MISSION STATEMENT

The mission of the University of Michigan is to serve the people of Michigan and the world through preeminence in creating, communicating, preserving and applying knowledge, art, and academic values, and in developing leaders and citizens who will challenge the present and enrich the future.

VISION STATEMENT

As the University of Michigan prepares to embark on its third century, we fully embrace the legacy bestowed upon us by President James B. Angell in our first century. We are proud to offer "an uncommon education for the common man."

We are a community of learners. We serve our multiple constituents by providing access to and participation in scholarly and creative endeavors on a vast scale. Our academic research enterprise affects the world. The university is defined by a culture of interdisciplinary teaching and research, coupled with academic rigor. We encourage our students, faculty, and staff to transcend disciplinary boundaries by tackling complex and vexing problems facing modern societies at local, national, and global levels.

We endorse and promote creativity in its many facets. We recognize the arts as a human essential and a foundation that helps to define our future. We create new knowledge and share the joy of discovery, and we see information technology as a powerful means for broadening access to knowledge and exchanging ideas.

We draw from study and experience to prepare our students for leadership in a wide range of social endeavors, including government, law, education, medicine and business, reflecting the university's many roles in contributing to good design and decision making within major domestic and international institutions.

We celebrate and promote diversity in all its forms, seeking the understanding and perspective that distinct life experiences bring. We proclaim ourselves a scholarly community in which ideas may be freely expressed and challenged, and all people are welcomed, respected, and nurtured in their academic and social development.

We are committed to providing for our students and faculty international learning and teaching experiences that will prepare them for a rapidly changing global community. The university encourages intellectual and cultural exchange in other countries, and programs that deeply engage scholars from disparate areas of the globe. We support and promote student, faculty, and staff immersion in local and national communities via service, learning, and leadership endeavors. We nurture lifelong relationships with alumni who span the globe.

Section I Mission Statement We advance health care through discovery and practice. We deliver clinical services to people within our state and the world, educate future generations of health care professionals, conduct basic research in fundamental processes of life, and vigorously advance research on the mechanisms, detection and treatment of a spectrum of human diseases. The university champions fitness, disease prevention, and policy research to advance health, quality of life, and longevity of our own community, the nation, and the globe.

We stimulate economic growth and development in Michigan and beyond. The university engages in productive partnerships among academe, industry, and government to sustain and grow a vigorous and dynamic economy. University students, faculty, and staff embody and advance innovative attitudes and entrepreneurial spirit.

We strive to be an exemplary employer and a positive influence in our community. We provide an environment where all employees have opportunities to develop their potential, and where there is a shared passion for excellence and a commitment to respect for one another.

We dedicate ourselves to ethical and responsible stewardship of financial, physical and environmental resources. We look for tools and strategies to create and enhance sustainable practices in all facets of operations and seek to lead in the global quest for a sustainable future.

We gladly accept the challenges and opportunities confronting us and understand that the University of Michigan must change, adapt and grow to meet the needs of a rapidly evolving society. We will always focus on the horizon.

Section I Mission Statement

INSTRUCTIONAL PROGRAMMING

The University of Michigan, founded in 1817, has a history of 200 years of leadership in education, innovative research, stewardship and service to the State of Michigan. The university consistently ranks in the top ten of public universities in the U.S., according to the U.S. News and World Report, and receives high marks for retention and graduation rates and for the reputation and excellence of many of the undergraduate, graduate, and professional degree programs offered by the university's 19 schools and colleges.

As a public institution, the university strives to achieve its mission through teaching, research, and service, set within the framework of various schools, colleges, institutes and centers and through strategic partnerships with public and private institutions in Michigan and beyond.

The following information describes various programs that support the core mission of the university and activities that will impact facility needs in the next five years.

A. Alfred Taubman College of Architecture and Urban Planning

The University of Michigan offered its first courses in architecture in 1876. The program became a department in 1913, and by 1931, the College of Architecture was established as a separate entity. Today, the college offers bachelor's, master's, and doctoral degrees in various fields, including architecture, urban and regional planning, and urban design. In 1999, the college was renamed in honor of A. Alfred Taubman, a longtime donor and adviser to the college. In 2014, A. Alfred Taubman continued his generosity to the college with a gift to support a partial renovation and expansion of the Art and Architecture Building, where the Taubman College is located. Opened for the fall 2017 term, the new A. Alfred Taubman wing provides modern instructional space, expanded student studios, and more spaces for student and faculty interaction, critiquing, and exhibitions. While the addition and partial renovation provide the college with much needed program growth space, much of the original 1970s building contains outdated classrooms, administrative and faculty spaces, and other support spaces that will need to be addressed at some point in the future.

Penny W. Stamps School of Art & Design

Education in the arts was first offered as part of architecture and engineering studies at the university. As art evolved as a discipline, the programs were moved out of these colleges and the School of Art & Design became a separate school in 1974. The school was renamed the Penny W. Stamps School of Art & Design in 2012 after receiving a significant donation from Penny and E. Roe Stamps. The school shares the Art and Architecture Building with the A. Alfred Taubman College of Architecture and Urban Planning, where it provides a comprehensive range of bachelor's and graduate degree programs in art, design, and interarts performance. In 2011, in response to a pressing programmatic need for graduate student and faculty art studios and limited space within their shared building, the university renovated and repurposed an existing university warehouse building for this purpose. In 2014, the school conducted a study of its long-term facilities needs and identified the need for a major renovation and expansion of their space in the Art and Architecture Building. This study has helped shape plans to repurpose their on-site art gallery into much needed student maker space and collaboration space and move the gallery

to an off-campus lease. While this has helped to free a small amount of space within the Art and Architecture Building, the 1970s structure limits the capabilities of the school to have all of the modern, collaborative teaching and studio spaces it needs.

