bottom of the equipment or inertia base (and height saving bracket) and the concrete housekeeping pad (or bolt heads) beneath the equipment.
- B. Check the clearance to ensure that no scraps have been left to short circuit the vibration isolators.
- C. Provide a minimum of 4 inches between isolated equipment and the walls, ceiling, floors, columns and any other equipment not installed on vibration isolators.
- D. Piping, ductwork, conduit or mechanical equipment shall not be hung from or supported on other equipment, pipes, or ductwork installed on vibration isolators.

- E. Equipment connected to water or other fluid piping shall be erected on isolators or isolated foundations at correct operating heights prior to connection of piping. Equipment should be blocked-up with temporary shims to final operating height. When the system is assembled and fluid is added, the isolators shall be adjusted to allow removal of the shims.
- F. All mechanical equipment not specifically identified in this specification that contains rotating or vibrating elements shall be installed on Mount Type 2 neoprene isolators as appropriate. Provide supporting steel structure between isolators and equipment if isolator does not readily connect to equipment.
- G. All equipment and their respective isolators shall be directly mounted on primary steel. Units and isolators shall not be mounted on resiliently supported steel cabinets or plenum floors or other flexible construction.
- H. Roof mounted fans or roof top units shall be installed on a curb mounted base.
- I. All wiring connections to mechanical equipment on vibration isolators (either spring or neoprene type) shall be made with a minimum 36 inch long flexible conduit. Coordinate wiring connections with the Electrical Installer.

3.2 APPLICATION TABLES

"Floor Span": Defined as the distance between centers of floor joists

3.3 BASE MOUNTED PUMPS

- A. Any rigid pipe elbows at the pump suction and discharge connections shall be supported from the inertia base. All pipe connections shall be with a flexible pipe connector.

3.4 FAN ISOLATION - GENERAL

- A. All fan bases and isolators shall be sized so that thrust restraints (which would act against turning moment caused by static pressure) are not required.

3.5 PIPES WITH MULTIPLE CONNECTIONS

- A. Where a pipe run connects multiple items of equipment in the Mechanical Room the pipe hanger isolators for the entire run shall be chosen to suit the connected equipment of greatest static deflection.

SPEC EDITOR NOTE: INCLUDE SUBSECTOIN 3.8 FOR VIBRATION SENSITIVE BUILDINGS.

3.6 INSPECTION

- A. Isolator manufacturer service representative shall inspect and approve the installation of the vibration isolators and shall submit a report to the Owner which verifies that all of the isolation equipment has been properly installed and that the installation is in full conformance with the specification. The report shall record the vibration isolator identification and model or type.
- B. For isolators containing steel springs the report shall also record the size and uncompressed height, design static deflection and measured static deflection of the isolators provided.

REVISIONS:
10-12-00: SUBSTANTIALLY REVISED, APPROVED AS NEW MASTER
UPDATED BY PLMG/FP MTT OCTOBER 2017
UPDATED NAMING CONVENTIONS 2024

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A - IN EVERY SPECIFICATION SECTION.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

1.2 SCOPE OF WORK:

- A. Mechanical identification on piping, ductwork and equipment, identification of underground pipe, valve tags, and architectural access panels.

1.3 QUALITY ASSURANCE

- A. Comply with ANSI A13.1 for lettering, size, colors, and viewing angles of mechanical identification.

1.4 ACCEPTABLE MANUFACTURERS:

- A. Provide mechanical identification materials from one of the following:
 - 1. Brady Co.
 - 2. Brimer
 - 3. Craftmark
 - 4. Seton
 - 5. Marking Services Incorporated
 - 6. Kolbi Marker Co.

PART 2 - PRODUCTS

2.1 PIPE MARKERS:

- A. Manufacturer's standard, pre-printed, color-coded, plastic pipe markers, complying with ANSI A13.1, and requirements below. Self-adhesive markers are not acceptable.
- B. For pipe diameter (with insulation) less than 6": full-band, semi-rigid, snap-on pipe markers, extending 360 degrees around pipe.

- C. For pipe diameter (with insulation) of 6" and larger: full-band or strip-type pipe markers, but not narrower than 3 times letter height. Fasten with nylon or stainless steel bands for pipe 6" through 12". Fastened with stainless steel bands for piping over 12".
- D. Lettering: Standard nomenclature which best describes piping system, as selected by Engineer (in cases of variance from table below).
- E. Arrows: Pipe marker arrows indicating direction of flow, either integrally with piping system lettering, or as a separate marker.
- F. Identify contents of piping by both fluid contained and unique temperature and /or pressure (if necessary to distinguish between other systems with same fluid at different conditions); e.g. Potable Hot Water - 110F vs Potable Hot Water - 140F.
- G. Use the following color coding and nomenclature for pipe markers:

SPEC EDITOR: EDIT THIS LIST TO ADD ANY SPECIFIED SYSTEMS, NOT INCLUDED IN THIS LIST. COORDINATE NOMENCLATURE WITH SYMBOLS SHEET AND PLANS.

Plumbing and Waste Pipe System Labels	Drawing I.D. (For Reference Only)	Letter and Label Color
--	--------------------------------------	---------------------------

Acid Vent	AV	Black on Orange
Acid Waste	AW	Black on Orange
Brine	BR	Black on Orange
Cold Water, Potable	CW	White on Green
Compressed Air	A	White on Blue

(For Reference Only)

Letter and
Label Color

Carbon Dioxide	CO2	White/Black on Gray
Helium	HE	White on Brown
Dental Air	DA	Black on Yellow
Dental Vacuum	DVAC	Silver on Yellow
Laboratory Compressed Air	LCA	Black on Yellow & White Checkerboard
Laboratory Vacuum	Lab Vac	Block boxed on white and black checkerboard
Medical Air	Med Air	Black on Yellow
Medical Vacuum	Med Vac	Black on White
Nitrous Oxide	N2O	White on Blue
Nitrogen	N2	White on Black

Oxygen	O2	White on Green
Waste Anesthetic Gas Disposal	WAGD	White on Violet

All labeling shall conform to NFPA 99.

2.2 DUCT MARKERS:

- A. Plastic, adhesive type color-coded duct markers, with arrow indicating direction of flow, and with fan system identified. Conform to the following color code and nomenclature:

Service/ Duct Label	Drawing I.D. (For Reference Only)	Letter and Label Color
Exhaust Air (Equip.#)	EA (Eq.#)	Black on Yellow
Fume Hood Exhaust (Equip.#)	FHEA (Eq.#)	Black on Yellow
Hazardous Exhaust (Equip.#)	HAZ EX (Eq.#)	Black on Yellow
Lab General Exhaust (Equip.#)	LGEX (Eq.#)	Black on Yellow
Outdoor Air (Equip.#)	OA (Eq.#)	White on Green
Return Air (Equip.#)	RA (Eq.#)	White on Green
Smoke Evac Exhaust (Equip.#)	SMOKE EX (Eq.#)	Black on Yellow
Smoke Evac Supply (Equip.#)	SMOKE SUP (Eq.#)	White on Green
Supply Air (Equip.#)	SA (Eq.#)	White on Green

- B. Provide plastic adhesive duct access door markers indicating item and associated equipment accessed, and appropriate safety and procedural information. (eg. Fire Damper AHU-1)

2.3 EQUIPMENT MARKERS AND DDC POINT TAGS:

- A. Engraved plastic equipment markers for all scheduled equipment, (eg., chillers, pumps, air handling units, heat exchangers, and fans). Indicate drawing I.D., and service, (eg., EF-1 serving FH No.3 in Rm. 2035, or P-7 Primary Chilled Water), nominal capacity (tons, cfm or gpm). Scale marker and lettering to equipment labeled. Typical nomenclature:

Drawing I.D. & Equip. Label	Equipment
AC	Air Compressor
ACC	Air Cooled Condenser
AHU	Air Handling Unit
BCU	Blower Coil Unit
CAD	Compressor Air Dryer
CB	Chilled Beam
CH	Chiller

CHWP	Chilled Water Pump
CP	Condensate Pump
CRAC	Computer Room AC Unit
CT	Cooling Tower
CUH	Cabinet Unit Heater
CWP	Condenser Water Pump
DA	Deaerator System
DWBP	Domestic Water Booster Pump
DOAS	Dedicated Outside Air System
EF	Exhaust Fan
ERC	Energy Recovery Coil
ERCPC	Energy Recovery Coil Pump
ERU	Energy Recovery Unit
EUH	Electric Unit Heater
EWB	Electric Water Heater
FH	Fume Hood
FHEF	Fume Hood Exhaust Fan
FC	Fluid Cooler (Closed Loop Cooling Tower)
FCU	Fan Coil Unit
FFU	Fan Filter Unit
FP	Fire Pump
GHXP	Geothermal Heat Exchange Pump
GWH	Gas-fired Water Heater
H	Humidifier
HP	Heat Pump
HPC	Heat Pump Chiller
HTX	Heat Exchanger
HWB	Hot Water Boiler
HWHP	Hot Water Heating Pump
HWRP	Domestic Hot Water Recirculation Pump
IAC	Instrument Air Compressor
LEF	Lab Exhaust Fan
LTU	Lab Terminal Air Unit
MAU	Packaged Gas Fired Makeup Air Unit
MGC	Medical Gas Compressor
P	Pump (other than those listed)
PTAC	Packaged Terminal AC Unit
RF	Return Fan
RHP	Radiant Heating Panel
RMS	Refrigerant Mode Selector Unit
RTU	Packaged Rooftop Air Handling Unit
SB	Steam Boiler
SEW	Sensible Energy Wheel
SF	Supply Fan
SP	Sump Pump
TEC	Terminal Equipment Controller
TEW	Total Energy Wheel
TU	Terminal Air Unit
UH	Unit Heater

VFD	Variable Frequency Drive
VP	Vacuum Pump
VRF	Variable Refrigerant Flow Unit (Indoor & Outdoor unit)

2.4 IDENTIFICATION ACCESSORIES:

- A. Underground Pipe Markers: Manufacturer's standard, permanent, bright-colored plastic tape, intended for direct-burial service, 6" wide x 4 mils thick, continuously printed to indicate service of buried pipe. For plastic pipe, provide label with detectable nonferrous locator.

SPEC EDITOR: VALVE TAGS ARE TYPICALLY NOT REQUIRED FOR RENOVATION PROJECTS. CONSIDER VALVE TAGS ONLY FOR NEW BUILDINGS, AND GUT RENOVATION PROJECTS.

- B. Valve Tags: 1-1/2" diameter brass valve tags with 1/4" stamp-engraved designations with piping system abbreviation and sequenced valve numbers. Provide solid brass chain, or solid brass S-hooks of the size and type required for proper attachment of tags to valves.

SPEC EDITOR: COORDINATE ARCHITECTURAL ACCESS PANEL LABELING WITH ARCHITECT, ESPECIALLY IN AESTHETICALLY SENSITIVE AREAS..

- C. Architectural Access Panel Markers: 1/16" thick engraved plastic laminate, with nomenclature corresponding to items for which access door was installed (eg. VAV-7, TEC-7 and HWH control valve V-23).

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS:

- A. Coordination: Install identification after insulation is applied. Protect identification from paint, or apply after painting is complete. Install above ceiling identification prior to acoustical ceilings.
- B. Attachment: Securely attach all mechanical identification to associated pipe, duct, panels and equipment. Locate identification to be readily visible.

3.2 PIPING SYSTEM IDENTIFICATION:

- A. Install pipe markers on all piping systems in all locations where piping, whether concealed or non-concealed, and where accessible at manholes and access panels. Installed at all access panels or doors, adjacent to valves and branch connections, both sides of floors, ceilings and walls, and all major changes in direction,
- B. Locate pipe markers near points where piping continues into shafts, underground, floor or wall; at 25' spacing along exposed runs (15' in congested areas), at valves, equipment and control devices, and where there could be question of flow pattern.

- C. Install marker over pipe insulation segment on hot non-insulated pipes.

3.3 DUCTWORK IDENTIFICATION:

- A. Install duct markers on all supply, return, exhaust, intake and relief ductwork, whether concealed or non-concealed, , and where accessible at access panels. Install at all access panels or doors, both sides of floors, ceilings and walls, and all major changes in direction.
- B. Locate duct markers near points where ductwork originates or continues into shafts, floor or wall, and at 25' spacing along exposed runs (15' in congested areas), equipment and control devises, and where there could be a question of flow pattern.
- C. Install duct access door markers on all access doors.

3.4 EQUIPMENT IDENTIFICATION:

- A. Provide equipment markers on scheduled equipment.

3.5 UNDERGROUND PIPING IDENTIFICATION:

- A. During back-filling, install continuous underground pipe markers over all buried piping, 6" to 8" below finished grade, at 24" intervals across the field. Where multiple pipes are in a trench up to 16" wide, install single line marker. For tile fields and similar installations, mark only edge pipe lines of field.

3.6 VALVE IDENTIFICATION:

- A. Install valve tags on all new valves and regulators for the following piping systems, except for valves within factory-fabricated equipment, at plumbing fixture faucets, hose bibs, and valves located directly at the equipment served. Number valves in a logical sequence relative to location installed.

SPEC EDITOR: SPECIFY SYSTEMS TO RECEIVE VALVE TAGS

- B. List each tagged valve in valve schedule for each piping system. Include a copy of the valve tag schedule in the Operation and Maintenance manuals, and mount a laminated copy on a wall as directed by the University.
- C. Where building has previously tagged valves, coordinate numbering with old schedule, and note changes made to previously tagged valves on new schedule.

3.7 ARCHITECTURAL ACCESS PANEL IDENTIFICATION:

- A. Install access panel markers on inside and/or outside of access doors, as directed by the University.

DIVISION 22

SECTION 220719 - MECHANICAL SYSTEMS INSULATION

END OF CONTENTS TABLE

DIVISION 22
SECTION 220719 - MECHANICAL SYSTEMS INSULATION

REVISIONS:

JULY 2019 - : UPDATED BY THE PLUMBING COMMITTEE; COMPLY WITH ASHRAE 90.1 - 2013

NOVEMBER 2022: UPDATED INSULATION THICKNESS TABLE.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
 - 1. Section 220553 - Mechanical Identification
 - 2. Section 221113 - Piping Materials and Methods

SPEC EDITOR: EDIT THE FOLLOWING AS REQUIRED

1.2 SUMMARY:

- A. Insulate piping, ductwork and equipment unless indicated as not to be insulated.
- B. Insulate branch heating or chilled water piping from the main to the coil.
- C. Reinsulate items from which asbestos insulation was removed.
- D. Insulate connection points between new and existing items.
- E. Repair or replace insulation damaged during construction.
- F. ITEMS NOT TO BE INSULATED:

SPEC EDITOR: EDIT LIST BELOW TO SUIT PROJECT

- 1. Equipment: hot water pumps, steam condensate pumps, feed water pump, water softener shell, vacuum pumps, hot water shot feeders, hot water expansion tanks, factory insulated equipment.
- 2. In hot piping: Unions, flexible connectors, control valves 2" and smaller, safety valves, discharge vent piping, vacuum breakers, thermostatic vent valves, piping within fin tube or other terminal units, and steam traps 3/4 inch and smaller, unless noted otherwise.
- 3. Other piping: waste and vent, compressed air, natural gas, lab vacuum, refrigerant liquid lines, vertical portion of rain water conductors, 12" of chilled beam piping at pipe condensate sensors.

4. Ductwork: indoor return and exhaust air ductwork in conditioned areas.

1.3 REFERENCES

A. Definitions

1. Insulation thermal conductivity: No greater than value listed, in Btu-inch/hour-square foot-degrees F at 100 degrees F mean temperature.
2. Water Vapor Permeance (ASTM E97 or E96, Procedure A): No more than value listed, in perms. Water vapor permeability (ASTM C355): No greater than value listed, in perm-inch.
3. Puncture resistance (ASTM D781): No less than value listed.
4. Flame spread classification (ASTM E84, NFPA 255): No greater than value listed. Smoke density classification (ASTM E84, NFPA 255): No greater than value listed. Composite listing includes insulation, jacket, and adhesive.
5. Density no less than value listed, in pounds per cubic foot.
6. Condition area: Areas that are mechanically maintained between 65F and 80F and relative humidity less than 60% at all times. The following spaces are normally considered conditioned area: spaces above ceilings, heated penthouse, mechanical and electrical rooms.

INCLUDE 1.4.A IN EVERY SPEC SECTION, BUT EDIT AS APPROPRIATE FOR THAT SPEC SECTION, E.G. STRIKE "WIRING DIAGRAMS" IF NOT APPLICABLE TO THE SECTION.

1.4 SUBMITTALS

- A. Product Data: Include manufacturer, catalog number, catalog illustrations, rated capacities, performance characteristics, weights, conductor insulation and jacket dimensions, component sizes, rough-in requirements, materials of construction, accessories, operating and maintenance clearance requirements. Additionally include:

1. Shop Drawings
2. Installation, Operation and Maintenance Manuals
3. Test and Evaluation Reports
4. Source Quality Control Submittals
5. Site Quality Control Submittals
6. Certificates
7. Manufacturer Reports
8. Special Procedure Submittals
9. Qualification Statements
10. Warranty Documentation
11. Record Documentation

SPEC EDITOR: REVISE 1.5 AS REQUIRED; INCLUDE ITEMS CONTAINING ASBESTOS IN DIVISION 02 OR ON PLANS.

1.5 ASBESTOS ABATEMENT:

- A. All asbestos within the contract bounds shall be removed per the requirements described in Division 02. Refer to drawings for items containing asbestos insulation. Reinsulate all piping, ductwork and equipment from which asbestos has been removed.

1.6 QUALITY ASSURANCE

- A. **Manufacturers and Products:** The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. **Installer Qualifications:** Skilled mechanics who have successfully completed an apprenticeship program or another craft-training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

WHEN FIRE-PERFORMANCE CHARACTERISTICS ARE IMPORTANT REQUIREMENTS, VERIFY SURFACE-BURNING CHARACTERISTICS OF INSULATION MATERIALS BY AN INDEPENDENT TESTING AGENCY AND REQUIRE TEST REPORT SUBMITTALS.

- C. **Surface-Burning Characteristics:** For insulation and related materials, as determined by testing identical products according to ASTM E 84 by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
 - 1. **Insulation Installed Indoors:** Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
 - 2. **Insulation Installed Outdoors:** Flame-spread index of 75 or less, and smoke-developed index of 150 or less.
- D. **Reference Standards:** Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
 - 1. **Reference Standards:** ASHRAE 90.1-2013.

TYPICALLY 1.7.A SHOULD BE INCLUDED IN EVERY SPEC SECTION.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Store materials and equipment raised off the floor on pallets and protected with coverings to prevent damage due to weather and construction activities. Store in areas that prevent damage due to freezing and extreme temperatures or sunlight. Arrange coverings to provide air circulation to avoid damage from condensation or chemical build-up. Protect from damage, dirt and debris at all times.
- B. Shipping and Handling Requirements
- C. Packaging and Protection
- D. On-site Storage & Staging
- E. Packaging Waste Management

BELOW IS U-M STANDARD WARRANTY LANGUAGE. ALL WARRANTIES ARE TO START FROM THE DATE OF SUBSTANTIAL COMPLETION. DO NOT USE TERMS LIKE "UPON OWNER ACCEPTANCE" OR "18 MONTHS FROM SHIPMENT OR 1 YEAR FROM STARTUP, WHICHEVER OCCURS FIRST", ETC.

1.8 WARRANTY

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Insulate pipe, duct and equipment to meet the thicknesses and conductivities indicated.

2.2 PIPING INSULATION THICKNESS TABLE:

- A. Minimum insulation thickness in inches, shall comply with the table below for the associated piping system and pipe sizes.

Piping System Fluid	Temp. Range Deg. F	Conductivity BTU·in./ (h·ft ² ·°F)	Thickness in Inches For Pipe Sizes Through Size Listed				
			1"	1.5"	4"	8"	above
MPS (60#) (above to include MPS condensate)	251-350	0.29-0.32	3.0	4.0	4.5	4.5	4.5
LPS (15#) (above to include LPS condensate)	201-250	0.27-0.30	2.5	2.5	2.5	3.0	3.0
Hot Water	141-200	0.25-0.29	1.5	1.5	2.0	2.0	2.0
Hot Water (above includes hot water potable and hot water heating)	105-140	0.22-0.28	1.0	1.0	1.5	1.5	1.5
Cold Water potable	Any	0.21-0.27	0.5	0.5	1.0	1.0	1.0
Storm	Any	0.21-0.27	0.5	0.5	1.0	1.0	1.0
Chilled Water	40-60	0.20-0.26	0.5	1.0	1.0	1.0	1.0
Chilled Water	<40	0.20-0.26	0.5	1.0	1.0	1.0	1.5
Ref. Suct.	Any		1.0	1.0	1.5	N/A	N/A
Energy Recovery	Any		1.0	1.0	1.0	1.0	1.0
Free Cooling Cond. Water	Any		1.0	1.0	1.0	1.0	1.0

(U-M HAS NOT YET ADOPTED ASHRAE 90.1-2019, HOWEVER THE ABOVE SCHEDULE HAS BEEN UPDATED TO MATCH ASHRAE 90.1-2019 RECOMMENDATIONS.)

- B. For heat traced piping use insulation $\frac{1}{4}$ " diameter larger to allow room for installation of cable.

2.3 PIPING INSULATION:

THESE PRODUCTS ARE SUITABLE FOR TEMPERATURES OF APPROXIMATELY 0 TO 180F.

- A. Fiberglass insulation with factory-applied vapor barrier jacket with self-sealing laps. ASTM C547 Class 1 insulation. Vapor barrier jacket: laminated white kraft paper, aluminum foil, glass fiber reinforcement.

Approved Manufacturers: Johns-Manville, Knauf, Owens/Corning

- B. Fiberglass insulation with factory-applied vapor barrier jacket with self-sealing laps. ASTM C547 Class 1 insulation. Vapor barrier jacket: smooth, durable, cleanable polymer film or polypropylene-coated.

Approved Manufacturers: Johns-Manville, Knauf, Owens/Corning

- C. At fittings and flanges, insulate with wrapped fiberglass insulation of same thickness as adjacent pipe, and cover with pre-molded PVC jackets. Seal edge of jacket with self-sealing vapor barrier tape.

Approved Jacket Manufacturers: Zeston, Ceel-Co-, Proto

- D. For valves, strainers, suction diffusers and other accessories that require maintenance: In hot piping, insulate similar to fittings and flanges. In cold piping, insulate with closed cell elastomeric insulation, installed to be removable for maintenance access.

- E. Insulate piping systems outside buildings with fiberglass Insulation. Apply insulation $\frac{1}{2}$ " thicker than listed in table, and weatherproof the insulation with PVC insulation jacketing.

Approved Jacket Manufacturers: Zeston, Ceel-Co, Proto

- F. As a Contractor's Option insulate hot water, cold water, chilled water, refrigerant, piping systems with flexible closed cell elastomeric insulation, ASTM C534, conductivity of 0.254 @90F, water vapor permeability of 0.05. In thickness 1" and less, composite flame spread/ smoke density of 25/50.

Approved Manufacturers: Armacell - AP Armaflex; Rubatex - R-180-FS, IMCOA.

1. Seal all butt joints and seams by joining cut edges with adhesive as supplied by the insulation manufacturer.
2. For exterior piping, coat insulation with glass mesh and two finish coats compatible with insulation. Manufacturer: Armstrong Armacell- Armaflex WB.

2.4 PIPING INSULATION SPECIALTIES:

SPEC EDITOR: ALUMINUM JACKETS ARE NOT GENERALLY RECOMMENDED, BECAUSE OF DAMAGE AND FAILURES WE'VE EXPERIENCED LATELY.

- A. Expansion Joints Insulation: Expansion joints shall be insulated with prefabricated insulation blankets, installed in a manner to allow for the repacking of the joints without removing blanket. Hold blankets in place with permanently attached Velcro fasteners.
- B. Aluminum Jackets: Where indicated on drawings, provide 0.016" thick alloy 3003 aluminum jacketing with longitudinal lock seam and butt strap circumferential joints.

Approved Manufacturers: Childers-Lock-on and Pabco-Surfeit.

SPEC EDITOR: CONSIDER ADDING A NOTE ON THE DRAWINGS FOR INSULATED JACKETS ON STEAM TRAP ASSEMBLIES AND UNIONS. JACKET SHALL OVERLAP THE UNION ON EACH SIDE AND LABEL THE UNIONS.

- C. Removable Insulation Jackets: Where indicated on drawings, provide removable insulation jackets with fiberglass insulation, flexible fabric jacket and velcro fasteners.

Approved Manufacturer: ESI, Insulation Technologies Inc.

2.5 TUNNEL PIPING INSULATION

- A. Additionally provide dimpled aluminum jacketing.

2.6 DUCTWORK INSULATION - INDOOR, EXPOSED:

SPEC EDITOR: RIGID INSULATION IS AVAILABLE IN DENSITIES OF 1.6, 2.25, 3.0, 4.25 AND 6.0. R VALUE AND COST INCREASE WITH DENSITY. INSULATION THICKNESS WAS INCREASED TO IMPROVE FIT OVER FLANGED CONNECTIONS, MAY BE REDUCED TO 1" FOR SLIP AND DRIVE DUCT.

- A. In mechanical equipment rooms and all other areas where visible without removing ceilings or opening access panels, insulate ductwork with 1-1/2" thick rigid, fiberglass insulation board with factory-applied vapor barrier. Insulation: ASTM C612 Class 2, conductivity of 0.26, density of 3.0. Vapor barrier: laminated white kraft paper, aluminum foil, glass fiber reinforcement, permeance of 0.02, and puncture resistance of 50 units. Composite flame spread/ smoke density of 25/50.

Approved Manufacturers: CertainTeed, Johns Mansville, Knauf, Owens/Corning

2.7 DUCTWORK INSULATION - INDOOR, CONCEALED:

- A. In ceiling spaces, building shafts, and other locations where not visible, insulate ductwork with 1-1/2" thick, blanket-type, fiberglass insulation with factory-applied vapor barrier, and 2" stapling and taping flange along one edge. Insulation: ASTM C553, density of 0.75, conductivity of 0.23 @75F. Vapor barrier: laminated white kraft paper, aluminum foil, glass fiber reinforcement, permeance of 0.02, and puncture resistance of 50 units. Composite flame spread/ smoke density of 25/50.

Approved Manufacturers: CertainTeed, Johns Mansville, Knauf, Owens/Corning.

2.8 DUCTWORK INSULATION - OUTDOOR:

SPEC EDITOR: PLANT HAS BEEN EXPERIMENTING WITH USING EPDM ROOFING AS A WRAPPING MATERIAL FOR EXTERIOR DUCTWORK. PRELIMINARY RESULTS LOOK PROMISING. CONSIDER ADDING PLANT WORK ORDER TO BUDGET TO COVER THIS.

- A. Insulate exterior ductwork with 2.0" thick flexible closed cell elastomeric insulation, ASTM C534, conductivity of 0.30, water vapor permeability of 0.20. Composite flame spread/ smoke density of 25/50.

Approved Manufacturers: Armacell, Rubatex.

1. Seal all butt joints and seams by joining cut edges with adhesive as supplied by the insulation manufacturer.
2. Wrap insulation with glass mesh and coat with two finish coats compatible with insulation.
Manufacturer: Armacell-Armaflex WB.
3. Taper insulation to prevent ponding.

2.9 SEALING MASTICS FOR PIPE AND DUCT INSULATION

- A. Provide mastics to seal insulation joints and to provide a continuous vapor barrier. The permeance of the mastic shall be equal to or less than the permeance of the vapor barrier of the insulation it is applied to. The ASTM E84 flame spread and smoke density classification shall not exceed 25/50. Mastics shall be mercury and asbestos free, selected for the temperature range of the service, and selected for uses recommended by the manufacturer. Mastics used outdoors shall be outdoor rated, waterproof, and U.V. resistant.

Approved Manufacturers: Subject to compliance with the above requirements, provide mastics manufactured by Childers, Foster, Vimasco, Mon-Eco Industries.

2.10 HOT EQUIPMENT INSULATION:

- A. Insulate all equipment with surface temperature over 100F, using rigid fiberglass insulation board. Insulation: ASTM C612 Class 2, conductivity of 0.23 @75F, density of 6.0. Vapor barrier: laminated white kraft paper, aluminum foil, glass fiber reinforcement, permeance of 0.2, and puncture resistance of 50 units. Composite flame spread/ smoke density of 25/50.

Approved Manufacturers: CertainTeed, Johns Mansville, Knauf Owens/Corning
- B. Apply insulation in thickness as follows: 1-1/2" for operating temperature up to 150F, 2" for operating temperature of 150F to 200F, 3" for operating temperature over 200F.
- C. Cut, score, or miter insulation to fit contour of equipment and secure with galvanized steel bands or wire, or weld pins. Stagger joints where possible and fill voids with insulating cement. Apply 1" galvanized wire mesh over entire exterior surface and finish with two coats of insulating cement troweled to a hard finish.

2.11 COLD EQUIPMENT INSULATION:

- A. Insulate all equipment with surface temperature below 60F with 1" thick, flexible, closed cell, elastomeric foam insulation sheet, ASTM C534, conductivity of 0.30, permeance of 0.20, composite flame spread/ smoke density of 25/50.

Manufacturers: Armacell, Rubatex.
- B. Apply elastomeric foam insulation sheet with contact adhesive.

Approved Manufacturers: Armacell, Rubatex. Seal all butt joints with adhesive.

PART 3 - EXECUTION

3.1 INSULATION INSTALLATION

- A. All systems shall be tested and approved before being insulated.
- B. The insulation shall be applied over clean, dry surface.
- C. Insulate all valves, flanges, couplings and fittings. Valve and flange insulation shall be removable and reinstallable.
- D. Full lengths of insulation shall be used except at end of straight sections and as required to accommodate fittings. Insulation shall be applied with the joints tightly fitted together. Cracks or voids shall be filled with insulation. Manufacturer's recommended installation procedures shall be strictly adhered to.
- E. The edges and seams at all visible locations shall be finished in a neat and workmanlike manner.

- F. All exposed ductwork insulation shall be applied with edges butted. Insulation shall be impaled over stick clips or pins welded to the duct, and secured with speed clips. Spacing of pins shall be as required to hold insulation firmly in place but not less than one pin per square foot. All joints and penetrations of the vapor barrier shall be sealed with a 3" wide strip of the same material, supplied with vapor barrier adhesive to both surfaces as recommended by adhesive manufacturers.
- G. Blanket insulation shall be tightly sealed at all joints and seams. Insulation shall be cut longer than ductwork perimeter to allow maximum thickness on all areas and avoid excessive compression. All joints shall be over lapped at least 2" and stapled in place. The stapled seams shall be sealed with a minimum 3" wide pressure sensitive tape designed for use with the duct insulation. All breaks in the vapor barrier facing shall also be sealed with the tape. The underside of ductwork 18" or greater in width, and vertical surfaces 48" or greater shall have the insulation additionally secured with mechanical fasteners and speed clips spaced approximately 12" on center. The protruding ends of the fasteners shall be cut off flush after the speed clips are installed, and then sealed with the same tape as specified above.
- H. Finished installation shall provide a continuous and effective vapor barrier.

2014-JULY: GENERAL UPDATE OF ENTIRE SPECIFICATION PER PLMG. AND HYDRONICS MTT. D. KARLE

2014-DECEMBER: ADD GEORGE FISCHER AS APPROVED FOR PP PRESSURE PIPING, ADD MATERIAL REQUIREMENTS FOR STORM AND SANITARY PUMP DISCHARGE PIPING. ADD GENERAL REQUIREMENTS FOR PLASTIC PIPE HANGERS/SUPPORTS. D. KARLE FOR P & FP MTT.

2015-APRIL: REVISE STAINLESS PIPE DESCRIPTION TO ALLOW 316L ONLY FOR COLD DOMESTIC AND CONDENSER WATER DUE TO CONCERN WITH CHLORIDES IN CITY WATER CORRODING 304L. D. KARLE FOR P & FP MTT.

2015-AUGUST: REMOVED STANDARD DUTY NO-HUB COUPLING ASTM NUMBER C1277, ADDED SPEC FOR DIS-SIMILAR PIPE CONNECTION TO C.I. NO-HUB, IMPROVED BRACING AND HANGING REQUIREMENTS FOR NO-HUB AND STM/SAN. PIPING IN PART 3. D. KARLE FOR P & FP MTT.

2017-FEBRUARY: ADDED APOLLO XPRESS (PRESS TO CONNECT) FITTINGS, REVISED PRESS SPEC TO ALLOW FOR PRESS VALVES, STRAINERS, CHECK VALVES FROM ANY MFR APPROVED FOR THAT COMPONENT FOR PIPING 2" AND BELOW. ADDED IPEX ENFIELD PIPING TO DEIONIZED WATER - ABOVE GROUND, ADDED GEORG FISHER FUSEAL TO LAB WASTE & VENT PIPING - ABOVE/BELOW GROUND. DELETED FLEXIBLE CONNECTORS WHICH ARE COVERED IN 220548 VIBRATION CONTROL. CHANGED OSEH TO EHS. B. BEGG AND D. KARLE FOR P & FP MTT.

APRIL 2018: REVISED TO LIST MFR.S FROM PML. R BENEDEK

JUNE 2018: REVISED STRAINER MESH SIZES FOR WATER SERVICE PER HYDRONIC AND PLMB. MTT'S. D. KARLE

NOV. 2018: REMOVED SPEC FOR U.G. DUCTILE IRON PIPING FOR CHW AND REFERRED TO 3336100 FOR THAT SPEC. D. KARLE FOR HYDRONIC AND PLMB. MTT.

MARCH 2019: REVISED RO WATER CPVC PIPE ASTM NUMBERS TO CORRECTLY REFLECT SCHEDULE 80 PIPE. THE ORIGINAL ASTM NUMBER (D2846) WAS FOR COPPER TUBE SIZES WHICH ARE MADE IN SDR 11 ONLY. D. KARLE/A. WEIR FOR HYDRONIC AND PLMB. MTT.

GENERAL

1.1 RELATED DOCUMENTS

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections, in particular the Related Sections listed below, apply to this Section.
- B. Related Sections
 - 1. Section 220500 - Common Work Results for Mechanical
 - 2. Section 220548 - Vibration Control
 - 3. Section 231123 - Facility Natural-Gas Piping
 - 4. Section 232300 - Refrigerant Piping
 - 5. Section 336100 - Hydronic Utilities

1.2 SUMMARY

- A. This Section specifies piping materials and installation methods for the piping systems listed in Part 2 and includes joining materials, piping specialties, and basic piping installation instructions.

1.3 SUBMITTALS

- A. Product Data: Include manufacturer, catalog illustrations, model, rated capacities, performance, dimensions, component sizes, rough-in requirements, materials of construction, and operating and maintenance clearance requirements. Additionally include:
 - 1. Provide a piping material schedule that indicates, by service, pipe material, pipe manufacturer, fitting type and manufacturer, joint type and manufacturer.
 - 2. Solder and brazing material data sheets.
 - 3. Grooved fittings, couplings, and accessories data sheets.
 - 4. Data sheets for all products listed in this section including flanges, gaskets, unions, hangers, di-electric protection method, thermal hanger shield inserts, di-electric fittings, flexible metal hose, flexible connectors, and seal sleeve systems.
 - 5. For underground pressurized and steam condensate piping systems, provide a simplified drawing of the piping system identifying pipe depth and slope, location and type of each joint and restraint, valve, and similar accessories, and dimensions of any expansion loops.

*QUALITY ASSURANCE: CENTRAL POWER PLANT AND TUNNEL PROJECTS:
REVIEW WITH U-M DESIGN MANAGER IF PIPE, FITTINGS AND FLANGES
SHOULD BE CERTIFIED AS SOURCED FROM DOMESTIC SUPPLIERS, GERMANY,
ITALY, FRANCE, OR GREAT BRITAIN.*

1.4 QUALITY ASSURANCE:

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
 - 1. All piping, (including vacuum piping), unless noted otherwise, shall comply with ANSI Standard B31.9 - Building Service Piping.
 - 2. All steam piping above 15 psig, and all steam condensate piping shall comply with ANSI Standard B31.1 - Power Piping.
 - 3. National Sanitation Foundation NSF/ANSI-61, including Annex G (listed as $\leq 0.25\%$ weighted average lead content) (and/or NSF/ANSI-372) and Annex F. Applies to any item in contact with domestic (potable) water.
 - 4. U.S Safe Drinking Water Act (any item in contact with domestic (potable) water)
 - 5. NFPA 54 - National Fuel Gas Code
 - 6. AWWA C600 Standard for Installation of Ductile-Iron Water Mains and their Appurtances
 - 7. AWWA C606 Grooved and Shouldered Joints.
 - 8. Mill certifications indicating country of origin and compliance to ASTM/ANSI/NSF and other required compliance standards verified by independent third party based in the United States, shall be promptly provided whenever requested.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store piping materials and accessories raised off the floor or ground on pallets and protected with coverings to prevent damage or contamination due to weather and construction activities. Provide temporary protective caps on pipe ends. Maintain caps installed at all times until just prior to assembly, and recap open pipe ends at the conclusion of each work day. Store in areas that prevent damage due to freezing and extreme temperatures or sunlight. Arrange coverings to provide air circulation to avoid damage from condensation or chemical build-up. Protect from damage, dirt and debris at all times.

1.6 WARRANTY

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GENERAL PIPING REQUIREMENTS:

- A. All piping materials shall be compatible for temperature, pressure and service.
- B. All wetted seals shall be made from materials that are immune from chloramine degradation.

- C. Provide long radius elbows and returns on welded steel pipe.

GROOVED JOINTS ARE ONLY PERMITTED IN ACCESSIBLE LOCATIONS. TYPICALLY, MECHANICAL ROOMS AND ABOVE LAY-IN ACOUSTIC CEILING ARE CONSIDERED ACCESSIBLE. SHAFTS AND AREAS ABOVE DRYWALL CEILINGS ARE EXAMPLES OF INACCESSIBLE LOCATIONS. REVISE THE PARAGRAPH BELOW TO INDICATE THE INACCESSIBLE LOCATIONS ON YOUR PROJECT.

- D. Grooved Joints:

1. Where grooved joints are indicated as permitted, such joints are only permitted in accessible locations. The following locations are considered inaccessible: shafts, above dry wall ceilings.

2.2 PLUMBING PIPING SYSTEMS:

PROJECTS CONSIDERING THE USE GROOVED JOINTS OR COPPER PRESS FITTINGS (E.G. "PROPRESS") SHALL OBTAIN APPROVAL FIRST FROM THE U-M DESIGN MANAGER AND THE PLUMBING/FIRE PROTECTION MECH TECH TEAM. IF GROOVED JOINTS OR COPPER PRESS FITTINGS ARE NOT BEING USED, REMOVE ALL ASSOCIATED REFERENCES TO THESE ITEMS, BELOW. GROOVED AND PRESS JOINTS ARE PROHIBITED ON DOMESTIC HOT WATER/HOT WATER RETURN IN BUILDINGS (OK FOR TUNNELS) DUE TO U-M'S PAST EXPERIENCE WITH LEAKAGE PROBLEMS.

PVC PIPING MAY NOT BE USED IN RETURN PLENUMS OR SUPPLY DUCTS, OR IN BUILDING OVER 3 FLOORS HIGH.

- A. Domestic Cold Water, Hot Water and Hot Water Return - Above Ground (including non-potable):

1. For piping through 6":
a. Pipe: Type L Copper, hard drawn, ASTM B88
b. Fittings: Wrought Copper, ANSI B16.22
c. Joints: Soldered through 2"; Brazed for 2-1/2" through 6"

ONLY USE THE CONTRACTORS OPTIONS BELOW WITH APPROVAL. SEE ARTICLE 2.2 SPEC EDITORS NOTE, ABOVE.

Contractor Options:

- d. For piping 2-1/2" through 6", excluding inaccessible locations, Grooved Joints - for cold water may be used (not allowed on hot or hot return).
e. For piping through 4", copper press to connect fittings for cold water may be used (not allowed on hot or hot return).

U-M'S EXPERIENCE WITH GALVANIZED PIPE HAS NOT BEEN GOOD, THEREFORE COPPER OR STAINLESS STEEL IS PREFERRED AND SPECIFIED FOR 8"-12" PIPE. IF LARGER DIAMETER IS REQUIRED, DESIGNER MUST REVISE SPECIFICATION (BELOW, AND THE FITTINGS SECTION, MUCH FARTHER BELOW) ANOTHER ALTERNATIVE IS POLYPROPYLENE ("AQUATHERM").

2. For cold water piping 8" through 12":
a. Pipe:
1) Type L Copper, hard drawn, ASTM B88 or
2) Sch. 10S Type 316L ASTM A312 seamless stainless steel.

- b. Fittings:
 - 1) For Copper Pipe: Wrought Copper, ANSI B16.22.
 - 2) For Stainless Steel Pipe:
 - a) 316L ASTM A312 stainless steel.
 - b) ASTM A403 Grade WP Class S or W, ANSI B16.9.
 - c) Flanges: ASTM A182, weld neck, with ASTM A193/ASTM A194 bolts/nuts.
 - c. Joints:
 - 1) Copper Pipe: Brazed. May be grooved where accessible, up to 8" maximum.
 - 2) Stainless Steel Pipe: Welded, or grooved where accessible. Weld per ASTM A312.
 - 3. For tunnel applications:
 - a. Piping: Type L copper, hard drawn, ASTM B88.
 - b. Fittings: Wrought Copper, ANSI B16.22
 - c. Joints: Soldered through 2"; Brazed for 2-1/2" through 6". Piping 2-1/2" through 6" may be grooved joints.
- B. Domestic Cold Water - Under Ground (including non-potable):
- 1. For piping through 4"
 - Pipe: Type K Copper, hard drawn, ASTM B88
 - Fittings: Wrought Copper, ANSI B16.22
 - Joints: Brazed.
 - 2. For piping 5" and larger:
 - Pipe: Ductile Iron, AWWA C115 or AWWA C151 with C104 cement mortar lining, polyethylene encased per ANSI/AWWA C105/A21.5.
 - Fittings: AWWA C110 or AWWA C153, 150 psi rating with C104 cement mortar lining.
 - Joints: AWWA C111 rubber gaskets.

SPEC EDITOR: INVESTIGATE SPECIFIC R.O. AND DEIONIZED WATER REQUIREMENTS WITH CLIENT AND EDIT THE BELOW TWO PARAGRAPHS ACCORDINGLY. CONFIRM NEED FOR HEAT FUSION JOINTS, AND SUITABILITY FOR SCREWED JOINTS. FOR D.I. WATER AT U-M, RESEARCH LABS NORMALLY SHOULD USE POLYPROPYLENE PIPE WITH FUSION JOINTS. ULTRA PURE SYSTEMS SUCH AS FOR SEMI-CONDUCTOR FABRICATION ARE TYPICALLY RECOMMENDED TO BE PVDF PIPE WITH FUSION JOINTS.

- C. Reverse Osmosis Water - Above Ground:
 - 1. Pipe: CPVC, Schedule 80, ASTM F441
 - Fittings: ASTM F439
 - Joints: Screwed or Solvent Welded
- D. Deionized Water - Above Ground:
 - 1. Pipe: Unpigmented polypropylene, Schedule 80, ASTM D4101, PP Resin.
 - Manufacturer: Georg Fischer PPro-Seal, IPEX Enfield, NIBCO, Orion.
 - Fittings: ASTM D4101
 - Joints: Heat Fusion Welded. "Riontite" mechanical Joints.

SPEC EDITOR NOTE: THE FOLLOWING PIPING CAN BE USED AS AN ALTERNATIVE TO THE POLYPROPYLENE PIPE. USE ONLY WHERE APPROVED BY U-M PROJECT MANAGER.

2. Alternate Pipe: Low extractable, polyvinyl chloride (PVC) compound, Type II pressure rating, Schedule 80, ASTM D1784.
Manufacturer: Spears LXT.
Fittings: Schedule 80, ASTM 2467
Joints: Specialty solvent cement, that meets or exceed the requirements of ASTM D2564 - Spears One-Step.

E. Lab Vacuum - Above Ground:

1. For piping through 4":
Pipe: Type L Copper, hard drawn, ASTM B88
Fittings: Wrought Copper, ANSI B16.22
Joints: Soldered through 2"; Brazed for 2-1/2" through 4"

FOR COMPRESSED AIR PIPING ABOVE 6", PRESENT MATERIAL ALTERNATIVES TO THE U-M DESIGN MANAGER FOR APPROVAL.

F. Compressed Air - Above Ground:

1. For piping through 6":
Pipe: Type L Copper, hard drawn, ASTM B88
Fittings: Wrought Copper, ANSI B16.22
Joints: Soldered through 2"; Brazed for 2-1/2" through 6"

THE FOLLOWING IS AN ACCEPTABLE ALTERNATE SPECIFICATION FOR COMPRESSED AIR IN HIGH HAZARD AREAS, WHERE PIPING MAY BE SUBJECTED TO PHYSICAL ABUSE. IF USED, UNHIDE TEXT AND INDICATE THE SPECIFIC LOCATION WHERE STEEL PIPE MAY BE USED.

2. For piping through 2" in areas subjected to physical abuse:
Pipe: Black Steel, Schedule 40, ASTM A 53, ERW or seamless, grade B
Fittings: Cast Iron, 125 lb. ASTM A 126 or malleable iron 150 lb. ASTM A 197; unions, 250 lb. ASTM A 197
Joints: Screwed.

G. Natural Gas - Above Ground:

SPEC EDITOR: UNDERGROUND NATURAL GAS PIPING IS TYPICALLY PROVIDED ONLY BY THE GAS COMPANY AND IS THEREFORE NOT ADDRESSED HEREIN. IF REQUIRED, CONSULT CODES.

1. For piping through 2":
Pipe: Black Steel, Schedule 40, ASTM A 53, ERW or seamless, grade B
Fittings: Malleable iron, 150 lb. ASTM A 197; unions, 250 lb. ASTM A 197
Joints: Screwed Terminal connections 1/2" and less: Type L Copper, annealed, ASTM B 88, 24" maximum length, flared connections
2. For piping 2-1/2" and larger
Pipe: Black Steel, Schedule 40, ASTM A 53, ERW or seamless, grade B, standard weight for 12" and above
Fittings: Standard weight, butt welded, black steel, ASTM A 234
Joints: Welded. Flanged ASTM A 181, 150#, forged steel at valves, and equipment.

H. Sanitary Waste and Vent - Above and Under Ground:

SPEC EDITOR: CHOOSE ONE OF THE FOLLOWING. CI IS STANDARD, PVC IS ECONOMICAL ALTERNATIVE ACCEPTABLE IN SOME BUILDINGS.

1. Pipe: Cast Iron, Service Weight, CISPI Standard 301, ASTM A74, ASTM A888
Fittings: Cast Iron, drainage pattern, ASTM A74, ASTM C564
Joints: Hubless - Heavy duty, ASTM C1540 shielded couplings
2. Pipe: PVC Schedule 40, ASTM D 2665, NSF approved, type DWV
Fittings: PVC, ASTM D 3311
Joints: Screwed or solvent weld, ASTM D2564

LAB WASTE AND VENT: DEPENDING ON THE APPLICATION, A LOWER COST ALTERNATIVE TO CONSIDER VERSUS THE PP/FUSED JOINT PIPING LISTED BELOW IS A SOLVENT JOINT SYSTEM MADE ESPECIALLY FOR LAB WASTE, SUCH AS SPEARS LABWASTE™ CPVC PIPING.

- I. Laboratory Waste and Vent - Above Ground:
 1. Pipe: Polypropylene, Schedule 40, ASTM- D 4101, Type 1
Fittings: ASTM D-4101
Joints: Mechanical joints with manufacturer's recommended seals by Orion, or fuse seal joints.
Manufacturer: Orion, Enfield, Georg Fisher Fuseal, Zurn
- J. Laboratory Waste and Vent - Under Ground:
 1. Pipe: Polypropylene, Schedule 80, ASTM- D 4101, Type 1
Fittings: ASTM D-4101
Joints: Mechanical joints with manufacturer's recommended seals by Orion, or fuse seal joints.
Manufacturer: Orion, Enfield, Georg Fisher Fuseal, Zurn
- K. Equipment Condensate Drains, including coils and energy recovery devices - Above Ground:
 1. Pipe: Type DWV Copper, hard drawn, ASTM B306
Fittings: Wrought Copper, ANSI B16.22
Joints: Soldered.

CHOOSE ONE OF THE FOLLOWING. CI IS STANDARD, PVC IS ECONOMICAL ALTERNATIVE ACCEPTABLE IN SOME BUILDINGS.

- L. Storm - Above and Under Ground:
 1. Pipe: Cast Iron, Service Weight, CISPI Standard 301, ASTM A74, ASTM A888
Fittings: Cast Iron, drainage pattern, ASTM-A74, ASTM C564
Joints: Hubless - Heavy duty, ASTM C1540 shielded couplings
 2. Pipe: PVC Schedule 40, ASTM D-2665, NSF approved, type DWV
Fittings: PVC, ASTM D-3311
Joints: Solvent welded, ASTM D-2564
- M. Sanitary and Storm Pump Pressure Piping- from pump discharge to connection to gravity main:
 - a. Pipe:
 - 1) Type L Copper, hard drawn, ASTM B88; or
 - 2) Sch. 10S Type 304L ASTM A312 seamless stainless steel.
 - b. Fittings:
 - 1) For Copper Pipe: Wrought Copper, ANSI B16.22.
 - 2) For Stainless Steel Pipe:
 - a) Type 304L or 316L ASTM A312 stainless steel.

- b) ASTM A403 Grade WP Class S or W, ANSI B16.9.
- c. Joints:
 - 1) Copper Pipe: Soldered. May be grooved where accessible, up to 8" maximum.
 - 2) Stainless Steel Pipe: Welded, or grooved where accessible. Weld per ASTM A312.
- d. Elevator sump pumps, in plenum return locations:
 - 1) Galvanized steel ASTM A53 pipe, standard weight, with galvanized, Gray-Iron threaded fittings: ASME B16.4, Class 125; or
 - 2) excluding inaccessible locations, Grooved Joints - for Steel Piping may be used, with hot dip galvanized pipe and fittings (couplings may be un-galvanized).
- e. Elevator sump pumps, in non-plenum return locations:
 - 1) Schedule 40 PVC ASTM D 1785 pipe, ASTM D 2466 socket fittings, ASTM D 2464 Schedule 80 threaded fittings.

2.3 HYDRONIC, STEAM AND CONDENSATE PIPING SYSTEMS:

PROJECTS CONSIDERING THE USE GROOVED JOINTS OR COPPER PRESS FITTINGS (E.G. "PROGRESS") SHALL FIRST OBTAIN APPROVAL FROM THE U-M DESIGN MANAGER AND THE PLUMBING/FIRE PROTECTION MECH TECH TEAM. IF GROOVED JOINTS OR COPPER PRESS FITTINGS ARE NOT BEING USED, REMOVE ALL ASSOCIATED REFERENCES TO THESE ITEMS, BELOW.

A. Chilled Water - Above Ground:

- 1. For piping through 4":
 - Pipe: Type L Copper, hard drawn, ASTM B88
 - Fittings: Wrought Copper, ANSI B16.22
 - Joints: Soldered through 2"; Brazed for 2-1/2" through 4"

ONLY USE THE CONTRACTORS OPTIONS BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.

- Contractor Options:
 - a. For piping 2-1/2" through 4", excluding inaccessible locations, Grooved Joints - for Copper Piping may be used.
 - b. For piping through 4", Copper press to connect fittings may be used
- 2. For piping 5" and larger:
 - Pipe: Black Steel, Schedule 40, ASTM A53, ERW or seamless, grade B, standard weight for 12" and above
 - Fittings: Standard weight, butt welded, black steel, ASTM A234
 - Joints: Welded. Flanged ASTM A181, 150#, forged steel at valves, and equipment.

ONLY USE THE CONTRACTOR OPTION BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.

Contractor Option: excluding inaccessible locations, Grooved Joints - for Steel Piping may be used for piping 5" through 12".

IF PROJECT HAS BELOW GROUND CHW PIPING BE SURE TO INCLUDE 336100 IN THE SPECIFICATION

B. Chilled Water - Below Ground

- 1. Refer to Related Section 336100 Hydronic Utilities

C. Hot Water Heating - Above Ground:

1. For piping through 4":
Pipe: Type L Copper, hard drawn, ASTM B88
Fittings: Wrought Copper, ANSI B16.22
Joints: Soldered through 2"; Brazed for 2-1/2" through 4"

ONLY USE THE CONTRACTORS OPTIONS BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.

Contractor Options:

- a. For piping 2-1/2" through 4", excluding inaccessible locations, Grooved Joints - for Copper Piping may be used.
 - b. For piping through 4", Copper press to connect fittings may be used.
2. For piping 5" and larger:
Pipe: Black Steel, Schedule 40, ASTM A53, ERW or seamless, grade B, standard weight for 12" and above
Fittings: Standard weight, butt welded, black steel, ASTM A234
Joints: Welded. Flanged ASTM A181, 150#, forged steel at valves, and equipment.

ONLY USE THE CONTRACTOR OPTION BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.

Contractor Option: excluding inaccessible locations, Grooved Joints - for Steel Piping may be used for piping 5" through 12":

FOR LENGTHS OF CONDENSER WATER PIPING EXPOSED TO SEASONAL DRAIN DOWN OR WHERE EXTERIOR CORROSION OF UNINSULATED CONDENSER WATER PIPING COULD PRESENT PROBLEMS, CONSIDER SPECIFYING A NONFERROUS PIPING MATERIAL, E.G. SCHEDULE 10 STAINLESS STEEL. A SAMPLE SPEC FOR STAINLESS STEEL PIPE CAN BE FOUND IN HIDDEN TEXT, BELOW.

D. Condenser Water/ Cooling Tower Water - Above Ground:

1. For piping through 4":
Pipe: Type L Copper, hard drawn, ASTM B88
Fittings: Wrought Copper, ANSI B16.22
Joints: Soldered through 2"; Brazed for 2-1/2" through 4"

SPEC EDITOR: ONLY USE THE CONTRACTORS OPTIONS BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.

Contractor Options:

- a. For piping 2-1/2" through 4", excluding inaccessible locations, Grooved Joints - for Copper Piping may be used:.
 - b. For piping through 4", Copper press to connect fittings may be used
2. For piping 5" and larger:
Pipe: Black Steel, Schedule 40, ASTM A53, ERW or seamless, grade B, standard weight for 12" and above
Fittings: Standard weight, butt welded, black steel, ASTM A234
Joints: Welded. Flanged ASTM A181, 150#, forged steel at valves, and equipment.

ONLY USE THE CONTRACTOR OPTION BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.

Contractor Option: excluding inaccessible locations, Grooved Joints - for Steel Piping may be used for piping 5" through 12".

BELOW IS SAMPLE SPEC FOR SS PIPE, IN HIDDEN TEXT.

3. For piping 5" and larger, stainless steel pipe:
 - a. Pipe: Sch. 10S Type 316L ASTM A312 seamless stainless steel.
 - b. Fittings: Type 316L ASTM A312 stainless steel. ASTM A403 Grade WP Class S or W.
 - c. Flanges: ASTM A182, forged, weld neck. Bolts/nuts ASTM A193/ASTM A194.
 - d. Joints: welded per ASTM A312.

ONLY USE THE CONTRACTOR OPTION BELOW WITH APPROVAL AS DETAILED IN PARAGRAPH 2.3 EDITOR'S NOTE ABOVE.

Contractor Option: excluding inaccessible locations, Grooved Joints - for Stainless Steel Piping may be used for piping 5" through 12".

- E. Steam - to 60 psig - Above Ground:
 1. For piping through 2":

Pipe: Black Steel, Schedule 40, ASTM A53, ERW or seamless, grade B.
Fittings: Forged steel, ASTM A181, ANSI B16.11.
Joints: Screwed.
 2. For piping 2-1/2" and larger
Pipe: Black Steel, Schedule 40, ASTM A53, ERW or seamless, grade B, standard weight for 12" and above
Fittings: Standard weight, butt welded, black steel, ASTM A234
Joints: Welded. Flanged ASTM A181, 150#, forged steel at valves, and equipment.
- F. Steam Condensate (gravity or pumped) - to 60 psig - Above Ground:
 1. For piping through 2":

Pipe: Black Steel, Schedule 80, ASTM A53, ERW or seamless, grade B.
Fittings: Forged steel, ASTM A181, ANSI B16.11.
Joints: Screwed.
 2. For piping 2-1/2" and larger
Pipe: Black Steel, Schedule 80, ASTM A53, ERW or seamless, grade B.
Fittings: Standard weight, butt welded, black steel, ASTM A234.
For utility tunnels use only extra heavy weight, butt welded, black steel, ASTM A234
Joints: Welded. Flanged ASTM A181, 150#, forged steel at valves, and equipment.
- G. Humidifier Piping (for steam humidifier using deionized or RO water):
 1. Steam piping from steam generator to humidifier manifold:

Pipe: Stainless steel for minimum 12" length at generator and at humidifier manifold.
Hose: Supplied by humidifier manufacturer, continuously pitched back to humidifier and continuously supported.
Fittings: Stainless steel.

- Joints: Screwed.
2. Condensate piping from manifold drip to generator or drain.
Pipe: Stainless steel.
Fittings: Stainless steel.
Joints: Screwed.
 3. Pipe and fittings: Sch. 40S Type 304L ASTM A312 seamless stainless steel pipe with ASTM A403 Grade WP Class S or W fittings.

2.4 SPECIAL PIPING SYSTEMS:

- A. Refrigeration Piping - Above Ground and Under Ground:
 1. Pipe: Type L or K Seamless Copper, Nitrogenized ACR, ASTM B 88 or ASTM B 280, annealed for 3/8" and smaller, hard drawn for 1/2" and larger. For underground piping 2" and smaller: Type K, annealed, with no fittings.
 2. Fittings: ANSI B16.26 cast copper alloy refrigeration type with 45 degree flare or wrought copper ANSI B16.22 socket fittings
Joints: brazed, flared (above ground only).

2.5 PIPE JOINTS:

- A. Soldered Joints: ASTM B32; Alloy Sb5, (95% Tin, 5% Antimony, maximum 0.20% Lead). When recommended by the component manufacturer, use manufacturer's recommended flux. Unless noted otherwise, joints may be screwed or flanged to suit valves and equipment. Manufacturers: Engelehard "Silverbrite 100", Harris "Bridgit"
- B. Brazed Joints: ASTM B32, silver brazed joints with 1000F minimum melting point, conforming to AWS - A5.8, "Specification for brazing filler metal". Classification BAg-1. For domestic potable water applications, maintain a nitrogen purge during brazing to prevent deposit formation inside the pipe. Unless noted otherwise, joints may be screwed or flanged to suit valves and equipment. Manufacturers: Lucas-Milhaupt Inc. "Sil-Fos", J.W. Harris "Stay-Silv 15" and "Safety Silv"
- C. Screwed Joints: Tapered thread, ASME B1.20.1, joined with compatible compound or sealant tape applied to male thread only.
- D. Welded Joints: Comply with Section II, Part C, ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded. Pipe and fittings shall be beveled and butt welded.

GROOVED PIPING JOINTS FOR COOPER PIPE ARE LIMITED TO 8", WHICH IS THE MAXIMUM SIZE THAT ALL THREE APPROVED MFR.S HAVE AVAILABLE.

- E. Grooved Joints - for Copper Piping, maximum pipe size 8": Rolled grooves, peroxide cured EPDM gaskets, ductile iron housing (ASTM A 532 or A 536), wrought copper (ASTM B 75, ANSI B16.22) or cast bronze fittings, rated for minimum 300 psi working pressure at 250°F, when used with grooves that comply with AWWA C606. Grooved system/components shall provide rigid installation. UL and UPC approved. Utilize manufacturer's recommended gasket lubricant. Brazed Class 150 ANSI B16.24 cast bronze flanges (or copper companion flange by CTS Fabrication USA) must be used at any component requiring a flanged connection. Clamp-on branch outlets are prohibited. Exact gasket material and style shall be as recommended by the coupling manufacturer for the service, and NSF/ANSI-61 Annex G and NSF/ANSI-372 listed when used for potable water. On potable water service, provide non-standard gasket styles that close off and isolate gasket cavities from the water in the pipe. The manufacturer of the couplings and the fittings shall be the same. The same grooved component manufacturer shall be provided for the entire scope of the work, for each system.
1. The following manufacturers and coupling model numbers are permitted, provided they comply with all the above: Victaulic Style 607; Tyco Grinnell 672 or 640.
 2. For copper piping in tunnels: Victaulic Style 607 only.

GROOVED JOINTS FOR STEEL PIPE ARE LIMITED TO 12". THE PRESSURE RATING OF GROOVED COUPLINGS DECREASE ABOVE 12" PIPE SIZE, AND VARIES BY COUPLING MFR. REVISE BELOW CAREFULLY IF USING GROOVED JOINTS ABOVE 12" PIPE SIZE.

- F. Grooved Joints - for Steel Piping, for maximum pipe size of 12": Rolled or cut grooves, peroxide cured EPDM gaskets, ductile iron coupling and fittings (ASTM A532 or A536), rated for minimum 400 psi working pressure at 250°F, when used with grooves that comply with AWWA C606. Grooved system/components shall provide rigid installation. UL and FM approved. Utilize manufacturer's recommended gasket lubricant. Welded flanges must be used at any component requiring a flanged connection. Clamp-on branch outlets are prohibited. Exact gasket material and style shall be as recommended by the coupling manufacturer for the service. The manufacturer of the couplings and the fittings shall be the same. The same grooved component manufacturer shall be provided for the entire scope of the work, for each system.
1. The following manufacturers and coupling model numbers are permitted, provided they comply with all the above: Victaulic Style 07 or 107; Tyco Grinnell Fig. 740 or 772.

ALTHOUGH THE BELOW ARTICLE CALLS FOR 300 PSI WORKING PRESSURE FOR STAINLESS STEEL FITTINGS UP TO 12", THE PRESSURE RATING OF GROOVED COUPLINGS IS OFTEN LESS ABOVE 8" PIPE SIZE, AND VARIES BY COUPLING MFR. REVISE BELOW CAREFULLY IF USING S.S. GROOVED JOINTS ABOVE 8" PIPE SIZE.

- G. Grooved Joints - for Stainless Steel Piping, for maximum pipe size of 12": Rolled grooves, peroxide cured EPDM gaskets, galvanized ductile iron (indoor piping only) or stainless steel couplings, minimum sch. 10 stainless steel fittings. Provide stainless steel nuts and bolts when couplings are stainless steel. Couplings and fittings rated for a minimum 300 psi working pressure at 250°F. Grooved system/components shall provide rigid installation. NSF/ANSI-61 Annex G and NSF/ANSI-372 listed when used for potable water. On potable water service, provide non-standard gasket styles that close off and isolate gasket cavities from the water in the pipe. Welded flanges must be used at any component requiring a flanged connection. Clamp-on branch outlets are prohibited. Exact gasket material and style shall be as recommended by the coupling manufacturer for the service. Utilize manufacturer's recommended gasket lubricant. The manufacturer of the couplings and the fittings shall be the same. The same grooved component manufacturer shall be provided for the entire scope of the work, for each system. Use the manufacturer's required roll sets for stainless steel pipe.
1. The following manufacturers and coupling model numbers are permitted, provided they comply with all the above: Victaulic Style 89 (indoor), Style 489 (outdoor); Tyco Grinnell Fig. 770 (indoor), Fig. 772 (indoor), Fig. 472 (outdoor).

THE FOLLOWING JOINING METHOD IS UNDER CONSIDERATION: USE PRESS JOINTS ONLY WHERE APPROVED BY U-M PROJECT MANAGER AND THE PLUMBING/FIRE PROTECTION MECH TECH TEAM.

H. Press Joints:

1. Limited to a maximum pipe size of 4".
2. Rated for a minimum 200 PSI working pressure from -4°F to 250°F.
3. Compatible with seamless type K, L, and M copper tube conforming to ASTM B88.
4. Fittings shall be a minimum 78% copper and a maximum of 15% zinc, alloyed to prevent dezincification.
5. Fittings shall conform to the material and sizing requirements of ASME B16.18 or ASME B16.12.
6. Seals/O-rings shall be peroxide cured EPDM.
7. Joints shall be pressed using the tool approved by the manufacturer.
8. Provide press fittings from the same manufacturer for the entire scope of the work, for each system.
9. For piping 2" and smaller, non-fitting components such as valves, strainers, check valves, etc. manufactured by the press fitting manufacturer may be used provided:
 - a. the press fitting manufacturer is approved for those components elsewhere in the specifications
 - b. such components fully comply to the requirements of the respective specification section for the component.
10. Approved fitting, tool, and process:
 - a. Viega ProPress
 - b. NIBCO Press System.
 - c. Apollo Xpress

I. Flanged Joints:

1. Select flange and gasket materials to suit service of piping and to comply with the respective ASME B31.1 or B31.9 piping standard.
 2. For steel pipe, provide raised face ANSI B16.5 compliant steel flanges.
 3. For copper pipe, provide Class 150 flat face ANSI B16.24 cast bronze flanges, brazed to the copper tube.
 - a. Alternative: Copper companion flange by CTS Fabrication USA rated 450 PSI minimum working pressure from -66°F to 272°F. ANSI B16.5 compliant, powder coated, with an EPDM insulator adhered to the plate steel flange protruding inside of the flange to prevent contact with the copper companion flange adapter. Flange adapter shall be manufactured to ASME B16.22, brazed to the copper tube.
 4. Gaskets shall conform to respective ANSI Standards, A21.11, B16.20, B16.21. Gaskets in steam and condensate lines shall be "FLEXTALLIC", 316 L stainless steel with "FLEXICARB" filler. Flange gaskets for domestic hot water shall be 100% PTFE. For butterfly valves on replaceable seat side with interfering set-screws, provide Garlock Style 9800.
 5. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated. Central Power Plant and Tunnels: Provide ASTM A193 B7 bolts and studs with ASTM A194 grade 2H heavy hex nuts.
- J. Hubless Joints for Cast Iron No-Hub Pipe: Heavy duty ASTM C1540 couplings with stainless steel shield with stainless steel bands and tightening devices, ASTM C564 rubber sleeve with integral center pipe stop.
1. When connecting cast iron no-hub pipe to dis-similar pipe: Provide ASTM C1460 couplings specifically designed for both pipe types, with stainless steel shield with stainless steel bands and tightening devices, with ASTM C564 rubber sleeve with integral center pipe stop. Unshielded couplings shall not be used. *Connections between dis-similar pipe materials shall be restrained.* Submit coupling and restraint methods for approval.
 2. Approved Manufacturers:
 - a. Anaco/Huskey
 - b. Clamp-All Corp.
 - c. Ideal Tridon
 - d. Mission Rubber Company (MCP Industries Inc.)
- K. Solvent Cement Joints: Select materials suitable for pipe materials joined and compatible with fluid served. Conform to respective ASTM Standards D-2235, D-2564, D-2855 and D-3138.
- L. Gasket Joint Lubricant - for use with grooved and hubless joints: Provide manufacturer's recommended gasket lubricant.

2.6 MECHANICALLY FORMED TEE CONNECTIONS IN COPPER PIPING:

THE T-DRILL TOOL HAS BEEN DEMONSTRATED AT UM A&E, AND TO PLANT, AND SEEMS TO HAVE APPROPRIATE APPLICATIONS. THE SPEC BELOW LIMITS T-DRILL'S USE. FORWARD COMMENTS AND EXPERIENCES TO THE SPEC TEAM.

- A. Contractor may use mechanically formed Tee connections in copper piping in lieu of tee fitting only where main piping is 2 1/2" or larger and where branch connection is 3/4" or smaller. Joint must be brazed. Tool manufacturer: T-Drill.

2.7 UNIONS:

- A. Unions in steel piping systems shall be malleable iron with ground joints made between two bronze inserts.
- B. Unions in copper piping systems shall be wrought copper or brass with sweat ends.

2.8 PIPE HANGERS AND SUPPORTS:

PIPE HANGER MODEL NUMBERS, SPACING, AND APPLICATION OF HANGERS AND SUPPORTS MUST BE ADDRESSED IN DRAWINGS, IT IS NO LONGER INCLUDED HEREIN. SOME DETAILS MAY BE AVAILABLE ON THE U-M AEC WEBSITE.

- A. Provide adjustable type pipe hangers, supports and accessories for the proper support of all piping. See details on drawings for requirements. Figure and model numbers specified on drawings are for Anvil International, and Pipe Shields Inc. Equivalent products by Carpenter & Paterson, Cooper B-line and PHD Manufacturing are also acceptable. Continuous threaded rod shall be used for intermediate attachments.
- B. Dielectric protection for hangers and supports: Where copper piping is supported with steel hangers and supports, dielectric protection must be provided. Use one of the following means as applicable:
 - 1. Coated hangers (copper or plastic coating)
 - 2. Insulation inserts
 - 3. Cushion clamps
 - 4. Other as approved by Engineer.

2.9 THERMAL-HANGER SHIELD INSERT ASSEMBLIES

- A. Except as noted, thermal hanger shield "insert" assemblies shall be used on all insulated pipe systems at each horizontal support, and at each clamped or guided vertical support. Manufactured units shall comply with MSS SP-58 standards and be tested per MSS SP-89 guidelines. Each assembly shall closely fit the various pipe diameters and match the outside diameter of the adjoining pipe insulation. Provide pre-grooved inserts when piping is heat traced. Compressive strength shall be adequate to prevent deformation at the project's hanger spacing requirements, with a minimum 3:1 safety factor.
- B. Thermal hanger shield insert assembly: Water-repellent treated, ASTM C 533, Type I calcium silicate, asbestos free insert. With G-90 galvanized sheet metal shield. With attached vapor barrier, where indicated. Each component shall have an ASTM E84 flame/smoke rating maximum of 25/50.
- C. Inserts for Cold Piping (piping conveying materials less than or equal to 60F), including all chilled water and domestic cold water piping: Insert with an attached vapor barrier.

1. Provide insert and sheet metal shield covering entire circumference of pipe.
- D. Inserts for Hot Piping (piping conveying materials at more than 60F): Insert only.
 1. For clevis or band hangers that support pipe from bottom: Insert and sheet metal shield shall cover lower 180 degrees of pipe, or entire circumference of pipe.
 2. For trapeze hangers or clamped pipe: Insert and sheet metal shield shall cover entire circumference of pipe.
- E. Inserts for piping less than 3/4-inch diameter: Not required except for piping conveying materials less than 45°F.
- F. Minimum Compressive Strength of Insert Material:
 1. 100 psig for sizes smaller than NPS 6.
 2. 600 psig for sizes NPS 6 and larger.
- G. Insert Length: Extend 2 inches beyond sheet metal shield.
- H. Vapor barrier: meeting ASTM C1136, with 0.02 perms maximum water vapor permeance.
- I. Adhesives shall comply with NFPA 90-A.
- J. Sheet Metal Shield Dimensions for Pipe: Not less than the following:
 1. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
 2. NPS 4: 12 inches long and 0.06 inch thick.
 3. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick
 4. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick
 5. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick
- K. Manufacturers
 1. Cooper B-Line
 2. Pipe Shields Inc.
 3. Rilco Manufacturing Company
 4. Value Engineered Products.
 5. American Mechanical Insulation Sales
 6. ERICO International Corp

2.10 PIPE SLEEVES:

NOTE THAT SLEEVE DETAILS MUST APPEAR ON DRAWINGS, INCLUDING UNDERGROUND DETAILS IF APPLICABLE.

- A. Furnish and set pipe sleeves per details on drawings.

2.11 DIELECTRIC FITTINGS:

- A. For pipe 2 inch and less: Provide brass coupling. (Dielectric unions are not acceptable).
- B. For pipe 2-1/2 inch and larger: Provide flange union with dielectric gasket and bolt sleeves. On copper pipe, copper companion flanges by CTS Fabrication USA may be used.
- C. Dielectric waterways are prohibited for all joint systems.

2.12 STRAINERS:

- A. Body shall be bronze for sizes 2" and less and bronze, cast steel, or cast iron for sizes over 2" unless otherwise indicated. Provide domestic water strainers with bronze, stainless steel, or epoxy lined cast iron bodies suitable for potable water.

Strainers shall be same size as piping.

Provide soldered or screwed connections on ¾" sizes or less, screwed connections on sizes between ¾" and 2-1/2" , and flanged connections on sizes 2-1/2" and larger. Where grooved piping is specified, grooved joint strainers may be used.

Pressure rating shall be that of piping system, minimum Class 125.

Provide with plugged blowdown port.

Provide screen free areas that are a minimum of twice the internal cross sectional area of the piping where installed.

- B. For water service, screen material stainless steel, with openings of 1/16 (0.062) inches for pipes 2" and smaller and 1/8 (0.125) inches for pipe sizes 2-1/2" and larger.
- C. For steam and condensate service, screen material stainless steel, with openings of 1/32 (0.031) inches for pipes 2" and smaller and 3/64 (0.047) inches for pipe sizes 2-1/2" and larger.
- D. For air and gas service, screen material stainless steel, with openings of 0.006 inches for pipes 2" and smaller and 0.009 inch for pipe sizes 2-1/2" and larger.
- E. Approved Manufacturers: Armstrong, Anvil International, Keckley, Metraflex, Mueller, Spirax-Sarco, Victaulic, Watts, Yarway.

2.13 FLEXIBLE PIPING CONNECTORS:

- A. Refer to Related Section 220548 - Vibration Control.

2.14 PIPE ANCHORS:

- A. Provide pipe anchors where shown and as detailed on drawings.

2.15 PIPING TRANSITIONS:

- A. For transitions between ductile iron pipe and other pipe materials, refer to the requirements for hubless joints found elsewhere in this specification.
- B. When two different pipe materials must be joined such as cast iron, clay, steel, copper or plastic, provide transition fittings specifically designed for that purpose and that are manufactured in compliance with the standards relevant for the pipes joined. Transitions shall have equal corrosion resistance to the pipes joined.
- C. For dissimilar metal connections, see "Dielectric Fittings".

2.16 SLEEVE-SEAL SYSTEMS

- A. Approved Manufacturers:
 - 1. EnPro Industries "Link Seal"
 - 2. Advance Products & Systems, Inc.
 - 3. Metraflex Company (The).
 - 4. Proco Products, Inc.
- B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve. Shall provide a water-proof seal between the pipe and sleeve at up to 20 psig head pressure. Each link and pressure plate shall include permanent identification of size and manufacturer's name. Manufactured in an approved ISO-9001:2000 facility.
- C. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe.
- D. Pressure Plates: Molded of glass reinforced nylon.
- E. Connecting Bolts and Nuts: Mild steel with a 60,000 psi minimum tensile strength and 2-part Zinc Dichromate coating per ASTM B-633 and Organic Coating, tested in accordance with ASTM B-117 to pass a 1,500-hour salt spray test. Of length required to secure pressure plates to sealing elements.
- F. Sleeves:
 - 1. Galvanized steel, ASTM A53/A53M, Schedule 40, with plain ends and welded steel collar, zinc coated. Steel Sleeve sizes 12" and larger shall be 0.375" thick or standard pipe wall thickness. Sleeves through wall shall be cast in place and the pipe shall be installed centered in the sleeve. Provide 2" collar (water-stop) of steel to match sleeve, welded all around on both sides to the sleeve at the point on the sleeve that positions it at the mid-point of the structural wall when the sleeve is in place.
 - 2. Molded non-metallic high density polyethylene sleeves (HDPE) with integral hollow, molded water-stop ring four inches larger than the outside diameter of the sleeve itself. End caps and reinforcing ribs, manufactured in an approved ISO-9001:2000 facility. With nailer flange.

PART 3 - EXECUTION

3.1 GENERAL PIPING INSTALLATION REQUIREMENTS:

- A. Work shall be done in accordance with applicable ordinances and codes. Arrange for inspections.
- B. For domestic potable water applications, maintain a nitrogen purge during brazing to prevent deposit formation inside the pipe, so that the inner pipe surface remains clean. Properly ventilate the area outside the pipe to avoid unsafe levels of nitrogen.
- C. Install pipe components and joining systems in accordance with the manufacturer's installation instructions.
- D. Install piping to permit complete draining. Provide capped hose end ball type drain valves at all low points.

EXPANSION OF PIPING MUST BE CONSIDERED IN DESIGN, AND ENGINEERED ON DRAWINGS, INCLUDING DIMENSIONED EXPANSION BENDS IF APPLICABLE.

- E. If water (flushing water, closed loop system water, blow down, etc.) or hydronic system fluids have a pH between 5.0 and 10.0 and meets the requirements of City of Ann Arbor Sewer Use Ordinance, it may be discharged to the sanitary sewer. If the water does not meet the sewer discharge limits, contact U-M Environment, Health and Safety (EHS) Hazmat at 763-4568 for proper disposal. City of Ann Arbor Sewer Use Limitations (Chapter 28 Sewage and Sewage Disposal, subsection 2:43.1. Prohibited discharges.) can be found at:
1. <http://www.municode.com/resources/gateway.asp?pid=11782&sid=22>
 2. or by contacting U-M EHS - Environmental Protection & Permitting Program at 936-1920.
- F. Installed piping shall be free from sagging. Provide for expansion and contraction of piping in an approved and safe manner by means of loops or offsets, where mechanical expansion joints are not specifically called for.
- G. Branch connections from horizontal steam, steam condensate, and gaseous system mains shall be taken off the top, up at a 45-degree angle, or off the side.
- H. Branch connections from horizontal hydronic system mains shall not be taken off the main bottom, or at less than 45 degrees from horizontal.
- I. Branch piping shall be valved at the branch connection points.
- J. Provide fittings and specialties necessary to properly interconnect all items, whether or not shown in detail.
- K. Piping shall remain protected and capped until just prior to connection. Immediately after assembly, restore all protection and cap unprotected ends to prevent odors, dust, moisture, and other debris from entering the piping system.
- L. Clean and swab-out all piping before installation.
- M. Lay out pipe lines straight, plumb and in true alignment. Offset as required to avoid interference with other work, to conceal piping, to allow maximum headroom and to avoid interference with windows and doors. Lay out all pipes and establish their levels from bench marks, existing floors or finished grades.
- N. Piping shall be concealed unless indicated otherwise on drawings. Do not conceal piping until it has been inspected, tested, flushed and approved.
- O. Use eccentric reducing fittings to increase or decrease pipe sizes. Bushings are not acceptable. Orient reducers to prevent trapping of water.
- P. Lubricate flange bolts and install with hardened flat washers. Use a torque wrench to tighten flange bolts to the gasket manufacturer's recommended torque.

- Q. Locate groups of pipe parallel to each other, spaced to permit applying insulation and servicing of valves. Install hot and cold water lines at least 6 inches apart.
- R. Install piping at least 3 inches clear of electrical conduit. Do not install pipe within the National Electrical Code (NEC) working space zone of electrical equipment. Examples:
1. Above the footprint of electrical equipment in the zone extending 6' above the installed height of the equipment.
 2. Within the NEC working space in front of the electrical equipment. NEC working space varies depending on voltage and other factors, typically for equipment 600 volts or less it extends from the floor to the height of the equipment or 6'-6", whichever greater, 3'-6" in front of the equipment, and for the width of the equipment or 30", whichever is greater.
- Verify NEC clearance requirements prior to installing work. Note that variable frequency drives are considered electrical equipment.
- S. Pipe extending into finished areas shall have chrome plated escutcheons large enough to cover pipe sleeves and shall fit snugly over pipe or insulation.
- T. Pitch piping as follows, but not less than required by code:
1. Hydronic piping up in direction of flow at 1/16" per foot
 2. Steam piping down in direction of flow at 1/16" per foot
 3. Vent piping back toward waste at 1/16" per foot
 4. Waste, condensate and compressed air piping down in direction of flow at 1/8" per foot.
- U. Join hubless, cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.
1. Support vertical pipe at no less than every floor level, at the base of each riser, and at every riser offset.
 2. Support horizontal pipe 5" diameter and greater with a minimum of two pipe hangers between couplings, except sections of pipe less than 4 feet in developed length are permitted to be supported with no less than one hanger between couplings.
 3. All horizontal piping 5" diameter and greater shall be restrained or braced to prevent movement at each joint at every direction change and at each branch connection.
 4. Provide pipe hangers to support every horizontal branch connection; provide sway bracing when pipe is suspended in excess of 18" by non-rigid hangers, and comply with all other bracing, support, and installation recommendations and suggestions in the CISPI Handbook.
 5. Provide hangers and supports to eliminate all misalignment at couplings.
 6. Tighten all clamps to coupling manufacturer's recommended torque, using a torque wrench.
 7. *Joints between dis-similar pipe materials shall be restrained.*
- V. Sanitary and storm piping shall be anchored upstream of the first coupling at the point of building exit (interior side) to prevent movement due to back surges, by permanent blocks, bracing, threaded rodding anchored to the exterior wall, or other suitable means.

3.2 NATURAL GAS PIPING INSTALLATION REQUIREMENTS:

- A. Install, inspect, test, and purge natural gas systems in accordance with NFPA 54, and local utility requirements.

SPEC EDITOR: INDICATE ON THE DRAWINGS, THE ROUTING AND TERMINATION LOCATION OF THE CONDUIT VENT PIPE.

- B. Gas piping in air plenum ceilings shall be continuously welded or installed in air-tight conduit constructed of Schedule 40 seamless black steel pipe with welded joints. Vent conduit to the outside and terminate with a screened vent cap. Valves shall not be installed in plenums.
- C. Drips and Sediment Traps: Install a drip leg at inlet to terminal equipment, points where condensate may collect, and at the outlet of the gas meter. Do not install drips where condensate is likely to freeze. Construct drips using a tee with plugged or capped bottom outlet. Drip shall be minimum of 3 pipe diameters long, same size as pipe. Locate drips to permit cleaning and emptying.

3.3 UNDERGROUND PIPING INSTALLATION REQUIREMENTS

- A. Piping below grade intersecting tunnel walls, basement walls, or penetrating floors, shall be run through a sleeve seal system.
 - 1. Size sleeves and select sleeve seal links per sleeve seal manufacturer's recommendations.
 - 2. Install sleeves and seals per manufacture's recommendations. Center sleeve water stops at midpoint of wall/floor thickness. Provide temporary support to avoid sleeve collapse during pours.
- B. Record as-built sketches and dimensions prior to backfilling.

3.4 GROOVED PIPING

- A. Install couplings from the same manufacturer as the grooved fittings. The same grooved component manufacturer shall be installed for the entire scope of the work, for each system.
- B. Groove pipe per manufacturer's requirements. Grooving tools shall be the same manufacturer as the couplings and fittings. Use special roll sets for copper and stainless steel pipe when required by the manufacturer.
- C. Lubricate gaskets with manufacturer's recommended gasket lubricant. Use NSF-61 approved lubricant for domestic water piping.
- D. Allow room for pipe expansion for couplings that allow pipe ends to separate before the joint acts in a fully restrained manner, for example, certain couplings used on stainless steel pipe.
- E. Tighten coupling as recommended by the manufacturer. Use a torque wrench and tighten bolts to required torque level when required by the manufacturer.

3.5 WELDING:

- A. All welding shall be performed by registered welders qualified to perform welding operations in accordance with the National Certified Pipe Welding Bureau's procedures and standards, ASME Code Standards and the HPACCNA Standard Manual of Welding.
- B. Submit a certified copy of "Record of Pipefitter Welder Performance Qualification Test" of any employees who will be doing welding on this project.
- C. No welding to building work shall be allowed without approval of Engineer.
- D. Except where prohibited by the Reference Standards, code, or ordinance, Black steel piping larger than 6-inch diameter may be welded with chill rings.