Stephen M. Ross School of Business

The School of Business Administration was formally established in 1924. Today, at all levels of instruction—bachelor's, master's, doctoral, and executive education—its programs consistently rank high nationally and internationally. In 2004, Stephen M. Ross made a historic gift to the school, and it was renamed in his honor. The gift supported the construction of a new Ross School of Business academic building, which opened in 2009, and provided state-of-the-art instructional and research space to support the school's core mission. Stephen M. Ross continued his generous support of the school with another gift in 2013. The gift, along with other donor gifts, supported the renovation of the Kresge Business Administration Library and construction of a new academic building, all connected to the main Ross School of Business academic building. The new academic building is named Jeff T. Blau Hall in recognition of Blau's generous financial contributions. Opened for the fall 2016 term, the new and renovated facilities house modern and innovative spaces for instruction, study and collaboration, and student and career services spaces, which will enable the school to continue its long-standing history of excellence in business education into the future. An additional gift from Stephen M. Ross will allow for completion of the exterior and fund academic programs.

School of Dentistry

Established in 1875, the School of Dentistry is one of only two schools of dentistry in the State of Michigan and continues to be a top-ranked program nationally. It offers bachelor's, master's, and doctoral degrees, as well as certification and continuing education, in a variety of dental fields including dental hygiene, pediatric dentistry, orthodontics, periodontics, oral and maxillofacial pathology, and surgery. The school's dedication to health and wellness extends well beyond the research lab and classroom. The school provides clinical services to patients on campus and around the State of Michigan and is particularly dedicated to providing care to underserved, atrisk, and special needs patients. Through its community-based dental education program, the school's faculty, students, and staff are serving these patients throughout the state in federally qualified health centers, community clinics, and in private offices. The school occupies two adjoined buildings that are in serious need of attention and limit the school from fully achieving its core mission. Addressing this need has been a high priority for the university, which is why the university submitted the School of Dentistry project to the state for fiscal years 2015, 2016 and 2017 capital outlay funding consideration. This year, the university received construction authorization from the state for a project that will construct a modest addition and partially renovate the building to improve the school's research and clinic spaces and to improve patient access to the building. The university is very appreciative of the state's recognition of this high priority need. Construction is expected to begin later in 2018 and conclude in 2021.

School of Education

The School of Education was formally founded in 1921; however, teacher diplomas were first offered at the university in 1874 with master's and doctoral degrees added in the decades

following. The school prepares students for professional careers in teaching and administration and offers advanced training and certification for researchers and practitioners at all levels of education. The school is housed in a building that is 94 years old (a former elementary and high school) and has had only modest renovations over the past several years. The renovations included remodeling a large auditorium and constructing the Brandon Professional Resource Center and Archive in 2011. Made possible by a generous gift from Jan and David Brandon, this space houses digital records of professional practice and other important resources for professional study and use and offers student-focused study and collaboration areas. In 2015, the university completed a renovation project that addressed the building's aging infrastructure and made modest improvements to the teaching and learning environment. The project addressed only some of the school's needs. The school continues to be challenged by its facilities, and has identified needs for an additional renovation and future addition to fully support its academic and research mission.

College of Engineering

The College of Engineering was officially established in 1895 and is renowned, both nationally and internationally, for delivering high-quality education and cutting-edge research to help solve the world's problems. Today, nearly all of the college's undergraduate and graduate programs rank in the top 10 nationally, enabling its students to experience academic excellence at its best. The college occupies over 30 buildings on the university's North Campus, many of which were built over 40 years ago when engineering program requirements were much different than they are today. Further, given the student demand, many programs lack sufficient classroom and research space. While the college and university make every effort to maintain and improve the college's facilities, they are challenged to keep up with demands for state-of-the-art space to support ever changing fields of engineering study and research. In 2014, the college completed a 62,500 square foot addition to the G. G. Brown Memorial Laboratories, which houses the Center for Excellence in Nano Mechanical Science and Engineering. In 2016, with a combination of university and state capital outlay funding, the college completed a deep renovation of the G. G. Brown Building to accommodate the growing needs of the Departments of Mechanical Engineering and Civil and Environmental Engineering. Thanks to the support from the state, the college was able to renovate the entire building, creating state-of-the-art academic and instructional spaces and upgrading much of the building's mechanical, electrical, and life safety systems. In 2015, the college began a major renovation of the former Ford Nuclear Reactor with a generous gift from long-time donors Bob and Betty Beyster. Opened in spring of 2017, the newly named Nuclear Engineering Laboratory building repurposed the former nuclear reactor space into modern research labs, offices, and student collaboration space to support the growing needs of the Department of Nuclear Engineering and Radiological Sciences. The college is also currently designing a new building, named the Ford Motor Company Robotics Building, to better support its programs and research in robotics and autonomous systems, including autonomous vehicles. This new facility will bring together faculty and students from across departments and schools under one roof and will house state-of-the-art research labs, teaching labs, classrooms, machine shops and garages, and robot test facilities both indoors and outdoors. In a unique and exciting arrangement, the university formalized a long-term lease of space within the Robotics Laboratory for researchers from Ford Motor Company. In addition to a generous gift to name the building, Ford will contribute funding to the project to provide additional space for its needs. Once completed, the building will be a prime example of industry engagement and interdisciplinary research, teaching, and application at the university. While these projects address many of the college's needs for modern teaching and research space, the college still has a number of departments and programs in inadequate spaces that hinder their academic and research missions. The college is currently conducting a strategic facilities master plan on its facilities to identify capital needs and prioritize projects for its departments of Chemical Engineering; Materials Science and Engineering; Naval Architecture and Marine Engineering; and Computer Science and Engineering (CSE). While addressing outdated facilities is critical to maintaining the college's excellence in these fields, the needs of Computer Science and Engineering are most critical to address. CSE currently occupies space in the Bob and Betty Beyster Building, which was designed to meet the department's needs a decade ago when its combined undergraduate and graduate enrollment was less than 600 students. Due in large part to the program's reputation and significant demand for computer science graduates in the job market, the program today has over 1,800 students. Despite experiencing such substantial growth, the department's physical space hasn't changed. CSE has been at 100 percent capacity for the past several years and the space constraints are preventing it from growing its program further to meet market demands and from providing CSE students with the quality experience that they deserve. The college anticipates that the demand for its CSE graduates will continue to grow for the foreseeable future, aligning with national and state trends in this field. As a result, addressing CSE's space need is the highest priority and will be submitted this year for consideration of state capital outlay funding. The proposed solution aims to combine CSE's capital project needs with those of the School of Information (described in the School of Information section), since both have similar types of space needs and would benefit with a combined solution.

School for Environment and Sustainability

The university is making significant, highly innovative changes to its environmental education and research programs. Building on more than a century of leadership in environmental science, management, policy, and design, the School of Natural Resources and Environment (former name) became a new school, the School for Environment and Sustainability (SEAS), as of July 1, 2017. The original school was founded in the late 1880s and was the first of its kind in the country. Since its founding, the school has been a pioneer in developing a scientific understanding of ecosystems, including their conservation, management, and restoration; and trains leaders, assists in policy-making, and teaches the skills necessary to manage and conserve the earth's resources. The school offers degrees at the master's and doctoral levels, as well as certification in fields like conservation ecology, environmental informatics, geographic information system (GIS) and modeling, environmental policy and planning, and sustainable systems. The school's historic home, the Samuel Trask Dana Building, underwent a series of renovations in the 2000s, thanks in large part to capital outlay funds from the state. At the time of completion in 2004, it was the first major academic renovation to receive a LEED gold level rating for sustainable construction in the state of Michigan and among the first in the country. As the newly formed SEAS, the school is currently undergoing a significant transformation and reorganization. The goal of this new school is to dramatically strengthen and expand both the mission and the quality of partnerships with the other schools and programs at U-M dealing with environmental and

sustainability issues. With this type of administrative reorganization and focus, the university expects that space in both the school's historic home in the Dana Building and in their future partners' and affiliates' space will need to be addressed. A study is currently underway to provide pathways to their near-term and long-term space needs.

School of Information

A formal program in library and information studies began in 1926 when the Department of Library Science was created within the College of Literature, Science, and the Arts. The department became a fully independent school in 1969. In response to rapid changes brought on by technology, the school broadened its teaching and research significantly in the 1990s and was renamed the School of Information. Its focus is offering a highly interdisciplinary and collaborative approach education to those who will serve as leaders in the information professions. The School of Information occupies space in the North Quadrangle Residential and Academic Complex (North Quad), which was built in 2010. Since 2010, the school has added two new programs (a Master of Health Informatics and a Bachelor of Science in Information) and experienced significant growth in student enrollment and faculty hires. In 2011, the school had 425 students. Today, the school has 820 students with plans to grow enrollment to 850 students by 2021 (an increase of 100 percent from when the school first occupied North Quad). With its significant growth in programs and enrollment, it is increasingly pressed for space to meet its needs. The school is currently leasing space in two nearby off-campus locations as a temporary solution, but this is costly and won't meet the school's space needs as it continues to grow. Operating from three locations is also a serious challenge for the school and hinders its ability to fulfill its academic mission and build community for its students, faculty, and staff. Identifying a long-term solution to meet the School of Information's needs has been a high priority to the university. The school began formally studying its needs in coordination with the College of Engineering's Computer Science and Engineering (CSE) program (noted in the College of Engineering section). The space and enrollment challenges faced by the School of Information and CSE are similar, and both units would benefit programmatically by having a joint solution. As a result, the university is submitting a combined School of Information and CSE project to the state for consideration for capital outlay funding.

School of Kinesiology

Kinesiology has been part of the University of Michigan curriculum since the turn of the twentieth century. In 1984, a Division of Kinesiology was created and was later designated as the School of Kinesiology in 2008. The school offers bachelor's, master's and doctoral degrees in a variety of subject areas, including athletic training, health and fitness, movement science, and sport management. In 2008, a State of Michigan Capital Outlay project for the renovation and upgrade of Observatory Lodge, now called the Kinesiology Building, was completed which provided classrooms, office, and research space for the school. The project also addressed deferred maintenance, code and accessibility requirements for the building. The school has since experienced tremendous growth and now has programs distributed across multiple on-campus buildings and off-campus leased spaces, which makes it very challenging to foster collaboration and community. In response to the growth in enrollment, faculty hires, and research and the need to collocate these functions, the university recently approved a complete renovation of and

addition to the historic Edward Henry Kraus Natural Sciences Building. This 1915 building currently houses the university's biological sciences programs, which will be relocated in the coming years. The university is very proud to be able to renovate this historically significant Albert Kahn building, while enabling the school to consolidate its programs and accommodate its significant growth. The university is also using this complete renovation to plan for the next generation of modern, flexible team-based learning spaces that will serve both Kinesiology and campus at large. Construction is expected to begin in 2018 and conclude in 2020.