SPEC EDITOR: DELETE THE FOLLOWING PARAGRAPH IF NO STEAM OR CONDENSATE OVER 15 PSIG

- E. Mitered turns will not be allowed. Turns shall be made with factory-made ASME B16.9 long radius wrought steel butt welding fittings.
- F. Except where prohibited by the Reference Standards, code, or ordinance, branch take-offs with manufactured formed nipples will be permitted provided nipple size is at least two pipe sizes smaller than the main size. Formed nipples shall be Bonney Forge "Weldolets", "Threadolets", "Sokolets". In all other cases, use factory-made ASME B16.9 wrought steel butt welding tee fittings.
- G. Shop welded pipe assemblies shall have all welds plainly stamped by the welding operator for inspection by the Engineer before installation.

3.6 SPECIAL WELDING REQUIREMENTS (FOR WORK LOCATED IN TUNNELS):

THIS ARTICLE IS REQUIRED FOR ALL TUNNEL PROJECTS. EDIT NUMBER OF WELDS AS NECESSARY FOR SCOPE OF PROJECT. THIS ARTICLE IS NOT NORMALLY REQUIRED FOR MOST NON-TUNNEL PROJECTS. IT CONTAINS ADDITIONAL WELDING REQUIREMENTS FOR SPECIAL CONDITIONS.

- A. Examine all welds by physical method. Include the cost of examining 5% of welds (but a minimum of 2 welds) to be selected by the Engineer, by approved graphic method similar to gamma ray process.
- B. The radiographic examination shall be by technicians of a reputable company regularly engaged in this type of work and skilled in the use of interpretation of results of this type of examination.
- C. The process shall provide visual proof at the site and such proof on photographs with reports which shall become the property of the Owner and will be included in the final Contract Documents.
- D. The report on the interpretation of the radiographic examination shall state whether or not the quality of the welding is suitable for the service for which the piping was designed.
- E. Welds examined by the above process shall be identified by a number and service symbol and shall be stamped into pipe adjacent to weld at the time of examination

- F. Failure to pass this test shall be cause for the rejection of the weld and authority to examine an additional weld. Rejected welds shall be repaired by an approved method and proven satisfactory by radiographic examination.
- G. If a second weld proves unsatisfactory by the radiographic examination, all welds shall be X-Rayed. Any welds proved unacceptable shall be repaired and X-Rayed again at no additional expense to the Owner.

3.7 PROTECTION AGAINST FREEZING:

- A. At any time that any of the piping is full of water for testing purposes or otherwise prior to actual heated operation, the system shall be protected against freezing by the introduction of pre-mixed propylene glycol type anti-freeze which will be flushed out before acceptance. Provision for introducing anti-freeze shall be made by means of valved connections to the system in an acceptable manner.

3.8 INSTALLATION OF PIPE HANGERS AND SUPPORTS:

- A. Arrange pipe hangers and supports to permit proper pitch of piping, free to move with pipe expansion, installed at proper intervals to totally prevent sagging and attached to building construction through approved means. Hangers shall be located near or at changes in piping direction and concentrated loads. Valves, strainers, in line pumps and other heavy equipment shall be supported independent of the pipes. After systems have been installed and filled adjust hangers and supports to evenly distribute weight, and maintain proper pitch. Refer to drawings for pipe hanger and support details.

PARA. B MAY BE CONSERVATIVE, REVIEW AND EDIT, OR DETAIL ON DRAWINGS

- B. Vertical Piping: When support locations are not indicated on the drawings, support piping at every floor level.

NOTE THAT HANGER SPACING IS TO APPEAR ON THE DRAWINGS - OR "APPLICABLE CODES" WILL DICTATE

- C. Horizontal Piping Hanger Spacing: Space hangers in compliance with schedule on drawings and applicable codes, or per MSS SP-89, which ever results in shortest spacing.
- D. For cold piping, install hangers and supports to maintain an effective continuous thermal and vapor barrier between cold piping and hangers and supports.

THE BELOW REQUIREMENTS FOR PLASTIC PIPE ARE GENERAL IN NATURE. THE DESIGNER SHOULD CAREFULLY SPECIFY HANGERS AND SUPPORTS AND PROVIDE DETAILS TO ASSURE PROPER SUPPORT AND TO ACCOMMODATE THE THERMAL EXPANSION OF PLASTIC PIPE.

- E. Plastic Piping: Hang and support in compliance with manufacturer's recommendations. At hangers and supports, including "Unistrut®" style channel supports, install to prevent plastic pipe contact with metal (exception: angle iron may be used for continuous support, provided all sharp edges are removed). Anchor piping only where required for expansion loops or to protect against pressure surges, etc. Compression style clamps/supports shall not be used. Use plastic pipe sleeves or equivalent as guides at all other locations, to allow longitudinal thermal expansion and to prevent lateral pipe movement. Compression style riser clamps shall not be used, use other support methods such as supporting at fitting shoulders. Support valves and other significant weight components independent of pipe. Space hangers no farther than manufacturer's recommendations for the application temperature but in no case farther than recommended for 100 deg. F application temperature. Continuously support all piping 1.5-inch nominal diameter or less (exception: PVC pipe connected to sump pumps). Provide thrust restraints where piping is subject to cyclic pressure surges, e.g. on/off pump applications.

3.9 INSTALLATION OF PIPE SLEEVES:

- A. Install pipe sleeves where piping passes through building construction including all walls, floors and ceilings.
- B. For new wall construction, promptly and accurately locate and securely set sleeves in forms before concrete is poured. For masonry construction, set the sleeves over the piping for Masonry Contractor to build around.

3.10 INSTALLATION OF STRAINERS:

- A. Provide Y-strainers in steam, condensate, or water piping preceding control valves, traps, pumps, pressure regulating valves and elsewhere as shown on drawings.
- B. Install strainer elements prior to flushing piping. Remove, clean and reinstall during flushing.
- C. On all strainers 2-1/2" or larger, provide a ball valve on the strainer blowdown port sized to match the blowdown port size on all strainers 1 1/2" and larger. Provide a 3/4" hose connection with cap on the ball valve.
- D. Install Y-type strainers in horizontal steam lines so the screen pocket is in the horizontal plane.
- E. Rotate screen removal flange so the blowdown port is at the lowest point.

3.11 TRENCHING AND BACKFILLING:

USE THIS ARTICLE ONLY IF NOT COVERED IN ANOTHER DIVISION.

- A. All trenching and backfilling required for the proper installation of the work shall be done as prescribed in other Divisions.

- B. Excavate trenches so that pipe can be installed at proper depth. Lay pipe on a firm bed bearing its full length except at the bell. Where sewers are installed in backfilled areas, provide machine tamping and be responsible for any settling at, or rupture to the sewer work. Keep trenches water free and as dry as possible during bedding, laying and jointing. After the joints are made, place sufficient backfill along each side of pipe to offset conditions that might tend to move the pipe off line and grade.
- C. Backfill only after pipes have been tested, inspected and approved.
- D. Piping encountered in excavating, (if shown on the drawings or not), shall be supported, and protected from damage. If utility lines are encountered, notify the Owner's Representative and do not disturb the lines unless so directed. If existing utility lines are damaged during excavations, immediately repair the lines at no cost to the Owner.
- E. Storm and sanitary piping may be installed side by side in same trench. Water piping may be installed in same trench with drainage piping, provided trench is benched so the water pipe may be laid on a shelf of firm earth not less than eighteen inches (18") above top of drain pipe.
- F. No excavation for pipe shall be made in filled or disturbed earth until it has been compacted as directed.
- G. Restore street pavements, curbs and sidewalks disturbed in the performance of this work. Restore in a manner prescribed by authorities having jurisdiction.
- H. Where mains are to pass under roadways or in any locations where open ditches are dangerous or undesirable, the work is to be installed by tunneling. In all other locations, excavations shall be done by the open trench method and to the depths and widths as may be necessary. All material excavated shall be deposited on the sides of the trenches and beyond the reach of slides.
- I. Supports:
 - 1. Where lines pass under footings for walls or columns, or lower than adjacent footings, backfill trenches with concrete up to the level of the bottom of the footings.
 - 2. Where pipes pass over column footings, or are laid in filled ground, or above the original natural grade, or in soil of insufficient bearing quality, or in other cases where necessary, they shall be supported by creosoted timbers carried by brick piers or piles or other approved supports carried down to firm bearing as approved.
- J. Provide shoring, bracing or sheet piling necessary to maintain the banks of the excavations, or tunnels. Take same out as the work is backfilled. Shoring must prevent any movement of the trench banks and strains on the piping and utility lines.

3.12 FLUSHING AND CLEANING OF PIPING:

- A. Flush and clean the following piping systems:

CUSTOMIZE FOR SPECIFIC PROJECT, IN CONJUNCTION WITH COMMISSIONER.

Domestic Cold Water (flush only)
Domestic Hot Water (flush only)
Steam and Condensate (flush only)
Chilled Water Supply and Return (flush and clean)
Heating Hot Water Supply and Return (flush and clean)
Cooling Tower Water Supply and Return (flush and clean)

- B. Develop plan for flushing and cleaning piping. Submit plan for approval prior to completion of piping. Provide all temporary and permanent piping, equipment, materials necessary to complete flushing and cleaning.
- C. Prior to flushing, swab out underground piping to remove all particulate.
- D. Prior to flushing, temporarily remove, isolate or bypass dirt sensitive equipment and devices, including the following:

LIST BELOW TO SUIT PROJECT

- 1. Automatic flow control valves
- 2. Heating and cooling coils
- 3. Boilers
- 4. Chillers
- 5. Heat exchangers
- 6. Flow measuring devices

Reinstall after flushing is complete.

- E. Prior to flushing, install fine mesh construction strainers at inlet to all equipment. Install fine mesh construction element in permanent strainers. During flushing and cleaning, remove and clean strainers periodically. At completion of final flush, clean permanent strainers, remove construction strainers.

CUSTOMIZE THE FOLLOWING PARAGRAPH IN CONJUNCTION WITH U-M PROJECT MANAGER AND COMMISSIONER. IDEALLY, PIPING SHOULD BE FLUSHED A MINIMUM OF ONE HOUR AT 6' PER SECOND. IN PROJECTS WHERE THIS IS SPECIFIED AND NO WATER SOURCE IS IMMEDIATELY AVAILABLE, HAVE CONTRACTOR PROVIDE SOURCE OF WATER, PIPING, HOSES AND PUMPS AS REQUIRED TO FLUSH PIPING.

- F. Flushing for new piping: Flush all piping with cold water (or fire protection system where approved by owner) for a minimum of one hour, until water runs clear. Water supply shall be equivalent to piping to be flushed. Use (2) 2-1/2" fire hose connections for piping 3" and larger. Drain all low points.

THE FOLLOWING PARAGRAPH IS TYPICALLY USED FOR CLEANING A COMPLETE HYDRONIC SYSTEM USING SYSTEM PUMPS, CIRCULATING THROUGH THE ENTIRE SYSTEM. NOT APPLICABLE FOR MINOR PIPING MODIFICATIONS.

G. Chemical Cleaning for new and existing hydronic piping: Where flushing could not be completed at 6 feet per second, or where chemical cleaning is required for new and existing piping, circulate flush water and clean strainers prior to installing cleaning chemicals. Provide cleaning chemicals, under the direction of the owner's chemical supplier. Following flushing, install cleaning chemicals and circulate through the entire system for a minimum of one hour, or as directed by chemical supplier. Take water sample for owner's use. Drain system, including all low points. Flush, drain and fill system, circulate for one hour, sample for owner's use. Drain, flush, fill, circulate and sample until system is free of cleaning chemicals, as indicated by owner's analysis of samples.

EDIT BELOW, ADD ESTIMATED SYSTEM VOLUME.

1. Estimated system volume for Hot Water Heating System:
2. Estimated system volume for Chilled Water System:
3. Estimated system volume for Condenser Water System:

THE FOLLOWING PARAGRAPH IS NOT TYPICALLY USED. DELETE, OR EDIT CAREFULLY FOR SPECIFIC PROJECT

H. Special Provisions for Chemical Cleaning: Provide temporary pumps and piping to chemically clean piping at a minimum velocity of 6 fps without using the system pumps. Otherwise comply with chemical cleaning requirements stated above. These special provisions are required for the following piping systems:

1. _____
2. _____
3. _____

THE FOLLOWING PARAGRAPH IS NOT TYPICALLY USED. DELETE, OR EDIT CAREFULLY FOR SPECIFIC PROJECT

I. Provide temporary bypass piping around the following equipment:

1. _____
2. _____
3. _____

3.13 PIPING SYSTEMS PRESSURE TESTING

A. General

1. Test new systems only, from point of connection to the existing systems. Perform initial tests and correct deficiencies prior to requesting acceptance test.
2. Perform acceptance pressure tests in the presence of the authorities having jurisdiction. Acceptance tests must be satisfactorily completed before piping surfaces are concealed.

3. Pneumatic tests shall be conducted using dry, oil free compressed air, carbon dioxide or nitrogen. Evacuate personnel not directly involved in testing prior to performing pneumatic testing. Perform testing in two stages, initial and acceptance. Conduct initial testing at 5 PSI or less. Swab joints with a commercial leak detector. Repair deficiencies prior to testing at higher pressures. Under no circumstances shall plastic piping of any type be pneumatically tested, including pre-acceptance tests.
4. Components shall be removed or isolated during testing if damage may occur due to test pressure and/or test media.
5. Existing steam and hot water piping connected to piping to be tested shall be shutoff, drained and cooled before testing.

B. Acceptance Pressure Testing:

NOTE THAT THIS SPEC DOES NOT INDICATE ACTUAL PRESSURE TESTING VALUES. IT IS NECESSARY TO INCLUDE A PRESSURE TEST TABLE, SUCH AS THAT AVAILABLE FROM THE U-M AEC WEBSITE, ON THE PROJECT DOCUMENTS. EDIT THE TABLE TO MAKE IT PROJECT SPECIFIC. ALSO EDIT BELOW PARAGRAPH AS APPROPRIATE.

1. Perform acceptance pressure testing per table found on the drawings, or if a table is not provided, per UM website: <http://www.umaec.umich.edu/for.archs/StandardDetails.html>.
2. Remake leaking gasket joints with new flange bolting. Where welded joints fail, submit proposed method of repair for approval by the Owner's representative and authorities having jurisdiction.
3. For each system tested, provide a certificate testifying that the system was satisfactorily tested and passed, using owner furnished forms.

3.14 FLUSHING, DISINFECTING, AND TESTING DOMESTIC WATER

A. Flush, disinfect and test domestic water piping as follows:

1. Prior to disinfection, flush all domestic water piping as described under Flushing and Cleaning of Piping.
2. Purge and disinfect domestic water piping per plumbing code and City of Ann Arbor requirements. Do not use excessive amounts of disinfectant as it may damage piping seals.
3. Submit water samples in sterile bottles to the City of Ann Arbor. Repeat the procedure if the biological examination made by the City of Ann Arbor shows evidence of contamination.

B. Prepare reports for all purging and disinfecting activities. Furnish owner final copy of test results for acceptance.

3.15 DYE TESTING - STORM AND SANITARY WASTE

DYE TESTING IS TYPICALLY REQUIRED ON ALL UNDERGROUND STORM AND SANITARY CONNECTIONS, NEW CONNECTIONS TO CONCEALED STORM AND SANITARY PIPING, AND ON ALL PROJECTS CONTAINING MORE THAN 10 NEW PLUMBING FIXTURES. DYE TESTING LINK UPDATED IN 2 PLACES BELOW ON 10/1/13 PER REQUEST OF JODY SCHAUB OF U-M EHS ON SAME DATE.

- A. Conduct Dye Testing on storm and sanitary piping connections as specified herein and in compliance with U-M EHS "Dye Testing Guidelines for Storm Water and Sanitary Systems" (Refer to <http://www.ehs.umich.edu/environment/dye.shtml>).
- 1. Dye testing is not required if all of the following apply:
 - a. Minor renovation with fewer than 10 total fixtures.
 - b. All piping can be clearly, visually traced back to clearly labeled existing piping.
 - c. No new underground connections.
- B. Preconstruction Phase: Prior to beginning demolition and construction activities:
 - 1. Identify point of connection for all storm and sanitary connections. Provide pipe labels on existing piping if required for clear identification.
 - 2. Identify dye test validation points in conjunction with U-M EHS (in general, first manhole outside the building).
 - 3. Develop dye testing plan in conjunction with U-M EHS and U-M Project Manager or assignee.
- C. Demolition and Construction Phase:
 - 1. Furnish dye and conduct dye testing of all new connections to new and existing storm and sanitary piping prior to making connection. Coordinate testing with U-M Project Manager, U-M EHS and U-M Code Inspector. No dye testing shall be performed without explicit consent of code inspector. (Refer to <http://www.ehs.umich.edu/environment/dye.shtml> for dye requirements.)
 - 2. Correct any cross-connect conditions revealed by the testing and retest to validate corrections.
- D. Post-Construction:
 - 1. Conduct additional dye testing at plumbing fixtures when instructed by U-M EHS (where new illicit connection is suspected).

3.16 MECHANICAL SYSTEM FLUID HANDLING

- A. Glycol Handling:
 - 1. Disposal of glycol (propylene or ethylene) into Sanitary Waste or Storm Water systems is strictly forbidden by City of Ann Arbor regulations, U-M EHS Department, and State of Michigan requirements.
 - 2. Where indicated, remove and properly dispose of glycol mixture from hydronics systems. Drained mixture and associated flush water (flushing must be done until the water leaving the system has allowably low levels of glycol per U-M EHS - 4 system flushes minimum) is considered Liquid Industrial Waste unless otherwise notified by U-M EHS. Mixture shall be removed and disposed of by U-M EHS approved sub-contractors only. Contact U-M EHS HazMat at (734) 763-4568 for current approved sub-contractors

SECTION 221119 - DOMESTIC WATER PIPING SPECIALTIES

REVISIONS:

8-1-99: CONTENT APPROVED AS NEW MASTER

8-11-99: REVISED TO VBS.DOT TEMPLATE

7-19-12: ADDED (2.1) THAT SEALS ARE TO BE IMMUNE FROM CHLORAMINES AND THAT EPDM SEALS ARE TO BE PEROXIDE CURED. D. KARLE FOR PLMG MTT.

2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.

2015-06-30 REVISED CITY WATER METER ARTICLE TO INDICATE PURCHASED BY OWNER, INSTALLED BY CONTRACTOR, AND TO INDICATE LOCATIONS, ALL TO MATCH STANDARD DETAILS AND DG. D.KARLE FOR PLMG MTT.

APRIL 2018: REVISED TO LIST MFR.S FROM PML. R BENEDEK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

1.2 SCOPE OF WORK:

- A. Provide piping, fittings, and specialties up to point 5 feet beyond the building for the following systems:
 - 1. Domestic Cold Water System
 - 2. Domestic Hot Water System

1.3 QUALITY ASSURANCE

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.

1. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as $\leq 0.25\%$ weighted average lead content) (and/or NSF/ANSI-372) and Annex F.
2. U.S Safe Drinking Water Act.

PART 2 - PRODUCTS

2.1 GENERAL

- A. All wetted seals shall be made from materials that are immune from chloramine degradation. EPDM seals shall be peroxide cured.

2.2 PIPING SPECIALTIES

- A. Water Hammer Arresters: Certified per PDI Standard WH-201. Bellows type, with stainless steel casing and bellows, pressure rated for 250 psi. Piston type, precharged to 60 psig, suitable for installation in any position.
Manufacturers: (Bellows) Zurn Shoktrol or by J.R. Smith, Wade; (Piston) Sioux Chief, Zurn, J.R. Smith, Wade

SPEC EDITOR: WALL FAUCETS ARE INEXPENSIVE ALTERNATIVE TO WALL HYDRANTS. CHROME PLATE AND T-KEY HANDLE ARE OPTIONS.

- B. Wall Faucet - Freezeless: Bronze body, extended stem to suit wall construction, renewable composition disc, wheel handle, 3/4 inch MPT inlet, hose outlet with integral vacuum breaker.
Manufacturers: Woodford 15, J. R. Smith, Chicago, Zurn
- C. Wall Faucet - for indoor use: Bronze body, renewable composition disc, wheel handle, 3/4 inch FPT inlet, hose outlet with integral vacuum breaker.
Manufacturers: Woodford 24, J. R. Smith, Chicago, Zurn

SPEC EDITOR: SELECT FROM 2 OPTIONS BELOW.

- D. Recessed Nonfreeze Wall Hydrants: Brass box with chrome-plated face, hinged locking cover, brass body and casing, T-Key handle, vacuum breaker, 3/4-inch FPT inlet, hose outlet, inlet stem to suit wall construction.
Manufacturers: Woodford B65, J. R. Smith, Chicago, Zurn
- E. Exposed Nonfreeze Wall Hydrants: Chrome plated brass body, T-Key handle, vacuum breaker, 3/4-inch inlet, and hose outlet, inlet stem to suit wall construction.
Manufacturers: Woodford 65, J. R. Smith, Chicago, Zurn
- F. Vacuum Breakers: Hose connection vacuum breakers shall conform to ASSE Standard 1011, with finish to match hose connection.
Manufacturers: Chicago, Watts, Kewanee

SPEC EDITOR: ITEMS G THROUGH K ARE USED FOR PROTECTING DOMESTIC WATER SYSTEMS FROM CONTAMINATION. SELECT APPLICABLE ITEMS CAREFULLY, AND COORDINATE WITH DETAILS. GENERALLY, SIZE OR CAPACITY SHOULD BE ADDED TO DRAWINGS, INCLUDING FLOW AND ALLOWABLE PRESSURE DROP.

SPEC EDITOR: ITEM G BELOW IS USED FOR LARGE HIGH HAZARD CONNECTIONS, INCLUDING BUILDING MAIN, FIRE PROTECTION BRANCH, BOILER FEED. DRAIN IS REQUIRED.

- G. Backflow Preventer - Reduced Pressure Zone: Includes dual check valves, reduced pressure relief valve and air vent, shutoff valves on inlet and outlet, strainer on inlet, test ports with test cocks, manufacturer's standard materials. ASSE Standard 1013 certified.

Manufacturer: Watts 909 Series, Conbraco, Febco, Ames, Zurn-Wilkins

SPEC EDITOR: ITEM H BELOW IS USED FOR LARGE LOW HAZARD CONNECTIONS, INCLUDING COOLING TOWER MAKE-UP WHERE OUTLET IS ABOVE TOWER OVERFLOW. NO DRAIN IS REQUIRED.

- H. Backflow Preventer - Double Check Valve Assembly: Includes double check valves, shutoff valves on inlet and outlet, strainer on inlet, test ports with test cocks, manufacturer's standard materials. ASSE Standard 1015 certified.

Manufacturer: Watts 709 Series, Conbraco, Febco, Ames, Zurn-Wilkins

SPEC EDITOR: ITEM I BELOW IS USED FOR SMALL LOW HAZARD CONNECTIONS, INCLUDING ICE MACHINE AND WATER COOLERS. NO DRAIN IS REQUIRED.

- I. Backflow Preventer - Dual Check Valve: Includes two removable check valve assemblies, manufacturer's standard materials. ASSE Standard 1024 certified.

Manufacturer: Watts 7 Series, Conbraco, Febco, Ames, Zurn-Wilkins

SPEC EDITOR: ITEM J BELOW IS USED FOR SMALL HIGH HAZARD CONNECTIONS NOT SUBJECT TO CONTINUOUS PRESSURE, INCLUDING INDIVIDUAL FUME HOODS. MUST BE LOCATED OUTSIDE OF FUME HOOD, DOWNSTREAM OF SHUT-OFF VALVE. NO DRAIN IS REQUIRED. FOR NEW FUME HOODS, THIS PARAGRAPH IS NOT REQUIRED, IT SHOULD BE INCLUDED IN HOOD SPECIFICATION

- J. Atmospheric Vacuum Breaker - Single float and disc with large atmospheric port. Angle pattern brass body, with chrome plated finish, ½" inlet and outlet unless otherwise noted. ASSE Standard 1001 certified.

Manufacturer: Watts 288A Series, Chicago Water Saver Model L-102, B & G

SPEC EDITOR: ITEM K BELOW IS USED FOR SMALL HIGH HAZARD CONNECTIONS SUBJECT TO CONTINUOUS PRESSURE, INCLUDING GANGED FUME HOODS. MUST BE LOCATED OUTSIDE OF FUME HOOD. NO DRAIN IS REQUIRED.

- K. Pressure Type Vacuum Breaker - Spring loaded single float and disc with independent first check valve, manufacturer's standard materials, with test cocks and ball type isolation valves. ASSE Standard 1020 certified. Manufacturer: Watts 800 Series, Conbraco, Febco, B & G.

SPEC EDITOR: ITEM L BELOW IS USED FOR AUTOMATIC FILL FOR HW HEATING AND CHILLED WATER SYSTEMS. EDIT BELOW FOR OTHER APPLICATIONS. INDICATE FLOW RATES AND INLET AND OUTLET PRESSURES ON THE DRAWINGS.

- L. Pressure-Regulating Valves: Single-seated, direct-operated type, having bronze body with integral strainer and complying with requirements of ASSE Standard 1003. Select proper size for maximum flow rate and inlet and outlet pressures indicated. Manufacturer: B&G Model 350, Conbraco, Watts, Hoffman, Keckley, Leslie, Spirax-Sarco.

SPEC EDITOR: ITEM M BELOW IS USED FOR DOMESTIC WATER HEATERS. IT IS USUALLY SPECIFIED WITH WATER HEATER OR OTHER EQUIPMENT. COORDINATE.

- M. Combined Pressure-Temperature Relief Valves: Bronze body, test lever, thermostat, ANSI Z21.22. Factory set at 210 degrees F, and 150 psig. Size valves in accordance with ASME Boiler and Pressure Vessel Codes. Manufacturers: Watt series 40, 140, 240, 340, Spirax-Sarco, Leslie

2.3 WATER METER

SPEC EDITOR: APPROACH SPECIFIED BELOW IS THE USUAL METHOD. SIZE SHOULD BE COORDINATED BY DESIGNER, AND INDICATED ON DRAWINGS. USE DETAIL "WATMETR"

- A. General: City water meters (domestic water at building entrance, cooling tower make-up and blow down, and irrigation meters) and associated remote read-out devices shall be obtained from the City of Ann Arbor (paid for by the owner) and installed by the contractor. Coordinate piping rough in and installation with the City of Ann Arbor.

PART 3 - EXECUTION

3.1 INSTALLATION OF PIPING SPECIALTIES

SPEC EDITOR: VERIFY LOCAL AUTHORITY REQUIREMENTS.

- A. Install backflow preventers and vacuum breakers where shown on drawings, in compliance with the plumbing code and authority having jurisdiction. Install air gap fitting and pipe relief (where applicable) to sanitary waste. Test backflow prevention for proper operation. Tests shall be by Certified Tester. Provide Owner with one (1) copy of each backflow prevention test report.
- B. Install water hammer arrestors complete with accessible isolation valve on hot and cold water supply piping to lavatories and sinks.

SPEC EDITOR: DISINFECTING IS TYPICALLY REQUIRED FOR LARGE DOMESTIC WATER SYSTEMS ONLY. DISINFECTING IS ALSO REQUIRED FOR ANY PIPING UPSTREAM OF THE BACKFLOW PREVENTER THAT PROTECTS THE CITY WATER SYSTEM. FLUSHING AND SAMPLING IS TYPICALLY ALL THAT IS DONE ON SMALL PROJECTS. SELECT FROM THE TWO APPROACHES SPECIFIED BELOW.

SPEC EDITOR: SELECT 3.2 BELOW FOR LARGE PROJECTS:

3.2 FLUSHING, DISINFECTING AND TESTING

- A. Flush, disinfect and test domestic water piping as follows:
 - 1. Flush all domestic water piping per Related Section 221113.
 - 2. Purge and disinfect domestic water piping per City of Ann Arbor requirements.
 - 3. Submit water samples in sterile bottles to the City of Ann Arbor. Repeat the procedure if the biological examination made by the City of Ann Arbor shows evidence of contamination.
- B. Prepare reports for all purging and disinfecting activities. Furnish owner final copy of test results for acceptance.

SPEC EDITOR: SELECT 3.3 BELOW FOR SMALL PROJECTS:

3.3 FLUSHING AND TESTING

- A. Flush and test domestic water piping as follows:
 - 1. Flush all domestic water piping per Related Section 221113.
 - 2. Submit water samples in sterile bottles to the City of Ann Arbor. Repeat the procedure if the biological examination made by the City of Ann Arbor shows evidence of contamination.
- B. Furnish owner final copy of test results for acceptance.

SECTION 221123 - DOMESTIC-WATER PACKAGED BOOSTER PUMPS

END OF CONTENTS TABLE

SPECIFICATION SECTION ISSUED 7-16-12.

ADDED SECTION 2.7.B, INDICATING THAT ONE VFD PER PUMP IS TO BE PROVIDED. D. KARLE FOR MTT, NOV. 6, 2012.

2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.

DIVISION 22 PLUMBING

SECTION 221123 - DOMESTIC-WATER PACKAGED BOOSTER PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

*INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.*

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

SPEC EDITOR: IN ARTICLE BELOW, SELECT PROPER SPEC SECTION NUMBER BY PROJECT. DELETE SUSTAINABLE DESIGN / LEED IF NOT APPLICABLE TO PROJECT.

- B. Related Sections:

1. Section 018113 - Sustainable Design Requirements
2. Section 019110/019100 - Commissioning
3. Section 221113- Piping Materials and Methods
4. Section 220523 - Valves
5. Section 220519 - Thermometers, Pressure Gauges, and Accessories
6. Section 220513 - Motors
7. Section 232123 - Pumps
8. Section 220548 - Vibration Control
9. Section 220719 - Mechanical Systems Insulation
10. Section 220514 - Variable Frequency Drives
11. Section 230900 - Mechanical Systems Controls
12. Division 26 - Electrical

1.2 SUMMARY

- A. Packaged, skid mounted, domestic water booster pump system including pumps, starters or variable frequency drives (VFDs), controls, piping, valves, hydro-pneumatic tanks, and accessories.

1.3 SUBMITTALS

- A. Product Data: Include catalog illustrations, model, rated capacities, performance, weights, dimensions, component sizes, rough-in requirements, piping and wiring diagrams and details, materials of construction, accessories, operating and maintenance clearance requirements. Wiring diagrams shall be project specific, and differentiate between factory wiring and field wiring. Include shop drawings and fabrication drawings for equipment indicating piping connections, power and utility requirements, rigging, installation and support details and instructions. Include written sequence of operations for all controls. Additionally include:

1. Overall dimensional drawing and weight of the pump package
2. Pump submittal including individual pump curves and composite curve for booster package

3. Starter submittal (non-VFD equipped packages)
4. For packages equipped with VFDs:
 - a. VFD submittal
 - b. Pressure sensor data including installation instructions and calibration procedures
5. Valve, pipe, pressure gauge, and motor submittals
6. Installation, operation, and maintenance manuals
7. Factory test reports
8. Hydro-Pneumatic Tanks:
 - a. Tank volume and tank acceptance volume
 - b. Bladder replacement instructions

1.4 QUALITY ASSURANCE

- A. **Manufacturers and Products:** The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. **Reference Standards:** Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
 1. American Water Works Association
 2. ANSI/HI 9.6.1-1998, NPSH Margin
 3. ANSI/HI 9.6.3-1997 Operating Region
 4. NEC-National Electrical Code
 5. National Electrical Manufacturers Association
 6. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as $\leq 0.25\%$ weighted average lead content) (and/or NSF/ANSI-372) and Annex F.
 7. U.S Safe Drinking Water Act.
 8. Underwriters Laboratories Inc. listed as a manufacturer of packaged pumping systems under UL/CUL Category QCZJ.
 9. Underwriters Laboratories Inc. listed as a manufacturer of control panels under UL/CUL 508a.
- C. The pumping package shall be assembled by the acceptable manufacturers listed in Part 2. Manufacturers shall assume "Unit Responsibility" for the complete pumping package. Unit responsibility shall be defined as responsibility for interface and successful operation of all system components supplied by the pumping system manufacturer.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Ship the pump package with entire skid in weather-proof wrap for storage outdoors. Protect control panels, pipe openings, and other sensitive components with heavy plastic or other durable means to ensure cleanliness and prevent damage during shipping and storage. Maintain protection during installation. Comply with protection requirements for variable frequency drives (VFD) described in Related Section.

1.6 WARRANTY

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

PART 2 - PRODUCTS

SPEC EDITOR: SCHEDULE THE PUMP SKID PERFORMANCE DATA ON THE DRAWINGS, INCLUDING QUANTITY OF PUMPS, VFD.S, AND REMOTE PRESSURE SENSORS. CONSIDER CONSTANT VOLUME STAGED PUMP CONTROL WHEN FRICTION LOSSES ARE LOW RELATIVE TO FIXED HEAD (STATIC HEAD AND RESIDUAL PRESSURE) REQUIREMENTS.

2.1 ACCEPTABLE MANUFACTURERS

- A. Acceptable Manufacturers:
 - 1. Armstrong
 - 2. Bell & Gossett
 - 3. Canariis
 - 4. Grundfos
 - 5. Paco

2.2 GENERAL

- A. Provide, as indicated and scheduled on the drawings, a UL labeled domestic water booster pump packaged system consisting of pumps, motors, controls, suction and discharged piping, hydro-pneumatic tanks, and all required accessories, mounted on a unitized structural steel support frame ("skid"). Hydro-pneumatic tank(s) shall be provided mounted on the skid when indicated on the drawings.
- B. Skid frame shall consist of welded A-36 structural steel support members designed to support all equipment, and rigid enough to withstand transportation to site, rigging, installation, and operation. Skid frame shall be suitable for floor mounting, and painted with two coat system consisting of oxide primer and alkyd enamel finish, minimum 3 mils dry film thickness. Provide holes in the base for the installation of anchor bolts and leveling of skid. Bolts to mount equipment components shall be stainless steel or zinc plated and shall meet ASTM Grade A193 B7.
- C. Pumps, valves and all wetted components shall be manufactured in compliance with NSF/ANSI-61 and NSF-61 Annex G.
- D. All elastomeric seals utilized in the skid including pump seals shall be immune from chloramine degradation.
- E. All components provided on the skid shall comply with Related Sections.
- F. Packaged system shall be rated for 300 PSIG working pressure at 250°F, or the system's maximum operating pressure and temperature at point where installed, whichever is greater, with a 3 to 1 pressure safety factor.

- G. Piping shall be in compliance with Related Section, either type L copper or (minimum) Schedule 10 type 304 stainless steel. Dissimilar metal piping shall not be used, ancillary piping including that associated with sensors shall be the same material as the suction and discharge manifolds. Provide welded or brazed flange connections at pumps, butterfly valves, and at suction and discharge connections (both ends of each manifold) to skid piping. Piping shall be sized to provide a maximum fluid velocity of 10 ft./sec. at the scheduled design flow rate. Header piping shall be easily removable to facilitate moving package through doorways.
- H. Provide isolation valves in compliance with Related Section. Valves 2-1/2" and larger shall be butterfly valves. Valves less than 2-1/2" shall be full-port ball valves. Provide isolation valves on the suction and discharge of each pump, and for each pressure gauge.
- I. Provide pressure gauges per related section, located on the suction and discharge of each pump.
- J. Provide a self-contained high temperature relief valve on the discharge of each pump, located between the pump and the downstream pump isolation valve. Factory set as required for project conditions.
- K. Provide a low point drain consisting of a ball valve and hose thread connection, in the suction and discharge header.

SPEC EDITOR: FOR VFD CONTROLLED PUMPS WHEN THE VFD IS EQUIPPED WITH A BYPASS, SPECIFY THE APPROPRIATE RELIEF VALVE PRESSURE SETTING IN THE PARAGRAPH BELOW. DRIVE BYPASSES ARE TYPICALLY NOT RECOMMENDED ON DOMESTIC BOOSTER PUMP APPLICATIONS.

- L. For VFD controlled pumps when the VFD is equipped with a bypass: Provide a pressure relief valve between the pump discharge and the pump downstream isolation valve, factory set at 125 PSIG.
- M. All control and power wiring shall be factory prewired on the skid. All exposed wiring shall be installed to minimize potential damage, and all power wiring, 110V and higher, shall be in a NEC compliant conduit system.
- N. Starters and variable frequency drives shall be mounted on the skid and configured to provide electrical clearances in compliance with the NEC. Examine installation area of skid and also adjust mounting locations in consideration of structures adjacent to the skid to provide NEC electrical clearances.

2.3 PUMPS

- A. Provide pumps of capacity and performance scheduled.

SPEC EDITOR: SELECT CLOSED COUPLE PUMP SPEC OR MULTISTAGE PUMP SPEC, BELOW, OR EDIT TO SPECIFY THE PUMP TYPE REQUIRED FOR YOUR PROJECT.

- B. Provide close coupled end suction pumps per Related Section with the following additional features:
 - 1. Lead free per NSF/ANSI-61 and NSF-61 Annex G.

2. Casing Construction: Bronze or stainless steel.
3. Impeller Construction: Bronze or stainless steel.
4. Replaceable casing wear rings.
5. Stainless steel shaft with replaceable bronze or stainless steel shaft sleeve completely covering the wetted area of the shaft under the seal.
6. Seals: Mechanical seals consisting of carbon rotating ring, stainless steel spring, ceramic seat, and flexible bellows and gasket.
7. Pump motors shall be secured to mounting frame, not supported by the volute alone.
8. Back pull-out design allowing servicing of pump internals without disturbing piping.

C. Provide multistage vertical mounted pumps.

1. Lead free per NSF/ANSI-61 and NSF-61 Annex G.
2. Casing Construction: Bronze or stainless steel.
3. Impeller Construction: Bronze or stainless steel.
4. Stainless steel shaft with replaceable bronze or stainless steel shaft sleeve completely covering the wetted area of the shaft under the seal.
5. Mechanical seal shall be silicon carbide/carbon with Viton or peroxide cured EPDM elastomers.
6. Pump motor coupler design shall allow seal replacement without having to remove motor.

SPEC EDITOR: TO REDUCE SPEC SIZE IT IS RECOMMENDED THAT THE CHECK VALVE TYPE (BELOW) NOT APPLICABLE TO THE PROJECT BE DELETED.

2.4 PUMP CHECK VALVES

A. For constant volume pump packages provide in-line combination pressure reducing/regulating/check valve as manufactured by Cla-Val Company.

1. Pilot operated, adjustable, spring-loaded, normally open diaphragm type valve.
2. Valve shall be sized for a maximum pressure drop of 10 PSIG at the scheduled flow rate for its respective pump.
3. Designed to permit flow when controlled pressure is less than the spring setting.
4. Suitable for working pressures up to 150 psig at 180°F.
5. Certified for potable water service and lead free, per NSF/ANSI-61 and NSF-61 Annex G. (Use of a fusion bonded epoxy barrier coating is permitted to provide conformance to NSF ANSI-61/NSF-61 Annex G.)
6. Flanged in accordance with ANSI B16.1, Class 125.
7. Valve body equal to nominal pipe diameter at all points through the valve(full port design).
8. Valve body and cover shall be constructed of ASTM A536 ductile iron.
9. Hydrostatically tested and seat tested to demonstrate zero leakage.
10. Locate check valves between the pump discharge and the pump downstream isolation valve.

- B. For variable speed pump packages provide non-slam resiliently hinged type check valves, "SWING-FLEX" as manufactured by Val Matic Valve and Manufacturing Corporation.
1. Suitable for working pressures up to 150 psig at 180°F.
 2. Full body type, with one moving part, the resiliently hinged disc.
 3. Bolted dome shaped access cover allowing replacement of resiliently hinged disk without removing valve from line.
 4. Certified for potable water service and lead free, per NSF/ANSI-61 and NSF-61 Annex G.
 5. Exterior and interior of the valve coated with an NSF/ANSI 61 approved fusion bonded epoxy coating.
 6. American Water Works Association Standard ANSI/AWWA C508 compliant.
 7. Flanged in accordance with ANSI B16.1, Class 125.
 8. Valve body equal to nominal pipe diameter at all points through the valve. The 4 in. valve shall be capable of passing a minimum 3 in. sphere.
 9. Hinged disk: One-piece construction, molded with integral o-ring type sealing surface, with alloy steel and nylon reinforcement in the flexible hinge area. Provide disc material compatible with domestic water service, unaffected by chloramines. Flex portion of disc shall be warranted for twenty-five years. The valve disc design shall have been cycle tested 1,000,000 times in accordance with ANSI/AWWA C508 and show no signs of wear, cracking, or distortion to the valve disc or seat and shall remain drip tight at all pressures.
 10. Disk seating surface on a 45 degree angle to minimize disc travel. 35 degree maximum disc stroke and memory disc return action to provide a cracking pressure of 0.25 psig.
 11. Valve body and cover shall be constructed of ASTM A536 ductile iron.
 12. Hydrostatically tested and seat tested to demonstrate zero leakage.
 13. Locate check valves between the pump discharge and the pump downstream isolation valve.

SPEC EDITOR: HYDRO-PNEUMATIC TANKS ARE RECOMMENDED FOR BOTH CONSTANT AND VARIABLE SPEED APPLICATIONS TO ALLOW NO-FLOW PUMP SHUT DOWN AND TO IMPROVE PRESSURE CONTROL. THE SPECIFICATION BELOW IS FOR LARGER STYLE TANKS WITH TANK VOLUMES OF APROX.50 GALLONS AND LARGER. SMALLER TANKS ARE TYPICALLY NOT AVAILABLE WITH THE REPLACEABLE BLADDER SPECIFIED BELOW. DESIGNER MUST PROVIDE TANK DIMENSIONS, VOLUME, ACCEPTANCE VOLUME, PRESSURE/TEMPERATURE RATING, AND PRECHARGE PRESSURE (PROJECT SPECIFIC, FIELD SET) ON THE DRAWINGS. FOR VERY LARGE TANKS IT IS RECOMMENDED THAT THE DESIGNER SPECIFY A "FULL ACCEPTANCE VOLUME" TANK (WHERE ACCEPTANCE VOLUME EQUALS TANK VOLUME), WHICH AVOIDS BLADDER DAMAGE IF THE AIR CHARGE IS LOST. IF TANK IS TO BE MOUNTED ON THE PUMP SKID, INDICATE SUCH ON THE DRAWING.

2.5 HYDRO PNEUMATIC TANKS

- A. Acceptable Manufacturers:

1. Amtrol
 2. Armstrong
 3. Wessels
- B. ASME rated, precharged, vertical style bladder tank with bottom system (water) connection.
1. NSF/ANSI-61 and NSF-61 Annex G listed for drinking water use.
 2. Replaceable (non-EPDM) butyl bladder, minimum 0.10 inch thick.
 3. Large flanged bladder service openings to allow bladder to be replaced without tipping tank on its side.
 4. Steel shell with red oxide exterior primer. FDA approved liner of polypropylene or epoxy.
 5. Rated for system pressure and temperature, but not less than 125 PSIG at 200F.
 6. Provide the following additional features: Tire valve style charging connection to permit on-site charging. Bronze or malleable iron water connection. Auxiliary gauge/pressure switch connection. Lift ring(s). Steel floor support skirt.

SPEC EDITOR: SELECT EITHER CONSTANT VOLUME OR VARIABLE VOLUME PUMP CONTROL BY DELETING ONE OF THE TWO BELOW ARTICLES.

2.6 STARTER AND CONTROLS - CONSTANT VOLUME PUMP PACKAGES

- A. Provide UL listed and labeled controller/starter assembly specifically designed for constant speed domestic water pumping applications.
- B. Pump staging shall be user-selectable based on kilowatts (kW), current (amps), or pressure (PSI).
1. kW shall be true power derived from a transducer. Amps shall be RMS obtained from the kW transducer. kW and amps shall be controller calibrated with calibration held in non-volatile memory. PSI shall be derived from a pressure transducer with a 4-20 mA analog output.
- C. The controller shall operate the pump(s) to provide the following sequence of operation:
1. Pump(s) shall be staged based on DESIGNER SELECT ONE: kilowatts/current/pressure.
 2. In the "AUTO" mode, the lead pump shall start upon initiation of the system either by activation of the "START" button or by digital input from the Owner's Building Automation System (BAS).
 3. The lead pump shall operate at the point on its curve where system demand is satisfied. If the lead pump is unable to satisfy demand, lag pumps shall be sequentially started as required to meet system demand.
 4. As demand decreases, the lag pumps shall be de-staged to minimize energy consumption.
 5. The system shall continue to operate, subject to the controller safety features and alarms, or a low/zero flow condition.

- a. The controller shall detect low/zero flow conditions. When the (user adjustable) low/zero flow condition limit is reached, the controller shall shut off the pump(s) and allow system demand to be provided by the hydro-pneumatic tank. The controller shall automatically restart the pumps as hydro pneumatic tank storage is depleted (user adjustable), to maintain the required system pressure/flow.
 - 6. In the event of a failure due to motor overload, the next pump in sequence shall be started.
 - 7. In the event of any safety/alarm condition, controller shall activate a common alarm contact hardwired back to the Owner's BAS system.
 - 8. The controller shall equalize pump run-times.
 - 9. In "MANUAL" mode, it shall be possible to manually turn individual pumps on and off. When a pump is started manually, controller safety and alarm features shall continue to operate including pump cut-out.
- D. The controller shall provide the following safety features and alarms:
- 1. Low suction pressure alarm and cut out(automatic reset)
 - 2. High suction pressure alarm and cut out(automatic reset) (suction pressure is sufficient to satisfy building demand)
 - 3. Low system pressure alarm
 - 4. High system pressure alarm and cut out (manual reset)
 - 5. Pump failure alarm
 - 6. High temperature alarm and cut out (automatic reset)
 - 7. Motor overload failure alarm (manual reset)
- E. The control enclosure shall conform to NEMA 1 and shall include motor starters, overloads, control power transformer and a digital microprocessor based controller with a NEMA 4 rated operator interface. Provide a single point electrical power connection that provides power to all controls.
- F. Controller shall be capable of operation in ambient conditions of 32°F to 140°F and a humidity range of 5% to 95%, non-condensing.
- G. The controller will include the following features:
- 1. Liquid crystal display user interface.
 - 2. Pump status indication.
 - 3. Alarms shall be displayed in plain English on the display.
 - 4. Fault information accessed by interrogating the controller through its HELP and log keys.
 - 5. Minimum one level of software password security provided for protection of field modifiable data.
 - 6. Data logging to provide historical information of key events with date and time stamps. Log information shall include alarms, pump run timers, system on-off times and pump cycle counters. The data log shall display the minimum, maximum and average values of temperature, pressure and flow. It shall also display kilowatt-hours.
 - 7. Capable of operating in automatic, manual or off-line diagnostic modes.
 - 8. A common alarm contact for hardwiring back to Owner's BAS system, which will activate when any alarm condition occurs.

- H. The controller shall be microcomputer based and hold its software in non-volatile memory. On-line field modified data entries, such as stage point, or method of staging, shall be stored in flash memory with capability to prevent accidental loss of data due to power loss, voltage surge or spike. In the event of a complete power outage, all field and factory settings shall remain stored and shall automatically be restored when power is restored.
- I. The controller shall be powered by 115V/1ph/60Hz AC power from a control power transformer provided within the control enclosure. The control panel shall be equipped with a regulated 24VDC power supply to power analog input signals. The controller shall be capable of receiving up to four 4-20 mA analog input signals and RTD signals.
- J. All external sensors/transmitters and switches shall be powered by the controller through its integral 24VDC power supply. Over voltage and short circuit protection shall be on-board. All analog circuits shall be protected from up to 575V with a fast-acting fuse and sacrificial input resistors. All digital outputs shall be externally isolated. The incoming power and I/O circuitry shall reject electromagnetic (EMI) and radio frequency interference.

2.7 VARIABLE FREQUENCY DRIVE (VFD) AND CONTROLS- VARIABLE VOLUME PUMP PACKAGES

- A. Provide UL listed and labeled variable speed drive(s) and controller assembly specifically designed for variable speed domestic water pumping applications. The controller shall provide multi-pump parallel operation control, duty-standby pump selection, automatic alternation and automatic transfer to the standby pump upon pump/VFD failure.
- B. Unless noted otherwise, provide a separate variable frequency drive for each pump.
- C. The controller shall operate the pump(s) to provide the following sequence of operation:
 - 1. When the controller mode is in REMOTE, the pumping system shall start and operate automatically upon the closure of Owner's BAS contact.
 - 2. When the controller mode is in LOCAL, the pumping system shall start immediately and operate automatically.
 - 3. It shall be possible to manually turn individual pumps on and off. When a pump is started manually, controller safety and alarm features shall continue to operate including pump cut-out.

SPEC EDITOR: INDICATE QUALITY AND LOCATION OF REMOTE PRESSURE SENSORS ON THE DRAWINGS. PRESSURE SENSORS LOCATED AT THE PUMP SKID DEFEAT THE PRIMARY ADVANTAGE OF VFD PUMPING SYSTEMS AND ARE NOT RECOMMENDED.

 - 4. The controller shall control pump speed based on remote mounted pressure transmitter(s), quantity as indicated on drawings.

5. The pump logic controller shall compare each remote pressure transmitter signal ("process variable") to the user adjustable set point. It shall be possible to set an individual setpoint for each process variable location.
 6. When the process variable set points at all locations are satisfied the pump speed shall remain constant at the optimum energy consumption level.
 7. The controller shall continuously scan and compare each process variable to its individual set point and control to the least satisfied zone.
 8. If the set point cannot be satisfied by the designated lead pump, the controller shall initiate a timed sequence of events to stage on a lag pump.
 9. The lag pump shall accelerate resulting in the lead pump(s) decelerating until they equalize in speed.
 10. Further changes in process variable shall cause the pumps to change speed together.
 11. As the worst case zone deviates from set point, the controller shall send the appropriate analog signal to the VFD to speed up or slow down the pump(s).
 12. When the set point can be safely satisfied with fewer pumps, the controller shall initiate a timed pump de-stage sequence and continue variable speed operation.
 13. The controller shall provide end-of-pump-curve point protection.
 14. In the event of any safety/alarm condition, controller shall activate a common alarm contact hardwired back to the Owner's BAS system.
 15. The system shall continue to operate, subject to the controller safety features and alarms, or a low/zero flow condition.
 - a. The controller shall detect low/zero flow conditions. When the (user adjustable) low/zero flow condition limit is reached, the controller shall shut off the pump(s) and allow system demand to be provided by the hydro pneumatic tank. The controller shall automatically restart the pumps as hydro pneumatic tank storage is depleted (user adjustable), to maintain the required system pressure/flow.
 16. In the event of a VFD fault, the controller shall automatically initiate a timed sequence of events to start the redundant pump/VFD set in the variable speed mode.
 17. In the event of the failure of a sensor/transmitter, its process variable signal shall be removed from the controllers scan/compare program and a plain English alarm message shall be displayed.
 18. In the event of failure to receive a pressure variable signal, a user selectable number of the VFDs shall maintain a user adjustable speed; reset shall be automatic upon correction of the sensor failure.
 19. The controller shall equalize pump run-times.
- D. The controller shall provide the following safety features and alarms:
1. Low suction pressure alarm and cut out(automatic reset)
 2. High suction pressure alarm and cut out(automatic reset).
(suction pressure is sufficient to satisfy building demand)

3. Low system pressure alarm
 4. High system pressure alarm and cut out (manual reset)
 5. Pump failure alarm
 6. High temperature alarm and cut out (automatic reset)
 7. Motor overload failure alarm (manual reset)
- E. The control enclosure shall conform to NEMA 1 and shall include a control power transformer and a digital microprocessor based controller with a NEMA 4 rated operator interface. Provide a single point electrical power connection that provides power to all controls.
- F. Controller shall be capable of operation in ambient conditions of 32°F to 140°F and a humidity range of 5% to 95%, non-condensing.
- G. The controller will include the following additional features:
1. Liquid crystal display user interface.
 2. Pump status indication.
 3. Alarms shall be displayed in plain English on the display.
 4. Fault information accessed by interrogating the controller through its HELP and log keys.
 5. Minimum one level of software password security provided for protection of field modifiable data.
 6. Hydraulic stabilization program with proportional-integral-derivative control, providing smooth pump start-up, speed control, and pump stage and de-stage; and shall prevent damaging hydraulic conditions including motor overload, pump flow surges, and hunting. PID values shall be field adjustable.
 7. Display readout shall display the following values at minimum:
 - a. Pressures at each remote pressure sensor (PSIG)
 - b. Skid discharge pressure (PSIG)
 - c. Skid total flow (GPM)
 8. Data logging to provide historical information of key events with date and time stamps. Log information shall include alarms, pump run timers, system on-off times and pump cycle counters. The data log shall display the minimum, maximum and average values of temperature, pressure and flow. It shall also display kilowatt-hours.
 9. Capable of operating in automatic, manual or off-line diagnostic modes.
 10. A common alarm contact for hardwiring back to Owner's BAS system, which will activate when any alarm condition occurs.
 11. Shall meet Part 15 of FCC regulations pertaining to class A computing devices.
 12. Upon VFD fault(s), the pump controller shall display an alarm condition through a plain English message.
 - a. VFD fault indication shall be continuously displayed on the operator interface of the controller until the fault has been corrected and the controller has been manually reset.

13. Analog input resolution from flow meters and pressure sensors shall be 12-bit minimum, and the controller shall scan each analog input a minimum of once every 100 milliseconds. All sensor/transmitter inputs shall be individually wired to the pump logic controller for continuous scan and comparison function. All analog inputs shall be provided with current limit circuitry to provide short circuit protection and safeguard against incorrect wiring of sensors
14. The controller shall be microcomputer based and hold its software in non-volatile memory. On-line field modified data entries, such as stage point, or method of staging, shall be stored in flash memory with capability to prevent accidental loss of data due to power loss, voltage surge or spike. In the event of a complete power outage, all field and factory settings shall remain stored and shall automatically be restored when power is restored.
15. The controller shall be powered by 115V/1ph/60Hz AC power from a control power transformer provided within the control enclosure. The control panel shall be equipped with a regulated 24VDC power supply to power analog input signals. The controller shall be capable of receiving up to four 4-20 mA analog input signals and RTD signals.
16. All external sensors/transmitters and switches shall be powered by the controller through its integral 24VDC power supply. Over voltage and short circuit protection shall be on-board. All analog circuits shall be protected from up to 575V with a fast-acting fuse and sacrificial input resistors. All digital outputs shall be externally isolated. The incoming power and I/O circuitry shall reject electromagnetic (EMI) and radio frequency interference (RFI)

H. Variable Speed Drive

1. Provide variable speed drives per Related Section. The following features described in the Related Section are not required, except as necessary to meet other parts of this specification.
 - a. VFD manual across-the-line electrical bypass.
 - b. Local-Remote speed control switch
 - c. A run permissive circuit, separate from the safety interlock circuit, which prevents motor operation whether in drive or bypass mode. This circuit, via the customer's external contact device, signals the motor may run, provided the safety interlock contact(s) is made.
 - d. "Powered run mode" and "powered run request" circuits.
 - e. PID controller integral to VFD.
 - f. Auxiliary contacts that actuate when the motor is started in any mode.
 - g. Indicating lamp for "POWER AVAILABLE" and for "MOTOR ON BYPASS".

I. Pressure Transmitters

1. Two wire 24 VDC system providing 4-20mA output signal to pump controller. Waterproof NEMA 4 electrical enclosure with a 0.5" NPT conduit connection. 316 stainless steel wetted parts. Adjustable span. Maximum inaccuracy 0.5% of full span including linearity, hysteresis and repeatability errors. Range 0-50 PSIG. Provide higher range transmitters when required by system design or configuration. Capable of withstanding over pressurization of no less than 300 PSIG. Immune from radio frequency interference.

SPEC EDITOR: THE ARTICLE HEADING BELOW (IN HIDDEN TEXT) IS RESERVED FOR SPECIFYING A FLOW METER IF DESIRED. A FLOW METER IS NOT REQUIRED FOR PUMP CONTROL BUT COULD ASSIST IN TROUBLE SHOOTING. FOR VERY LARGE BOOSTER PUMP INSTALLATIONS A MAGNETIC FLOW METER SHOULD BE CONSIDERED DUE TO DURABILITY, ACCURACY, AND HIGH TURN-DOWN. A MAGNETIC FLOW METER CAN EASILY BE SPECIFIED BY REVISING THIS SECTION TO REFERENCE THE MAGNETIC FLOW METER SPECIFICATION FOUND IN SECTION 230900 - MECHANICAL SYSTEMS CONTROLS.

- J. Flow Meter

2.8 FACTORY TESTING

- A. Prior to shipment, hydrostatically and electrically test each unit, including all safeties and control functions. Test system with motors connected to starters or VFD output. Operate skid from 0 to 100% of design flow requirement and validate proper pump staging and speed control. Calibrate and test all safety features. Test all inputs, outputs and program execution specific to this application.
- B. The Owner's Representative shall be allowed to witness the factory testing. A report detailing the results of the factory test shall be provided. An officer of the manufacturer's company shall certify by signature that the report accurately reflects the test results, and that the package meets all performance requirements. The report shall clearly identify any performance requirements that were not achieved.

PART 3 - EXECUTION

SPEC EDITOR: WHEN REMOTE SENSORS ARE USED, COORDINATE DOCUMENTS TO PROVIDE SENSOR LOCATION AND CONDUIT/WIRING FROM SENSOR TO PUMP CONTROLLER. DESIGNER MUST SHOW SENSOR LOCATIONS ON PLANS.

3.1 EXAMINATION AND PREPARATION

- A. Rig units off delivery trucks. Comply with Manufacturer's rigging instructions.
- B. Store units protected from weather, dirt, water, construction debris, and physical damage. Support stored units at points as required by manufacturer.

- C. Examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting equipment performance, maintenance, and operations. Assure that required NEC electrical clearances will be available at skid mounted components such as VFDs, starters, control panels, and similar electrical equipment. Existing and new piping cannot run over skid control panels or skid VFDs. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in strict compliance with manufacturer's installation instructions and Related Sections. Maintain manufacturer's recommended clearances for service and maintenance.
- B. Install skid and hydro-pneumatic tanks on support structures or concrete bases as indicated. Install skid vibration isolation when indicated or required by Related Section. Set skid base level, using stainless steel shims and metal blocks designed for leveling machinery bases. Anchor base to floor using all mounting holes.
- C. Install separate devices furnished by skid manufacturer and not factory installed, including but not limited to pressure transmitters and flow meters. Install such devices in compliance with Related Sections.
- D. Connect suction and discharge headers to building piping using flexible piping connectors per Related Section, whether indicated or not. Cap unused ends of skid manifolds.
- E. Install flow meters and pressure transmitters when included or required. Final termination of devices (both ends) shall be accomplished by the factory service technician.
 - 1. Install flow meters per flow meter manufacturer's recommendations and with the recommended up and downstream straight lengths of pipe. Install piping as required to provide these straight lengths. When manufacturer does not indicate the required up and downstream requirements, provide a minimum of 5 pipe diameters upstream and downstream of straight pipe. Provide wiring in conduit between the flow meter and the skid controller.
 - 2. Install pressure transmitters at locations specified on the drawings.
 - a. Install pressure transmitters in locations easily accessible for calibration and replacement.
 - b. Install ball type isolation valve to isolate the pressure transmitter.
 - c. Provide a pressure gauge at the same location as each pressure transmitter, to validate pressure transmitter reading.
 - d. Provide wiring in conduit between the pressure transmitter and the skid controller.
 - 3. Install wiring in conformance with Related Section (Mechanical Systems Controls), utilizing approved contractors listed in that section.
- F. Install hydro pneumatic tanks as indicated on the drawings.

1. Install to maintain manufactures specified clearance above tanks, minimum 18 inches.
 2. Connect to system piping. Provide separate isolation valve and drain valve with hose bib for each hydro-pneumatic tank.
 3. Install pressure gauge (or switch when indicated) on hydro-pneumatic tank auxiliary air connection.
 4. Isolate each tank from the system, drain the tank, then charge to specified precharge pressure. If precharge pressure is not indicated, obtain from project engineer. Factory precharge is not to be considered the correct precharge pressure. Commissioner shall witness the setting of precharge pressure.
- G. Complete all manufacturer's pre-start checks.
- H. Prior to placing system into operation, sanitize skid piping, hydro-pneumatic tanks, and any building piping not previously sanitized. Assure sanitizing solution enters each hydro-pneumatic tank. Provide temporary piping and bypasses as required to accomplish sanitization.
- I. Insulate skid piping and hydro-pneumatic tanks; materials and installation per Related Section.

3.3 TEMPORARY SERVICE

- A. Start units for temporary use only with the express written permission of the Project Manager and in compliance with all requirements of the Contract Documents.
- B. Prior to placement into temporary service perform manufacturer's pre-start protocols.
- C. Utilize factory trained service technician to perform start-up as described under the Field Quality Control article. Commission prior to putting into temporary service to the extent required by the Commissioning Authority. Re-perform factory service technician start-up and all commissioning activities prior to Owner acceptance, even if previously completed to ready for temporary service.
- D. Perform all required routine maintenance procedures during temporary service. Continuously maintain a log of such procedures. Store log at unit during temporary use period and include log as part of the final O & M manual.

3.4 FIELD QUALITY CONTROL

- A. Provide a factory trained service technician to perform start-up services. The service technician shall perform the following:
 1. Verify correct installation and organize, instruct and assist the mechanical contractor's personnel in start-up procedures
 2. Terminate all control wiring connections associated with the skid.
 3. Perform manufacturer's pre-start checks.
 4. Set all safety devices.
 5. Start skid controller and VFDs. Set all controller and VFD parameters. Tune the controller.

6. Commission the pump package, including demonstrating all safeties, proper pump staging, de-staging, and speed control, zero-flow shutdown, restart after power failure, and all other skid features.
 - a. Optimize the setpoint of each pressure transmitter control variable to the minimum pressure (with reasonable safety factor) required for the plumbing fixtures actually installed. Obtain preliminary setpoints in advance from project engineer. Adjust setpoints under the direction of the Commissioning Authority.
 - b. On constant volume pump packages, adjust pump pressure regulating valves to provide adequate pressure at the most remote plumbing fixture (with reasonable safety factor). Set controller to specified staging method (kW/amps/pressure); reset to another staging method and adjust controller parameters as required to provide proper performance.
7. Provide a written service report prepared on site and submitted at the time of each service visit (with copies immediately provided to the Owner and Commissioner). Report shall indicate services provided and list all controller settings, PID settings, and set points.
8. Train Owner personnel. Training and start up services are separate functions and training shall not be combined with startup services.

3.5 COMMISSIONING

- A. Perform commissioning activities per Related Sections.

3.6 TRAINING

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.
- B. Train Owner's maintenance personnel on equipment operation, start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel.
 1. Provide 2 hours training minimum.

NUMBER SECTION DESCRIPTION

DIVISION 22 PLUMBING

SECTION 221319 - DRAINAGE SPECIALTIES

END OF CONTENTS TABLE

DIVISION 22 PLUMBING
SECTION 221319 - DRAINAGE SPECIALTIES

REVISIONS:

8-1-99: CONTENT APPROVED AS NEW MASTER

8-11-99: REVISED TO VBS.DOT TEMPLATE

EDITOR: FUTURE SECTION WILL ADDRESS PVC CLEANOUTS, ROOF DRAINS AND FLOOR DRAINS.

SPEC TEAM: I SUGGEST WE DELETE THE FOLLOWING FOR SHORT SPEC VERSION:

2.3 TRENCH DRAINS

2.4 ROOF DRAINS

2.5 DRAINAGE SPECIALTIES

3.5 INSTALLATION OF ROOF DRAINS

APPLICABLE PORTIONS OF 1.1 SCOPE OF WORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

1.2 SCOPE OF WORK

SPEC EDITOR: REVISE EDIT TO SUIT PROJECT

- A. Provide piping, fittings, and specialties up to point 5 feet beyond the building for the following systems:
1. Sanitary Waste and Vent System
 2. Storm Waste System
- B. This section specifies materials and installation for the following specialties:
1. Clean-outs
 2. Floor Drains
 3. Trench Drains
 4. Roof Drains
 5. Drainage Specialties (backwater valves, trap primers, neutralization tanks)

PART 2 - PRODUCTS

2.1 CLEAN-OUTS

SPEC EDITOR: STANDARD APPLICATION IS SPECIFIED BELOW. OTHER OPTIONS INCLUDE SQUARE COVER, RECESSED COVER, TRACTOR COVER, WATER TIGHT COVER, FLANGE AND CLAMP WITH MEMBRANE (FOR WET, ABOVE GRADE LOCATIONS). CONSULT CATALOG FOR SPECIAL APPLICATIONS.

- A. Floor Clean-Out: Cast iron body, round, adjustable, scoriated, secured, nickel-bronze top, threaded and slotted bronze closure plug, outlet connection to suit application. For carpeted floors, provide nickel bronze carpet clamping frame and cover. Manufacturer: Smith 4020 to 4031, Wade, Zurn, Watts.
- B. Wall Clean-Out: Treaded bronze plug in cast iron tee or ferrule, with stainless steel cover.
- C. Exposed Clean-Out: Threaded plug, of material compatible with system piping.

2.2 FLOOR DRAINS

SPEC EDITOR: THE FLOOR DRAINS LISTED BELOW ARE STANDARD APPLICATION FLOOR DRAINS. ADD ADDITIONAL FLOOR DRAINS FOR SPECIALTY APPLICATIONS (HOSPITALS ETC.). OPTIONS INCLUDE: GRATE MATERIAL, SQUARE OR HINGED GRATES, SIDE OUTLETS, INTEGRAL BACKWATER VALVES, TRAPS, TRAP PRIMERS, 12" DIAMETER GRATES, ANIMAL ROOMS (WITH AUTO FLUSH), COATED BODY.

- A. General floor drain requirements: Unless otherwise noted, provide round strainer/ grate, cast iron body, seepage flange and clamping collar, bottom outlet same size as pipe served, with caulked, no-hub or neoprene gasket connection. Load classifications per ASME A112.21.1M. Waterproofing: 40 mils sheet membrane, chlorinated polyethylene, Chloraloy 240.
- B. Provide funnel type floor drain cover for floor drains used for cooling coil condensate drains, equipment drains and wherever shown on drawings. See details.

SPEC EDITOR: USE FD-A IN TOILET ROOMS, SHOWERS, SMALL KITCHENS, FINISHED AREAS, SMALL MECHANICAL ROOMS.

- C. Type FD-A: Light duty, adjustable, nickel bronze strainer, minimum strainer diameter equal to twice pipe diameter. Manufacturer: Smith 2005-A, Wade, Zurn, MiFAB.

SPEC EDITOR: USE FD-B IN LARGE KITCHENS, AND AREAS WITH HEAVIER LOADS, WHERE FINAL ADJUSTMENT IS IMPORTANT, AND SEDIMENT BUCKET IS NOT REQUIRED.

- D. Type FD-B: Medium duty, adjustable 8 1/2" diameter cast iron grate. Manufacturer: Smith 2310, Wade, Zurn, MiFAB.

SPEC EDITOR: USE FD-C OR FD-D IN LARGE MECHANICAL ROOMS, LOADING DOCKS AND AREAS WITH HEAVIER LOADS, WHERE FINAL ADJUSTMENT IS LESS IMPORTANT, AND SEDIMENT BUCKET IS REQUIRED.

- E. Type FD-C: Medium duty, 8 1/2" diameter cast iron grate, free standing sediment bucket. Manufacturer: Smith 2110, Wade, Zurn, MiFAB.
- F. Type FD-D: Heavy duty, 10" x 12" cast iron grate, free standing sediment bucket. Manufacturer: Smith 2450, Wade, Zurn.

2.3 TRENCH DRAINS

SPEC EDITOR: SEE JAY R. SMITH POLYMER CONCRETE AND FIBERGLASS DRAINAGE SYSTEMS FOR A VIABLE ALTERNATIVE TO CAST IRON. ADDITIONAL RESEARCH AND EDITING IS REQUIRED TO MAKE TRENCH DRAINS PROJECT SPECIFIC.

- A. Trench drain type designations and sizes are indicated on Drawings.
- B. Cast Iron Trench Drains: Cast-iron shallow hub body and grate with end plates and gaskets, assembled in standard lengths for total length and width as indicated, with the following features:
 - 1. Sediment bucket.
 - 2. Flashing device.
 - 3. Heel-proof, ADA compliant grate.
 - 4. Vandal-proof grate.
 - 5. Backwater valve.
 - 6. Convex grate.
 - 7. Dome bottom strainer.
 - 8. Bottom outlet, inside caulk.
- C. Manufacturers: Smith, Wade, Zurn, Erik-sons

2.4 ROOF DRAINS

SPEC EDITOR: THESE ROOF DRAINS ARE STANDARD FOR MOST INSULATED ROOFS. USE RD-C WHERE PRACTICAL. OTHER CONSIDERATIONS: CAST IN PLACE DRAINS, PROMENADE DRAINS, EXPANSION JOINTS, OVERFLOW DRAINS, IRMA ROOFS. SECONDARY ROOF DRAINAGE IS REQUIRED BY CODE - COORDINATE WITH ARCHITECT.

- A. General roof drain requirements: Unless otherwise noted, provide secured round cast iron dome, cast iron body and flashing clamp/ gravel stop, sump receiver, underdeck clamp, bottom outlet same size as pipe served, with caulked, no-hub or neoprene gasket connection.

SPEC EDITOR: RD-A IS FOR SMALL AREAS, 2" - 4" OUTLET

- B. Type RD-A: 8" diameter, 40 sq. in. free area, cast iron extension and collar. Manufacturer: Smith 1330, Wade, Zurn.

SPEC EDITOR: RD-B IS FOR MEDIUM AREAS, 2" - 4" OUTLET

- C. Type RD-B: 12" diameter, 70 sq. in. free area, cast iron extension and collar. Manufacturer: Smith 1310, Wade, Zurn.

SPEC EDITOR: RD-C IS FOR LARGE AREAS, 2" - 6" OUTLET

- D. Type RD-C: 15" diameter, 100 sq. in. free area, cast iron adjustable extension and collar. Manufacturer: Smith 1015, Wade, Zurn.

SPEC EDITOR: RD-D IS FOR VERY LARGE AREAS, 8" TO 10" OUTLET

- E. Type RD-D: 20" diameter, 150 sq. in. free area, cast iron extension and collar. Manufacturer: Smith 1010, Wade, Zurn.

2.5 DRAINAGE SPECIALTIES

SPEC EDITOR: EDIT ITEMS BELOW CAREFULLY. OTHER ITEMS TO CONSIDER ADDING: GREASE INTERCEPTORS

- A. Backwater Valve (in-line): Bronze fitted cast-iron, bolted cover. Flapper shall provide a maximum 1/4 inch clearance between flapper and seat for air circulation. Manufacturer: Smith 7022, Wade, Zurn.
- B. Trap Primers: ASSE 1018, bronze body valve with automatic vacuum breaker, with 1/2 inch connections. Manufacturers: Precision Plumbing Products Model P-1
- C. Dilution and Neutralization Tank: Plastic construction, for use with acid laboratory waste, see details. Manufacturers: Orion, Wessels, Town and Country Plastics.
- D. Acid Waste Clean-out: For lab waste piping, specified to be polypropylene, provide corrosion resistant fire retardant polypropylene cleanouts, ASTM-D 401, with nickel bronze cover. Manufacturer: Orion, Sioux Chief
- E. Acid Waste Floor Drain: For lab waste piping specified to be polypropylene, provide corrosion resistant floor drains manufactured with fire retardant polypropylene, ASTM-D-4101. Grate funnel and covers shall be fiber filled polypropylene. Manufacturer: Orion: Model FD-3, Sioux Chief
- F. Trap seal: HPDE (High density poly ethylene)housing with heavy duty silicone diaphragm and soft EPDM sealing gasket. Floor rating ASSE 1072 AF GW. Manufactures: RectorSeal, Josam, JRSmith.
- G. Air admittance valves: A one-way valve allowing air to enter plumbing drainage systems when negative pressures develop in the system. Gravity closing, sealing the vent terminal at zero differential pressure (no flow conditions) and under positive internal pressures.
 - 1. Standards Compliance: ASSE 1050 & 1051, ICC ESR-1664, NSF Standard 14, IAPMO - Classified Mark, ASTM F-409, IPC 2003, IRC 2003.
 - 2. Materials:
 - a. Valve: White PVC with 1-1/2 in NPT threads.
 - b. Tension membrane: Neoprene or silicone.
 - c. Tubular Adapter: [White 1-1/2 in (38 mm) polypropylene] [Black 1-1/2 in (38 mm) polypropylene] [PVC].
 - d. DFU Rating: 6. For venting 2 in (51 mm) DWV or smaller.
 - e. Opening Pressure: Minus 0.01 psi.
 - f. Closing Sealing Pressure: 0.00 psi and higher.
 - g. Air inlet screen.
 - h. Protective rubber sleeve.
 - i. Functionality Test: 100 percent functional at 1/4 in (6 mm) H2O and 30 in (762 mm) H2O.
 - j. Operating Temperature Range: Minus 40 to 150 degrees F (minus 4.4 to 65.6 degrees C).
 - 3. Manufacturers: Studor, Oatey.

PART 3 - EXECUTION

3.1 EXAMINATION AND PREPARATION

- A. Verify existing grades, inverts, utilities, obstacles, and topographical conditions prior to installations.
- B. Examine rough-in requirements for plumbing fixtures and other equipment having drain connections to verify actual locations of piping connections prior to installation.
- C. Examine walls, floors, roof, and plumbing chases for suitable conditions where piping and specialties are to be installed.

3.2 INSTALLATION OF PIPING

- A. Refer to Related Section 221113 for additional requirements.
- B. Install underground cast iron piping per Cast Iron Soil Pipe Institute Engineering Manual.

3.3 INSTALLATION OF CLEANOUTS

SPEC EDITOR: CLEANOUT LOCATIONS SHOULD BE INDICATED ON DRAWINGS. CLEANOUTS IN ULAM AREA SHALL BE LOCATED IN WALLS. CLEANOUTS LOCATED IN THE FLOOR WILL NOT BE PERMITTED.

- A. Provide cleanouts at each change in direction of piping greater than 45 degrees, where indicated on drawings and where required by code. Clean-outs shall be same size as pipe served through 4". Above Ground Cleanouts: Install cleanouts at minimum intervals of 50' for piping 4 inch and smaller and 100' for larger piping, at base of each vertical soil or waste stack.
- B. Encase exterior cleanouts in concrete flush with grade.
- C. Cleanouts shall be aesthetically located with respect to tile patterns, masonry bond and alignment. Coordinate installation with masonry and concrete work.
- D. Prior to acceptance of the system, demonstrate that cleanout plugs are easily removable and can be easily rodded.
- E. When cleanouts are required in above grade floors, flash and clamp cleanouts in floors provided with membrane waterproofing as specified for floor drains.

3.4 INSTALLATION OF FLOOR DRAINS

- A. Install floor drains as indicated on drawings, at low points of surface areas to be drained.
- B. Provide trap for all floor drains, minimum 3" trap and waste.
- C. Check drainage of surfaces by flooding with the hose.
- D. Provide vent for floor drain piping per code, minimum 1 1/2".

3.5 **INSTALLATION OF ROOF DRAINS**

*SPEC EDITOR: USE DETAIL SHOWING INSTALLATION OF WATERPROOF
MEMBRANE*

- A. Install drain flashing collar or flange so that no leakage occurs between roof drain and adjoining roofing. Maintain integrity of waterproof membranes, where penetrated.
- B. Check drainage of surfaces by flooding with hose.

SECTION 221333 - PACKAGED SUBMERSIBLE STORM AND SANITARY PUMPS

END OF CONTENTS TABLE

DIVISION 22 PLUMBING

SECTION 221333 - PACKAGED SUBMERSIBLE STORM AND SANITARY PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

***INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION.
EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.***

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 01 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
 - 1. Section 018113: Sustainable Design Requirements
 - 2. Section 019110/019100: Commissioning
 - 3. Section 220500: Common Work Results for Mechanical
 - 4. Section 220513: Motors
 - 5. Section 220523: Valves
 - 6. Division 26: Electrical

EDIT SUMMARY TO MAKE PROJECT SPECIFIC. THIS SPECIFICATION PERTAINS TO PUMPS SERVING BUILDING DRAINS, I.E. PUMPS LOCATED WITHIN BUILDINGS. IT IS NOT WRITTEN TO APPLY TO PUMPS SERVING BUILDING SEWERS OR OTHER SEWERS. SUCH PUMPS HAVE ADDITIONAL REQUIREMENTS (EXPLOSION PROOF, ETC.) PER NFPA 820.

1.2 SUMMARY

- A. Pumps and accessories serving Building Drains. This specification does not apply to pumps and accessories serving sewers of any type. Products specified in this section include the following:
 - 1. Submersible pumps for elevator sumps
 - 2. Submersible storm pumps
 - 3. Submersible sewage pumps
 - 4. Submersible grinder sewage pumps
 - 5. Controls for the specified pumps
 - 6. Sump basins and covers
 - 7. Check valves and accessories for submersible pumps
 - 8. Guide rail support system

1.3 SUBMITTALS.

- A. Product Data: Include catalog illustrations, model, rated capacities, performance, weights, dimensions, component sizes, rough-in requirements, piping and wiring diagrams and details, materials of construction, accessories, operating and maintenance clearance requirements. Wiring diagrams shall be project specific, and differentiate between factory wiring and field wiring. Include written sequence of operations for all controls.
- B. Provide information for the following:

1. Individual pump curves indicating flow rate, head, horsepower, and pump efficiency.
2. Pump pipe connection size and type.
3. Maximum passable solid size.
4. Shaft seals, bearings, and cord sealing information.
5. Motor insulation data.
6. Pump starter information.
7. Float information.
8. Control panel wiring diagrams.
9. Control panel face diagrams indicating components on the panel face and sides and how the components are labeled.
10. Float rod information.
11. Basin data, including depth, diameter; size, arrangement, and elevations of all openings; and data on gaskets and bushings to seal the cover and cover penetrations gas-tight.
12. Guide rail support system data.

C. Installation, Operation and Maintenance Manuals

1.4 QUALITY ASSURANCE STANDARDS

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
 1. American Water Works Association
 2. ANSI/HI 9.6.1-1998, NPSH Margin
 3. ANSI/HI 9.6.3-1997 Operating Region
 4. NEC-National Electrical Code
 5. National Electrical Manufacturers Association
 6. National Sanitation Foundation
 7. Underwriters Laboratories Inc. listed as a manufacturer of packaged pumping systems under UL/CUL Category QCZJ.
 8. Underwriters Laboratories Inc. listed as a manufacturer of control panels under UL/CUL 508a.
 9. UL Standard 778 Motor Operated Water Pumps.

1.5 DEFINITIONS

- A. Building Drains: Refer to the Michigan Plumbing Code.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Ship the pump and accessories in weather-proof wrap for storage outdoors. Protect control panels, pipe openings, and other sensitive components with heavy plastic or other durable means to ensure cleanliness and prevent damage during shipping and storage. Maintain protection during installation.
- B. Comply with pump manufacturer's written rigging instructions for handling and installation.

1.7 WARRANTY

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

PART 2 - PRODUCTS

PROVIDE A DETAIL ON THE DRAWINGS INDICATING PIT SIZE AND DEPTH, QUANTITY AND ELEVATIONS OF FLOATS, INVERT ELEVATIONS OF CONNECTIONS TO PIT, ETC.

2.1 ACCEPTABLE MANUFACTURERS

- A. Acceptable Manufacturers:
 - 1. Barnes
 - 2. Zoeller
 - 3. Hydromatic
 - 4. Goulds

ELEVATOR SUMP PUMPS MUST DISCHARGE TO SANITARY. SEE THE CONVEYING SYSTEMS DESIGN GUIDELINE FOR DETAILED REQUIREMENTS REGARDING ELEVATOR SUMP PUMPS.

2.2 SUBMERSIBLE CENTRIFUGAL PUMPS FOR ELEVATOR SUMPS

- A. Simplex design, minimum capacity of 3000 gallons per hour per hoistway.
- B. Pump Type: Completely submersible, end-suction, close-coupled, overhung-impeller, centrifugal pump with controls. Capable of operating un-submerged without damage to pump. Factory-assembled and tested.
- C. Impeller: Capable of passing spherical solids 1/2 inch in diameter or greater. Statically and dynamically balanced, cast iron, stainless steel, or engineered plastic, keyed and secured to shaft.
- D. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection. Powder coated epoxy finish. Stainless steel screws, bolts, and lift handle.

EDIT MOTOR HP BELOW, OR DELETE AND INCLUDE IN PUMP SCHEDULE. MICHIGAN ELEVATOR CODE PROHIBITS PUMPS OVER 300 VOLTS. VOLTAGE RANGES INDICATED BELOW ARE THE TYPICAL DESIRED BUT MAY REQUIRE REVISION DEPENDING ON THE PROJECT. SEE THE CONVEYING SYSTEMS DESIGN GUIDELINE FOR MORE INFORMATION.

- E. Motor: Hermetically sealed, oil filled, with waterproof power cable of length required with cord cap (control panel will be wired to control a receptacle in the elevator hoistway that the pump will be plugged into) and a cable-sealing assembly for connection at pump. Class B or better insulation, 1.15 service factor minimum. Non-overloading through the length of the curve.
 - 1. Pumps 1 HP or less: 120 VAC single phase.

2. Pumps greater than 1 HP: 208 VAC three phase.
 3. Single Phase Pumps: Provide capacitor-start type motors with built-in overload protection.
- F. Pump and Motor Shaft: Stainless steel with factory-sealed, oil or grease-lubricated ball bearings. Upper bearing may be sleeve type.
- G. Shaft Seals: Mechanical seals, single or double.
- H. Controls:
1. Float Switches: Provide multiple tethered style float switches to turn the pump on and off and to detect high level, with waterproof cables of length required. High level detection shall be provided by use of a separate float switch. Float switches shall be non-mercury mechanical type. Provide stainless steel clamps to secure floats to the pump discharge pipe.
 2. Control Panel: Minimum NEMA 1 rated. Hinged, lockable, dead front cover. No electrical switches, indicator lights, or enunciators of any kind shall be located on the outside of the panel/panel cover.
 3. Controls: Provide UL listed controller/starter assembly. Provide a magnetic contactor (single phase pumps) or magnetic starter with overload protection (three phase pumps) that starts and stops the pump via float switch(es) separately wired to the control panel. Provide a non-latching dry alarm contact for monitoring by the Owner's building monitoring system. The dry alarm contact shall energize *whenever the pump runs*, and when high sump level is detected by the high level float switch. When high water level is detected by the high level float switch, the pump shall turn on (if not already running) and the dry alarm contact shall energize. Provide panel circuit breaker or fuse, numbered terminal strip(s) for all electrical connections, and a project specific wiring diagram in a plastic pouch inside the panel.

THE ARTICLE BELOW IS FOR STORM PUMP APPLICATIONS.

2.3 SUBMERSIBLE DOUBLE SEAL CENTRIFUGAL STORM WATER PUMPS

- A. Pump Type: **Duplex** design, completely submersible, end-suction, close-coupled, overhung-impeller, centrifugal pump with controls. Capable of operating un-submerged without damage to pump. Factory-assembled and tested.
- B. Impeller: Vortex style, uncoated, capable of passing spherical solids 3/4 inch in diameter or greater. Statically and dynamically balanced cast or ductile iron, bronze, or stainless steel; keyed and secured to shaft.
- C. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection. Powder coated epoxy finish. All fasteners exposed to liquid shall be 300 series stainless steel. Provide stainless steel lifting handle. Provide lift ring (of stainless steel) and self-sealing discharge fittings for connection to guide-rail supports, when guide rail supports are indicated.