Law School

Since its founding in 1859, the Law School has been a national and international leader in the field of law and educational access—in 1870, the school was the nation's second university to award a law degree to an African American and, in 1871, the first in the nation to award a law degree to a woman. The school's graduates work in every state and all over the world in business, as practitioners and professors, as legislators and members of Congress, and as distinguished civil servants and members of the judiciary. In recent years, the Law School was able to significantly improve and expand its historic and iconic facilities through a series of renovations and construction projects. The school now houses state-of-the-art student interaction and study spaces, improved classrooms, multi-purpose and clinical spaces, and offices for faculty and administrators in the new South Hall building, new Aikens Commons, and partially renovated Hutchins Hall. A gift from Robert and Ann Aikens helped fund the school's recent building and renovation projects. In 2013, the university reopened the newly renovated Charles T. Munger Residences in the Lawyers' Club building, a residence hall adjacent to the Law School. This significant renovation to the historic 1923 building was made possible in large part by a donation from Charles T. Munger.

University Library System

The University Library system can trace its history to 1838, one year after the university's relocation to Ann Arbor, with the purchase of John James Audubon's Birds of America books that are still on display in the historic Harlan Hatcher Graduate Library. Much has changed since the library's founding, but its central role in advancing the university's research and teaching missions continues. Today, the University Library is one of the largest university library systems in the United States, with 13.1 million volumes stored in various buildings around the Ann Arbor campus. The library is also leading the university's efforts in materials digitization, online, distance, and digital education, looking at ways to enhance the effectiveness and efficiency of on-campus teaching and educational technology and at ways to expand the university's outreach to new audiences. Such technological advancements and a general shift in how students and the community interact with collection materials have significantly changed the responsibilities and operations of the library, and as a result, the library has begun to transform the way its buildings are used to provide new ways for the university community to interact with its materials. In 2008, a donation from alumnus Bert Askwith enabled the University Library to renovate a portion of the Shapiro Undergraduate Library Building into high-quality study and collaboration areas with a small food service operation to meet student needs. The building now operates 24-hours-a-day to accommodate the demand on its spaces and collections. Although the university continues to invest in library facilities to address infrastructure needs and to accommodate changes in use,

the library still struggles to meet campus needs in its historic buildings. The University Library currently leases several off-campus properties to help relieve pressure in overcrowded oncampus collection facilities and would like to find a better, long-term solution (a large repository) for these needs. To partially satisfy their need for safer and stricter temperature controls for collections, the university is completing a modest renovation to a building at the North Campus Research Complex for this purpose. This space will also be used by a number of other departments on campus to better preserve high-priority collections, including items such as ancient or historical musical instruments and costumes, university and State of Michigan records, and other paper materials requiring a more stable environment for preservation. The University Library has also identified the need to modernize and create space for the next generation of student and faculty oriented services in their facilities on Central Campus, including the historic Harlan H. Hatcher Graduate Library.

College of Literature, Science, and the Arts

The College of Literature, Science, and the Arts (LSA), founded in 1841, was the first duly constituted college of the university. Distinguished in the humanities since its earliest years, the college became preeminent in the natural sciences during the early twentieth century and went on to become a leader in social science research. As the largest college on campus serving the greatest number of undergraduates, the college's departments and centers are housed in several buildings on Central Campus. The university is continually making improvements to these spaces to keep up with its ever-changing fields of study and research. LSA's most urgent need has been to provide improved and collocated research, teaching, administrative, and exhibit space for its programs in Ecology and Evolutionary Biology; Molecular, Cellular and Developmental Biology; and the Museums of Natural History, Paleontology, and Zoology. This need is being addressed by the construction of a new 300,000 gross square foot Biological Sciences Building, expected to be complete in 2018. This building will also connect to the Life Sciences Institute building in order to share core research facilities, resulting in a significant savings in overall cost of building construction. Related to this project, the university recently renovated an off-campus university warehouse building, to create a state-of-the-art storage and research facility, called the Research Museums Center, for the collections of the programs and departments noted above. A generous donation from Ambassador Ronald Weiser and Eileen Weiser enabled LSA to repurpose the former Dennison Building, now Weiser Hall. Opened for the fall 2017 term, the project transformed the 1963 facility comprised mainly of outdated classrooms into an academic center for programs and institutes with international and interdisciplinary themes. The collocation of these programs, previously housed in numerous buildings across campus, provides students, faculty, and staff with a single location for these academic centers and services and also enhances programmatic synergies and overall operational efficiencies for the college. LSA is currently planning a modest renovation and addition to the Literature, Science, and the Arts Building. The goal of this project is to provide students with a gateway to explore the connection between their liberal arts education and their goals and aspirations in the real world. The new student services space will provide access to a wide variety of experiences and opportunities, including internships, study and work abroad options, funding and employment opportunities, and connections to college alumni. Lastly, LSA also has a pressing need to increase both the number

and the quality of instructional spaces to support both existing and developing curriculum and teaching methodologies, particularly team-based learning methodology. The university is looking at options to address both the LSA and university-wide need for modern, team-based instructional spaces.

Medical School

Since opening its doors in 1850, the Medical School has been a leader in medical education, biomedical research, and patient care. In addition to its professional Doctor of Medicine program, the school offers master's and doctoral degrees in the basic medical sciences. The school is renowned for its many firsts in medicine, including establishing the nation's first universityowned and operated teaching hospital and creating the first departments of pharmacology and human genetics in the United States. The Medical School was also among the first major American medical schools to admit and graduate women and minorities. In an effort to maintain its excellence in all areas of its mission, the Medical School continues to renovate and modernize instructional and research facilities as priorities dictate and funds allow. The school's ongoing activation and renovation of the North Campus Research Complex (formerly the Pfizer research and development headquarters) has provided faculty and staff immediate opportunities to expand interdisciplinary research and programs and translational research programs, such as emergency medicine. The university is proud to have activated and leveraged the NCRC campus and the complex is now home to more than 3,000 faculty, staff and external partners. Additionally, the school is taking advantage of recently renovated A. Alfred Taubman Health Sciences Library building—home to many of the school's medical student education programs. The facility reopened for the fall 2015 term and now houses high-quality, contemporary teaching, clinical simulation, student services, and study space. The school is also in the process of renovating space throughout the Medical Campus to create more modern, modular, and flexible research labs. Shifting from traditionally dedicated, smaller labs to the modular configuration has been a priority for the school in all lab renovations in recent years, and it allows them to accommodate growth for existing and new research and to manage operational costs more effectively.

School of Music, Theatre & Dance

As one of the oldest and largest schools of music in the United States, the School of Music, Theatre & Dance ranks among the top conservatories and schools of music in the country. Degrees are offered at the bachelor's, master's, and doctoral levels in nearly all fields of music, dance, and theater. The school's academic programs are distributed across six buildings on North and Central Campuses. The university recently completed the renovation of the Power Center for the Performing Arts, one of its signature performance venues, to update life safety and other building infrastructure. In 2015, the school completed a significant facilities project to renovate and expand the school's principal building, the Earl V. Moore Building, made possible by a generous donation from William K. and Delores S. Brehm. The project included new and updated rehearsal halls, new state-of-the-art classrooms and technology suite, more student practice rooms, and improved faculty space. Having programs and operations distributed across multiple buildings on two campuses continues to be a challenge. This includes the dance, musicology, and music education departments, as well as other key administrative functions for the school. The school and university have identified relocating Dance as a high priority and are beginning to study how to locate this program closer to the main Moore building and other North Campus facilities. Additionally, the school has identified the need to expand student practice rooms and improve its administrative space to better support students, faculty, and staff. In 2017, the university completed a modest infrastructure improvement project to Revelli Hall, constructed in the early 1970s and home to the university's world renowned marching band.

School of Nursing

The School of Nursing has maintained a reputation of excellence for more than 100 years and has been a national leader in the advancement of nursing knowledge and the promotion of trends in health care since its founding. The school offers bachelor's, master's, doctoral, and certification programs in a wide variety of nursing fields, such as pediatrics, gerontology and midwifery. In 2015, the school completed construction on a new 78,000 gross square foot building adjacent to their current building. The new building provides active-learning classrooms, a technology rich clinical learning center with simulation and skills labs and simulated patient suites, offices for student services and a few faculty offices. With the opening of the new building, the School of Nursing now has its programs and operations distributed across two buildings. The existing building, which is over 100 years old, will eventually need attention or be replaced.

College of Pharmacy

Established first as a department in 1868, Pharmacy became an independent college in 1876, the first at any university in the United States. Today, Pharmacy is the oldest college of pharmacy in the country and is ranked as one of the top 10 programs nationally, offering a number of bachelor's, master's, and doctoral degrees in fields such as pharmaceutical sciences, pharmaceutical engineering, and medicinal chemistry. The college is also actively involved with other health science schools and colleges on campus in developing and teaching interprofessional health science courses that provide a holistic, real-world approach to healthcare education, bringing together students from multiple health science programs (pharmacy, medicine, social work, dentistry, public health, etc.) to focus on patient-centered care. In addition to contributing well-trained pharmacists to the health care industry, the college also plays an instrumental role in research, providing a hub that intersects basic, clinical, and social science disciplines with leading research centers and scientific institutes. Its translational research/drug discovery center plays an instrumental role in taking advanced projects in early drug discovery from idea to clinical proof-of-concept. Other research with the Federal Department of Agriculture (FDA), pharmaceutical industry, and in innovating pharmacy care in physician organizations also contribute to better healthcare of citizens in the state, nation, and world-wide. The college has been successful in delivery high-quality education and research, but this is becoming harder to do in its current facilities. The college currently occupies space in six buildings on campus, excluding clinical space, five of which date from 1909 to 1960. For a small college like Pharmacy, being physically distributed across this many locations significantly challenges its ability to meet its core academic, research, and clinical mission, to building a sense of community within the college, and to operate efficiently. While the university completed a modest building renovation in 2013 to reconfigure spaces in the College of Pharmacy Building to address some mechanical and electrical issues and improve student, faculty, and administrative

spaces, the college continues to be significantly challenged to meet its research and team-based learning pedagogical needs. The college has been exploring ways to reconfigure existing spaces to construct team-based learning spaces in their building, but the outdated building infrastructure is unable to accommodate this need—severely hindering the college's desire to shift more curriculum in this direction. Having research labs distributed across multiple buildings with outdated infrastructure and structural limitations also limit the college's ability to conduct cutting edge research. Addressing Pharmacy's needs is one of the university's highest priorities when funding is available.