- D. Motor: Hermetically sealed, oil filled, with waterproof power cable of length required. Class B or better insulation, 1.15 service factor minimum. Non-overloading through the length of the curve.
 - 1. Single Phase Pumps: Provide capacitor-start type motors with built-in overload protection.
- E. Cable-sealing assembly at pump connection: shall employ compression gland and epoxy potting of individual motor leads to prevent moisture from entering the motor housing if cord is damaged.
- F. Pump and Motor Shaft: Stainless steel with factory-sealed, oil or grease-lubricated upper and lower ball bearings.
- G. Shaft Seals: Double mechanical seals. Lower and upper seals to be silicon carbide/silicon carbide. Provide seal moisture probes for leak detection.

THE ARTICLE BELOW SHOULD BE USED FOR SEWAGE PUMPS THAT PRIMARILY SERVE LIGHT DUTY SANITARY APPLICATIONS SUCH AS FLOOR DRAINS IN MECHANICAL SPACES OR WHERE A FEW LOW USE WATER CLOSETS DRAIN TO THE PUMP. FOR PUMPS THAT SERVE A SIGNIFICANT NUMBER OF WATER CLOSETS A SEWAGE GRINDER PUMP AS SPECIFIED IN THE NEXT SECTION IS TYPICALLY RECOMMENDED. BE SURE TO INDICATE WHICH TYPE PUMP IS REQUIRED ON THE PROJECT DRAWINGS, PREFERABLY IN A SCHEDULE.

2.4 SUBMERSIBLE DOUBLE SEAL CENTRIFUGAL SEWAGE PUMPS

- A. Pump Type: **Duplex** design, completely submersible, end-suction, close-coupled, overhung-impeller, centrifugal pump with controls. Capable of operating un-submerged without damage to pump. Factory-assembled and tested.
- B. Impeller: Vortex style, uncoated, capable of passing spherical solids 2 inch in diameter or greater. Statically and dynamically balanced cast or ductile iron, bronze, or stainless steel; keyed and secured to shaft.
- C. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical discharge for piping connection. Powder coated epoxy finish. All fasteners exposed to liquid shall be 300 series stainless steel. Provide stainless steel lifting handle. Provide lift ring (of stainless steel) and self-sealing discharge fittings for connection to guide-rail supports, when guide rail supports are indicated.
- D. Motor: Hermetically sealed, oil filled, with waterproof power cable of length required. Class B or better insulation, 1.15 service factor minimum. Non-overloading through the length of the curve.
 - 1. Single Phase Pumps: Provide capacitor-start type motors with built-in overload protection.
- E. Cable-sealing assembly at pump connection: shall employ compression gland and epoxy potting of individual motor leads to prevent moisture from entering the motor housing if cord is damaged.

- F. Pump and Motor Shaft: Stainless steel with factory-sealed, oil or grease-lubricated upper and lower ball bearings.
- G. Shaft Seals: Double mechanical seals. Lower and upper seals to be silicon carbide/silicon carbide. Provide seal moisture probes for leak detection.

THE ARTICLE BELOW SHOULD BE USED FOR SEWAGE PUMPS RECEIVING THE DISCHARGE FROM A SIGNIFICANT QUANTITY OF WATER CLOSETS, IN PARTICULAR FOR AREAS WHERE WATER CLOSETS MAY BE SUBJECT TO ABUSE SUCH AS DORMITORYS. FOR PUMPS SUBJECT TO HEAVY USE, CONSIDER SPECIFYING A REVERSE FLOW ASSEMBLY.

2.5 SUBMERSIBLE DOUBLE SEAL CENTRIFUGAL GRINDER SEWAGE PUMPS

- A. Pump Type: **Duplex** design, completely submersible, end-suction, close-coupled, overhung-impeller, centrifugal pump with controls. Capable of operating un-submerged without damage to pump. Factory-assembled and tested. 1-1/4 inch minimum discharge opening.
- B. Impeller: Vortex style, uncoated, capable of passing solids. Statically and dynamically balanced cast or ductile iron, bronze, stainless steel, or engineered thermoplastic; keyed and secured to shaft. Provide hardened stainless-steel cutter/grinder with shredding device.
- C. Pump Casing: Cast iron, with open inlet, legs that elevate pump to permit flow into impeller, and vertical or horizontal discharge (as required for the project) for piping connection. Powder coated epoxy finish. All fasteners exposed to liquid shall be 300 series stainless steel. Provide stainless steel lifting handle. Provide lift ring (of stainless steel) and self-sealing discharge fittings for connection to guide-rail supports, when guide rail supports are indicated.
- D. Motor: Hermetically sealed, oil filled, with waterproof power cable of length required. With Class F motor insulation. Non-overloading through the length of the curve.
 - 1. Single Phase Pumps: Provide capacitor-start type motors with built-in overload protection.
- E. Cable-sealing assembly at pump connection: shall employ compression gland and epoxy potting of individual motor leads to prevent moisture from entering the motor housing if cord is damaged.
- F. Pump and Motor Shaft: Stainless steel with factory-sealed, oil or grease-lubricated upper and lower ball bearings, to provide radial and thrust support.
- G. Shaft Seals: Double mechanical seals. Lower and upper seals to be silicon carbide/silicon carbide. Provide seal moisture probes for leak detection.

THE PUMP CONTROL ARTICLE BELOW REFLECTS TYPICAL U-M REQUIREMENTS. MODIFY AS REQUIRED TO MAKE PROJECT SPECIFIC. INCLUDE A MORE DETAILED PUMP SEQUENCE OF OPERATION WITH THE PUMP DETAIL ON THE DRAWINGS OR WITH THE ARTICLE BELOW, IF NECESSARY. INFORMATION BELOW DOES NOT INDICATE QUANTITY OF FLOATS SINCE FLOAT QUANTITIES VARY WITH PUMP CONFIGURATION.

**THEREFORE, INDICATE REQUIRED QUANTITY OF FLOATS ON THE PUMP
DETAIL OR BELOW.**

2.6 PUMP CONTROLS:

- A. Unless otherwise noted, provide UL listed controller/starter assembly with the following features for each pump.
1. Float Switches: Provide multiple tethered style non-mercury mechanical style float switches to turn the pump on and off and to detect high level, with waterproof cables of length required. Provide float rod/pipe, tether clamps, and hardware, to secure the floats at the required elevations, all of stainless steel construction.
 2. Control Panel: Minimum NEMA 1 rated. Hinged, lockable.
 3. Controls: Provide UL listed controller/starter assembly. Provide a magnetic contactor (single phase pumps) or magnetic starter with adjustable overload protection (three phase pumps) that starts and stops the pump via float switch(es) separately wired to the control panel.
 - a. Automatic Alternator (duplex pump arrangements): Electrical alternator that starts pumps on successive cycles and starts multiple pumps if one cannot handle load.
 - b. High-Water Alarm: Rod-mounted mechanical-float switch.
 - c. Panel features (all mounted on panel face): control on/off switch, hand-off-auto switch and pump run light for each pump, high water alarm light, high water alarm test switch, seal failure light.
 - d. Provide an audible alarm that activates upon high water or seal failure condition.
 - e. Provide a latching dry auxiliary alarm contact for monitoring by the Owner's building monitoring system, that energizes upon either a high water or seal failure condition.
 - f. Provide an alarm silence button which deactivates the audible alarm but does not deactivate the local alarm lights or auxiliary alarm contact until the alarm condition clears.
 - g. Provide motor disconnect for each motor, control transformer, control panel circuit breaker or fuse, numbered terminal strip(s) for all electrical connections, a project specific wiring diagram in a plastic pouch inside the panel, and all required accessories.
 - h. Label all components on the exterior of the control panel with engraved plastic labels screwed to the panel face. Label all wiring, terminal strips, and electrical components inside the panels using labels made for that purpose.

2.7 SUMP BASINS AND BASIN COVERS

PROVIDE A DETAIL ON THE DRAWINGS INDICATING QUANTITY AND ELEVATIONS OF TOP AND SIDE WALL CONNECTIONS AND FLOAT ACTIVATION ELEVATIONS. DUE TO RADON CONCERNS ALL COVERS (I.E. INCLUDING STORM PUMPS) ARE SPECIFIED AS GAS TIGHT, WITH THE EXCEPTION OF THOSE USED FOR ELEVATOR SUMP PUMPS.

- A. Basins: Factory-fabricated, watertight, cylindrical, basin sump with top flanges and sidewall openings for pipe connections.
 - 1. Material: Fiberglass.
 - 2. Reinforcement: Mounting plates for pumps, fittings, guide-rail supports if used, and accessories, adequately braced. Provide integral water tight anchor flange(s) that match the guide rail base plate and side support mounting holes, when guide rails are used.

RETAIN SUBPARAGRAPH BELOW IF REQUIRED TO ANCHOR BASIN TO CONCRETE SLAB IN CASE OF GROUND-WATER PROBLEMS.
 - 3. Anchor Flange: Same material as or compatible with basin sump, cast in or attached to sump, in location and of size required to anchor basin in concrete slab.
- B. Basin Covers: Gas tight cover with gaskets, seals, and bushings to seal hatches, piping, conduit and cords gas tight. Sealants and caulks shall not be used.
 - 1. Cover Reinforcement: Reinforced to support anticipated loads in the area of use but no less than required for supporting foot traffic.
 - 2. For basins larger than 36" diameter and for any duplex pump arrangement, provide a bolted sub-hatch centered above each pump and pump discharge pipe that allows the pump to be removed through the sub-hatch without disturbing the basin cover, cover vent or drainage connections, sump float rod, or adjacent pumps and their discharge pipes and power cords. Additionally, provide an inspection hatch that can be opened without disturbing any component penetrating the basin cover.
- C. Covers for basins in elevator hoistways: Provide removable galvanized steel grating (capable of supporting foot traffic), notched around the pump discharge pipe to allow grate removal without disconnecting the discharge pipe.

2.8 ACCESSORIES

- A. Check valves for elevator sump pumps and storm pumps:
 - 1. Silent check valve per Related Section.

SILENT CHECK VALVES ARE NOT RECOMMENDED FOR WASTE WATER SERVICE, THEREFORE A RESILIENTLY HINGED TYPE CHECK VALVE HAS BEEN SPECIFIED FOR THAT SERVICE, BELOW.
- B. Check valves for sewage pumps and grinder sewage pumps:
 - 1. Non-slam resiliently hinged type check valve with peroxide cured EPDM disk, disk accelerator, and flanged connections; "SurgeBuster" as manufactured by Val Matic Valve and Manufacturing Corporation.

SPECIFY GUIDE RAIL SUPPORT SYSTEMS WHEN SUMP DEPTH EXCEEDS FOUR FEET. DELETE ARTICLE BELOW WHEN GUIDE RAILS ARE NOT REQUIRED.

2.9 GUIDE-RAIL SUPPORT SYSTEM:

- A. Provide a guide rail support system allowing automatic disconnect and removal of pump, furnished by the same manufacturer that supplied the submersible pump.
- B. Guide Rails: Vertical pipes or structural members, made of stainless steel, attached to baseplate and basin sidewall or cover.
- C. Baseplate: Stainless Steel plate, attached to basin floor, supporting guide rails and stationary elbow.
- D. Hardware: all nuts, bolts, fasteners and hardware shall be stainless steel.
- E. Pull rods and lifting cable: Stainless steel.
- F. Sliding guide rail connector: Stainless steel motor-mounted or casing-mounted yokes or other attachments for aligning pump during connection of flanges and sliding pump up and down rails.
- G. Movable Elbow: Cast iron pump discharge-elbow fitting with flange and positioning device.
- H. Stationary Elbow: Cast iron fixed discharge-elbow fitting with flange that mates to movable-elbow flange and connects to baseplate.
- I. Seal between movable and stationary elbow: Elastomeric seal retained by non-corrosive clamp ring and stainless steel fasteners.

2.10 SOURCE QUALITY CONTROL

- A. All pumps shall be factory tested. Verify all control panel functions. Verify pump grounding and integrity of winding insulation by megger testing. Run each pump submerged prior to shipment at maximum running point. Verify flow rate, head, amperage draw, and water tightness.

THE TEST REPORT BELOW IS OPTIONAL, BUT TYPICALLY RECOMMENDED FOR CRITICAL OR LARGE PUMP INSTALLATIONS.

- B. A report detailing the results of the factory test shall be provided. An officer of the manufacturer's company shall certify by signature that the report accurately reflects the test results, and that the package meets all performance requirements. The report shall clearly identify any performance requirements that were not achieved.

PART 3 - EXECUTION

3.1 EXAMINATION AND PREPARATION

- A. Examine roughing-in for equipment support, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting equipment performance, maintenance, and operations. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install in strict compliance with manufacturer's installation instructions and Related Sections. Maintain manufacturer's recommended clearances for service and maintenance.
- B. Install separate devices furnished by manufacturer and not factory installed, including but not limited to float rods and floats, basins, basin covers and all related accessories, guide rail system, lift rods/cables, control panels, and any manufacturer's accessory devices necessary or recommended to meet the particular needs of the pump installation.
- C. Protect basins from trash and debris at all times including during temporary service.

SEWAGE AND GRINDER SEWAGE PUMP INSTALLATIONS SHOULD NOT BE DESIGNED WITH A DISCHARGE PIPE LESS THAN 2". INDICATE THE PIPE SIZE ON THE DRAWINGS.

- D. For all sewage and grinder sewage pump installations, regardless of pump connection size, provide minimum 2 inch diameter pipe (or larger as indicated) on the discharge side of each pump.
- E. Provide a check valve and an isolation valve on each pump discharge pipe, near and above the basin cover or sump top rim level. Locate the check valve upstream of the isolation valve. Provide check valves of the type specified in Part 2.
- F. Where discharge piping is below grade, locate the check and isolation valves outside of the basin in an access pit with access cover.
- G. Run all power, float, and control wiring in conduit between basin cover and control panel. Seal inner diameter of conduit with sealing putty and connect to basin cover.
 - 1. Power cords of elevator sump pumps shall not be run in conduit. Connect directly to the non-GFCI outlet in the elevator hoistway that is controlled by the pump control panel. Install weatherproof cover on the outlet.
- H. Verify proper pump rotation of pumps before installing in basins.
- I. Adjust level control to prevent effluent in the sump basin from rising to within 2 inches of the invert of the lowest gravity drain inlet connection to the sump.
- J. Adhere to manufacturer's start-up instructions.

3.3 TEMPORARY SERVICE

- A. Start units for temporary use only with the expressed written permission of the Project Manager and in compliance with all requirements of the Contract Documents.
- B. Prior to placement into temporary service, perform manufacturer's pre-start protocols.
- C. Commission equipment prior to putting into temporary service to the extent required by the Commissioning Authority. Re-perform all commissioning activities prior to Owner acceptance, even if previously commissioned to prepare for temporary service.

- D. Perform all required routine maintenance procedures during temporary service. Continuously maintain a log of such procedures. Store the log at unit during temporary use period and include log as part of the final O&M manual.

3.4 FIELD QUALITY CONTROL

- A. In the presence of the Commissioning Authority:
 - 1. Demonstrate the functionality of the slide rails by sliding the pump over the full length of the rails and out the basin cover, and reseating the pump on the stationary flange without entering the basin.
 - 2. Demonstrate the operation of the pump by filling the basin with water and verifying all functions of the pump and control panel. Provide temporary plugs in basin connections to allow filling the basin for testing. Remove plugs at completion of testing.

WHEN JUSTIFIED, REQUIRE START-UP SERVICES BY A FACTORY SERVICE TECHNICIAN, OTHERWISE DELETE THE PARAGRAPH BELOW.

- B. Provide a factory trained service technician to perform start-up services. The service technician shall perform the following:
 - 1. Verify correct installation and organize, instruct and assist the mechanical contractor's personnel in start-up procedures.
 - 2. Perform manufacturer's pre-start checks.
 - 3. Set all safety devices.
 - 4. Commission the pump package, including demonstrating all safeties, proper pump staging, alteration, and all other features.
 - 5. Provide a written service report prepared on site and submitted at the time of each service visit (with copies immediately provided to the Owner and Commissioner). Report shall indicate services provided and list all controller settings.
 - 6. Train Owner personnel. Training and start up services are separate functions and training shall not be combined with startup services.

INCLUDE THE ARTICLE BELOW IN EVERY SPECIFICATION SECTION.

3.5 COMMISSIONING

- A. Perform Commissioning activities per Related Sections above.

WHEN JUSTIFIED, REQUIRE TRAINING BY A FACTORY SERVICE TECHNICIAN, OTHERWISE DELETE THE FIRST PARAGRAPH BELOW.

3.6 TRAINING

- A. Provide a qualified service technician from the Manufacturer's staff to provide training.

B. Train Owner's maintenance personnel on equipment operation, start-up and shutdown, trouble-shooting, servicing and preventative maintenance procedures, pump access and pump removal. Review the data contained in the Operating and Maintenance Manuals with Owner's personnel.

1. Provide 2 hours training, minimum.

SECTION 221500 - COMPRESSED AIR ACCESSORIES

REVISIONS:

8-1-99: CONTENT APPROVED AS NEW MASTER

8-11-99: REVISED TO VBS.DOT TEMPLATE

EDITOR: SEE 230900 FOR COMPRESSORS, DRYERS, AND ACCESSORIES FOR CONTROL (INSTRUMENT) AIR USE. THE ACCESSORIES SPECIFIED BELOW ARE NOT TYPICALLY SPECIFIED FOR CONTROL AIR USE; NOTE THE DESCRIPTION IN THE SCOPE OF WORK, BELOW.

APRIL 2018: REVISED TO LIST MFR.S FROM PML. R BENEDEK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.

1.2 SCOPE OF WORK:

- A. Provide piping, fittings, and specialties for the following systems:
 - 1. Compressed air regulators, filters, drain valves, relief valves and lubricators, for compressed air systems **not** associated with control (instrument) air or medical air systems.

PART 2 - PRODUCTS:

2.1 COMPRESSED AIR SPECIALTIES:

SPEC EDITOR: BELOW FOR LARGE CAPACITY ON AIR MAINS. MODIFY DESCRIPTION AS REQUIRED. ADDITIONAL RESEARCH REQUIRED.

- A. Pressure Regulating Valve: Bronze body, direct-acting, spring-loaded, manual pressure setting adjustment, pressure gauges, and rated for 150-psig inlet pressure. Manufacturers: Landis and Staefa Series 201, Van Aire, Wilkerson, Zeks, Parker-Hannifin, Fisher, Siemens
- B. Compressed Air Filter - General Requirements: Housings shall be corrosion resistant, rated for minimum of 150psig. Capacity, accessories and configuration (simplex or duplex) as indicated on drawings. Furnish spare filter set. Manufacturers: Hankinson, Van Aire, Wilkerson, Zeks

SPEC EDITOR: THIS IS A GOOD GENERAL PURPOSE FILTER, SUITED FOR REMOVAL OF HIGH VOLUMES OF OIL AND WATER.

- C. Compressed Air Filter - Centrifugal/Coalescing and Impingement: Cleanable perforated stainless steel coalescing inner core, with automatic drain and in-depth impingement filter outer section. Designed for efficient removal of water droplets (99%) and oil aerosols (40%) via coalescence, and removal of particles to 3 microns. Manufacturer: Hankinson Centriflex

SPEC EDITOR: THE FOLLOWING IS FOR MORE EFFICIENT REMOVAL OF WATER AND OIL AND PARTICLES.

- D. Compressed Air Filter - Combination Coalescing and Impingement: Glass fiber coalescing inner core, with automatic drain and in-depth impingement filter outer section. Designed for efficient removal of water droplets (100%) and oil aerosols (70%) via coalescence, and removal of particles to 1 microns. Manufacturer: Hankinson 3100 Series

SPEC EDITOR: THE FOLLOWING IS FOR FINE FILTRATION AND WATER AND OIL REMOVAL, BUT IN LOWER QUANTITIES. GOOD FINAL FILTER FOR CONTROL AIR, BUT USE ONE OF THE FILTERS ABOVE FIRST.

- E. Compressed Air Filter - Fine Impingement: Inner foam distributing core, fine glass fiber coalescing and impingement core, foam final coalescing outer section, and with automatic drain. Designed for efficient removal of oil (99.999%) via coalescence, and removal of particles to 0.025 microns. Manufacturer: Hankinson Aerolescer

SPEC EDITOR: THE FOLLOWING IS NOT GENERALLY REQUIRED. IF USED, IT SHOULD HAVE A COALESCING FILTER FIRST.

- F. Compressed Air Filter - Adsorption: Include activated carbon capable of removing virtually 100% of oil aerosols, with color change dye to indicate when carbon is saturated, and with final filter to contain carbon dust to 0.025 microns. Manufacturer: Hankinson Hypersorb

SPEC EDITOR: THE FOLLOWING IS AN OLD CARRYOVER SPEC WITH SOME EDITS AND MANUFACTURERS ADDED. ADDITIONAL RESEARCH IS REQUIRED. CONSIDER AUTOMATIC BALL FLOAT TYPE (WRIGHT AUSTINB MODEL 90-AC OR ARMSTRONG NO.21 VS. ATOMIZING TYPE, NICHOLSON DRAIN-AIR.)

- G. Automatic Drain Valves: Corrosion-resistant metal body and internal parts, rated for 150-psig minimum working pressure, capable of automatic discharge of collected condensate. Manufacturer: Drain-all, Van Aire Draintender, Zeks, Hankinson Snap-Trap

SPEC EDITOR: RELIEF VALVE IS USUALLY SPECIFIED WITH THE AIR COMPRESSOR.

- H. Pressure Relief Valve: Brass body, spring relief, capacity and factory set relief pressure as indicated on drawings.

SPEC EDITOR: LUBRICATORS ARE INFREQUENTLY REQUIRED, ONLY WHERE PNEUMATIC TOOLS REQUIRE OIL FOR LUBRICATION. ADDITIONAL RESEARCH IS REQUIRED. CHECK FISHER TYPE 67FR.

- I. Air-Line Lubricators: Sizes and capacities indicated; equip with drip chamber and sight dome for observing oil drop entering air stream; with oil feed adjustment screw, and quick-release collar for easy bowl removal.

PART 3 - EXECUTION

3.1 PIPING INSTALLATION

- A. See Related Section 221113 for piping materials and installation requirements.

3.2 SPECIALTIES INSTALLATION AND START-UP

- A. Install drain and vent from automatic drain valves per manufacturer's instructions. Route drain to floor drain or location approved by engineer.
- B. After installation is complete test operation of regulators, and automatic drain valves.
- C. Instruct owner on location, operation, and maintenance of piping specialties.

DIVISION 22 PLUMBING

SECTION 223116 - WATER SOFTENER

END OF CONTENTS TABLE

DIVISION 22 PLUMBING
SECTION 223116 - WATER SOFTENER

2012-09-17: NEW VERSION ISSUED.

2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.

APRIL 2018: REVISED TO LIST MFR.S FROM PML. R BENEDEK

2024-01-02: REPLACED PNEUMATICALLY ACTUATED CONTROL VALVES WITH ELECTRONICALLY ACTUATED CONTROL VALVES.

2024-04-29: UPDATED MANUFACTURERS.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
 - 1. 220500 Common Work Results for Mechanical
 - 2. 221113 Piping Materials and Methods
 - 3. 220523 Valves
 - 4. 220519 Thermometers, Pressure Gauges, and Accessories
 - 5. 221119 Domestic Water Piping Specialties
 - 6. Division 26: Electrical.

SPEC EDITOR: WHEN EDITING THIS SPEC TO MAKE IT PROJECT SPECIFIC, REVISE THE SUMMARY SECTION BELOW ACCORDINGLY.

1.2 SUMMARY

- A. Section Includes:
 - 1. Brine Regenerated Water Softening Systems.

1.3 SUBMITTALS

- A. Product Data: For each type of fixture product.
 - 1. Water softening system and accessories including rated capacities, operating characteristics, furnished specialties, accessories, dimensions of individual components and profiles.
 - 2. Construction details and piping diagrams of water softening system and components.

3. Wiring diagrams for power, signal, control wiring and monitoring points tied into the owners building monitoring system.
4. Proof of NSF 61 compliance for softeners used for drinking water systems.
5. Operation and maintenance manuals.

1.4 QUALITY ASSURANCE

SPEC EDITOR: RETAIN PARAGRAPHS A AND B IN EVERY PROJECT SPECIFICATION.

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

SPEC EDITOR: REVISE THE REFERENCE STANDARDS FOR PROJECT REQUIREMENTS.

- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
1. Michigan Plumbing Code
 2. Electrical components, devices and accessories: UL Listed and labeled as defined as in NFPA 70, Article 100.
 3. ASME Boiler and Pressure Vessel Code: Section VII, Division 01, where indicated.
 4. ASME compliance for FRP Tanks: Fabricate and label mineral tanks to comply with ASME Boiler and Pressure Vessel Code
 5. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as $\leq 0.25\%$ weighted average lead content) (and/or NSF/ANSI-372) and Annex F.
 6. U.S Safe Drinking Water Act.

1.5 COORDINATION

- A. Coordinate size and location of concrete bases.

1.6 WARRANTY

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers:
1. Evoqua
 2. Veolia North America
 3. R.A. Bruner
 4. Marmon Industrial Water

2.2 WATER SOFTENER

- A. Provide a factory assembled, pressure type packaged water softener, consisting of a softener tank, valve, brine tank (including first full fill of the brine tank), etc., all as required for a complete system. Constructed to handle up to 120 degree Fahrenheit water.
- B. When used for drinking water systems, water softening system shall comply with NSF 61, "Drinking Water System Components - Health Effects"

SPEC EDITOR: REVISE THE PERFORMANCE FOR PROJECT REQUIREMENTS.

2.3 PERFORMANCE

- A. Provide a water softening systems that delivers the output water quality, capacity, and performance indicated below at the specified water input characteristics indicated.
- B. Input water characteristics:
 - 1. Raw City of Ann Arbor water. City of Ann Arbor water quality base line data can be found at the following web site: http://www.a2gov.org/government/publicservices/water_treatment.
 - 2. Up to 120 degree Fahrenheit water inlet temperature.
- C. Output capacity and performance:

SPEC EDITOR: REVISE TO SIMPLEX RESIN TANK IF CONTINUOUS SOFTENER OPERATION IS NOT REQUIRED.

- 1. Duplex resin tanks to provide continuous operation.
- 2. Minimum Control valve pipe size 1".
- 3. Peak flow rate: _____ GPM @ a maximum 15 psi pressure drop.
- 4. Total water softened in 24 hours: _____ gallons.
- 5. Maximum of one regeneration per 72 hour period.
- 6. Regenerations between brine tank refills: _____.
- 7. Water quality output conditions in CaCO3 equivalents:
 - a. - ppm hardness
 - b. - ppm ferrous iron

SPEC EDITOR: REVISE THE TANK PRESSURE RATINGS GIVEN BELOW, IF NECESSARY FOR THE APPLICATION.

2.4 RESIN TANK

- A. Resin tank shall have no less than 50% free-board, be designed for 100 psig, and be tested at 150 psig. Tanks shall be steel with phenolic lining or fiberglass wound type. Steel tanks shall be internally lined with a phenolic epoxy to a 4-6 mil thickness and then baked at 400 degrees F. The exterior shall be sand blasted, painted with a rust-inhibiting primer and then finished with a gloss epoxy top coat. Tank shall have a 15 year non-prorated guarantee.
- B. Tank shall be equipped with an opening in the top head for mineral filling and periodic inspection.

2.5 BRINE SYSTEM:

- A. Brine system shall consist of combination salt storage and brine tank. Tank shall be molded of corrosion-proof, high density polyethylene.
- B. Brine tank shall be equipped with an elevated salt plate for brine collection, and a chamber to house a brine valve assembly. The brine valve shall automatically open to admit brine to the resin tank during eduction and close automatically to prevent introduction of air into the resin tank. During refill, the brine valve shall regulate the flow of treated water into the brine tank, working with the timed refill feature of the control valve. Together these components shall admit the correct volume of water to the brine tank in accordance with the salt dosage settings on the control valve. The brine valve shall include a float operated safety shut-off valve as a backup to the timed refill valve on the controller to prevent brine tank overflow

2.6 DISTRIBUTOR SYSTEM:

- A. Resin tank shall have a stainless steel upper distributor which shall disperse water laterally to avoid channeling within the resin bed. The lower distributor shall be of all plastic construction in a hub-radial design. It shall incorporate fine slot distributors to avoid passing of resin to service in the event of plumbing system upset. No slots shall face upward to minimize the opportunity of channeling. One layer of gravel shall be provided to aid in the even collection of water and make efficient use of the softening capacity of the resin.

2.7 SOFTENING MEDIA:

- A. High-capacity sulfonated polystyrene ion-exchange resin that is stable over the entire pH range of the water being treated with good resistance to bead fracture from attrition or shock. Minimum exchange capacity of 30,000 grains/cu. ft. when regenerated with 15 pounds of salt. The media shall be solid, of the proper particle size and shall contain no agglomerates, shells, plates or other shapes that might interfere with the normal function of the water softener. The resins shall be manufactured to comply with the food additive regulations, 21 CFR 173.25 as set forth by the US FDA.

2.8 AUTOMATIC CONTROLS:

- A. Automatic controls shall be of top mount design. Provide corrosion proof valve head construction, with no dissimilar metals, utilizing a bolt-down flange connection to permit proper positioning between the valve and the conditioner tank openings. Valve head shall have provisions for either left-hand or right-hand raw water plumbing connections to simplify installation while maintaining a forward facing controller for easy servicing. Provide readily accessible service connections. Provide a fully automatic multi-port control valve operated by a rotary pilot that hydraulically or electronically activates cartridge style diaphragm valves to accomplish regeneration. The multi-port valve shall incorporate self-adjusting flow regulators to control the rate of flow and prevent resin loss during back-wash, brine rinse, and brine refill positions, regardless of pressure fluctuations between 30 and 100 psig. The control shall open and close slowly to prevent noise and hydraulic shock. It shall have provisions for manual by-pass of hard water. The electrical control mechanism shall be enclosed in a gasketed, moisture-and corrosion resistant case. The enclosure shall conform to NEMA 3 enclosure standards.
- B. On duplex resin tank systems, the controller shall automatically switched back and forth between charged and expended resin tanks to provide a continuous supply of soft water.
- C. Provide a digital demand control system installed on the unit. It shall include a turbine meter and a solid state control device to permit regeneration on a metered volume basis. The totalizing turbine water meter shall be installed in the outlet pipe of the unit. This meter shall continuously measure and record the amount of treated water that has flowed to the service. Regeneration shall not be activated until a user adjustable time of day. The controller shall also indicate the current flow rate and the estimated days' remaining before a brine tank refill is required.
- D. Controls shall have an adjustable duration of the various steps in regeneration and allow for pushbutton manual operation. Control system shall have 10 year non prorated guarantee. Regeneration shall be initiated based on total gallons softened (programmable) and average daily use, compensated for extra-high or low use, with time of regeneration preset to a user selectable time.

2.9 AUXILIARY EQUIPMENT

- A. Provide pressure gauge on inlet and outlet of softener.
- B. Provide test cock to sample water in and soft water out.

2.10 BRINE

- A. High-purity sodium chloride, free of dirt and foreign material. Processed, food grade salt pellets, 99% pure. Rock and granulated forms are not acceptable.

2.11 INSTRUCTIONS:

- A. Provide 4 complete sets of installation, operation and maintenance manuals covering the equipment.

PART 3 - EXECUTION

3.1 INSTALLATION:

- A. Complete installation shall be in accordance with manufacturer's instruction and recommendations. Contractor shall be responsible for receiving all equipment, placing and assembling of all components for a complete and operational system.
- B. Install the equipment level on a concrete base sloped so that water will not stand under or around the equipment.
- C. Make all connections required. Provide rigid connections to softener input and output water connections, using approved joining methods. Hoses shall not be used.
- D. Install service valves to isolate the softener system input and output, and to provide a bypass path around the softener to allow softener servicing.
- E. Install brine tank overflow drain line, routed to a floor drain, terminated with an approved air gap. Use approved materials and secure drain line using approved hangers.
- F. For softeners used in drinking water systems, flush, clean, and disinfect per Related Section and manufacturer's instructions.

3.2 CHECK, TEST & START-UP:

- A. Check, test and start-up services shall be provided by a factory trained representative as follows:
 - 1. Inspect the equipment to verify proper installation.
 - 2. Set-up the controller and place the equipment into operation.
 - 3. Test to verify all performance.
- B. The manufacturer representative's shall provide a written report within 3 days of the Check, Test, Start-up. Report shall include information on services provided, document all controller settings, and indicate the results of the water quality performance tests.

3.3 TRAINING

- A. Factory trained representative shall provide training to owner maintenance staff on the control and operation of the softening equipment and accessories. This shall include adjusting controller settings, cleaning of eductor and filters, other general maintenance procedures, and rebuilding the control valve head. Provide a spare control valve head to demonstrate rebuilding.

3.4 COMMISSIONING

- A. Perform the commissioning activities as outlined in the Division 01 Section Commissioning and other requirements of the Contract Documents.

DIVISION 22 PLUMBING
SECTION 224200 - PLUMBING FIXTURES

2011-05-18: REVISED FORMAT, REINSERTED SUBMITTAL, EXTENSIVE MODIFICATIONS TO TECHNICAL CONTENT.

2011-05-24: ADDED REQUIREMENT TO ALL EMERGENCY FIXTURES THAT THEY BE BARRIER FREE. (D.KARLE PER J. JEFFERY)

2012-09-12: ADDED SPEC. EDITORS NOTE TO SECTION 2.31 TO ASK DESIGN MANAGER IF BOTTLE FILLERS SHOULD BE PROVIDED.

2013-09-06: REVISED SS SINK MODEL NUMBERS (ARTICLES 2.16, 2.17, 2.18 AND WATER COOLER MODEL NUMBERS (2.31). M. OLIVER.

2014-01-06: IMPROVED LEAD FREE REQUIRMENTS TO REFLECT U.S SAFE DRINKING WATER ACT REQUIREMENTS THAT WENT INTO EFFECT JAN. 4, 2014. D.KARLE FOR MTT.

APRIL 2018: REVISED TO LIST MFR.S FROM PML. R BENEDEK

AUGUST 2019: REVISED TO INCLUDE MICHIGAN MEDICINE HEALTHCARE SPECIFIC FIXTURE REQUIREMENTS.

AUG 2021: REVISED TO INCLUDE ADDITIONAL EMERGENCY FIXTURES

DECEMBER 2022: REVISED TO INCLUDE LOWER FLOW FIXTURES PER CARBON NEUTRALITY INITIATIVES

REVISED TO INCLUDE HEALTHCARE HANDWASHING SINK, TYPE SINK-F. ADDED CHICAGO AS ACCEPTABLE MANUF FOR EEWS-C COMBINATION EYE WASH/ FAUCET

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
 - 1. Section 123553 Laboratory Casework
 - 2. Section 115313 Laboratory Fume Hoods
 - 3. Section 220500 Common Work Results for Mechanical
 - 4. Section 221113 Piping Materials and Methods
 - 5. Section 220523 Valves
 - 6. Division 26: Electrical.

SPEC EDITOR: WHEN EDITING THIS SPEC TO MAKE IT PROJECT SPECIFIC, REVISE THE SUMMARY SECTION BELOW ACCORDINGLY.

1.2 SUMMARY

A. Section Includes:

1. Water Closets
2. Water Closet Seats.
3. W.C. and Urinal Wall Carriers.
4. Urinals.
5. W.C. and Urinal Flush Valves.
6. Lavatories, Sinks, Service Sinks, and related Faucets and Trim.
7. Lavatory Support Systems.
8. Under-Sink Waste and Supply Pipe Guards.
9. Thermostatic Mixing Valves (for hand-wash facilities).
10. Scrub Sinks
11. Shower Heads and Shower Control Valves.
12. Electric Water Coolers.
13. Emergency Fixtures, Tempering Valve, Alarm System.
14. Garbage Disposer.
15. Washing Machine Valve Box.
16. Supply Tubes and Stops.
17. Installation of fixtures including fixtures supplied by others for casework and fume hoods.

1.3 SUBMITTALS

A. Product Data: For each type of fixture product.

1. Construction details, material descriptions, rated capacities, operating characteristics dimensions of individual components and profiles, and finishes for fixtures.
2. Water consumption data.
3. Wiring diagrams for power, signal, and control wiring
4. Proof of compliance to NSF/ANSI 61.

1.4 QUALITY ASSURANCE

SPEC EDITOR: RETAIN PARAGRAPHS A AND B IN EVERY PROJECT SPECIFICATION.

- A. **Manufacturers and Products:** The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
- B. The Contractor shall verify and resolve compatibility between separate components (e.g. that lavatory hole quantity and centering match that of the specified faucet, supports are compatible with respective urinals and water closets, etc.). **Model numbers, when provided, are partial model numbers for identifying style. Provide fixtures that meet all the specified requirements.**

SPEC EDITOR: REVISE THE REFERENCE STANDARDS FOR PROJECT REQUIREMENTS. INCLUDE CURRENT APPLICABLE CODES WITH YEAR/VERSION ON TITLE SHEET IN DRAWING SET OR IN SPECIFICATION BOOK FRONT END.

- C. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the Michigan Plumbing Code and the following quality assurance standards; latest editions, unless noted otherwise.
 - 1. National Sanitation Foundation NSF/ANSI-61 (potable drinking water) and NSF-61 Annex G (listed as $\leq 0.25\%$ weighted average lead content) (and/or NSF/ANSI-372) and Annex F.
 - 2. U.S Safe Drinking Water Act.
 - 3. ANSI Z358.1 Standard for Emergency Eyewash and Shower Equipment
 - 4. ADA Standard for Accessible Design
 - 5. ICC A117.1 Accessible and usable Building and Facilities

1.5 WARRANTY

- A. Provide a complete parts and labor warranty for a minimum of one year from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 WATER CLOSETS - GENERAL

- A. Vitreous china; color white unless noted otherwise. Elongated bowl, direct-fed siphon jet action. 1-1/2 inch top spud for external flush valve. China bolt covers. For 10 in. or 12 in. rough-in (floor mounted models). Dimensions within ASME Standard A112.19.2 tolerances.
- B. Shall meet ASME A112.19.2 flush requirements at 1.28 gpf.

2.2 WATER CLOSETS - STANDARD AND BARRIER FREE

- A. WC-A - Wall mounted.
 - 1. ADA compliant when installed so top of seat is 17 in. to 19 in. from the finished floor.
 - 2. Acceptable Manufacturers:
 - a. American Standard "Afwall".
 - b. Kohler
 - c. Sloan
 - d. Zurn

SPEC EDITOR: ITEM WC-B BOWL IS 15 IN. HIGH FOR STANDARD INSTALLATION. NOT ADA COMPLIANT.

- B. WC-B: Floor mounted 15" nominal height, non-ADA compliant.
 - 1. Acceptable Manufacturers:
 - a. American Standard "Madera"
 - b. Kohler "Wellcomme".
 - c. Zurn

SPEC EDITOR: ITEM WC-C BOWL IS NOMINAL 17 IN. HIGH FOR ELDERLY, SPECIAL NEEDS, AND ADA INSTALLATIONS

- C. WC-C-Floor mounted ADA compliant.
 - 1. Acceptable Manufacturers:

- a. American Standard "Madera Right Height".
- b. Kohler "Highcliff".
- c. Zurn

WC-C (NEW CONSTRUCTION) AND WC-D (RENOVATION) ARE UM'S STANDARD FOR HOSPITAL PATIENT TOILET ROOMS

- D. WC-D: Floor mounted, back outlet, ADA compliant.
 - 1. Acceptable Manufacturers:
 - a. American Standard "Huron"
 - b. Kohler "Anglesey"
 - c. Sloan

SPEC EDITOR: FLOOR MOUNTED, TANK TYPE WATER CLOSETS ARE RARELY USED

- E. WC-E: Floor mounted, floor outlet, close coupled (gravity tank), vitreous china, ADA Compliant.
 - 1. Bowl:
 - a. Standards: ASME A112.19.2/CSA B45.1, ASME A112.19.5/CSA B45.15 and ASSE 1037/ASME A112.1060/CSA B125.16.
 - b. Bowl Type: Siphon jet.
 - c. Height: Handicapped/elderly.
 - d. Rim Contour: Elongated].
 - e. Water Consumption: 1.28 gpf.
 - f. Color: White.
 - 2. Toilet Seat: 1 in. high: Solid white plastic, open front, extended back, self-sustaining stainless steel bolts and hinges, molded-in bumpers, with cover. Acceptable Manufacturers:
 - a. Bemis.
 - b. Church.
 - c. Centoco
 - 3. Supply Fittings:
 - a. Standard: ASME A112.18.1/CSA B125.1.
 - b. Supply Piping: Chrome-plated-brass pipe or chrome-plated-copper tube matching water-supply piping size. Include chrome-plated wall flange.
 - c. Stop: Chrome-plated-brass, one-quarter-turn, ball-type or compression stop with inlet connection matching water-supply piping type and size.

2.3 WATER CLOSET FLUSH VALVES

SPEC EDITOR: THE BELOW DUAL FLUSH VALVE IS U-M'S STANDARD FOR APPLICATIONS WHERE RETROFITTING EXISTING WATER CLOSET CHINA.

- A. WC-FLV-A: Manual, dual flush valve. Chrome plated, exposed, diaphragm type, water closet flushometer. ASTM classified as semi-red brass alloy. Chloramine resistant synthetic rubber diaphragms/seals. With 1-1/2 inch top spud, escutcheons, seat bumper, integral screwdriver stop and vacuum breaker. ADA compliant.

1. Lifting Handle up initiates reduced flush 1.1 gpf eliminating liquid waste. Pushing handle down initiates full flush of 1.6 gpf eliminating all waste.
2. Provide metal wall plate etched with flushing instructions.

SPEC EDITOR: PIPE SUPPORT RING, BELOW, IS RECOMMENDED FOR HIGH USE AREAS, FOR EXAMPLE, RESIDENCE HALLS. BLOCKING SHOULD BE SPECIFIED FOR NON-MASONRY WALLS IF THIS PIPE SUPPORT IS SPECIFIED.

3. With flush valve manufacturers chrome plated split ring wall pipe support accessory.
4. Acceptable Manufacturers and Models:
 - a. Sloan "Uppercut".
 - b. Zurn "AquaVantage".

B. WC-FLV-B: Manual, single flush valve. Chrome plated, exposed, diaphragm type, water closet flushometer. ASTM classified as semi-red brass alloy. Chloramine resistant synthetic rubber diaphragms/seals. With 1-1/2 inch top spud, escutcheons, seat bumper, integral screwdriver stop and vacuum breaker. ADA compliant.

1. Pushing handle down initiates full flush of 1.28 gpf eliminating all waste.
2. Provide metal wall plate etched with flushing instructions.

SPEC EDITOR: PIPE SUPPORT RING, BELOW, IS RECOMMENDED FOR HIGH USE AREAS, FOR EXAMPLE, RESIDENCE HALLS. BLOCKING SHOULD BE SPECIFIED FOR NON-MASONRY WALLS IF THIS PIPE SUPPORT IS SPECIFIED.

3. With flush valve manufacturers chrome plated split ring wall pipe support accessory.
4. Acceptable Manufacturers and Models:
 - a. Sloan.
 - b. Zurn "AquaVantage".

SPEC EDITOR: THE BELOW FLUSH VALVE IS TYPICALLY USED FOR HOSPITAL PATIENT TOILET ROOMS.

C. WC-FLV-C: Manual, dual flush valve with bedpan washer. Chrome plated, exposed, diaphragm type, water closet flushometer, 1.6 gpm. With bedpan washer diverter assembly. Flush valve, bedpan washer and assembly shall be ASTM classified as semi-red brass alloy. Chloramine resistant synthetic rubber diaphragms/seals. With 1-1/2 inch top spud, escutcheons, seat bumper, integral screwdriver stop and vacuum breaker. ADA compliant.

1. Lifting handle up initiates reduced flush 1.1 gpf eliminating liquid waste. Pushing handle down initiates full flush of 1.6 gpf eliminating all waste.
2. Provide metal wall plate etched with flushing instructions.
3. Provide flush valve manufacturer's chrome plated split ring wall pipe support accessory.
4. Where clearance around wall mounted grab bar is needed, provide offset configuration of same model specified below.
5. Acceptable Manufacturers and Models:
 - a. Sloan "Uppercut" WES BPW 1000-1.6/1.1
 - b. Zurn
 - c. Kohler

d. Delany

SPEC EDITOR: THE BELOW AUTOMATIC FLUSH VALVE IS NOT PREFERRED & IS TYPICALLY NOT USED. ONLY USE AS DIRECTED & VERIFY COMPATIBILITY WITH FIXTURES

D. WC-FLV-D Flushometer Valves - Piston, Sensor Operated, Battery Powered

1. Minimum Pressure Rating: 125 psig.
2. Features: Include integral check stop and backflow-prevention device.
3. Material: Brass body with corrosion-resistant components.
4. Style: Exposed.
5. Exposed Flushometer-Valve Finish: Chrome-plated.

CAUTION: FLUSHOMETER-VALVE CONSUMPTION MUST MATCH THE WATER CONSUMPTION OF THE WATER-CLOSET BOWL. VERIFY THAT MANUFACTURER HAS SPECIFIC FLUSHOMETER VALVE FEATURE(S) PRIOR TO INCLUDING IN PROJECT.

6. Consumption: 1.28 gal per flush.
7. Minimum Inlet: NPS 1 (DN 25).
8. Minimum Outlet: NPS 1-1/4 (DN 32).

2.4 WATER CLOSET ACCESSORIES

A. WCS-A Standard Seat: 1 in. high: Solid white plastic, open front, extended back, self-sustaining stainless steel bolts and hinges, molded-in bumpers, without cover. Acceptable Manufacturers:

1. Bemis.
2. Church.
3. Centoco

B. WCS-B High Style ADA Seat: where required to meet ADA requirements; 2 in. high, solid white plastic, open front, extended back, self-sustaining stainless steel bolts and hinges, molded-in bumpers, without cover. Acceptable Manufacturers:

1. Bemis
2. Church
3. Centoco.

C. Water Closet Wall Carrier: Fully compatible with water closet installation, adjustable, high extension (barrier free), cast iron frame with integral drain hub and vent, lugs for floor and wall attachment and threaded fixture studs. Acceptable Manufacturers and Models:

1. Zurn.
2. Josam.
3. J.R. Smith.
4. Wade Drain.
5. Watts

2.5 URINALS - GENERAL:

A. Vitreous china with extended sides and 14 in. elongated rim. Color white unless noted otherwise. With wall hangers.

SPEC EDITOR: CLARIFY WHICH FLUSH VALVE IS TO BE USED WITH URINAL, EITHER THROUGH DRAWING SCHEDULE OR PROJECT SPECIFIC SPECIFICATION EDIT.

2.6 URINALS AND ACCESSORIES

- A. UR-A: Shall meet ASME A112.19.2 flush requirements at 0.125 gpf. Washout action. 3/4 inch top spud, 2-inch back spud. Vandal resistant outlet strainer.
 - 1. Acceptable Manufacturers:
 - a. American Standard "Washbrook FloWise".
 - b. Kohler "Bardon".
 - c. Zurn "The Pint".
 - d. Sloan
- B. Urinal Wall Carrier: Fully compatible with urinal installation. Cast iron or steel frame, complying with load and deflection requirements of ASME Standard A112.6.1M. Tubular legs, lugs for floor and wall attachment, threaded fixture studs and hardware for hanger and bearing plate. Acceptable Manufacturers and Models:
 - 1. Zurn.
 - 2. Josam.
 - 3. J.R. Smith.
 - 4. Wade Drain.

2.7 URINAL FLUSH VALVES

SPEC EDITOR: AUTOMATIC BATTERY OPERATED URINAL FLUSH VALVE IS U-M STANDARD.

- A. U-FLV-A: 0.125 gpf Sensor Activated Urinal Flush Valve. Chrome plated, exposed, diaphragm type, urinal flushometer. ASTM classified as semi-red brass alloy. Chloramine resistant synthetic rubber diaphragms/seals. With 3/4 inch top spud, escutcheons, integral screwdriver stop and vacuum breaker. ADA compliant. Infrared sensor, controls.
 - 1. Shall meet ASME A112.19.2 flush requirements at 0.125 gpf.
 - 2. Size AA size batteries, factory installed.
 - 3. Acceptable Manufacturers:
 - a. Sloan "ECOS".
 - b. Zurn "AquaSense".
 - c. Kohler 1/8 gpf touchless.

SPEC EDITOR: SELECT MANUAL URINAL FLUSH VALVE ONLY WHEN AUTHORIZED BY THE DESIGN MANAGER.

- B. U-FLV-B: Manual Urinal Flush Valve. Chrome plated, exposed, diaphragm type, urinal flushometer. ASTM classified as semi-red brass alloy. Chloramine resistant synthetic rubber diaphragms/seals. With 3/4 inch top spud, escutcheons, integral screwdriver stop and vacuum breaker. ADA compliant.
 - 1. Shall meet ASME A112.19.2 flush requirements at 0.125 gpf.
 - 2. Acceptable Manufacturers and models:
 - a. Sloan "Royal".
 - b. Zurn "AquaVantage".

SPEC EDITOR: LAVS AND SINKS AND ASSOCIATED FAUCETS ARE TYPICALLY PROVIDED IN THIS SECTION FOR TOILET ROOMS AND KITCHENS. SINKS AND FAUCETS ARE SPECIFIED FOR LAB CASEWORK IN A DIVISION 12 SECTION AND PIPED UNDER THIS SECTION. MODEL NUMBERS INDICATED ARE PARTIAL MODEL NUMBERS FOR STYLE ONLY. DESIGNER MUST EDIT THE BELOW TO MATCH LAVS WITH LAV FAUCETS; FOR PROJECTS WITH MULTIPLE LAV AND FAUCET STYLES THIS IS BEST DONE WITH A SCHEDULE ON THE DRAWINGS.

LAVS ARE ADA COMPLIANT IF INSTALLED IN COUNTERTOP OR MOUNTED ON WALL IN COMPLIANCE WITH ADA REQUIREMENTS.

2.8 LAVATORIES - GENERAL

- A. Lavatories: Vitreous china. Color white unless noted otherwise. With faucet ledge, overflow, and polished chrome plated brass strainer grid drain. ADA compliant.

2.9 LAV-A: COUNTERTOP LAVATORY (SINGLE CENTER FAUCET HOLE)

SPEC EDITOR: THE FOLLOWING BASIN IS TYPICALLY USED WITH FAUCET LF-A SENSOR FAUCET.

- A. LAV-A: Countertop Self-rimming Lavatory: Oval, single center faucet hole.
 - 1. Nominal overall: 20-3/8 in. wide by 17-3/8 in. front to back.
 - 2. Bowl: depth varies 6-8".
 - 3. Color: White
 - 4. Acceptable manufacturers and models:
 - a. American Standard "Aqualyn" 0475.
 - b. Crane "Galaxy" 1287.
 - c. Kohler "Bryant" K-2699.
 - d. Zurn Z5110 Series.
 - e. Sloan

2.10 LAV-B: COUNTERTOP LAVATORY (8-IN. CENTER FAUCET HOLES)

SPEC EDITOR: THE FOLLOWING BASIN IS TYPICALLY USED WITH FAUCET LF-B TWO HANDLED MANUAL FAUCET.

- A. LAV-B: Countertop Self-rimming Lavatory: Oval, three hole with 8-in. center faucet holes.
 - 1. Nominal overall: 20-3/8 in. wide by 17-3/8 in. front to back.
 - 2. Bowl: depth varies 6-8".
 - 3. Color: White
 - 4. Acceptable manufacturers and models:
 - a. American Standard "Aqualyn" 0475.
 - b. Crane "Galaxy" 1287.
 - c. Kohler "Bryant" K-2699.
 - d. Zurn Z5110 Series.

2.11 LAV-C: WALL MOUNTED LAVATORY (SINGLE CENTER FAUCET HOLE)

SPEC EDITOR: THE FOLLOWING BASIN IS TYPICALLY USED WITH FAUCET LF-A SENSOR FAUCET. KOHLER "KINGSTON" IS THE ONLY KOHLER SINK AVAILABLE WITH SPLASH SHIELDS, HAS A HIGH BACKSPLASH COMPARED TO COMPETITORS, AND HAS A DATED LOOK.

- A. LAV-C: Wall Mounted Lavatory D-shaped bowl: with single center faucet hole, self-draining deck area with contoured back and side splash shields.
 - 1. Nominal overall dimensions: 20-1/2 in. wide by 18-1/4 in. front to back.
 - 2. Bowl: depth varies 6-7".
 - 3. Color: White
 - 4. Acceptable manufacturers and models:
 - a. American Standard "Lucerne" 0356.
 - b. Kohler "Kingston".
 - c. Zurn Z5340 Series.

2.12 LAV-D: WALL MOUNTED LAVATORY (8-IN. CENTER FAUCET HOLES)

SPEC EDITOR: THE FOLLOWING BASIN IS TYPICALLY USED WITH FAUCET LF-B TWO HANDLED MANUAL FAUCET. ORDER FOUR HOLE VARIATION IF SOAP DISPENSER TO BE USED ON LAV DECK (INTEGRAL SOAP DISPENSER NOT PREFERRED AT U-M). KOHLER "KINGSTON" IS THE ONLY KOHLER SINK AVAILABLE WITH SPLASH SHIELDS, HAS A HIGH BACKSPLASH COMPARED TO THE COMPETITORS, AND HAS A DATED LOOK.

- A. LAV-D: Wall Mounted Lavatory, D-shaped bowl: three hole with 8 in. center faucet holes, self-draining deck area with contoured back and side splash shields.
 - 1. Nominal overall dimensions: 20-1/2 in. wide by 18-1/4 in. front to back.
 - 2. Bowl: depth varies 6-7".
 - 3. Color: White
 - 4. Acceptable manufacturers and models:
 - a. American Standard "Lucerne" 0356.
 - b. Kohler "Kingston".
 - c. Zurn Z5340 Series.

SPEC EDITOR: THE FOLLOWING BASIN IS TYPICALLY USED WITHIN HOSPITAL PATIENT TOILET ROOMS AND STAFF TOILET ROOMS, IN COMPLIANCE WITH INFECTION PREVENTION REQUIREMENTS. PAIR WITH MANUAL FAUCET TYPE LF-C.

2.13 LAV-E: WALL MOUNTED LAVATORY (4-IN CENTER FAUCET HOLES)

- A. LAV-E: Wall mounted vitreous china lavatory D-shaped bowl with single center faucet hole, self-draining deck area with contoured back and side splash shields, no-overflow hole.
 - 1. Nominal overall dimensions: 21" wide by 18" front to back.
 - 2. Bowl: 6-1/2" deep.
 - 3. Color: White
 - 4. Acceptable manufacturers and models:
 - a. American Standard "Lucerne" 0355.912

- b. Kohler "Greenwich" (no overflow hole)
- c. Zurn

2.14 LF-A: LAVATORY FAUCET (SENSOR OPERATED)

SPEC EDITOR: AUTOMATIC FAUCET IS UNIVERSITY STANDARD IN PUBLIC TOILET ROOMS.

SPEC EDITOR: MODEL NUMBERS INDICATED ARE PARTIAL MODEL NUMBERS FOR STYLE ONLY. FEATURES LISTED BELOW REPRESENT THOSE FOUND IN A QUALITY COMMERCIAL FAUCET. THEREFORE, IF ALTERNATE STYLES ARE BEING CONSIDERED, THEY SHOULD PROVIDE THE SAME FEATURES. U-M PREFERS SOLID BRASS FAUCETS FOR VANDAL RESISTANCE; NOTE THAT SOME MFR.'S METAL FAUCETS ARE NOT BRASS.

- A. LF-A Lavatory Faucet: Automatic sensor activated hand washing faucet, battery powered. Polished chrome plated solid brass construction. ADA compliant. With trim.
 - 1. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as ≤ 0.25% weighted average lead content.
 - 2. Nominal spout height: varies 5-5/8 to 6-1/2 in.
 - 3. For use in single hole lavatory.

SPEC EDITOR: THE BASE PLATE REQUIREMENT FOR THE STYLES BELOW IS SO THAT ALL MFR.'S MODELS LOOK SIMILAR. NOTE THAT SLOAN EBF-85 HAS AN INTEGRAL BASE PLATE WHICH CAN'T BE OMITTED.

- 4. Chrome/brass trim plate base for 4 in. faucet centers.
- 5. Serviceable filtered solenoid valve.
- 6. Batteries included, factory installed.
- 7. 0.5 gpm vandal resistant spray head with pressure compensating flow control.
- 8. Trim: Rigid supplies with metal handled stops, flat grid strainer, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.
- 9. Acceptable manufacturers and models:
 - a. Sloan Model Optima EBF-85.
 - b. American Standard "Selectronic" 6055.
 - c. Zurn AquaSense Z6913, or Aqua FIT Z6950-XL-S
 - d. Chicago Faucets

2.15 LF-B: LAVATORY FAUCET (TWO HANDLED MANUAL, 8" CENTERS)

SPEC EDITOR: MANUAL FAUCET BELOW IS FOR AREAS WHERE AUTOMATIC LAV FAUCETS ARE NOT DESIRED. SPECIFIED FAUCET IS UNDER-MOUNT (CONCEALED) "WIDESPREAD" (8" FAUCET CENTERS) TYPE SUITABLE FOR USE WITH LAVATORIES OR COUNTERTOP MOUNTED SINKS. NOTE THAT A GRID DRAIN IS SPECIFIED; MODIFY DESCRIPTION IF A POP-UP DRAIN IS REQUIRED.

SPEC EDITOR: MODEL NUMBERS INDICATED ARE PARTIAL MODEL NUMBERS FOR STYLE ONLY. FEATURES LISTED BELOW REPRESENT THOSE FOUND IN A QUALITY COMMERCIAL FAUCET. THEREFORE, IF ALTERNATE STYLES ARE BEING CONSIDERED, THEY SHOULD PROVIDE THE SAME FEATURES. U-M

PREFERS SOLID BRASS FAUCETS FOR VANDAL RESISTANCE; NOTE THAT SOME MFR.S METAL FAUCETS ARE NOT BRASS.

- A. LF-B Lavatory Faucet: Polished chrome plated brass valves, spout, handles, spray head. Concealed (under-mount) body. ADA compliant. With trim.
1. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as \leq 0.25% weighted average lead content.

SPEC EDITOR: EDIT FLAT GRID STRAINER TO POP-UP DRAIN, IF POP-UP REQ'D.

2. Chrome plated brass flat grid strainer.
3. Center of body to center of spout: 4" minimum.
4. Lever style handles, with hot and cold color indicators and vandal resistant mounting screws.
5. 8" rigid valve body centers (flexible tubing connections between valves and spout not allowed).
6. 0.5 gpm vandal resistant spray head.
7. Ceramic disc valve cartridges.
8. Trim: Rigid supplies with metal handled stops, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.
9. Acceptable manufacturers and models:
 - a. American Standard "Reliant"
 - b. Moen "8413"
 - c. Chicago 404 (for grid) with curved lever handles.

SPEC EDITOR: MANUAL FAUCET BELOW IS FOR HOSPITAL PATIENT AND/ OR STAFF STAFF TOILET LAVATORY, IN COMPLIANCE WITH INFECTION PREVENTION REQUIREMENTS.

2.16 LF-C: LAVATORY FAUCET (TWO HANDLED MANUAL, 4" CENTERS)

- A. LF-C Lavatory Faucet: Healthcare handwashing. Polished chrome plated brass valves, spout and handles. Deck mounted gooseneck spout with two-handle wrist blade control. ADA compliant. With trim.
1. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as \leq 0.25% weighted average lead content.
 2. Faucet shall not discharge directly over fixture drain strainer.
 3. Center of body to center of spout: 6" minimum.
 4. Lever style handles, with hot and cold color indicators and vandal resistant mounting screws.
 5. 4" rigid valve body centers (flexible tubing connections between valves and spout not allowed).
 6. 1.0 gpm laminar flow control in base of gooseneck spout.

SPEC EDITOR: SELECT EITHER 6" OR 4-1/2" GOOSENECK SPOUT SO THAT FAUCET DOES NOT DISCHARGE OVER GRID STRAINER. COORDINATE WITH SINK DIMENSIONS. EDIT BELOW AND MODEL NUMBER ACCORDINGLY

7. Heavy duty 6" gooseneck with smooth end (no threads or means to attach an aerator).
8. Ceramic disc valve cartridges.

9. Trim: Chrome plated brass flat grid strainer. Rigid supplies with metal handled stops, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.
10. Acceptable manufacturers and models:
 - a. American Standard
 - b. Delta 27C4974
 - c. Moen
 - d. Chicago

2.17 LAVATORY SUPPORT SYSTEMS

SPEC EDITOR: SELECT EITHER OR BOTH SUPPORT SYSTEMS LISTED BELOW. GENERALLY, USE WALL MOUNTING BRACKET (LOWER COST) IN LIEU OF CARRIER, EXCEPT WHERE WALL FRAMING CANNOT SUPPORT THE LOAD OF THE LAVATORY (DRYWALL, ETC).

- A. Wall Mounting Bracket: Steel bearing plate anchored to wall, furnished by lavatory manufacturer. Use at masonry walls only.
- B. Wall Mounted Concealed Carrier Arms: cast iron and steel frame with tubular legs, lugs for floor and wall attachment, concealed arm supports, bearing plate and studs. Use at all walls except masonry type. Acceptable manufacturers:
 1. Josam.
 2. J.R. Smith.
 3. Wade.
 4. Zurn.
 5. Watts

2.18 SINK-A: COUNTERTOP (SINGLE BOWL STAINLESS STEEL SELF-RIMMING)

SPEC EDITOR: SINK-A IS USED FOR KITCHENETTES/ COFFEE ROOMS WITH SINGLE BOWL SINK. USE SWING ARM FAUCET WITH SIDE SPRAY. NOTE THAT SIDE SPRAY 6" HOLE CENTER HAS BEEN SPECIFIED TO ACCOMMODATE ADA LEVER HANDLES.

- A. Sink-A: Countertop Single Bowl: Type 304 stainless steel, 18 gauge, self-rimming, chrome plated brass drain/removable strainer, sound deadening coating, with mounting clamps.
 1. Nominal overall dimensions 22 in. long by 25 in. wide by 6 in. deep.
 2. 4 faucet holes, three holes on 4-in. centers, forth on nominal 6" center to accommodate side spray.
 3. Acceptable manufacturers and models:
 - a. Elkay "Lustertone"
 - b. Kohler "Toccata."
 - c. Just "SL" Series.

2.19 SINK-B: COUNTERTOP (DOUBLE BOWL STAINLESS STEEL SELF-RIMMING)

SPEC EDITOR: SINK-B IS USED FOR KITCHENETTES/ COFFEE ROOMS. USE SWING ARM FAUCET WITH SIDE SPRAY. NOTE THAT SIDE SPRAY 6" HOLE CENTER HAS BEEN SPECIFIED TO ACCOMMODATE ADA LEVER HANDLES.

- A. Sink-B: Countertop Double Bowl: Type 304 stainless steel, 18 gauge, equal compartment size, self-rimming, (2) chrome plated brass drains/removable strainers (delete (1) if sink equipped with disposer), sound deadening coating, with mounting clamps.
1. Nominal overall dimensions. 22 in. long by 33 in. wide by 6 in. deep.
 2. 4 faucet holes, three holes on 4-in. centers, forth on nominal 6" center to accommodate side spray.
 3. Acceptable manufacturers and models:
 - a. American Standard "Colony".
 - b. Elkay "Lustertone."
 - c. Kohler "Toccata"
 - d. Just "DL" Series

2.20 SINK-C: COUNTERTOP (SMALL SINGLE BOWL SS SELF-RIMMING)

SPEC EDITOR: SINK-C IS USED FOR SMALLER SCALE KITCHENETTES/ COFFEE ROOMS. USE SWING ARM FAUCET WITHOUT SIDE SPRAY. NOT TYPICALLY AVAILABLE IN 18 GA.

- A. Sink-C: Countertop Single Bowl: Type 304 stainless steel, self-rimming, chrome plated brass drain/removable strainer, sound deadening coating, with mounting clamps.
1. Nominal overall dimensions: 15 in. long by 15 in. wide by 6 in. deep.
 2. 2 faucet holes on 4-in. centers.
 3. Acceptable manufacturers and models:
 - a. Kohler "Toccata."
 - b. Elkay "Celebrity."
 - c. American Standard "Colony".

2.21 SINK-D: COUNTERTOP (INTEGRAL)

SPEC EDITOR: THE FOLLOWING PARAGRAPH DESCRIBES ARCHITECTURALLY SPECIFIED BOWLS SUCH AS CORIAN SINK BOWL INTEGRAL WITH COUNTERTOP. COORDINATE WITH ARCHITECTURAL WORK.

SPEC EDITOR: AN INTEGRAL SOLID SURFACE SINK BOWL (WITH OFFSET STRAINER), COUNTER, BACKSPLASH AND SUPPORT IS THE STANDARD FOR ALL HOSPITAL PATIENT CARE HANDWASHING INSTALLATIONS. COORDINATE WITH ARCHITECTURAL WORK.

- A. Sink-D: Countertop Sink and countertop shall be provided by architectural (general) trades and specified in another Section.

SPEC EDITOR: SINK-E IS USED FOR HOSPITAL APPLICATIONS WHERE AN INTEGRAL SINK IS NOT UTILIZED, REVIEW APPLICATION WITH HOSPITAL ENGINEERING. MINIMUM SIZE FOR HANDWASHING SINKS SHALL BE 16" X 14" X 6-1/2". A/E TO SCHEDULE REQUIRED SINK DIMENSION BASED ON PROJECT NEEDS. COORDINATE FAUCET HOLE REQUIREMENTS BASED ON USE

OF WRISTBLADES (8" CENTERS) VS FOOTPEDALS (SINGLE CENTERED HOLE FOR SPOUT).

2.22 SINK E: UNDERMOUNT (SINGLE BOWL STAINLESS STEEL)

- A. Sink-E: Undermount Single Bowl: Type 304 stainless steel, 18 gauge, undermount, coved corners, rear left or right offset strainer outlet (not centered across width of bowl), chrome plated brass drain/removable strainer, sound deadening coating, with mounting clamps.
1. Nominal overall dimensions: refer to drawings.
 2. 3 faucet holes. 8-inch centers.
 3. Faucet Type: SF-C
 4. Acceptable manufacturers and models:
 - a. Elkay "Lustertone"
 - b. Just "US" Series

SPEC EDITOR: SINK-F IS USED FOR HOSPITAL APPLICATIONS WHERE A FREE-STANDING, WALL HUNG HANDWASHING SINK IS NEEDED. PROVIDE WITH HEALTHCARE HANDWASHING SINK FAUCET SF-C OR SF-D, COORDINATE 4" OR 8" CENTERS. WHERE APPLICATIONS REQUIRE INCORPORATING AN EYE WASH, USE COMBINATION EMERGENCY EYE WASH/ FAUCET, EEWS-C

2.23 SINK F: WALL-HUNG, HEALTHCARE HANDWASHING

- A. Sink-F: Wall-hung Single Bowl: Non-porous, fully welded and seam free solid surface polymer material with antimicrobial protection. Sink shall have a deep internal sloping basin, offset sink grid strainer drain and no overflow. Provide with integral side & rear splash guards, made from same material as sink, and one-piece formed stainless steel or solid surface polymer trap cover w/ stainless steel mounting hardware. Provide with mounting carrier.
1. Nominal overall dimensions: approx. 22"x22"x 29"H.
 2. 3 faucet holes. 4-inch centers.
 3. Faucet Type: SF-C
 4. Acceptable manufacturers and models:
 - a. Whitehall "4151"
 - b. Willoughby "WICS-2222"

SPEC EDITOR: SERVICE SINKS ARE USED IN MECHANICAL ROOMS AND JANITOR CLOSETS. SS-A IS FOR HEAVY DUTY LOCATIONS SUCH AS CHILLER AND BOILER ROOMS. SS-C IS FOR LIGHT DUTY LOCATIONS.

2.24 SS-A: SERVICE SINK (C.I. WALL MOUNTED)

- A. SS-A: Wall mounted, concealed support, enameled cast iron, perforated grid strainer drain, with cast iron drain/trap.
1. Nominal 22 in. wide by 18- in. front to back by 9 in. high back by 11-1/4 in. high bowl.
 2. Drilled back with 2 holes on 8 -in. centers.
 3. Rim guard of stainless steel or chrome-plated brass on three sides.
 4. Acceptable manufacturers and models:
 - a. American Standard "Lakewell" Model 7692.008.
 - b. Kohler "Bannon" Model K-6714 and 44602 rim guard.

- c. Zurn Z5898.
- B. Cast iron P-trap with integral removable strainer, adjustable mounting foot, threaded brass cleanout plug. Supplied by sink manufacturer.

2.25 SS-B: SERVICE SINK (C.I. FLOOR MOUNTED CUSTODIAL)

- A. SS-B: Floor mounted, enameled cast iron, corner model, strainer/drain, and vinyl-coated removable rim guard.
 - 1. Nominal 28 in. wide by 28 in. long by 13 in. high at walls and 8 in. high rim at room side.
 - 2. Acceptable manufacturers and models:
 - a. American Standard "Florwell" Model 7745.811 with removable vinyl rim guard and flat grid drain 7721.038.
 - b. Kohler K-6710 "Whitby" service sink with K-8940 Coated wire rim guard.
 - c. Zurn Z5850-RG with removable vinyl-coated rim guard.
- B. Perforated flat grid strainer drain, polished chrome solid brass.

2.26 SS-C: SERVICE SINK (MOLDED FLOOR MOUNTED UTILITY)

- A. SS-C: Floor mounted, fabricated from compression molded resin material with integral drain connection. Integral molded self-draining faucet ledge and 4 in. centered faucet holes.
 - 1. Overall nominal outside dimensions at top of tub 23 in. by 23 in. by 13 in. tub depth. Nominal 20-gallon capacity.
 - 2. 4 angular steel legs with levelers.
 - 3. Acceptable manufacturers and models:
 - a. The Swan Corporation Model MF-1F.
 - b. E.L. Mustee and Sons Model 17F

2.27 SF-A SINK FAUCET (SWING GOOSENECK W/SIDE SPRAY)

SPEC EDITOR: MODEL NUMBERS INDICATED ARE PARTIAL MODEL NUMBERS FOR STYLE ONLY. FEATURES LISTED BELOW REPRESENT THOSE FOUND IN A QUALITY COMMERCIAL FAUCET. THEREFORE, IF ALTERNATE STYLES ARE BEING CONSIDERED, THEY SHOULD PROVIDE THE SAME FEATURES. U-M PREFERS SOLID BRASS FAUCETS FOR VANDAL RESISTANCE; NOTE THAT SOME MFR.S METAL FAUCETS ARE NOT BRASS.

SPEC EDITOR: USE FAUCET SF-A WITH COUNTERTOP SINK-A AND B. COULD ALSO BE USED WITH SINK-D.

- A. SF-A Faucet: Polished chrome plated brass valves, spout, handles, aerator. Concealed (under-mount) body. ADA compliant. With trim.
 - 1. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as \leq 0.25% weighted average lead content.
 - 2. Gooseneck swing spout with side spray.
 - 3. 8" minimum center of body to spout center. Minimum 12" high spout.
 - 4. Lever style handles, with hot and cold color indicators and vandal resistant mounting screws.
 - 5. 8" rigid valve body centers (flexible tubing connections between valves and spout not allowed).

6. With aerator, maximum flow rate of 1.5 gpm.
7. Ceramic disc valve cartridges.
8. Trim: Rigid supplies with metal handled stops, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.
9. Acceptable manufacturers and models:
 - a. American Standard "Colony" with No. 550 lever handles and side spray.
 - b. Moen "M-Dura"
 - c. Chicago Faucets 200 (base/spout) with curved lever handles.

2.28 SF-B SINK FAUCET (SWING GOOSENECK, 4" CENTERS, NO SIDE SPRAY)

SPEC EDITOR: MORE COMPACT FAUCET SF-B FOR USE WITH SINK-C.

- A. SF-B Faucet: Polished chrome plated brass valves, spout, handles, aerator. Deck mount. ADA compliant. With trim.
 1. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as \leq 0.25% weighted average lead content.
 2. Gooseneck swing spout.
 3. 5" minimum center of body to spout center. Nominal 11" high spout.
 4. Lever style handles, with hot and cold color indicators and vandal resistant mounting screws.
 5. 4-inch centers.
 6. With aerator, maximum flow rate of 1.5 gpm
 7. Ceramic disc valve cartridges.
 8. Trim: Rigid supplies with metal handled stops, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.
 9. Acceptable manufacturers and models:
 - a. American Standard "Colony" with No. 550 lever handles and side spray.
 - b. Moen "M-Dura"
 - c. Chicago Faucets 895 (base/spout) with lever handles.

SPEC EDITOR: MANUAL FAUCETS SF-C & SF-D BELOW ARE FOR HOSPITAL PATIENT CARE HANDWASHING USE, IN COMPLIANCE WITH INFECTION PREVENTION REQUIREMENTS. SF-C WRISTBLADE CONTROL IS STANDARD, SF-D FOOT PEDAL CONTROL IS BASED ON USER REQUEST. FAUCET IS TYPICALLY PAIRED WITH AN INTEGRAL SOLID SURFACE SINK WITH OFFSET OUTLET PROVIDED BY ARCHTECTORAL TRADES, IE SINK-D.

2.29 SF-C: HOSPITAL HANDWASHING SINK FAUCET (GOOSENECK WITH WRISTBLADES)

- A. SF-C Faucet: Polished chrome plated brass valves, spout and handles. Concealed deck mount, gooseneck spout with two-handle wrist blade control. ADA compliant. With trim.
 1. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as \leq 0.25% weighted average lead content.

2. Faucet shall not discharge directly over fixture drain strainer.
3. Center of body to center of spout: 8" minimum.
4. Lever style handles, with hot and cold color indicators and vandal resistant mounting screws.

SPEC EDITOR: SELECT EITHER 8" OR 4" VALVE BODY CENTERS, IN COORDINATION WITH SINK TYPE. EDIT BELOW AND MODEL NUMBER ACCORDINGLY.

5. 8" rigid valve body centers (flexible tubing connections between valves and spout not allowed).
6. 1.0 gpm laminar flow control in base of gooseneck spout.

SPEC EDITOR: SELECT GOOSENECK SPOUT SO THAT FAUCET DOES NOT DISCHARGE OVER GRID STRAINER AND TO LIMIT SPLASHING. COORDINATE WITH SINK DIMENSIONS. EDIT BELOW AND MODEL NUMBER ACCORDINGLY.

7. Heavy duty, fixed position 8" gooseneck with smooth end (no threads or means to attach an aerator).
8. Ceramic disc valve cartridges.
9. Trim: Chrome plated brass flat grid strainer. Rigid supplies with metal handled stops, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.
10. Acceptable manufacturers and models:
 - a. American Standard
 - b. Delta
 - c. Moen
 - d. Chicago 786-GN8FCABCP

2.30 SF-D HOSPITAL HANDWASHING SINK FAUCET (GOOSENECK WITH FOOT PEDALS)

A. SF-D Faucet: Polished chrome plated brass valves, spout and pedals. Concealed deck mount, gooseneck spout with dual foot pedal control. ADA compliant. With trim.

1. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as ≤ 0.25% weighted average lead content.
2. Faucet shall not discharge directly over fixture drain strainer.
3. Center of body to center of spout: 8" minimum.

SPEC EDITOR: BASED ON WALL MOUNTED EXTENDED PEDALS. IF SHORT PEDAL BOX FOR MOUNTING ON MILLWORK BELOW SINK IS DESIRED, EDIT BELOW AND MODEL # ACCORDINGLY.

4. Extended, chrome plated pedals for wall mounting, with hot and cold indicators, NAIAD metering fast cycle time closure cartridges for immediate shut-off, locking feature to keep pedals in raised position. Flexible tubing connections between valves and spout not allowed.
5. 1.0 gpm laminar flow control in base of gooseneck spout.

SPEC EDITOR: SELECT GOOSENECK SPOUT SO THAT FAUCET DOES NOT DISCHARGE OVER GRID STRAINER AND TO LIMIT SPLASHING. COORDINATE WITH SINK DIMENSIONS. EDIT BELOW AND MODEL NUMBER ACCORDINGLY.

6. Heavy duty, fixed position 8" gooseneck with smooth end (no threads or means to attach an aerator).
7. Ceramic disc valve cartridges.
8. Trim: Chrome plated brass flat grid strainer. Rigid supplies with metal handled stops, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.
9. Acceptable manufacturers and models:
 - a. American Standard
 - b. Delta
 - c. Moen
 - d. Chicago GN8 gooseneck with 834-EPABCP extended footpedals

2.31 SSF-A SERVICE SINK-FAUCET (SINK WALL MOUNT)

SPEC EDITOR: USE SERVICE SINK-FAUCET SSF-A WITH SERVICE SINKS SS-A. SSF-A IS FOR MOUNTING ON VERTICAL SURFACE OF SINK BACK.

- A. SSF-A: Utility Faucet: For mounting on vertical surface of sink back. Rough or polished chrome plated brass body, spout, handles. ADA compliant.
 1. Metal lever handles with hot and cold indicators.
 2. Compression or ceramic disc valve cartridges.
 3. Integral vacuum breaker.
 4. 8" centers.
 5. Spout with 3/4 in. threaded hose end.
 6. 3 ft. hose with one end a 3/4 in. threaded brass conn.
 7. Minimum 5" wall-to-spout projection.
 8. Acceptable manufacturers and models:
 - a. American Standard Model 8350
 - b. Chicago Faucets 540.
 - c. Zurn AquaSpec Z842L1-RC

2.32 SSF-B SERVICE SINK-FAUCET (WALL MOUNT)

SPEC EDITOR: USE SERVICE SINK-FAUCET SSF-B WITH SERVICE SINKS SS-B.

- A. SSF-B: Wall-Mount Utility Faucet: Chrome plated brass valves, spout, handles. ADA compliant.
 1. Metal lever handles with hot and cold indicators.
 2. Ceramic disc valve cartridges.
 3. Vacuum breaker.
 4. Wall-to-spout brace.
 5. Integral check valves to prevent cross-flow.
 6. Offset adjustable shanks capable of adjustment to 8" centers.
 7. Spout with 3/4 in. threaded hose end and bucket hook.
 8. Minimum 9" wall-to-spout projection.
 9. Acceptable manufacturers and models:
 - a. American Standard Model 8354
 - b. Chicago Faucets 540.
 - c. Zurn AquaSpec Z843M1-RC

2.33 SSF-C SERVICE SINK-FAUCET (4" CENTER DECK MOUNT)

SPEC EDITOR: USE SERVICE SINK-FAUCET SSF-C WITH SERVICE SINK SS-C.

- A. SSF-C Deck-Mount Utility Faucet: Chrome plated brass valves, spout, handles. ADA compliant.
1. 4 in. centers.
 2. Metal lever handles with hot and cold indicators.
 3. Ceramic disc valve cartridges.
 4. 6" minimum center of body to spout center.
 5. Swivel spout with 3/4 in. threaded hose end and in-line or integral vacuum breaker.
 6. Acceptable manufacturers and models:
 - a. Chicago 891.
 - b. Zurn Z812N1.

2.34 SCRUB SINK

SPEC EDITOR: SCRUB SINK IS FOR USE IN HOSPITAL FACILITIES. DO NOT PROVIDE WITH INTEGRAL SOAP DISPENSERS, AS MICH MEDICINE WILL INSTALL WALL MOUNTED DISPENSERS. COORDINATE WITH SURGICAL STAFF ON USE OF SPLASH SCREEN DIVIDERS, WHICH ARE TYPICALLY NOT REQUIRED. ELECTRONIC INFRARED SENSOR FACUET IS STANDARD, DO NOT SPECIFY KNEE OPERATED OR DIGITALLY TIMED FAUCETS. EYEWASH UNITS ARE TYPICALLY NOT REQUIRED, CONSULT WITH UM SAFETY MANAGEMENT SERVICES (SMS) WHERE REQUIRED. IF REQUIRED, PROVIDE SEPARATE, DEDICATED EYEWASH UNIT COMPIANT WITH ANSI STANDARDS. DO NOT INTEGRATE EYEWASH AND HANDWASHING.

- A. SCRUB-A: 16-gauge (min) 304 stainless steel anti-splash tub with horizontal and vertical 0.25" radius coved corners, fully welded and polished to #4 finish, underside sound deadened. 18-gauge (min) 304 stainless steel outer enclosure with removable stainless steel access panels. Stainless steel shall conform to ASTM A240.
1. Factory pre-piped with thermostatic, pressure balancing, anti-scald mixing valve to allow manual adjustment of temperature up to 115°F at each station. Valve shall conform to requirements stated under THERMOSTATIC MIXING VALVE - HAND WASHING FACILITIES, "Mixing Valve Specifications". Provide with chrome plated brass adjustment handle mounted on backsplash control panel. All piping shall be concealed behind enclosure with maintenance access.

SPEC EDITOR: COORDINATE NUMBER OF STATIONS REQUIRED AND DIMENSION OF COMPLETE UNIT.

2. Stations: 2
3. Dimensions: 64" wide x 27" front to back.
4. Provide each station with an electronic infrared sensor-operated, laminar (non-rose spray) flow faucet set to flow tempered water with presence of operator within range of sensor, with time delay off. Provide with internally piped and wired solenoid valve, control module and 24VAC transformer for hard-wiring.
5. Provide with 2" drain with stainless steel flat grid strainer, one per station.

6. Provide with wall bracket(s) for installation on masonry wall. Provide chair carrier for all non-masonry wall installations.
7. Provide with integral digital timer, one per station, set to begin and stop with water flow.
8. Acceptable manufacturers and models:
 - a. Steris AMSCO Flexmatic
 - b. Continental Metal Products
 - c. LogiQuip

2.35 UNDERSINK WASTE AND SUPPLY PIPE GUARDS

SPEC EDITOR: PROVIDE UNDER SINK PROTECTIVE INSULATION FOR ADA COMPLIANT WALL MOUNTED LAVATORIES

- A. Provide ADA compliant undercounter protective covers on all supply and waste piping at barrier free lavatories. Covers shall be UV protected PVC, with reusable fastening system. Provide product type designed for the specific piping material over which it will be applied.
 1. Acceptable manufacturers and models:
 - a. Zurn.
 - b. IPS Corporation Truebro.

SPEC EDITOR: CENTRAL DOMESTIC WATER MIXING VALVES ARE NOT INCLUDED IN THIS SPECIFICATION BECAUSE THEY NEED TO BE SELECTED SPECIFICALLY FOR PROJECT CONDITIONS IF THEY ARE TO WORK PROPERLY. IF SUCH A VALVE IS REQUIRED THE DESIGNER SHOULD CAREFULLY SELECT AN APPROPRIATE MODEL AND ADD IT TO THIS SPECIFICATION.

2.36 THERMOSTATIC MIXING VALVE - HAND WASHING FACILITIES

- A. The Michigan Plumbing Code section 607.1 (2) (h) has been modified by local rule as follows:
 1. A ASSE 1070 mixing valve (water temperature limiting device) is permitted to control up to 5 accessible plumbing fixtures within the same room. The ASSE 1070 mixing valve shall be certified for a minimum flow rate of 0.5 gpm or less.
- B. Provide a thermostatic mixing valve at all public lavatories including at accessible plumbing fixtures. A maximum of 5 faucets within the same room may be served by 1 mixing valve.
 1. At other locations identified in the Michigan Plumbing Code, provide individual water temperature limiting devices (thermostatic mixing valves) to individual fixtures.
- C. Provide mixing valves based on the following selection criteria:
 1. Mixing valve serving a single fixture: Valve pressure drop shall not exceed 5 psi at 1 gpm flow rate.
 2. Mixing valve serving 2-5 fixtures: Valve pressure drop shall not exceed 5 psi at 4.0 gpm flow rate.
- D. Mixing valve specification:
 1. Manually adjustable thermostatically controlled domestic water tempering valve.
 2. ASSE 1070 listed to control down to 0.5 GPM flow rate.