School of Public Health

Though formally established in 1941, the School of Public Health can trace its beginning to 1887 when the first professor of hygiene was appointed, and to 1897 when the university awarded its first degree in that field. Today, the school offers master's and doctoral degrees in fields such as biostatistics, environmental health sciences, epidemiology, health behavior and health education, nutritional sciences, and health management and policy, and health informatics. For fall 2015, the college began offering undergraduate courses for the first time, and in fall 2017, it formally launched two undergraduate degree programs. Over the past decade, the university made a series of renovations and an expansion to the school's existing buildings to provide higher quality research, classroom, and administrative space, as well as to make significant infrastructure improvements to its research-heavy facilities.

Gerald R. Ford School of Public Policy

The Gerald R. Ford School of Public Policy traces its history to the founding of the Institute of Public Administration in 1914, the first university program in the United States to provide a systematic course of study in municipal administration. Today, named in honor of Gerald R. Ford, the 38th President of the United States and an alumnus of the University of Michigan, the school prepares graduates for distinguished careers in policy analysis and management and promotes improved public policy through research. Its graduates work in government and in the private and nonprofit sectors all over Michigan, the United States, and throughout the world. Traditionally a graduate and professional school, the school launched a highly successful undergraduate degree program in 2007. Thanks to a generous gift from Joan and Sanford Weill, the school was able to consolidate into a single building, named Weill Hall, in 2006. The school is beginning to look at how to use their existing facility in new ways to accommodate changes to their research and pedagogy.

Horace H. Rackham School of Graduate Studies

The Horace H. Rackham School of Graduate Studies oversees and coordinates graduate education, bringing together graduate students and faculty from across the institution to experience and take full advantage of the university as a scholarly community. In 2003, a major renovation of the historic Horace H. Rackham Building, originally constructed in 1938, was completed. Additional infrastructure improvements to the facility were completed in 2015. Given the iconic building's age, historic significance, and its prime location as an event and study facility on Central Campus, it is a building that will require on-going upkeep.

School of Social Work

The program in Social Work began in 1921 and was granted the status of a school in 1951. The School of Social Work consistently ranks as one of the top programs in the nation and offers master's and doctoral level degrees and continuing education that prepare practitioners, researchers, and academics in the fields of interpersonal therapy, community organization, management of human services, and social policy and evaluation. Its graduates work throughout Michigan, the U.S., and the globe, with individuals, children and their families, organizations, and communities in such fields as substance abuse, aging, mental health, education, child and public welfare, and public policy. In 2011, the school completed a renovation of the lower level of its building, which repurposed space previously housing a small library into areas that enable students to practice and observe clinical approaches, accommodate expanded continuing education programs, and provide much needed student collaboration and study space. The school recently identified the need for additional space for a variety of administrative, faculty, and instructional functions. The school will soon expand into other areas of the School of Social Work Building, in space previously occupied by a number of non-social work related functions. With this additional space, the school expects to be able to address some of their pressing space needs noted above.

Other Initiatives Impacting Facilities and the Economic Development Impact of Current/Future Programs

As one of the top-ranked public and research institutions in the world, the University of Michigan is fully committed to its role of stewardship and contributing to the state's economy. The university supports students and faculty well beyond the traditional walls of studies and research by creating an environment that fosters innovation, robust collaborations and partnerships, and by providing resources to transfer education and research into applications. Several endeavors are underway that impact current and future facilities usage, and also spur economic development in Michigan and beyond.

Leadership in Transportation, Automotive and Autonomous Systems Research

The University of Michigan has historically held a leadership role in automotive and transportation research and continues to view its strong partnerships with the state government, federal government, and the private sector, particularly automakers, as essential to the application of the university's research and to the state economy.

 In 2013, the university established the Mobility Transformation Center (MTC), a universitygovernment-industry partnership formed at U-M to transform global mobility by dramatically improving transportation safety, sustainability, and accessibility. Mcity, a cityscape designed expressly for testing connected and automated (including driverless) vehicle systems was launched in 2015. The MTC draws on U-M's broad strengths in engineering, urban planning, energy technology, and information technology to accelerate progress in diverse areas such as connected-vehicle systems, driverless or autonomous vehicles, shared vehicles, and advanced propulsion systems. A key focus of the MTC is a series of model deployments that will enable researchers to test emerging concepts in connected and automated vehicles in on-road settings. Through interdisciplinary cooperation, MTC also addresses the many social, political, regulatory, and economic issues inherent in the transition to new mobility technologies and systems. The MTC collaborates closely with its state and federal government founding partners as well as private sector partners including auto manufacturers and suppliers, insurance, telecommunications, data management, and mobility services companies.