3. All bronze or brass body, rough finish, chrome plated if exposed. Brass and stainless steel internal components.
4. Chloramine resistant seals.
5. Integral check valves and stainless steel strainers (screens) in hot and cold water inlet connections.
6. Tamper resistant temperature adjustment handle.
7. Union with male or female NPT connections, or compression fittings.
8. Valves shall operate properly:
 - a. At supply pressures between 20 PSIG and 125 PSIG.
 - b. With up to 20 percent pressure differential between hot and cold water supplies.
9. Outlet temperature shall be adjustable to within 10 deg. F of inlet hot water temperature.
10. Hot inlet operating range: 120-180 deg. F.
11. Lower temperature adjustment range: not more than 95 deg. F.
12. Upper temperature adjustment range: not more than 140 deg. F.

E. Acceptable manufacturers and models:

1. Powers Hydroguard.
2. Symmons Maxline.
3. Wilkins Aqua-Gard.

2.37 SHOWER HEADS, SHOWER CONTROL VALVES, AND TRIM

SPEC EDITOR: SELECT SH-A AND/OR SH-B TO SUIT PROJECT

A. SH-A: ADA Shower System: Including chrome plated brass supply ell, wall flange, and 30-inch slide bar. Chrome plated brass handheld shower head with on/off control having non positive shut off, chrome plated brass swivel cradle with adjusting knob, (min.) 69 in. chrome plated stainless steel hose, in line vacuum breaker. Shower head flow rate 1.5 gpm. All components shall be ADA compliant. Shower head shall be compatible with shower control valve range. Acceptable manufacturers:

1. American Standard.
2. Chicago Faucet.
3. Speakman.
4. Symmons.
5. Kohler.

B. SH-B Shower Head: Chrome plated brass shower head, shank, and ball joint. 1.5 GPM flow rate. Spray adjusting side handle. Shower head shall be compatible with shower control valve range. Acceptable manufacturers and models:

1. American Standard.
2. Chicago Faucet.
3. Speakman.
4. Symmons.
5. Kohler.

SPEC EDITOR: U-M HOUSING TYPICALLY USES A SYMMONS MODEL 4-500 "SAFETYMIX" SHOWER CONTROL VALVE IN A SYMMONS "HYDAPIPE" HOUSING. FOR HOUSING PROJECTS VERIFY IF THE AFOREMENTIONED SYMMONS SHOWER ASSEMBLY IS REQUIRED, AND REVISE BELOW ACCORDINGLY.

SPEC EDITOR: HOSPITAL PROJECTS SHALL ONLY EMPLOY COMBINATION BALANCED PRESSURE/THERMOSTATIC SHOWER VALVES, REVISE BELOW ACCORDINGLY.

- C. Shower Control Valve, for SH-A & SH-B (including tub/shower combination valves): Balanced pressure, thermostatic, or combination balanced pressure/thermostatic valve. ADA compliant.
1. Vandal resistant chrome plated brass face plate, single handle, and tub spout (provide 4-port valve, diverter, and spout for bathtub applications).
 2. Brass body mixing valve with integral check stops, for concealed piping connections, capable of back-to-back installation.
 3. Adjustable limit stop factory set to 110 deg. F (120 deg. F max adjustment).
 4. Shall provide anti-scald protection and temperature regulation at inlet pressures as low as 20 psig (flowing), at flows from 1.5 gpm, at supply temperatures from 40 deg. F to 160 deg. F.
 5. Minimum static pressure rating: 125 psig.
 6. Acceptable manufacturers and models:
 - a. American Standard.
 - b. Chicago Faucet.
 - c. Speakman.
 - d. Symmons.
 - e. Kohler.
 - f. Powers.

SPEC EDITOR: PATIENT BATHROOMS WITHIN HOSPITAL PROJECTS TYPICALLY REQUIRE BOTH A HANDHELD & FIXED SHOWER HEAD INSTALLATION. INCLUDE BELOW ACCORDINGLY.

- D. SS-H Shower System: Shower control valve, fixed shower head, handheld shower head, diverter valve & trim. ADA. Supplied as a complete matching system by a single manufacturer.
1. Chrome plated brass fixed shower head, shank and trim. Provide with matching handheld shower head, including chrome plated brass supply ell, wall flange, and 30-inch slide bar. Chrome plated brass handheld shower head with on/off control having non-positive shut-off, chrome plated brass swivel cradle with adjusting knob, (min.) 69 in. chrome plated stainless steel hose, in line vacuum breaker. Shower head flow rate 2.5 gpm. All components shall be ADA compliant. Shower head shall be compatible with shower control valve range.
 2. Shower Control Valve (including tub/shower combination valves): Combination balanced pressure/thermostatic valve. ADA compliant.
 - a. Vandal resistant chrome plated brass face plate, single handle.
 - b. Brass body mixing valve with integral check stops, for concealed piping connections, capable of back-to-back installation.
 - c. Adjustable limit stop factory set to 110 deg. F (120 deg. F max adjustment).
 - d. Shall provide anti-scald protection and temperature regulation at inlet pressures as low as 20 psig (flowing), at flows from 1.5 gpm, at supply temperatures from 40 deg. F to 160 deg. F.
 - e. Minimum static pressure rating: 125 psig.

3. Provide a matching chrome-plated brass diverter valve meeting shower control valve requirements stated herein.
4. Acceptable manufacturers and models:
 - a. American Standard
 - b. Chicago Faucet
 - c. Speakman SM-5460-E-15
 - d. Symmons
 - e. Kohler
 - f. Powers "HydroGuard T/P Series e420"

2.38 ELECTRIC WATER COOLERS

SPEC EDITOR: CARBON WATER FILTERS ARE NOT TO BE PROVIDED WITH WATER COOLERS AT THE UNIVERSITY OF MICHIGAN DUE TO INCREASED MAINTENANCE.

- A. EWC-A Electric Water Cooler: Vandal-resistant, wall mounted, refrigerated water cooler. ADA compliant.
 1. 14 gauge satin-finish stainless steel vented cabinet and integral basin, with removable access panel.
 2. Self-closing button operated. Polished chrome-plated bubbler head with flow adjustment. In-line removable strainer.
 3. Without carbon filter.
 4. Cooling System: Integral to water cooler. Insulated stainless steel evaporator tank. Copper tube/aluminum fin condenser. Non-CFC/HCFC refrigerant. Adjustable thermostat. 115V/1Ph/60Hz. UL listed.
 5. Delivers a minimum of 8 gph of water at 50 deg. F, cooled from 80 deg. F inlet water, at 90 deg. F, ambient.
 6. Certified to NSF/ANSI 61-G.
 7. Acceptable manufacturers and models:
 - a. Halsey-Taylor "HVRHD" Series.
 - b. Haws Model "H" Series.
 - c. Oasis International "PG" Series.

- B. EWC-B Electric Water Cooler: Bi Level, vandal-resistant, wall mounted, refrigerated water cooler. ADA compliant.
 1. 14 gauge satin-finish stainless steel vented cabinet and integral basin, with removable access panel.
 2. Self-closing button operated. Polished chrome-plated bubbler head with flow adjustment. In-line removable strainer.
 3. Without carbon filter.
 4. Cooling System: Integral to water cooler. Insulated stainless steel evaporator tank. Copper tube/aluminum fin condenser. Non-CFC/HCFC refrigerant. Adjustable, accessible thermostat. 115V/1Ph/60Hz. UL listed.
 5. Delivers a minimum of 8 gph of water at 50 deg. F, cooled from 80 deg. F inlet water, at 90 deg. F, ambient.
 6. Certified to NSF/ANSI 61-G.
 7. Acceptable manufacturers and models:
 - a. Halsey-Taylor "HVRHD" Series.
 - b. Haws Model "H" Series.
 - c. Oasis International Model "PG" Series.

SPEC EDITOR: ELECTRIC WATER COOLER WITH BOTTLE FILLER IS ACCEPTABLE IN NUMEROUS ACCEPTABLE CONFIGURATIONS (BI-LEVEL,

"ARCHITECTURAL" RECESSED, STAND-ALONE BOTTLE-FILLER, ETC. IN ALL CASES, UNITS SHALL BE ALL STAINLESS STEEL, REFRIGERATED, VANDAL RESISTANT WHERE AVAILABLE AND ADA COMPLIANT. EDIT ACCORDINGLY.

SPEC EDITOR: HOSPITAL PROJECTS REQUIRE NON-FILTERED WATER COOLERS.

- C. WC-C Electric Water Cooler with Bottle Filler: Vandal-resistant, wall mounted, refrigerated water cooler. ADA compliant.
1. 14 gauge satin-finish stainless steel vented cabinet and integral basin, with removable access panel.
 2. One piece chrome plated with integral hood.
 3. Type 300 series stainless steel cooler top with satin finish and anti-splash ridge.
 4. Self-closing button operated. Polished chrome-plated bubbler head with flow adjustment. In-line removable strainer.
 5. Provide with integral electronic bottle filler.
 6. Bottle fill station to be sensor activated with user interface graphics. Quick fill rate is 1.1 gpm.
 7. Cooling System: Integral to water cooler. Insulated stainless steel evaporator tank. Copper tube/aluminum fin condenser. Non-CFC/HCFC refrigerant. Adjustable thermostat. 115V/1Ph/60Hz. UL listed.
 8. Delivers a minimum of 8 gph of water at 50 deg. F, cooled from 80 deg. F inlet water, at 90 deg. F, ambient.
 9. Without carbon filter.
 10. Certified to NSF/ANSI 61-G.
 11. Acceptable manufacturers and models:
 - a. Halsey-Taylor "HTHBHVR" Series.
 - b. Haws
 - c. Oasis International
 - d. Murdock
 - e. Elkay

SPEC EDITOR: EMERGENCY FIXTURES SPECIFICATION MUST BE MODIFIED TO BE PROJECT SPECIFIC. BELOW SPECS COVER SOME COMMONLY USED TYPES.

2.39 EMERGENCY FIXTURES

SPEC EDITOR: THE PLUMBING CODE REQUIRES THAT TEPID WATER BE DELIVERED TO EMERGENCY FIXTURES. THE BELOW ARTICLE CALLS FOR A DEDICATED TEMPERING VALVE PER EMERGENCY FIXTURE, WHICH MAY NOT BE COST EFFECTIVE FOR EVERY PROJECT. DESIGNER SHALL CAREFULLY EVALUATE TEMPERING VALVE OPTIONS AND REVISE THE BELOW ACCORDINGLY. DESIGNER IS CAUTIONED IN PARTICULAR TO EVALUATE PRESSURE DROP ACROSS THE TEMPERING VALVE.

SPEC EDITOR: PLASTIC BOWLS, EYE WASH HEADS, AND SHOWER HEADS CAN SAVE CONSIDERABLE COST BUT MAY BE MORE SUSCEPTIBLE TO BREAKAGE AND BACTERIAL GROWTH, EVEN WITH ANTIMICROBIAL PROTECTION. BELOW EYEWASH/SHOWERS ARE SPECIFIED WITH THESE PARTS IN TRADITIONAL STAINLESS STEEL OR CHROME PLATED, FOR CLEANLINESS AND DURABILITY.

SPEC EDITOR: MULTIPLE SWING ARRANGEMENTS ARE AVAILABLE FOR EYE WASH COUNTERTOP MODELS, THEREFORE MODEL NUMBERS ARE NOT PROVIDED BELOW. REVISE THE BELOW TO SPECIFY THE SPECIFIC MFR.S MODEL NUMBERS THAT WILL ACCOMMODATE YOUR PROJECT'S MOUNTING LOCATION(S) .

- A. EEWS-A Emergency Eye Wash: Countertop mounted. Swing away when not in use. ANSI Z358.1-2009 compliant. Provide swing arrangement that accommodates mounting location. Barrier Free.
 - 1. Stainless steel or chrome plated brass eye wash head(s) with tethered dust cover(s) and auto-flow control.
 - 2. Chrome-plated brass pipe, fittings, deck escutcheon, and stay-open ball valve, with stainless steel ball and stem.
 - 3. Universal emergency sign mounted on stainless steel ball valve paddle.
 - 4. Test card to record weekly checks.
 - 5. Emergency Fixture Tempering Valve.
 - 6. Acceptable manufacturers and models:
 - a. Haws.
 - b. Bradley
 - c. Speakman.

- B. EEWS-B Emergency Eye/Face Wash: Pedestal mounted, self-supporting. ANSI Z358.1-2009 compliant. Barrier Free.
 - 1. Stainless steel or chrome plated brass combination eye and face wash head(s) with tethered dust cover(s) and auto-flow control.
 - 2. Chrome-plated brass fittings and stay-open ball valve, with stainless steel ball and stem.
 - 3. Universal emergency sign mounted on stainless steel ball valve paddle.
 - 4. Stainless steel bowl.
 - 5. In-line strainer.
 - 6. 1-1/4 in. sch. 40 hot-dipped galvanized steel pipe stand/waste tee and cast-iron floor flange. Stand and floor flange painted/powder coated.
 - 7. Test card to record weekly checks.
 - 8. Emergency Fixture Tempering Valve.
 - 9. Acceptable manufacturers and models:
 - a. Haws.
 - b. Bradley.
 - c. Speakman.

SPEC EDITOR: BELOW FLUSH CEILING-MOUNTED DRENCH SHOWER IS SPECIFIED W/SS SHOWER (AS OPPOSED TO PLASTIC) AND PULL ROD BASED ON THE ASSUMPTION THAT THIS TYPE SHOWER WAS SPECIFIED FOR AESTHETIC REASONS.

- C. EEWS-C Emergency Eye Wash: Combination eye wash / faucet. ANSI Z358.1-2009 compliant.
 - 1. Chrome-plated brass construction faucet with integral eyewash.
 - 2. Chrome-plated brass eye wash head(s) with tethered dust cover(s) and auto-flow control. Independent water channel for eyewash.
 - 3. Lever style handles, with hot and cold color indicators and vandal resistant mounting screws.

4. 3-hole rigid valve body centers (flexible tubing connections between valves and spout not allowed).
5. 1.5 gpm laminar flow control.
6. Faucet, supplies, and stops shall be NSF/ANSI-61-G listed as \leq 0.25% weighted average lead content.
7. Faucet shall not discharge directly over fixture drain strainer.
8. Lever style handles, with hot and cold color indicators and vandal resistant mounting screws.
9. Ceramic disc valve cartridges.
10. Trim: Chrome plated brass flat grid strainer. Rigid supplies with metal handled stops, tailpiece, P-trap with clean-out, waste to wall, escutcheons; all chrome plated brass. Where concealed, trim under sinks may be unplated brass stops, plastic or rough brass supply tubes, PVC trap, and rough brass escutcheons.
11. Test card to record weekly checks.
12. Emergency Fixture Tempering Valve.
13. Acceptable manufacturers and models:
 - a. Speakman "SEF"
 - b. Chicago "8452-E64VPABCP"

D. EEWS-D Eye Wash - Wall Mounted

SPEC EDITOR: EEWS-G IS APPROVED BY U-M EHS FOR USE AT CHEMICAL TREATMENT EQUIPMENT

1. Wall mounted eye/face wash providing laminar flow, with universal emergency sign, wall hook, 12' recoil swivel hose, chrome plated stay-open squeeze lever, with compatible manufacturer supplied, code compliant, vacuum breaker.
2. Minimum flow for plumbed and portable eyewash units is .4 gpm at 30 psi.
3. Units must be capable of delivering a minimum of 15 minutes of flushing fluid.
4. Eyewash units shall be capable of being activated in 1 second or less.
5. Stay open ball valves must be used to accommodate for hands-free rinsing.
6. Flushing fluid must be provided to both eyes simultaneously.
7. Dust caps or dust covers must be installed to protect the unit from contaminates.
8. Spray heads must be positioned between 33" and 45" from the floor.
9. Spray heads must be positioned at least 6" from the wall or nearest obstruction.
10. Eyewash stations must be located within 55' of hazard, with unobstructed travel path.
11. Eyewash must meet ANSI z358.1-2014 requirements.
12. Acceptable manufacturers and models
 - a. Haws 8905

E. EEWS-E Emergency Eye Wash: Portable. Self-Contained. ANSI Z358.1-2009 compliant.

1. Impact resistant plastic with pull down activation eyewash arm.
2. Flushes eyes for 15 minutes at 0.4 gpm.
3. Gravity Fed.
4. 7-9 gallon capacity.

5. Acceptable manufacturers and models:
 - a. Haws.
 - b. Bradley
 - c. Speakman.

- F. EEWS-F Emergency Eye Wash: Recessed Wall mounted. Swing away when not in use. ANSI Z358.1-2009 compliant. Provide swing arrangement that accommodates mounting location. Barrier Free.
 1. Stainless steel or chrome plated brass eye wash head(s) with tethered dust cover(s) and auto-flow control.
 2. Chrome-plated brass pipe, fittings, and stay-open ball valve, with stainless steel ball and stem.
 3. Universal emergency sign mounted on stainless steel ball valve paddle.
 4. Test card to record weekly checks.
 5. Emergency Fixture Tempering Valve.
 6. Acceptable manufacturers and models:
 - a. Haws.
 - b. Bradley

- G. EEWS-G Emergency Eye Wash: Deck-mount drench hose, handheld eye/face wash. ANSI Z358.1-2009 compliant.
 1. Stainless steel or chrome plated brass eye wash head(s) with tethered dust cover(s) and auto-flow control.
 2. Chrome-plated brass pipe, fittings, deck escutcheon, and stay-open ball valve.
 3. Provide with 8' thermoplastic hose with swivel fitting. Min 250 psi rating.
 4. Universal emergency sign for wall mounting.
 5. Test card to record weekly checks.
 6. Emergency Fixture Tempering Valve.
 7. Acceptable manufacturers and models:
 - a. Haws
 - b. Bradley S19-460EFW
 - c. Speakman

- H. EEWS-H Emergency Shower: Drench shower, flush ceiling-mounted shower head with concealed horizontal supply pipe and valve. ANSI Z358.1-2009 compliant. Barrier Free.
 1. Stainless steel shower head with 20 gpm flow control.
 2. Stainless steel or brass stay-open ball valve, with stainless steel ball and stem.
 3. Stainless steel triangular pull rod; provide length required to meet ANSI Z358.1 44-48" maximum distance to floor requirement.
 4. Pull rod ceiling escutcheon.
 5. 1.0 in. sch. 40 galvanized steel supply pipe/fittings.
 6. Universal emergency sign and weekly test card.
 7. Emergency Fixture Tempering Valve.
 8. Acceptable manufacturers:
 - a. Haws
 - b. Bradley.
 - c. Speakman.

- I. EEWS-I Emergency Shower/Eye-Face Wash: Combination shower eye/face wash, self-supporting. ANSI Z358.1-2009 compliant. Barrier Free.

1. Stainless steel or chrome plated brass combination eye and face wash head(s) with tethered dust cover(s) and auto-flow control. Operated by stainless steel paddle with universal emergency sign.
2. Stay-open stainless steel or chrome plated brass ball valve, with stainless steel ball and stem, for eye/face wash and for shower.
3. Stainless steel bowl.
4. In-line strainer for eye/face wash.
5. 1-1/4 in. sch. 40 hot-dipped galvanized steel pipe stand/waste tee and cast floor flange. Stand and floor flange painted/powder coated.

SPEC EDITOR: COMBINATION SHOWER/EYE-FACE WASH UNITS ARE AVAILABLE WITH DRAIN AND SUPPLY CONNECTIONS LOCATED AT VARIOUS ELEVATIONS. EDIT THE BELOW TO PROVIDE CONNECTIONS SUITABLE FOR YOUR PROJECT.

6. Low waste connection, supply connection to be tee at top of pipe stand.
7. Universal shower emergency sign and weekly test card.
8. Stainless steel shower head with 20 gpm flow control.
9. Stainless steel or aluminum triangular pull rod; provide length required to meet ANSI Z358.1 69" maximum distance to floor requirement.
10. Emergency Fixture Tempering Valve.
11. Acceptable manufacturers and models:
 - a. Haws.
 - b. Bradley.
 - c. Speakman.

SPEC EDITOR: NOTE THAT COMBINATION FAUCET/ EYE WASH FIXTURE REQUIRES THAT IT BE MOUNTED IN A SINK BOWL THAT IS A MINIMUM OF 13" FRONT TO BACK (WITH STANDARD 5" SPOUT) TO CONTAIN EYEWASH PLUME WITHIN SINK.

J. EEWS-J Emergency Shower: Drench shower, ceiling-mounted shower head with horizontal supply pipe and valve. ANSI Z358.1-2009 compliant. Barrier Free.

1. Stainless steel shower head with 20 gpm flow control.
2. Stainless steel or brass stay-open ball valve, with stainless steel ball and stem. .
3. Stainless steel triangular pull rod; provide length required to meet ANSI Z358.1 44-48" maximum distance to floor requirement.
4. Pull rod ceiling escutcheon.
5. 1.0 in. sch. 40 galvanized steel supply pipe/fittings.
6. Universal emergency sign and weekly test card.
7. Emergency Fixture Tempering Valve.
8. Acceptable manufacturers:
 - a. Haws
 - b. Bradley.
 - c. Speakman

SPEC EDITOR: TEMPERING VALVE CONSIDERATIONS: LOCATION? MOUNTING CABINET? ONE TEMPERING VALVE TO SERVE MULTIPLE FIXTURES? IS THERE

ADEQUATE WATER SUPPLY PRESSURE FOR TEMPERING VALVE AND FIXTURE PRESSURE DROP?

- K. Emergency Fixture Tempering Valve: ANSI Z358.1-2009 compliant and ASSE 1071 listed emergency fixture tempering valve. Provide one tempering valve per emergency fixture. Cold water bypass when hot supply lost; shut-off of hot supply when cold supply lost; shut off hot and allow cold flow if thermal actuator fails.
1. Select valve to control accurately across the entire flow range of the emergency fixture. Tempering valve pressure drop shall not exceed 10 PSI at the emergency fixture's maximum flow rate.
 2. Tamper resistant temperature adjustment, range 65 deg. F to 95 deg. F, factory set at 85 deg. F.
 3. Rough bronze finish. Brass and stainless steel internal components.
 4. Chloramine resistant seals.
 5. Integral check valves and stainless steel strainers (screens) in hot and cold water inlet connections.
 6. Provide thermometer to measure the mixed temperature, range 0-140 deg. F. Thermometer may be integral to tempering valve or field supplied.
 7. Approved manufacturers:
 - a. Haws
 - b. Bradley
 - c. Powers Hydroguard XP
 - d. Leonard Valve Company

SPEC EDITOR: THE BELOW EMERGENCY FIXTURE ALARM SPECIFICATION (IN HIDDEN TEXT) IS A SAMPLE SPECIFICATION ONLY. TURN ON TEXT IF USED. TYPICALLY AT U-M, EMERGENCY FIXTURE ALARMS ARE ONLY USED FOR SHOWERS IN AREAS HIGHLY PRONE TO VANDALISM. HAWS, BRADLEY, AND SPEAKMAN ALL MAKE ALARM PACKAGES WITH THE FEATURES DESCRIBED BELOW. DESIGN CONSIDERATIONS: LOCATION OF THE HORN/LIGHT? IS ADEQUATE FLOW-SWITCH-TO-ALARM CABLE LENGTH AVAILABLE FROM THE MFR? HORN/LIGHT MOUNTED TO WHAT? DOME COLOR? REMOTE MONITORING? FOR EYEWASHES, SHOWERS, OR BOTH?

- L. Emergency Fixture Alarm System: Complete stand-alone alarm system with flow switch, horn, and flashing light or strobe. For non-hazardous locations.
1. 120 VAC single phase. UL listed electrical components. On-off horn silence switch. NEMA 3R rated electrical components. Factory pre-wired flow switch, silence switch, horn, and flashing light/strobe. Provide adequate cable length between flow switch and alarm devices to accommodate installation conditions.
 2. Amber light dome.
 3. Horn volume 85 dB at 10 feet.
 4. Additional alarm contact for remote monitoring.
 5. Vapor proof flow switch. Provide flow switch compatible with emergency fixture served.
 6. Approved manufacturers:
 - a. Haws
 - b. Bradley
 - c. Speakman

2.40 GD-A - GARBAGE DISPOSAL

- A. GD-A Garbage Disposal:
 - 1. Corrosion proof polymer or stainless steel hopper and grinding chamber.
 - 2. Compact shell, 14 in. maximum overall height. Sound insulated.
 - 3. Stainless steel grind ring, swivel impellers, and turntable.
 - 4. Motor: 3/4 HP, 120V single phase permanently lubricated. Built-in overload protection with manual reset.
 - 5. Stainless steel 3-bolt sink flange connection, stainless steel stopper, and dishwasher drain connection.
 - 6. For operation with wall switch (continuous feed).
 - 7. Acceptable manufacturers and models:
 - a. Insinkerator Evolution Compact Series.
 - b. Waste King Legend 9940.

2.41 WASHING MACHINE VALVE BOX

- A. ABS plastic outlet box and trim ring and with supply and drainage connections. Box shall allow piping from bottom or top. With separate quarter turn ball valve for each supply connection. Ball valves shall be brass body, 1/2 in. sweat inlet connection, stainless steel ball and stem, with 3/4 in. hose bib. Provide dual drain "Du-All" box or a separate supply and drain box "Ox Box" as convenient for installation. Provide fire rated outlet boxes when required.
 - 1. Approved manufacturers:
 - a. IPS Corporation ("Du-All")
 - b. Sioux Chief ("Ox Box" and fire rated)

2.42 ACCESSORIES

- A. Supply Tubes, Stop Valves, and Escutcheons for Faucets: Sweat, threaded or compression connection. Rigid supplies. Metal handled valves. Valves and escutcheons chrome plated brass where exposed, may be rough brass where concealed. Supply tubes chrome plated brass where exposed, may be rough brass or plastic where concealed. Brass tubes and valves NSF/ANSI-61-G listed as $\leq 0.25\%$ weighted average lead content. Acceptable manufacturers:
 - 1. Watts
 - 2. Chicago.
 - 3. BrassCraft.
 - 4. Faucet manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION AND PREPARATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation. Verify that walls and floor finishes are prepared and ready for installation of fixtures.

- B. Review millwork/casework shop drawings. Confirm location and size of fixtures and openings before rough-in and installation. Confirm that millwork/casework is constructed with adequate provision for the installation of countertop lavatories and sinks.
- C. Coordinate cutting and forming of roof and floor construction to receive drains to required invert elevations.

3.2 INSTALLATION OF PLUMBING FIXTURES AND LABORATORY SERVICE OUTLETS - GENERAL

- A. Fixtures shall not be used for construction activities. Protect fixtures from damage during construction.
- B. Install fixture supports securely to building substrate, utilizing bolts in every mounting hole provided in the fixture support. Provide additional blocking/backing when required.
- C. Install Barrier Free water closets, urinals, lavatories, and other devices at mounting heights and with clearances in conformance with the applicable Building Code and ADA requirements.
- D. Install supply, vent and drain connections to fixtures full size of fixture connection, unless larger required by code or indicated otherwise on drawings. Provide the following minimum branch piping and connection sizes:
 - 1. Lavatory and Sink Faucets: 1/2 in. branch piping to wall, 3/8 in. connection between wall and fixture, length of each 3/8 in. supply not to exceed 30 in.
 - 2. Wall Hydrants: 3/4 in. branch piping.
 - 3. Fume Hood Cup Sinks: 1/2 in. branch piping.
 - 4. Eye/Face Wash: 3/4 in. branch piping.
- E. Install fixtures and fixture carriers level and plumb.
- F. Countertop Lavs: Coordinate with architectural trades.
- G. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork. Install deep-pattern escutcheons if required to conceal protruding fittings.
- H. Install each fixture with trap, easily removable for servicing and cleaning.
- I. Provide rigid supply tubes and stops to all lavatories and sinks.
- J. Provide accessible ball type isolation valves (construction per Related Section) in the supplies to shower control valves and electric water coolers.
- K. Provide accessible ball type isolation valves and spring check valves (construction per Related Section) in the supplies to service sink faucets. These check valves are in addition to checks integral to the faucet. Locate isolation valves to isolate faucet and checks.
- L. Provide plumbing fixtures complete with supply, waste and vent piping connections; together with all fittings, supports, fastening devices, and valves.
- M. Use strap wrenches and padded tools to preclude injury to chrome plated and other decorative surfaces.

- N. Exposed to view supply and drainage trim for fixtures and equipment shall be connected to the rough piping systems at the wall, unless noted otherwise.
- O. Wall sleeves on supply and drain connections are not required at the immediate connection to plumbing fixtures. Provide escutcheons.
- P. For faucets without an included gasket, seal areas between faucet base and sink top with non-hardening plumber's putty.
- Q. Seal joints between plumbing fixtures and walls and floors using mildew-resistant 100% silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Division 07 section for Joint Sealants.
- R. Install emergency fixture placards at approved location.

3.3 INSTALLATION OF WATER CLOSETS AND URINALS - STANDARD AND BARRIER FREE

SPEC EDITOR: COORDINATE MOUNTING HEIGHTS WITH ARCHITECTURAL DRAWINGS

- A. Mounting Heights:
 1. Water closets - standard: 15 in. to 17 in. from top of toilet seat to finished floor.
 2. Water closets - barrier free: 17 in. from top of toilet seat to finished floor.
 3. Urinals- standard: 24 in. from rim to finished floor.
 4. Urinals - barrier free: 17 in. from rim to finished floor, 44 in. maximum from hand operated flush valve to finished floor.
 5. Flush Valve: Mount flush valve handle on wide side of stall or room.
- B. Apply dual flush instruction plates to wall centered above flushometer.
- C. Install toilet seats on water closets.

3.4 INSTALLATION OF FIXTURES IN CASEWORK AND FUME HOODS

SPEC EDITOR: BACKFLOW PREVENTER MAY BE REQUIRED - SPECIFY IN 221119 DOMESTIC WATER SPECIALTIES

- A. Fixtures (including tailpiece) and outlets to be installed in casework and fume hoods shall be furnished by others and installed by this contractor as part of the work under this section. Contractor shall install fixtures and outlets complete including all piping, supports, stops, etc. Contractor shall provide rough-in and shall make all final connections. Contractor shall coordinate his work with fume hood and casework manufacturers and with all other trades. Refer to Related Sections Laboratory Casework and Laboratory Fume Hoods. Refer to Architectural drawings for location and quantities of outlets and fixtures and for piping details within fume hoods.

3.5 INSTALLATION OF THERMOSTATIC MIXING VALVES (NON-EMERGENCY FIXTURES)

- A. Install in a location readily accessible for cleaning, adjustment, and valve/cartridge replacement.
- B. Install mixing valve after checks and stops are installed. Thoroughly flush all piping immediately prior to mixing valve installation.
- C. Install isolation valves on the hot and cold water inlet pipe connections, near the mixing valve.
- D. Install check valves between the mixing valve and the mixing valve isolation valves. These check valves are in addition to the mixing valve's integral check valves.
- E. Adjust valve temperature set point to 110 deg. F, following manufacturer's adjustment instructions.

3.6 INSTALLATION OF EMERGENCY FIXTURE TEMPERING VALVES

- A. Install in a location readily accessible for cleaning, adjustment, and valve/cartridge replacement.
- B. Install tempering valve after checks and stops are installed. Thoroughly flush all piping immediately prior to tempering valve installation.
- C. Install isolation valves on the hot and cold water inlet pipe connections, near the mixing valve.
- D. Install check valves between the mixing valve and the mixing valve isolation valves. These check valves are in addition to the tempering valve's integral check valves.
- E. Install individual fixture tempering valves a maximum of 10 feet from the emergency fixture served, closer if recommended by the manufacturer.
- F. Install a downstream thermometer with a range of 0-140 deg. F, to measure the mixed temperature. Not required if tempering valve is supplied with an integral thermometer.
- G. Remove isolation valve handles.
- H. Adjust valve temperature set point to 85 deg. F +/- 3 deg. F, or as indicated on drawings. Follow manufacturer's adjustment instructions.

3.7 COMMISSIONING

- A. Perform the commissioning activities as outlined in the Division 01 Section for Commissioning and other requirements of the Contract Documents.

3.8 ADJUSTING AND CLEANING

- A. Flush all water closets and urinals and verify performance. Adjust or clean flush valves to produce proper flow.

- B. Back-flush shower heads, faucet aerators/spray heads, and in-line strainers at electric water coolers, emergency fixtures, and wherever installed, and reinstall.
- C. Adjust pop-up drains for proper operation.
- D. Adjust eyewashes to provide proper flow.
- E. Adjust shower control valve limit stops to deliver maximum 120 deg. water.
- F. Adjust stops or valves for intended water flow rate to fixtures without splashing, noise or overflow.
- G. Replace dead batteries in sensor operated flush valves and faucets. Adjust sensor operation to satisfaction of commissioner.
- H. At completion of project, remove excess caulk and sealants and clean plumbing fixtures and equipment.

SECTION 226313 - MEDICAL GAS CERTIFICATION (FOR HOSPITAL FUNDED PROJECTS)

END OF CONTENTS TABLE

DIVISION 22 PLUMBING

SECTION 226313 - MEDICAL GAS CERTIFICATION (FOR HOSPITAL FUNDED PROJECTS)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections:
 - 1. Section 018113: Sustainable Design Requirements.
 - 2. Section 019110/019100: Commissioning
 - 3. Section 220500 Common Work Results for Mechanical
 - 4. Section 221113 Piping Materials and Methods
 - 5. Section ~~XXXXXX~~ Medical Gas Systems

1.2 SUMMARY

- A. Perform certification of all medical gas/ vacuum installations in conformance with NFPA 99C.
- B. Certification services will be a direct contract between UM and the certification contractor and should not be included in the contractor's bid. Contractor shall be responsible for coordination of and with the certification contractor's services. The information expressed in this specification is for contractor information purposes only.
- C. Section Includes:
 - 1. Owner approved medical gas certification companies
 - 2. Certifiers scope of services

1.3 REFERENCES

- A. Definitions
 - 1. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.

1.4 SUBMITTALS

- A. Documentation:
 - 1. Certification reports in conformance with NFPA 99C
 - a. Submit to the State of Michigan Health Facilities Evaluation Section at the completion of each project phase. All submittals shall be conducted thru the UM Project Manager.
 - b. Final, approved reports shall be delivered in hard copy and electronic Adobe Acrobat pdf form to the UMH Plumbing Shop Foreman at the completion of each project phase.

2. Medical gas as-built drawings
 - a. Medical gas as-builts shall be uploaded in electronic Adobe Acrobat pdf form to the UMH Facilities Planning & Development website:
 - b. <http://www.med.umich.edu/facilities/plan/vn/>
- B. All Submittals: Identify and incorporate information in each submittal as follows:
 1. Assemble complete submittal package per project into a single indexed file. Report hard copies shall be bound and compiled in an orderly fashion. Report electronic copies shall be saved and compiled as a single pdf file.
 2. Submitted documents shall be FINAL, APPROVED reports and as-builts. Partial, preliminary reports or reports identifying outstanding issues of non-compliance should not be submitted to UMHHC. Prior to submitting FINAL reports, all outstanding issues and/or code deficiencies shall be resolved and re-certified.
- C. Electronic Submittals: File name shall use project identifier (UMH project RTN number) and project name followed by a description of the file contents. An example of a file name:
 1. RTN 1234567 Emergency Dept Expansion- FINAL Med Gas Certification Report.pdf
 2. RTN 1234567 Emergency Dept Expansion- FINAL Med Gas As-Built.pdf

1.5 QUALITY ASSURANCE

- A. Reference Standards: Services described in this section shall be in compliance with the following quality assurance standards; latest editions, unless noted otherwise.
 1. NFPA 99C, "Standard for Health Care Facilities", 2005 edition
- B. All medical gas certification services shall be conducted under the direct supervision of an ASSE 6020 certified inspector and ASSE 6030 certified verifier.
- C. All medical gas certifications required under a given project shall be conducted by a single certification company.
- D. Coordinate testing and inspections with the University of Michigan mechanical inspector, UM project manager and UMH plumbing shop.

1.6 ACCEPTABLE CERTIFICATION CONTRACTORS

- A. Acceptable Medical Gas Certification Service Providers:
 1. Diamond Medical Services (Rob Rawlings)
 2. ~~Pneumatic Medical, Au Gres, MCGassy Girl~~ (Matt Bussinger)

PART 2 - PRODUCTS

2.1 NOT APPLICABLE

PART 3 - EXECUTION

3.1 GENERAL SERVICE REQUIREMENTS:

- A. Inspection and testing shall be performed on all new piped gas systems, additions, renovations, temporary installations, or repaired systems to assure the facility, by a documented procedure, that all applicable provisions of NFPA 99C have been adhered to and system integrity has been achieved and/or maintained.
- B. The verifier will check all source equipment, piping distribution, valving, outlets & inlets and labeling for form, function and conformance. All alarm systems shall be tested for set points, signals, and pressures monitored. Piping systems are to be tested for purity, free of both gaseous and particulate contaminants.
- C. The duties of the medical gas certifier shall include:
 - 1. Coordination with project manager and project phasing in order to avoid delays in the project schedule. Certifications shall be conducted, certified and submitted for each phase of construction.
 - 2. Coordination with the project's UM mechanical inspector to ensure that medical gas installations are certified prior to mechanical inspection.
 - 3. Alerting UM Project Manager of any errors or violations that may impact project budget or schedule.
- D. If deficiencies are found, the certifier shall summarize in a deficiency report issued thru the UM Project Manager. The mechanical contractor shall make corrections as required and coordinate with the certification contractor for re-certifying the installation.

3.2 CERTIFICATION REPORT:

- A. The verifier is to inspect, test, and develop a document that proves that the installation meets all current code requirements and that it is safe and ready for patient use.
- B. Submit reports in conformance with NFPA 99C, specifications and the requirements listed below.
- C. Reports shall be signed by a licensed ASSE 6030 certifier.
- D. Reports shall be bound and include UM/ UMH project numbers (ie UM AEC Project # and UMH FPD RTN #) and project name (from project construction documents) clearly labeled on the cover sheet.
- E. Report shall include a list of all deficiencies, corrections made and final re-certification results. Reports shall not be submitted with outstanding, unresolved deficiencies within the scope of work.

3.3 MEDICAL GAS AS-BUILTS

- A. The University of Michigan Hospitals & Health Centers Facilities Planning & Development (UMHHC FPD) maintains a web-based, digital record drawing of all medical gas/ vacuum systems in use in UMHHC facilities. Access to viewing, printing and downloading the current medical gas as-built as well as uploading proposed changes to these documents is controlled thru a secure log-in thru the UMH FPD website:
 - 1. <http://www.med.umich.edu/facilities/plan/vn/>
- B. At the completion of the medical gas certifier's services, the certifier shall be responsible for generating an as-built of all source equipment, piping distributions, isolation valves, alarms and outlets/ inlets modified and/ or added in the scope of the project.
- C. The certification contractor shall be responsible for uploading the project medical gas as-built to the UMHHC FPD website to aid in the upkeep of accurate medical gas as-builts.
- D. Submitted as-builts will be incorporated into the hospital's master record drawings and re-posted to UMHHC FPD's website.

3.4 COMMISSIONING

- A. Perform commissioning activities in accordance with Related Sections.

SPECIFICATION DIVISION 23

NUMBER SECTION DESCRIPTION

DIVISION 23

SECTION 230593 - TESTING, ADJUSTING AND BALANCING (TAB)

END OF CONTENTS TABLE

DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)
SECTION 230593 - TESTING, ADJUSTING AND BALANCING (TAB)

REVISIONS:

10-12-00: SUBSTANTIALLY REVISED, APPROVED AS NEW MASTER

REVISED FOR HVAC MECH TECH TEAM BY D. KARLE, AUGUST 2008.

ADDED GAS CABINET BALANCE INSTRUCTIONS TO ARTICLE 3.8 (WORDING DUPLICATES MMC) D. KARLE NOVEMBER 2010.

ADDED (ARTICLE 3.8) THAT ALL ADJUSTMENTS TO LAB TERMINAL AIRFLOW UNITS ARE TO BE DONE BY THE LABORATORY CONTROLS CONTRACTOR, NOT THE TAB CONTRACTOR. D. KARLE, DECEMBER 2013.

ADDED 230910 AND 230920 AS RELATED SECTIONS. ADDED IN ARTICLE 3.8 TO VERIFY LTAU AIR FLOWS AT DESIGN MIN. AND MAX CFM. D. KARLE FOR HVAC MTT JUNE 2015.

AUGUST 2015: ADDED REQUIREMENT TO LABEL CHILLED BEAMS. ADDED REQUIREMENT TO VERIFY PURGE VOLUMES AND CROSS LEAKAGE OF AIR TO AIR HEAT EXCHANGERS. D. KARLE FOR HVAC MTT.

AUGUST 2017: ADDED REQUIREMENT FOR I.D. LABELS ON CEILING NEAR VAV BOXES PER PLUMBING MTT DUE TO REQUEST BY HOSPITAL FPD. D. KARLE.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections
 - 1. Section 230910: Laboratory Air Flow Controls - DDC
 - 2. Section 230920: Laboratory Air Flow Controls - Analog

1.2 SCOPE OF WORK:

EDITOR: EDIT SCOPE CAREFULLY. CONSIDER OTHER SYSTEMS THAT MAY REQUIRE TAB WORK, SUCH AS PROCESS COOLING WATER SYSTEMS AND RODI SYSTEMS, AND ADD TO THIS SCOPE OF WORK SECTION. ALSO CONSIDER IF TAB DATA SHOULD BE TAKEN ON EXISTING SYSTEMS PRIOR TO NEW CONSTRUCTION. WHILE THIS SPECIFICATION IS INTENDED TO COVER GENERAL TESTS ASSOCIATED WITH FUME HOOD TESTING SUCH AS FACE VELOCITY READINGS, IT DOES NOT COVER ASHRAE 110 TESTING.

A. Adjust and balance the following systems:

1. Supply air systems
2. Return air systems
3. Exhaust air systems
4. Hydronic systems
5. Domestic hot water systems

B. Conduct the following systems testing:

1. Sound testing
2. Vibration testing
3. Fume hood testing

EDITOR: PERFORMANCE TESTING IS EXPENSIVE AND DIFFICULT TO ACCOMPLISH IN MOST CASES, AND IS THEREFORE NOT USUALLY SPECIFIED. FOR CRITICAL SYSTEMS, CONSIDER FACTORY TESTING RATHER THAN FIELD PERFORMANCE TESTING.

4. Equipment Performance Testing for the following equipment:
(none)

C. Hydronic Balancing shall include as a minimum all devices for which a GPM is indicated in the plans, schedules or specifications.

D. Air Balancing shall include as a minimum all devices for which a CFM is indicated in the plans, schedules or specifications.

E. Testing, Adjusting and Balancing Reports, as detailed in part 3.

1.3 QUALITY ASSURANCE:

A. The Contractor shall obtain the services of an independent (third party) Test, Adjust and Balance (TAB) Contractor.

B. Air balance and water balance shall be done by the same Test and Balance Contractor.

C. Testing and balancing shall be performed in accordance with standards of either AABC ("National Standards for Field Measurement and Instrumentation - Total System Balance", Current Volume and Supplements,) or NEBB ("Procedural Standards for Testing, Adjusting and Balancing of Environmental Systems"), and ASHRAE Standard 111-1988.

D. The TAB supervisor shall be currently certified under the requirements of either NEBB or AABC, and shall directly supervise the project TAB activities. Supervisors shall be certified in all areas germane to the project's work scope: air, hydronic, fume hood and sound/vibration testing. Sound and vibration testing may be subcontracted to other qualified firms as approved by the Engineer.

E. Test equipment accuracies shall be no less than recommended by NEBB or AABC; provide higher accuracy test equipment if dictated by project needs. Test equipment shall have been calibrated within the time intervals recommended by NEBB or AABC, but in all cases shall have been calibrated within the last year.

1.4 ACCEPTABLE BALANCING CONTRACTORS:

A. The following are the only acceptable balancing companies:

1. Absolut Balance

2. Air Flow Testing
3. Enviro-Aire/ Total Balance, Inc.
4. Aerodynamics Inspecting Co.

1.5 SUBMITTALS

- A. Provide the following for approval:
 1. Test instrument list including the following information:
 - a. Instrument type and accuracy
 - b. Instrument manufacturer and model number
 - c. Instrument serial number
 - d. Copy of current calibration certificate
 2. Proof of TAB supervisor certification.
 3. Resume of the TAB supervisor and of all TAB technicians proposed for the project.
 4. Proposed reporting forms for each TAB procedure.

1.6 SEQUENCING AND SCHEDULING:

- A. Where performance testing is specified, equipment and systems must be tested under conditions that are near design conditions. Various components and systems shall be tested in summer or winter design conditions to accurately reflect specified conditions.

1.7 WARRANTY:

- A. For a period of 90 days after the acceptance of the balancing report, the TAB contractor shall recheck or reset any part of any system to meet the Owner's needs, where these variations are within the capabilities of the equipment.

PART 2 - PRODUCTS

2.1 NOT APPLICABLE.

PART 3 - EXECUTION:

3.1 PREPARATION

- A. Pre-Balancing Conference: Prior to the pre-balance conference, inspect system readiness for testing, adjusting, and balancing (TAB). Prepare and submit a list of system deficiencies. Afterwards, meet with the Project Engineer, Commissioner and contractors to resolve system deficiencies, to verify TAB procedures and system readiness for TAB, and to coordinate TAB activities and schedule.
- B. Coordinate testing, adjusting and balancing of fume hood exhaust systems with U-M OSEH.

- C. Phased Construction: Coordinate TAB procedures with any phased construction requirements for the project so that usable increments of finished work may be accepted for beneficial occupancy. Systems serving partially occupied phases of the project may require balancing for each phase prior to final balancing.
- D. Scheduling: Identify to the contractor anticipated durations for TAB work, and what items must be complete prior to proceeding with TAB work. Allow sufficient time in the construction schedule for TAB prior to final project inspection.
- E. Conduct final TAB after system has been completed and is in full working order. Prior to completing balancing, inspect and test systems and components to verify proper installation and operation, including but not be limited to:
 - 1. Verify strainers and filters are installed and clean.
 - 2. Verify motor and equipment rotation, lubrication and alignment.
 - 3. Align belts and pulleys. Adjust tension.
 - 4. Check operation of all automatic valves and dampers.
 - 5. Check position of isolation valves and dampers.
 - 6. Verify air has been vented from hydronic systems.
- F. In cooperation with other contractors, correct deficiencies.

3.2 TESTING, ADJUSTING AND BALANCING - GENERAL REQUIREMENTS:

- A. Notify Commissioner and / or University Project Engineer when testing and balancing activities are commencing.
- B. Immediately notify the Commissioner and University Project Engineer when any deficiencies are detected, whether associated with design, installation, or equipment.
- C. Properly repair any damage to mechanical systems resulting from TAB procedures, e.g. patch duct test holes, repair pipe insulation, etc.
- D. TAB contractor shall provide all required tools and equipment necessary to perform TAB services. Take measurements with certified and calibrated devices. Do not use field installed sensors and gauges.
 - 1. Exception: Magnetic flow meters may be utilized for flow measurements when available. However, the TAB contractor shall make secondary checks such as pump pressure readings and shall indicate the results of those tests in the TAB report.
- E. Take air and hydronic measurements on equipment at the same time, e.g. take air handler coil water flow data at the same time as air handler air side data.
- F. Measure the total air and water flow rate of each system and each major system component.
- G. Coordinate work with the building controls contractor(s).
- H. Measure motor and equipment speed (RPM) with strobe tachometer. Record full load and part load slippage, and calculate motor brake horsepower (BHP) using $BHP = \text{nameplate HP} \times (\text{part load slip} / \text{full load slip})$.

3.3 AIR BALANCING - GENERAL REQUIREMENTS:

- A. Place systems in operation with filters installed and control systems complete and operating. Temporarily block filters to simulate dirty filter pressure drop (obtain dirty filter pressure drop from drawing schedules. If not stated, contact design engineer to obtain). Balance systems to design ratings. Adjust each air terminal unit, inlet and outlet within plus or minus 10 percent of design requirements, but total air for each system shall be not less than shown.
- B. Check flow rates for all factory set air terminal units and reset if not correct.
- C. Adjust fan speeds by adjusting or replacing sheaves and belts. If replacement is required, follow project change order procedures and obtain authorization prior to proceeding.
- D. Set supply fan static pressure as low as practicable while maintaining required pressure at the most aerodynamically remote terminal units.
- E. Record pressure drop readings across all major system components and significant drops within duct systems.
- F. Verify the calibration of air flow measuring stations by taking traverse readings across associated ducts.
- G. For fans equipped with variable speed drives, set the drive to 60 hertz and measure motor and fan RPM to validate that, at the maximum drive speed setting, the fan rotates at the maximum design fan speed. The maximum design fan speed shall be as indicated on the approved fan curve. Assure that running the fan at maximum design speed will not cause any damage prior to making this test.
- H. Label all diffusers, chilled beams, registers and grilles with clear plastic adhesive labels indicating air flow rate, terminal unit number and outlet number corresponding to the balance report. Similarly label VAV boxes with terminal unit number and min./max. CFM, affixing label to ceiling grid or access panel at box location. Use nominal 3/16" high black block-style font.

3.4 AIR BALANCING - CONSTANT VOLUME SYSTEMS:

- A. Adjust fan speed to minimize wasted horsepower and noise at throttled balancing dampers.
- B. Verify each CAV box or zone for proper control: normally open or normally closed position, and type of control.

3.5 AIR BALANCING - VARIABLE VOLUME SYSTEMS (INCLUDING CAV AND VAV BOXES) :

- A. Balance systems to minimize throttling losses and to optimize (reduce to lowest possible) end-of-line (E-O-L) differential pressure set points. Prior to beginning balancing, meet with the project Commissioner and agree to the exact procedures to be followed. Set static pressure set points to ensure the most hydraulically remote terminal unit can achieve design flow. Measure flow at each terminal unit individually to verify scheduled design flow is achieved at the lowest possible differential pressure set point. Reset E-O-L set point and re-measure flow at each terminal unit until the lowest E-O-L set point is achieved. For DDC systems, coordinate with DDC programmer to optimize E-O-L set point where the sum of the loads exceeds system capacity, the ratio of capacity/loads is defined as the system diversity factor. Calculate diversity factor and indicate calculated diversity factor in the balance report. Adjust belts and sheaves to achieve design flow. Test maximum equipment capacity with all boxes forced open to design maximum CFM. Document design diversity, actual diversity, E-O-L set point, and fan volume. Show all calculations
- B. Verify each VAV box for proper control: normally open or normally closed position, and type of control.
- C. Check each individual VAV box for minimum and maximum flow. Calibrate boxes as required to meet design CFMs. For electronically controlled boxes, check and correct correction factor at each box. Coordinate with the DDC programmer.
- D. Check supply and return fan tracking and assure compliance with design requirements.

SPEC EDITOR: ROOM PRESSURIZATION VERIFICATION (3.6.A.1) SHOULD BE INCLUDED FOR ALL LABS AND OTHER AREAS WHERE A PRESSURE RELATIONSHIP IS IMPLIED BY CFM DIFFERENTIAL BETWEEN SUPPLY AND EXHAUST. HOWEVER, TRUE ROOM PRESSURIZATION CONTROL (3.6.A.2 AND 3) IS INFREQUENTLY USED, TYPICALLY ONLY FOR ANIMAL ROOMS, CLEAN ROOMS, BIOSAFETY LABS, AND OTHER CRITICAL LABS.

3.6 AIR BALANCING - ROOM PRESSURIZATION VERIFICATION:

- A. Perform room pressurization verification on all systems where drawings indicate a pressure relationship between rooms based on a differential in supply, return and exhaust cfm. Test systems in each operational mode (e.g. close fume hood sashes, change room temperature set point, etc.) and verify that correct air flow direction at doorways and correct CFM offset between terminal units is maintained in any mode. Indicate if the room "passed" in the air balance report. In all cases, record room pressurization in cfm differential. Verify that all architectural patching of penetrations has been completed. Conduct final testing and balancing with all doors closed. Coordinate work with Laboratory Controls Contractor.
 - 1. For room pressurization designed with cfm offset:
 - a. Balance air flow to all terminal units.

- b. Verify the room pressure relationships implied by scheduled cfm. Smoke stick test all rooms and record results.
- 2. For room pressurization designed with controlled differential pressure offset:
 - a. Balance air flow to all terminal units.
 - b. Verify room pressure relationships. Document offset achieved in inches w.c. at design set points.
- 3. For room pressurization systems with adjustable or reversible controls: Verify room pressure relationships with controls set in both the positive and the negative direction. Test at maximum offsets and document offsets achieved in inches w.c. Set at design offset (if indicated) and document offset achieved in inches w.c.
- 4. For room pressurization designed with visual indicators (Ping-Pong balls or similar devices): Verify correct function of the visual indicators in each operational mode.

3.7 AIR BALANCING - AIR HANDLING EQUIPMENT AND SYSTEMS:

- A. Test air handling units, exhaust and return fans, and associated automatic dampers in all modes of operation. Determine the most restrictive operating mode and balance systems in this mode.
- B. In addition to values listed in ASHRAE Standard 111-1988, the following shall also be measured and reported:
 - 1. Minimum and maximum outdoor air quantities. (Include setting minimum outside air where applicable.)
 - 2. Power factor or watts for motors larger than 10 HP
 - 3. Component air pressure drops, including across open dampers.
- C. Record actual motor amps, volts, and rpm, and fan flow, static pressure and rpm.
- D. Check all equipment motors, belts, drives, bearings, filters.
- E. Check supply and return fan tracking/offset by traverse duct measurements and validate compliance with design requirements.
- F. For new air handling units, fan coils, or any other air handling equipment equipped with a condensate drain: In conjunction with the commissioner, test cooling coil condensate drain and trap performance. Artificially load filters to simulate dirty filter conditions. Verify drain pan does not overflow, and air does not blow by trap.
- G. Units equipped with air-to-air heat exchangers: Take measurements up and downstream of heat exchangers and calculate the leakage rate between the supply and exhaust/return sides of the unit to validate that leakage rates do not exceed design values. Measure leakage rates at design air flow volumes (producing corresponding pressure differentials), with filters blocked to simulate dirty filter pressure drop. For rotary heat exchangers, take air flow measurements with rotor rotating at maximum speed. Take air flow measurements after duct leak testing has successfully passed, as close to units as possible to limit impacts from duct leakage, but at locations that allow accurate measurement.

3.8 AIR BALANCING - LABORATORY SYSTEMS:

**EDITOR: THIS ARTICLE CONTAINS ITEMS SPECIFIC TO LAB SYSTEMS.
REVIEW AND EDIT CAREFULLY TO ADDRESS PROJECT REQUIREMENTS.**

- A. Test, adjust and balance laboratory air systems, including all laboratory terminal airflow units, fume hoods, bio-safety cabinets (exhausted, or partially exhausted type), snorkels, chemical cabinets, canopy hoods, etc.
 - 1. All adjustments to Lab Terminal Airflow Units (LTAUs) shall be done by the Laboratory Controls Contractor, not the TAB contractor. TAB contractor shall take flow readings to verify the accuracy of these devices, only.
- B. Test supply and exhaust tracking through full system performance range. Record room pressurization in cfm differential. Correlate to room air balancing plan.
 - 1. Verify the LTAU air flow against that reported by the LTAU controller at the following points: design minimum and maximum CFM.
 - 2. Measure differential pressure across the LTAU during each CFM verification measurement.
 - 3. Record air flow measured, air flow reported by LTAU controller, and differential pressure across the LTAU, for each verification point. In heavy black permanent marker, mark this data on the LTAU near the mfr.'s data.
- C. Fume Hoods: In conjunction with U-M OSEH and the laboratory air flow controls contractor:
 - 1. Adjust the fume hood terminal air flow unit to achieve the design fume hood face velocity with the sash set at the sash stop position.
 - 2. Measure the face velocity at sash stop position and at the fully open sash position.
 - 3. Verify operation of the fume hood alarm monitor (sash at sash stop position) by temporarily reducing air flow through the hood until the alarm set point indicated on the design drawings is achieved.
 - 4. Measure the hood face dimensions (sash at sash stop) and include this info along with the calculated face area and calculated face velocity in the balance report.
- D. Lab Exhaust Fans:
 - 1. Test operation of bleed-in dampers.
 - 2. Measure total exhaust air flow from the building to each exhaust fan/fan plenum.
 - 3. Test every fan on plenumized fan systems.
- E. Gas Cabinets:
 - 1. Balance exhaust to achieve an average face velocity at the face of gas cabinet access ports or windows (while open) of not less than 200 FPM, and a minimum velocity of 150 FPM at any point at the face of the access port or window.

3.9 HYDRONIC BALANCE - GENERAL REQUIREMENTS

- A. Perform final hydronic balance after all systems have been flushed, cleaned, and filled.
- B. Test hydronic systems in all modes of operation. In general, balance systems in the most restrictive operating mode.
- C. Hydronic balance includes performance readings (flow, pressures, temperatures) on all pumps, coils, heat exchangers, and flow measuring devices. For coils 3 gpm or less at terminal units, record flows only. Adjust pump flows to actual system heads by adjusting balancing valves (constant volume systems). Flow measuring devices take precedence over pump head readings. Record discrepancies for evaluation. Provide pump head and flow (i.e. flow determined from shut off head, operating head and pump curve) and flow measuring device data.
- D. Report pressure drop readings across all major system components both for flow determination and for deviations between actual and design values.
- E. Record the pressure drop across water filtering devices.
- F. Where Y or basket strainers are equipped with inlet and outlet pressure gauges, record the pressure drop.
- G. Record (on flow diagrams) the flows and pressures obtained in each of the various circuits and modes of operation. Measure flows in parallel pumping systems when operating independently and jointly.
- H. Adjust and set the memory stop for each balancing valve.
- I. For auto-balancing valves, record differential pressure with auto-balancing valve throttling against maximum flow mode. .
- J. For 3-way control valves, balance "bypass" flow to match "through" flow.

- K. In general, balance variable flow systems to achieve design flow at all units simultaneously. Where the sum of the loads exceeds system capacity, the ratio of capacity/loads is defined as the system diversity factor. Calculate diversity factor and indicate calculated diversity factor in the balance report. Balance variable flow systems to minimize throttling losses and to optimize (reduce to lowest possible) differential pressure set points. Prior to beginning balancing, meet with the project Commissioner and agree to the exact procedures to be followed. Set static pressure set points to ensure the most hydraulically remote load can achieve design flow. Measure flow at each load individually to verify scheduled design flow is achieved at the lowest possible differential pressure set point. Reset and re-measure flow at each load until the lowest differential pressure set point is achieved. Verify that no control valve "lifts" at the final differential pressure set point, by closing all other control valves, allowing the controls to settle to the differential pressure set point, and then verifying the valve remains fully closed. Record the final differential pressure set point in the TAB report. Throttle balance valves at loads only as required to obtain accurate flow data; generally balance valves should otherwise be left fully open. (Exception: throttle balance valves at stacked coil sections (or similar arrangements) to provide equal flow to each coil in the stack.) For DDC systems, coordinate with DDC programmer to optimize differential set point.

3.10 VIBRATION TESTING

- A. Perform vibration measurements for all rotating equipment 1/2 horsepower and larger, including compressors, pumps, fans and motors.
- B. Inspect vibration isolation system and alignment and report deficiencies.
- C. Allowable Vibration Tolerances: Self-excited, vibration maximum velocity shall not exceed the following limits, measured in inches per second RMS (not in mils peak to peak), filter in. Measure vibration at bearing caps of machine in vertical, horizontal and axial directions or at equipment mounting feet if bearings are concealed.
1. Except where noted otherwise: 0.20
 2. Pumps: 0.13
 3. Centrifugal Compressors: 0.13
 4. Fans: 0.09
- D. For variable speed equipment, inspect at full range of speeds. Verify the maximum safe speed the system can be run at before beginning tests. Modulate speed from minimum to maximum to test for possible harmonic vibrations. Record vibration at maximum operating speed and at any speed displaying harmonic vibration.
- E. Include in the report a summary sheet indicating pass / fail for each unit. For each unit of equipment, record detailed initial measurements, corrections made, retest measurements, and suggested course of action for equipment that still fails limits after contractor correction.

SPEC EDITOR: EDIT ACOUSTICAL TESTING SECTION TO MAKE PROJECT SPECIFIC. CONSIDER ALWAYS INCLUDING THE SECTION ON TESTING 6 ROOMS IN CASE NOISE ISSUES ARISE AFTER CONSTRUCTION IS COMPLETE.

3.11 ACOUSTIC TESTING

- A. Conduct acoustic testing with a calibrated sound level meter and octave band analyzer of the accuracy required by AABC or NEBB. Include dBA and individual octave readings. Use current ASHRAE manuals for reference levels, formulas and coefficients.
- B. Record sound pressure readings by octave and in weighted dBA scale. Plot dB by octave and calculate RC and NC values. Compare against specified levels indicated on drawings or in specifications.

SPEC EDITOR: THE FOLLOWING ARE RECOMMENDED ROOM CRITERIA (RC - THE NEW STANDARD) VALUES FOR VARIOUS ROOM TYPES. (NOISE CRITERIA, NC - IS THE OLD STANDARD) :

OFFICES: RC 30-35 (N) FOR PRIVATE, RC 35-40 (N) FOR OPEN

LECTURE HALLS: RC 25-30 (N)

OPEN PLAN CLASSROOMS: RC 35-40 (N)

PUBLIC AREAS: RC 35-45 (N)

LABS: RC 30-40 (N) - OFTEN NOT ACHIEVABLE WITH HEAVY AIR FLOW.

EDIT LIST BELOW AND/OR THE DRAWINGS OR DELETE SOUND PRESSURE TESTING.

- 1. Conduct sound pressure testing:
 - a. In six rooms, designated by the Owner/Engineer.
 - b. Where RC/NC criteria appears on the drawings.

3.12 PERFORMANCE TESTING

SPEC EDITOR: THIS PARAGRAPH IS RARELY USED. ACCURATE PERFORMANCE TESTING IS DIFFICULT AND EXPENSIVE. SOME SMALL EQUIPMENT (EG: ARI FAN COIL UNITS) AND COMPONENTS IN LARGER EQUIPMENT (EG: AMCA FANS) CARRY PERFORMANCE CERTIFICATION. IF WARRANTED, FACTORY TESTING OF CUSTOM EQUIPMENT IS GENERALLY PREFERRED OVER FIELD PERFORMANCE TESTING.

- A. Equipment Performance Testing: For the equipment listed, test performance and verify that it meets scheduled capacity. Develop a system specific testing plan for review by the Architect / Engineer and the commissioner. Document all testing procedures, and corrections due to variations in actual testing condition versus scheduled performance.

SPEC EDITOR: THIS PARAGRAPH IS RARELY USED. WEATHER IS DIFFICULT TO PREDICT, AND RARELY COOPERATES WITH CONSTRUCTION AND OCCUPANCY SCHEDULES. IF USED, EDIT VERY CAUTIOUSLY.

- B. Seasonal Performance Testing: For the systems listed, conduct testing at or near design outdoor conditions. Test, adjust, and balance air conditioning systems during summer season and heating systems during winter season, including at least a period of operation at outside conditions within 5 deg F wet bulb temperature of maximum summer design condition, and within 10 deg F dry bulb temperature of minimum winter design condition. Take final temperature readings during seasonal operation.

3.13 COMPLETION SERVICES

- A. Final Check: Make final checks and complete any testing as directed.
- B. Acceptance: Final acceptance of the project will not be made until a satisfactory report is received. Owner reserves the right to spot check the report by field verification prior to final acceptance.

3.14 TESTING, ADJUSTING, AND BALANCING REPORT

- A. Submit TAB reports in compliance with specifications and the requirements listed below.
- B. Submit progress TAB reports within 3 days of balancing each air, hydronic, and plumbing system, and more frequently if requested by the project Commissioner. Submit the final TAB report within one week of completing all testing, adjusting and balancing
- C. Report all data in inch/pound units.
- D. Provide date and time all readings were taken.
- E. Include brief system descriptions, deficiencies, corrections made, unresolved problems, and recommendations.
- F. Provide as-built schematic sketches for each system indicating all equipment, balancing related components, terminal devices, diffusers, grilles, registers, and valves. Use equipment nomenclature as defined in construction documents. Indicate room numbers, and correlate all devices to the balance report data.
- G. Include a list of all testing equipment and devices used, including type, accuracy, manufacturer, model number, serial number, and calibration date.
- H. Include definition of all abbreviations and acronyms, and all formulas used in calculations.
- I. Provide the outside air dry bulb and wet bulb temperature at the beginning and end of each TAB day, correlated to the day's TAB work.
- J. Number all report pages. Tab major sections of the report and provide a report table of contents.
- K. Include complete nameplate data for all equipment.
- L. Include flows and pressures in all operating modes. Indicate final E-O-L differential pressure set points, and the results of all tests (e.g. smoke stick tests, etc.)
- M. Describe TAB procedures used; including procedure used in establishing differential pressure set point for variable speed drive controlled systems.

- N. Include performance data for all major equipment, including providing copies of the approved fan curves, pump curves, coil data sheets, flow element curves, and Cv characteristics. This is not required for terminal units 2000 cfm or less.

SPECIFICATION DIVISION 23

NUMBER SECTION DESCRIPTION

DIVISION 23

SECTION 230900 - MECHANICAL SYSTEMS CONTROLS

END OF CONTENTS TABLE

DIVISION 23
SECTION 230900 - MECHANICAL SYSTEMS CONTROLS

REVISION NOTES:

MAY 2024: BALL STYLE CONTROL VALVES ARE NOW SPECIFIED TO BE NICKEL COATED BRASS OR STAINLESS STEEL CONSTRUCTION DUE TO WATER QUALITY ISSUES CASUING CORROSION AND FAILURE IN BALL VALVES WITH BRASS CONSTRUCTION. LTDE INSTALLATION REQUIREMENTS HAVE BEEN ADJUSTED TO MATCH MANUFACTURER RECOMMENDED INSTALLATION REQUIREMENTS.

APRIL 2023: MODIFIED AUTOMATIC CONTROL VALVE SECTION 2.17 AND DAMPER OPERATORS SECTION 2.19 TO INCLUDE ELECTRIC ACTUATION AS THE PREFERRED OPTION FOR NEW PROJECTS. REORGANIZED SECTION 2.17 TO SIMPLIFY VALVE REQUIREMENTS PER CONTROLS AD HOC SPECIFICATION SUBCOMMITTEE.

JUNE 2021: ADDED PRELIMINARY CHANGE OF VALUE INCREMENTS FOR DATA SHARING TO PART 3. D. KARLE, AS REQUESTED BY UM CONTROLS AD HOC TEAM.

SEPTEMBER 2020: EXTENSIVE REVISION BY AEC CONTROLS AD HOC SPEC TEAM.

MAY 2019: ADD COMBINATION ROOM TEMP AND HUMIDITY SENSOR. ADD ROOM TEMPERATURE CONTROLLER ("RTC"). REVISE ROOM TEMPERATURE CONTROLLER FOR FAN COILS ("RTC-F"). REVISE BALL VALVE ACTUATORS TO MODULATING TYPE. ADDED FLN AND BLN WIRE COLORS. AS APPROVED BY HVAC MTT. D. KARLE.

DECEMBER 2018: ADD CONDENSATION SENSOR, ALARM INDICATION STATION, OCCUPANCY COUNTER. IMPROVE TEC SPECIFICATION LANGUAGE (2.5). REVISE ROOM DIFFERENTIAL PRESSURE INDICATING GAUGE TO CENTER ZERO MODEL. PART 3: INDICATED THAT SETPOINTS ON DOCUMENTS ARE PRELIMINARY AND MUST BE FINALIZED WITH THE ENGINEER AND COMMISSIONING AUTHORITY PRIOR TO PROGRAMMING. ADDED SELF CALIBRATION DEVICE REQUIREMENTS. PER HVAC MTT. D. KARLE.

MAY 2018: ADDED ONICON AS APPORVED FOR EM FLOW METERS (WATER) PER HVAC MTT. D. KARLE.

JUNE 2016: REVISED SECTION TO ADD CONSTANT VOLUME VENTURI (CVV) FUME HOOD LAB AIRFLOW CONTROLS. VAV FUME HOOD LAB AIRFLOW CONTROLS, INCLUDING ALL OTHER MECHANICAL CONTROLS IN THE VAV FUME HOOD LAB, REMAINS IN MS230910. REFER TO DESIGN GUIDELINE 230030 FOR ADDITIONAL GUIDANCE. ALSO ADDED INFO ON UTILITY METERING ("DATA ACQUISITION PANELS"). D. APPEL.

EDITOR'S NOTE:

IF THE PROJECT WILL NOT SPLIT THE WORK BETWEEN THE MECHANICAL SYSTEMS CONTROLS CONTRACTOR AND THE UNIVERSITY OF MICHIGAN AS DESCRIBED IN 1.3, UTILIZE SPECIFICATION SECTION 230901.

THESE SPECIFICATIONS MUST BE CUSTOMIZED APPROPRIATELY FOR EACH PROJECT, E.G. ADDING SPECIFICATIONS FOR COMPONENTS NOT ALREADY

SPECIFIED IN PART 2. HOWEVER, DELETING COMPONENTS SPECIFIED IN PART 2 IS NOT TYPICALLY NECESSARY OR RECOMMENDED. IN ADDITION TO THESE SPECIFICATIONS, THE PLANS ARE TO INCLUDE THE FOLLOWING, AS A MINIMUM:

SCHEMATIC LAYOUT OF EACH SYSTEM SHOWING ALL DDC AND CONTROL COMPONENTS.

LOCATIONS OF ALL DDC PANEL ARRAYS.

PROVIDE TWO 20 AMP POWER CIRCUITS AT EACH DDC/AUXILIARY PANEL LOCATION. ONE CIRCUIT IS FOR THE DDC PANEL, THE OTHER IS FOR THE AUXILIARY PANEL. ELECTRICAL POWER REQUIREMENTS TO BE COORDINATED WITH ELECTRICAL DRAWINGS.

WIRING DIAGRAMS FOR EACH SYSTEM TO SHOW INTENT OF AUTOMATIC OR INTERLOCKED OPERATION.

SCHEDULES FOR DAMPERS, AIRFLOW MEASURING STATIONS, STATIC PRESSURE PROBE LOCATIONS, HUMIDITY RESET, TEMPERATURE RESET, DAY/NIGHT CONTROL ZONE, ETC.

THE SCOPE OF THIS SPECIFICATION INCLUDES CONTROLS FOR ANY LAB ROOM WITHOUT VAV FUME HOODS OR COMBINATION SASHES. IF A LAB ROOM INCLUDES THOSE HOOD TYPES, U-M MASTER SPEC 230910 MUST BE INCLUDED TO COVER ALL MECHANICAL CONTROLS IN THOSE ROOMS.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

ALWAYS INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections
 - 1. 019100 Project Commissioning
 - 2. 220523 Valves
 - 3. 233600 Air Terminal Units
 - 4. 230910 VAV Fume Hood Laboratory Air Flow Controls
 - 5. Division 26: Electrical

1.2 SUMMARY

- A. This Section specifies mechanical systems controls applicable to all project controls except for labs with variable air volume (VAV) fume hoods, including combination (vertical/horizontal) sash fume hoods. Controls in rooms with VAV and combination sash hoods shall be in accordance with Section 230910.

1.3 REFERENCES

A. Definitions

1. Area Level Network: The network that allows communication between B-BC controllers, 3rd party controllers, and the owner's BAS server.
2. Field Level Network: The network that allows communication to/from B-AAC's, B-ASC's, and other field controllers to/from B-BC controllers.
3. Terminal equipment controller: A controller associated with a specific piece of equipment (e.g. VAV box, fan coil unit, cabinet unit, etc.)

B. Abbreviations and Acronyms

1. ALN: Area Level Network
2. BMS: Building Management System
3. BTL: BACnet Testing Labs <http://www.bacnetinternational.net/btl/>
4. B-AAC: BACnet Advanced Application Controller
5. B-ASC: BACnet Application Specific Controller
6. B-AWS: BACnet Advanced Workstation
7. B-OD: BACnet Operators Device
8. B-BC: BACnet Building Controller
9. B-SA: BACnet Smart Actuator
10. B-SS: BACnet Smart Sensor
11. BBMD: BACnet Broadcast Management Device
12. BDT: BACnet Distribution Table
13. CAV: Constant Air Volume
14. DDC: Direct Digital Control
15. FCU: Fan Coil Unit
16. FLN: Field Level Network
17. MSCC: Mechanical Systems Controls Contractor
18. VAV: Variable Air Volume

1.4 SUBMITTALS

A. Submittals shall, as a minimum, consist of the following:

1. Schematic diagrams of all systems being controlled and/or monitored indicating all DDC points, point numbers (using UM conventions), sensors, relays, controllers, valves, dampers, complete control wiring schematics (including starter, VSD, DX system, etc. wiring diagrams), pneumatic tubing, DDC panel maps, etc.
2. HMI display graphic pages including each analog and digital point that will be displayed.
3. Wiring of each point to the DDC panels, including terminal block numbers.
4. Layout of all auxiliary devices and panels, and wiring of relays, contacts, etc. Include terminal block numbers at all control panels, at all mechanical equipment, and at all control devices.
5. Complete Sequence of Operation for each system being controlled, including set points, alarms settings, etc. in narrative format.
6. Pneumatic compressed air supply equipment, risers, and major tubing runs.

7. Complete bill of materials to identify and quantify all devices.
8. Product data including a description and complete engineering data for each control system component.
9. Layout and nomenclature for all nameplates.
10. Point nomenclature and controller addressing: All point and object names shall be named utilizing the UM standard naming convention. Obtain the naming convention and controller addresses from UM prior to providing submittals. This shall include all BACnet devices.
11. Network diagrams indicating network switches, routers, servers, and peripheral devices, including location of each device (room number), device name, address, instance number, approximate cable lengths, and indicating network connection points to Owner's BAS and/or Utility Meter data acquisition system. Provide separate diagrams for the building network and terminal device network.
12. Wiring diagrams and locations of power supplies.
13. Additional submittal items required for any room designated as a lab:
 - a. Equipment schedule for each room or zone, with the following information:
 - 1) Equipment tag, room served, occupied/unoccupied min., max., offset CFM, network address, and network and power trunk identifier.
 - 2) Model number of each control component.
 - 3) Function of each terminal device and control component.
14. Resume of any personnel proposed to work on University of Michigan's building automation server.

B. Submit, as a minimum, the following design data schedules indicating:

1. Airflow Measuring Probes:
 - a. Device tag.
 - b. Equipment served/function.
 - c. Model number.
 - d. Size, type, and location.
 - e. Station area in square feet.
 - f. Max/Min Range.
 - g. Magnehelic scale range.
 - h. Velocity pressure range.
2. Air and water pressure sensors:
 - a. Device tag.
 - b. Equipment served/function.
 - c. Model number.
 - d. Size, type, and location.
 - e. Max/Min Range.
3. Control Dampers:
 - a. Damper tag.
 - b. Equipment served/function.
 - c. Model number.
 - d. Blade configuration and orientation.
 - e. Size in width, height, and blade width.
 - f. Pressure drop.
 - g. Type of seals (blade and edge).
 - h. Normal position.
 - i. Size, quantity, type, and model number of actuators.

- Method of actuator mounting and actuation.
- 4. Control Valves:
 - a. Valve tag.
 - b. Equipment served/function.
 - c. Valve flow rate (GPM).
 - d. Line size.
 - e. Specified valve pressure drop (ft. head).
 - f. Valve size.
 - g. Valve Cv.
 - h. Actual valve pressure drop (ft. head).
 - i. Valve normal position.
 - j. Valve spring range.
 - k. Valve shut-off rating (ft. head).
 - l. Valve body pressure/temperature rating.
 - m. Valve type/model number.
 - n. Actuator type/model number.
- 5. Terminal Equipment Devices:
 - a. Device tag.
 - b. Equipment served/function.
 - c. Model number and application code.
 - d. Associated sensor location/tag.
 - e. Size, control values, etc.

C. Submittal Submission Requirements

- 1. In compliance with the submittal distribution plan for the project, submit an additional copy of the submittals to the Operations & Maintenance Engineering department.
- 2. Submittals shall be provided in a searchable PDF (OCR) format.
- 3. Submittals shall include a complete table of contents indicating every piece of equipment included under each tab.
- 4. A paper and electronic copy shall be submitted to the UM DDC shop and Cx Agent after the submittal is approved.
 - a. Provide updated sections or pages in paper and electronic format to reflect construction changes or field changes as they occur.
- 5. Control drawings shall be minimum 11" x 17" size.
- 6. The submittal shall be organized into bookmarked/tabbed sections consisting of (at minimum) the following categories:
 - a. Control Drawing tabbed sections:
 - 1) Network Diagrams
 - 2) Schedules: Control Valves, Control Dampers/Actuators, Liquid Flow Meters, Air Flow Meters, Terminal Units, Lab Terminal Units
 - 3) A section shall be provided for each temperature control panel indicating all equipment associated with that panel. All of the following shall be included in this tab:
 - a) Equipment control diagrams
 - b) Project specific wiring diagrams of controlled or alarmed equipment
 - c) Aux. & LPI panel layout and wiring diagrams
 - d) DDC panel layout diagrams
 - 4) A separate section for terminal equipment controllers.

- b. Product Data tabbed sections: Temperature Devices, Humidity Devices, Pressure Devices, Hydronic Flowmeters, Air-flow Meters, Auxiliary Panel Devices, Pneumatic Components, Electric Components, Miscellaneous Components
 - 7. For the paper version, each section shall consist of tabbed divider sheets indexed to a table of contents.
 - 8. For the electronic version, each tabbed section shall be bookmarked.
 - 9. Since many items are interrelated and should be checked concurrently, all of the MSCC's submittal drawings and product data sheets shall be submitted at one time. No consideration will be given to partial submittals, except valves, flowmeters and damper submittals on approval only. Any partial submittals must be included in the complete submittal package.
- D. Project Record Documents and Operation and Maintenance Manuals
 - 1. Provide the specified number of paper copies of complete operation and maintenance instructions for all system components furnished. Additionally provide a final electronic copy of the above in two formats: Microstation or AutoCAD compatible format and searchable PDF (OCR) format.
 - 2. Include as-built system schematic drawings and wiring diagrams.
 - 3. Include updated network diagram including final locations of power supplies and end of line resistors.
 - 4. Include updated terminal device schedule indicating final device name, address and power trunk designation. Update terminal device schedule to indicate the order in which they are connected on the communication trunk.
 - 5. Indicate final set points, settings, and adjustments of all components.
 - 6. Provide factory calibration certificates for steam and water flowmeters, differential pressure hydronic sensors, differential pressure transmitters used for laboratory control, "matched" temperature transmitters, and any other factory calibrated device.
 - 7. Include project specific catalog cuts and data sheets indicating installation, operation, maintenance, repair, wiring diagrams, calibration, calibration tolerances, inspection period, cleaning methods and cleaning materials for all components. The O&M manual shall be organized in a manner similar to the product submittal package.

REVISE ARTICLE 1.5 AS REQUIRED FOR THE SPECIFIC PROJECT

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare Parts/Extra Stock Materials
- B. Tools
- C. Software and Licensing

1.6 QUALITY ASSURANCE

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
 - 1. Where not indicated in Part 2, all devices shall be as manufactured by Honeywell, Johnson Controls or Siemens.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.
 - 1. Underwriters Laboratory or Intertek (ETL) (listed and labeled).
 - 2. National Electric Manufacturer's Association (standards pertaining to components and devices for electrical control systems)
 - 3. National Fire Protection Associate NFPA 90A "Standard for the Installation of Air Conditioning and Ventilating Systems"
 - 4. National Electrical Code NFPA 70.
 - 5. ASHRAE Standard 135 BACnet - A Data Communication Protocol for Building Automation and Control Networks
 - 6. UL Compliance: DDC Controllers for this project shall comply with UL916 Standard for Energy Management Equipment. DDC Controllers associated with equipment utilized in a smoke control application shall also comply with UUKL-UL 864 "Standard for Control Units and Accessories for Fire Alarm Systems".
 - 7. National Institute of Standards and Technology (NIST), NIST IR 6392 Annex B: Profiles of Standard BACnet Devices.
 - 8. Electronics Industries Association (EIA)
 - a. EIA-232: Interface Between Data Terminal Equipment and Data Circuit-Terminating Equipment Employing Serial Binary Data Interchange
 - b. EIA-485: Standard for Electrical Characteristics of Generator and Receivers for Use in Balanced Digital MultiPoint System

1.7 DELIVERY, STORAGE AND HANDLING

- A. Store materials and equipment raised off the floor on pallets and protected with coverings to prevent damage due to weather and construction activities. Store in areas that prevent damage due to freezing and extreme temperatures or sunlight. Arrange coverings to provide air circulation to avoid damage from condensation or chemical build-up. Protect from damage, dirt and debris at all times.
- B. Shipping and storage protection shall be provided by manufacturer to insure that the interior and exterior of components are completely protected from damage, dirt or weather. Components shall be continuously covered with plastic or other durable means, until just prior to installation. Maintain protection after installation to protect against ongoing construction activities.

1.8 SCOPE OF WORK

- A. The complete control system work shall be split between the Mechanical Systems Controls Contractor and the University of Michigan as outlined below. As it relates to the extent of responsibility for work within this specification section, "provide" shall mean the identified party both furnishes and installs such item(s). "Furnish" shall mean the identified party furnishes the item for installation by others.
- B. Summary of work by the Mechanical Systems Controls Contractor- shall include, but not be limited to:
 - 1. Temperature control system consisting of all pneumatic and Direct Digital Controls (DDC) sensors, transducers, relays, switches, data communication network, etc. and all associated control wiring and conduit systems.
 - 2. Laboratory control systems except in rooms with VAV hoods or combination sash fume hoods. (Programming and some components provided by UM. Refer to section "DDC related work by the University of Michigan").
 - 3. Provide fume hood monitors except in rooms with VAV hoods or combination sash fume hoods.
 - 4. Install UM furnished devices for terminal equipment.

EDITOR: DRAWINGS SHOULD INDICATE LOCATION AND TYPE OF COMMUNICATION CONNECTION SHOWING NECESSARY CONDUIT TO THAT LOCATION (NEAREST DDC PANEL FOR EXISTING BUILDINGS OR NEAREST DATA CLOSET FOR NEW BUILDINGS) .

- 5. Connection of new DDC panels to permit communication to the owner's Building Automation System (BAS). Connection to host computer via trunk connection to an existing DDC panel, data closet, or local Ethernet data port as indicated on the drawings. Where not indicated on the drawings, provide a proposed network design for review and approval by the owner.
- 6. Engineering, submittals, as-built drawings, and operation and maintenance manuals.
- 7. Provide an auxiliary temperature control panel adjacent to each DDC panel. Provide additional auxiliary panels as required to house the required quantity of control components. Provide all wiring between the DDC panel and the auxiliary panel(s).
- 8. Provide a Loop-Powered Indicator (LPI) panel adjacent to the auxiliary panel. Provide additional LPI panels as required to house the required quantity of LPIs. Provide all wiring between the DDC panel and the LPI panel(s).
- 9. When loop powered indicators are not shown on control diagrams, provide a Human Machine Interface (HMI) at each DDC panel array. Provide all wiring and accessories required to enable the HMI to function as specified.
- 10. For existing panels, punch the LPI panel doors.
- 11. Provide free standing unistrut racks to support all DDC panels and equipment. Mount all panels.
- 12. Assembly of DDC panel circuit boards, associated I/O modules, and communication hardware into U-M furnished DDC and UPS panel enclosures. Provide all interconnecting power wiring between the DDC panel power supply and the UPS panel duplex receptacle.
- 13. Provide a minimum 8"x 8" wiring trough extending over and between each DDC, auxiliary temperature control, and LPI panel.
- 14. Provide thermostats, control valves, dampers, operators, meters, control air tubing, etc.

15. Provide gauges, indicating devices, electric and electronic control accessories, and other control system devices.
16. Except where indicated otherwise under "DDC related work by the University of Michigan", provide setup/programming, calibration and start-up services of control systems, e.g. electronic room temperature controllers. This shall include all programming required to network back to owner's BAS.
17. Termination of all wires and pneumatic lines within the DDC panel, auxiliary panel and LPI panel, including the power supply.
18. Termination of all field wiring including but not limited to: sensors, actuators, H/O/A switches, hard-wired safeties, relays, terminal equipment controllers, network wiring, etc.
19. For U-M Utility's energy metering, install U-M furnished data acquisition panel. Provide wiring from meters and transmitters to utility data acquisition panels. Provide dedicated Ethernet communication wiring to utility data acquisition panels from local data closet. Terminations inside panels by U-M.
20. Provide site supervision of mechanical control work and coordination with related electrical and fire alarm work and packaged controls.
21. Provide all control wiring and electrical components necessary for each system to permit automatic or interlocked operation, such as: air cooled condensing units, high level alarm circuits, damper end switches, fuel oil pumping/monitoring systems, chiller control/interface panels, boiler control/interface panels, early break contacts on disconnects to VSD's, cooling tower vibration switches, etc.
22. All other work and components required for complete and operational control systems, and that allows the sequence of operation indicated on the drawings or elsewhere to be achieved, except work specified as provided or furnished by the University of Michigan.
23. Start-up, calibration, and checkout of sensors, transducers, thermostats, control valves, dampers/damper operators, meters, and all other components provided. Verify correct functionality of DDC points and inputs/outputs associated with terminal equipment controllers and correct all deficiencies.
24. Commission all mechanical controls provided. Provide a detailed list of every control point installed to the project Commissioning Authority (CxA), and verify proper operation of each component prior to commissioning the controls with the CxA. Include, in checklist format, a detailed procedure to verify all aspects of the controls' Sequence of Operation.
25. Training of U-M personnel to familiarize operations staff with the configuration, operation, and maintenance of provided controls.

C. DDC related work by the University of Michigan:

1. Point database entry.
2. Provide programming for DDC panels and terminal equipment controllers, excluding rooms with VAV fume hoods and hoods with combination sashes.
 - a. Provide programming required to achieve the sequence of operation and the control intent indicated on the documents.
 - b. Tune control loops.

- c. Program the following alarms, whether specifically indicated in the sequence of operation or not. Include appropriate deadbands and time delays:
 - 1) For every indicated setpoint, create a variation from setpoint alarm. Examples include air handler discharge temperature, chilled water temperature, end-of-line DP, etc.
 - 2) Status does not match command.
 - 3) Failed point.
 - 4) Exception: Unless specifically indicated, alarms are not required for terminal equipment controllers controlling space temperature.
 - d. Programming lines shall be grouped into subparts and explained with comment fields. The comment fields shall include the related part of the project sequence of operation that each program subpart is intended to accomplish. All unused program lines or sections shall be deleted from the final program.
3. Provide temporary programming to provide building heating or cooling during construction.
 4. Furnish all DDC panel circuit boards, associated I/O modules, and communication hardware.
 5. Furnish DDC panel UPS.
 6. Furnish proprietary Siemens control components per detailed list on control drawings except labs with VAV fume hoods or combination sash fume hoods.
 7. Furnish all DDC panel enclosures and UPS enclosures.
 8. Start-up and checkout of DDC panels.
 9. Verify correct functionality of every DDC point associated with every DDC panel, and for every input and output associated with every TEC.
 10. Commission DDC controllers and verify each sequence of operation with the project CxA.
 11. Training of UM personnel on the various Sequences of Operation, the DDC panel and its connections, the LPI panel, the UPS panel, and terminal equipment controllers and their related components.
 12. Configure all controllers to serve BACnet data to BACnet Clients installed on the network. Each controller shall be configured and programmed to map all the BACnet objects associated with the controller, as selected by UM BAS. Provide a list of all objects to UM BAS at least 2 weeks in advance of this work. UM BAS will return the list indicating the specific objects to be mapped. Configure the controllers to utilize a change of value subscription with the clients that reside on the IT network. Change of value increments shall be as selected by the UM BAS department and tuned to minimize IT network traffic.
 13. Provide and participate in all sustainable design requirements, including but not limited to providing temporary control and operation of air handlers to achieve LEED IEQ Credit 3.2 building flush-out. Refer to specification section 018113 Sustainable Design Requirements
 14. Program HMI display with graphics and point information. Submit for review and approval by owner.

15. Furnish data acquisition panels for metering of all utilities, including steam, condensate and BTU metering. Provide internal panel components including din rail, fuse, power terminal block, power supply, 24V terminal block, communication module, and read out modules. Terminate all input/output wiring and data connections to the panel. Start-up, configure and commission the panel.
16. Equipment schedules.
17. System Profile integration.
18. Generation of system graphics.
19. Provide remote notification alarms via email, text messages, etc. to U-M personnel.
20. Work with U-M IT department to obtain the required IP addresses.
21. For new panels, punch the LPI panel doors. MSCC must drop off and pick up doors from U-M's shop.
22. Selection of the appropriate size, type, and quantity of DDC controllers to be used.
23. Configure trends for every analog (30 minute trend interval) and digital(change of value) input to DDC panels. Configure room temperature (or the controlled variable) trends for every terminal equipment controller, at a 30 minute interval.

1.9 ITEMIZED QUOTATION

- A. When requested, immediately provide an itemized bid breakdown to the Owner post bid, for review and approval. Include itemized material costs for all major components (along with model numbers), installation labor costs, subcontractor labor and itemized material cost, and engineering costs, for base bid and for each alternate, for the entire work scope of the Mechanical Systems Controls.

EDITOR: CONTACT THE UM DESIGN MANAGER TO DETERMINE WHICH OF THE BELOW CONTROLS INSTALLATION CONTRACTORS ARE TO BE LISTED AS ACCEPTABLE FOR YOUR SPECIFIC PROJECT.

1.10 ACCEPTABLE MECHANICAL SYSTEMS CONTROLS CONTRACTORS

- A. The following MSCCs are acceptable for the furnishing and installation of pneumatic, electric and DDC components as specified in this section:
 1. Siemens Building Technologies
 2. Johnson Controls, Inc.
 3. Fontanesi & Kann Company

1.11 COORDINATION

- A. Provide controls and control wiring compatible with equipment provided by others and with existing equipment and controls.
- B. Coordinate the installation of controls with the installation of other project equipment.
- C. Coordinate with laboratory equipment suppliers (constant flow fume hoods, etc.) regarding dimensions and mounting location for alarm monitors and assure proper accommodation is made for the installation of other devices related to laboratory airflow controls.

- D. Coordinate panel locations, space requirements, and other control device locations during the development of the Project Coordination Drawings.

1.12 WARRANTY

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GENERAL

- A. DDC panels, including field and zone controllers/panels and all related software shall be the Siemens Apogee Building Automation System.
- B. Provide components compatible with new and existing DDC controller I/O modules, and with equipment provided by others. The MSCC shall become familiar with the DDC system's requirements, limitations, and characteristics.
- C. Any parts not described within this specification shall be submitted as an "Owner's Options/Voluntary Alternates" on the bid form, in accordance with the alternate product requirements contained in the Instructions to Bidders. UM reserves the right to reject any part not pre-approved which could result in bid disqualification.

2.2 GENERAL DDC CONTROL ARCHITECTURE

- A. All control points indicated on the documents shall be directly connected to primary DDC panels as current or voltage signals, not via the communication network, unless specifically shown otherwise.
- B. The Area Level Network shall be a BACnet/IP Ethernet network and the Field Level Network shall be a BACnet MS/TP unless shown otherwise on the documents. The FLN shall utilize the Master-Slave/Token-Passing (MS/TP) protocol, as acknowledged by the ANSI/ASHRAE 135 standard. This secondary network shall be provided and installed by the MSCC. Proprietary RS-485 or equivalent links will not be considered unless otherwise noted. The MS/TP link shall operate at a 38.4 Kbps minimum. Repeaters shall not be used in any instance.
- C. BACnet Broadcast Management shall be facilitated by one B-BC per IP Subnet and incorporate a BACnet Distribution Table, provided by U-M BAS dept. B-BC's that handle BBMD's and I/O functionality shall be properly sized to handle memory & processing requirements.
- D. Terminal units (VAV, FCU, etc) shall be connected directly to primary field panels. Use of a BacNet MS/TP to IP router is not acceptable.
- E. System architectural design shall eliminate dependence upon any single device for control execution. Each DDC controller shall operate independently by performing its own specified control, operator I/O and data collection. The failure of any single component or network connection shall not interrupt the execution of control strategies at other operational devices. Data collection that requires a single mechanism for user notification or viewing is strictly prohibited.

- F. All controllers within a building shall be able to access any data from, or send control commands directly to, any other DDC controller or combination of controllers in the same building without dependence upon a central processing device (peer-to-peer).

SPEC EDITOR'S NOTE: THE TYPE OF DDC CONTROLLER REQUIRED FOR EACH APPLICATION MUST BE IDENTIFIED ON THE PROJECT DOCUMENTS. CONSULT UM O&M ENGINEERING FOR MODEL NUMBERS.

2.3 GENERAL DDC CONTROLLER REQUIREMENTS

- A. Stand-alone microprocessor board with ROM and fully custom programmable RAM, EPROM, and/or EEPROM memory, integral interface equipment and power surge protection. DDC controllers shall be connected directly to sensors, controlled devices and the communication network.
- B. All DDC controllers shall use the latest version of ANSI/ASHRAE Standard 135 BACnet standard for communications, have passed BTL certification as available and be listed as compliant with UL916 Standard for Energy Management Equipment. DDC controllers used in smoke control applications must also be listed as compliant with UL864 Standard for Control Units and Accessories for Fire Alarm Systems.
- C. Controllers shall be listed by BACnet Testing Laboratories (BTL) as conforming to the required standard device profile and support all of the minimum required BACnet Interoperability Building Blocks (BIBBs) associated with this device profile.
- D. The "Present_Value" property of all analog output and binary output objects shall be writable so that Systems Monitoring personnel have the capability to override all system outputs from the central BMS server(s).
- E. Each DDC controller shall support firmware upgrades without the need to change hardware.
- F. Each DDC controller shall continuously perform self-diagnostics, communication diagnosis, and diagnosis of all panel components. The DDC controller shall provide both local and remote annunciation of any detected component failures, low battery conditions or repeated failure to establish communication for any system.
- G. DDC controller types shall be one of three types, a BACnet Building Controller (B-BC), a BACnet Advanced Application Specific Controller (B-AAC) or a BACnet Application Specific Controllers (B-ASC).
 - 1. Building Controllers (B-BC) shall be used for all major mechanical equipment and/or systems (i.e. chilled water, heating hot water, large AHU's, etc.).
 - 2. Advanced Application Specific Controllers (B-AAC) shall be used, as an extension of a B-BC's performance & capacity, for control of all medium and small mechanical systems and/or terminal equipment.
 - 3. Application Specific Controllers (B-ASC) shall only be used for the terminal equipment indicated under the B-ASC section of this specification.
- H. Any controller supplied under this specification must provide all integration functionality required to meet the sequence of operation and to communicate with the owner's building automation system.

I. BACnet Building Controller (B-BC):

1. Provide controllers conforming to the latest version of ANSI/ASHRAE 135 BACnet Building Controller (B-BC) standard device profile and support all of the minimum required BACnet Interoperability Building Blocks (BIBBs) associated with this device profile.
2. Controllers shall support Internet Protocol (IP) for communications to other BC's and the BMS front-end and MS/TP communication to B-AAC's and B-ASC's.
3. Controllers shall have a minimum 64 bit processor with an EEPROM, flash driven operating system. They shall be multi-tasking, multi-user, real-time digital control processors and permit I/O expansion for control / monitoring. Controller size shall be sufficient to fully meet the requirements of the project documents. Controllers shall be fully programmable while supporting standard energy management functions, including but not limited to:
 - a. Alarm detection and reporting
 - b. Automatic Daylight Saving Time switchover
 - c. Calendar-based scheduling
 - d. Closed loop PID control
 - e. Duty cycling
 - f. Economizer control
 - g. Equipment scheduling, optimization and sequencing
 - h. Event scheduling
 - i. Historical trend collection
 - j. Holiday scheduling
 - k. Logical programming
 - l. Reset schedules
 - m. Night setback control
 - n. Peak Demand Limiting (PDL)
 - o. Start-Stop Time Optimization (SSTO)
 - p. Temperature-compensated duty cycling
 - q. Temporary schedule override
4. Provide controller with integral power switch. If an integral switch is not provided by the manufacturer, the MSCC shall provide a separate dedicated transformer and switch within each enclosure for each controller present.
5. The operator shall have the ability to manually override automatic or centrally executed commands at the Building Controller via local, point discrete, hand/off/auto operator override switches for digital control type points and gradual switches for analog control type points.
6. Controllers shall provide local LED status indication for power, communications, status and each digital output for constant, up-to-date verification of all point conditions without the need for an operator I/O device.
7. Controller shall utilize optically isolated digital outputs.

8. All points associated with a given mechanical system (e.g., an air handling unit) will be controlled from a single Building Controller or point expansion panel(s) from the respective master. All expansion modules shall be located in the building controller enclosure or an attached enclosure. No points from a given mechanical system may be distributed among multiple panels - points must be run back to a single Building Controller dedicated to that mechanical system. Multiple mechanical systems shall be allowed on a single controller. Closed-loop control must never depend upon network communications. All inputs, program sequences, and outputs for any single DDC control loop shall reside in the same Building Controller.
9. A variety of historical data collection utilities shall be provided for manual or automatic sampling, storing and displaying system point data.
 - a. Building Controllers shall store point history data for selected analog and digital inputs and outputs.
10. Building Controllers shall also provide high resolution sampling capability for verification of control loop performance. Operator-initiated automatic and manual loop tuning algorithms shall be provided for operator-selected PID control. Provide capability to view or print trend and tuning reports.
 - 1) Loop tuning shall be capable of being initiated either locally at the Building Controller or from a network workstation. For all loop tuning functions, access shall be limited to authorized personnel through password protection.
11. Provide controller with battery backup capable of maintaining SDRAM memory for a minimum of 30 days.
12. Provide controllers that, upon full system power recovery, all clocks shall be automatically synchronized, and all controlled equipment shall be automatically re-started based on correct clock time and sequence of operation.
13. For expansion purposes, provide enough space and extend rail(s) within each control panel to allow the addition of (1) future I/O module per DIN rail.
14. Controllers shall provide at least one data communication port for operation of operator I/O devices such as portable laptop operator's terminals. Controllers shall allow temporary use of portable devices without interrupting the normal operation of permanently connected printers or terminals. A USB port shall alternatively be available to support local HMI tools connection.

J. BACnet Advanced Application Specific Controller (B-AAC):

1. Provide where indicated on project documents, or when required by application when approved by owner.
2. Provide controllers conforming to the latest version of ANSI/ASHRAE 135 BACnet Advanced Application Specific Controller (B-AAC) standard device profile and support all of the minimum required BACnet Interoperability Building Blocks (BIBBs) associated with this device profile.
3. Controllers shall support MS/TP communication to B-BC's and other B-AAC's and B-ASC's.
4. Controller shall be a microprocessor-based, 32 bit, multi-tasking, real-time digital control processor capable of stand-alone operation.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230900 - - 15

- a. If the hardware point requirements of any system should exceed the I/O configuration of available B-AAC offerings then a B-BC must be used. Control of one piece of mechanical equipment may not be performed by more than one controller.
 - 5. Provide each controller with sufficient memory to accommodate point databases and operating programs. All databases and programs shall be stored in non-volatile EEPROM. The controllers shall be able to return to full normal operation without user intervention after a power failure of unlimited duration.
 - 6. Controllers must be fully programmable. All programs shall be field-customized to meet the user's exact control strategy requirements.
 - 7. All points used for a single mechanical system shall be connected to the same B-AAC.
 - 8. Controller shall utilize optically isolated digital outputs.
 - 9. Analog outputs shall be 24V floating control, 0-10VDC, or 4-20mA as required by the device being modulated.
 - 10. Each controller shall perform its primary control function independent of other DDC controller communications, or if communication is interrupted. Reversion to a fail-safe mode of operation during network interruption is not acceptable. Controller shall receive its real-time data from the Building Controller time clock to insure network continuity.
 - 11. Each controller shall include algorithms incorporating proportional, integral and derivative (PID) values for all applications. All PID values and biases shall be field-adjustable by the user via operator terminals.
 - 12. Controllers shall provide diagnostic LEDs for power, communications and processor status. The controller shall continually check the status of its processor and memory circuits.
 - 13. The B-AAC providing control of a system shall have all associated points connected directly to it unless approved otherwise.
- K. BACnet Application Specific Controller B-ASC (Also referred to as Terminal Equipment Controller-"TEC") and related room temperature sensor (RTS)
- 1. Only for use with air terminal units (VAV boxes, CAV boxes, dual-duct mixing boxes), or where indicated. Provide B-AAC controllers when required by application.
 - 2. Controllers:
 - a. Provide electronic damper operators compatible with the controller and the air terminal units provided. Actuator shall utilize a brushless DC operator, min 35 in-lbs of torque, floating control (unless noted otherwise).
 - b. Controllers shall have an internal differential pressure transducer(s) capable of utilizing the total and static pressure signals from the air terminal unit's velocity sensor. The differential pressure transmitter maximum error shall be 5% of reading, not to exceed a velocity pressure error of 0.023" w.c., for the flow range 0-5600 fpm. Associated velocity sensor shall be furnished by air terminal unit manufacturer.
 - c. Each controller shall have electronic outputs compatible with the electronically operated air terminal unit tempering coil control valve and perimeter radiation control valve where applicable.

- d. Provide a discharge air sensor, mounted on the discharge of the terminal box reheat coil and/ or the outlet of dual duct mixing boxes, interfaced with the controller.
 - e. Where a pressure offset is described on the drawings, or when a damper based auto-calibration routine adversely affects control, utilize an auto-zero auxiliary device to temporarily disengage the differential pressure sensor from the air velocity sensor. This shall function so that a 0 cfm air volume reading is forced without changing the damper position to prevent negatively affecting room pressurization.
3. RTS shall have a digital temperature display, set point button, and override button. Sensor shall be thermistor type, 55°F-95°F range, +/-0.18°F resolution and capable of being field calibrated. Provide sensor with auxiliary communications port to allow remote connection to VAV controller(s) with a laptop computer, to facilitate configuration and commissioning of controllers.
 - a. Zone Sensors shall not be located on perimeter walls. Where explicitly indicated on drawings to do so and/or in locations near exterior walls and/or subject to drafts, sensors shall have insulated mounting bases to prevent false room temperature readings.
 4. Provide all other devices except those indicated as furnished by the equipment manufacturer. Install equipment manufacturer provided devices when not pre-installed. The MSCC shall coordinate devices furnished by others and provide all devices not furnished by them to provide a complete operating system that achieves the sequence of operation requirements.
 5. The MSCC may send TECs to the equipment manufacturer for factory mounting, or may field mount TECs. All mounting costs are the responsibility of the MSCC.
 6. TECs shall be provided with metal enclosure, complete with conduit knockouts (enclosure provided by MSCC).
 7. Connect TECs to the Siemens DDC control panel controller FLN of the AHU or system being served.
 8. Power to TECs and associated controlled devices shall be 24 VAC, provided by the MSCC.
 9. Approved Manufacturers:
 - a. Siemens

L. HUMAN MACHINE INTERFACE panel (HMI)- (color touchscreen panel)

1. 15" LCD, glass front, industrial color touchscreen. Custom configured to provide a graphic matching the control diagram in the construction drawings for each piece of equipment or system controlled by a building controller (B-BC). HMI shall display all analog and digital points. Standard default view shall be a read only display.
2. HMI shall connect to the BACnet MS/TP network at the DDC controller as well as to the campus ethernet for management and configuration of the device. Route ethernet cable to data closet if local switch is unavailable.
3. HMI shall at a minimum satisfy BACnet Operator Device (OD) functionality as a local MS/TP device.
4. HMI shall be suitable for operation in un-conditioned equipment room (32°F-122°F, 30%-90%RH).

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230900 - - 17

5. Mount the HMI through the Auxiliary (Aux.) temperature control panel face, utilizing mounting bolts, with its center-line a nominal 60" A.F.F. Provide an additional Aux. panel for the HMI when insufficient room exists in the main Aux. panel.
6. Approved Manufacturers:
 - a. Loytec LVIS-3ME15-G2 with mounting frame

SPECIFICATION EDITOR: SYSTEMS (AHU'S CHILLER, ETC) THAT ARE FED FROM EMERGENCY POWER SOURCES SHALL HAVE THEIR ASSOCIATED DDC CONTROLLERS AND DDC DEVICES FED FROM THE SAME EMERGENCY POWER SOURCE. A/E TO INDICATE PROPER CIRCUITS ON DOCUMENTS.

M. Controller Power Supplies:

SPECIFICATION EDITOR: THE AE SHALL CLEARLY INDICATE SOURCE OF POWER FOR ALL DDC CONTROLS. POWER SOURCE (NORMAL VS EMERGENCY) & PRIORITY SHALL MEET OR EXCEED THAT OF THE EQUIPMENT BEING CONTROLLED.

1. Power supplies shall be provided by the MSCC. Power source (i.e. normal vs. emergency power & emergency power priority) shall match that of the equipment and/ or system being controlled.
2. Provide each DDC panel with a line filter, surge suppressor, electrical disconnect, control fuse or circuit breaker, and control transformer. All sized and provided by the MSCC.
3. Within control enclosures provide insulated, modular, feed-through, clamp-style terminal blocks suitable for rail-mounting with end plates and partitions for the termination of all field wiring in control enclosures. Wire nut connectors or similar devices shall not be used.

2.4 NETWORK SWITCHES

- A. Provide network switches with 120V plug-in power supply. Switches shall be sized for the number of connected devices + 1 extra port for service access.
 1. 5 port switch - NETGEAR model FS105
 2. 8 port switch - NETGEAR model GS108E
 3. 16 port switch - NETGEAR model GS116E
- B. Network switches shall not be powered from the 24VAC terminal unit power supplies unless approved by Owner.

IMPORTANT: DESIGNER SHALL CLEARLY DELINEATE ON THE PROJECT DRAWINGS WHICH SPACES ARE LABORATORIES.

2.5 LABORATORY CONTROLS

- A. Provide laboratory controls for any space designated as a laboratory and where indicated, except for rooms with VAV fume hoods and hoods with combination sashes. System shall include: temperature, pressure, and other sensors/transmitters; control valves; control, network, and power wiring; power supplies; routers, servers, and all other devices required for a complete system.

1. The system shall utilize conventional terminal air flow units for supply and general room exhaust and venturi style terminal air flow units for constant volume fume hoods and any other constant volume exhaust point. Refer to related section 233600.
2. Provide programming of all laboratory controls.
3. The system shall function to achieve the sequences of operation detailed on the drawings.
4. Each room or zone shall have a dedicated control system. Systems shall be independent and stand-alone from the Owner's BAS. Failures of the BAS system or network communications between the BAS and the system (cut communication cables, router or server failures, etc.) shall have no impact on individual laboratory control.
5. The system shall perform the following control functions:
 - a. Pressurization Control: Control supply and auxiliary/general exhaust at a volumetric offset to maintain lab pressurization (positive, negative, or neutral). Controller shall maintain a constant offset (adjustable) between the sum of the room's total exhaust and the make-up/supply air volumes. This offset shall represent the volume of air that will transfer to or from the corridor or other adjacent rooms. Pressurization control shall consider networked devices, non-networked devices, and any number of constant volume devices.
 - b. Lab Temperature Control: Regulate lab space temperature through a combination of supply air volumetric control and control of reheat coils and other auxiliary temperature control devices, in response to temperature sensor(s).
 - c. Occupancy Control: Reset minimum volume settings and/or temperature control set points, based upon external signals from occupancy detectors, local over-ride buttons, and similar devices.
 - d. Constant volume fume hoods and other constant volume exhaust points (excluding general room exhaust): The self-actuated Constant Volume Venturi (CVV) Terminal Airflow Unit shall maintain a constant airflow set point.
 - e. Fume Hood Monitoring: Alarm unsafe condition at each fume hood.
 - f. Each lab room shall include a labeled Room Differential Pressure Indicating Gauge to indicate room pressurization relative to the adjacent room or corridor. Provide an engraved POS/NEG label (with 3/8" high lettering) adjacent to the gauge labeled "Correct Room Pressure Offset: X, where X = "POS" (positive) or "NEG" (negative) as indicated by the room volumetric offset indicated on the design documents.
 - g. Other control functions as indicated on the drawings.
 - h. Interface with the Owner's Siemens Apogee Building Automation System.

CONSIDER IF OTHER LABORATORY EQUIPMENT WOULD BENEFIT FROM BEING EQUIPPED WITH A FUME HOOD MONITOR AND INDICATE THAT EQUIPMENT ACCORDINGLY. EXAMPLES: EXISTING FUME HOODS, BIO-SAFETY CABINETS.

- B. All conventional terminal units used for laboratory controls shall utilize the following. Provide B-BC or B-AAC type controllers, as required for the application.

1. For laboratories utilizing B-BC type controllers, provide the following:
 - a. Controller (in addition to the B-BC requirements elsewhere in this specification):
 - 1) Supports wall switch or contact closure to change between occupied and unoccupied mode.
 - 2) Input and output types and quantities suitable for the application.
 - b. Differential Pressure Transmitter:
 - 1) +/- 0.25% of full scale reading, drift not to exceed 0.1% of full scale per year, range not to exceed 1.5 times the velocity pressure at the terminal unit's maximum cataloged flow rate. 4-20mA output.
 - 2) Factory calibrated. Provide factory calibration certificate.
 - 3) Mounting on terminal unit to match factory calibration mounting orientation.
 - 4) Approved Mfr./Model: Setra C267
 2. For laboratories utilizing B-AAC type controllers:
 - a. Controller (in addition to the B-AAC requirements elsewhere in this specification):
 - 1) Controller specifically designed for high accuracy lab pressure control.
 - 2) Air flow sensor read 5 times per second.
 - 3) Supports wall switch or contact closure to change between occupied and unoccupied mode.
 - 4) Input and output types and quantities suitable for the application. Minimum two air velocity sensor inputs.
 - b. Differential Pressure Transmitter:
 - 1) "Off Board" style differential pressure transmitter, maximum error 3.5% of reading not to exceed a velocity pressure error of 0.023" w.c., for the flow range 0-5600 fpm.
 - 2) With automatic calibration feature allowing periodic recalibration of airflow measurement without impacting room pressurization during the calibration routine. Auto-calibration shall occur on start-up and at an adjustable frequency selectable for 1 to 6 times per day.
 - 3) Approved mfr.: Siemens
- C. Provide fume hood monitors for constant volume fume hoods and for other laboratory equipment where indicated.
1. Monitor shall include audible alarm, visual LED alarm, and a common (single) alarm silence button.
 2. The fume hood monitor shall provide an alarm indication for the following conditions:
 - a. Low fume hood face velocity as detected by:
 - 1) Insufficient differential static pressure as detected by the TAU- CVV pressure switch (Phoenix CVV Terminal Air Flow Units).
 - 2) Insufficient air volume, as detected by the air flow station (Siemens CVV Terminal Air Flow Units).
 - 3) Sash raised above sash stop position.

- b. When an alarm condition is detected, audible and visual alarm indicators shall activate. Pushing the alarm silence button shall mute the alarm for an adjustable time delay, initially set at 10 minutes. Alarm shall re-sound after the time delay, until alarm condition clears. Visual alarm shall remain lit until alarm conditions clears.
- 3. Sash position shall be sensed by using a vertical sash position sensor. The vertical sash sensor shall consist of a precision 10-turn potentiometer mechanically coupled to a constant tension spring reel. Resolution shall be +/- 1/2 inch or better. A stainless steel, burr and snag-free cable shall be attached to the spring reel. Expected lifetime based on manufacturer's tests shall be over 200,000 full height sash movements. Sash sensor shall be installed in a location on the fume hood easily accessible for service.
- 4. Fume hood monitor shall be suitable for surface mounting on the front of the fume hood.
- 5. Approved fume hood monitors:
 - a. Phoenix FHM530 Controller (Provide for Phoenix CVV Terminal Air Flow Units)
 - b. Siemens (Provide for Siemens CVV Terminal Air Flow Units)

BELOW PARAGRAPH INDICATES THAT POWER SUPPLIES SHOULD BE INSTALLED ABOVE DOORS TO LABS. DESIGNATE THE LOCATION OF THIS EQUIPMENT ON THE DRAWINGS. WORK WITH ELECTRICAL ENGINEER TO DESIGNATE THE RECEPTACLE PANEL CIRCUITS TO FEED LAB CONTROL POWER SUPPLIES. DEPENDING ON LOAD, MULTIPLE POWER SUPPLIES MAY BE FED FROM A SINGLE 120 VAC CIRCUIT.

- D. Install power supplies secured to a wall and mounted above the doors to labs, unless indicated otherwise. Utilize receptacle panel circuits designated for powering lab control power supplies.
- E. Provide power supplies for lab airflow controls in NEMA 1 metal enclosures, adequately ventilated to prevent overheating of the equipment, with exterior labeled "Laboratory Airflow Controls Power Supply", and listing the room numbers served. If power supply is located above the ceiling or otherwise concealed, also provide an engraved label in an approved location visible without removing any building component. Maximum cabinet projection from wall shall be 8 inches. Label each secondary circuit inside the cabinet with the room number(s) served.
 - 1. Control transformers shall be rated NEC Class 2 and shall meet all the requirements and recommendations of the laboratory airflow controls manufacturer.
 - 2. No more than five pressurization zones shall be served from a single control transformer. No control transformer shall exceed 500 VA.
 - 3. Each pressurization zone shall be powered by a dedicated (isolated) secondary circuit. Each secondary circuit shall include a disconnect switch, "power on" indicator, and be current limited with a slow blow fuse or circuit breaker.
- F. Provide a disconnect switch, with shielded terminations, for line side power (one per control transformer). Locate inside the power supply enclosure.

2.6 TEMPERATURE TRANSMITTERS AND ACCESSORIES

A. Duct, Outside Air, Liquid Immersion:

1. Temperature sensor assemblies shall consist of a Resistive Temperature Device (RTD's) with a 4-20 mA 2-wire transmitter and gasketed utility box enclosure. Sensing element shall be platinum with 100 ohms resistance at 32 deg. F. Accuracy shall be +/- 1/2 deg. F over the entire range.
 - a. Single point duct temperature sensor shall be rigid bulb type with stainless steel (SS) sheath, aluminum tip, and have a calibrated span of 20-120 deg. F or 30-250 deg. F for heating applications.
 - b. Averaging element duct mounted temperature sensor shall have a SS minimum 25 ft. long continuous element sensor along the entire length, and have a calibrated span of 20-120 deg. F or 30-250 deg. F for heating applications. Provide sufficient sensor(s)/sensor lengths so that the elements are strung at 2 foot increments horizontally across the entire face of the coil. Provide additional sensors and wiring back to the DDC panel as needed to meet this requirement.
 - c. Rigid averaging element duct mounted temperature sensor shall have a brass case, bendable sheath, continuous element sensor along the entire length, and have a calibrated span of 20-120 deg.
 - d. Liquid immersion temperature sensors shall have a probe with SS well, and weather tight enclosure. Sensor well length shall be 1/3 of the pipe diameter, minimum 2.5 inches. Transmitters for chilled water shall have a calibrated span of 20-120 deg. F or 30-250 deg. F for heating applications.
 - e. Only when specifically indicated, surface mount thermal-ribbon flexible sensor for pipe mounting shall have SS braid over lead wires, use pressure sensitive adhesive, must be properly insulated, and have a calibrated span of 30-250 deg. F.
 - f. Room temperature sensors (non-TEC) shall have a span of 20-120 deg. F, locking covers, and when pneumatic, match the pneumatic thermostats used.
 - g. Adjustable room temperature sensors (non-TEC) shall have a digital temperature display, high accuracy set point slide, flush mounted override button, and a temperature range of 55-95 deg. F.
 - h. Approved Manufacturers:
 - 1) TCS
 - 2) Siemens
 - 3) Minco

B. High Precision Liquid Immersion: (for temperature inputs used for BTU calculations and where noted)

1. Temperature transmitter with 100 ohm platinum RTD sensor and 4-20 mA 2-wire DC output. Zero and span shall be continuously adjustable. Sensor and transmitter shall be a matched assembly. Accuracy shall be +/- 0.1% of calibrated transmitter span, including combined effects of repeatability, hysteresis and linearity. Calibrated range shall be 20 to 120 deg. F. Both CHWS and CHWR sensor/transmitter assemblies shall have the same span and shall be factory calibrated as a matched pair.
2. Liquid immersion sensors shall have welded stainless steel thermowell. Transmitters shall be of the potted type or shall have a thermally isolated watertight enclosure. Sensor well length shall be 1/3 of the pipe diameter, minimum 2.5 inches.
3. Approved Manufacturers:
 - a. TCS
 - b. Minco

2.7 HUMIDITY TRANSMITTERS AND ACCESSORIES

A. Room and Duct Type:

1. Sensor element shall be thin film capacitive type or bulk polymer resistance type, accuracy of +/- 2% RH, range of 0-100% RH with 4-20 mA 2-wire linear output. Factory calibrate for maximum accuracy at mid-range of normal operating humidity. All humidity sensors shall be resistant to chlorine and other cleaning agents.
2. Room Sensors shall have locking cover.
3. Duct Sensors shall have duct probe and mounting plate.
4. Approved Manufacturers:
 - a. Siemens
 - b. TCS
 - c. General Eastern
 - d. Vaisala

2.8 COMBINATION T & H TRANSMITTERS AND ACCESSORIES

A. Combination Room Temperature and Humidity Transmitter:

1. Single enclosure wall mounted room temperature and humidity sensor. Without display unless indicated otherwise on the contract documents. White casing/cover/fascia color. With service port to enable two-point calibration using either a PC or Vaisala HUMICAP Handheld Humidity and Temperature Meter HM70. Unit supply voltage 20-28 VDC.
2. Room temperature RTD shall be 100 ohm platinum sensor with 4-20 mA loop powered 2-wire output transmitter, 23-131°F temperature range, accuracy of +/- .54°F between 86-104°F.
3. Room humidity sensor shall have a 4-20 mA loop powered 2-wire output transmitter, humidity range of 0-90 percent RH, accuracy of +/- 1.7 percent RH at temperature range of 50-104°F, stability in typical HVAC applications of +/- 0.5 percent RH/year.
4. Provide with certificate of calibration.
5. Approved Manufacturers:
 - a. Vaisala HMW92 Series

B. Outside Air Temperature and Humidity Transmitter:

1. Single point outside air temperature RTD shall be 1000-ohm thin film platinum resistor sensor with 4-20 mA 2-wire output transmitter with solar shield.
2. Outside air humidity sensor shall be thin film alumina substrate capacitance signal generating sensor with 4-20 mA 2-wire output transmitter with 0-100% relative humidity range within +/- 1% RH.
3. Approved Manufacturers:
 - a. Vaisala

2.9 VIVARIUM TEMPERATURE AND HUMIDITY TRANSMITTERS AND ACCESSORIES

A. Vivarium Temperature and Humidity Transmitters for Wet Service:

1. Room temperature RTD shall be 100 ohm platinum sensor with 4-20 mA 2-wire output transmitter. Transmitter shall be waterproof or shall be remote mounted.
2. Room humidity sensor shall have a 4-20 mA 2-wire output transmitter, 0-100% relative humidity range, accuracy of +/- 2% RH, shall be waterproof, and shall be resistant to chlorine and other cleaning agents.
3. Combination T & H units shall comply with the above, but shall be mounted in a single enclosure.
4. All vivarium sensors shall have rust proof and waterproof covers and be protected by a stainless steel "U"-shaped guard firmly attached to the wall.
5. Approved Manufacturers:
 - a. Vaisala (combination temp. and humidity)
 - b. TCS (temp. only)
 - c. Siemens(temp. only)

2.10 PRESSURE TRANSMITTERS AND ACCESSORIES

A. Air Differential Pressure Transmitter:

1. Variable capacitance type with ranges not exceeding 150% of maximum expected input. Transducer shall have zero and span adjustment. Output shall be 2-wire 4-20 mA with 24 VDC input.
2. Safe over pressure rating shall be minimum 5 times the range.
3. Temperature compensated with thermal error of not greater than 0.04% of full scale in temperature range of 40 to 100 deg. F.
4. Accuracy shall be 1% of full scale.
5. Approved Manufacturers:
 - a. Air Monitor
 - b. Setra
 - c. Modus

B. Air Static Pressure Sensors- Duct, Area, Outside Air:

1. For use with Air Differential Pressure Transmitter
2. Duct mounted sensors shall be easily removable for cleaning, have multiple sensing ports, and fabricated of aluminum, copper, or SS. Sensors used in outdoor or condensing environments shall not be copper.
3. Wall or ceiling (area) mounted sensors shall be shielded, suitable for surface or flush mounting, complete with multiple sensing ports, contain a pressure impulse suppression chamber, and fabricated of aluminum, paintable steel, or SS as required.

4. Outside air mounted sensors shall be shielded, complete with multiple sensing ports, maintain sensing accuracy regardless of wind flow direction or pattern, and fabricated of aluminum or SS.
5. Accuracy shall be 1% of actual pressure value.
6. Provide a companion 4" Magnehelic gauge, mounted at auxiliary panel, of appropriate span for each sensor. Gauges shall be graduated in inches W.C. Provide a phenolic identification tag for each gauge.
7. Approved Manufacturers:
 - a. Air Monitor
 - b. Siemens
 - c. Dwyer
 - d. Honeywell

C. Airflow Sensors:

1. For use with Air Differential Pressure Transmitter
2. Provide where indicated amplified signal airflow traverse probe(s) or airflow stations, complete with straighteners when required, capable of continuously monitoring the fan or duct capacities (air volumes) it serves.
3. Each airflow array shall contain multiple total and static pressure sensors positioned at the center of equal and symmetrical cross-sectional areas, and interconnected by their respective averaging manifolds.
4. Sensors shall not protrude beyond the surface of the array, nor shall be adversely affected by particle contamination normally present in building airflow systems.
5. The airflow array shall be fabricated of galvanized steel or aluminum of adequate gauge to withstand the velocities to be encountered and with all required mounting brackets, plates, gaskets, and flanges.
6. Accuracy shall be a minimum of 3 percent of actual airflow over the designed range of flow.
7. Provide a companion 4" Magnehelic gauge, mounted at auxiliary panel, of appropriate span for each sensor array. Gauges shall be graduated in CFM for airflow measurement. Provide a phenolic identification tag for each gauge.
8. Approved Manufacturers:
 - a. Air Monitor
 - b. Tek-Aire
 - c. Dietrich-Standard
 - d. Ramsey Air

D. Steam/Liquid Differential Pressure Transmitters: (flow only)

1. Each differential pressure transmitter shall be selected and calibrated for operations between 0 and 125% of the normal differential pressure and up to 150-psig line pressure. The calibration point shall be rounded upward to the nearest 10 inches WC (for spans less than 200" WC) or to the nearest 5 psi for larger spans. Calibration date shall be included on an embossed tag attached to each transmitter.
2. The accuracy, including linearity, hysteresis and repeatability, of the transducer for measuring differential pressure shall be better than 0.25% of the span stated above throughout a minimum of a 6:1 turndown. Turndown ratio shall be based on the actual flow span.

3. The transmitter shall not be damaged by pressures of up to 500 psig on either side of the transducer and all wetted parts shall be inert in the presence of up to a 40% concentration of ethylene or polypropylene glycol in water.
4. Provide a drain valve for each side of the pressure chamber. Furnish and install mounting brackets appropriate for the installation location.
5. Span and zero shall be individually adjustable.
6. Shall be 2-wire and 4-20mA output.
7. Approved manufacturers:
 - a. Tobar
 - b. ITT Barton
 - c. Dietrich - Standard
 - d. ABB
 - e. Siemens
 - f. Rosemont/Fischer
 - g. Honeywell

E. Steam/Liquid Differential Pressure Transmitters: (pressure only)

1. Each differential pressure transmitter shall be selected and calibrated for operations between 0 and 200% of the normal differential pressure. The calibration point shall be rounded upward to the nearest 10 inches WC (for spans less than 200" WC) or to the nearest 5 psi for larger spans. Calibration date shall be included on an embossed tag attached to each transducer. Adjust output signal span to 150% of the differential pressure setpoint determined by the water balancer or the maximum differential pressure expected at the point of measurement.
2. The accuracy, including linearity, hysteresis and repeatability, of the transmitter for measuring differential pressure shall be better than 2% of the span stated above throughout a minimum of a 4:1 turndown. Turndown ratio shall be based on the actual differential span.
3. The transmitter shall not be damaged by pressures of up to 500 psig on either side of the transducer and all wetted parts shall be inert in the presence of up to a 40% concentration of ethylene or polypropylene glycol in water.
4. Provide a drain valve for each side of the pressure chamber. Furnish and install mounting brackets appropriate for the installation location.
5. Span and zero shall be individually adjustable.
6. Shall be 2-wire and 4-20 mA output.
7. Approved manufacturers:
 - a. Tobar
 - b. ITT Barton
 - c. Dietrich - Standard
 - d. ABB
 - e. Siemens

F. Steam/Liquid Pressure Transmitters: (pressure only)

1. The pressure transmitter shall be selected and calibrated for 150% of the normal operating pressure at the location of installation.

2. The accuracy, including linearity, hysteresis and repeatability, of the transmitter for measuring differential pressure shall be better than 2% of the span stated above throughout a minimum of a 10:1 turndown.
3. The transmitter shall not be damaged by pressures of up to twice its range. All wetted parts shall be inert in the presence of up to a 40% concentration of ethylene or polypropylene glycol in water.
4. Provide an isolation valve and pressure gauge on the inlet of each pressure transmitter.
5. Shall be 2-wire and 4-20 mA output.
6. Approved manufacturers:
 - a. ABB
 - b. Siemens
 - c. Kele
 - d. Setra
 - e. Dwyer

G. Steam/Liquid Flow Sensors: (differential pressure type)

1. Uni-directional sensors shall be of the venturi type or velocity pressure type. They shall be constructed of stainless steel, sized to the system's range of flow, and have an accuracy of 0.5%.
2. Bi-directional sensors shall be of the velocity pressure type. They shall be constructed of stainless steel, sized to the system's range of flow, and have an accuracy of 0.5%.
3. Approved Manufacturers
 - a. Preso
 - b. Gerand
 - c. Dietrich-Standard (Annubar Diamond II)

H. Three Valve Manifolds for Steam/Liquid Pressure Transmitter:

1. Provide a three-valve manifold for each transducer. Pressures of up to 500 psig shall not damage the manifold. All wetted parts shall be inert in the presence of up to a 40% concentration of ethylene or polypropylene glycol in water.
2. The manifold shall be designed for direct mounting on the transducer it serves and utilizes two quarter turn valves to provide zeroing, blocking and normal service modes.
3. Approved Manufacturers:
 - a. D/A Manufacturing

EDITOR: CONTACT THE UTILITIES AND PLANT ENGINEERING DEPARTMENT VIA THE U-M DESIGN MANAGER FOR INSTRUCTIONS ON TYPE OF FLOW METER TO USE FOR STEAM, CONDENSATE, CHILLED WATER, AND HEATING HOT WATER.

2.11 METERS AND ACCESSORIES

A. Liquid Electro-Magnetic Flowmeters:

1. The meter system shall consist of a primary flow sensor and transmitter. The flow sensor shall be equipped with 150-lb. flanges. The meter system shall be installed with all necessary grounding components and gaskets per manufacturer's instructions. The meter shall be capable of bi-directional operation. The meter shall be sized appropriately for the range of flow for the system. The electrodes shall be SS or Hasteloy C. The transmitter shall be provided with a remote mounting bracket, cable, integral LCD display, NEMA 4X housing, shall indicate flow rate and totalized flow, shall have an isolated 2-wire 4-20 mA linear output flow rate signal, and shall have a pulsed output signal for totalization. The transmitter shall be capable of being field calibrated and reprogrammed from the outside housing via magnetic probe or security protected integral keypad menu switching. Unit electronics shall have noise immunity. The primary flow sensor and transmitter shall be mounted in accessible locations. Unit shall have the capability to maintain flow total in non-volatile memory. The flowmeter and transmitter as a unit shall have the following minimum characteristics:
 - a. Flowmeter Liner:
 - 1) Heating hot water, domestic hot water, and other water systems operating at or above 110°F: Teflon
 - 2) Chilled water, domestic cold water, and other water systems operating below 110°F: Polyurethane
 - 3) Steam condensate: Teflon to 300°F, Ceramic over 300°F, and as suitable for the expected fluid conditions.
 - b. Accuracy:
 - 1) At 1 to 33 feet per second velocity: ±0.5% of rate.
 - 2) At 0.3 feet per second velocity: ±2% of rate.
 - c. Each unit shall be factory calibrated for the specified flow and shall be calibrated in both directions if the application is bi-directional. Calibration shall be a minimum of three point. Specific performance test data shall be furnished with the meter.
 - d. Each meter shall provide two analog 4-20 mA signals or a single 4-20 mA signal and a digital contact closure on reverse flow.
 - e. Meters for steam condensate shall be capable of sensing with condensate conductivity down to 6 µS/cm.
2. Provide a phenolic tag for each transmitter to identify service and meter ID number (i.e. SECONDARY CHILLED WATER FLOW, FM-1, etc.).
3. Approved Manufacturers (Water)
 - a. ABB
 - b. Siemens
 - c. EMCO
 - d. Rosemount
 - e. Krohne
 - f. Onicon
4. Approved Manufacturers (Steam Condensate)
 - a. Rosemount
 - b. Krohne
 - c. ABB

B. Steam (Vapor) Flowmeters (Vortex-Shedding Type):

1. The meter system shall consist of a primary flow sensor and transmitter. The flow sensor body and wetted parts shall be SS, and shall be flanged and suitable for the service rating. The meter shall be installed with all necessary grounding components and gaskets per manufacturer's instructions. The transmitter shall be provided with a remote mounting bracket and cable, integral LCD display, NEMA 4X housing, shall indicate flow rate and totalized flow, shall have an isolated 2-wire 4-20 mA linear output flow signal and a pulsed output signal for totalization. The transmitter shall be capable of being field calibrated and reprogrammed from the outside housing via magnetic probe or security protected integral keypad menu switching. Unit electronics shall have noise immunity. Unit shall have the capability to maintain flow total in non-volatile memory. The primary flow sensor and transmitter shall be mounted in accessible locations. The flowmeter shall be provided with a 1-year warranty and application non-degradation performance guarantee. The flowmeter and transmitter as a unit shall have the following minimum characteristics:
 - a. Temperature range shall be -40 to +750°F.
 - b. Accuracy shall be 1.0% of rate and 0.1% of full scale.
 - c. Repeatability shall be 0.15% of flow rate.
 - d. Each meter shall be factory calibrated for the specified flow range prior to shipment and specific performance test data shall be furnished with the meter.
 - e. Meter range shall accommodate the minimum and maximum expected flow for the steam pressure at the installed location.
 - f. Meter shall be equipped with a temperature and pressure compensation feature.
2. Provide a phenolic tag for each transmitter to identify service and Meter ID number (i.e. MEDIUM PRESSURE STEAM FLOW - LSI BUILDING, etc.).
3. Approved Manufacturers
 - a. Rosemount
 - b. Krohne
 - c. ABB

C. Steam (Vapor) Flow Meters (Differential-Pressure Type)

1. The meter system shall consist of a differential pressure primary flow element, a differential pressure transmitter (or transmitters), and a flow monitor/computer. The flow sensor body and wetted parts shall be SS, and shall be equipped with 150-lb. flanges. The transmitter(s) and flow computer shall be provided with a remote mounting bracket and cable, integral LCD display, and NEMA 4X housing. Flow computer shall indicate flow rate and totalized flow, shall have an isolated 2-wire 4-20 mA linear output flow signal and a pulsed output signal for totalization. Unit electronics shall have noise immunity. The transmitter shall be capable of being field calibrated and reprogrammed from the outside housing via magnetic probe or security protected integral keypad menu switching. Unit shall have the capability to maintain flow total in non-volatile memory. The flowmeter and transmitter as a unit shall have the following minimum characteristics:
 - a. Temperature range shall be -40 to +750°F.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230900 - - 29

- b. Accuracy shall be 1.0% of rate or better and 0.1% of full scale.
 - c. Repeatability shall be 0.15% of flow rate.
 - d. Each meter shall be factory calibrated for the specified flow range prior to shipment and specific performance test data shall be furnished with the meter.
 - e. Meter range shall accommodate the minimum and maximum expected flow for the steam pressure at the installed location.
 - f. Meter shall be equipped with a temperature and pressure compensation feature.
 - g. V-cone horizontal pilot lines shall be pitched back to steam lines and shall not trap condensate.
2. Provide a phenolic tag for each meter to identify service and Meter ID number (i.e. MEDIUM PRESSURE STEAM FLOW - LSI BUILDING, FM-1 etc.).
 3. Approved Manufacturers
 - a. McCrometer (V-cone-style meter)
 - b. Preso (Venturi-style meter)
 - c. Gerand Engineering (Venturi-style meter)

TWO METHODS OF CALCULATING ENERGY CONSUMPTION (BTUS), WITH THE RESPECTIVE EQUIPMENT REQUIRED, ARE SPECIFIED BELOW: (1) BY THE DDC SYSTEM OR (2) BY A "BTU METER". D.2 IS USED WHEN UTILITY (REVENUE) BILLING OF A SYSTEM IS PLANNED. D.1 IS USED WHEN ENERGY CONSUMPTION IS COLLECTED FOR INFORMATIONAL PURPOSES ONLY. ASSURE THE CONTROL DRAWINGS INDICATE WHICH METHOD, IF ANY, IS TO BE USED FOR EACH SYSTEM.

D. BTU Metering

1. (BTU determination via virtual point) When the control drawings describe BTU or BTU/hr trending, provide the following for each point described:
 - a. One (1) liquid flowmeter unit with transmitter as specified elsewhere in this section.
 - b. Two (2) high-precision matched temperature sensor assemblies with transmitters as specified elsewhere in this section. Sensor with SS well shall be installed in each respective supply and return pipe as shown on project drawings.
 - c. These devices shall be wired to a local DDC panel. Calculations for instantaneous and totalized load shall be incorporated into the panel control code, and the necessary virtual points shall be created to allow remote monitoring and trending via the DDC system.
2. When a BTU meter is indicated on the control drawings, provide all the requirements described above for BTU virtual points, and additionally provide a Flow/BTU computer. Flow/BTU computer shall be programmable for various flow meter types including linear, square law, or multi-point linearization data interpretation:
 - a. Inputs shall include 4-20ma flow from flow meter, and 4-20ma from two temperature sensors.
 - b. Flow and temperature inputs shall be simultaneously connected to this computer and looped to the local DDC panel.

- c. Flow/BTU computer shall operate in an environment of 0 to 50 C, shall include a keypad for data input and retrieval, and an EEPROM/nonvolatile RAM. Unit shall calculate and provide:
 - 1) Two 4-20ma analog outputs indicating btu, mass or volume flow rate, temperature 1, temperature 2, delta temperature, pressure, density, and peak demand.
 - 2) One isolated pulse output indicating btu, mass or volume total
 - 3) Two NC/NO relay outputs assignable to trip according to various rate, total, temperature or pressure readings Programmable as latching or non-latching, or as pulsed output of a total.
- d. Outputs shall be stored in a battery backed data logger, selectable for continuous or periodic log modes.
- e. Unit shall have a real time clock and shall date stamp logged data. Unit shall have an RS-232 port and shall be capable of setup from a laptop computer. The supplier shall set up and verify BTU measurement and shall train U of M personnel in all aspects of BTU computer setup and operation.
- f. Computer shall calculate and display heat, mass or Volume flow rate, resettable total, non-resettable total, temperature input 1, temperature input 2, delta temperature, density, pressure, peak demand, and time/date stamp.
- g. Provide a phenolic tag for each transmitter and flow computer (as applicable) to identify service and ID number (e.g. CHILLED WATER BTU METER - LSI BUILDING, etc.).
- h. Mount Flow/BTU computer in a NEMA 4 enclosure: Minimum size 16" (H) x 14" (W) x 8" (D), hinged cover, pad-lockable latch, and stainless steel hinge. Provide cutout in enclosure face and mount computer in face. Where multiple computers are supplied, they may be mounted in a common enclosure.
- i. Approved Manufacturers and Models for Flow/BTU Computer:
 - 1) Kessler-Ellis Supertrol II with MS816 enclosure.

2.12 MISCELLANEOUS DEVICES

A. Alarm Indication Station

- 1. Alarm indicating station with red alarm LED, alarm horn, horn momentary silence switch, adjustable alarm delay and alarm repeat time, and alarm status relay.
 - a. Supply Voltage: 24 VAC @ 100 mA or 24 VDC @ 34 mA.
 - b. Alarm Time Delay: None, or 1 to 31 seconds in one-second increments, or 10 to 310 seconds in 10-second increments.
 - c. Alarm Horn: Continuous or pulsed tone, 70 db minimum.
 - d. Alarm Repeat Time: None, or 1 to 7 minutes in one-minute increments, or 10 to 70 minutes in 10-minute increments.
 - e. Alarm Relay: SPDT, 0.5A @ 24 VAC, 1.0A @ 30 VDC, follows horn or lamp action, selectable.
 - f. Connections: Screw terminals, 22 - 14 AWG wires.
 - g. Mounting: Brushed stainless steel plate mountable to standard single junction box, with two screws provided.
- 2. Accepted Manufacturer:
 - a. Kele Model RAD-1.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230900 - - 31

B. Carbon Dioxide Sensors:

1. Carbon dioxide sensing cell shall consist of a non-dispersive infrared carbon dioxide gas cell that uses a pulsed source and has no free air optical path. Output shall be linearized 4-20 mA for use with 24 VDC input. The unit shall be specifically designed for the wall or duct application specified. Duct aspiration boxes shall be by the manufacturer. Unit shall have span adjustment. The unit shall have no moving parts.
2. Minimum requirements:
 - a. Range: 0-2,000 ppm
 - b. Accuracy: 3 % of full scale
 - c. Repeatability: 1% of full scale
 - d. Power Consumption: less than 3 watts
 - e. Zero Drift at Constant Temp.: 100 ppm per 24 hrs (random not cumulative)
 - f. Max. allowable Drift in 1 year: 20 ppm
3. Unit shall not require calibration for a period of 1 year or more.
4. Approved Manufacturers:
 - a. Valtronics
 - b. Telaire

C. Carbon Monoxide and Combustible Gas Sensors:

1. Sensors shall be a micro-processor-based system for continuous monitoring and use catalytic, electro-chemical, diffusion cell, or solid-state type sensing. Output shall be linearized 4-20 mA for use with 24 VDC input with green LED normal operation indicator. Unit shall provide a SPDT pilot duty low voltage alarm contact with an adjustable set point. The unit mounting shall be wall, duct aspiration, or ceiling to suit application. The unit shall specifically designed for the application and shall be explosion proof, as required. Unit shall have single point set point and span adjustment. The unit shall have no moving parts. Units mounted outdoors shall be waterproof and rustproof.
2. Minimum requirements:
 - a. Range: as required for application; ppm, %, % L.E.L.
 - b. Accuracy: 3-5% of full scale
 - c. Repeatability: 1% of full scale
 - d. Power Consumption: 5 watts or less
 - e. Relay contact rating: 5 amp at 24 VDC, 150 VA max. inductive
 - f. Zero Drift at Constant Temp.: 0 per 24 hrs (random not cumulative)
 - g. Max. allowable Drift in 1 year: 1% of full scale.
3. Approved Manufacturers:
 - a. Draegar
 - b. Vulcain

D. Condensation Sensor - Pipe Mounting Type

1. Sensor with built-in relay contact that opens upon detection of condensation, for sensing condensation when mounted on bare pipe.
 - a. Supply voltage: 24 VAC/VDC \pm 10%
 - b. Power consumption: Maximum 1.6 VA
 - c. Relays contacts: rated 1 amp @ 24 VAC/VDC

- d. Operating temperature: -20... +50°C
 - e. Display: LED (visible without removing cover), green - power supply ok, red - condensation sensed, contact open.
 - f. With pipe mounting bracket.
- E. Current Sensing Relays
- 1. Provide current sensors with donut transformers capable of monitoring AC current, maximum input current ranges from 20 to 300 amp, peak, with digital output signals having adjustable high and low current trips. An LED shall provide visual indication and shall not bleed through.
 - a. Provide special current sensing relays designed to monitor belt breakage, when indicated or described in the Sequence of Operation.
 - 2. Approved Manufacturer:
 - a. Neilsen Kuljian
 - b. Veris Industries
- F. Electronic to Pneumatic Transducers
- 1. Provide transducers to convert electronic signals from the Siemens analog output modules to linear proportional pneumatic signals for all DDC controlled modulating pneumatic devices. The transducer shall be a panel-mounted device, with hand/auto switch, override dial for manual override control, and a 0-30 psig output gauge. Supply voltage shall be 19-26 VAC. Control signal shall be 0-10 VDC or 4-20 mA. Output accuracy shall be 1/4 psig at 75 Deg. F, producing a 0-15 psig pneumatic signal. Output repeatability shall be .05 psig maximum. Transducers shall be high capacity non-bleed devices with a minimum output capacity of 500 SCIM, except special circumstances that require a constant bleed controller with branch exhaust on signal loss.
 - 2. Approved Manufacturers:
 - a. Non-bleed Type:
 - 1) Siemens
 - 2) ACI - PXP
 - b. Bleed Type:
 - 1) ACI - PXP
- G. Liquid Detectors
- 1. Liquid detectors shall utilize microchip technology for detection of conductive liquids through one of the following types of sensors: gold-plated probes, self-adhesive sensor tape with copper electrodes and durable cotton cover, or rope type sensor. Detectors shall be selected based on the best use for the application. Power requirement shall be 11-27 VAC or VDC and have a green LED normal operation indicator. Unit shall have a SPDT pilot duty low voltage alarm contact. Unit shall be waterproof and rustproof. A red LED shall indicate the presence of liquid. Unit shall have an adjustable set point.
 - 2. Approved Manufacturers:
 - a. R. E. Technologies, Inc
 - b. Water Alert
- H. Loop-Powered Indicators:

1. Where indicated, analog sensors (i.e., temperature, humidity, CO₂, CO, etc.) shall be provided with a Loop-Powered Indicator (LPI) mounted on a separate dedicated LPI panel, except those sensors that are provided with a local display. Local displays shall be mounted at the DDC panel array.
2. Indicator shall be designed to display any 4-20 mA transmitter signal directly in the engineering unit of the measured media. The display shall be powered directly by the measured 4-20 mA signal without requiring an additional power supply. Indicator shall not impose impedance on the current loop beyond the capability of the transmitter.
3. Display shall have minimum 5/16" LCD digits, with 3-1/2 digit capability selectable decimal point and selectable scale. Accuracy of indication shall be 0.1% of scale.
4. Indicator shall be provided with a lettered plate indicating appropriate engineering units.
5. Approved Manufacturer:
 - a. R. E. Technologies, Inc. (Kele Assoc.)

I. Occupancy Counters (People Counters)

1. Dual Sensor - Differential Thermal Imaging Counter
 - a. General
 - 1) Provide combination BACnet-MS/TP and Analog Output counting devices for Dynamic Ventilation Reset Controls to be mounting where indicated on the plans and controlling ventilation to occupied zones as populations vary, in compliance with the Ventilation Rate Procedure in ASHRAE 62.1-2013 and 2016.
 - b. Counters shall provide data on net zone populations to dynamically calculate the ASHRAE Standard 62.1 Ventilation Rate.
 - 1) Each counter shall consist of a center-top door frame mounted counter, using a dual thermopile differential thermal imaging counters, an integral microprocessor-based design capable of providing net population data to the controls network for use in ventilation reset based on accurately measured real-time zone populations.
 - 2) Counter with steel enclosure shall have an overall size of: 6.12L x 2.94W x 1.36H inches and weigh approx. 0.25 lbs.
 - 3) Counters shall have an environmental operating range of no less than 65° F to 85° F and 5% - 95% RH, non-condensing.
 - c. Population Counter Design and Counting Performance
 - 1) Counter shall be mounted to provide zone entry and exit data to the network for maintenance of a net zone population value to less than ±5% of actual or ±3 people, whichever is larger.
 - 2) Counter design shall be optimized for single entry/exit interior doors, ≤ 42 x ≤ 96 in.

- 3) Small deviations or accumulation in counts shall be adjusted when "population reset interval" is selected during configuration and set up. Upon activation, the total net population in memory shall be 'zeroed' based on the user-determined reset period selected or every 24 hours during a predetermined non-occupied period.
- 4) Power, Connectivity and Communications
 - a) The BACnet / analog combination counters shall be capable of communicating with other devices using an RS-485 standard interface and BACnet-MS/TP protocol, implemented as a Master node.
 - b) Communication speed shall be field-selectable by dip switch between 9.6, 19.2, 38.4 and 76.9 kBaud.
 - c) The counter-network communications shall be capable of field configuration and setup using a simple dip-switch interface.
 - d) A simultaneous 0-10 VDC scalable and protected analog output shall also be available to provide net counts.
 - e) All counters shall be powered with individual 24 VAC transformers (22.8V to 26.4V under load) @1.2 V-A nominal.
2. The manufacturer's authorized representative shall review and approve counter position placement for each location indicated on the plans.
3. Accepted Manufacturer:
 - a. EBTRON, Inc. Model CENSUS - C100, Single-entry interior door occupancy counter.

J. Pressure to Electronic Transducers

1. Provide transducers to convert linear proportional pressure signals to interface with the Siemens analog input modules. The transducer shall be a panel-mounted device, with input pressure snubber, as required, and gauge. Supply voltage shall be 19-26 VAC. Control signal shall be 4-20 mA. Accuracy shall be 1 percent full scale. Thermal effect shall be less than 1 percent full scale on zero and less than 1 percent of reading on span. Transducer shall have elastomer seals and SS wetted parts.
2. Approved Manufacturers:
 - a. Siemens
 - b. Setra
 - c. Modus
 - d. ACI
 - e. Dwyer

K. Room Differential Pressure Indicating Gauges

1. Dial (4" dia.) in metal case, diaphragm actuated, black figures on white background, front recalibration adjustment, center zero scale with scale range of 0.05-0-0.2" WC with 0.005 minor divisions, suitable for surface or flush mounting. Accuracy +/- 2% of full scale. With plastic gauge mounting plate for flush mounting and space pressure sensor consisting of pressure port, barbed tubing connection, and sensor plastic mounting plate suitable for mounting on a standard electrical junction box.
2. Approved Manufacturers:

- a. Dwyer "Magnehelic" 2000-00N with A-465 pressure sensor and A-464 flush mounting plate (provide A-368 mounting bracket for surface mount applications)

THE DESIGNATION "RTC" SHOULD BE USED ON THE CONTROL DRAWINGS WHEN THE BELOW TYPE OF CONTROLLER IS INTENDED.

2.13 ELECTRONIC ROOM TEMPERATURE CONTROLLER (RTC)- CHILLED BEAMS, FIN TUBE, AND SIMILAR TERMINAL DEVICES WITHOUT A FAN

A. Room Temperature Controller:

- 1. UL listed configurable electronic room temperature controller with LCD display. Use only where specifically called for on control drawings. With the following features:
 - a. Two part controller consisting of plastic base plate and detachable plastic controller housing, white casing/cover/fascia color. The base shall include screw terminals to allow all wiring to be terminated on the base, as opposed to directly on the controller. The controller housing shall mechanically and electrically engage the base and shall include all electronics and a built-in room temperature sensor.
 - b. LCD display shall display the measured room temperature in °F.
 - c. Control shall be by room temperature sensing.

REVISE OUTPUT REQUIREMENT TO FLOATING CONTROL WHEN FLOATING TYPE CONTROL VALVES ARE USED. FLOATING CONTROL IS NOT APPROPRIATE FOR APPLICATIONS THAT MAY DESIRE FAIL OPEN OR FAIL CLOSED CONTROL VALVES SUCH AS CHILLED BEAMS.

- d. Shall provide the number and type of inputs and outputs required to meet the sequence of operation.
 - 1) Provide a minimum of two analog outputs for 0-10VDC modulating valve actuators.
 - 2) Output Action (analog): Selectable normally open or normally closed.
 - 3) Inputs: Provide a minimum of two binary inputs and one universal input.
 - 4) Input and Output Ratings: As required for controlled devices.
- e. Setpoint Adjustment Buttons: The controller face shall provide an "up" setpoint adjustment button and a "down" setpoint adjustment button, or touch display, to allow occupant adjustment of setpoint.

NOTE THE AUTOMATIC CHANGEOVER MODE DESCRIBED BELOW. IF A MFR. DOES NOT OFFER THIS FUNCTION FOR 2-PIPE HEATING/COOLING APPLICATIONS, PIPING AT THE FAN COIL WILL NEED TO BE CONFIGURED WITH A SMALL BYPASS TO ASSURE THE CONTROLLER SENSES THE CURRENT 2-PIPE SYSTEM WATER TEMP.

- f. Automatic Changeover Mode (provide for two pipe applications): the controller shall detect if the system is in heating or cooling mode by measuring the system water temperature at the fan coil and automatically switching the controller to heating or cooling control mode. An icon on the controller LCD shall indicate which mode the system is in, heating or cooling. Provide a strap-on-pipe temperature sensor device wired to the controller, for measuring system water temperature. The controller shall also include a purge mode function to assure proper acquisition of system water temperature by the strap-on sensor. Purge mode function shall open the fan coil 2-way control valve (for an adjustable time period) at two hour intervals if the control valve has remained closed during that interval.
- g. The controller shall provide the following setpoint modes:
 - 1) Normal (Occupied) Mode: Controller maintains the heating and cooling occupant adjustable setpoint.
 - 2) Un-Occupied Mode: Controller maintains set-back/setup heating and cooling setpoint; activated by a remote contact closure wired to a status input on the controller. Not occupant adjustable.
- h. Override Button or Touch Display: The controller face shall include a button or touch display that allows the occupant to temporarily switch to Normal (occupied) mode. The duration of the temporary occupied mode shall be adjustable from 0 to 24 hours. When override is activated, Normal Mode setpoint operation shall be invoked and the controller shall provide a network point to signal the Owner's DDC system via BACnet MS/TP that occupied mode has been requested.
- i. Operating Voltage: 24 VAC.
- j. Power Consumption: 12 VA maximum.
- k. Control Transformer: Provide control transformer when required.
- l. Control Deviation Including Sensor Inaccuracy at 77 °F: ± 1 °F maximum.
- m. Programmable Features: It shall be possible to program (configure) the following controller functions without special software. These features shall be provided directly by the controller. Programming/configuration mode shall be accessible via either a password or by non-intuitive button activation sequences.
 - 1) Cooling setpoint range, all Modes: Adjustable 54 °F to 100 °F.
 - 2) Heating setpoint range, all Modes: Adjustable 40 °F to 90 °F.
 - 3) Heating maximum setpoint (adjustable 40 °F to 90 °F) and cooling minimum setpoint (adjustable 54 °F to 100 °F).
 - 4) Proportional band adjustable from 3°F to 10°F.
 - 5) Dead-band between heating and cooling adjustable in 1°F increments, over a range 2°F to 5°F.
 - 6) Other parameters as required to meet the requirements of this specification and the control sequence of operation.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230900 - - 37

- n. Serial Communications: Provide Controller with BACnet Testing Laboratories certified BACnet MS/TP Communications compatible with Siemens controls.
- o. BAS Connections: Connect to the Siemens DDC control panel controller FLN or BACnet MS/TP network.
- 2. Warranty: 18 month unconditional parts and labor warranty and 5 year unconditional warranty for all parts including sensors.
- 3. Approved Manufacturers, subject to compliance with all the above requirements:
 - a. Schneider Electric SE7200 Series or Schneider Electric SE8300 Series
 - b. Viconics VT7200 Series or Viconics VT8300 Series

THE DESIGNATION "RTC-F" SHOULD BE USED ON THE CONTROL DRAWINGS WHEN THE BELOW TYPE OF CONTROLLER IS INTENDED.

2.14 ELECTRONIC ROOM TEMPERATURE CONTROLLER (RTC-F)- FAN COILS (FCU), UNIT HEATERS (UH), AND CABINET UNIT HEATERS (CUH)

A. Room Temperature Controller:

- 1. UL listed configurable electronic room temperature controller with LCD display, for modulating control of 2 or 4 pipe FCUs/UHs/CUHs. Use only where specifically called for on control drawings. With the following features (Fan speed relay board provided with the controlled equipment. Coordinate with equipment manufacturer and assure controller is compatible with relay board. Provide additional components to make compatible if required.):
 - a. Two part controller consisting of plastic base plate and detachable plastic controller housing, white casing/cover/fascia color. The base shall include screw terminals to allow all wiring to be terminated on the base, as opposed to directly on the controller. The controller housing shall mechanically and electrically engage the base and shall include all electronics and a built-in room temperature sensor.
 - b. LCD display shall display the measured room temperature in °F.
 - c. Control shall be by room temperature sensing. Provide return air sensor where indicated as required.
 - d. Outputs for modulating valve actuator and three-speed fan control or ECM fan control.

REVISE OUTPUT REQUIREMENT TO FLOATING CONTROL WHEN FLOATING TYPE CONTROL VALVES ARE USED. FLOATING CONTROL IS NOT APPROPRIATE FOR APPLICATIONS THAT MAY DESIRE FAIL OPEN OR FAIL CLOSED CONTROL VALVES SUCH AS CHILLED BEAMS.

NOTE THAT AS OF MAY 2019 VICONICS AND SCHNEIDER ELECTRIC CONTROLLERS FOR ECM FANS HAVE AVAILABLE ONLY ONE OUTPUT FOR CONTROL VALVES (2-PIPE OPERATION).

- e. Provide the number and type of inputs and outputs required to meet the sequence of operation.
 - 1) Provide a minimum of two analog outputs for 0-10VDC modulating valve actuators or 2-10VDC ECM fan control.

- 2) Output Action (analog): Selectable normally open or normally closed.
 - 3) Inputs: Provide a minimum of two binary inputs and one universal input.
 - 4) Input and Output Ratings: As required for controlled devices.
- f. Fan Speed Selector Switch, Button, or Touch Display: that allows occupant to select high, medium, low or automatic fan speed. When setpoint dead-band is exceeded, the controller shall turn on the fan at the speed selected and modulate the control valve. In automatic mode, once the control valve opens to maximum position, the fan shall modulate from minimum speed/2VDC to maximum speed/10VDC.
- 1) If controlling single speed equipment, provide ability to jumper or program the controller so that regardless of fan "switch position", controller turns on fan to fixed speed when setpoint dead-band is exceeded.
- g. Setpoint Adjustment Buttons: The controller face shall provide an "up" setpoint adjustment button and a "down" setpoint adjustment button, or touch display, to allow occupant adjustment of setpoint.
- h. It shall be possible to set the fan control for either continuous fan operation independent of room temperature, or for the fan to turn on and off dependent on room temperature.

NOTE THE AUTOMATIC CHANGEOVER MODE DESCRIBED BELOW. IF A MFR. DOES NOT OFFER THIS FUNCTION FOR 2-PIPE HEATING/COOLING APPLICATIONS, PIPING AT THE FAN COIL WILL NEED TO BE CONFIGURED WITH A SMALL BYPASS TO ASSURE THE CONTROLLER SENSES THE CURRENT 2-PIPE SYSTEM WATER TEMP.

- i. Automatic Changeover Mode (provide for two-pipe applications): the controller shall detect if the system is in heating or cooling mode by measuring the system water temperature at the fan coil and automatically switching the controller to heating or cooling control mode. An icon on the controller LCD shall indicate which mode the system is in, heating or cooling. Provide a strap-on-pipe temperature sensor device wired to the controller, for measuring system water temperature. The controller shall also include a purge mode function to assure proper acquisition of system water temperature by the strap-on sensor. Purge mode function shall open the fan coil 2-way control valve (for an adjustable time period) at two hour intervals if the control valve has remained closed during that interval.
- j. The controller shall provide the following setpoint modes:
 - 1) Normal Mode: Controller maintains the heating and cooling occupant adjustable setpoint.
 - 2) Standby Mode: Controller maintains standby heating and cooling setpoints. Not occupant adjustable.
 - 3) Economy Mode: Controller maintains set-back/set-up heating and cooling setpoint; activated by a remote contact closure wired to a status input on the controller. Not occupant adjustable.
- k. Standby Switch or Button: the controller face shall include a standby switch/button/touch screen that allows the occupant to activate stand-by mode by a single key stroke.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230900 - - 39

- l. Operating Voltage: 24 VAC.
- m. Power Consumption: 12 VA maximum.
- n. Control Transformer: Provide control transformer when required.
- o. Control Deviation Including Sensor Inaccuracy at 77 °F: ± 1 °F maximum.
- p. Programmable Features: It shall be possible to program (configure) the following controller functions without special software. These features shall be provided directly by the controller. Programming/configuration mode shall be accessible via either a password or by non-intuitive button activation sequences.
 - 1) Cooling setpoint range, all Modes: Adjustable 54 °F to 100 °F.
 - 2) Heating setpoint range, all Modes: Adjustable 40 °F to 90 °F .
 - 3) Heating maximum setpoint (adjustable 40 °F to 90 °F) and cooling minimum setpoint (adjustable 54 °F to 100 °F) .
 - 4) Proportional band adjustable from 3°F to 10°F.
 - 5) Dead-band between heating and cooling adjustable in 1°F increments, over a range 2°F to 5°F.
 - 6) Two Pipe Applications:
 - a) Heating/Cooling Changeover Cooling Switch Point: <75 °F.
 - b) Heating/Cooling Changeover Heating Switch Point: >77 °F.
 - c) Purge function active or inactive.
 - d) Purge function time duration.
 - 7) Fan Control in the Economy Mode: On or off.
 - 8) Other parameters as required to meet the requirements of this specification and the control sequence of operation.
2. Serial Communications: Provide Controller with BACnet Testing Laboratories certified BACnet MS/TP Communications compatible with Siemens controls.
3. BAS Connections: Connect to the Siemens DDC control panel controller FLN or BACnet MS/TP network.
4. Warranty: 18 month unconditional parts and labor warranty and 5 year unconditional warranty for all parts including sensors.
5. Approved Manufacturers subject to compliance with all the above requirements:
 - a. Schneider Electric SE7300 Series or Schneider Electric SE8300 Series
 - b. Viconics VT7300 Series or Viconics VT8300 Series

2.15 ELECTRIC COMPONENTS

- A. Components shall be Honeywell, Johnson, or Siemens, unless listed otherwise.

- B. Low temperature detection thermostats shall be duct type, fixed 5 deg. F differential, range 30 to 60 deg. F. Sensing element shall have a 20-foot long capillary tube responding to the lowest temperature sensed along any 12 inches of bulb length. Switch shall be SPDT 120 VAC, UL listed, rated for 10 amps at 120 VAC full load. Unit shall be manually reset. Provide one thermostat for every 20 square feet of coil surface.
- C. High temperature detection thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load. Unit shall be manually reset.
- D. Immersion electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required, with stainless steel separable well. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- E. Remote-bulb electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required, with stainless steel separable well as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- F. Wall-mounted electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- G. Strap-on electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- H. Differential Pressure Switches:
 - 1. Shall provide electrical switching action upon a sensed pressure differential increase between two points. Sensitivity shall be suitable for the application. Set point shall be adjustable over the full range of the device. Switching action shall SPDT. Electrical switch rating shall be 10 amps at 120 VAC, minimum.
 - 2. Pressure rating of switch and connecting tubing:
 - a. Fan - Rated for 12 inches WC.
 - b. Pump - Maximum deadhead system pressure.
 - 3. Switches used for safety shutdown applications shall be of the manual reset type.
 - 4. Approved Manufacturers:
 - a. Honeywell
 - b. Siemens
 - c. Dwyer
 - d. Cleveland Airflow
- I. Limit Switches:
 - 1. Limit switches shall be oil tight type with appropriate operator to provide required function.
 - 2. Approved Manufacturers:

- a. Honeywell
- b. Siemens
- c. Allen-Bradley
- d. GE
- e. Square D

J. Control Relays and Contactors:

- 1. Relays shall be a minimum DPDT, of proper coil voltage, with neon indicator light, and of sufficient rating for specified purpose. Relay base shall be of the screwed terminal type.
- 2. Contactors shall be definite purpose type, have adequate number of poles, of proper coil voltage, and of sufficient rating for specified purpose. Contactors used for DDC interface control shall contain a Hand-Off-Auto switch.
- 3. Approved Manufacturers:
 - a. Dayton
 - b. Siemens
 - c. Allen-Bradley
 - d. GE
 - e. Square D

K. Selector Switches:

- 1. Switches shall be multiple position type, oil-tight, water-tight, dust-tight, have the adequate number of contact blocks, capable of additional contact blocks, and of sufficient rating for specified purpose. Nomenclature plate shall be provided with appropriate wording, units, etc.
- 2. Approved Manufacturers:
 - a. Dayton
 - b. Siemens
 - c. Allen-Bradley
 - d. GE
 - e. Square D

L. Push Buttons and Pilot Lights:

- 1. Push button switches and pilot lights shall be, oil-tight, watertight, dust-tight, have the adequate number of contact blocks, capable of additional contact blocks, and of sufficient rating for specified purpose. Nomenclature plate shall be provided with appropriate wording, units, etc.
- 2. Pilot lights shall be neon or LED, push-to-test type with replaceable lens. Lens shall be of the appropriate color for application served.
- 3. Approved Manufacturers:
 - a. Dayton
 - b. Siemens
 - c. Allen-Bradley
 - d. GE
 - e. Square D

M. Fuse Holder/Disconnects:

- 1. Fuse holder/disconnects shall be provided for all control circuits inside auxiliary control panels, and shall be of appropriate size/type for service.
- 2. Approved Manufacturers:
 - a. Little Fuse

- b. Dayton
- c. Buss
- d. GE

N. Terminal Blocks:

- 1. Terminal blocks shall be modular, barrier type, direct mount, single pole, and snap together to any required number of poles. Units shall be rated for 300 volts, 20 amp., handle wire sizes from 22-12 AWG, and have a marking strip for identification.
- 2. Approved Manufacturers:
 - a. Little Fuse
 - b. Dayton
 - c. Buss
 - d. GE

O. Toggle Switches:

- 1. A toggle switch shall be provided for every auxiliary and local control panel that utilizes a 120 VAC power source as a means to turn off the power to that panel and shall be of appropriate size/type for service. Toggle switches shall be rated 120/277 volts, 20 amps, SPDT, specification grade, extra-heavy duty, back and side wired, with brown handles.
- 2. Approved Manufacturers:
 - a. Leviton
 - b. Pass & Seymour
 - c. Hubbell
 - d. Arrow Hart
 - e. Bryant

2.16 ELECTRICAL ACCESSORIES

A. Wiring and Conduit

- 1. The MSCC shall provide all DDC and related control wiring, conduit, and J-hook cable hanging system. Wire and cable shall be pulled from device or control point to the DDC, Auxiliary, UPS, or LPI panels and run between DDC, Auxiliary, UPS, or LPI panels. MSCC shall be responsible for sizing all wiring to allow for proper function.
- 2. The MSCC shall develop a logical and systematic wire numbering scheme for each panel assembly. All wire and cable shall be labeled and tagged on both ends. Within a panel assembly, wiring shall be tagged 4 inches down from the point at which the wire enters the cabinet with the corresponding point number or wire number. All other wiring shall be tagged within 4 inches of the termination point.
 - a. Labels shall be thermal printed type designed specifically for wiring identification.
- 3. All wiring carrying voltages greater than 24 volts or rated as Class 1 circuits shall be run in conduit.
- 4. All wiring carrying voltages 24 volts nominal or less shall be run as follows:
 - a. Wiring routed in shafts, walls, below grade, and in any concealed or inaccessible space, or above ceilings requiring the use of a tool to access or held in place by clips or similar devices: run wiring in conduit.

- b. Wiring routed in exposed locations such as mechanical and electrical rooms or in rooms without ceilings (i.e. exposed to deck above): run in conduit.
 - c. ALN wiring: run in conduit.
 - d. Wiring above accessible lay-in ceiling areas: Utilize J-hook hangers.
 - 1) Provide UL Listed zinc electro-plated steel or plastic J-hooks, sky blue color, plenum use approved, with minimum 1-inch wide cable support area, rated for the cable type being supported. Provide with integral cable retainer strap to provide containment of cables within the hanger.
 - 2) Install J-hooks with J-hook bottoms a minimum of 10 feet A.F.F. and no less than 2 feet above the ceiling.
 - 3) Space hangers at maximum 5 foot intervals, with additional hangers located a maximum of 3 feet from both sides of any change in direction. Wiring shall not sag more than 12 inches between J-hooks. Install wiring and J-hooks in a neat and workman-like manner, routed parallel or perpendicular to the building column lines.
 - 4) Install to protect wire from damage and to allow for wire replacement. Do not exceed 50 % of the wire capacity specified by the J-hook manufacturer (first installation), or route control wiring in non-control-wiring J-hooks.
 - e. Wiring to wall mounted devices such as room sensors, switches, and similar devices: New walls--Route wiring in wall in minimum 1/2 inch conduit. Stub conduit up/down into accessible ceiling space, terminating conduit with a 90 degree bend and a strain relief to prevent wire damage. Install wall box for device mounting. Existing Walls--Route wiring in wall in minimum 1/2 inch flexible conduit. Stub flex up/down into accessible ceiling space, terminating flex with a bushing to prevent wire damage. Install wall box for device mounting.
 - f. Wiring to perimeter radiation valves and similar control devices requiring wiring to be routed in walls: Route wiring in wall in minimum 1/2 inch conduit. Stub conduit up/down into accessible ceiling space, terminating conduit with a 90 degree bend and a strain relief to prevent wire damage. Provide maximum 12 inch long flexible metal conduit for the final connection to the device.
5. Conduits shall be sized on a maximum fill of 40% capacity.
6. Five separate conduit systems shall be provided:
- a. DO/DI and 120 VAC control wiring.
 - b. AO/AI wiring (may also contain DI wiring if rated as Class II teflon jacketed twisted pair)
 - c. Pneumatic tubing.
 - d. ALN/FLN cables.
 - e. 24VAC (note exception under TEC Wiring Requirements)
- Exception: DO's, DI's, AI's, and AO's between VSD's and DDC panels may share the same conduit if all wiring meets Class I wiring standards and provided all analog signals use a 4-20mA signal.