- The U-M Transportation Research Institute (UMTRI) is a research institute that collaborates
 with other university units and with public and private sector institutions and automakers. Its
 mission is to achieve safe and sustainable transportation, increase driving safety, and further
 transportation systems knowledge through interdisciplinary research. UMTRI's portfolio is
 vast and its research covers areas such as vehicle safety and injury biomechanics; connectedvehicle research and testing; sustainable mobility systems; transportation data fusion and
 analysis; and the efficient movement of heavy freight.
- The College of Engineering has a strong portfolio dedicated to automotive and transportation
 research and works closely with UMTRI and national and local institutions and business in
 finding solutions to real world problems. Its research and outreach activities on these topics
 take place in its Mechanical Engineering department and in a variety of centers within the
 college, such as the Automotive Research Center, a partnership with the U.S. Army; the
 National Science Foundation (NSF) Engineering Research Center for Reconfigurable
 Manufacturing Systems; the General Motors/U-M Institute of Automotive Research and
 Education; the Advanced Battery Coalition for Drivetrains; the Ground Robotics Research
 Center for research on mobile robots and autonomous vehicles; and the NSF Emerging
 Frontiers in Research and Innovation Program for research on electric power grid
 infrastructures and plug-in hybrid electric vehicles.

Lightweight Materials Manufacturing Research and Application

Founded in 2014 with U-M as a founding partner, the consortium LIFT, or Lightweight Innovations for Tomorrow, is a public-private partnership headquartered in Detroit with a mission to develop and deploy advanced lightweight materials manufacturing technologies and to implement education and training programs to prepare the workforce. LIFT serves the U.S. manufacturing sector by supporting innovative manufacturing technologies, and enabling cost-effective light weighting of components used in transportation systems. Target manufacturing sectors include automotive, aerospace, defense, over the road truck, and rail. The institute's partners identify priorities for technology, workforce, and supply chain development, as well as provide financial support for precompetitive research. This effort aims to yield results in technology insertion, maturation, and opportunities for commercialization. LIFT also develops relevant manufacturing workforce, education, and apprenticeship programs that can reach students at all levels of the education system.

Leadership in Data Science Research and Application

The University of Michigan is investing \$100 million in a Data Science Initiative (DSI), launched in fall 2015, to enhance opportunities for student and faculty researchers across the university to develop the enormous potential of big data. Progress in a wide spectrum of fields ranging from

medicine to transportation relies critically on the ability to gather, store, search and analyze big data—collections of information so vast and complex that they challenge traditional approaches to data processing and analysis. The DSI plans to support this with the hiring of 35 new faculty over several years and with the engagement of existing faculty across campus and by supporting interdisciplinary data-related research initiatives to foster new methodological approaches to big data. Industry engagement is also central to the initiative, with a particular focus on the automotive, advanced manufacturing, chemical, finance, health care and pharmaceutical sectors, and the DSI will also support future and existing research that have practical applications in all of these fields. In one project at U-M's Transportation Research Institute, for example, researchers have collected a continuous stream of data at a rate of 10 times per second from each of nearly 3,000 private cars, trucks and buses on the streets of Ann Arbor in order to test the operation of connected vehicles. The DSI will help collect, store and analyze the huge amount of data being generated as researchers expand the number of vehicles to more than 20,000 across Southeast Michigan. In medicine and public health, U-M researchers seek to use big data to boost the effectiveness of data-driven biomedical and health research to accelerate the translation from basic research to patient care. By sifting through the massive amount of data generated from DNA sequencing, medical histories and other sources, for example, the DSI will help researchers looking to more precisely diagnose or assess an individual's risk for certain types of cancer and to formulate the most effective personalized therapies.

Economic Growth Institute

The Economic Growth Institute leverages the University of Michigan's resources, research, technologies, and expertise to foster innovation and create positive economic impact for local, state, national, and global communities and economies by working with small and medium-sized enterprises.

- The institute works with companies that are considered to be strategically critical to the economy. During the great recession, the institute worked with 200 Midwest manufacturing companies, important to the automotive supply chains, that were predicted to declare bankruptcy within six months. After conducting 1) financial analysis and restructuring, 2) market analysis and new customer support, 3) operational excellence strategies, and 4) assistance with adopting new university technologies to improve companies' competitiveness; 198 companies survived.
- The institute works with companies that are launching their first technical product, or an existing technical product into a new market. For example, the institute worked with a small rural company that had developed a waterproof fabric and was selling outdoor clothing. The institute's team of project managers searched for and found faculty to develop a flame retardant fabric treatment at a university and helped the company integrate the technology into their design. The institute then found a customer that needed a waterproof, flame-retardant fabric to manufacture military tents.
- The institute works with communities that would like to improve their economy. With funding from the USDOC-EDA in response to the automotive crisis, U-M Economic Growth

Institute formed and led rapid response teams at the University of Michigan, Ohio State University, Cleveland State University, Purdue, and the University of Wisconsin-Whitewater. These teams worked with communities experiencing the adverse impacts of 50 major auto manufacturing plant closings. At the end, there was approximately 350 million square feet of empty manufacturing space in the six-state EDA Chicago region. At that time, the institute launched the National Catalog of Excess Manufacturing Capacity and created a matching algorithm and website for foreign direct investment, targeting site selectors internationally. One site was the General Motors Willow Run plant in Michigan. The institute was part of the team that facilitated a transaction that transferred ownership of the site to the American Center for Mobility (ACM) that is now located on the 350-acre site and transforming into the nation's premier research facility, certification site, and test and development location for connected and autonomous vehicles. The ACM when fully operational is expected create hundreds of jobs, spin-off innovations and startups, and to be the national center for testing, evaluation and certification for advanced mobility.