7. All junction boxes and couplings on conduit containing DDC related wiring or pneumatic tubing shall be painted sky blue color. Alternative: Allied Tube True Color® EMT, color blue, may be used in lieu of painted fittings and junction boxes.
 8. Data transmission cabling and equipment grounding procedures shall meet the latest FCC guidelines for electromagnetic field generation.
 9. All control wiring sizes and types shall meet the equipment manufacturer's recommendations.
 10. Minimum DDC Wiring and Cable Requirements:
 - a. Digital Output: Minimum #14 AWG THHN
 - b. Digital Input: Teflon jacketed twisted pair #20 -or- #16 AWG THHN minimum.
 - c. Analog Output: Twisted pair NEC-rated CMP #20 AWG
 - d. Analog Input: Twisted pair NEC-rated CMP #20 AWG
 - e. Data Transmission (Non-BACnet): Teflon jacketed twisted shielded pair #22 AWG 12-1/2 pico-ferrad, 6 twists/foot, with 22 AWG ground wire.
 - f. Data Transmission (BACnet MS/TP): BACnet Testing Laboratories compliant communication cable utilizing a twisted pair cable to include an additional conductor to be used for common or signal reference when required.
 - g. Data Transmission (BACnet IP): BACnet Testing Laboratories compliant Ethernet communication cable.

All wire sizes listed are for lengths up to 750'.
 11. All control wiring shall have insulation rated for 300 volts minimum, and be installed per NEC requirements. Exposed wiring running in return plenums, air handling devices, and where required by code shall be plenum rated.
 12. DDC panel to DDC panel (ALN) wiring insulation outer jacket color shall be orange.
 13. Terminal unit (FLN) wiring insulation outer jacket color shall be orange with blue stripe.
 14. TEC Wiring Requirements:
 - a. FLN & 24VAC Class II power wiring may be routed in the same conduit.
 - b. Provide all necessary 24 VAC transformers, 24 VAC power distribution wiring, etc. to TECs for a complete operating system. Transformers shall have primary and secondary fuse protection and shall be mounted in an electrical closet, auxiliary panel or other suitable accessible location with disconnecting means. Provide a pilot light for each transformer, to indicate the presence of load power.
 - c. Terminal fittings or insulating bushings shall be used to protect wiring associated with TECs at enclosures, junction boxes, etc.
- B. Provide all necessary 24 VAC transformers, 24 VAC power distribution wiring, etc. for a complete operating system. Transformers shall have primary and secondary fuse protection and shall be mounted in an electrical closet, auxiliary panel or other suitable accessible location with disconnecting means. Provide a pilot light for each transformer, to indicate the presence of load power.

- C. Provide conduit and wiring to power all 120 VAC control accessories such as flow meters, BTU meters, data acquisition panels, and actuators. Feed this power from an auxiliary control panel, with a separate disconnect and fuse for each device, located in the auxiliary panel.
- D. For TEC's, provide 120 VAC conduit and wiring between electrical panels and TEC power supply transformers.

2.17 AUTOMATIC CONTROL VALVES AND ACTUATORS

A. General:

- 1. Unless indicated otherwise on the control drawings, provide the control valve body style (globe, ball, butterfly, etc.) indicated for each application (hydronic, steam, etc.) noted below.
- 2. Except where otherwise noted, valve bodies 2 inches IPS and smaller shall be single seated bronze, and shall have screwed end connections. Valve bodies 2-1/2 inches IPS and larger shall be cast iron, and shall have flanged end connections. Valve stem packing shall be PTFE or EPDM. Packless construction is acceptable. Valve linkage shall have an adjustment for valve lift.
- 3. Valve rangeability shall be no less than 50:1 for valve $C_v \leq 1$, no less than 100:1 for valve $C_v > 1$.
- 4. When indicated, provide separate SPDT limit switches which actuate at the full open and full closed valve position.
- 5. All electrically actuated control valves installed in locations exposed to outdoor conditions shall be provided with NEMA 4/4X weather resistant housings and thermostatically controlled heaters for climates that reach below freezing.

B. High Performance Butterfly Valves

- 1. May be used for hydronic applications, when approved, for valves 5" and larger.
- 2. High performance butterfly valves shall comply with Related Section 220523 Valves.
- 3. Approved Manufacturers
 - a. Per Related Section 220523 Valves

STEAM CONTROL VALVES: REVISE THE VALVE PRESSURE DROP SPECIFIED BELOW TO THAT APPROPRIATE FOR YOUR PROJECT. FOR EXAMPLE, FOR LOCATIONS CLOSE TO THE CENTRAL POWER PLANT, A PRESSURE DROP HIGHER THAN THE INDICATED 4 PSIG WOULD BE APPROPRIATE. ALSO NOTE THAT THE BELOW VALVE SIZING CRITERIA ASSUMES THAT THE STEAM PRESSURE REQUIREMENT FOR THE EQUIPMENT SERVED BY THE CONTROL VALVE IS 1 PSI OR LESS. ALWAYS VERIFY THE EQUIPMENT PRESSURE REQUIREMENT AND MODIFY THE BELOW ACCORDINGLY.

C. Hydronic Control Valves

- 1. General Valve Requirements
 - a. Maximum pressure drop across any hydronic system valve at maximum flow and valve size shall be as indicated.
 - b. When not indicated, valves shall be sized for a pressure drop of 3 psig for chilled water and 4 psig for hot water based on the maximum flow rate scheduled for the device controlled.

- c. Two-way valves shall have equal percentage characteristics for heating and cooling applications, either linear or equal percentage for other applications as appropriate, linear for three-way valves.
 - d. 2 year unconditional warranty, parts and labor. 5 year unconditional parts warranty.
2. Globe Style Valves (May be used for sizes 1" and larger).
- a. Bodies and trim shall be rated for service pressures through 125 psig at 250 deg. F, globe style.
 - b. Hydronic system valves shall have replaceable plugs and seats of SAE 72 brass or AISI 300 series stainless steel, selected for maximum lift under application conditions.
 - c. Shall provide safe and reliable operation in water or in up to 50% glycol/water solutions, at fluid temperatures between 35°F and 212°F and static pressures up to 300 psi.
 - d. Bronze body with female NPT end connections.
 - e. Differential pressure rating (valve operating): 30 PSID maximum.
 - f. Provide valves with the flow coefficient indicated, or if not indicated, subject to engineer's approval, with a Cv appropriate for good control and considering the system differential pressure available.
 - g. Approved Manufacturers
 - 1) Siemens
 - 2) Honeywell
 - 3) Johnson

ALTHOUGH AVAILABLE UP TO 4", BALL VALVES SHOULD TYPICALLY ONLY BE USED FOR SMALL CONTROL VALVE APPLICATIONS, E.G. VAV BOXES, FAN COILS. THIS SPECIFICATION IS ONLY FOR BALL VALVES UP TO 3/4" DIAMETER.

3. Ball Style Control Valves
- a. Control Valve Body: Quarter turn ball valves, 2-way and 3-way configuration as indicated, for 2 position or modulating service, with the following features:
 - 1) 1/2" or 3/4" valve size.
 - 2) Nickel coated brass or stainless steel body with female NPT end connections.
 - 3) Stainless steel or chrome plated brass ball, with reinforced EPDM or PTFE O-ring seals.
 - 4) Blow-out proof stainless steel or chrome plated brass stem with double O-ring EPDM or PTFE seals.
 - 5) Shall provide safe and reliable operation in water or in up to 50% glycol/water solutions, at fluid temperatures between 35°F and 212°F and static pressures up to 300 psi.
 - 6) Ball and stem seals shall be formulated to prevent degradation by typical water treatment chemicals and Chloramines.
 - 7) Minimum close-off rating: 200 PSI.
 - 8) Differential pressure rating (valve operating): 30 PSID maximum.
 - 9) Downstream leakage: maximum of 0.01% of design flow at rated close-off differential pressure.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230900 - - 47

- 10) 0 - 90 degree angle of rotation.
 - 11) Valves for modulating service shall be equipped with a characterized ball (glass filled polymer flow insert) that provides an equal percentage flow characteristic.
 - 12) Valves for two position control shall be reduced port type as required for the appropriate valve Cv.
 - 13) Provide valves with the flow coefficient indicated, or if not indicated, subject to engineer's approval, with a Cv appropriate for good control and considering the system differential pressure available.
- b. Approved Manufacturers:
- 1) Johnson Controls
 - 2) Belimo

D. Steam Control Valves

1. Globe Style.
 - a. Bodies and trim shall be rated for scheduled saturated steam service pressures. Steam valve replaceable plugs and seats shall be stainless steel, hardened to not less than 500 Brinell.
 - b. Valves shall have modified linear characteristics and shall be sized based on a 5 psig inlet pressure and a maximum drop of 4 psig.
 - c. 2 year unconditional warranty, parts and labor. 5 year unconditional parts warranty.
 - d. Approved Manufacturers
 - 1) Siemens
 - 2) Honeywell
 - 3) Johnson

E. Control Valve Actuators

EDITOR: WHENEVER POSSIBLE, THE USE OF ELECTRIC ACTUATION FOR CONTROL VALVES IS PERFERRED. PNEUMATIC ACTUATION MAY ONLY BE CONSIDERED FOR PARTIAL RETROFITS OF EXISTING SYSTEMS WITH PNEUMATIC CONTROLS. CONSULT WITH THE UM DESIGN TEAM IF PNEUMATIC CONTROLS ARE REQUIRED. CONTROL VALVES LOCATED IN AN UNCONDITIONED ENVIRONMENT SHOULD BE ELECTRIC.

NOTE THAT MOST ELECTRIC BUTTERFLY VALVE ACTUATORS ARE NOT AVAILABLE WITH A SPRING RETURN OPTION WITHOUT THE ADDITION OF A BATTERY OR CAPACITOR TO DRIVE THE ACTUATOR TO ITS FAILSAFE POSITION. CAREFUL CONSIDERATION SHOULD BE GIVEN TO THE APPLICATION OF THIS TYPE OF CONTROL VALVE BEFORE USE.

WHEN THE USE OF ELECTRIC ACTUATORS IS PLANNED, THE METHOD OF GETTING POWER TO THOSE ACTUATORS MUST BE CONSIDERED. READ THE BELOW SPEC SECTION CAREFULLY AND NOTE THE SIZE RANGE FOR VARIOUS ACTUATOR VOLTAGES. THE CONTROLS CONTRACTOR SHALL NOT RUN POWER WIRING ABOVE 120V. THEREFORE:

FOR 120V ACTUATORS, POWER TO SUCH ACTUATORS IS THE RESPONSIBILITY OF THE CONTROLS CONTRACTOR AND IS TO BE ROUTED FROM THE DDC AUXILARY PANEL (SEE SECTION 2.5). IF YOUR PROJECT HAS A LARGE NUMBER OF 120V ACTUATORS, THE STANDARD (2) 20 AMP CURCUITS RUN TO THE DDC AUX PANEL MAY NOT BE ENOUGH. DETERMINE THE TOTAL AMPERAGE OF SUCH ACTUATORS AND DIRECT THE ELECTRICAL DESIGNER TO DESIGNATE ADDITIONAL 120V CIRCUITS TO THE DDC AUX PANEL, IF REQUIRED.

1. Except as noted otherwise, actuators shall be electric.

2. Provide actuator manufactured by the respective control valve manufacturer and factory assembled with the valve body.
3. Ball Style Control Valve Actuators
 - a. Actuator shall include a manually operated hand wheel/lever for manual override of the valve position.
 - b. Modulating Actuators (0-10V or 4-20mA)
 - 1) UL listed electronic rotary actuator designed for operation with the ball type control valve, with the following features:
 - 2) The actuator shall be of the same manufacturer as the valve body and shall be integrally mounted to the valve at the factory.
 - 3) For direct coupling to the valve shaft without the use of linkages, use an ISO-style mounting pad.
 - 4) Minimum cycle life: 60,000 full strokes at maximum rated torque.
 - 5) Torque: as required for smooth positioning and closure of the valve against a maximum differential pressure of 30 PSI and to provide close-off up to 200 PSI.
 - 6) Motor runtime to rotate the valve ball 90°: 90 seconds maximum, 20 seconds minimum.
 - 7) Spring return runtime to rotate the valve ball 90°: 90 seconds maximum, 20 seconds minimum.
 - 8) For use with a 24VAC power supply with the ability to operate off the same power supply required for the temperature controller.
 - 9) For use with 0-10Vdc output proportional plus integral room controllers, fully compatible with the specified temperature controller. Unless indicated otherwise on the control drawings:
 - a) Heating coil (non-vivarium applications): Normally open spring return actuation.
 - b) Heating Coil(vivarium applications): Normally closed spring return actuation.
 - c) Cooling coil: Normally closed spring return actuation.
 - 10) Electronic stall detection/overload protection. Actuator shall sense that maximum rotational position has been reached even when control signal is still applied and stop rotating prior to actuator damage.
 - 11) Rotation mechanically limited by adjustable integral limit stops.
 - 12) Mechanical range adjustment.
 - 13) Valve position indicator.
 - 14) Actuator/actuator housing: Brushless DC motor design, NEMA type 1 or 2 enclosure, die-cast aluminum alloy or UL 94 listed plastic housing, lubricated gears, with a thermal barrier to prevent condensation on the actuator parts when used for chilled water applications. It shall be possible to rotate the actuator to any of four rotational angles in 90° increments, relative to the valve body.
 - 15) Ambient temperature operating range: -20°F and 120°F.
 - 16) Maximum actuator noise level, running or spring return: 40 dBA.
 - c. Floating Point Actuators
 - 1) Shall only be used for VAV box applications

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230900 - - 49

- 2) 24 VAC 3-position floating control, 7/32" (5.5 mm) stroke minimum, direct-coupled to valve bodies without the use of tools, with sufficient power to prevent valves from lifting off their seats. With visual position indication, manual override knob, UL-listed for plenum installations.
 - 3) The actuators shall be fail-safe open for perimeter heating applications.
 - 4) The actuators shall be fail-in-place for reheat control valves.
4. Butterfly Valve Actuators
- a. Electric Actuators
 - 1) Actuators shall utilize split capacitor, reversible electric motor driving a compound epicyclic gear, thermal overload protected, factory tested, factory lubricated, localized mechanical position indicator readable at 25 feet, 0-90 degree reversible operation, bolt directly to valve top plate.
 - 2) Housing shall be weatherproof and suitable for outdoor location (NEMA 4X or IP66 rated).
 - 3) Provide thermostatically controlled heater for prevention of condensation at low temperatures.
 - 4) Provide auxiliary limit switches to confirm open/closed valve position.
 - 5) For modulating valves, provide 0-10 VDC or 4-20 mA feedback signal for valve position.
 - 6) Actuator voltage shall be 120 VAC. 120V actuators shall be fed out of the DDC auxiliary panel with a separate disconnect and fuse. Disconnect and fuse to be located in the DDC auxiliary panel.
 - 7) In all cases the MSCC shall provide the required control wiring to the actuators.
 - 8) Actuator ambient temperature range shall be -20 deg. F to +140 deg. F.
 - 9) Actuator shall include a manually operated hand wheel for manual override of the valve position.
 - b. Pneumatic Actuators
 - 1) Pneumatic actuators shall be pneumatic rotary type with rack and pinion to provide constant output torque rated for at least 125 percent, pilot positioner with gauges, spring return, adjustable travel stops, factory tested, factory lubricated, self-draining body, integral pneumatic parting,
 - 2) Actuators shall have localized mechanical position indicator readable at 25 feet, 0-90 deg. reversible operation, capable of operating in any valve mounting position.
 - 3) Actuators shall be capable of being mounted in line or transverse to pipeline, and bolt directly to valve top plate.
 - 4) Valves shall be actuated with 60-psig air and 3-15 psig pilot service. Valves used for isolation do not require pilot positioners. Actuator shall include a manually operated hand wheel for manual override.

- 5) Provide speed control valves for On/Off (2-position) actuators for adjustment of actuator speed
5. Globe Valve Actuators
- a. Valves shall spring return to normal position as indicated.
 - b. Select with sufficient close-off power for system pressure, pump shut off head, highest operating torque, and torque requirements of valves that may stick because of infrequent use.
 - c. Select to provide smooth proportioning control under operating conditions normal to the system.
 - d. Electric Actuators
 - 1) All actuators shall have visual position indication.
 - 2) Actuator shall be electric motor driving, microprocessor signal controlled.
 - 3) Modulating valves shall be positive positioning, responding to a 0-10VDC, 2-10VDC or 4-20mA signal.
 - 4) Power: All actuators shall be 24VAC power and less than 100VA draw. Power shall be via Class 2 wiring.
 - 5) Fail Safe: Valves actuators shall position the valve in a fail-safe position when the power supply is disrupted or the signal goes to 0.
 - 6) Valves shall have a means to manually open the valve when power is not available, such as a hand wheel or a geared crank with a clutch. A release button (clutch) or handle on the actuator shall be provided to allow for manual override.
 - 7) The actuator shall be designed with a current limiting motor protection.
 - 8) Actuator shall provide minimum torque required for proper valve close-off. The close-off differential pressure rating of the valve shall exceed the highest possible head pressure available at the pump plus 10%, and still be rated for a Class IV leakage.
 - 9) The actuator shall have the capability of adding auxiliary switches or feedback potentiometer if specified.
 - 10) Actuators shall be UL and CSA listed.
 - e. Pneumatic Actuators
 - 1) Pneumatic, rolling diaphragm, spring loaded, piston type.
 - 2) Spring range shall be as required for non-overlapping sequencing or as indicated on drawings.
 - 3) Ratio relays or accumulators used for sequencing valves are not acceptable unless specifically indicated on the drawings.
6. Valve body/actuator control action shall be as follows unless noted otherwise:
- a. Heating coil valves (non-vivarium) shall be normally open to flow through the coil.
 - b. Heating coil valves (vivarium) shall be normally closed to flow through the coil.
 - c. Heat exchanger valves (steam or water) shall be normally open to flow through the heat exchanger.
 - d. Cooling coil valves shall be normally closed to flow through the coil.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230900 - - 51

- e. Humidifier valves shall be normally closed to flow through the humidifier.
- f. Condenser water valves shall be normally open to flow through the cooling tower.
- g. Isolation valves shall be normally open.
- h. Drain valves shall be normally closed.

2.18 AUTOMATIC CONTROL DAMPERS

EDITOR'S NOTE: CONTROL DAMPERS SHALL BE SCHEDULED ON THE DRAWINGS. INDICATE THE DAMPER STATIC PRESSURE AND VELOCITY RATING IN THE SCHEDULE. FOR DAMPERS USED IN ANY APPLICATIONS REQUIRING SPECIALTY MATERIALS OF CONSTRUCTION, REFER TO SECTION 2.18.E (CONSULT WITH UM DESIGN MANAGER).

- A. Multi-blade type. Provide with parallel blades for two-position, throttling, and modulating service unless noted otherwise. Provide required drive axles, linkage, jackshafts, and accessories for proper damper operation. Damper blades, frames, linkages, jackshafts and other parts of the damper actuation system shall not distort or rack during operation. Dampers shall close tightly, and operate in a smooth, hesitation and slack-free manner over the entire range of travel, at the maximum air pressure and velocity at the mounting location. Additionally, multiple section dampers shall operate in unison section-to-section.
- B. Face and bypass dampers shall each be capable of passing 100% of unit rated CFM. Pressure drops shall be approximately the same in either extreme position, including the pressure drops of coils and bypass components.
- C. All automatic control dampers shall conform to these specifications, including those provided by equipment manufacturers.
- D. All control dampers shall be low leakage type and shall meet the following minimum requirements:
 - 1. Leakage: 6.0 CFM/sq. ft. max. at 3" WC.
 - 2. Frames: 13 gauge (minimum) galvanized steel, minimum 2 inch in frame depth, welded or riveted with corner reinforcement.
 - 3. Blades: 16 gauge (minimum) stamped galvanized steel or aluminum airfoil type, maximum blade size 8 inches wide, 48 inches long. Axles and axle extensions shall be minimum 1/2 inch solid galvanized steel. Dampers which are required to have a static pressure rating over 4" WC shall have minimum 3/4 inch solid galvanized steel axles/axle extensions.
 - 4. Blade Seals: Synthetic elastomeric or neoprene, inflatable type, mechanically attached, field replaceable.
 - 5. Jackshafts: Provide to drive adjacent vertical sections of multiple damper assemblies to ensure uniform operation. Minimum 3/4 inch solid or 1" hollow (minimum 1/8 inch wall thickness) galvanized steel. Where jackshafts penetrate air handling casing walls, provide greasable ball bearing supports sleeved and sealed to prevent casing leakage. Provide intermediate greasable ball bearing supports bolted to damper frames for jack shafts extending across multiple damper sections.
 - 6. Jamb Seals: Stainless steel.

7. Bearings: Oil impregnated sintered bronze or lubricant free, solid stainless steel. Provide thrust washers at bearings for all dampers that are to be mounted with blades in the vertical position.
 8. Linkages: Deflection and slack-free. Zinc plated, fully exposed, connected to blade faces (located in the air stream). Linkages may be located in-jamb for single damper flange mounting arrangements, provided linkage is external to the duct and easily accessible for maintenance.
 9. Static pressure Rating: As scheduled on the drawings, or provide dampers rated for the maximum pressure to be encountered at the mounting location but not less than 4" WC.
 10. Velocity Rating: As scheduled on drawings, or provide dampers rated for the maximum velocity to be encountered at the mounting location.
 11. Temperature Limits: -40 to 200 deg. F.
 12. Provide through-bolted connections for connecting axle or jack-shaft extensions. Set screw arrangements are not allowed.
 13. Selection and sizing criteria: Damper selection and sizing shall be based on damper schedule shown on the drawings. For dampers that are not scheduled on the drawings, selection and sizing shall be based on the procedure contained in Engineering Manual of Automatic Control, Honeywell, Inc., 1997.
- E. For dampers located in stainless steel ductwork, PVC coated ductwork, fume hood exhaust ductwork, and exhaust fan outside air bleed-in ductwork, fabricate and size as indicated above, with the following additional requirements:
1. Frames, blades, blade axles and extensions, blade seals, jackshafts, linkages, and all other components exposed to the air-stream: Type 316 stainless steel.
 2. Bearings: Solid stainless steel.
 3. Damper operators shall be mounted outside of air stream. Extend damper axles and jackshafts to permit mounting outside of air stream.
- F. Approved Manufacturers:
1. Honeywell
 2. Ruskin
 3. Vent Products
 4. American Warming & Ventilating
 5. Arrow United Industries
 6. White Environmental
 7. Johnson Controls

2.19 DAMPER OPERATORS

EDITOR: WHENEVER POSSIBLE, THE USE OF ELECTRIC ACTUATION FOR DAMPER ACTUATORS IS PREFERRED. PNEUMATIC ACTUATION MAY ONLY BE CONSIDERED FOR PARTIAL RETROFITS OF EXISTING SYSTEMS WITH PNEUMATIC CONTROLS. CONSULT WITH THE UM DESIGN MANAGER IF PNEUMATIC CONTROLS ARE REQUIRED.

- A. General:
1. Damper operators shall be electric unless specifically noted otherwise on the drawings.

2. Damper operators shall be installed in accessible locations. Damper operators shall not be installed inside ducts or air units that convey hazardous exhaust.
 - a. Single section dampers should be configured with an extended shaft actuator mounting arrangement with the actuator mounted in an accessible location outside the ductwork.
 - b. Multiple section dampers should be connected with a jackshaft arrangement which is extended to an accessible location outside the duct. Where possible tandem mounted actuation should be provided on one side of the damper assembly.
 - c. Damper actuators mounted onto the same jackshaft should be controlled using a leader/follower wiring design with the DDC panel signal being wired to the master actuator and the remaining slave actuators being controlled through the master feedback signal.
3. Electric Operators:
 - a. Maintenance free electric actuator, reversible, with push rod and bracket for swivel mounting and for the transmission of power.
 - b. Synchronous motor with load independent running time providing parallel operation of several operators. Gear train with low noise level.
 - c. Magnetic hysteresis coupling with magnetic transmission of torque, with no mechanical contact between the coupling members.
 - d. The actuator shall be safe against blocking and overload proof even when operated continuously.
 - e. 24 or 120 VAC, 4-20 mA or 0-10 VDC input, reversible, direct-drive, metal or aluminum housing, brushless DC motor with stall protection, quiet, low-power operation, have visual position indicator, manual override, and a 0-10VDC feedback signal output.
 - f. Actuators located outdoors shall be provided with internal heaters and should operate in the ambient temperature range of -20°F to 140°F.
 - g. Actuators located outdoors shall be NEMA4x or IP66 rated or shall be provided with weatherproof NEMA 4X stainless steel enclosures that have removable covers with clasps or machine screws (no sheet metal screws) and that do not require removing fasteners.
4. Electronic damper operators used with TECs
 - a. Operators shall be 24 VAC 3-position floating control type and utilize a 90-degree rotation.
 - b. Operators shall be direct-drive, have sufficient power to operate the damper against system pressures, provide visual position indication, have manual override, and shall be UL-listed for plenum installations. Operators shall be of the fail-in-place type.
5. Pneumatic Operators: Rolling diaphragm piston type with 8-13# spring range, as indicated on drawings, or as required to achieve specified performance.

- B. Provide operator mounting brackets. Provide devices to connect operator drive shafts to dampers, damper linkages, and jackshafts.
- C. Quantity of operators: Provide a sufficient number to achieve unrestricted movement throughout damper range, such that one operator does not operate more than the maximum square footage of damper area as recommended in standard catalog of manufacturer. Minimum torque rating for sizing electric actuators on duct systems that operate above 1" of static pressure is 14 in-lbs/ft². Provide sufficient number so dampers close tightly, operate in a smooth, hesitation and slack-free manner over the entire range of travel at the maximum air pressure and velocity at the mounting location, and so that multiple section dampers operate in unison section-to-section. Provide spring return to normal position.
- D. Where end switches are shown on control diagrams, it is not acceptable to utilize the internal damper operator end switches. Where shown, external end switches should be provided that are secured to the damper blades, linkages, or jackshaft independently of the damper operator(s).
- E. Approved Manufacturers:
 - 1. Honeywell
 - 2. Johnson
 - 3. Siemens
 - 4. Belimo

2.20 PNEUMATIC CONTROL COMPONENTS

- A. Components shall be Honeywell, Johnson, or Siemens, unless listed otherwise.
- B. Electric-pneumatic relays shall be two-position, have a metallic body, can be field or panel mounted, have a 120 VAC coil, and 3 or 4 ports. Only Johnson E.P. relays are acceptable.
- C. Pressure-electric switches shall be two-position, appropriate range and element, suitable for the service, single or double pole, normally open or normally closed as required. Set point shall adjustable over the full range. Switch rating shall be 8.0 amps at 120 VAC, minimum.
- D. Differential pressure transmitter shall be one-pipe, 3-15 psig output, capable of measuring pressure differentials of positive or negative type, operate on the force-balance principal, have an overpressure rating of 30" WC, accuracy of 5 percent full scale, and of the range suitable for the service.
- E. Pneumatic room thermostats shall be direct acting, dual (minimum 5°F dead band - 2 output branch lines) or single setpoint, 2-pipe, large capacity, adjustable proportioning type, containing dual or single bi-metallic elements, adjustable differential, minimum setting no greater than 1-1/2 deg. F over a range of 55 to 85 deg. F. Provide tamperproof covers with exposed setpoint indicator in black lettering, exposed thermometer, exposed setpoint adjustment in non-public areas and key operated setpoint adjustment in public areas.
- F. Pneumatic humidistats shall be of the adjustable proportioning, 2-pipe type, duct or wall mounted, reverse acting, adjustable sensitivity, sensitive hygroscopic membrane, temperature compensated, 20-90% RH range room, 25-65% RH range for duct, and 55-95% RH range for high-limit applications. Room type shall have tamperproof cover. Duct type shall come mounted inside a galvanized duct mounting box.

BuildingName

The Description of the Project

P0000000 0000 Issued for: BID 230900 - - 55

- G. Temperature transmitters shall be one pipe, directly proportional output signal to measured variable, linearity within plus or minus 1/2% of range for 200 deg. F span and plus or minus 1% for 50 deg. F span, with appropriate 50, 100, 200 deg. F temperature range, compensated bulb, averaging capillary, rod and tube or room transmitter operating on 20 psig input pressure and 3 to 15 psig output. Room transmitter shall be provided with cover and wall plate.
- H. Humidity transmitters shall be one pipe, directly proportional output signal to measured variable, linearity within plus or minus 1% of range, temperature compensated, sensitive hygroscopic membrane, room or duct mounted, operating on 20 psig input pressure and 3 to 15 psig output. Room transmitter shall be provided with cover and wall plate.
- I. Receiver-controllers shall be single or dual input models direct or reverse acting with mechanical set point adjustment, calibrated proportional band adjustment, and calibrated authority adjustment. Provide proportional control mode for temperature control applications, and proportional plus integral control mode for differential pressure control applications. Proportional band shall extend from 2 to 40% of primary sensor span, authority from 0 to 200% of primary sensor span and integral time from 1/2 to 20 minutes. Suitable for input signal of associated transmitter and output signal required by controlled device.
- J. Signal selector relays shall be capable of receiving two or more input signals and transmitting the highest or lowest pressure, with 1:1 input/output ratio.
- K. Booster relays shall be proportional type for increasing the volume capacity of an input signal to a directly proportional output signal.
- L. Pneumatic switching relays shall be snap acting, switching type with adjustable switching setpoint and fixed differential, single or double pole, and metallic body, for connecting a common port to either of two other ports based on the switching signal.
- M. Pneumatic multi-purpose relays shall be two-valve design, high accuracy, high repeatability, metallic body, internal relief, high capacity, proportional, with adjustable set point, capable of being used as direct or reverse acting, amplifying, signal advancing, minimum pressure output, or lower pressure transfer. Removal of main air to the relay causes the branch line output to go to zero.
- N. Pneumatic gradual position switches shall provide regulated pressure to a controlled device, with knob and pointer for manual adjustment, graduated scale plate with appropriate markings, suitable for surface or flush mounting on wall or panel as indicated.
- O. Pneumatic selector switches shall be two or three position with metallic bodies, have indicating plates with appropriate markings, and suitable for panel or wall mounting. Switches installed in finished rooms shall be recessed in wall and provided with faceplate.
- P. Field Mounted Gauges:

1. Provide 1-1/2" air pressure gauges on branch lines of pneumatic systems at controllers, transmitters, valve and damper operators, relays, switches, regulators; and DDC output points. Accuracy shall be 2.5 percent of full scale for the middle half of scale and 3.5 percent elsewhere. At dampers or devices that utilize multiple actuators, a single gauge in a readily visible location is acceptable.

Q. Panel Mounted Pneumatic Gauges:

1. All transmitters shall be provided with receiver gauges.
2. Door mounted analog indicator gauges shall be 3-1/2" diameter with a 1% accuracy.
3. Sub-panel mounted analog indicator gauges shall be 2-1/2" diameter with a 1% accuracy.
4. A 1-1/2" gauge shall be provided on the main air supply inside each control panel.

2.21 LOCAL, AUXILIARY, UPS, LPI AND SIMILAR PANELS

- A. Unitized cabinet type for each system under automatic control with relays and controls mounted in cabinet and temperature indicators, pressure gauges, pilot lights, push buttons and switches flush on cabinet panel face, or as detailed on drawings.
- B. Doors shall be removable, right or left hand hinged, locking, keyed alike and to other U-M control panels.
- C. Removable perforated subpanel to permit mounting of controls without drilling holes.
- D. Wall mounted or support kit or unistrut type frame for floor mounting.
- E. Unit shall have knockouts, NEMA Type 1, and listed under UL508 Industrial Control Panel Enclosures.
- F. UPS panel shall be mounted directly below the primary DDC control panel.
- G. Auxiliary panels shall not be smaller than 24"x24".

2.22 UNINTERRUPTABLE POWER SUPPLY (UPS)

- A. UPS shall be sized for continuous full load use of primary DDC controller panel plus an additional 25% for a period of at least 5 minutes. Minimum size shall be 700 VA.
- B. Provide a UPS with the following features:
 1. Audible alarm when main power is not available
 2. Automatic internal bypass
 3. Provide with a network communication card for remote monitoring by Web/SNMP thru layer network.
 4. RF noise filtering.
 5. Over-voltage protection.
 6. Three outlet receptacles minimum.
 7. Visual status alert light.
 8. Sealed maintenance-free hot-swappable batteries.
- C. Provide a fan ventilated panel enclosure of adequate size to house the UPS.
- D. Approved Manufacturers:

1. Schneider Electric - APC, model BR700G, BR1000G, BR1300G, BR1500G as required.

2.23 AHU SAFETIES ENCLOSURES (FIRE ALARM TO TEMPERATURE CONTROL INTERFACE BOX)

- A. Enclosures shall utilize a standard 4-11/16" x 4-11/16" square electrical box and blank cover. One half of the blank cover shall be painted red and the other blue. A red neon indicator light shall be installed in the red half of the cover and a blue neon indicator light shall be installed in the blue half of the cover. A terminal strip shall be installed inside the electrical box with two terminals in one half, labeled "H1" and "H2" (for HVAC use), and two additional terminals in the other half, labeled "F1" and "F2" (for fire alarm use). The red neon indicator shall be wired to the F terminals and the blue neon indicator to the H terminals.

THE UNIVERSITY'S HIGH PRESSURE AIR SUPPLY IS AVAILABLE ON CENTRAL CAMPUS VIA THE STEAM TUNNEL SYSTEM. AS OF SEPTEMBER 2020 THE DEWPOINT IS NOT GUARANTEED. NEW PROJECTS CONNECTING TO THE TUNNEL SHOULD VERIFY THE DEWPOINT WITH UM CENTRAL UTILITY PLANT TO DETERMINE IF DESICCANT DRYERS ARE REQUIRED FOR THE CONTROL AIR.

2.24 PNEUMATIC ACCESSORIES

- A. Control Air Supply
 1. Control air supply shall be from the University's high-pressure (steam tunnel) air supply or from a temperature control compressed air station as indicated on the project documents. System shall be sized for expected use, including air usage of laboratory airflow units or process control actuators (whether this equipment is provided by the MSCC or not), plus 10 percent extra capacity. When providing a control Compressed Air Station, provide a Refrigerated Air Dryer if none of the pneumatic tubing or pneumatic components are exposed to outside air conditions. Provide a Regenerative Desiccant Air Dryer when pneumatic tubing or pneumatic components are exposed to outside air conditions.
- B. Compressed Air Station
 1. Temperature control air compressors shall be reciprocating oil type through 25 HP, rotary screw over 25 HP, specifically designed for pneumatic controls, shall be of the simplex or duplex type, tank or base mounted unit assemblies, have combination intake filter/silencer, and totally enclosed belt guards. Compressors shall be sized based on no more than 1/3 run time with an appropriately sized tank and an average tank pressure of 70 psig for optimum performance. Simplex units shall only be used when backing up another control air supply.
 2. Tank shall be of adequate size and contain a shut-off ball valve, ASME safety relief valve, pressure switch operated start/stop control, 120 VAC electronic automatic drain with manual bypass and air pressure gauge.

3. Duplex models shall be complete with NEMA 1 enclosure, starters, disconnects, automatic alternator, H-O-A switches (left H position spring return for test only), low oil shutdown switch, push-to-test pilot lights, and 3-position switch for selection of: compressor 1 only/automatic alternate/compressor 2 only operation. PRV/filter/dryer assemblies may be mounted to the compressor/tank assembly.
4. Approved Manufacturers:
 - a. Quincy
 - b. ACP
 - c. Divilbis
 - d. Ingersol-Rand

C. Tubing

1. Copper tubing shall be new hard drawn, air grade, ASTM B75 for 3/8 inch and smaller or type L, ASTM B68 for 1/2 inch and larger, with solder joint or compression type fittings, at the option of the MSCC.
2. Plastic tubing (all sizes) shall be black virgin, polyethylene, ASTM D1248, Type 1, Class C, Grade 5, meeting crack test performance required by ASTM D1693 and be fire retardant (FR) rated. Multi-tube harness material shall be as specified above with a polyester film barrier and vinyl jacket not less than 0.062 inches thick. All non-metallic tubing shall be 1/4" O.D. minimum; micro-sleeve is not acceptable.

D. Pressure Reducing Valves:

1. Pressure reducing valves (PRV) shall be diaphragm operated, self-relieving, designed to provide precision control of air supply pressures, and shall be located after any filters or dryers.
2. PRV shall be capable of being mounted in any position, shall have locking set point handle, and SS inlet strainer.
3. PRV shall have metal or plastic body and shall be provided with 2-1/2" gauge of appropriate units.
4. PRV's that are not self-relieving shall be provided with a separate relief valve of appropriate range.
5. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air
 - e. Johnson
 - f. Honeywell
 - g. Siemens

E. DDC/Auxiliary/Local Control Panel Air Filters:

1. Provide an in-line air filter for main air supply to each DDC, auxiliary and local control panels capable of removing solids and petroleum-based oils.
2. Filter efficiency shall be 99.9% of 0.5 micron particles.
3. Filter element shall be visible and shall change color to indicate when to be replaced.
4. Minimum capacity shall be 500 SCIM and 30 psig.
5. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison

- c. Parker
- d. Van-Air

F. Coalescing Air Filters:

1. Provide a duplex set of coalescing air filters for the main air supply to all building temperature controls.
2. Duplex assembly shall include upstream and downstream pressure gauges and isolation ball valves for each filter.
3. Filter shall have a replaceable cartridge and drain port.
4. Filter shall be designed to remove oil and water droplets down to 0.01 microns and particulates down to 0.08 microns. Minimum capacity shall be 10 SCFM and 150 psig.
5. Coalescing filters shall be located downstream of refrigerated air dryers and upstream of chemical or desiccant dryers.
6. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air

G. Particulate Air Filters:

1. Whenever chemical or desiccant dryers are used, provide a duplex set of particulate air filters for the main air supply to all building temperature controls located downstream of chemical or desiccant dryers.
2. Duplex assembly shall include upstream and downstream pressure gauges and isolation ball valves for each filter.
3. Filter shall have a replaceable cartridge and drain port.
4. Filter shall be designed to remove particulates down to 0.1 microns. Minimum capacity shall be 10 SCFM and 150 psig.
5. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air

H. Refrigerated Air Dryers:

1. Provide a 120 VAC air-cooled refrigerated dryer capable of providing 35 deg. F dew point air.
2. Unit shall have power on light, high temperature light, valved air bypass piping, and air-to-air precooler/reheater.
3. Heat exchanger to be non-fouling, tube-in-tube, self-cleaning with smooth surfaces.
4. Compressor shall have hot gas bypass, as required, and shall be protected by thermal and current overloads.
5. Condenser fan shall have thermal overload protection.
6. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air

I. Regenerative Desiccant Air Dryers:

1. Provide a 120 VAC regenerative type desiccant dryer of the optimal size to ensure sufficient contact time and capable of providing -40 deg. F dew point air at 150 psig.

2. Units shall have an adjustable solid-state timer and purge flow economizer valve, on/off switch, power on light, separate fill and drain ports for ease of desiccant replacement without piping removal, heavy duty purge exhaust mufflers for quiet operation, non-lubricated air control valves, Teflon seated check valves, visible moisture indicator, visible purge flow indicator, pressure relief valve, ASME code constructed/stamped pressure vessels, SS support screens and air diffusers, tower pressure gauges, structural floor frame and stand for large sizes, wall mounting brackets and supports for small sizes, pre-piped and wired, and complete with air bypass piping.
3. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air

J. In-line Desiccant Air Dryers:

1. Provide an in-line desiccant dryer of the optimal size to ensure sufficient contact time and capable of providing 4,000 cubic feet of -40 deg. F dew point air at 150 psig with a dryer inlet temperature of 68 deg. F.
2. Units shall have a removable bowl or fill port for ease of desiccant replacement without piping removal, visible moisture indicator, and air bypass piping.
3. Not to be used as a substitute for Regenerative Desiccant Air Dryers when providing a control compressed air station.
4. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air

2.25 IDENTIFICATION AND LABELS

- A. The MSCC shall provide black phenolic nameplates with engraved white minimum 1/4" high lettering (3/8" high at room differential pressure indicators), for each DDC or auxiliary panel, panel door mounted devices, and all LPI's, permanently attached, to identify field panel number, building, area, service, etc.
- B. All control devices located within auxiliary panels shall be labeled with legible identification that corresponds with the as-built drawings via black permanent marker. Use plastic or metal tags when it is not possible to mark directly on the device.

PART 3 - EXECUTION

3.1 INSTALLATION - GENERAL

- A. All system components shall be installed per manufacturer's installation recommendations.

- B. Coordinate with 3rd party equipment supplier BACnet object lists and integrate into Owner's BAS system, including assigning Instance numbers based on Owner's convention. Submit a list of available BACnet objects and proposed naming convention for owner approval. Map all BACnet objects selected by owner (using owner designated naming convention) to be viewable at the field panel and BAS server.
- C. Configure all controllers to serve BACnet data to BACnet Clients installed on the network. Each controller shall be configured and programmed to map all the BACnet objects associated with the controller, as selected by UM BAS. Provide a list of all objects to UM BAS at least 2 weeks in advance of this work. UM BAS will return the list indicating the specific objects to be mapped. Configure the controllers to utilize a change of value subscription with the clients that reside on the IT network. Change of value increments shall be as selected by the UM BAS department and tuned to minimize IT network traffic.
1. Data Sharing:
 - a. Data communication from Building Controllers to Engineering Workstation and BAS web server shall be programmed to use Change of Value (COV) data sending and not continuous data polling to limit network traffic.
 - b. Data communication parameters for analog inputs and analog values shall be operator configurable. Preliminary values are provided below, obtain approval from UM BAS of specific values for the project:
 - 1) Minimum Send Time (where property is available): 1 minute
 - 2) Maximum Send Time (where property is available): 15 minutes
 - 3) Send on Delta (COV):
 - a) Space Temperature: $\pm 1.0^{\circ}\text{F}$
 - b) Process Temperature: $\pm 1.0^{\circ}\text{F}$
 - c) Duct Static Pressure: $\pm 0.1'' \text{ WC}$
 - d) Relative Humidity: $\pm 1.0\%$
 - e) Air Flow: $\pm 5\%$ of calibrated span
 - f) Water Flow: $\pm 2\%$ of calibrated span
 - g) Water Pressure: $\pm 0.5 \text{ psi}$
 - h) Space Pressure (Pharmacy & ORs): $\pm 0.005'' \text{ WC}$
 - i) Space/ Building Pressure (General): $\pm 0.01'' \text{ WC}$
 - j) Space CO2 sensors: $\pm 100 \text{ ppm}$
 - k) Gas Monitoring (O2 Depletion): $\pm 0.1\% \text{ O}_2$
 - l) Not Mentioned Above: $\pm 5\%$ of range of sensor
 - m) Analog Values (calculated values): Same as COV for calculation input values (e.g. calculated space air flow offset would have a COV of $\pm 5\%$ of the value range, same as individual air terminal air flows)
 - n) Digital data points shall be sent whenever a state change occurs.
- D. Ensure all control components are located and installed correctly so that the specified and intended performance and the sequence of operation is achieved, including components supplied and installed by others.

- E. Wall mounted devices shall be mounted on an electrical box. Thermostats, room temperature sensors, push-buttons, and other adjustable devices meant for room occupant operation shall be mounted 44 inches to center above the finished floor (or as permitted by ADA requirements referenced in UM Design Guideline 1.0 Codes and Regulatory Agencies). This requirement does not apply to control panels and devices mounted in penthouses, mechanical rooms, and other spaces normally inaccessible to room occupants.
- F. Zone thermostatic controls used to control both heating and cooling, e.g. a variable volume terminal unit also controlling a reheat coil and/or fin tube radiation, shall be programmed (DDC systems) or set up (non-DDC systems) with a heating setpoint of 71 deg. F and cooling setpoint of 76 deg. F, and a dead-band of 5 deg. F, unless indicated otherwise on the Drawings.
- G. All set points and alarm points shown on the documents are preliminary. Finalize with the Engineer and Commissioning Authority prior to programming. Revise settings as required during commissioning.
- H. For fan coil/terminal unit controllers and similar programmable electronic controllers, obtain approval of programmable settings from the Engineer and Commissioning Authority prior to programming. Revise settings as required during commissioning.
- I. System I/O's shall not be split between different DDC panels.
- J. Fire Alarm to Temperature Control Interface Box shall be mounted at the DDC panel array.
- K. Install all conduit, wiring, cable, tubing and equipment in a first-class manner, using proper tools, equipment, hangers, and supports, and in locations as required for a neat, attractive installation. No material shall be exposed if it is possible to conceal it. Exposed materials shall be installed only with consent of the Owner. Conduit shall not be supported from work of other trades.
- L. For all rooms with a pressure or CFM offset, seal the inside of conduits routed to room mounted devices at the point where the device is mounted. Utilize material specifically made for this purpose.
- M. Support all sensors as recommended by the manufacturer. Averaging element temperature sensors shall be mounted securely from coil frames in a horizontal serpentine manner at intervals not to exceed 4 feet; provide rigid supplemental metallic support structure when required. For element directional changes, minimum bend radius shall be no less than 2". Use mounting clips which prevent element wear due to vibration.
- N. Install low temperature detectors as recommended by the manufacturer: devices shall be mounted securely from coil frames horizontally with no upward pitch at intervals not to exceed 1 foot. Provide rigid supplemental metallic support structure when required. For element directional changes, minimum bend radius shall be no less than 2". Use mounting clips which prevent element wear due to vibration.
- O. Panels and meter enclosures shall be rigidly mounted. Panels shall be wall mounted or provide free-standing Unistrut type frames for floor mounting.
- P. Provide a pouch or other containing method inside each control panel and insert a copy of the corresponding system control drawings.

- Q. Provide supplemental Hand-Off-Auto switches and contactors to permit automatic or manual operation of equipment from the DDC system (e.g. single phase equipment which uses fractional motor starters, etc.).
- R. Extreme care shall be used in making connections to other equipment to ensure that the safeties on this equipment are not inadvertently bypassed or overridden by the DDC.
- S. Ensure all dampers, valves, thermowells, flowmeters, and other miscellaneous control components are located and installed correctly so that the specified and intended performance and the sequence of operation is achieved, including components supplied and installed by others.
- T. Limit switches used on dampers shall be set at approximately 95% of full stroke (opened and closed).
- U. Flow meters shall be installed with at least 10 diameter of straight pipe length upstream and five diameter of straight pipe length downstream or per manufacturer's recommendations.
- V. Power supply to flow meters and BTU meters shall be 115 VAC from the auxiliary DDC panel, and power connection for each device shall be installed with a lockable local service disconnect. Flow meter transmitters/displays and BTU meters shall be mounted 4 feet above finished floor. They shall be located at the DDC panel array unless the maximum available cable length is exceeded. All meter components, including sensors, shall be mounted in accessible locations.
- W. Airflow sensors shall be installed so that the manufacturer's recommended upstream and downstream conditions are achieved to produce maximum accuracy.
- X. Remove any unused items that are part of renovations or demolition, including, but not limited to: conduit, wire, tubing, controllers, controlled devices, relays, enclosures, etc. Do not abandon in place.
- Y. Locate all control components and accessories such that they are easily accessible for adjustment, service and replacement.
- Z. Install constant flow fume hood monitors surface mounted on the front of the fume hood. Furnish exact dimensions and location to the fume hood factory to allow for concealed wiring to the monitor.
- AA. Install constant flow fume hood sash position sensors and sash travel limit brackets in a neat and workmanlike manner. Install cables and wires in a manner which avoids contact by the user during normal use, and allows vertical sashes to be positioned without binding, twisting or tangling.
- BB. Flush mount room differential pressure indicating gauges above one door outside of each lab, animal room, and where indicated, in the corridor wall at the entrance expected to be most frequently used, or as otherwise shown. Surface mounting is permitted on non-drywall walls. Mount related pressure sensor in ceiling or wall of lab. Attach tubing to gauge so that the intended room offset is displayed on the largest scale range of the gauge. Mount POS/NEG label adjacent to gauge and visible from floor.

3.2 CONTROL PANELS

- A. Arrange control panel I/O modules and points as follows:
 1. Processor, power & communication modules - top right

2. DI points - center right
 3. DO points - bottom right
 4. AI points - top left
 5. AO points - bottom left
- B. Control module address layout shall be as follows:
1. Right column - Address keys 1-6
 2. Left column - Address keys 7 and above.
- C. Control panels shall be assembled in a neat and workmanlike manner:
1. Maintain separation of class 1 and class 2 wiring. Use separate conduit connections to control panel for each wire type. I/O wiring shall enter control panel through a conduit directly above the module that it will connect to.
 2. Wiring shall be bundled neatly together at 4-inch intervals using nylon tie straps. Wire bundle straps shall be secured to panel backplane using screws or mounting rails. Wiring troughs shall not be used.
 3. Any extra wiring shall be coiled up in the wiring trough, strapped, and tagged as spare.
 4. For door mounted devices, the installing contractor shall properly dress and bundle the wiring or tubing in a way that does not interfere with fully opening and closing the door.
 5. Wiring shall be tagged with point address or wire number 4 inches down from the point at which the wire enters the cabinet.
 6. Route wiring into panel for each termination leaving enough excess wire to reach the bottom of the enclosure. Wire shielding and jacketing for all signal wiring shall be left intact to within 4 inches of final termination.
 7. The 24VAC power supply in the DDC panel shall only be used to power the controller and shall be fed by a dedicated 120V circuit. Provide separate control transformers as required to power other devices.
 8. Network switches shall be installed on the floor of the cabinet or lower right corner of the backplane.
 - a. Network jacks and cabling shall be installed neatly and strapped securely to the panel or backplane.
 - b. Plug in power supply for network switch shall be plugged into the 120V service outlet with extra cord coiled neatly.
 9. Controller module labels shall be installed into each module with final point names and addresses listed. Where not possible, include a printout of panel point addresses with the as-built drawing set left in panel.
 10. Auxiliary panels shall be powered with a dedicated 120VAC circuit and contain a service disconnect in the upper right corner. Final circuit number shall be tagged on switch cover.
 11. Auxiliary panel components shall be laid out in an organized manner and positioned to conserve available space for future use. All devices shall be mounted on panel backplanes. Auxiliary panels shall not be loaded beyond 90% of the backplane capacity.
 12. Motor load wiring shall not be routed into or through control panels.
 13. No voltage higher than 120 VAC shall be routed into or through control panels.

3.3 INSTALLATION - POWER, CONTROL, AND NETWORK WIRING

- A. All wiring to devices installed inside auxiliary/local panels shall enter/exist via terminal strips, except twisted/shielded sensor wiring.
- B. DDC sensor cabling shall not be spliced.
- C. Refer to Part 2 for additional installation requirements.

3.4 INSTALLATION - PNEUMATIC AIR

- A. Provide a control air shut-off valve for each panel. Downstream, install an in-line air filter for main air supply to each DDC, auxiliary and local control panel.
- B. Plastic tubing may be used in all locations, except in mechanical rooms, shafts, or exposed locations, unless run in conduit.
- C. Tubing shall not be attached to conduits with current carrying conductors or fire protection piping. It shall be adequately supported with no noticeable sagging between supports, and protected from abrasion and galvanic corrosion. All pneumatic tubing shall be concealed in finished areas.
- D. A PRV shall be installed on each floor to provide control air supply, when control air is required on the floor.
- E. Provide all required control air and associated tubing.

3.5 LABELLING

- A. Labelling methods and color scheme shall be reviewed and approved by UM before proceeding.
- B. Labels for devices in offices, public, and similar spaces shall be thermal printed on clear adhesive tape.
 - 1. Label terminal unit controllers with address (non-BACnet) or Instance number (BACnet), affixing label to ceiling grid or access panel at unit location. Use nominal 3/16" high black block-style font.
 - 2. Label exterior of room mounted control devices with address (non-BACnet) or Instance number (BACnet). Use nominal 12 point block-style black font.
- C. Label the field end of every DO/DI/AO/AI connected to a B-BC controller. Labels shall be thermal printed on white adhesive tape.
 - 1. Nomenclature shall include point name and address (non-BACnet) or Instance number (BACnet). Use nominal 12 point block-style black font attached to exterior of device.
- D. Refer to Part 2 for additional labelling requirements.

3.6 CALIBRATION, START-UP, AND COMMISSIONING

- A. Perform commissioning activities as described here-in and in accordance with Related Sections Participate in the commissioning process in accordance with the project commissioning documents. This applies to all controls including those provided as part of 3rd party equipment.

- B. All work performed at the Building Automation Server shall be by personnel approved by the University of Michigan.
- C. Except where specifically indicated elsewhere in this specification, the MSCC shall calibrate and start-up control devices and systems, including compressors, dryers, etc.
- D. Program all auto calibration routines to self-calibrate outside the hours of normal space occupancy. When this is not possible, program the self calibration to occur during hours of lowest occupancy. Establish with the Owner, working with the Commissioning Authority, a self calibration schedule that will be the least intrusive to building occupants. Phase self-calibration routines (as opposed to all devices simultaneously calibrating) to avoid negatively impacting air handler operation.
- E. Provide all necessary equipment, test gases, etc. for calibration, and calibrate all sensors (i.e. CO₂, CO, combustible gas, etc.) in accordance with the manufacturer's recommendations. Specialized equipment, test gases, etc. shall be turned over to owner upon completion and acceptance.
- F. After control components have been installed and connected, test, adjust and re-adjust as required all control components in terms of function, design, systems balance and performance. Control devices, linkages and other control components shall be calibrated and adjusted for stable and accurate operation in accordance with the design intent and to obtain optimum performance from the equipment controlled. All control valves shall be stroked and spring ranges verified and set. All dampers shall be stroked to verify proper and smooth operation. Cause every device to automatically operate as intended to ensure its proper functionality. Make systems ready for acceptance tests.
- G. Provide tuning of all control loops:
 - 1. Adjust PID control loop parameters to optimize system performance and response time.
 - 2. Loops shall be tuned to provide the accuracy indicated on the contract documents. Where not indicated, provide the following:
 - a. Temperature +/- 1 deg F
 - b. Duct static Pressure +/- 0.1 in WC
 - c. Hydronic pressure +/- 0.5 PSIG.
 - d. Other setpoints: As required for the application and directed by the Engineer.
 - 3. For system setpoints that are impacted by seasonal variations, return to verify and optimize control loop tuning.
 - 4. Response time to achieve setpoint shall be as typically achievable for such control loops or as indicated on the contract documents. Interpretation of typically achievable response times shall be as determined by the Engineer.
- H. Provide support to UM BAS for connecting and backing up all field controllers to the server. At least one week prior to connecting any field panel to the BAS server, provide the following for UM BAS approval:
 - 1. Field panel backup file (.P2 extension)
 - 2. Field panel backup log file (.log extension)
 - 3. Electronic copy of current field annotated (red-lined) control diagrams for systems or panel being connected.
 - 4. Any special alarm or alarm handling requirements

- I. Provide any trend setup, reporting and trend graphs in advance of functional testing and by dates specified by the Commissioning Authority to verify proper operation of controls and systems. Trend intervals and storage duration shall be as designated by the commissioner. All such trends shall be deleted before each panel is connected to the BAS server.
- J. Set constant flow fume hood monitor alarms as follows:
 - 1. Insufficient differential static pressure/air volume:
 - a. Face velocity 80 FPM (standard hoods) or 60 FPM (Reduced Face Velocity Hoods).
 - 2. Sash above the sash stop position.
 - a. Time delay to re-alarm after silence button pushed: 10 minutes.
 - b. Alarm shall clear when sash returned to sash stop position or lower.
 - c. Floor mounted hoods: Alarm shall activate when any sash is above its sash stop position; time delay and alarm clear shall be same as above.

ARTICLE 3.7 IS WRITTEN ASSUMING A LARGE PROJECT. EDIT AS APPROPRIATE, IN PARTICULAR FOR SMALLER PROJECTS.

3.7 TRAINING

- A. Provide comprehensive training for the entire mechanical controls system.
- B. The party that performed the portion of the control work as outlined in Section 1 shall provide the training related to that work.
- C. Provide an agenda of the proposed training for approval by the Commissioning Authority.
- D. Training shall include a combination of site walkthrough and classroom training as required to review the complete control system. At minimum provide the following:
 - 1. One half hour minimum of classroom training per each construction drawing sheet included for the mechanical controls. Provide a complete explanation of the following for the controls on each sheet:
 - a. The Sequence of Operation, alarms, and trend logs
 - b. Schedule and grouping for each piece of equipment
 - c. Overview of program layout and modules including explanation of each section of code and variables used.
 - d. Identify which sensors are critical for the proper function of the controls.
 - e. Location of critical sensors and manual reset devices
 - f. The calibration, setup, and maintenance of all control devices
 - g. Review the contents of the O&M relative to the controls on each sheet.
 - h. Graphical user interface training. Review each system and floor plan graphic and explain the meaning of each point type.
 - i. Review of terminal equipment controller applications used for the project including all subpoints and custom applications.

- j. Interfaces to other systems (e.g. fire alarm system, packaged controllers, etc.)
- 2. Also to be provided as part of classroom training:
 - a. A review of the network diagram and the type, location, and function of each network device
 - b. Demonstrate bench calibration of critical or unique sensors. The Owner and Commissioner shall have exclusive rights to identify which sensors require this training. Maximum 8 hours training.
 - c. Programming of non-DDC controllers including passwords, alarms and setting tuning parameters and set point limits.
- 3. One half hour minimum of field training per each construction drawing sheet included for the mechanical controls. At minimum provide the following:
 - a. Walk down each piece of equipment controlled, generally reviewing the Sequence of Operation.
 - b. Identify the location of:
 - 1) Controllers and DDC panels
 - 2) Critical sensors and manual reset devices. Demonstrate the reset of devices.
 - 3) Damper operators and control valves
 - 4) Meters, including any UM data acquisition panels
 - 5) Pneumatic system components
 - 6) UPS
 - 7) Network devices
 - c. Review the information presented and operation of touch-screen displays and other indicating devices.
 - d. Interfaces to other systems (e.g. fire alarm system, packaged controllers, etc.)

SPECIFICATION DIVISION 23

NUMBER SECTION DESCRIPTION

DIVISION 23

SECTION 230901 - MECHANICAL SYSTEMS CONTROLS--TURNKEY

END OF CONTENTS TABLE

DIVISION 23

SECTION 230901 - MECHANICAL SYSTEMS CONTROLS-TURNKEY

REVISION NOTES:

JUNE 2023: MODIFIED AUTOMATIC CONTROL VALVE SECTION 2.17 AND DAMPER OPERATORS SECTION 2.19 TO INCLUDE ELECTRIC ACTUATION AS THE PREFERRED OPTION FOR NEW PROJECTS. REORGANIZED SECTION 2.17 TO SIMPLIFY VALVE REQUIREMENTS PER CONTROLS AD HOC SPECIFICATION SUBCOMMITTEE.

JUNE 2021: ADDED PRELIMINARY CHANGE OF VALUE INCREMENTS FOR DATA SHARING. ADDED IMPROVED WARRANTY REQUIREMENTS (RESPONSE TIME). D. KARLE, AS REQUESTED BY UM CONTROLS AD HOC TEAM.

SEPTEMBER 2020: NEW VERSION OF TURNKEY SPECIFICATION. THIS SECTION IS IDENTICAL TO 230900 WITH THE EXCEPTION OF CHANGES IN PART 1. EXTENSIVE REVISION BY AEC CONTROLS AD HOC SPEC TEAM. THIS SPECIFICATION TO BE USED ONLY WHEN SPECIFICALLY DIRECTED TO DO SO BY THE U-M DESIGN MANAGER.

MAY 2019: ADD COMBINATION ROOM TEMP AND HUMIDITY SENSOR. ADD ROOM TEMPERATURE CONTROLLER ("RTC"). REVISE ROOM TEMPERATURE CONTROLLER FOR FAN COILS ("RTC-F"). REVISE BALL VALVE ACTUATORS TO MODULATING TYPE. ADDED FLN AND BLN WIRE COLORS. AS APPROVED BY HVAC MTT. D. KARLE.

DECEMBER 2018: ADD CONDENSATION SENSOR, ALARM INDICATION STATION, OCCUPANCY COUNTER. IMPROVE TEC SPECIFICATION LANGUAGE (2.5). REVISE ROOM DIFFERENTIAL PRESSURE INDICATING GAUGE TO CENTER ZERO MODEL. PART 3: INDICATED THAT SETPOINTS ON DOCUMENTS ARE PRELIMINARY AND MUST BE FINALIZED WITH THE ENGINEER AND COMMISSIONING AUTHORITY PRIOR TO PROGRAMMING. ADDED SELF CALIBRATION DEVICE REQUIREMENTS. PER HVAC MTT. D. KARLE.

MAY 2018: ADDED ONICON AS APPROVED FOR EM FLOW METERS (WATER) PER HVAC MTT. D. KARLE.

JUNE 2016: REVISED SECTION TO ADD CONSTANT VOLUME VENTURI (CVV) FUME HOOD LAB AIRFLOW CONTROLS. VAV FUME HOOD LAB AIRFLOW CONTROLS, INCLUDING ALL OTHER MECHANICAL CONTROLS IN THE VAV FUME HOOD LAB, REMAINS IN MS230910. REFER TO DESIGN GUIDELINE 230030 FOR ADDITIONAL GUIDANCE. ALSO ADDED INFO ON UTILITY METERING ("DATA ACQUISITION PANELS"). D. APPEL.

EDITOR'S NOTE:

THIS "TURNKEY" SPECIFICATION IS USED WHEN THE CONTROL WORK WILL NOT BE SPLIT BETWEEN THE UNIVERSITY OF MICHIGAN AND THE MECHANICAL SYSTEMS CONTROLS CONTRACTOR, OR IF A TURNKEY ALTERNATE IS DESIRED. THIS SPECIFICATION TO BE USED ONLY WHEN SPECIFICALLY DIRECTED TO DO SO BY THE U-M DESIGN MANAGER.

THESE SPECIFICATIONS MUST BE CUSTOMIZED APPROPRIATELY FOR EACH PROJECT, E.G. ADDING SPECIFICATIONS FOR COMPONENTS NOT ALREADY SPECIFIED IN PART 2. HOWEVER, DELETING COMPONENTS SPECIFIED IN PART 2 IS NOT TYPICALLY NECESSARY OR RECOMMENDED. IN ADDITION TO THESE SPECIFICATIONS, THE PLANS ARE TO INCLUDE THE FOLLOWING, AS A MINIMUM:

SCHEMATIC LAYOUT OF EACH SYSTEM SHOWING ALL DDC AND CONTROL COMPONENTS.

LOCATIONS OF ALL DDC PANEL ARRAYS.

PROVIDE TWO 20 AMP POWER CIRCUITS AT EACH DDC/AUXILIARY PANEL LOCATION. ONE CIRCUIT IS FOR THE DDC PANEL, THE OTHER IS FOR THE AUXILIARY PANEL. ELECTRICAL POWER REQUIREMENTS TO BE COORDINATED WITH ELECTRICAL DRAWINGS.

WIRING DIAGRAMS FOR EACH SYSTEM TO SHOW INTENT OF AUTOMATIC OR INTERLOCKED OPERATION.

SCHEDULES FOR DAMPERS, AIRFLOW MEASURING STATIONS, STATIC PRESSURE PROBE LOCATIONS, HUMIDITY RESET, TEMPERATURE RESET, DAY/NIGHT CONTROL ZONE, ETC.

THE SCOPE OF THIS SPECIFICATION INCLUDES CONTROLS FOR ANY LAB ROOM WITHOUT VAV FUME HOODS OR COMBINATION SASHES. IF A LAB ROOM INCLUDES THOSE HOOD TYPES, U-M MASTER SPEC 230910 MUST BE INCLUDED TO COVER ALL MECHANICAL CONTROLS IN THOSE ROOMS.

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

ALWAYS INCLUDE PARAGRAPH 1.1.A AND B IN EVERY SPECIFICATION SECTION. EDIT RELATED SECTIONS 1.1.B TO MAKE IT PROJECT SPECIFIC.

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections
 - 1. Section 019100 Project Commissioning
 - 2. 220523 Valves
 - 3. 233600 Air Terminal Units
 - 4. 230910 VAV Fume Hood Laboratory Air Flow Controls
 - 5. Division 26: Electrical

1.2 SUMMARY

- A. This Section specifies mechanical systems controls applicable to all project controls except for labs with variable air volume (VAV) fume hoods, including combination (vertical/horizontal) sash fume hoods. Controls in rooms with VAV and combination sash hoods shall be in accordance with Section 230910.

1.3 REFERENCES

A. Definitions

1. Area Level Network: The network that allows communication between B-BC controllers, 3rd party controllers, and the owner's BAS server.
2. Field Level Network: The network that allows communication to/from B-AAC's, B-ASC's, and other field controllers to/from B-BC controllers.
3. Terminal equipment controller: A controller associated with a specific piece of equipment (e.g. VAV box, fan coil unit, cabinet unit, etc.)

B. Abbreviations and Acronyms

1. ALN: Area Level Network
2. BMS: Building Management System
3. BTL: BACnet Testing Labs <http://www.bacnetinternational.net/btl/>
4. B-AAC: BACnet Advanced Application Controller
5. B-ASC: BACnet Application Specific Controller
6. B-AWS: BACnet Advanced Workstation
7. B-OD: BACnet Operators Device
8. B-BC: BACnet Building Controller
9. B-SA: BACnet Smart Actuator
10. B-SS: BACnet Smart Sensor
11. BBMD: BACnet Broadcast Management Device
12. BDT: BACnet Distribution Table
13. CAV: Constant Air Volume
14. DDC: Direct Digital Control
15. FCU: Fan Coil Unit
16. FLN: Field Level Network
17. MSCC: Mechanical Systems Controls Contractor
18. VAV: Variable Air Volume

1.4 SUBMITTALS

A. Submittals shall, as a minimum, consist of the following:

1. Schematic diagrams of all systems being controlled and/or monitored indicating all DDC points, point numbers (using UM conventions), sensors, relays, controllers, valves, dampers, complete control wiring schematics (including starter, VSD, DX system, etc. wiring diagrams), pneumatic tubing, DDC panel maps, etc.
2. HMI display graphic pages including each analog and digital point that will be displayed.
3. Wiring of each point to the DDC panels, including terminal block numbers.
4. Layout of all auxiliary devices and panels, and wiring of relays, contacts, etc. Include terminal block numbers at all control panels, at all mechanical equipment, and at all control devices.
5. Complete Sequence of Operation for each system being controlled, including set points, alarms settings, etc. in narrative format.
6. Pneumatic compressed air supply equipment, risers, and major tubing runs.
7. Complete bill of materials to identify and quantify all devices.
8. Product data including a description and complete engineering data for each control system component.
9. Layout and nomenclature for all nameplates.

10. Point nomenclature and controller addressing: All point and object names shall be named utilizing the UM standard naming convention. Obtain the naming convention and controller addresses from UM prior to providing submittals. This shall include all BACnet devices.
11. Network diagrams indicating network switches, routers, servers, and peripheral devices, including location of each device (room number), device name, address, instance number, approximate cable lengths, and indicating network connection points to Owner's BAS and/or Utility Meter data acquisition system. Provide separate diagrams for the building network and terminal device network.
12. Wiring diagrams and locations of power supplies.
13. Additional submittal items required for any room designated as a lab:
 - a. Equipment schedule for each room or zone, with the following information:
 - 1) Equipment tag, room served, occupied/unoccupied min., max., offset CFM, network address, and network and power trunk identifier.
 - 2) Model number of each control component.
 - 3) Function of each terminal device and control component.
14. Resume of any personnel proposed to work on University of Michigan's building automation server.

B. Submit, as a minimum, the following design data schedules indicating:

1. Airflow Measuring Probes:
 - a. Device tag.
 - b. Equipment served/function.
 - c. Model number.
 - d. Size, type, and location.
 - e. Station area in square feet.
 - f. Max/Min Range.
 - g. Magnehelic scale range.
 - h. Velocity pressure range.
2. Air and water pressure sensors:
 - a. Device tag.
 - b. Equipment served/function.
 - c. Model number.
 - d. Size, type, and location.
 - e. Max/Min Range.
3. Control Dampers:
 - a. Damper tag.
 - b. Equipment served/function.
 - c. Model number.
 - d. Blade configuration and orientation.
 - e. Size in width, height, and blade width.
 - f. Pressure drop.
 - g. Type of seals (blade and edge).
 - h. Normal position.
 - i. Size, quantity, type, and model number of actuators. Method of actuator mounting and actuation.
4. Control Valves:
 - a. Valve tag.
 - b. Equipment served/function.
 - c. Valve flow rate (GPM).
 - d. Line size.

- e. Specified valve pressure drop (ft. head).
 - f. Valve size.
 - g. Valve Cv.
 - h. Actual valve pressure drop (ft. head).
 - i. Valve normal position.
 - j. Valve spring range.
 - k. Valve shut-off rating (ft. head).
 - l. Valve body pressure/temperature rating.
 - m. Valve type/model number.
 - n. Actuator type/model number.
5. Terminal Equipment Devices:
- a. Device tag.
 - b. Equipment served/function.
 - c. Model number and application code.
 - d. Associated sensor location/tag.
 - e. Size, control values, etc.

C. Submittal Submission Requirements

1. In compliance with the submittal distribution plan for the project, submit an additional copy of the submittals to the Operations & Maintenance Engineering department.
2. Submittals shall be provided in a searchable PDF (OCR) format.
3. Submittals shall include a complete table of contents indicating every piece of equipment included under each tab.
4. A paper and electronic copy shall be submitted to the UM DDC shop and Cx Agent after the submittal is approved.
 - a. Provide updated sections or pages in paper and electronic format to reflect construction changes or field changes as they occur.
5. Control drawings shall be minimum 11" x 17" size.
6. The submittal shall be organized into bookmarked/tabbed sections consisting of (at minimum) the following categories:
 - a. Control Drawing tabbed sections:
 - 1) Network Diagrams
 - 2) Schedules: Control Valves, Control Dampers/Actuators, Liquid Flow Meters, Air Flow Meters, Terminal Units, Lab Terminal Units
 - 3) A section shall be provided for each temperature control panel indicating all equipment associated with that panel. All of the following shall be included in this tab:
 - a) Equipment control diagrams
 - b) Project specific wiring diagrams of controlled or alarmed equipment
 - c) Aux. & LPI panel layout and wiring diagrams
 - d) DDC panel layout diagrams
 - 4) A separate section for terminal equipment controllers.
 - b. Product Data tabbed sections: Temperature Devices, Humidity Devices, Pressure Devices, Hydronic Flowmeters, Air-flow Meters, Auxiliary Panel Devices, Pneumatic Components, Electric Components, Miscellaneous Components
7. For the paper version, each section shall consist of tabbed divider sheets indexed to a table of contents.
8. For the electronic version, each tabbed section shall be bookmarked.

9. Since many items are interrelated and should be checked concurrently, all of the MSCC's submittal drawings and product data sheets shall be submitted at one time. No consideration will be given to partial submittals, except valves, flowmeters and damper submittals on approval only. Any partial submittals must be included in the complete submittal package.

D. Project Record Documents and Operation and Maintenance Manuals

1. Provide the specified number of paper copies of complete operation and maintenance instructions for all system components furnished. Additionally provide a final electronic copy of the above in two formats: Microstation or AutoCAD compatible format and searchable PDF (OCR) format.
2. Include as-built system schematic drawings and wiring diagrams.
3. Include updated network diagram including final locations of power supplies and end of line resistors.
4. Include updated terminal device schedule indicating final device name, address and power trunk designation. Update terminal device schedule to indicate the order in which they are connected on the communication trunk.
5. Indicate final set points, settings, and adjustments of all components.
6. Provide factory calibration certificates for steam and water flowmeters, differential pressure hydronic sensors, differential pressure transmitters used for laboratory control, "matched" temperature transmitters, and any other factory calibrated device.
7. Include project specific catalog cuts and data sheets indicating installation, operation, maintenance, repair, wiring diagrams, calibration, calibration tolerances, inspection period, cleaning methods and cleaning materials for all components. The O&M manual shall be organized in a manner similar to the product submittal package.

REVISE ARTICLE 1.5 AS REQUIRED FOR THE SPECIFIC PROJECT

1.5 MAINTENANCE MATERIAL SUBMITTALS

- A. Spare Parts/Extra Stock Materials
- B. Tools
- C. Software and Licensing

1.6 QUALITY ASSURANCE

- A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.
 1. Where not indicated in Part 2, all devices shall be as manufactured by Honeywell, Johnson Controls or Siemens.
- B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.

1. Underwriters Laboratory or Intertek (ETL) (listed and labeled).
2. National Electric Manufacturer's Association (standards pertaining to components and devices for electrical control systems)
3. National Fire Protection Associate NFPA 90A "Standard for the Installation of Air Conditioning and Ventilating Systems"
4. National Electrical Code NFPA 70.
5. ASHRAE Standard 135 BACnet - A Data Communication Protocol for Building Automation and Control Networks
6. UL Compliance: DDC Controllers for this project shall comply with UL916 Standard for Energy Management Equipment. DDC Controllers associated with equipment utilized in a smoke control application shall also comply with UUKL-UL 864 "Standard for Control Units and Accessories for Fire Alarm Systems".
7. National Institute of Standards and Technology (NIST), NIST IR 6392 Annex B: Profiles of Standard BACnet Devices.
8. Electronics Industries Association (EIA)
 - a. EIA-232: Interface Between Data Terminal Equipment and Data Circuit-Terminating Equipment Employing Serial Binary Data Interchange
 - b. EIA-485: Standard for Electrical Characteristics of Generator and Receivers for Use in Balanced Digital MultiPoint System

1.7 DELIVERY, STORAGE AND HANDLING

- A. Store materials and equipment raised off the floor on pallets and protected with coverings to prevent damage due to weather and construction activities. Store in areas that prevent damage due to freezing and extreme temperatures or sunlight. Arrange coverings to provide air circulation to avoid damage from condensation or chemical build-up. Protect from damage, dirt and debris at all times.
- B. Shipping and storage protection shall be provided by manufacturer to insure that the interior and exterior of components are completely protected from damage, dirt or weather. Components shall be continuously covered with plastic or other durable means, until just prior to installation. Maintain protection after installation to protect against on-going construction activities.

1.8 SCOPE OF WORK

- A. The complete control system work shall be by the Mechanical Systems Controls Contractor. Provide a fully functional control system comprised of Apogee BACnet Building Controllers and Apogee BACnet application specific controllers (which are generically referred to as Terminal Equipment Controllers (TECs) in this specification). The mechanical systems control contractor (MSCC) shall configure, program and commission all controllers to provide the required functionality as defined in the sequence of operation located on the control drawings. As it relates to the extent of responsibility for work within this specification section, "provide" shall mean furnish and install.
- B. Summary of work by the Mechanical Systems Controls Contractor- shall include, but not be limited to:

1. Temperature control system consisting of all pneumatic and Direct Digital Controls (DDC) sensors, transducers, relays, switches, data communication network, etc. and all associated control wiring and conduit systems.
2. Laboratory control systems except in rooms with VAV hoods or combination sash fume hoods. (Programming and some components provided by UM. Refer to section "DDC related work by the University of Michigan").
3. Provide fume hood monitors except in rooms with VAV hoods or combination sash fume hoods.
4. Install UM furnished devices for terminal equipment.

EDITOR: DRAWINGS SHOULD INDICATE LOCATION AND TYPE OF COMMUNICATION CONNECTION SHOWING NECESSARY CONDUIT TO THAT LOCATION (NEAREST DDC PANEL FOR EXISTING BUILDINGS OR NEAREST DATA CLOSET FOR NEW BUILDINGS) .

5. Connection of new DDC panels to permit communication to the owner's Building Automation System (BAS). Connection to host computer via trunk connection to an existing DDC panel, data closet, or local Ethernet data port as indicated on the drawings. Where not indicated on the drawings, provide a proposed network design for review and approval by the owner.
6. Engineering, submittals, as-built drawings, and operation and maintenance manuals.
7. Provide an auxiliary temperature control panel adjacent to each DDC panel. Provide additional auxiliary panels as required to house the required quantity of control components. Provide all wiring between the DDC panel and the auxiliary panel(s).
8. Provide a Loop-Powered Indicator (LPI) panel adjacent to the auxiliary panel. Provide additional LPI panels as required to house the required quantity of LPIS. Provide all wiring between the DDC panel and the LPI panel(s).
9. When loop powered indicators are not shown on control diagrams, provide a Human Machine Interface (HMI) at each DDC panel array. Provide all wiring and accessories required to enable the HMI to function as specified.
10. For existing panels, punch the LPI panel doors.
11. Provide free standing unistrut racks to support all DDC panels and equipment. Mount all panels.
12. Assembly of DDC panel circuit boards, associated I/O modules, and communication hardware into U-M furnished DDC and UPS panel enclosures. Provide all interconnecting power wiring between the DDC panel power supply and the UPS panel duplex receptacle.
13. Provide a minimum 8"x 8" wiring trough extending over and between each DDC, auxiliary temperature control, and LPI panel.
14. Provide thermostats, control valves, dampers, operators, meters, control air tubing, etc.
15. Provide gauges, indicating devices, electric and electronic control accessories, and other control system devices.
16. Except where indicated otherwise under "DDC related work by the University of Michigan", provide setup/programming, calibration and start-up services of control systems, e.g. electronic room temperature controllers. This shall include all programming required to network back to owner's BAS.
17. Termination of all wires and pneumatic lines within the DDC panel, auxiliary panel and LPI panel, including the power supply.

18. Termination of all field wiring including but not limited to: sensors, actuators, H/O/A switches, hard-wired safeties, relays, terminal equipment controllers, network wiring, etc.
 19. For U-M Utility's energy metering, install U-M furnished data acquisition panel. Provide wiring from meters and transmitters to utility data acquisition panels. Provide dedicated Ethernet communication wiring to utility data acquisition panels from local data closet. Terminations inside panels by U-M.
 20. Provide site supervision of mechanical control work and coordination with related electrical and fire alarm work and packaged controls.
 21. Provide all control wiring and electrical components necessary for each system to permit automatic or interlocked operation, such as: air cooled condensing units, high level alarm circuits, damper end switches, fuel oil pumping/monitoring systems, chiller control/interface panels, boiler control/interface panels, early break contacts on disconnects to VSD's, cooling tower vibration switches, etc.
 22. All other work and components required for complete and operational control systems, and that allows the sequence of operation indicated on the drawings or elsewhere to be achieved, except work specified as provided or furnished by the University of Michigan.
 23. Start-up, calibration, and checkout of sensors, transducers, thermostats, control valves, dampers/damper operators, meters, and all other components provided. Verify correct functionality of DDC points and inputs/outputs associated with terminal equipment controllers and correct all deficiencies.
 24. Commission all mechanical controls provided. Provide a detailed list of every control point installed to the project Commissioning Authority (CxA), and verify proper operation of each component prior to commissioning the controls with the CxA. Include, in checklist format, a detailed procedure to verify all aspects of the controls' Sequence of Operation.
 25. Training of U-M personnel to familiarize operations staff with the configuration, operation, and maintenance of provided controls.
- C. The following work shall also be by the Mechanical Systems Controls Contractor:
1. Point database entry.
 2. Provide programming for DDC panels and terminal equipment controllers, excluding rooms with VAV fume hoods and hoods with combination sashes.
 - a. Provide programming required to achieve the sequence of operation and the control intent indicated on the documents.
 - b. Tune control loops.
 - c. Program the following alarms, whether specifically indicated in the sequence of operation or not. Include appropriate deadbands and time delays:
 - 1) For every indicated setpoint, create a variation from setpoint alarm. Examples include air handler discharge temperature, chilled water temperature, end-of-line DP, etc.
 - 2) Status does not match command.
 - 3) Failed point.

- 4) Exception: Unless specifically indicated, alarms are not required for terminal equipment controllers controlling space temperature.
 - d. Programming lines shall be grouped into subparts and explained with comment fields. The comment fields shall include the related part of the project sequence of operation that each program subpart is intended to accomplish. All unused program lines or sections shall be deleted from the final program.
 3. Provide temporary programming to provide building heating or cooling during construction.
 4. Furnish all DDC panel circuit boards, associated I/O modules, and communication hardware.
 5. Furnish DDC panel UPS.
 6. Furnish proprietary Siemens control components per detailed list on control drawings except labs with VAV fume hoods or combination sash fume hoods.
 7. Furnish all DDC panel enclosures and UPS enclosures.
 8. Start-up and checkout of DDC panels.
 9. Verify correct functionality of every DDC point associated with every DDC panel, and for every input and output associated with every TEC.
 10. Commission DDC controllers and verify each sequence of operation with the project CxA.
 11. Training of UM personnel on the various Sequences of Operation, the DDC panel and its connections, the LPI panel, the UPS panel, and terminal equipment controllers and their related components.
 12. Configure all controllers to serve BACnet data to BACnet Clients installed on the network. Each controller shall be configured and programmed to map all the BACnet objects associated with the controller, as selected by UM BAS. Provide a list of all objects to UM BAS at least 2 weeks in advance of this work. UM BAS will return the list indicating the specific objects to be mapped. Configure the controllers to utilize a change of value subscription with the clients that reside on the IT network. Change of value increments shall be as selected by the UM BAS department and tuned to minimize IT network traffic.
 13. Provide and participate in all sustainable design requirements, including but not limited to providing temporary control and operation of air handlers to achieve LEED IEQ Credit 3.2 building flush-out. Refer to specification section 018113 Sustainable Design Requirements
- D. The following work associated with the controls shall be done by the University of Michigan.
1. Program HMI display with graphics and point information. Submit for review and approval by owner.
 2. Furnish data acquisition panels for metering of all utilities, including steam, condensate and BTU metering. Provide internal panel components including din rail, fuse, power terminal block, power supply, 24V terminal block, communication module, and read out modules. Terminate all input/output wiring and data connections to the panel. Start-up, configure and commission the panel.
 3. Equipment schedules.
 4. System Profile integration.
 5. Generation of system graphics.

6. Provide remote notification alarms via email, text messages, etc. to U-M personnel.
7. Work with U-M IT department to obtain the required IP addresses.
8. For new panels, punch the LPI panel doors. MSCC must drop off and pick up doors from U-M's shop.
9. Selection of the appropriate size, type, and quantity of DDC controllers to be used.
10. Configure trends for every analog (30 minute trend interval) and digital(change of value) input to DDC panels. Configure room temperature (or the controlled variable) trends for every terminal equipment controller, at a 30 minute interval.

1.9 ITEMIZED QUOTATION

- A. When requested, immediately provide an itemized bid breakdown to the Owner post bid, for review and approval. Include itemized material costs for all major components (along with model numbers), installation labor costs, subcontractor labor and itemized material cost, and engineering costs, for base bid and for each alternate, for the entire work scope of the Mechanical Systems Controls.

EDITOR: CONTACT THE UM DESIGN MANAGER TO DETERMINE WHICH OF THE BELOW CONTROLS INSTALLATION CONTRACTORS ARE TO BE LISTED AS ACCEPTABLE FOR YOUR SPECIFIC PROJECT.

1.10 ACCEPTABLE MECHANICAL SYSTEMS CONTROLS CONTRACTORS

- A. The following MSCCs are acceptable for the furnishing and installation of pneumatic, electric and DDC components as specified in this section:
 1. Siemens Building Technologies
 2. Johnson Controls, Inc.
 3. Fontanesi & Kann Company

1.11 COORDINATION

- A. Provide controls and control wiring compatible with equipment provided by others and with existing equipment and controls.
- B. Coordinate the installation of controls with the installation of other project equipment.
- C. Coordinate with laboratory equipment suppliers (constant flow fume hoods, etc.) regarding dimensions and mounting location for alarm monitors and assure proper accommodation is made for the installation of other devices related to laboratory airflow controls.
- D. Coordinate panel locations, space requirements, and other control device locations during the development of the Project Coordination Drawings.

1.12 WARRANTY

- A. Provide a complete warranty for parts and labor for a minimum of one year from the date of Substantial Completion or the Owner's formal acceptance of the control system, whichever is later.

- B. Provide 24 hour per day emergency service during the warranty period. Provide phone number(s) where warranty service can be reached at all times. Respond on-site and make corrections within 12 hours of a warranty service call.

PART 2 - PRODUCTS

2.1 GENERAL

- A. DDC panels, including field and zone controllers/panels and all related software shall be the Siemens Apogee Building Automation System.
- B. Provide components compatible with new and existing DDC controller I/O modules, and with equipment provided by others. The MSCC shall become familiar with the DDC system's requirements, limitations, and characteristics.
- C. Any parts not described within this specification shall be submitted as an "Owner's Options/Voluntary Alternates" on the bid form, in accordance with the alternate product requirements contained in the Instructions to Bidders. UM reserves the right to reject any part not pre-approved which could result in bid disqualification.

2.2 GENERAL DDC CONTROL ARCHITECTURE

- A. All control points indicated on the documents shall be directly connected to primary DDC panels as current or voltage signals, not via the communication network, unless specifically shown otherwise.
- B. The Area Level Network shall be a BACnet/IP Ethernet network and the Field Level Network shall be a BACnet MS/TP unless shown otherwise on the documents. The FLN shall utilize the Master-Slave/Token-Passing (MS/TP) protocol, as acknowledged by the ANSI/ASHRAE 135 standard. This secondary network shall be provided and installed by the MSCC. Proprietary RS-485 or equivalent links will not be considered unless otherwise noted. The MS/TP link shall operate at a 38.4 Kbps minimum. Repeaters shall not be used in any instance.
- C. BACnet Broadcast Management shall be facilitated by one B-BC per IP Subnet and incorporate a BACnet Distribution Table, provided by U-M BAS dept. B-BC's that handle BBMD's and I/O functionality shall be properly sized to handle memory & processing requirements.
- D. Terminal units (VAV, FCU, etc) shall be connected directly to primary field panels. Use of a BacNet MS/TP to IP router is not acceptable.
- E. System architectural design shall eliminate dependence upon any single device for control execution. Each DDC controller shall operate independently by performing its own specified control, operator I/O and data collection. The failure of any single component or network connection shall not interrupt the execution of control strategies at other operational devices. Data collection that requires a single mechanism for user notification or viewing is strictly prohibited.
- F. All controllers within a building shall be able to access any data from, or send control commands directly to, any other DDC controller or combination of controllers in the same building without dependence upon a central processing device (peer-to-peer).

SPEC EDITOR'S NOTE: THE TYPE OF DDC CONTROLLER REQUIRED FOR EACH APPLICATION MUST BE IDENTIFIED ON THE PROJECT DOCUMENTS. CONSULT UM O&M ENGINEERING FOR MODEL NUMBERS.

2.3 GENERAL DDC CONTROLLER REQUIREMENTS

- A. Stand-alone microprocessor board with ROM and fully custom programmable RAM, EPROM, and/or EEPROM memory, integral interface equipment and power surge protection. DDC controllers shall be connected directly to sensors, controlled devices and the communication network.
- B. All DDC controllers shall use the latest version of ANSI/ASHRAE Standard 135 BACnet standard for communications, have passed BTL certification as available and be listed as compliant with UL916 Standard for Energy Management Equipment. DDC controllers used in smoke control applications must also be listed as compliant with UL864 Standard for Control Units and Accessories for Fire Alarm Systems.
- C. Controllers shall be listed by BACnet Testing Laboratories (BTL) as conforming to the required standard device profile and support all of the minimum required BACnet Interoperability Building Blocks (BIBBs) associated with this device profile.
- D. The "Present_Value" property of all analog output and binary output objects shall be writable so that Systems Monitoring personnel have the capability to override all system outputs from the central BMS server(s).
- E. Each DDC controller shall support firmware upgrades without the need to change hardware.
- F. Each DDC controller shall continuously perform self-diagnostics, communication diagnosis, and diagnosis of all panel components. The DDC controller shall provide both local and remote annunciation of any detected component failures, low battery conditions or repeated failure to establish communication for any system.
- G. DDC controller types shall be one of three types, a BACnet Building Controller (B-BC), a BACnet Advanced Application Specific Controller (B-AAC) or a BACnet Application Specific Controllers (B-ASC).
 - 1. Building Controllers (B-BC) shall be used for all major mechanical equipment and/or systems (i.e. chilled water, heating hot water, large AHU's, etc.).
 - 2. Advanced Application Specific Controllers (B-AAC) shall be used, as an extension of a B-BC's performance & capacity, for control of all medium and small mechanical systems and/or terminal equipment.
 - 3. Application Specific Controllers (B-ASC) shall only be used for the terminal equipment indicated under the B-ASC section of this specification.
- H. Any controller supplied under this specification must provide all integration functionality required to meet the sequence of operation and to communicate with the owner's building automation system.
- I. BACnet Building Controller (B-BC):

1. Provide controllers conforming to the latest version of ANSI/ASHRAE 135 BACnet Building Controller (B-BC) standard device profile and support all of the minimum required BACnet Interoperability Building Blocks (BIBBs) associated with this device profile.
2. Controllers shall support Internet Protocol (IP) for communications to other BC's and the BMS front-end and MS/TP communication to B-AAC's and B-ASC's.
3. Controllers shall have a minimum 64 bit processor with an EEPROM, flash driven operating system. They shall be multi-tasking, multi-user, real-time digital control processors and permit I/O expansion for control / monitoring. Controller size shall be sufficient to fully meet the requirements of the project documents. Controllers shall be fully programmable while supporting standard energy management functions, including but not limited to:
 - a. Alarm detection and reporting
 - b. Automatic Daylight Saving Time switchover
 - c. Calendar-based scheduling
 - d. Closed loop PID control
 - e. Duty cycling
 - f. Economizer control
 - g. Equipment scheduling, optimization and sequencing
 - h. Event scheduling
 - i. Historical trend collection
 - j. Holiday scheduling
 - k. Logical programming
 - l. Reset schedules
 - m. Night setback control
 - n. Peak Demand Limiting (PDL)
 - o. Start-Stop Time Optimization (SSTO)
 - p. Temperature-compensated duty cycling
 - q. Temporary schedule override
4. Provide controller with integral power switch. If an integral switch is not provided by the manufacturer, the MSCC shall provide a separate dedicated transformer and switch within each enclosure for each controller present.
5. The operator shall have the ability to manually override automatic or centrally executed commands at the Building Controller via local, point discrete, hand/off/auto operator override switches for digital control type points and gradual switches for analog control type points.
6. Controllers shall provide local LED status indication for power, communications, status and each digital output for constant, up-to-date verification of all point conditions without the need for an operator I/O device.
7. Controller shall utilize optically isolated digital outputs.
8. All points associated with a given mechanical system (e.g., an air handling unit) will be controlled from a single Building Controller or point expansion panel(s) from the respective master. All expansion modules shall be located in the building controller enclosure or an attached enclosure. No points from a given mechanical system may be distributed among multiple panels - points must be run back to a single Building Controller dedicated to that mechanical system. Multiple mechanical systems shall be allowed on a single controller. Closed-loop control must never depend upon network communications. All inputs, program sequences, and outputs for any single DDC control loop shall reside in the same Building Controller.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230901 - - 14

9. A variety of historical data collection utilities shall be provided for manual or automatic sampling, storing and displaying system point data.
 - a. Building Controllers shall store point history data for selected analog and digital inputs and outputs.
 10. Building Controllers shall also provide high resolution sampling capability for verification of control loop performance. Operator-initiated automatic and manual loop tuning algorithms shall be provided for operator-selected PID control. Provide capability to view or print trend and tuning reports.
 - 1) Loop tuning shall be capable of being initiated either locally at the Building Controller or from a network workstation. For all loop tuning functions, access shall be limited to authorized personnel through password protection.
 11. Provide controllers that, upon full system power recovery, all clocks shall be automatically synchronized, and all controlled equipment shall be automatically re-started based on correct clock time and sequence of operation.
 12. For expansion purposes, provide enough space and extend rail(s) within each control panel to allow the addition of (1) future I/O module per DIN rail.
 13. Controllers shall provide at least one data communication port for operation of operator I/O devices such as portable laptop operator's terminals. Controllers shall allow temporary use of portable devices without interrupting the normal operation of permanently connected printers or terminals. A USB port shall alternatively be available to support local HMI tools connection.
- J. BACnet Advanced Application Specific Controller (B-AAC):
1. Provide where indicated on project documents or when required by application when approved by owner.
 2. Provide controllers conforming to the latest version of ANSI/ASHRAE 135 BACnet Advanced Application Specific Controller (B-AAC) standard device profile and support all of the minimum required BACnet Interoperability Building Blocks (BIBBs) associated with this device profile.
 3. Controllers shall support MS/TP communication to B-BC's and other B-AAC's and B-ASC's.
 4. Controller shall be a microprocessor-based, 32 bit, multi-tasking, real-time digital control processor capable of stand-alone operation.
 - a. If the hardware point requirements of any system should exceed the I/O configuration of available B-AAC offerings then a B-BC must be used. Control of one piece of mechanical equipment may not be performed by more than one controller.
 5. Provide each controller with sufficient memory to accommodate point databases and operating programs. All databases and programs shall be stored in non-volatile EEPROM. The controllers shall be able to return to full normal operation without user intervention after a power failure of unlimited duration.
 6. Controllers must be fully programmable. All programs shall be field-customized to meet the user's exact control strategy requirements.
 7. All points used for a single mechanical system shall be connected to the same B-AAC.

8. Controller shall utilize optically isolated digital outputs.
 9. Analog outputs shall be 24V floating control, 0-10VDC, or 4-20mA as required by the device being modulated.
 10. Each controller shall perform its primary control function independent of other DDC controller communications, or if communication is interrupted. Reversion to a fail-safe mode of operation during network interruption is not acceptable. Controller shall receive its real-time data from the Building Controller time clock to insure network continuity.
 11. Each controller shall include algorithms incorporating proportional, integral and derivative (PID) values for all applications. All PID values and biases shall be field-adjustable by the user via operator terminals.
 12. Controllers shall provide diagnostic LEDs for power, communications and processor status. The controller shall continually check the status of its processor and memory circuits.
 13. The B-AAC providing control of a system shall have all associated points connected directly to it unless approved otherwise.
- K. BACnet Application Specific Controller B-ASC (Also referred to as Terminal Equipment Controller-"TEC") and related room temperature sensor (RTS)
1. Only for use with air terminal units (VAV boxes, CAV boxes, dual-duct mixing boxes), or where indicated. Provide B-AAC controllers when required by application.
 2. Controllers:
 - a. Provide electronic damper operators compatible with the controller and the air terminal units provided. Actuator shall utilize a brushless DC operator, min 35 in-lbs of torque, floating control (unless noted otherwise).
 - b. Controllers shall have an internal differential pressure transducer(s) capable of utilizing the total and static pressure signals from the air terminal unit's velocity sensor. The differential pressure transmitter maximum error shall be 5% of reading, not to exceed a velocity pressure error of 0.023" w.c., for the flow range 0-5600 fpm. Associated velocity sensor shall be furnished by air terminal unit manufacturer.
 - c. Each controller shall have electronic outputs compatible with the electronically operated air terminal unit tempering coil control valve and perimeter radiation control valve where applicable.
 - d. Provide a discharge air sensor, mounted on the discharge of the terminal box reheat coil and/ or the outlet of dual duct mixing boxes, interfaced with the controller.
 - e. Where a pressure offset is described on the drawings, or when a damper based auto-calibration routine adversely affects control, utilize an auto-zero auxiliary device to temporarily disengage the differential pressure sensor from the air velocity sensor. This shall function so that a 0 cfm air volume reading is forced without changing the damper position to prevent negatively affecting room pressurization.

3. RTS shall have a digital temperature display, set point button, and override button. Sensor shall be thermistor type, 55°F-95°F range, +/-0.18°F resolution and capable of being field calibrated. Provide sensor with auxiliary communications port to allow remote connection to VAV controller(s) with a laptop computer, to facilitate configuration and commissioning of controllers.
 - a. Zone Sensors shall not be located on perimeter walls. Where explicitly indicated on drawings to do so and/or in locations near exterior walls and/or subject to drafts, sensors shall have insulated mounting bases to prevent false room temperature readings.
 4. Provide all other devices except those indicated as furnished by the equipment manufacturer. Install equipment manufacturer provided devices when not pre-installed. The MSCC shall coordinate devices furnished by others and provide all devices not furnished by them to provide a complete operating system that achieves the sequence of operation requirements.
 5. The MSCC may send TECs to the equipment manufacturer for factory mounting, or may field mount TECs. All mounting costs are the responsibility of the MSCC.
 6. TECs shall be provided with metal enclosure, complete with conduit knockouts (enclosure provided by MSCC).
 7. Connect TECs to the Siemens DDC control panel controller FLN of the AHU or system being served.
 8. Power to TECs and associated controlled devices shall be 24 VAC, provided by the MSCC.
 9. Approved Manufacturers:
 - a. Siemens
- L. HUMAN MACHINE INTERFACE panel(HMI)- (color touchscreen panel)
1. 15" LCD, glass front, industrial color touchscreen. Custom configured to provide a graphic matching the control diagram in the construction drawings for each piece of equipment or system controlled by a building controller (B-BC). HMI shall display all analog and digital points. Standard default view shall be a read only display.
 2. HMI shall connect to the BACnet MS/TP network at the DDC controller as well as to the campus ethernet for management and configuration of the device. Route ethernet cable to data closet if local switch is unavailable.
 3. HMI shall at a minimum satisfy BACnet Operator Device (OD) functionality as a local MS/TP device.
 4. HMI shall be suitable for operation in un-conditioned equipment room (32°F-122°F, 30%-90%RH).
 5. Mount the HMI through the Auxiliary (Aux.) temperature control panel face, utilizing mounting bolts, with its center-line a nominal 60" A.F.F. Provide an additional Aux. panel for the HMI when insufficient room exists in the main Aux. panel.
 6. Approved Manufacturers:
 - a. Loytec LVIS-3ME15-G2 with mounting frame

EDITOR: SYSTEMS (AHU'S CHILLER, ETC) THAT ARE FED FROM EMERGENCY POWER SOURCES SHALL HAVE THEIR ASSOCIATED DDC CONTROLLERS AND DDC DEVICES FED FROM THE SAME EMERGENCY POWER SOURCE. A/E TO INDICATE PROPER CIRCUITS ON DOCUMENTS.

M. Controller Power Supplies:

EDITOR: THE AE SHALL CLEARLY INDICATE SOURCE OF POWER FOR ALL DDC CONTROLS. POWER SOURCE (NORMAL VS EMERGENCY) & PRIORITY SHALL MEET OR EXCEED THAT OF THE EQUIPMENT BEING CONTROLLED.

1. Power supplies shall be provided by the MSCC. Power source (i.e. normal vs. emergency power & emergency power priority) shall match that of the equipment and/ or system being controlled.
2. Provide each DDC panel with a line filter, surge suppressor, electrical disconnect, control fuse or circuit breaker, and control transformer. All sized and provided by the MSCC.
3. Within control enclosures provide insulated, modular, feed-through, clamp-style terminal blocks suitable for rail-mounting with end plates and partitions for the termination of all field wiring in control enclosures. Wire nut connectors or similar devices shall not be used.

N. Provide controller with battery backup capable of maintaining SDRAM memory for a minimum of 30 days.

2.4 NETWORK SWITCHES

A. Provide network switches with 120V plug-in power supply. Switches should be sized for the number of connected devices + 1 extra port for service access.

1. 5 port switch - NETGEAR model FS105
2. 8 port switch - NETGEAR model GS108E
3. 16 port switch - NETGEAR model GS116E

B. Network switches shall not be powered from the 24VAC terminal unit power supplies unless approved by Owner.

IMPORTANT: DESIGNER SHALL CLEARLY DELINEATE ON THE PROJECT DRAWINGS WHICH SPACES ARE LABORATORIES

2.5 LABORATORY CONTROLS

A. Provide laboratory controls for any space designated as a laboratory and where indicated, except for rooms with VAV fume hoods and hoods with combination sashes. System shall include: temperature, pressure, and other sensors/transmitters; control valves; control, network, and power wiring; power supplies; routers, servers, and all other devices required for a complete system.

1. The system shall utilize conventional terminal air flow units for supply and general room exhaust and venturi style terminal air flow units for constant volume fume hoods and any other constant volume exhaust point. Refer to related section 233600.
2. Provide programming of all laboratory controls.
3. The system shall function to achieve the sequences of operation detailed on the drawings.
4. Each room or zone shall have a dedicated control system. Systems shall be independent and stand-alone from the Owner's BAS. Failures of the BAS system or network communications between the BAS and the system (cut communication cables, router or server failures, etc.) shall have no impact on individual laboratory control.
5. The system shall perform the following control functions:

- a. Pressurization Control: Control supply and auxiliary/general exhaust at a volumetric offset to maintain lab pressurization (positive, negative, or neutral). Controller shall maintain a constant offset (adjustable) between the sum of the room's total exhaust and the make-up/supply air volumes. This offset shall represent the volume of air that will transfer to or from the corridor or other adjacent rooms. Pressurization control shall consider networked devices, non-networked devices, and any number of constant volume devices.
- b. Lab Temperature Control: Regulate lab space temperature through a combination of supply air volumetric control and control of reheat coils and other auxiliary temperature control devices, in response to temperature sensor(s).
- c. Occupancy Control: Reset minimum volume settings and/or temperature control set points, based upon external signals from occupancy detectors, local over-ride buttons, and similar devices.
- d. Constant volume fume hoods and other constant volume exhaust points (excluding general room exhaust): The self-actuated Constant Volume Venturi (CVV) Terminal Airflow Unit shall maintain a constant airflow set point.
- e. Fume Hood Monitoring: Alarm unsafe condition at each fume hood.
- f. Each lab room shall include a labeled Room Differential Pressure Indicating Gauge to indicate room pressurization relative to the adjacent room or corridor. Provide an engraved POS/NEG label (with 3/8" high lettering) adjacent to the gauge labeled "Correct Room Pressure Offset: X, where X = "POS" (positive) or "NEG" (negative) as indicated by the room volumetric offset indicated on the design documents.
- g. Other control functions as indicated on the drawings.
- h. Interface with the Owner's Siemens Apogee Building Automation System.

CONSIDER IF OTHER LABORATORY EQUIPMENT WOULD BENEFIT FROM BEING EQUIPPED WITH A FUME HOOD MONITOR AND INDICATE THAT EQUIPMENT ACCORDINGLY. EXAMPLES: EXISTING FUME HOODS, BIO-SAFETY CABINETS.

- B. All conventional terminal units used for laboratory controls shall utilize the following. Provide B-BC or B-AAC type controllers, as required for the application.
 - 1. For laboratories utilizing B-BC type controllers, provide the following:
 - a. Controller (in addition to the B-BC requirements elsewhere in this specification):
 - 1) Supports wall switch or contact closure to change between occupied and unoccupied mode.
 - 2) Input and output types and quantities suitable for the application.
 - b. Differential Pressure Transmitter:
 - 1) +/- 0.25% of full scale reading, drift not to exceed 0.1% of full scale per year, range not to exceed 1.5 times the velocity pressure at the terminal unit's maximum cataloged flow rate. 4-20mA output.

- 2) Factory calibrated. Provide factory calibration certificate.
 - 3) Mounting on terminal unit to match factory calibration mounting orientation.
 - 4) Approved Mfr./Model: Setra C267
2. For laboratories utilizing B-AAC type controllers:
- a. Controller (in addition to the B-AAC requirements elsewhere in this specification):
 - 1) Controller specifically designed for high accuracy lab pressure control.
 - 2) Air flow sensor read 5 times per second.
 - 3) Supports wall switch or contact closure to change between occupied and unoccupied mode.
 - 4) Input and output types and quantities suitable for the application. Minimum two air velocity sensor inputs.
 - b. Differential Pressure Transmitter:
 - 1) "Off Board" style differential pressure transmitter, maximum error 3.5% of reading not to exceed a velocity pressure error of 0.023" w.c., for the flow range 0-5600 fpm.
 - 2) With automatic calibration feature allowing periodic recalibration of airflow measurement without impacting room pressurization during the calibration routine. Auto-calibration shall occur on start-up and at an adjustable frequency selectable for 1 to 6 times per day.
 - 3) Approved mfr.: Siemens
- C. Provide fume hood monitors for constant volume fume hoods and for other laboratory equipment where indicated.
1. Monitor shall include audible alarm, visual LED alarm, and a common (single) alarm silence button.
 2. The fume hood monitor shall provide an alarm indication for the following conditions:
 - a. Low fume hood face velocity as detected by:
 - 1) Insufficient differential static pressure as detected by the TAU- CVV pressure switch (Phoenix CVV Terminal Air Flow Units).
 - 2) Insufficient air volume, as detected by the air flow station (Siemens CVV Terminal Air Flow Units).
 - 3) Sash raised above sash stop position.
 - b. When an alarm condition is detected, audible and visual alarm indicators shall activate. Pushing the alarm silence button shall mute the alarm for an adjustable time delay, initially set at 10 minutes. Alarm shall re-sound after the time delay, until alarm condition clears. Visual alarm shall remain lit until alarm conditions clears.
 3. Sash position shall be sensed by using a vertical sash position sensor. The vertical sash sensor shall consist of a precision 10-turn potentiometer mechanically coupled to a constant tension spring reel. Resolution shall be +/- 1/2 inch or better. A stainless steel, burr and snag-free cable shall be attached to the spring reel. Expected lifetime based on manufacturer's tests shall be over 200,000 full height sash movements. Sash sensor shall be installed in a location on the fume hood easily accessible for service.

4. Fume hood monitor shall be suitable for surface mounting on the front of the fume hood.
5. Approved fume hood monitors:
 - a. Phoenix FHM530 Controller (Provide for Phoenix CVV Terminal Air Flow Units)
 - b. Siemens (Provide for Siemens CVV Terminal Air Flow Units)

EDITOR: BELOW PARAGRAPH INDICATES THAT POWER SUPPLIES SHOULD BE INSTALLED ABOVE DOORS TO LABS. DESIGNATE THE LOCATION OF THIS EQUIPMENT ON THE DRAWINGS. WORK WITH ELECTRICAL ENGINEER TO DESIGNATE THE RECEPTACLE PANEL CIRCUITS TO FEED LAB CONTROL POWER SUPPLIES. DEPENDING ON LOAD, MULTIPLE POWER SUPPLIES MAY BE FED FROM A SINGLE 120 VAC CIRCUIT.

- D. Install power supplies secured to a wall and mounted above the doors to labs, unless indicated otherwise. Utilize receptacle panel circuits designated for powering lab control power supplies.
- E. Provide power supplies for lab airflow controls in NEMA 1 metal enclosures, adequately ventilated to prevent overheating of the equipment, with exterior labeled "Laboratory Airflow Controls Power Supply", and listing the room numbers served. If power supply is located above the ceiling or otherwise concealed, also provide an engraved label in an approved location visible without removing any building component. Maximum cabinet projection from wall shall be 8 inches. Label each secondary circuit inside the cabinet with the room number(s) served.
 1. Control transformers shall be rated NEC Class 2 and shall meet all the requirements and recommendations of the laboratory airflow controls manufacturer.
 2. No more than five pressurization zones shall be served from a single control transformer. No control transformer shall exceed 500 VA.
 3. Each pressurization zone shall be powered by a dedicated (isolated) secondary circuit. Each secondary circuit shall include a disconnect switch, "power on" indicator, and be current limited with a slow blow fuse or circuit breaker.
- F. Provide a disconnect switch, with shielded terminations, for line side power (one per control transformer). Locate inside the power supply enclosure.

2.6 TEMPERATURE TRANSMITTERS AND ACCESSORIES

- A. Duct, Outside Air, Liquid Immersion:
 1. Temperature sensor assemblies shall consist of a Resistive Temperature Device (RTD's) with a 4-20 mA 2-wire transmitter and gasketed utility box enclosure. Sensing element shall be platinum with 100 ohms resistance at 32 deg. F. Accuracy shall be +/- 1/2 deg. F over the entire range.
 - a. Single point duct temperature sensor shall be rigid bulb type with stainless steel (SS) sheath, aluminum tip, and have a calibrated span of 20-120 deg. F or 30-250 deg. F for heating applications.

- b. Averaging element duct mounted temperature sensor shall have a SS minimum 25 ft. long continuous element sensor along the entire length, and have a calibrated span of 20-120 deg. F or 30-250 deg. F for heating applications. Provide sufficient sensor(s)/sensor lengths so that the elements are strung at 2 foot increments horizontally across the entire face of the coil. Provide additional sensors and wiring back to the DDC panel as needed to meet this requirement.
- c. Rigid averaging element duct mounted temperature sensor shall have a brass case, bendable sheath, continuous element sensor along the entire length, and have a calibrated span of 20-120 deg.
- d. Liquid immersion temperature sensors shall have a probe with SS well, and weather tight enclosure. Sensor well length shall be 1/3 of the pipe diameter, minimum 2.5 inches. Transmitters for chilled water shall have a calibrated span of 20-120 deg. F or 30-250 deg. F for heating applications.
- e. Only when specifically indicated, surface mount thermal-ribbon flexible sensor for pipe mounting shall have SS braid over lead wires, use pressure sensitive adhesive, must be properly insulated, and have a calibrated span of 30-250 deg. F.
- f. Room temperature sensors (non-TEC) shall have a span of 20-120 deg. F, locking covers, and when pneumatic, match the pneumatic thermostats used.
- g. Adjustable room temperature sensors (non-TEC) shall have a digital temperature display, high accuracy set point slide, flush mounted override button, and a temperature range of 55-95 deg. F.
- h. Approved Manufacturers:
 - 1) TCS
 - 2) Siemens
 - 3) Minco

B. High Precision Liquid Immersion: (for temperature inputs used for BTU calculations and where noted)

- 1. Temperature transmitter with 100 ohm platinum RTD sensor and 4-20 mA 2-wire DC output. Zero and span shall be continuously adjustable. Sensor and transmitter shall be a matched assembly. Accuracy shall be +/- 0.1% of calibrated transmitter span, including combined effects of repeatability, hysteresis and linearity. Calibrated range shall be 20 to 120 deg. F. Both CHWS and CHWR sensor/transmitter assemblies shall have the same span and shall be factory calibrated as a matched pair.
- 2. Liquid immersion sensors shall have welded stainless steel thermowell. Transmitters shall be of the potted type or shall have a thermally isolated watertight enclosure. Sensor well length shall be 1/3 of the pipe diameter, minimum 2.5 inches.
- 3. Approved Manufacturers:
 - a. TCS
 - b. Minco

2.7 HUMIDITY TRANSMITTERS AND ACCESSORIES

A. Room and Duct Type:

1. Sensor element shall be thin film capacitive type or bulk polymer resistance type, accuracy of +/- 2% RH, range of 0-100% RH with 4-20 mA 2-wire linear output. Factory calibrate for maximum accuracy at mid-range of normal operating humidity. All humidity sensors shall be resistant to chlorine and other cleaning agents.
2. Room Sensors shall have locking cover.
3. Duct Sensors shall have duct probe and mounting plate.
4. Approved Manufacturers:
 - a. Siemens
 - b. TCS
 - c. General Eastern
 - d. Vaisala

2.8 COMBINATION T & H TRANSMITTERS AND ACCESSORIES

A. Combination Room Temperature and Humidity Transmitter:

1. Single enclosure wall mounted room temperature and humidity sensor. Without display unless indicated otherwise on the contract documents. White casing/cover/fascia color. With service port to enable two-point calibration using either a PC or Vaisala HUMICAP Handheld Humidity and Temperature Meter HM70. Unit supply voltage 20-28 VDC.
2. Room temperature RTD shall be 100 ohm platinum sensor with 4-20 mA loop powered 2-wire output transmitter, 23-131°F temperature range, accuracy of +/- .54°F between 86-104°F.
3. Room humidity sensor shall have a 4-20 mA loop powered 2-wire output transmitter, humidity range of 0-90 percent RH, accuracy of +/- 1.7 percent RH at temperature range of 50-104°F, stability in typical HVAC applications of +/- 0.5 percent RH/year.
4. Provide with certificate of calibration.
5. Approved Manufacturers:
 - a. Vaisala HMW92 Series

B. Outside Air Temperature and Humidity Transmitter:

1. Single point outside air temperature RTD shall be 1000-ohm thin film platinum resistor sensor with 4-20 mA 2-wire output transmitter with solar shield.
2. Outside air humidity sensor shall be thin film alumina substrate capacitance signal generating sensor with 4-20 mA 2-wire output transmitter with 0-100% relative humidity range within +/- 1% RH.
3. Approved Manufacturers:
 - a. Vaisala

2.9 VIVARIUM TEMPERATURE AND HUMIDITY TRANSMITTERS AND ACCESSORIES

A. Vivarium Temperature and Humidity Transmitters for Wet Service:

1. Room temperature RTD shall be 100 ohm platinum sensor with 4-20 mA 2-wire output transmitter. Transmitter shall be waterproof or shall be remote mounted.
2. Room humidity sensor shall have a 4-20 mA 2-wire output transmitter, 0-100% relative humidity range, accuracy of +/- 2% RH, shall be waterproof, and shall be resistant to chlorine and other cleaning agents.
3. Combination T & H units shall comply with the above, but shall be mounted in a single enclosure.

4. All vivarium sensors shall have rust proof and waterproof covers and be protected by a stainless steel "U"-shaped guard firmly attached to the wall.
5. Approved Manufacturers:
 - a. Vaisala (combination temp. and humidity)
 - b. TCS (temp. only)
 - c. Siemens(temp. only)

2.10 PRESSURE TRANSMITTERS AND ACCESSORIES

A. Air Differential Pressure Transmitter:

1. Variable capacitance type with ranges not exceeding 150% of maximum expected input. Transducer shall have zero and span adjustment. Output shall be 2-wire 4-20 mA with 24 VDC input.
2. Safe over pressure rating shall be minimum 5 times the range.
3. Temperature compensated with thermal error of not greater than 0.04% of full scale in temperature range of 40 to 100 deg. F.
4. Accuracy shall be 1% of full scale.
5. Approved Manufacturers:
 - a. Air Monitor
 - b. Setra
 - c. Modus

B. Air Static Pressure Sensors- Duct, Area, Outside Air:

1. For use with Air Differential Pressure Transmitter
2. Duct mounted sensors shall be easily removable for cleaning, have multiple sensing ports, and fabricated of aluminum, copper, or SS. Sensors used in outdoor or condensing environments shall not be copper.
3. Wall or ceiling (area) mounted sensors shall be shielded, suitable for surface or flush mounting, complete with multiple sensing ports, contain a pressure impulse suppression chamber, and fabricated of aluminum, paintable steel, or SS as required.
4. Outside air mounted sensors shall be shielded, complete with multiple sensing ports, maintain sensing accuracy regardless of wind flow direction or pattern, and fabricated of aluminum or SS.
5. Accuracy shall be 1% of actual pressure value.
6. Provide a companion 4" Magnehelic gauge, mounted at auxiliary panel, of appropriate span for each sensor. Gauges shall be graduated in inches W.C. Provide a phenolic identification tag for each gauge.
7. Approved Manufacturers:
 - a. Air Monitor
 - b. Siemens
 - c. Dwyer
 - d. Honeywell

C. Airflow Sensors:

1. For use with Air Differential Pressure Transmitter
2. Provide where indicated amplified signal airflow traverse probe(s) or airflow stations, complete with straighteners when required, capable of continuously monitoring the fan or duct capacities (air volumes) it serves.

3. Each airflow array shall contain multiple total and static pressure sensors positioned at the center of equal and symmetrical cross-sectional areas, and interconnected by their respective averaging manifolds.
 4. Sensors shall not protrude beyond the surface of the array, nor shall be adversely affected by particle contamination normally present in building airflow systems.
 5. The airflow array shall be fabricated of galvanized steel or aluminum of adequate gauge to withstand the velocities to be encountered and with all required mounting brackets, plates, gaskets, and flanges.
 6. Accuracy shall be a minimum of 3 percent of actual airflow over the designed range of flow.
 7. Provide a companion 4" Magnehelic gauge, mounted at auxiliary panel, of appropriate span for each sensor array. Gauges shall be graduated in CFM for airflow measurement. Provide a phenolic identification tag for each gauge.
 8. Approved Manufacturers:
 - a. Air Monitor
 - b. Tek-Aire
 - c. Dietrich-Standard
 - d. Ramsey Air
- D. Steam/Liquid Differential Pressure Transmitters: (flow only)
1. Each differential pressure transmitter shall be selected and calibrated for operations between 0 and 125% of the normal differential pressure and up to 150-psig line pressure. The calibration point shall be rounded upward to the nearest 10 inches WC (for spans less than 200" WC) or to the nearest 5 psi for larger spans. Calibration date shall be included on an embossed tag attached to each transmitter.
 2. The accuracy, including linearity, hysteresis and repeatability, of the transducer for measuring differential pressure shall be better than 0.25% of the span stated above throughout a minimum of a 6:1 turndown. Turndown ratio shall be based on the actual flow span.
 3. The transmitter shall not be damaged by pressures of up to 500 psig on either side of the transducer and all wetted parts shall be inert in the presence of up to a 40% concentration of ethylene or polypropylene glycol in water.
 4. Provide a drain valve for each side of the pressure chamber. Furnish and install mounting brackets appropriate for the installation location.
 5. Span and zero shall be individually adjustable.
 6. Shall be 2-wire and 4-20mA output.
 7. Approved manufacturers:
 - a. Tobar
 - b. ITT Barton
 - c. Dietrich - Standard
 - d. ABB
 - e. Siemens
 - f. Rosemont/Fischer
 - g. Honeywell
- E. Steam/Liquid Differential Pressure Transmitters: (pressure only)

1. Each differential pressure transmitter shall be selected and calibrated for operations between 0 and 200% of the normal differential pressure. The calibration point shall be rounded upward to the nearest 10 inches WC (for spans less than 200" WC) or to the nearest 5 psi for larger spans. Calibration date shall be included on an embossed tag attached to each transducer. Adjust output signal span to 150% of the differential pressure setpoint determined by the water balancer or the maximum differential pressure expected at the point of measurement.
2. The accuracy, including linearity, hysteresis and repeatability, of the transmitter for measuring differential pressure shall be better than 2% of the span stated above throughout a minimum of a 4:1 turndown. Turndown ratio shall be based on the actual differential span.
3. The transmitter shall not be damaged by pressures of up to 500 psig on either side of the transducer and all wetted parts shall be inert in the presence of up to a 40% concentration of ethylene or polypropylene glycol in water.
4. Provide a drain valve for each side of the pressure chamber. Furnish and install mounting brackets appropriate for the installation location.
5. Span and zero shall be individually adjustable.
6. Shall be 2-wire and 4-20 mA output.
7. Approved manufacturers:
 - a. Tobar
 - b. ITT Barton
 - c. Dietrich - Standard
 - d. ABB
 - e. Siemens

F. Steam/Liquid Pressure Transmitters: (pressure only)

1. The pressure transmitter shall be selected and calibrated for 150% of the normal operating pressure at the location of installation.
2. The accuracy, including linearity, hysteresis and repeatability, of the transmitter for measuring differential pressure shall be better than 2% of the span stated above throughout a minimum of a 10:1 turndown.
3. The transmitter shall not be damaged by pressures of up to twice its range. All wetted parts shall be inert in the presence of up to a 40% concentration of ethylene or polypropylene glycol in water.
4. Provide an isolation valve and pressure gauge on the inlet of each pressure transmitter.
5. Shall be 2-wire and 4-20 mA output.
6. Approved manufacturers:
 - a. ABB
 - b. Siemens
 - c. Kele
 - d. Setra
 - e. Dwyer

G. Steam/Liquid Flow Sensors: (differential pressure type)

1. Uni-directional sensors shall be of the venturi type or velocity pressure type. They shall be constructed of stainless steel, sized to the system's range of flow, and have an accuracy of 0.5%.

2. Bi-directional sensors shall be of the velocity pressure type. They shall be constructed of stainless steel, sized to the system's range of flow, and have an accuracy of 0.5%.
 3. Approved Manufacturers
 - a. Preso
 - b. Gerand
 - c. Dietrich-Standard (Annubar Diamond II)
- H. Three Valve Manifolds for Steam/Liquid Pressure Transmitter:
1. Provide a three-valve manifold for each transducer. Pressures of up to 500 psig shall not damage the manifold. All wetted parts shall be inert in the presence of up to a 40% concentration of ethylene or polypropylene glycol in water.
 2. The manifold shall be designed for direct mounting on the transducer it serves and utilizes two quarter turn valves to provide zeroing, blocking and normal service modes.
 3. Approved Manufacturers:
 - a. D/A Manufacturing

EDITOR: CONTACT THE UTILITIES AND PLANT ENGINEERING DEPARTMENT VIA THE U-M DESIGN MANAGER FOR INSTRUCTIONS ON TYPE OF FLOW METER TO USE FOR STEAM, CONDENSATE, CHILLED WATER, AND HEATING HOT WATER.

2.11 METERS AND ACCESSORIES

- A. Liquid Electro-Magnetic Flowmeters:
1. The meter system shall consist of a primary flow sensor and transmitter. The flow sensor shall be equipped with 150-lb. flanges. The meter system shall be installed with all necessary grounding components and gaskets per manufacturer's instructions. The meter shall be capable of bi-directional operation. The meter shall be sized appropriately for the range of flow for the system. The electrodes shall be SS or Hasteloy C. The transmitter shall be provided with a remote mounting bracket, cable, integral LCD display, NEMA 4X housing, shall indicate flow rate and totalized flow, shall have an isolated 2-wire 4-20 mA linear output flow rate signal, and shall have a pulsed output signal for totalization. The transmitter shall be capable of being field calibrated and reprogrammed from the outside housing via magnetic probe or security protected integral keypad menu switching. Unit electronics shall have noise immunity. The primary flow sensor and transmitter shall be mounted in accessible locations. Unit shall have the capability to maintain flow total in non-volatile memory. The flowmeter and transmitter as a unit shall have the following minimum characteristics:
 - a. Flowmeter Liner:
 - 1) Heating hot water, domestic hot water, and other water systems operating at or above 110°F: Teflon
 - 2) Chilled water, domestic cold water, and other water systems operating below 110°F: Polyurethane
 - 3) Steam condensate: Teflon to 300°F, Ceramic over 300°F, and as suitable for the expected fluid conditions.
 - b. Accuracy:
 - 1) At 1 to 33 feet per second velocity: ±0.5% of rate.
 - 2) At 0.3 feet per second velocity: ±2% of rate.

- c. Each unit shall be factory calibrated for the specified flow and shall be calibrated in both directions if the application is bi-directional. Calibration shall be a minimum of three point. Specific performance test data shall be furnished with the meter.
 - d. Each meter shall provide two analog 4-20 mA signals or a single 4-20 mA signal and a digital contact closure on reverse flow.
 - e. Meters for steam condensate shall be capable of sensing with condensate conductivity down to 6 μ S/cm.
2. Provide a phenolic tag for each transmitter to identify service and meter ID number (i.e. SECONDARY CHILLED WATER FLOW, FM-1, etc.).
 3. Approved Manufacturers (Water)
 - a. ABB
 - b. Siemens
 - c. EMCO
 - d. Rosemount
 - e. Krohne
 - f. Onicon
 4. Approved Manufacturers (Steam Condensate)
 - a. Rosemount
 - b. Krohne
 - c. ABB

B. Steam (Vapor) Flowmeters (Vortex-Shedding Type):

1. The meter system shall consist of a primary flow sensor and transmitter. The flow sensor body and wetted parts shall be SS, and shall be flanged and suitable for the service rating. The meter shall be installed with all necessary grounding components and gaskets per manufacturer's instructions. The transmitter shall be provided with a remote mounting bracket and cable, integral LCD display, NEMA 4X housing, shall indicate flow rate and totalized flow, shall have an isolated 2-wire 4-20 mA linear output flow signal and a pulsed output signal for totalization. The transmitter shall be capable of being field calibrated and reprogrammed from the outside housing via magnetic probe or security protected integral keypad menu switching. Unit electronics shall have noise immunity. Unit shall have the capability to maintain flow total in non-volatile memory. The primary flow sensor and transmitter shall be mounted in accessible locations. The flowmeter shall be provided with a 1-year warranty and application non-degradation performance guarantee. The flowmeter and transmitter as a unit shall have the following minimum characteristics:
 - a. Temperature range shall be -40 to +750°F.
 - b. Accuracy shall be 1.0% of rate and 0.1% of full scale.
 - c. Repeatability shall be 0.15% of flow rate.
 - d. Each meter shall be factory calibrated for the specified flow range prior to shipment and specific performance test data shall be furnished with the meter.
 - e. Meter range shall accommodate the minimum and maximum expected flow for the steam pressure at the installed location.
 - f. Meter shall be equipped with a temperature and pressure compensation feature.

2. Provide a phenolic tag for each transmitter to identify service and Meter ID number (i.e. MEDIUM PRESSURE STEAM FLOW - LSI BUILDING, etc.).
 3. Approved Manufacturers
 - a. Rosemount
 - b. Krohne
 - c. ABB
- C. Steam (Vapor) Flow Meters (Differential-Pressure Type)
1. The meter system shall consist of a differential pressure primary flow element, a differential pressure transmitter (or transmitters), and a flow monitor/computer. The flow sensor body and wetted parts shall be SS, and shall be equipped with 150-lb. flanges. The transmitter(s) and flow computer shall be provided with a remote mounting bracket and cable, integral LCD display, and NEMA 4X housing. Flow computer shall indicate flow rate and totalized flow, shall have an isolated 2-wire 4-20 mA linear output flow signal and a pulsed output signal for totalization. Unit electronics shall have noise immunity. The transmitter shall be capable of being field calibrated and reprogrammed from the outside housing via magnetic probe or security protected integral keypad menu switching. Unit shall have the capability to maintain flow total in non-volatile memory. The flowmeter and transmitter as a unit shall have the following minimum characteristics:
 - a. Temperature range shall be -40 to +750°F.
 - b. Accuracy shall be 1.0% of rate or better and 0.1% of full scale.
 - c. Repeatability shall be 0.15% of flow rate.
 - d. Each meter shall be factory calibrated for the specified flow range prior to shipment and specific performance test data shall be furnished with the meter.
 - e. Meter range shall accommodate the minimum and maximum expected flow for the steam pressure at the installed location.
 - f. Meter shall be equipped with a temperature and pressure compensation feature.
 - g. V-cone horizontal pilot lines shall be pitched back to steam lines and shall not trap condensate.
 2. Provide a phenolic tag for each meter to identify service and Meter ID number (i.e. MEDIUM PRESSURE STEAM FLOW - LSI BUILDING, FM-1 etc.).
 3. Approved Manufacturers
 - a. McCrometer (V-cone-style meter)
 - b. Preso (Venturi-style meter)
 - c. Gerand Engineering (Venturi-style meter)

TWO METHODS OF CALCULATING ENERGY CONSUMPTION (BTUS), WITH THE RESPECTIVE EQUIPMENT REQUIRED, ARE SPECIFIED BELOW: (1) BY THE DDC SYSTEM OR (2) BY A "BTU METER". D.2 IS USED WHEN UTILITY (REVENUE) BILLING OF A SYSTEM IS PLANNED. D.1 IS USED WHEN ENERGY CONSUMPTION IS COLLECTED FOR INFORMATIONAL PURPOSES ONLY. ASSURE THE CONTROL DRAWINGS INDICATE WHICH METHOD, IF ANY, IS TO BE USED FOR EACH SYSTEM.

- D. BTU Metering
1. (BTU determination via virtual point) When the control drawings describe BTU or BTU/hr trending, provide the following for each point described:

- a. One (1) liquid flowmeter unit with transmitter as specified elsewhere in this section.
 - b. Two (2) high-precision matched temperature sensor assemblies with transmitters as specified elsewhere in this section. Sensor with SS well shall be installed in each respective supply and return pipe as shown on project drawings.
 - c. These devices shall be wired to a local DDC panel. Calculations for instantaneous and totalized load shall be incorporated into the panel control code, and the necessary virtual points shall be created to allow remote monitoring and trending via the DDC system.
2. When a BTU meter is indicated on the control drawings, provide all the requirements described above for BTU virtual points, and additionally provide a Flow/BTU computer. Flow/BTU computer shall be programmable for various flow meter types including linear, square law, or multi-point linearization data interpretation:
- a. Inputs shall include 4-20ma flow from flow meter, and 4-20ma from two temperature sensors.
 - b. Flow and temperature inputs shall be simultaneously connected to this computer and looped to the local DDC panel.
 - c. Flow/BTU computer shall operate in an environment of 0 to 50 C, shall include a keypad for data input and retrieval, and an EEPROM/nonvolatile RAM. Unit shall calculate and provide:
 - 1) Two 4-20ma analog outputs indicating btu, mass or volume flow rate, temperature 1, temperature 2, delta temperature, pressure, density, and peak demand.
 - 2) One isolated pulse output indicating btu, mass or volume total
 - 3) Two NC/NO relay outputs assignable to trip according to various rate, total, temperature or pressure readings Programmable as latching or non-latching, or as pulsed output of a total.
 - d. Outputs shall be stored in a battery backed data logger, selectable for continuous or periodic log modes.
 - e. Unit shall have a real time clock and shall date stamp logged data. Unit shall have an RS-232 port and shall be capable of setup from a laptop computer. The supplier shall set up and verify BTU measurement and shall train U of M personnel in all aspects of BTU computer setup and operation.
 - f. Computer shall calculate and display heat, mass or Volume flow rate, resettable total, non-resettable total, temperature input 1, temperature input 2, delta temperature, density, pressure, peak demand, and time/date stamp.
 - g. Provide a phenolic tag for each transmitter and flow computer (as applicable) to identify service and ID number (e.g. CHILLED WATER BTU METER - LSI BUILDING, etc.).
 - h. Mount Flow/BTU computer in a NEMA 4 enclosure: Minimum size 16" (H) x 14" (W) x 8" (D), hinged cover, pad-lockable latch, and stainless steel hinge. Provide cutout in enclosure face and mount computer in face. Where multiple computers are supplied, they may be mounted in a common enclosure.
 - i. Approved Manufacturers and Models for Flow/BTU Computer:
 - 1) Kessler-Ellis Supertrol II with MS816 enclosure.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230901 - - 30

2.12 MISCELLANEOUS DEVICES

A. Alarm Indication Station

1. Alarm indicating station with red alarm LED, alarm horn, horn momentary silence switch, adjustable alarm delay and alarm repeat time, and alarm status relay.
 - a. Supply Voltage: 24 VAC @ 100 mA or 24 VDC @ 34 mA.
 - b. Alarm Time Delay: None, or 1 to 31 seconds in one-second increments, or 10 to 310 seconds in 10-second increments.
 - c. Alarm Horn: Continuous or pulsed tone, 70 db minimum.
 - d. Alarm Repeat Time: None, or 1 to 7 minutes in one-minute increments, or 10 to 70 minutes in 10-minute increments.
 - e. Alarm Relay: SPDT, 0.5A @ 24 VAC, 1.0A @ 30 VDC, follows horn or lamp action, selectable.
 - f. Connections: Screw terminals, 22 - 14 AWG wires.
 - g. Mounting: Brushed stainless steel plate mountable to standard single junction box, with two screws provided.
2. Accepted Manufacturer:
 - a. Kele Model RAD-1.

B. Carbon Dioxide Sensors:

1. Carbon dioxide sensing cell shall consist of a non-dispersive infrared carbon dioxide gas cell that uses a pulsed source and has no free air optical path. Output shall be linearized 4-20 mA for use with 24 VDC input. The unit shall be specifically designed for the wall or duct application specified. Duct aspiration boxes shall be by the manufacturer. Unit shall have span adjustment. The unit shall have no moving parts.
2. Minimum requirements:
 - a. Range: 0-2,000 ppm
 - b. Accuracy: 3 % of full scale
 - c. Repeatability: 1% of full scale
 - d. Power Consumption: less than 3 watts
 - e. Zero Drift at Constant Temp.: 100 ppm per 24 hrs (random not cumulative)
 - f. Max. allowable Drift in 1 year: 20 ppm
3. Unit shall not require calibration for a period of 1 year or more.
4. Approved Manufacturers:
 - a. Valtronics
 - b. Telaire

C. Carbon Monoxide and Combustible Gas Sensors:

1. Sensors shall be a micro-processor-based system for continuous monitoring and use catalytic, electro-chemical, diffusion cell, or solid-state type sensing. Output shall be linearized 4-20 mA for use with 24 VDC input with green LED normal operation indicator. Unit shall provide a SPDT pilot duty low voltage alarm contact with an adjustable set point. The unit mounting shall be wall, duct aspiration, or ceiling to suit application. The unit shall specifically designed for the application and shall be explosion proof, as required. Unit shall have single point set point and span adjustment. The unit shall have no moving parts. Units mounted outdoors shall be waterproof and rustproof.
2. Minimum requirements:
 - a. Range: as required for application; ppm, %, % L.E.L.
 - b. Accuracy: 3-5% of full scale
 - c. Repeatability: 1% of full scale

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230901 - - 31

- d. Power Consumption: 5 watts or less
 - e. Relay contact rating: 5 amp at 24 VDC, 150 VA max. inductive
 - f. Zero Drift at Constant Temp.: 0 per 24 hrs (random not cumulative)
 - g. Max. allowable Drift in 1 year: 1% of full scale.
3. Approved Manufacturers:
- a. Draegar
 - b. Vulcain
- D. Condensation Sensor - Pipe Mounting Type
1. Sensor with built-in relay contact that opens upon detection of condensation, for sensing condensation when mounted on bare pipe.
 - a. Supply voltage: 24 VAC/VDC \pm 10%
 - b. Power consumption: Maximum 1.6 VA
 - c. Relays contacts: rated 1 amp @ 24 VAC/VDC
 - d. Operating temperature: -20... +50°C
 - e. Display: LED (visible without removing cover), green - power supply ok, red - condensation sensed, contact open.
 - f. With pipe mounting bracket.
- E. Current Sensing Relays
1. Provide current sensors with donut transformers capable of monitoring AC current, maximum input current ranges from 20 to 300 amp, peak, with digital output signals having adjustable high and low current trips. An LED shall provide visual indication and shall not bleed through.
 - a. Provide special current sensing relays designed to monitor belt breakage, when indicated or described in the Sequence of Operation.
 2. Approved Manufacturer:
 - a. Neilsen Kuljian
 - b. Veris Industries
- F. Electronic to Pneumatic Transducers
1. Provide transducers to convert electronic signals from the Siemens analog output modules to linear proportional pneumatic signals for all DDC controlled modulating pneumatic devices. The transducer shall be a panel-mounted device, with hand/auto switch, override dial for manual override control, and a 0-30 psig output gauge. Supply voltage shall be 19-26 VAC. Control signal shall be 0-10 VDC or 4-20 mA. Output accuracy shall be 1/4 psig at 75 Deg. F, producing a 0-15 psig pneumatic signal. Output repeatability shall be .05 psig maximum. Transducers shall be high capacity non-bleed devices with a minimum output capacity of 500 SCIM, except special circumstances that require a constant bleed controller with branch exhaust on signal loss.
 2. Approved Manufacturers:
 - a. Non-bleed Type:
 - 1) Siemens
 - 2) ACI - PXP
 - b. Bleed Type:
 - 1) ACI - PXP
- G. Liquid Detectors

1. Liquid detectors shall utilize microchip technology for detection of conductive liquids through one of the following types of sensors: gold-plated probes, self-adhesive sensor tape with copper electrodes and durable cotton cover, or rope type sensor. Detectors shall be selected based on the best use for the application. Power requirement shall be 11-27 VAC or VDC and have a green LED normal operation indicator. Unit shall have a SPDT pilot duty low voltage alarm contact. Unit shall be waterproof and rustproof. A red LED shall indicate the presence of liquid. Unit shall have an adjustable set point.
2. Approved Manufacturers:
 - a. R. E. Technologies, Inc
 - b. Water Alert

H. Loop-Powered Indicators:

1. Where indicated, analog sensors (i.e., temperature, humidity, CO₂, CO, etc.) shall be provided with a Loop-Powered Indicator (LPI) mounted on a separate dedicated LPI panel, except those sensors that are provided with a local display. Local displays shall be mounted at the DDC panel array.
2. Indicator shall be designed to display any 4-20 mA transmitter signal directly in the engineering unit of the measured media. The display shall be powered directly by the measured 4-20 mA signal without requiring an additional power supply. Indicator shall not impose impedance on the current loop beyond the capability of the transmitter.
3. Display shall have minimum 5/16" LCD digits, with 3-1/2 digit capability selectable decimal point and selectable scale. Accuracy of indication shall be 0.1% of scale.
4. Indicator shall be provided with a lettered plate indicating appropriate engineering units.
5. Approved Manufacturer:
 - a. R. E. Technologies, Inc. (Kele Assoc.)

I. Occupancy Counters (People Counters)

1. Dual Sensor - Differential Thermal Imaging Counter
 - a. General
 - 1) Provide combination BACnet-MS/TP and Analog Output counting devices for Dynamic Ventilation Reset Controls to be mounting where indicated on the plans and controlling ventilation to occupied zones as populations vary, in compliance with the Ventilation Rate Procedure in ASHRAE 62.1-2013 and 2016.
 - b. Counters shall provide data on net zone populations to dynamically calculate the ASHRAE Standard 62.1 Ventilation Rate.
 - 1) Each counter shall consist of a center-top door frame mounted counter, using a dual thermopile differential thermal imaging counters, an integral microprocessor-based design capable of providing net population data to the controls network for use in ventilation reset based on accurately measured real-time zone populations.
 - 2) Counter with steel enclosure shall have an overall size of: 6.12L x 2.94W x 1.36H inches and weigh approx. 0.25 lbs.

- 3) Counters shall have an environmental operating range of no less than 65° F to 85° F and 5% - 95% RH, non-condensing.

c. Population Counter Design and Counting Performance

- 1) Counter shall be mounted to provide zone entry and exit data to the network for maintenance of a net zone population value to less than ±5% of actual or ±3 people, whichever is larger.
- 2) Counter design shall be optimized for single entry/exit interior doors, ≤ 42 x ≤ 96 in.
- 3) Small deviations or accumulation in counts shall be adjusted when "population reset interval" is selected during configuration and set up. Upon activation, the total net population in memory shall be 'zeroed' based on the user-determined reset period selected or every 24 hours during a predetermined non-occupied period.
- 4) Power, Connectivity and Communications
 - a) The BACnet / analog combination counters shall be capable of communicating with other devices using an RS-485 standard interface and BACnet-MS/TP protocol, implemented as a Master node.
 - b) Communication speed shall be field-selectable by dip switch between 9.6, 19.2, 38.4 and 76.9 kBaud.
 - c) The counter-network communications shall be capable of field configuration and setup using a simple dip- switch interface.
 - d) A simultaneous 0-10 VDC scalable and protected analog output shall also be available to provide net counts.
 - e) All counters shall be powered with individual 24 VAC transformers (22.8V to 26.4V under load) @1.2 V-A nominal.

2. The manufacturer's authorized representative shall review and approve counter position placement for each location indicated on the plans.
3. Accepted Manufacturer:
 - a. EBTRON, Inc. Model CENSUS - C100, Single-entry interior door occupancy counter.

J. Pressure to Electronic Transducers

1. Provide transducers to convert linear proportional pressure signals to interface with the Siemens analog input modules. The transducer shall be a panel-mounted device, with input pressure snubber, as required, and gauge. Supply voltage shall be 19-26 VAC. Control signal shall be 4-20 mA. Accuracy shall be 1 percent full scale. Thermal effect shall be less than 1 percent full scale on zero and less than 1 percent of reading on span. Transducer shall have elastomer seals and SS wetted parts.
2. Approved Manufacturers:
 - a. Siemens
 - b. Setra
 - c. Modus
 - d. ACI
 - e. Dwyer

K. Room Differential Pressure Indicating Gauges

1. Dial (4" dia.) in metal case, diaphragm actuated, black figures on white background, front recalibration adjustment, center zero scale with scale range of 0.05-0-0.2" WC with 0.005 minor divisions, suitable for surface or flush mounting. Accuracy +/- 2% of full scale. With plastic gauge mounting plate for flush mounting and space pressure sensor consisting of pressure port, barbed tubing connection, and sensor plastic mounting plate suitable for mounting on a standard electrical junction box.
2. Approved Manufacturers:
 - a. Dwyer "Magnehelic" 2000-00N with A-465 pressure sensor and A-464 flush mounting plate (provide A-368 mounting bracket for surface mount applications)

THE DESIGNATION "RTC" SHOULD BE USED ON THE CONTROL DRAWINGS WHEN THE BELOW TYPE OF CONTROLLER IS INTENDED.

2.13 ELECTRONIC ROOM TEMPERATURE CONTROLLER (RTC)- CHILLED BEAMS, FIN TUBE, AND SIMILAR TERMINAL DEVICES WITHOUT A FAN

A. Room Temperature Controller:

1. UL listed configurable electronic room temperature controller with LCD display. Use only where specifically called for on control drawings. With the following features:
 - a. Two part controller consisting of plastic base plate and detachable plastic controller housing, white casing/cover/fascia color. The base shall include screw terminals to allow all wiring to be terminated on the base, as opposed to directly on the controller. The controller housing shall mechanically and electrically engage the base and shall include all electronics and a built-in room temperature sensor.
 - b. LCD display shall display the measured room temperature in °F.
 - c. Control shall be by room temperature sensing.

REVISE OUTPUT REQUIREMENT TO FLOATING CONTROL WHEN FLOATING TYPE CONTROL VALVES ARE USED. FLOATING CONTROL IS NOT APPROPRIATE FOR APPLICATIONS THAT MAY DESIRE FAIL OPEN OR FAIL CLOSED CONTROL VALVES SUCH AS CHILLED BEAMS.

- d. Shall provide the number and type of inputs and outputs required to meet the sequence of operation.
 - 1) Provide a minimum of two analog outputs for 0-10VDC modulating valve actuators.
 - 2) Output Action (analog): Selectable normally open or normally closed.
 - 3) Inputs: Provide a minimum of two binary inputs and one universal input.
 - 4) Input and Output Ratings: As required for controlled devices.
- e. Setpoint Adjustment Buttons: The controller face shall provide an "up" setpoint adjustment button and a "down" setpoint adjustment button, or touch display, to allow occupant adjustment of setpoint.

NOTE THE AUTOMATIC CHANGEOVER MODE DESCRIBED BELOW. IF A MFR. DOES NOT OFFER THIS FUNCTION FOR 2-PIPE HEATING/COOLING APPLICATIONS, PIPING AT THE FAN COIL WILL NEED TO BE CONFIGURED WITH A SMALL BYPASS TO ASSURE THE CONTROLLER SENSES THE CURRENT 2-PIPE SYSTEM WATER TEMP.

- f. Automatic Changeover Mode (provide for two pipe applications): the controller shall detect if the system is in heating or cooling mode by measuring the system water temperature at the fan coil and automatically switching the controller to heating or cooling control mode. An icon on the controller LCD shall indicate which mode the system is in, heating or cooling. Provide a strap-on-pipe temperature sensor device wired to the controller, for measuring system water temperature. The controller shall also include a purge mode function to assure proper acquisition of system water temperature by the strap-on sensor. Purge mode function shall open the fan coil 2-way control valve (for an adjustable time period) at two hour intervals if the control valve has remained closed during that interval.
- g. The controller shall provide the following setpoint modes:
 - 1) Normal (Occupied) Mode: Controller maintains the heating and cooling occupant adjustable setpoint.
 - 2) Un-Occupied Mode: Controller maintains set-back/setup heating and cooling setpoint; activated by a remote contact closure wired to a status input on the controller. Not occupant adjustable.
- h. Override Button or Touch Display: The controller face shall include a button or touch display that allows the occupant to temporarily switch to Normal (occupied) mode. The duration of the temporary occupied mode shall be adjustable from 0 to 24 hours. When override is activated, Normal Mode setpoint operation shall be invoked and the controller shall provide a network point to signal the Owner's DDC system via BACnet MS/TP that occupied mode has been requested.
- i. Operating Voltage: 24 VAC.
- j. Power Consumption: 12 VA maximum.
- k. Control Transformer: Provide control transformer when required.
- l. Control Deviation Including Sensor Inaccuracy at 77 °F: ± 1 °F maximum.
- m. Programmable Features: It shall be possible to program (configure) the following controller functions without special software. These features shall be provided directly by the controller. Programming/configuration mode shall be accessible via either a password or by non-intuitive button activation sequences.
 - 1) Cooling setpoint range, all Modes: Adjustable 54 °F to 100 °F.
 - 2) Heating setpoint range, all Modes: Adjustable 40 °F to 90 °F.
 - 3) Heating maximum setpoint (adjustable 40 °F to 90 °F) and cooling minimum setpoint (adjustable 54 °F to 100 °F).
 - 4) Proportional band adjustable from 3°F to 10°F.
 - 5) Dead-band between heating and cooling adjustable in 1°F increments, over a range 2°F to 5°F.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230901 - - 36

- 6) Other parameters as required to meet the requirements of this specification and the control sequence of operation.
- n. Serial Communications: Provide Controller with BACnet Testing Laboratories certified BACnet MS/TP Communications compatible with Siemens controls.
- o. BAS Connections: Connect to the Siemens DDC control panel controller FLN or BACnet MS/TP network.
- 2. Warranty: 18 month unconditional parts and labor warranty and 5 year unconditional warranty for all parts including sensors.
- 3. Approved Manufacturers, subject to compliance with all the above requirements:
 - a. Schneider Electric SE7200 Series or Schneider Electric SE8300 Series
 - b. Viconics VT7200 Series or Viconics VT8300 Series

THE DESIGNATION "RTC-F" SHOULD BE USED ON THE CONTROL DRAWINGS WHEN THE BELOW TYPE OF CONTROLLER IS INTENDED.

2.14 ELECTRONIC ROOM TEMPERATURE CONTROLLER (RTC-F)- FAN COILS (FCU), UNIT HEATERS (UH), AND CABINET UNIT HEATERS (CUH)

A. Room Temperature Controller:

- 1. UL listed configurable electronic room temperature controller with LCD display, for modulating control of 2 or 4 pipe FCUs/UHs/CUHs. Use only where specifically called for on control drawings. With the following features (Fan speed relay board provided with the controlled equipment. Coordinate with equipment manufacturer and assure controller is compatible with relay board. Provide additional components to make compatible if required.):
 - a. Two part controller consisting of plastic base plate and detachable plastic controller housing, white casing/cover/fascia color. The base shall include screw terminals to allow all wiring to be terminated on the base, as opposed to directly on the controller. The controller housing shall mechanically and electrically engage the base and shall include all electronics and a built-in room temperature sensor.
 - b. LCD display shall display the measured room temperature in °F.
 - c. Control shall be by room temperature sensing. Provide return air sensor where indicated as required.
 - d. Outputs for modulating valve actuator and three-speed fan control or ECM fan control.

REVISE OUTPUT REQUIREMENT TO FLOATING CONTROL WHEN FLOATING TYPE CONTROL VALVES ARE USED. FLOATING CONTROL IS NOT APPROPRIATE FOR APPLICATIONS THAT MAY DESIRE FAIL OPEN OR FAIL CLOSED CONTROL VALVES SUCH AS CHILLED BEAMS.

NOTE THAT AS OF MAY 2019 VICONICS AND SCHNEIDER ELECTRIC CONTROLLERS FOR ECM FANS HAVE AVAILABLE ONLY ONE OUTPUT FOR CONTROL VALVES (2-PIPE OPERATION).

- e. Provide the number and type of inputs and outputs required to meet the sequence of operation.

- 1) Provide a minimum of two analog outputs for 0-10VDC modulating valve actuators or 2-10VDC ECM fan control.
 - 2) Output Action (analog): Selectable normally open or normally closed.
 - 3) Inputs: Provide a minimum of two binary inputs and one universal input.
 - 4) Input and Output Ratings: As required for controlled devices.
- f. Fan Speed Selector Switch, Button, or Touch Display: that allows occupant to select high, medium, low or automatic fan speed. When setpoint dead-band is exceeded, the controller shall turn on the fan at the speed selected and modulate the control valve. In automatic mode, once the control valve opens to maximum position, the fan shall modulate from minimum speed/2VDC to maximum speed/10VDC.
- 1) If controlling single speed equipment, provide ability to jumper or program the controller so that regardless of fan "switch position", controller turns on fan to fixed speed when setpoint dead-band is exceeded.
- g. Setpoint Adjustment Buttons: The controller face shall provide an "up" setpoint adjustment button and a "down" setpoint adjustment button, or touch display, to allow occupant adjustment of setpoint.
- h. It shall be possible to set the fan control for either continuous fan operation independent of room temperature, or for the fan to turn on and off dependent on room temperature.

NOTE THE AUTOMATIC CHANGEOVER MODE DESCRIBED BELOW. IF A MFR. DOES NOT OFFER THIS FUNCTION FOR 2-PIPE HEATING/COOLING APPLICATIONS, PIPING AT THE FAN COIL WILL NEED TO BE CONFIGURED WITH A SMALL BYPASS TO ASSURE THE CONTROLLER SENSES THE CURRENT 2-PIPE SYSTEM WATER TEMP.

- i. Automatic Changeover Mode (provide for two-pipe applications): the controller shall detect if the system is in heating or cooling mode by measuring the system water temperature at the fan coil and automatically switching the controller to heating or cooling control mode. An icon on the controller LCD shall indicate which mode the system is in, heating or cooling. Provide a strap-on-pipe temperature sensor device wired to the controller, for measuring system water temperature. The controller shall also include a purge mode function to assure proper acquisition of system water temperature by the strap-on sensor. Purge mode function shall open the fan coil 2-way control valve (for an adjustable time period) at two hour intervals if the control valve has remained closed during that interval.
- j. The controller shall provide the following setpoint modes:
- 1) Normal Mode: Controller maintains the heating and cooling occupant adjustable setpoint.
 - 2) Standby Mode: Controller maintains standby heating and cooling setpoints. Not occupant adjustable.

- 3) Economy Mode: Controller maintains set-back/set-up heating and cooling setpoint; activated by a remote contact closure wired to a status input on the controller. Not occupant adjustable.
- k. Standby Switch or Button: the controller face shall include a standby switch/button/touch screen that allows the occupant to activate stand-by mode by a single key stroke.
- l. Operating Voltage: 24 VAC.
- m. Power Consumption: 12 VA maximum.
- n. Control Transformer: Provide control transformer when required.
- o. Control Deviation Including Sensor Inaccuracy at 77 °F: ± 1 °F maximum.
- p. Programmable Features: It shall be possible to program (configure) the following controller functions without special software. These features shall be provided directly by the controller. Programming/configuration mode shall be accessible via either a password or by non-intuitive button activation sequences.
 - 1) Cooling setpoint range, all Modes: Adjustable 54 °F to 100 °F.
 - 2) Heating setpoint range, all Modes: Adjustable 40 °F to 90 °F .
 - 3) Heating maximum setpoint (adjustable 40 °F to 90 °F) and cooling minimum setpoint (adjustable 54 °F to 100 °F).
 - 4) Proportional band adjustable from 3°F to 10°F.
 - 5) Dead-band between heating and cooling adjustable in 1°F increments, over a range 2°F to 5°F.
 - 6) Two Pipe Applications:
 - a) Heating/Cooling Changeover Cooling Switch Point: <75 °F.
 - b) Heating/Cooling Changeover Heating Switch Point: >77 °F.
 - c) Purge function active or inactive.
 - d) Purge function time duration.
 - 7) Fan Control in the Economy Mode: On or off.
 - 8) Other parameters as required to meet the requirements of this specification and the control sequence of operation.
- 2. Serial Communications: Provide Controller with BACnet Testing Laboratories certified BACnet MS/TP Communications compatible with Siemens controls.
- 3. BAS Connections: Connect to the Siemens DDC control panel controller FLN or BACnet MS/TP network.
- 4. Warranty: 18 month unconditional parts and labor warranty and 5 year unconditional warranty for all parts including sensors.
- 5. Approved Manufacturers subject to compliance with all the above requirements:
 - a. Schneider Electric SE7300 Series or Schneider Electric SE8300 Series
 - b. Viconics VT7300 Series or Viconics VT8300 Series

2.15 ELECTRIC COMPONENTS

- A. Components shall be Honeywell, Johnson, or Siemens, unless listed otherwise.
- B. Low temperature detection thermostats shall be duct type, fixed 5 deg. F differential, range 30 to 60 deg. F. Sensing element shall have a 20-foot long capillary tube responding to the lowest temperature sensed along any 12 inches of bulb length. Switch shall be SPDT 120 VAC, UL listed, rated for 10 amps at 120 VAC full load. Unit shall be manually reset. Provide one thermostat for every 20 square feet of coil surface.
- C. High temperature detection thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load. Unit shall be manually reset.
- D. Immersion electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required, with stainless steel separable well. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- E. Remote-bulb electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required, with stainless steel separable well as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- F. Wall-mounted electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- G. Strap-on electric thermostats shall be two-position type, range and element shall be suitable for the service, single or double pole, normally open or normally closed as required. Set point shall be adjustable over the full range. Switch shall be UL listed, rated for 10 amps at 120 VAC full load.
- H. Differential Pressure Switches:
 - 1. Shall provide electrical switching action upon a sensed pressure differential increase between two points. Sensitivity shall be suitable for the application. Set point shall be adjustable over the full range of the device. Switching action shall SPDT. Electrical switch rating shall be 10 amps at 120 VAC, minimum.
 - 2. Pressure rating of switch and connecting tubing:
 - a. Fan - Rated for 12 inches WC.
 - b. Pump - Maximum deadhead system pressure.
 - 3. Switches used for safety shutdown applications shall be of the manual reset type.
 - 4. Approved Manufacturers:
 - a. Honeywell
 - b. Siemens
 - c. Dwyer
 - d. Cleveland Airflow

I. Limit Switches:

1. Limit switches shall be oil tight type with appropriate operator to provide required function.
2. Approved Manufacturers:
 - a. Honeywell
 - b. Siemens
 - c. Allen-Bradley
 - d. GE
 - e. Square D

J. Control Relays and Contactors:

1. Relays shall be a minimum DPDT, of proper coil voltage, with neon indicator light, and of sufficient rating for specified purpose. Relay base shall be of the screwed terminal type.
2. Contactors shall be definite purpose type, have adequate number of poles, of proper coil voltage, and of sufficient rating for specified purpose. Contactors used for DDC interface control shall contain a Hand-Off-Auto switch.
3. Approved Manufacturers:
 - a. Dayton
 - b. Siemens
 - c. Allen-Bradley
 - d. GE
 - e. Square D

K. Selector Switches:

1. Switches shall be multiple position type, oil-tight, water-tight, dust-tight, have the adequate number of contact blocks, capable of additional contact blocks, and of sufficient rating for specified purpose. Nomenclature plate shall be provided with appropriate wording, units, etc.
2. Approved Manufacturers:
 - a. Dayton
 - b. Siemens
 - c. Allen-Bradley
 - d. GE
 - e. Square D

L. Push Buttons and Pilot Lights:

1. Push button switches and pilot lights shall be, oil-tight, water-tight, dust-tight, have the adequate number of contact blocks, capable of additional contact blocks, and of sufficient rating for specified purpose. Nomenclature plate shall be provided with appropriate wording, units, etc.
2. Pilot lights shall be neon or LED, push-to-test type with replaceable lens. Lens shall be of the appropriate color for application served.
3. Approved Manufacturers:
 - a. Dayton
 - b. Siemens
 - c. Allen-Bradley
 - d. GE
 - e. Square D

M. Fuse Holder/Disconnects:

1. Fuse holder/disconnects shall be provided for all control circuits inside auxiliary control panels, and shall be of appropriate size/type for service.
2. Approved Manufacturers:
 - a. Little Fuse
 - b. Dayton
 - c. Buss
 - d. GE

N. Terminal Blocks:

1. Terminal blocks shall be modular, barrier type, direct mount, single pole, and snap together to any required number of poles. Units shall be rated for 300 volts, 20 amp., handle wire sizes from 22-12 AWG, and have a marking strip for identification.
2. Approved Manufacturers:
 - a. Little Fuse
 - b. Dayton
 - c. Buss
 - d. GE

O. Toggle Switches:

1. A toggle switch shall be provided for every auxiliary and local control panel that utilizes a 120 VAC power source as a means to turn off the power to that panel and shall be of appropriate size/type for service. Toggle switches shall be rated 120/277 volts, 20 amps, SPDT, specification grade, extra-heavy duty, back and side wired, with brown handles.
2. Approved Manufacturers:
 - a. Leviton
 - b. Pass & Seymour
 - c. Hubbell
 - d. Arrow Hart
 - e. Bryant

2.16 ELECTRICAL ACCESSORIES

A. Wiring and Conduit

1. The MSCC shall provide all DDC and related control wiring, conduit, and J-hook cable hanging system. Wire and cable shall be pulled from device or control point to the DDC, Auxiliary, UPS, or LPI panels and run between DDC, Auxiliary, UPS, or LPI panels. MSCC shall be responsible for sizing all wiring to allow for proper function.
2. The MSCC shall develop a logical and systematic wire numbering scheme for each panel assembly. All wire and cable shall be labeled and tagged on both ends. Within a panel assembly, wiring shall be tagged 4 inches down from the point at which the wire enters the cabinet with the corresponding point number or wire number. All other wiring shall be tagged within 4 inches of the termination point.
 - a. Labels shall be thermal printed type designed specifically for wiring identification.
3. All wiring carrying voltages greater than 24 volts or rated as Class 1 circuits shall be run in conduit.
4. All wiring carrying voltages 24 volts nominal or less shall be run as follows:

- a. Wiring routed in shafts, walls, below grade, and in any concealed or inaccessible space, or above ceilings requiring the use of a tool to access or held in place by clips or similar devices: run wiring in conduit.
 - b. Wiring routed in exposed locations such as mechanical and electrical rooms or in rooms without ceilings (i.e. exposed to deck above): run in conduit.
 - c. ALN wiring: run in conduit.
 - d. Wiring above accessible lay-in ceiling areas: Utilize J-hook hangers.
 - 1) Provide UL Listed zinc electro-plated steel or plastic J-hooks, sky blue color, plenum use approved, with minimum 1-inch wide cable support area, rated for the cable type being supported. Provide with integral cable retainer strap to provide containment of cables within the hanger.
 - 2) Install J-hooks with J-hook bottoms a minimum of 10 feet A.F.F. and no less than 2 feet above the ceiling.
 - 3) Space hangers at maximum 5 foot intervals, with additional hangers located a maximum of 3 feet from both sides of any change in direction. Wiring shall not sag more than 12 inches between J-hooks. Install wiring and J-hooks in a neat and workman-like manner, routed parallel or perpendicular to the building column lines.
 - 4) Install to protect wire from damage and to allow for wire replacement. Do not exceed 50 % of the wire capacity specified by the J-hook manufacturer (first installation), or route control wiring in non-control-wiring J-hooks.
 - e. Wiring to wall mounted devices such as room sensors, switches, and similar devices: New walls--Route wiring in wall in minimum 1/2 inch conduit. Stub conduit up/down into accessible ceiling space, terminating conduit with a 90 degree bend and a strain relief to prevent wire damage. Install wall box for device mounting. Existing Walls--Route wiring in wall in minimum 1/2 inch flexible conduit. Stub flex up/down into accessible ceiling space, terminating flex with a bushing to prevent wire damage. Install wall box for device mounting.
 - f. Wiring to perimeter radiation valves and similar control devices requiring wiring to be routed in walls: Route wiring in wall in minimum 1/2 inch conduit. Stub conduit up/down into accessible ceiling space, terminating conduit with a 90 degree bend and a strain relief to prevent wire damage. Provide maximum 12 inch long flexible metal conduit for the final connection to the device.
5. Conduits shall be sized on a maximum fill of 40% capacity.
6. Five separate conduit systems shall be provided:
- a. DO/DI and 120 VAC control wiring.
 - b. AO/AI wiring (may also contain DI wiring if rated as Class II teflon jacketed twisted pair)
 - c. Pneumatic tubing.
 - d. ALN/FLN cables.
 - e. 24VAC (note exception under TEC Wiring Requirements)
- Exception: DO's, DI's, AI's, and AO's between VSD's and DDC panels may share the same conduit if all wiring meets Class I

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230901 - - 43

wiring standards and provided all analog signals use a 4-20mA signal.

7. All junction boxes and couplings on conduit containing DDC related wiring or pneumatic tubing shall be painted sky blue color. Alternative: Allied Tube True Color® EMT, color blue, may be used in lieu of painted fittings and junction boxes.
8. Data transmission cabling and equipment grounding procedures shall meet the latest FCC guidelines for electromagnetic field generation.
9. All control wiring sizes and types shall meet the equipment manufacturer's recommendations.
10. Minimum DDC Wiring and Cable Requirements:
 - a. Digital Output: Minimum #14 AWG THHN
 - b. Digital Input: Teflon jacketed twisted pair #20 -or- #16 AWG THHN minimum.
 - c. Analog Output: Twisted pair NEC-rated CMP #20 AWG
 - d. Analog Input: Twisted pair NEC-rated CMP #20 AWG
 - e. Data Transmission (Non-BACnet): Teflon jacketed twisted shielded pair #22 AWG 12-1/2 pico-ferrad, 6 twists/foot, with 22 AWG ground wire.
 - f. Data Transmission (BACnet MS/TP): BACnet Testing Laboratories compliant communication cable utilizing a twisted pair cable to include an additional conductor to be used for common or signal reference when required.
 - g. Data Transmission (BACnet IP): BACnet Testing Laboratories compliant Ethernet communication cable.

All wire sizes listed are for lengths up to 750'.

11. All control wiring shall have insulation rated for 300 volts minimum, and be installed per NEC requirements. Exposed wiring running in return plenums, air handling devices, and where required by code shall be plenum rated.
 12. DDC panel to DDC panel (ALN) wiring insulation outer jacket color shall be orange.
 13. Terminal unit (FLN) wiring insulation outer jacket color shall be orange with blue stripe.
 14. TEC Wiring Requirements:
 - a. FLN & 24VAC Class II power wiring may be routed in the same conduit.
 - b. Provide all necessary 24 VAC transformers, 24 VAC power distribution wiring, etc. to TECs for a complete operating system. Transformers shall have primary and secondary fuse protection and shall be mounted in an electrical closet, auxiliary panel or other suitable accessible location with disconnecting means. Provide a pilot light for each transformer, to indicate the presence of load power.
 - c. Terminal fittings or insulating bushings shall be used to protect wiring associated with TECs at enclosures, junction boxes, etc.
- B. Provide all necessary 24 VAC transformers, 24 VAC power distribution wiring, etc. for a complete operating system. Transformers shall have primary and secondary fuse protection and shall be mounted in an electrical closet, auxiliary panel or other suitable accessible location with disconnecting means. Provide a pilot light for each transformer, to indicate the presence of load power.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230901 - - 44

- C. Provide conduit and wiring to power all 120 VAC control accessories such as flow meters, BTU meters, data acquisition panels, and actuators. Feed this power from an auxiliary control panel, with a separate disconnect and fuse for each device, located in the auxiliary panel.
- D. For TEC's, provide 120 VAC conduit and wiring between electrical panels and TEC power supply transformers.

2.17 AUTOMATIC CONTROL VALVES AND ACTUATORS

A. General:

- 1. Unless indicated otherwise on the control drawings, provide the control valve body style (globe, ball, butterfly, etc.) indicated for each application (hydronic, steam, etc.) noted below.
- 2. Except where otherwise noted, valve bodies 2 inches IPS and smaller shall be single seated bronze, and shall have screwed end connections. Valve bodies 2-1/2 inches IPS and larger shall be cast iron, and shall have flanged end connections. Valve stem packing shall be PTFE or EPDM. Packless construction is acceptable. Valve linkage shall have an adjustment for valve lift.
- 3. Valve rangeability shall be no less than 50:1 for valve $C_v \leq 1$, no less than 100:1 for valve $C_v > 1$.
- 4. When indicated, provide separate SPDT limit switches which actuate at the full open and full closed valve position.
- 5. All electrically actuated control valves installed in locations exposed to outdoor conditions shall be provided with NEMA 4/4X weather resistant housings and thermostatically controlled heaters for climates that reach below freezing.

B. High Performance Butterfly Valves

- 1. May be used for hydronic applications, when approved, for valves 5" and larger.
- 2. High performance butterfly valves shall comply with Related Section 220523 Valves.
- 3. Approved Manufacturers
 - a. Per Related Section 220523 Valves

STEAM CONTROL VALVES: REVISE THE VALVE PRESSURE DROP SPECIFIED BELOW TO THAT APPROPRIATE FOR YOUR PROJECT. FOR EXAMPLE, FOR LOCATIONS CLOSE TO THE CENTRAL POWER PLANT, A PRESSURE DROP HIGHER THAN THE INDICATED 4 PSIG WOULD BE APPROPRIATE. ALSO NOTE THAT THE BELOW VALVE SIZING CRITERIA ASSUMES THAT THE STEAM PRESSURE REQUIREMENT FOR THE EQUIPMENT SERVED BY THE CONTROL VALVE IS 1 PSI OR LESS. ALWAYS VERIFY THE EQUIPMENT PRESSURE REQUIREMENT AND MODIFY THE BELOW ACCORDINGLY.

C. Hydronic Control Valves

- 1. General Valve Requirements
 - a. Maximum pressure drop across any hydronic system valve at maximum flow and valve size shall be as indicated.
 - b. When not indicated, valves shall be sized for a pressure drop of 3 psig for chilled water and 4 psig for hot water based on the maximum flow rate scheduled for the device controlled.

- c. Two-way valves shall have equal percentage characteristics for heating and cooling applications, either linear or equal percentage for other applications as appropriate, linear for three-way valves.
 - d. 2 year unconditional warranty, parts and labor. 5 year unconditional parts warranty.
2. Globe Style Valves (May be used for sizes 1" and larger).
- a. Bodies and trim shall be rated for service pressures through 125 psig at 250 deg. F, globe style.
 - b. Hydronic system valves shall have replaceable plugs and seats of SAE 72 brass or AISI 300 series stainless steel, selected for maximum lift under application conditions.
 - c. Shall provide safe and reliable operation in water or in up to 50% glycol/water solutions, at fluid temperatures between 35°F and 212°F and static pressures up to 300 psi.
 - d. Forged brass body with female NPT end connections.
 - e. Differential pressure rating (valve operating): 30 PSID maximum.
 - f. Provide valves with the flow coefficient indicated, or if not indicated, subject to engineer's approval, with a Cv appropriate for good control and considering the system differential pressure available.
 - g. Approved Manufacturers
 - 1) Siemens
 - 2) Honeywell
 - 3) Johnson

ALTHOUGH AVAILABLE UP TO 4", BALL VALVES SHOULD TYPICALLY ONLY BE USED FOR SMALL CONTROL VALVE APPLICATIONS, E.G. VAV BOXES, FAN COILS. THIS SPECIFICATION IS ONLY FOR BALL VALVES UP TO 3/4" DIAMETER.

3. Ball Style Control Valves
- a. Control Valve Body: Quarter turn ball valves, 2-way and 3-way configuration as indicated, for 2 position or modulating service, with the following features:
 - 1) 1/2" or 3/4" valve size.
 - 2) Forged brass body with female NPT end connections.
 - 3) Nickel or chrome plated brass ball, with tetrafluorethylene reinforced EPDM O-ring seals.
 - 4) Blow-out proof brass stem with double O-ring EPDM seals.
 - 5) Shall provide safe and reliable operation in water or in up to 50% glycol/water solutions, at fluid temperatures between 35°F and 212°F and static pressures up to 300 psi.
 - 6) Ball and stem seals shall be formulated to prevent degradation by typical water treatment chemicals and Chloramines.
 - 7) Minimum close-off rating: 200 PSI.
 - 8) Differential pressure rating (valve operating): 30 PSID maximum.
 - 9) Downstream leakage: maximum of 0.01% of design flow at rated close-off differential pressure.
 - 10) 0 - 90 degree angle of rotation.

- 11) Valves for modulating service shall be equipped with a characterized ball (glass filled polymer flow insert) that provides an equal percentage flow characteristic.
 - 12) Valves for two position control shall be reduced port type as required for the appropriate valve Cv.
 - 13) Provide valves with the flow coefficient indicated, or if not indicated, subject to engineer's approval, with a Cv appropriate for good control and considering the system differential pressure available.
- b. Approved Manufacturers:
- 1) Johnson Controls
 - 2) Belimo

D. Steam Control Valves

1. Globe Style.
 - a. Bodies and trim shall be rated for scheduled saturated steam service pressures. Steam valve replaceable plugs and seats shall be stainless steel, hardened to not less than 500 Brinell.
 - b. Valves shall have modified linear characteristics and shall be sized based on a 5 psig inlet pressure and a maximum drop of 4 psig.
 - c. 2 year unconditional warranty, parts and labor. 5 year unconditional parts warranty.
 - d. Approved Manufacturers
 - 1) Siemens
 - 2) Honeywell
 - 3) Johnson

E. Control Valve Actuators

EDITOR: WHENEVER POSSIBLE, THE USE OF ELECTRIC ACTUATION FOR CONTROL VALVES IS PERFERRED. PNEUMATIC ACTUATION MAY ONLY BE CONSIDERED FOR PARTIAL RETROFITS OF EXISTING SYSTEMS WITH PNEUMATIC CONTROLS. CONSULT WITH THE UM DESIGN TEAM IF PNEUMATIC CONTROLS ARE REQUIRED. CONTROL VALVES LOCATED IN AN UNCONDITIONED ENVIRONMENT SHOULD BE ELECTRIC.

NOTE THAT MOST ELECTRIC BUTTERFLY VALVE ACTUATORS ARE NOT AVAILABLE WITH A SPRING RETURN OPTION WITHOUT THE ADDITION OF A BATTERY OR CAPACITOR TO DRIVE THE ACTUATOR TO ITS FAILSAFE POSITION. CAREFUL CONSIDERATION SHOULD BE GIVEN TO THE APPLICATION OF THIS TYPE OF CONTROL VALVE BEFORE USE.

WHEN THE USE OF ELECTRIC ACTUATORS IS PLANNED, THE METHOD OF GETTING POWER TO THOSE ACTUATORS MUST BE CONSIDERED. READ THE BELOW SPEC SECTION CAREFULLY AND NOTE THE SIZE RANGE FOR VARIOUS ACTUATOR VOLTAGES. THE CONTROLS CONTRACTOR SHALL NOT RUN POWER WIRING ABOVE 120V. THEREFORE:

FOR 120V ACTUATORS, POWER TO SUCH ACTUATORS IS THE RESPONSIBILITY OF THE CONTROLS CONTRACTOR AND IS TO BE ROUTED FROM THE DDC AUXILARY PANEL (SEE SECTION 2.5). IF YOUR PROJECT HAS A LARGE NUMBER OF 120V ACTUATORS, THE STANDARD (2) 20 AMP CURCUITS RUN TO THE DDC AUX PANEL MAY NOT BE ENOUGH. DETERMINE THE TOTAL AMPERAGE OF SUCH ACTUATORS AND DIRECT THE ELECTRICAL DESIGNER TO DESIGNATE ADDITIONAL 120V CIRCUITS TO THE DDC AUX PANEL, IF REQUIRED.

1. Except as noted otherwise, actuators shall be electric.
2. Provide actuator manufactured by the respective control valve manufacturer and factory assembled with the valve body.

3. Ball Style Control Valve Actuators
 - a. Actuator shall include a manually operated hand wheel/ lever for manual override of the valve position.
 - b. Modulating Actuators (0-10V or 4-20mA)
 - 1) UL listed electronic rotary actuator designed for operation with the ball type control valve, with the following features:
 - 2) The actuator shall be of the same manufacturer as the valve body and shall be integrally mounted to the valve at the factory.
 - 3) For direct coupling to the valve shaft without the use of linkages, use an ISO-style mounting pad.
 - 4) Minimum cycle life: 60,000 full strokes at maximum rated torque.
 - 5) Torque: as required for smooth positioning and closure of the valve against a maximum differential pressure of 30 PSI and to provide close-off up to 200 PSI.
 - 6) Motor runtime to rotate the valve ball 90°: 90 seconds maximum, 20 seconds minimum.
 - 7) Spring return runtime to rotate the valve ball 90°: 90 seconds maximum, 20 seconds minimum.
 - 8) For use with a 24VAC power supply with the ability to operate off the same power supply required for the temperature controller.
 - 9) For use with 0-10Vdc output proportional plus integral room controllers, fully compatible with the specified temperature controller. Unless indicated otherwise on the control drawings:
 - a) Heating coil (non-vivarium applications): Normally open spring return actuation.
 - b) Heating Coil(vivarium applications): Normally closed spring return actuation.
 - c) Cooling coil: Normally closed spring return actuation.
 - 10) Electronic stall detection/overload protection. Actuator shall sense that maximum rotational position has been reached even when control signal is still applied and stop rotating prior to actuator damage.
 - 11) Rotation mechanically limited by adjustable integral limit stops.
 - 12) Mechanical range adjustment.
 - 13) Valve position indicator.
 - 14) Actuator/actuator housing: Brushless DC motor design, NEMA type 1 or 2 enclosure, die-cast aluminum alloy or UL 94 listed plastic housing, lubricated gears, with a thermal barrier to prevent condensation on the actuator parts when used for chilled water applications. It shall be possible to rotate the actuator to any of four rotational angles in 90° increments, relative to the valve body.
 - 15) Ambient temperature operating range: -20°F and 120°F.
 - 16) Maximum actuator noise level, running or spring return: 40 dBA.
 - c. Floating Point Actuators
 - 1) Shall only be used for VAV box applications

- 2) 24 VAC 3-position floating control, 7/32" (5.5 mm) stroke minimum, direct-coupled to valve bodies without the use of tools, with sufficient power to prevent valves from lifting off their seats. With visual position indication, manual override knob, UL-listed for plenum installations.
 - 3) The actuators shall be fail-safe open for perimeter heating applications.
 - 4) The actuators shall be fail-in-place for reheat control valves.
4. Butterfly Valve Actuators
- a. Electric Actuators
 - 1) Actuators shall utilize split capacitor, reversible electric motor driving a compound epicyclic gear, thermal overload protected, factory tested, factory lubricated, localized mechanical position indicator readable at 25 feet, 0-90 degree reversible operation, bolt directly to valve top plate.
 - 2) Housing shall be weatherproof and suitable for outdoor location (NEMA 4X or IP66 rated).
 - 3) Provide thermostatically controlled heater for prevention of condensation at low temperatures.
 - 4) Provide auxiliary limit switches to confirm open/closed valve position.
 - 5) For modulating valves, provide 0-10 VDC or 4-20 mA feedback signal for valve position.
 - 6) Actuator voltage shall be 120 VAC. 120V actuators shall be fed out of the DDC auxiliary panel with a separate disconnect and fuse. Disconnect and fuse to be located in the DDC auxiliary panel.
 - 7) In all cases the MSCC shall provide the required control wiring to the actuators.
 - 8) Actuator ambient temperature range shall be -20 deg. F to +140 deg. F.
 - 9) Actuator shall include a manually operated hand wheel for manual override of the valve position.
 - b. Pneumatic Actuators
 - 1) Pneumatic actuators shall be pneumatic rotary type with rack and pinion to provide constant output torque rated for at least 125 percent, pilot positioner with gauges, spring return, adjustable travel stops, factory tested, factory lubricated, self-draining body, integral pneumatic parting,
 - 2) Actuators shall have localized mechanical position indicator readable at 25 feet, 0-90 deg. reversible operation, capable of operating in any valve mounting position.
 - 3) Actuators shall be capable of being mounted in line or transverse to pipeline, and bolt directly to valve top plate.
 - 4) Valves shall be actuated with 60-psig air and 3-15 psig pilot service. Valves used for isolation do not require pilot positioners. Actuator shall include a manually operated hand wheel for manual override.

- 5) Provide speed control valves for On/Off (2-position) actuators for adjustment of actuator speed
5. Globe Valve Actuators
- a. Valves shall spring return to normal position as indicated.
 - b. Select with sufficient close-off power for system pressure, pump shut off head, highest operating torque, and torque requirements of valves that may stick because of infrequent use.
 - c. Select to provide smooth proportioning control under operating conditions normal to the system.
 - d. Electric Actuators
 - 1) All actuators shall have visual position indication.
 - 2) Actuator shall be electric motor driving, microprocessor signal controlled.
 - 3) Modulating valves shall be positive positioning, responding to a 0-10VDC, 2-10VDC or 4-20mA signal.
 - 4) Power: All actuators shall be 24VAC power and less than 100VA draw. Power shall be via Class 2 wiring.
 - 5) Fail Safe: Valves actuators shall position the valve in a fail-safe position when the power supply is disrupted or the signal goes to 0.
 - 6) Valves shall have a means to manually open the valve when power is not available, such as a hand wheel or a geared crank with a clutch. A release button (clutch) or handle on the actuator shall be provided to allow for manual override.
 - 7) The actuator shall be designed with a current limiting motor protection.
 - 8) Actuator shall provide minimum torque required for proper valve close-off. The close-off differential pressure rating of the valve shall exceed the highest possible head pressure available at the pump plus 10%, and still be rated for a Class IV leakage.
 - 9) The actuator shall have the capability of adding auxiliary switches or feedback potentiometer if specified.
 - 10) Actuators shall be UL and CSA listed.
 - e. Pneumatic Actuators
 - 1) Pneumatic, rolling diaphragm, spring loaded, piston type.
 - 2) Spring range shall be as required for non-overlapping sequencing or as indicated on drawings.
 - 3) Ratio relays or accumulators used for sequencing valves are not acceptable unless specifically indicated on the drawings.
6. Valve body/actuator control action shall be as follows unless noted otherwise:
- a. Heating coil valves (non-vivarium) shall be normally open to flow through the coil.
 - b. Heating coil valves (vivarium) shall be normally closed to flow through the coil.
 - c. Heat exchanger valves (steam or water) shall be normally open to flow through the heat exchanger.
 - d. Cooling coil valves shall be normally closed to flow through the coil.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230901 - - 50

- e. Humidifier valves shall be normally closed to flow through the humidifier.
- f. Condenser water valves shall be normally open to flow through the cooling tower.
- g. Isolation valves shall be normally open.
- h. Drain valves shall be normally closed.

2.18 AUTOMATIC CONTROL DAMPERS

EDITOR'S NOTE: CONTROL DAMPERS SHALL BE SCHEDULED ON THE DRAWINGS. INDICATE THE DAMPER STATIC PRESSURE AND VELOCITY RATING IN THE SCHEDULE. FOR DAMPERS USED IN ANY APPLICATIONS REQUIRING SPECIALTY MATERIALS OF CONSTRUCTION, REFER TO SECTION 2.18.E (CONSULT WITH UM DESIGN MANAGER) .

- A. Multi-blade type. Provide with parallel blades for two-position, throttling, and modulating service unless noted otherwise. Provide required drive axles, linkage, jackshafts, and accessories for proper damper operation. Damper blades, frames, linkages, jackshafts and other parts of the damper actuation system shall not distort or rack during operation. Dampers shall close tightly, and operate in a smooth, hesitation and slack-free manner over the entire range of travel, at the maximum air pressure and velocity at the mounting location. Additionally, multiple section dampers shall operate in unison section-to-section.
- B. Face and bypass dampers shall each be capable of passing 100% of unit rated CFM. Pressure drops shall be approximately the same in either extreme position, including the pressure drops of coils and bypass components.
- C. All automatic control dampers shall conform to these specifications, including those provided by equipment manufacturers.
- D. All control dampers shall be low leakage type and shall meet the following minimum requirements:
 - 1. Leakage: 6.0 CFM/sq. ft. max. at 3" WC.
 - 2. Frames: 13 gauge (minimum) galvanized steel, minimum 2 inch in frame depth, welded or riveted with corner reinforcement.
 - 3. Blades: 16 gauge (minimum) galvanized steel or aluminum airfoil type, maximum blade size 8 inches wide, 48 inches long. Axles and axle extensions shall be minimum 1/2 inch solid galvanized steel. Dampers which are required to have a static pressure rating over 4" WC shall have minimum 3/4 inch solid galvanized steel axles/axle extensions.
 - 4. Blade Seals: Synthetic elastomeric or neoprene, inflatable type, mechanically attached, field replaceable.
 - 5. Jackshafts: Provide to drive adjacent vertical sections of multiple damper assemblies to ensure uniform operation. Minimum 3/4 inch solid or 1" hollow (minimum 1/8 inch wall thickness) galvanized steel. Where jackshafts penetrate air handling casing walls, provide greasable ball bearing supports sleeved and sealed to prevent casing leakage. Provide intermediate greasable ball bearing supports bolted to damper frames for jack shafts extending across multiple damper sections.
 - 6. Jamb Seals: Stainless steel.

7. Bearings: Oil impregnated sintered bronze or lubricant free, solid stainless steel. Provide thrust washers at bearings for all dampers that are to be mounted with blades in the vertical position.
 8. Linkages: Deflection and slack-free. Zinc plated, fully exposed, connected to blade faces (located in the air stream). Linkages may be located in-jamb for single damper flange mounting arrangements, provided linkage is external to the duct and easily accessible for maintenance.
 9. Static pressure Rating: As scheduled on the drawings, or provide dampers rated for the maximum pressure to be encountered at the mounting location but not less than 4" WC.
 10. Velocity Rating: As scheduled on drawings, or provide dampers rated for the maximum velocity to be encountered at the mounting location.
 11. Temperature Limits: -40 to 200 deg. F.
 12. Provide through-bolted connections for connecting axle or jack-shaft extensions. Set screw arrangements are not allowed.
 13. Selection and sizing criteria: Damper selection and sizing shall be based on damper schedule shown on the drawings. For dampers that are not scheduled on the drawings, selection and sizing shall be based on the procedure contained in Engineering Manual of Automatic Control, Honeywell, Inc., 1997.
- E. For dampers located in stainless steel ductwork, PVC coated ductwork, fume hood exhaust ductwork, and exhaust fan outside air bleed-in ductwork, fabricate and size as indicated above, with the following additional requirements:
1. Frames, blades, blade axles and extensions, blade seals, jack-shafts, linkages, and all other components exposed to the air-stream: Type 316 stainless steel.
 2. Bearings: Solid stainless steel.
 3. Damper operators shall be mounted outside of air stream. Extend damper axles and jackshafts to permit mounting outside of air stream.
- F. Approved Manufacturers:
1. Honeywell
 2. Ruskin
 3. Vent Products
 4. American Warming & Ventilating
 5. Arrow United Industries
 6. White Environmental
 7. Johnson Controls

2.19 DAMPER OPERATORS

EDITOR: WHENEVER POSSIBLE, THE USE OF ELECTRIC ACTUATION FOR DAMPER ACTUATORS IS PREFERRED. PNEUMATIC ACTUATION MAY ONLY BE CONSIDERED FOR PARTIAL RETROFITS OF EXISTING SYSTEMS WITH PNEUMATIC CONTROLS. CONSULT WITH THE UM DESIGN MANAGER IF PNEUMATIC CONTROLS ARE REQUIRED.

- A. General:
1. Damper operators shall be electric unless specifically noted otherwise on the drawings.

2. Damper operators shall be installed in accessible locations. Damper operators shall not be installed inside ducts or air units that convey hazardous exhaust.
 - a. Single section dampers should be configured with an extended shaft actuator mounting arrangement with the actuator mounted in an accessible location outside the ductwork.
 - b. Multiple section dampers should be connected with a jackshaft arrangement which is extended to an accessible location outside the duct. Where possible tandem mounted actuation should be provided on one side of the damper assembly.
 - c. Damper actuators mounted onto the same jackshaft should be controlled using a leader/follower wiring design with the DDC panel signal being wired to the master actuator and the remaining slave actuators being controlled through the master feedback signal.
3. Electric Operators:
 - a. Maintenance free electric actuator, reversible, with push rod and bracket for swivel mounting and for the transmission of power.
 - b. Synchronous motor with load independent running time providing parallel operation of several operators. Gear train with low noise level.
 - c. Magnetic hysteresis coupling with magnetic transmission of torque, with no mechanical contact between the coupling members.
 - d. The actuator shall be safe against blocking and overload proof even when operated continuously.
 - e. 24 or 120 VAC, 4-20 mA or 0-10 VDC input, reversible, direct-drive, metal or aluminum housing, brushless DC motor with stall protection, quiet, low-power operation, have visual position indicator, manual override, and a 0-10VDC feedback signal output.
 - f. Actuators located outdoors shall be provided with internal heaters and should operate in the ambient temperature range of -20°F to 140°F.
 - g. Actuators located outdoors shall be NEMA4x or IP66 rated or shall be provided with weatherproof NEMA 4X stainless steel enclosures that have removable covers with clasps or machine screws (no sheet metal screws) and that do not require removing fasteners.
4. Electronic damper operators used with TECs
 - a. Operators shall be 24 VAC 3-position floating control type and utilize a 90-degree rotation.
 - b. Operators shall be direct-drive, have sufficient power to operate the damper against system pressures, provide visual position indication, have manual override, and shall be UL-listed for plenum installations. Operators shall be of the fail-in-place type.
5. Pneumatic Operators: Rolling diaphragm piston type with 8-13# spring range, as indicated on drawings, or as required to achieve specified performance.

- B. Provide operator mounting brackets. Provide devices to connect operator drive shafts to dampers, damper linkages, and jackshafts.
- C. Quantity of operators: Provide a sufficient number to achieve unrestricted movement throughout damper range, such that one operator does not operate more than the maximum square footage of damper area as recommended in standard catalog of manufacturer. Minimum torque rating for sizing electric actuators on duct systems that operate above 1" of static pressure is 14 in-lbs/ft². Provide sufficient number so dampers close tightly, operate in a smooth, hesitation and slack-free manner over the entire range of travel at the maximum air pressure and velocity at the mounting location, and so that multiple section dampers operate in unison section-to-section. Provide spring return to normal position.
- D. Where end switches are shown on control diagrams, it is not acceptable to utilize the internal damper operator end switches. Where shown, external end switches should be provided that are secured to the damper blades, linkages, or jackshaft independently of the damper operator(s).
- E. Approved Manufacturers:
 - 1. Honeywell
 - 2. Johnson
 - 3. Siemens
 - 4. Belimo

2.20 PNEUMATIC CONTROL COMPONENTS

- A. Components shall be Honeywell, Johnson, or Siemens, unless listed otherwise.
- B. Electric-pneumatic relays shall be two-position, have a metallic body, can be field or panel mounted, have a 120 VAC coil, and 3 or 4 ports. Only Johnson E.P. relays are acceptable.
- C. Pressure-electric switches shall be two-position, appropriate range and element, suitable for the service, single or double pole, normally open or normally closed as required. Set point shall adjustable over the full range. Switch rating shall be 8.0 amps at 120 VAC, minimum.
- D. Differential pressure transmitter shall be one-pipe, 3-15 psig output, capable of measuring pressure differentials of positive or negative type, operate on the force-balance principal, have an overpressure rating of 30" WC, accuracy of 5 percent full scale, and of the range suitable for the service.
- E. Pneumatic room thermostats shall be direct acting, dual (minimum 5°F dead band - 2 output branch lines) or single setpoint, 2-pipe, large capacity, adjustable proportioning type, containing dual or single bi-metallic elements, adjustable differential, minimum setting no greater than 1-1/2 deg. F over a range of 55 to 85 deg. F. Provide tamperproof covers with exposed setpoint indicator in black lettering, exposed thermometer, exposed setpoint adjustment in non-public areas and key operated setpoint adjustment in public areas.
- F. Pneumatic humidistats shall be of the adjustable proportioning, 2-pipe type, duct or wall mounted, reverse acting, adjustable sensitivity, sensitive hygroscopic membrane, temperature compensated, 20-90% RH range room, 25-65% RH range for duct, and 55-95% RH range for high-limit applications. Room type shall have tamperproof cover. Duct type shall come mounted inside a galvanized duct mounting box.

- G. Temperature transmitters shall be one pipe, directly proportional output signal to measured variable, linearity within plus or minus 1/2% of range for 200 deg. F span and plus or minus 1% for 50 deg. F span, with appropriate 50, 100, 200 deg. F temperature range, compensated bulb, averaging capillary, rod and tube or room transmitter operating on 20 psig input pressure and 3 to 15 psig output. Room transmitter shall be provided with cover and wall plate.
- H. Humidity transmitters shall be one pipe, directly proportional output signal to measured variable, linearity within plus or minus 1% of range, temperature compensated, sensitive hygroscopic membrane, room or duct mounted, operating on 20 psig input pressure and 3 to 15 psig output. Room transmitter shall be provided with cover and wall plate.
- I. Receiver-controllers shall be single or dual input models direct or reverse acting with mechanical set point adjustment, calibrated proportional band adjustment, and calibrated authority adjustment. Provide proportional control mode for temperature control applications, and proportional plus integral control mode for differential pressure control applications. Proportional band shall extend from 2 to 40% of primary sensor span, authority from 0 to 200% of primary sensor span and integral time from 1/2 to 20 minutes. Suitable for input signal of associated transmitter and output signal required by controlled device.
- J. Signal selector relays shall be capable of receiving two or more input signals and transmitting the highest or lowest pressure, with 1:1 input/output ratio.
- K. Booster relays shall be proportional type for increasing the volume capacity of an input signal to a directly proportional output signal.
- L. Pneumatic switching relays shall be snap acting, switching type with adjustable switching setpoint and fixed differential, single or double pole, and metallic body, for connecting a common port to either of two other ports based on the switching signal.
- M. Pneumatic multi-purpose relays shall be two-valve design, high accuracy, high repeatability, metallic body, internal relief, high capacity, proportional, with adjustable set point, capable of being used as direct or reverse acting, amplifying, signal advancing, minimum pressure output, or lower pressure transfer. Removal of main air to the relay causes the branch line output to go to zero.
- N. Pneumatic gradual position switches shall provide regulated pressure to a controlled device, with knob and pointer for manual adjustment, graduated scale plate with appropriate markings, suitable for surface or flush mounting on wall or panel as indicated.
- O. Pneumatic selector switches shall be two or three position with metallic bodies, have indicating plates with appropriate markings, and suitable for panel or wall mounting. Switches installed in finished rooms shall be recessed in wall and provided with faceplate.
- P. Field Mounted Gauges:

1. Provide 1-1/2" air pressure gauges on branch lines of pneumatic systems at controllers, transmitters, valve and damper operators, relays, switches, regulators; and DDC output points. Accuracy shall be 2.5 percent of full scale for the middle half of scale and 3.5 percent elsewhere. At dampers or devices that utilize multiple actuators, a single gauge in a readily visible location is acceptable.

Q. Panel Mounted Pneumatic Gauges:

1. All transmitters shall be provided with receiver gauges.
2. Door mounted analog indicator gauges shall be 3-1/2" diameter with a 1% accuracy.
3. Sub-panel mounted analog indicator gauges shall be 2-1/2" diameter with a 1% accuracy.
4. A 1-1/2" gauge shall be provided on the main air supply inside each control panel.

2.21 LOCAL, AUXILIARY, UPS, LPI AND SIMILAR PANELS

- A. Unitized cabinet type for each system under automatic control with relays and controls mounted in cabinet and temperature indicators, pressure gauges, pilot lights, push buttons and switches flush on cabinet panel face, or as detailed on drawings.
- B. Doors shall be removable, right or left hand hinged, locking, keyed alike and to other U-M control panels.
- C. Removable perforated subpanel to permit mounting of controls without drilling holes.
- D. Wall mounted or support kit or unistrut type frame for floor mounting.
- E. Unit shall have knockouts, NEMA Type 1, and listed under UL508 Industrial Control Panel Enclosures.
- F. UPS panel shall be mounted directly below the primary DDC control panel.
- G. Auxiliary panels shall not be smaller than 24"x24".

2.22 UNINTERRUPTABLE POWER SUPPLY (UPS)

- A. UPS shall be sized for continuous full load use of primary DDC controller panel plus an additional 25% for a period of at least 5 minutes. Minimum size shall be 700 VA.
- B. Provide a UPS with the following features:
 1. Audible alarm when main power is not available
 2. Automatic internal bypass
 3. Provide with a network communication card for remote monitoring by Web/SNMP thru layer network.
 4. RF noise filtering.
 5. Over-voltage protection.
 6. Three outlet receptacles minimum.
 7. Visual status alert light.
 8. Sealed maintenance-free hot-swappable batteries.
- C. Provide a fan ventilated panel enclosure of adequate size to house the UPS.

D. Approved Manufacturers:

1. Schneider Electric - APC, model BR700G, BR1000G, BR1300G, BR1500G as required.

2.23 AHU SAFETIES ENCLOSURES (FIRE ALARM TO TEMPERATURE CONTROL INTERFACE BOX)

- A. Enclosures shall utilize a standard 4-11/16" x 4-11/16" square electrical box and blank cover. One half of the blank cover shall be painted red and the other blue. A red neon indicator light shall be installed in the red half of the cover and a blue neon indicator light shall be installed in the blue half of the cover. A terminal strip shall be installed inside the electrical box with two terminals in one half, labeled "H1" and "H2" (for HVAC use), and two additional terminals in the other half, labeled "F1" and "F2" (for fire alarm use). The red neon indicator shall be wired to the F terminals and the blue neon indicator to the H terminals.

THE UNIVERSITY'S HIGH PRESSURE AIR SUPPLY IS AVAILABLE ON CENTRAL CAMPUS VIA THE STEAM TUNNEL SYSTEM. AS OF SEPTEMBER 2020 THE DEWPOINT IS NOT GUARANTEED. NEW PROJECTS CONNECTING TO THE TUNNEL SHOULD VERIFY THE DEWPOINT WITH UM CENTRAL UTILITY PLANT TO DETERMINE IF DESICCANT DRYERS ARE REQUIRED FOR THE CONTROL AIR.

2.24 PNEUMATIC ACCESSORIES

A. Control Air Supply

1. Control air supply shall be from the University's high-pressure (steam tunnel) air supply or from a temperature control compressed air station as indicated on the project documents. System shall be sized for expected use, including air usage of laboratory air-flow units or process control actuators (whether this equipment is provided by the MSCC or not), plus 10 percent extra capacity. When providing a control Compressed Air Station, provide a Refrigerated Air Dryer if none of the pneumatic tubing or pneumatic components are exposed to outside air conditions. Provide a Regenerative Desiccant Air Dryer when pneumatic tubing or pneumatic components are exposed to outside air conditions.

B. Compressed Air Station

1. Temperature control air compressors shall be reciprocating oil type through 25 HP, rotary screw over 25 HP, specifically designed for pneumatic controls, shall be of the simplex or duplex type, tank or base mounted unit assemblies, have combination intake filter/silencer, and totally enclosed belt guards. Compressors shall be sized based on no more than 1/3 run time with an appropriately sized tank and an average tank pressure of 70 psig for optimum performance. Simplex units shall only be used when backing up another control air supply.
2. Tank shall be of adequate size and contain a shut-off ball valve, ASME safety relief valve, pressure switch operated start/stop control, 120 VAC electronic automatic drain with manual bypass and air pressure gauge.

BuildingName

The Description of the Project

P00000000 0000 Issued for: BID 230901 - - 57

3. Duplex models shall be complete with NEMA 1 enclosure, starters, disconnects, automatic alternator, H-O-A switches (left H position spring return for test only), low oil shutdown switch, push-to-test pilot lights, and 3-position switch for selection of: compressor 1 only/automatic alternate/compressor 2 only operation. PRV/filter/dryer assemblies may be mounted to the compressor/tank assembly.
4. Approved Manufacturers:
 - a. Quincy
 - b. ACP
 - c. Divilbis
 - d. Ingersol-Rand

C. Tubing

1. Copper tubing shall be new hard drawn, air grade, ASTM B75 for 3/8 inch and smaller or type L, ASTM B68 for 1/2 inch and larger, with solder joint or compression type fittings, at the option of the MSCC.
2. Plastic tubing (all sizes) shall be black virgin, polyethylene, ASTM D1248, Type 1, Class C, Grade 5, meeting crack test performance required by ASTM D1693 and be fire retardant (FR) rated. Multi-tube harness material shall be as specified above with a polyester film barrier and vinyl jacket not less than 0.062 inches thick. All non-metallic tubing shall be 1/4" O.D. minimum; micro-sleeve is not acceptable.

D. Pressure Reducing Valves:

1. Pressure reducing valves (PRV) shall be diaphragm operated, self-relieving, designed to provide precision control of air supply pressures, and shall be located after any filters or dryers.
2. PRV shall be capable of being mounted in any position, shall have locking set point handle, and SS inlet strainer.
3. PRV shall have metal or plastic body and shall be provided with 2-1/2" gauge of appropriate units.
4. PRV's that are not self-relieving shall be provided with a separate relief valve of appropriate range.
5. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air
 - e. Johnson
 - f. Honeywell
 - g. Siemens

E. DDC/Auxiliary/Local Control Panel Air Filters:

1. Provide an in-line air filter for main air supply to each DDC, auxiliary and local control panels capable of removing solids and petroleum-based oils.
2. Filter efficiency shall be 99.9% of 0.5 micron particles.
3. Filter element shall be visible and shall change color to indicate when to be replaced.
4. Minimum capacity shall be 500 SCIM and 30 psig.
5. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker

d. Van-Air

F. Coalescing Air Filters:

1. Provide a duplex set of coalescing air filters for the main air supply to all building temperature controls.
2. Duplex assembly shall include upstream and downstream pressure gauges and isolation ball valves for each filter.
3. Filter shall have a replaceable cartridge and drain port.
4. Filter shall be designed to remove oil and water droplets down to 0.01 microns and particulates down to 0.08 microns. Minimum capacity shall be 10 SCFM and 150 psig.
5. Coalescing filters shall be located downstream of refrigerated air dryers and upstream of chemical or desiccant dryers.
6. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air

G. Particulate Air Filters:

1. Whenever chemical or desiccant dryers are used, provide a duplex set of particulate air filters for the main air supply to all building temperature controls located downstream of chemical or desiccant dryers.
2. Duplex assembly shall include upstream and downstream pressure gauges and isolation ball valves for each filter.
3. Filter shall have a replaceable cartridge and drain port.
4. Filter shall be designed to remove particulates down to 0.1 microns. Minimum capacity shall be 10 SCFM and 150 psig.
5. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air

H. Refrigerated Air Dryers:

1. Provide a 120 VAC air-cooled refrigerated dryer capable of providing 35 deg. F dew point air.
2. Unit shall have power on light, high temperature light, valved air bypass piping, and air-to-air precooler/reheater.
3. Heat exchanger to be non-fouling, tube-in-tube, self-cleaning with smooth surfaces.
4. Compressor shall have hot gas bypass, as required, and shall be protected by thermal and current overloads.
5. Condenser fan shall have thermal overload protection.
6. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air

I. Regenerative Desiccant Air Dryers:

1. Provide a 120 VAC regenerative type desiccant dryer of the optimal size to ensure sufficient contact time and capable of providing - 40 deg. F dew point air at 150 psig.

2. Units shall have an adjustable solid-state timer and purge flow economizer valve, on/off switch, power on light, separate fill and drain ports for ease of desiccant replacement without piping removal, heavy duty purge exhaust mufflers for quiet operation, non-lubricated air control valves, Teflon seated check valves, visible moisture indicator, visible purge flow indicator, pressure relief valve, ASME code constructed/stamped pressure vessels, SS support screens and air diffusers, tower pressure gauges, structural floor frame and stand for large sizes, wall mounting brackets and supports for small sizes, pre-piped and wired, and complete with air bypass piping.
3. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air

J. In-line Desiccant Air Dryers:

1. Provide an in-line desiccant dryer of the optimal size to ensure sufficient contact time and capable of providing 4,000 cubic feet of -40 deg. F dew point air at 150 psig with a dryer inlet temperature of 68 deg. F.
2. Units shall have a removable bowl or fill port for ease of desiccant replacement without piping removal, visible moisture indicator, and air bypass piping.
3. Not to be used as a substitute for Regenerative Desiccant Air Dryers when providing a control compressed air station.
4. Approved Manufacturers:
 - a. Wilkerson
 - b. Hankison
 - c. Parker
 - d. Van-Air

2.25 IDENTIFICATION AND LABELS

- A. The MSCC shall provide black phenolic nameplates with engraved white minimum 1/4" high lettering (3/8" high at room differential pressure indicators), for each DDC or auxiliary panel, panel door mounted devices, and all LPI's, permanently attached, to identify field panel number, building, area, service, etc.
- B. All control devices located within auxiliary panels shall be labeled with legible identification that corresponds with the as-built drawings via black permanent marker. Use plastic or metal tags when it is not possible to mark directly on the device.

PART 3 - EXECUTION

3.1 INSTALLATION - GENERAL

- A. All system components shall be installed per manufacturer's installation recommendations.

- B. Coordinate with 3rd party equipment supplier BACnet object lists and integrate into Owner's BAS system, including assigning Instance numbers based on Owner's convention. Submit a list of available BACnet objects and proposed naming convention for owner approval. Map all BACnet objects selected by owner (using owner designated naming convention) to be viewable at the field panel and BAS server.
- C. Configure all controllers to serve BACnet data to BACnet Clients installed on the network. Each controller shall be configured and programmed to map all the BACnet objects associated with the controller, as selected by UM BAS. Provide a list of all objects to UM BAS at least 2 weeks in advance of this work. UM BAS will return the list indicating the specific objects to be mapped. Configure the controllers to utilize a change of value subscription with the clients that reside on the IT network. Change of value increments shall be as selected by the UM BAS department and tuned to minimize IT network traffic.
 - 1. Data Sharing:
 - a. Data communication from Building Controllers to Engineering Workstation and BAS web server shall be programmed to use Change of Value (COV) data sending and not continuous data polling to limit network traffic.
 - b. Data communication parameters for analog inputs and analog values shall be operator configurable. Preliminary values are provided below, obtain approval from UM BAS of specific values for the project:
 - 1) Minimum Send Time (where property is available): 1 minute
 - 2) Maximum Send Time (where property is available): 15 minutes
 - 3) Send on Delta (COV):
 - a) Space Temperature: $\pm 1.0^{\circ}\text{F}$
 - b) Process Temperature: $\pm 1.0^{\circ}\text{F}$
 - c) Duct Static Pressure: $\pm 0.1''\text{ WC}$
 - d) Relative Humidity: $\pm 1.0\%$
 - e) Air Flow: $\pm 5\%$ of calibrated span
 - f) Water Flow: $\pm 2\%$ of calibrated span
 - g) Water Pressure: $\pm 0.5\text{ psi}$
 - h) Space Pressure (Pharmacy & ORs): $\pm 0.005''\text{ WC}$
 - i) Space/ Building Pressure (General): $\pm 0.01''\text{ WC}$
 - j) Space CO2 sensors: $\pm 100\text{ ppm}$
 - k) Gas Monitoring (O2 Depletion): $\pm 0.1\%\text{ O}_2$
 - l) Not Mentioned Above: $\pm 5\%$ of range of sensor
 - m) Analog Values (calculated values): Same as COV for calculation input values (e.g. calculated space air flow offset would have a COV of $\pm 5\%$ of the value range, same as individual air terminal air flows)
 - n) Digital data points shall be sent whenever a state change occurs.
- D. Ensure all control components are located and installed correctly so that the specified and intended performance and the sequence of operation is achieved, including components supplied and installed by others.

- E. Wall mounted devices shall be mounted on an electrical box. Thermostats, room temperature sensors, push-buttons, and other adjustable devices meant for room occupant operation shall be mounted 44 inches to center above the finished floor (or as permitted by ADA requirements referenced in UM Design Guideline 1.0 Codes and Regulatory Agencies). This requirement does not apply to control panels and devices mounted in penthouses, mechanical rooms, and other spaces normally inaccessible to room occupants.
- F. Zone thermostatic controls used to control both heating and cooling, e.g. a variable volume terminal unit also controlling a reheat coil and/or fin tube radiation, shall be programmed (DDC systems) or set up (non-DDC systems) with a heating setpoint of 71 deg. F and cooling setpoint of 76 deg. F, and a dead-band of 5 deg. F, unless indicated otherwise on the Drawings.
- G. All set points and alarm points shown on the documents are preliminary. Finalize with the Engineer and Commissioning Authority prior to programming. Revise settings as required during commissioning.
- H. For fan coil/terminal unit controllers and similar programmable electronic controllers, obtain approval of programmable settings from the Engineer and Commissioning Authority prior to programming. Revise settings as required during commissioning.
- I. System I/O's shall not be split between different DDC panels.
- J. Fire Alarm to Temperature Control Interface Box shall be mounted at the DDC panel array.
- K. Install all conduit, wiring, cable, tubing and equipment in a first-class manner, using proper tools, equipment, hangers, and supports, and in locations as required for a neat, attractive installation. No material shall be exposed if it is possible to conceal it. Exposed materials shall be installed only with consent of the Owner. Conduit shall not be supported from work of other trades.
- L. For all rooms with a pressure or CFM offset, seal the inside of conduits routed to room mounted devices at the point where the device is mounted. Utilize material specifically made for this purpose.
- M. Support all sensors and devices as recommended by the manufacturer. Averaging element temperature sensors and low temperature detectors shall be mounted securely from coil frames in a horizontal serpentine manner at intervals not to exceed 4 feet; provide rigid supplemental metallic support structure when required. For element directional changes, minimum bend radius shall be no less than 2". Use mounting clips which prevent element wear due to vibration.
- N. Panels and meter enclosures shall be rigidly mounted. Panels shall be wall mounted or provide free-standing Unistrut type frames for floor mounting.
- O. Provide a pouch or other containing method inside each control panel and insert a copy of the corresponding system control drawings.
- P. Provide supplemental Hand-Off-Auto switches and contactors to permit automatic or manual operation of equipment from the DDC system (e.g. single phase equipment which uses fractional motor starters, etc.).

- Q. Extreme care shall be used in making connections to other equipment to ensure that the safeties on this equipment are not inadvertently bypassed or overridden by the DDC.
- R. Ensure all dampers, valves, thermowells, flowmeters, and other miscellaneous control components are located and installed correctly so that the specified and intended performance and the sequence of operation is achieved, including components supplied and installed by others.
- S. Limit switches used on dampers shall be set at approximately 95% of full stroke (opened and closed).
- T. Flow meters shall be installed with at least 10 diameter of straight pipe length upstream and five diameter of straight pipe length downstream or per manufacturer's recommendations.
- U. Power supply to flow meters and BTU meters shall be 115 VAC from the auxiliary DDC panel, and power connection for each device shall be installed with a lockable local service disconnect. Flow meter transmitters/displays and BTU meters shall be mounted 4 feet above finished floor. They shall be located at the DDC panel array unless the maximum available cable length is exceeded. All meter components, including sensors, shall be mounted in accessible locations.
- V. Airflow sensors shall be installed so that the manufacturer's recommended upstream and downstream conditions are achieved to produce maximum accuracy.
- W. Remove any unused items that are part of renovations or demolition, including, but not limited to: conduit, wire, tubing, controllers, controlled devices, relays, enclosures, etc. Do not abandon in place.
- X. Locate all control components and accessories such that they are easily accessible for adjustment, service and replacement.
- Y. Install constant flow fume hood monitors surface mounted on the front of the fume hood. Furnish exact dimensions and location to the fume hood factory to allow for concealed wiring to the monitor.
- Z. Install constant flow fume hood sash position sensors and sash travel limit brackets in a neat and workmanlike manner. Install cables and wires in a manner which avoids contact by the user during normal use, and allows vertical sashes to be positioned without binding, twisting or tangling.
- AA. Flush mount room differential pressure indicating gauges above one door outside of each lab, animal room, and where indicated, in the corridor wall at the entrance expected to be most frequently used, or as otherwise shown. Surface mounting is permitted on non-drywall walls. Mount related pressure sensor in ceiling or wall of lab. Attach tubing to gauge so that the intended room offset is displayed on the largest scale range of the gauge. Mount POS/NEG label adjacent to gauge and visible from floor.

3.2 CONTROL PANELS

- A. Arrange control panel I/O modules and points as follows:
 1. Processor, power & communication modules - top right
 2. DI points - center right
 3. DO points - bottom right

4. AI points - top left
5. AO points - bottom left

B. Control module address layout shall be as follows:

1. Right column - Address keys 1-6
2. Left column - Address keys 7 and above.

C. Control panels shall be assembled in a neat and workmanlike manner:

1. Maintain separation of class 1 and class 2 wiring. Use separate conduit connections to control panel for each wire type. I/O wiring shall enter control panel through a conduit directly above the module that it will connect to.
2. Wiring shall be bundled neatly together at 4-inch intervals using nylon tie straps. Wire bundle straps shall be secured to panel backplane using screws or mounting rails. Wiring troughs shall not be used.
3. Any extra wiring shall be coiled up in the wiring trough, strapped, and tagged as spare.
4. For door mounted devices, the installing contractor shall properly dress and bundle the wiring or tubing in a way that does not interfere with fully opening and closing the door.
5. Wiring shall be tagged with point address or wire number 4 inches down from the point at which the wire enters the cabinet.
6. Route wiring into panel for each termination leaving enough excess wire to reach the bottom of the enclosure. Wire shielding and jacketing for all signal wiring shall be left intact to within 4 inches of final termination.
7. The 24VAC power supply in the DDC panel shall only be used to power the controller and shall be fed by a dedicated 120V circuit. Provide separate control transformers as required to power other devices.
8. Network switches shall be installed on the floor of the cabinet or lower right corner of the backplane.
 - a. Network jacks and cabling shall be installed neatly and strapped securely to the panel or backplane.
 - b. Plug in power supply for network switch shall be plugged into the 120V service outlet with extra cord coiled neatly.
9. Controller module labels shall be installed into each module with final point names and addresses listed. Where not possible, include a printout of panel point addresses with the as-built drawing set left in panel.
10. Auxiliary panels shall be powered with a dedicated 120VAC circuit and contain a service disconnect in the upper right corner. Final circuit number shall be tagged on switch cover.
11. Auxiliary panel components shall be laid out in an organized manner and positioned to conserve available space for future use. All devices shall be mounted on panel backplanes. Auxiliary panels shall not be loaded beyond 90% of the backplane capacity.
12. Motor load wiring shall not be routed into or through control panels.
13. No voltage higher than 120 VAC shall be routed into or through control panels.

3.3 INSTALLATION - POWER, CONTROL, AND NETWORK WIRING

- A. All wiring to devices installed inside auxiliary/local panels shall enter/exist via terminal strips, except twisted/shielded sensor wiring.
- B. DDC sensor cabling shall not be spliced.
- C. Refer to Part 2 for additional installation requirements.

3.4 INSTALLATION - PNEUMATIC AIR

- A. Provide a control air shut-off valve for each panel. Downstream, install an in-line air filter for main air supply to each DDC, auxiliary and local control panel.
- B. Plastic tubing may be used in all locations, except in mechanical rooms, shafts, or exposed locations, unless run in conduit.
- C. Tubing shall not be attached to conduits with current carrying conductors or fire protection piping. It shall be adequately supported with no noticeable sagging between supports, and protected from abrasion and galvanic corrosion. All pneumatic tubing shall be concealed in finished areas.
- D. A PRV shall be installed on each floor to provide control air supply, when control air is required on the floor.
- E. Provide all required control air and associated tubing.

3.5 LABELLING

- A. Labelling methods and color scheme shall be reviewed and approved by UM before proceeding.
- B. Labels for devices in offices, public, and similar spaces shall be thermal printed on clear adhesive tape.
 - 1. Label terminal unit controllers with address (non-BACnet) or Instance number (BACnet), affixing label to ceiling grid or access panel at unit location. Use nominal 3/16" high black block-style font.
 - 2. Label exterior of room mounted control devices with address (non-BACnet) or Instance number (BACnet). Use nominal 12 point block-style black font.
- C. Label the field end of every DO/DI/AO/AI connected to a B-BC controller. Labels shall be thermal printed on white adhesive tape.
 - 1. Nomenclature shall include point name and address (non-BACnet) or Instance number (BACnet). Use nominal 12 point block-style black font attached to exterior of device.
- D. Refer to Part 2 for additional labelling requirements.

3.6 CALIBRATION, START-UP, AND COMMISSIONING

- A. Perform commissioning activities as described here-in and in accordance with Related Sections Participate in the commissioning process in accordance with the project commissioning documents. This applies to all controls including those provided as part of 3rd party equipment.
- B. All work performed at the Building Automation Server shall be by personnel approved by the University of Michigan.
- C. Except where specifically indicated elsewhere in this specification, the MSCC shall calibrate and start-up control devices and systems, including compressors, dryers, etc.
- D. Program all auto calibration routines to self-calibrate outside the hours of normal space occupancy. When this is not possible, program the self calibration to occur during hours of lowest occupancy. Establish with the Owner, working with the Commissioning Authority, a self calibration schedule that will be the least intrusive to building occupants. Phase self-calibration routines (as opposed to all devices simultaneously calibrating) to avoid negatively impacting air handler operation.
- E. Provide all necessary equipment, test gases, etc. for calibration, and calibrate all sensors (i.e. CO₂, CO, combustible gas, etc.) in accordance with the manufacturer's recommendations. Specialized equipment, test gases, etc. shall be turned over to owner upon completion and acceptance.
- F. After control components have been installed and connected, test, adjust and re-adjust as required all control components in terms of function, design, systems balance and performance. Control devices, linkages and other control components shall be calibrated and adjusted for stable and accurate operation in accordance with the design intent and to obtain optimum performance from the equipment controlled. All control valves shall be stroked and spring ranges verified and set. All dampers shall be stroked to verify proper and smooth operation. Cause every device to automatically operate as intended to ensure its proper functionality. Make systems ready for acceptance tests.
- G. Provide tuning of all control loops:
 - 1. Adjust PID control loop parameters to optimize system performance and response time.
 - 2. Loops shall be tuned to provide the accuracy indicated on the contract documents. Where not indicated, provide the following:
 - a. Temperature +/- 1 deg F
 - b. Duct static Pressure +/- 0.1 in WC
 - c. Hydronic pressure +/- 0.5 PSIG.
 - d. Other setpoints: As required for the application and directed by the Engineer.
 - 3. For system setpoints that are impacted by seasonal variations, return to verify and optimize control loop tuning.
 - 4. Response time to achieve setpoint shall be as typically achievable for such control loops or as indicated on the contract documents. Interpretation of typically achievable response times shall be as determined by the Engineer.

- H. Provide support to UM BAS for connecting and backing up all field controllers to the server. At least one week prior to connecting any field panel to the BAS server, provide the following for UM BAS approval:
 - 1. Field panel backup file (.P2 extension)
 - 2. Field panel backup log file (.log extension)
 - 3. Electronic copy of current field annotated (red-lined) control diagrams for systems or panel being connected.
 - 4. Any special alarm or alarm handling requirements

- I. Provide any trend setup, reporting and trend graphs in advance of functional testing and by dates specified by the Commissioning Authority to verify proper operation of controls and systems. Trend intervals and storage duration shall be as designated by the commissioner. All such trends shall be deleted before each panel is connected to the BAS server.

- J. Set constant flow fume hood monitor alarms as follows:
 - 1. Insufficient differential static pressure/air volume:
 - a. Face velocity 80 FPM (standard hoods) or 60 FPM (Reduced Face Velocity Hoods).
 - 2. Sash above the sash stop position.
 - a. Time delay to re-alarm after silence button pushed: 10 minutes.
 - b. Alarm shall clear when sash returned to sash stop position or lower.
 - c. Floor mounted hoods: Alarm shall activate when any sash is above its sash stop position; time delay and alarm clear shall be same as above.

ARTICLE 3.7 IS WRITTEN ASSUMING A LARGE PROJECT. EDIT AS APPROPRIATE, IN PARTICULAR FOR SMALLER PROJECTS.

3.7 TRAINING

- A. Provide comprehensive training for the entire mechanical controls system.
- B. The party that performed the portion of the control work as outlined in Section 1 shall provide the training related to that work.
- C. Provide an agenda of the proposed training for approval by the Commissioning Authority.
- D. Training shall include a combination of site walkthrough and classroom training as required to review the complete control system. At minimum provide the following:
 - 1. One half hour minimum of classroom training per each construction drawing sheet included for the mechanical controls. Provide a complete explanation of the following for the controls on each sheet:
 - a. The Sequence of Operation, alarms, and trend logs
 - b. Schedule and grouping for each piece of equipment
 - c. Overview of program layout and modules including explanation of each section of code and variables used.
 - d. Identify which sensors are critical for the proper function of the controls.

- e. Location of critical sensors and manual reset devices
 - f. The calibration, setup, and maintenance of all control devices
 - g. Review the contents of the O&M relative to the controls on each sheet.
 - h. Graphical user interface training. Review each system and floor plan graphic and explain the meaning of each point type.
 - i. Review of terminal equipment controller applications used for the project including all subpoints and custom applications.
 - j. Interfaces to other systems (e.g. fire alarm system, packaged controllers, etc.)
2. Also to be provided as part of classroom training:
- a. A review of the network diagram and the type, location, and function of each network device
 - b. Demonstrate bench calibration of critical or unique sensors. The Owner and Commissioner shall have exclusive rights to identify which sensors require this training. Maximum 8 hours training.
 - c. Programming of non-DDC controllers including passwords, alarms and setting tuning parameters and set point limits.
3. One half hour minimum of field training per each construction drawing sheet included for the mechanical controls. At minimum provide the following:
- a. Walk down each piece of equipment controlled, generally reviewing the Sequence of Operation.
 - b. Identify the location of:
 - 1) Controllers and DDC panels
 - 2) Critical sensors and manual reset devices. Demonstrate the reset of devices.
 - 3) Damper operators and control valves
 - 4) Meters, including any UM data acquisition panels
 - 5) Pneumatic system components
 - 6) UPS
 - 7) Network devices
 - c. Review the information presented and operation of touch-screen displays and other indicating devices.
 - d. Interfaces to other systems (e.g. fire alarm system, packaged controllers, etc.)

SPECIFICATION DIVISION 23

NUMBER SECTION DESCRIPTION

DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)

SECTION 230905 - MECHANICAL SYSTEMS CONTROLS (HOSPITAL PROJECTS)

END OF CONTENTS TABLE

DIVISION 23 HEATING, VENTILATING AND AIR CONDITIONING (HVAC)
SECTION 230905 - MECHANICAL SYSTEMS CONTROLS (HOSPITAL PROJECTS)

REVISION NOTES:

MARCH 2024: UPDATED LINK UNDER 3.14. UPDATED IAQ MONITOR REQUIREMENTS UNDER SECTION 2.3. MODIFIED 1.1.E FOR DESCRIPTION OF SIEMENS SERVER ARCHITECTURE.

JUNE 2023: MODIFIED AUTOMATIC CONTROL VALVE SECTION 2.14 AND DAMPER OPERATORS SECTION 2.16 TO INCLUDE ELECTRIC ACTUATION AS THE PREFERRED OPTION FOR NEW PROJECTS. REORGANIZED SECTION 2.14 TO SIMPLIFY VALVE REQUIREMENTS PER UM CONTROLS AD HOC SPECIFICATION SUBCOMMITTEE. CLARIFIED THERMISTOR REQUIREMENTS. REFORMATTED SECTIONS 2.5 THRU 2.11 TO ALIGN WITH CAMPUS SPEC FORMATTING, LITTLE IF ANY TECHNICAL CHANGES MADE. ADDED SECTIONS 3.3 THRU 3.6 TO ALIGN WITH CAMPUS.

FEBRUARY 2023: INCLUDES CHANGES ASSOCIATED WITH NEW SYSTEMS INTEGRATION SPEC 230924. CHANGED UMHC TO UMH TO REFLECT BRANDING CHANGE. ADDED REFERENCE TO AND CONTACT INFO FOR FACILITIES APPLICATIONS AND SYSTEMS MONITORING GROUP. ADDED REQUIREMENTS FOR ALL IP DDC SOLUTIONS. MODIFIED DDC CONTROLLER REQUIREMENTS, INCLUDING ALARM AND TREND MANAGEMENT REQUIREMENTS. ADDED REQUIREMENT FOR MSCC TO PROVIDE LATEST FIRMWARE. MODIFIED DEMOLITION OF LEGACY DDC SYSTEM RESPONSIBILITIES. MODIFIED REQUIREMENT THAT MSCC CONFIGURE HMI'S. MISC CHANGES TO INCORPORATE CAMPUS CHANGES TO 230900, INCLUDING EXPANDED ELECTRONIC ACTUATOR REQUIREMENTS, AND CONTROL LOOP TUNING REQUIREMENTS. ADDED GAS DETECTION, INCLUDING MRI O2 DEPLETION. ADDED OCC SENSORS FOR ORS. ADDED ROOM PRESSURE INDICATOR REQUIREMENTS. MINOR CHANGES TO SUBMITTAL AND WARRANTY REQUIREMENTS, INCLUDING NEW BMS ADDRESSING REQUIREMENTS.

MAY 2021: ADDED COV SETTING REQUIREMENTS, MODIFIED CONTROL DAMPER REQUIREMENTS.

AUGUST 2020: DELETED HONEYWELL AS ACCEPTABLE MSCC. UPDATED 3.14 TABLE 1 WITH UPDATED BACNET CONTROLLER PERFORMANCE.

JULY 2019: UPDATED UPS MODEL REQUIREMENTS.

MAY 2019: ADD COMBINATION ROOM TEMP AND HUMIDITY SENSOR. REVISE BALL VALVE ACTUATORS TO MODULATING TYPE.

JANUARY 2019: MODIFIED REQUIREMENTS FOR HMI'S. ADD CONDENSATION SENSOR, ALARM INDICATION STATION, OCCUPANCY COUNTER. PART 3: INDICATED THAT SETPOINTS ON DOCUMENTS ARE PRELIMINARY AND MUST BE FINALIZED WITH THE ENGINEER AND COMMISSIONING AUTHORITY PRIOR TO PROGRAMMING. ADDED SELF CALIBRATION DEVICE REQUIREMENTS.

JUNE 2018: REVISIONS TO SCOPE OF WORK, ADDED ONICON TO FLOWMETER MANUF, NEW UPS REQUIREMENTS AND INSTALLATIONS, REDEFINED ROOM PRESSURE MONITORS AS HMI'S, NEW HMI REQUIREMENTS AND INSTALLATIONS, PANEL IDENTIFICATION AND POINT DESCRIPTION ID REQUIREMENTS, CHANGES IN DEMOLITION SCOPE.

MAY 2017: REVISED SECTION TO ADD CONSTANT VOLUME VENTURI (CVV) FUME HOOD LAB AIRFLOW CONTROLS. VAV FUME HOOD LAB AIRFLOW CONTROLS, INCLUDING ALL OTHER MECHANICAL CONTROLS IN THE VAV FUME HOOD LAB, REMAINS IN MS230910. REFER TO DESIGN GUIDELINE 230030 FOR ADDITIONAL GUIDANCE. ADDITIONAL EDITS INCLUDE CLARIFICATION TO CONTROL DEMOLITION SCOPE, MISCELLANEOUS FLOW METER CLARIFICATIONS, HMI CLARIFICATIONS, CHANGE REFERENCE OF MCIT TO HITS, ADDITIONAL VAV CONTROLLER REQUIREMENTS, CHANGES TO DDC WIRING REQUIREMENTS, IDENTIFICATION LABELLING REQUIREMENTS, AND OTHER MISC EDITS

MAY 2015: NEW SECTION, SPECIFIC AND APPROPRIATE FOR HOSPITAL FUNDED PROJECTS ONLY

APRIL 2016: DEFINED THAT DDC HMI SHALL BE PROVIDED & INSTALLED BY MSCC, PROGRAMMED BY SI. MODIFIED SUBMITTAL REQUIREMENTS. FURTHER DEFINED DDC ARCHITECTURE. ADDED TSTAT AUX COMM PORT. MODIFIED HMI & DIFF PRESSURE TRANSMITTER REQUIREMENTS. MODIFIED BACNET NAMING REQUIREMENTS. ADDED INSTALLATION REQUIREMENTS.

EDITOR'S NOTE:

THESE SPECIFICATIONS MUST BE CUSTOMIZED APPROPRIATELY FOR EACH PROJECT. IN ADDITION TO THESE SPECIFICATIONS, THE PLANS ARE TO INCLUDE THE FOLLOWING, AS A MINIMUM:

- TEMPERATURE CONTROL DIAGRAM / SCHEMATIC OF EACH SYSTEM (AIR HANDLING UNIT, CHILLED WATER, HOT WATER, AIR TERMINIALS, ETC.) INDICATING ALL CONTROL AND MONITORING INSTRUMENTS AND COMPONENTS. THE DIAGRAM SHOULD ALSO INCLUDE AN INPUT / OUTPUT SCHEDULE FOR THE DDC CONTROLLER, AND SEQUENCE OF OPERATION. AUXILIARY CONTROL COMPONENTS SHALL BE INSTALLED IN AUXILIARY CONTROL PANELS (LOOP POWERED INDICATORS, E.P. RELAYS, P.E. SWITCHES, DIFFERENTIAL PRESSURE TRANSDUCERS, ETC.) SHALL BE SO INDICATED BY SOME METHOD. (I.E. ASTERISK)
- INDICATION OF ALL POINTS TO BE DISPLAYED ON THE HUMAN MACHINE INTERFACE (HMI) TOUCHSCREEN PANEL.
- LOCATIONS OF ALL DDC PANEL ARRAYS.
- PROVIDE TWO 20 AMP POWER CIRCUITS AT EACH DDC/AUXILIARY PANEL LOCATION. ONE CIRCUIT IS FOR THE DDC PANEL, THE OTHER IS FOR THE AUXILIARY PANEL. ELECTRICAL POWER REQUIREMENTS TO BE COORDINATED WITH ELECTRICAL DRAWINGS.
- WIRING DIAGRAMS FOR EACH SYSTEM TO SHOW INTENT OF AUTOMATIC OR INTERLOCKED OPERATION.
- SCHEDULES FOR DAMPERS, AIRFLOW MEASURING STATIONS, STATIC PRESSURE PROBE LOCATIONS, HUMIDITY RESET, TEMPERATURE RESET, DAY/NIGHT CONTROL ZONE, ETC.

- **LOCATIONS OF ALL HITS DATA DROPS, SHOWN AT LOCATIONS FOR ALL BACNET BUILDING CONTROLLERS.**

THE SCOPE OF THIS SPECIFICATION INCLUDES CONTROLS FOR ANY LAB ROOM WITHOUT VAV FUME HOODS WHICH INCLUDES HOODS WITH COMBINATION SASHES. IF A LAB ROOM INCLUDES THOSE HOOD TYPES, U-M MASTER SPEC 230910 MUST BE INCLUDED TO COVER ALL MECHANICAL CONTROLS IN THOSE ROOMS.

PART 1 - GENERAL

1.1 MECHANICAL CONTROL SYSTEM GENERAL REQUIREMENTS

- A. This Section specifies mechanical systems controls applicable to all project controls except for labs with variable air volume (VAV) fume hoods, including combination (vertical/horizontal) sash fume hoods. Controls in rooms with VAV and combination sash hoods shall be in accordance with Section 230910.
- B. The complete control system work shall be split between the Mechanical Systems Controls Contractor (MSCC), the Systems Integrator (SI), UMH Facilities Applications and UMH's HITS department as described under section 1.4 "Scope of Work".
- C. The Mechanical Systems Controls Contractor shall provide a fully integrated BACnet Mechanical Control System (MCS) incorporating electric, pneumatic, and direct digital control (DDC) components for the control and monitoring of heating, ventilating and air conditioning (HVAC) equipment and other related systems. Controllers shall natively use the most current ANSI/ASHRAE Standard 135 for communications and shall be BTL certified with BTL published PIC statements. Proprietary networks and protocols to one company or distributed by one company are prohibited.
- D. All controllers to be used as an integral part of the proposed MCS must be contained on the vendor's "Acceptable BACnet Controllers" list (including BTL PIC statements) on file with the UMH Facility Planning and Development (FPD) office and included in Table 1 on BMS Network Architecture Detail on the contract documents. All pre-qualified MSCC shall periodically update their product documentation for approved products to reflect the most current product configurations and features. All new or different parts to be used on this project shall either be submitted and approved prior to bid or specifically included as an alternate on the bid form, in accordance with the alternate product requirements contained general conditions of these specifications. UMH reserves the right to reject any part not pre-approved which could result in bid disqualification. Any part that is installed that is not on the "Acceptable BACnet Controllers" list will be removed at the contractor's expense and replaced with the pre-approved controller needed to meet the requirements of these project documents.

BuildingName

The Description of the Project

P00000000 0000 Issued for: (FILL IN) BID 230905 - - 3

- E. University of Michigan Health (UMH) maintains an existing Siemens Desigo CC BACnet Advanced Workstation (B-AWS), which provides system monitoring, alarming, scheduling, reporting and historical trend functions via graphical user interface. This software is installed on application servers- located in the HITS data center. For a description of Desigo application servers, see "Hospital Facilities - Desigo BMS Integration Guidelines" (https://michmed.service-now.com/sp?id=kb_article_view&sysparm_article=KB0023632).

Desigo client workstations are located in University Hospital, Systems Monitoring, Room B2C204. All BMS installations shall be integrated into this front-end thru BACnet IP over UMH HITS's layer 3 network.

- F. The project shall provide a fully functional MCS comprised of BACnet Building Controllers (B-BC), advanced application controllers (B-AAC), application specific controllers (B-ASC) and Smart Sensors (B-SS), Smart Actuators (B-SA) and Operators Displays (B-OD). The MSCC shall configure, program and commission all controllers to provide the required functionality as defined in the sequence of operation located on the MCS drawings.
- G. The MSCC will be responsible to configure B-BC's to serve BACnet data to BACnet Clients installed on the HITS network. Each B-BC shall be configured and programmed to expose all BACnet Objects associated with controllers supervised by the B-BC. The MSCC shall configure the B-BC's to utilize a Change of Value subscription with the Desigo client (and other clients that may reside on the HITS network). Change of Value increments shall be set (tuned) to minimize HITS network traffic.
- H. All MCS communication to the Desigo BACnet Client requires the use of BACnet Broadcast Distribution Device configuration (BBMD). UMH maintains a BBMD server and will expand the BACnet Distribution Table (BDT) as needed for the project. Submit project requirements as detailed below to facilitate the BDT entries. Coordinate with UMH HITS to determine the proper server level setup for proper communication. The MSCC shall provide proper personnel skilled at BBMD and IT configuration to work with the UMH FPD personnel as needed.

1.2 DEFINITIONS

- A. BMS: Building Management System
- B. BTL: BACnet Testing Labs <http://www.bacnetinternational.net/btl/>
- C. B-AAC: BACnet Advanced Application Controller
- D. B-ASC: BACnet Application Specific Controller
- E. B-AWS: BACnet Advanced Workstation
- F. B-OD: BACnet Operators Device
- G. B-BC: BACnet Building Controller
- H. B-SA: BACnet Smart Actuator
- I. B-SS: BACnet Smart Sensor
- J. BBMD: BACnet Broadcast Management Device

BuildingName

The Description of the Project

P00000000 0000 Issued for: (FILL IN) BID 230905 - - 4

- K. BDT: BACnet Distribution Table
- L. DDC: Direct Digital Control
- M. UMH Facilities Applications: UMH department responsible for maintaining the hospital's Building Management System application
- N. UMH BAS Controls: UMH department responsible for maintaining the hospitals BMS hardware and devices
- O. FLN: Field Level Network
- P. FPD: UMH Facilities Planning and Development department responsible for design & construction
- Q. HITS: Health Information Technology & Services
- R. HMI: Human Machine Interface Panel
- S. MSCC: Mechanical Systems Controls Contractor
- T. MCS: Mechanical Control System
- U. SI: Systems Integrator
- V. Systems Monitoring: UMH department responsible for operating the hospital's Building Management System
- W. TC: Temperature Controls
- X. UMH: University of Michigan Health

1.3 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, Standard General and Supplementary General Conditions, Division 1 Specification Sections, and other applicable Specification Sections including the Related Sections listed below, apply to this Section.
- B. Related Sections
 - 1. Division 26: Electrical
 - 2. 220523 Valves
 - 3. 233600 Air Terminal Units
 - 4. 230910 VAV Fume Hood Laboratory Air Flow Controls
 - 5. 230924 Systems Integration

1.4 SCOPE OF WORK

- A. The complete control system work shall be split between the Mechanical Systems Controls Contractor, the Systems Integrator and UMH's HITS department as described below and under section 1.5 "Related Work by Others". As it relates to the extent of responsibility for work within this specification section, "provide" shall mean the identified party both furnishes and installs such item(s). "Furnish" shall mean the identified party furnishes the item for installation by others.
- B. The Mechanical Systems Controls Contractor shall be a direct Sub-contractor to the Contractor.

SPEC WRITER NOTES: EDIT SCOPE OF WORK TO SUIT THE SPECIFIC NEEDS OF THE PROJECT

C. Summary of work by the Mechanical Systems Controls Contractor shall include, but not be limited to:

1. Provide and install a native BACnet-based (latest version of ANSI/ ASHRAE 135) MCS consisting of programmable and application specific DDC controllers, electronic sensors, pneumatic actuators, electronic to pneumatic transducers, relays, switches, control panels, power supplies, twisted shielded pair (TSP) network cabling and all associated control wiring (excluding Ethernet network wiring) and low voltage conduit systems.
2. Provide and install control panels for all DDC controllers and an auxiliary control panel for all ancillary control devices (electric and pneumatic relays, EP switches, contactors, etc.)
3. Provide and install application specific controllers (B-ACS) or advanced application controllers (B-AAC) for terminal units (VAV, Dual Duct, Fan Coil Units etc.) including associated room temperature sensors, room temperature sensors with LED display, room temperature sensors with bias adjustment, and CO2 sensors.
4. Create BACnet object names and tags according to UMH's point naming standard outlined at in Section 3 - Execution.

SPEC WRITER NOTES: DRAWINGS SHOULD INDICATE LOCATION AND TYPE OF COMMUNICATION CONNECTION SHOWING NECESSARY CONDUIT TO THAT LOCATION (NEAREST DDC PANEL FOR EXISTING BUILDINGS OR NEAREST HITS CLOSET FOR NEW BUILDINGS) .

5. Final connection of control panels to the HITS Network from patch panels to the B-BC to permit communication between B-BC's to the existing Building Management System (BMS) server(s) via BACnet/IP. MSCC shall provide and install data connection raceway from panel to facility cable tray. UMH HITS department will provide network drops using biscuit jacks inside the control panels to patch panels installed in HITS Telecommunication Rooms. MSCC shall provide and install MS/TP communication trunk for BACnet AAC's, ASC's, SA's and SS's.
6. For UM Utility's energy metering, install UM furnished data acquisition panel for utility metering. Provide Ethernet connection of Utility Meters to host computer. MSCC shall provide and install data connection raceway from panel to facility cable tray. Provide wiring from meters and transmitters to utility data acquisition panels. Provide communication wiring to utility data acquisition panels. Terminations inside panels by UM Utilities.
7. Engineering, submittals, as-built drawings, and operation and maintenance manuals.
8. Provide an auxiliary temperature control panel adjacent to each DDC panel. Provide additional auxiliary panels as required to house the required quantity of control components. Small control installations with limited future expansion may be allowed to forego an aux panel and install all devices in a single DDC panel- contact project engineer for approval. Auxiliary panels shall not be smaller than 24"x24", and shall have a 1' high by minimum 2' wide (but not less than panel width) contiguous clear area which can be used for future expansion. Provide all wiring between the DDC panel and the auxiliary panel(s).

BuildingName

The Description of the Project

P00000000 0000 Issued for: (FILL IN) BID 230905 - - 6

9. Provide, install and configure all Human Machine Interfaces (HMI's), Room Pressure Monitors (RPM) and Room Pressure Indicators (RPI). Provide all wiring and accessories required to enable HMI/ RPM/ RPI to function as specified.
10. Provide and mount all airflow measuring station/ flow meter LCD readout panels on wall adjacent to DDC panels.
11. Provide & install all UPS's and required enclosures. Provide all interconnecting power wiring between the DDC panel power supply and the UPS panel receptacle.
12. Provide a 6"x 6" wiring trough extending over and between each DDC, auxiliary temperature control, and LPI panel. Provide 1" conduit from trough to cable tray, bonded to tray, for HITS network connection (coordinate routing with HITS).
13. Provide and install all DDC panel and device enclosures.
14. Provide pneumatic thermostats (where applicable), control valves, dampers, operators, meters, control air tubing, etc.
15. Provide pneumatic air main piping, PRV's and accessories.
16. Provide gauges, indicating devices, electric and electronic control accessories, and other control system devices.
17. Provide setup/ programming, calibration and start-up services of all DDC and non-DDC temperature control systems.
18. Configuration of all required alarming and point/object trending at the local DDC panel, as indicated by project documents.
19. Provide site supervision of temperature control work and coordination with related, pneumatic, electrical, fire alarm work and packaged controls.
20. Provide all control wiring and electrical components necessary for each system to permit automatic or interlocked operation, such as: air cooled condensing units, high level alarm circuits, damper end switches, fuel oil pumping/monitoring systems, chiller control/interface panels, boiler control/interface panels, early break contacts on disconnects to VSD's, cooling tower vibration switches, etc.
21. The MSCC shall be responsible for identifying the demolition/decommissioning scope on UMH's legacy Siemens, Honeywell, Johnson Controls, and/ or ASI DDC systems impacted by the project scope.
22. Configuration of all required alarming and point/object trending at the local DDC panel, as indicated by project documents.
23. Re-establish and validate existing DDC controller communication modified by the scope of work.
24. All other work and components required for complete and operational temperature control systems as specified herein, excluding work specified below in "Related Work by Others" section that is to be provided or furnished by the Systems Integrator.
25. Start-up, calibration, and checkout of sensors, transducers, thermostats, control valves, dampers/damper operators, meters, and all other components provided.
26. Commission all mechanical controls provided. Provide a detailed list of every control point installed to the project Commissioning Authority (CxA) and verify proper operation of each component prior to commissioning the controls with the CxA. Include, in checklist format, a detailed procedure to verify all aspects of the controls' Sequence of Operation.
27. Participation in point-to-point verification with Systems Integrator for all control points.

BuildingName

The Description of the Project

P00000000 0000 Issued for: **(FILL IN)** BID 230905 - - 7

28. Coordination with Systems Integrator as well as UMH's HITS, Facilities Applications and Systems Monitoring groups.
29. Training of UMH personnel to familiarize operations staff with the configuration and operation of this project's MCS installations.

SPEC WRITER NOTES: FUME HOOD MONITORS ARE TYPICALLY NOT PROVIDED BY THE MSCC ON UMH PROJECTS, BUT ARE RATHER PROVIDED WITH THE FUME HOOD. FOR RARE OCCASIONS WHERE THE MSCC WILL PROVIDE THE FUME HOOD MONITOR, CHANGE THE FOLLOWING PARAGRAPH FROM HIDDEN TEXT.

30. Provide fume hood monitors except in rooms with VAV hoods, including combination sash fume hoods.
31. Provides controls for temporary heating/cooling/ventilation during construction, as required by the owner's construction manager.

1.5 RELATED WORK BY OTHERS

- A. BMS related work by the Systems Integrator:
 1. See specification section 230924 SYSTEMS INTEGRATION
- B. BMS related work by UMH HITS:
 1. Providing IP Layer 3 networking for all peer-to-peer communication of DDC Building Controllers, utility acquisition panels and the front-end. The MSCC shall be responsible for coordinating implementation of the MCS on the HITS network without disruption.
 2. HITS will verify network connectivity and establish a TCP connection between the BMS server and the network drop termination.
 3. HITS will provide all required patch cables. MSCC shall be responsible for connecting all patch cables at respective IP devices (controllers, routers, UPS's, etc).
 4. Confirmation of Telecommunication Rooms to extend network communications to IP devices.
- C. BMS related work by UM Utilities
 1. Provide utility meter data acquisition panels. Panels installed and wired by MSCC. UM Utilities to terminate all I/O wiring and data connections, as well as start-up, configure and commission the panel.
- D. BMS related work by UMH Facilities Applications:
 1. Management of existing and assignment of new:
 - a. IP addresses
 - b. BACnet Device Instance and Network numbers
 - c. BACnet Broadcast Management Device (BBMD) and Broadcast Distribution Table (BDT)
 - d. MS/TP MAC Addresses
 2. Validation that network devices meet the HITS "UDEW Process" to validate network security.
 3. Onboarding IP devices onto HITS network.
- E. BMS related work by UMH Systems Monitoring:

1. Removal/ decommissioning of all graphics, alarms, trends on UMH's legacy BMS front ends (ie Honeywell EBI & JCI Metasys) related to points, devices & controllers that have been modified as part of the MSCC's work.
2. Validation of final integration services.

F. BMS related work by UMH BAS Controls:

1. Removal/ decommissioning of all legacy DDC panel databases (ie Honeywell EBI & JCI Metasys) related to points, devices & controllers that have been modified as part of the MSCC's work.
2. Review IP configuration of IP controllers.

1.6 ACCEPTABLE MECHANICAL SYSTEMS CONTROLS CONTRACTORS

A. The following MSCCs are acceptable for the furnishing and installation of pneumatic, electric and DDC components as specified in this section:

1. Siemens Industry Inc.
2. Fontanesi & Kann (ASI Controls)

EDITOR: CONTACT THE UM DESIGN MANAGER TO DETERMINE WHICH OF THE ABOVE CONTROLS INSTALLATION CONTRACTORS ARE TO BE LISTED AS ACCEPTABLE FOR YOUR SPECIFIC PROJECT.

1.7 QUALITY ASSURANCE

A. Manufacturers and Products: The products and manufacturers specified in this Section establish the standard of quality for the Work. Subject to compliance with all requirements, provide specified products from the manufacturers named in Part 2.

B. Reference Standards: Products in this section shall be built, tested, and installed in compliance with the specified quality assurance standards; latest editions, unless noted otherwise.

1. Electrical Standards: Provide electrical products that have been tested, listed and labeled by UL and comply with NEMA standards as well as NFPA 70 (National Electric Code).
2. NEMA Compliance: Comply with NEMA standards pertaining to components and devices for electrical control systems.
3. NFPA Compliance: Comply with NFPA 90A "Standard for the Installation of Air Conditioning and Ventilating Systems" where applicable to controls and control sequences.
4. Install all BMS components, panels, and wiring in compliance with NEC and all local electrical codes.
5. DDC devices shall use the latest version of ANSI/ASHRAE Standard 135 "BACnet- Building Automation and Control Networking Protocol" standard for communications and have passed BTL certification as available.
6. UL Compliance: DDC Controllers for this project shall comply with UL916 Standard for Energy Management Equipment. DDC Controllers associated with equipment utilized in a smoke control application shall also comply with UUKL-UL 864 "Standard for Control Units and Accessories for Fire Alarm Systems".
7. National Institute of Standards and Technology (NIST), NIST IR 6392 Annex B: Profiles of Standard BACnet Devices.
8. Electronics Industries Association (EIA)

BuildingName

The Description of the Project

P00000000 0000 Issued for: **(FILL IN)** BID 230905 - - 9

- a. EIA-232: Interface Between Data Terminal Equipment and Data Circuit-Terminating Equipment Employing Serial Binary Data Interchange
- b. EIA-485: Standard for Electrical Characteristics of Generator and Receivers for Use in Balanced Digital Multi-Point System

1.8 COORDINATION

- A. Coordinate with the Systems Integrator, as well as UMH's HITS, Systems Monitoring, and Facilities Applications groups as specified.
- B. All correspondence with UMH Facilities Applications shall be via email directed to bmsIntegrationRequest@umich.edu.
- C. All correspondence with Systems Monitoring shall be via email directed to HFAC-OPERATIONS-SYSTEMS-MONITORING@med.umich.edu.
- D. All correspondence with the System Integrator or other UMH departments (ie HITS, Fac Apps, Systems, BAS Controls) involved in the project shall copy the respective owner's project manager (ie AEC).
- E. Ensure installation of components is complementary to installation of similar components in other systems.
- F. Coordinate installation of system components with installation of other mechanical system equipment.
- G. Coordinate control wiring requirements with mechanical equipment manufacturers.

SPEC WRITER NOTES: FUME HOOD MONITORS ARE TYPICALLY NOT PROVIDED BY THE MSCC ON UMH PROJECTS, BUT ARE RATHER PROVIDED WITH THE FUME HOOD. FOR RARE OCCASIONS WHERE THE MSCC WILL PROVIDE THE FUME HOOD MONITOR, CHANGE THE FOLLOWING PARAGRAPH FROM HIDDEN TEXT.

- H. Coordinate with laboratory equipment suppliers (constant flow fume hoods, etc.) regarding dimensions and mounting location for alarm monitors and assure proper accommodation is made for the installation of other devices related to laboratory airflow controls.

1.9 SUBMITTALS

- A. Prior to submitting shop drawings to the AE of record, the MSCC shall request BMS address assignments from the UMH Facilities Application group, including:
 - 1. IP addresses for new devices and the necessary IP addresses of other BACnet IP devices (for the BACnet Broadcast Distribution Table)
 - 2. BACnet Device Instance and Network numbers
 - 3. BACnet BBMD (when required) and BDT
 - 4. MS/TP MAC addresses

MSCC shall utilize the latest [BMS Address Request Template \(https://www.dropbox.com/s/3xbkt16n02ppxe2/BMS%20Address%20Request%20Template.xltx?dl=1\)](https://www.dropbox.com/s/3xbkt16n02ppxe2/BMS%20Address%20Request%20Template.xltx?dl=1) from DropBox to request IP and BACnet addresses for all devices. Email the completed form to bmsIntegrationRequest@umich.edu.

BMS Address Request submittal shall include all required fields in the template. Hospital Facilities Applications ensures that all IP devices provided by the MSCC comply with UMH security and device policy. The MCC may be asked to provide additional information before addresses can be assigned.

- B. Once BMS addressing has been assigned by UMH Facilities Applications, submit shop drawings to the project AE of record for their review and approval and to FPD Engineer. AE shop drawings shall reflect assigned BMS addressing.
- C. No work shall be done until the final submittals are approved by project AE.
- D. MSCC shall submit approved shop drawings to the Systems Integrator for coordination.
- E. Shop drawings shall contain, as a minimum, the following:
 - 1. UMH BMS Addressing Template pre-filled in with all project specific DDC devices needing BMS addressing assignments.
 - 2. Schematic diagrams of all systems being controlled and/or monitored indicating all DDC points or BACnet objects, BACnet instance numbers, IP addresses, MS/TP MAC addresses, object names/numbers (using UMH standard point naming conventions), sensors, relays, controllers, valves, dampers, complete control wiring schematics (including starter, VSD, DX system, etc. wiring diagrams), pneumatic tubing, DDC panel maps, etc.
 - 3. Clearly indicate if DDC points are analog inputs (AI), analog outputs (AO), digital inputs (DI) or digital outputs (DO).
 - 4. Wiring of each point to the DDC panels, including terminal block numbers.
 - 5. Layout of all auxiliary devices and panels, and wiring of relays, contacts, etc. Include terminal block numbers at all control panels, at all mechanical equipment, and at all control devices. Provide the design of and wiring diagrams for all safety interlocks for equipment (LTDE, fire alarm, high/low static etc.)
 - 6. Complete Sequence of Operation for each system being controlled, including set points, etc. in written (text) format. Identify each piece of equipment that the sequence of operation applies to utilizing the equipment tags from the engineer's equipment schedules.
 - 7. Summary of all alarming & trending requirements, including alarm thresholds and delays, for all DDC points. Submittal shall clearly indicate which alarms/ trends are configured at the local DDC panel and which are configured at the Desigo BMS front-end.
 - 8. Submit a write-up of the application software that will be used on the operator workstation including revision level, functionality and software applications required to meet the specifications
 - 9. Schematic diagram of the total DDC system layout, including all panels, trunk cables, peripheral devices, locations, etc.
 - 10. Floor plan drawing showing locations of field devices/instrumentation, transformer panels, control panels, RPMs, RPIs, HMIs, network equipment and BMS components.

11. Electrical power panel and circuit, including if source is emergency power, normal power, or UPS power, for all DDC panels and devices/ actuators.
12. Pneumatic compressed air supply equipment, risers, and major tubing runs.
13. Complete bill of materials to identify and quantify all devices and controllers.
14. Protocol Implementation Conformance Statements (PICS) for all native BACnet controllers and BACnet IP routers.
15. Location/ identification of BBMD including configuration details.
16. Location, on a floor plan, of all HITS layer 3 network data connections needed for IP controllers. Show data jack locations and quantity.
17. Point Description Identification of all DDC points included in project, consistent with UMH requirements.
18. Change Of Value (COV) point parameters, consistent with UMH requirements.
19. Submit blank field check-out and commissioning test reports, customized for each panel or system, which will be filled out by the technician during start-up.
20. A schedule of all nameplates and associated wording.
21. An index of sheets for ease of access.
22. Wiring diagrams and locations of power supplies.
23. Additional submittal items required for any room designated as a lab:
 - a. Equipment schedule for each room or zone, with the following information:
 - 1) Equipment tag, room served, occupied/unoccupied min., max., and offset CFM; lab subnet description, name, and network address; network and power trunk identifier.
 - 2) Model number of each control component.
 - 3) Function of each terminal airflow unit and control component

F. Submit, as a minimum, the following design data schedules indicating:

1. Airflow Measuring Probes:
 - a. Device tag.
 - b. Equipment served/function.
 - c. Model number.
 - d. Size, type, and location.
 - e. Station area in square feet.
 - f. Max/Min Range.
 - g. Magnehelic scale range.
 - h. Velocity pressure range.
2. Air and water pressure sensors:
 - a. Device tag.
 - b. Equipment served/function.
 - c. Model number.
 - d. Size, type, and location.
 - e. Max/Min Range.
3. Control Dampers:
 - a. Damper tag.
 - b. Equipment served/function.
 - c. Model number.

- d. Blade configuration and orientation.
 - e. Size in width, height, and blade width.
 - f. Pressure drop.
 - g. Type of seals (blade and edge).
 - h. Normal position.
 - i. Size, quantity, type, and model number of actuators.
 - j. Method of actuator mounting and actuation.
4. Control Valves:
- a. Valve tag.
 - b. Equipment served/function.
 - c. Valve flow rate (GPM).
 - d. Line size.
 - e. Specified valve pressure drop (ft. head).
 - f. Valve size.
 - g. Valve Cv.
 - h. Actual valve pressure drop (ft. head).
 - i. Valve normal position.
 - j. Valve spring range.
 - k. Valve shut-off rating (ft. head).
 - l. Valve body pressure/temperature rating.
 - m. Valve type/model number.
 - n. Actuator type/model number.
5. DDC Controllers:
- a. Device tag.
 - b. Equipment served/function.
 - c. Model number and application code.
 - d. Associated sensor location/tag.
 - e. Size, control values, etc.

G. Submittal Requirements

- 1. Shop drawings shall be 8-1/2" x 11" and 11" x 17" size, in PDF format