Technology Transfer and Business Engagement

The U-M Office of Technology Transfer is the organization responsible for bringing university research to the marketplace. The office enhances university research discoveries to encourage licensing and broad deployment with existing businesses and newly formed U-M start-ups; the Michigan Venture Center, which opens the university to entrepreneurs and venture partners interested in start-up opportunities; and the Venture Accelerator. In addition to these programs, the Office of Technology Transfer provides patenting, licensing, legal, and general decision-making and business advice to the U-M community. Tech Transfer also had a record 172 U.S. patents issued in fiscal year 2017. It also signed 173 license and option agreements with companies seeking to commercialize the discoveries of university researchers in the past fiscal year. In 2011, the university opened the Venture Accelerator at the North Campus Research Complex to provide space and resources for up to five years for start-up companies emerging from new ventures at the Office of Technology Transfer. Through its Venture Center, the office averages one new startup every four weeks.

The Business Engagement Center, which is collocated with the Office of Technology Transfer, has a mission to strengthen the university's ties to business and community partners and to help revitalize and diversify Michigan's economy. Acting as a gateway to the university, the Business Engagement Center assists business and community partners in maximizing their growth potential by identifying and accessing the university's vast resources, including research discoveries, new technology, high-tech facilities, student and alumni talent, continuing education programs, and strategic giving opportunities.

Precision Health

In 2017, the university launched a new initiative to harness campus-wide research aimed at finding personalized solutions to improve the health and wellness of individuals and communities. Precision Health brings together researchers from across campus and combines biomedical expertise with big data and social science approaches to tailor health solutions for the population. This initiative is about more than traditional personalized medicine, and there

are three complementary components: discovery, treatment, and implementation. An initial Precision Health project will focus on the prescribing of opioids to manage pain from surgery. For this project, researchers will identify risk factors that might increase the likelihood of someone becoming a chronic opioid user – based on each patient's health, genetics, social, environmental and lifestyle factors. From there, they can create guidelines to tailor pain management plans and reduce opioid prescriptions.

Poverty Solutions

The university launched Poverty Solutions in 2016, an initiative dedicated to the prevention and alleviation of poverty. While rooted in an understanding of the causes and consequences of poverty, Poverty Solutions engages multiple disciplines and extends beyond basic research. It drives change by focusing on collaborative, action-based research partnerships with communities, policymakers, and stakeholders. U-M students at every level have opportunities to work and learn with real-world practitioners, testing strategies to change the trajectory of poverty in a meaningful and lasting way. Projects within the initiative include a summer youth employment program and research on housing instability and the employment of a less educated workforce.

Sustainability and Great Lakes Research

The University of Michigan has long been engaged in many aspects of sustainability, and in recent years has begun focusing resources to spur progress in this critical arena. Through a number of research centers and initiatives, the university is finding realistic solutions to many major sustainability problems—whether related to energy, water conservation, air pollution, or transportation. In the coming years, we expect research, application, and partnerships in these area to increase significantly with the recent announcement by the university of a new school of sustainability.

- The Great Lakes Integrated Sciences and Assessments Center (GLISA) is a collaboration of the University of Michigan, Michigan State University, Ohio State University, and Michigan Sea Grant. GLISA's focus is mainly the watersheds of Lake Huron and Lake Erie in Michigan, Ohio, and Ontario, but also encompasses the broader Great Lakes basin. Its research and outreach spotlight critical sectors in the region—agriculture, watershed management, urban management, water quality, and natural resources-based tourism.
- The University of Michigan Water Center, part of the university's Graham Environmental Sustainability Institute, was established in October 2012 to bolster freshwater ecosystem restoration and protection efforts. The center engages researchers, practitioners, policymakers, and nonprofit groups, and its initial efforts are focused on the Great Lakes with an emphasis on working closely with academic colleagues and practitioners in the region to improve restoration outcomes. The U-M Water Center is extending its reach beyond the Upper Midwest with a five-year, \$20 million cooperative-agreement contract to join the National Oceanic and Atmospheric Administration. The center now oversees research at a nationwide network of 28 coastal reserves and help coordinate the National Estuarine Research Reserve System's collaborative science program. This program supports water

quality monitoring and long-term research on the impacts of land-use change, pollution and habitat degradation in the context of climate change trends. The overarching goal is improved stewardship of these economically significant estuaries.

Academic and Practical Training Programs in Entrepreneurship

The university is committed to fostering and nurturing the entrepreneurial spirit with faculty and students through academic programs and incubator-like centers across campus:

- The Zell Lurie Institute, part of the Ross School of Business, is a globally recognized academic program in entrepreneurial studies. The program provides curriculum, program initiatives, community involvement, and alumni outreach activities that deliver exclusive resources for future entrepreneurs at the university. The institute's innovative real-world approach and the Ross School of Business's traditional management excellence encourages, nurtures, and prepares students for entrepreneurial careers and to be leaders for new venture creation and growth.
- The Center for Entrepreneurship, part of the College of Engineering, connects current students with Michigan alumni in the start-up community; provides grants for students to pursue their own ideas for companies and products; supports, simplifies and clarifies intellectual property transfer processes for students and the broader community; and develops entrepreneurship-focused programming on campus. The Center for Entrepreneurship is responsible for launching brand new courses and formal academic programs focused on entrepreneurship and for co-managing the TechArb student startup accelerator, described below.
- TechArb, supported by the Center for Entrepreneurship and the Zell Lurie Institute, is a student venture accelerator program at the university. TechArb provides community space in Ann Arbor for students to interact with each other and with mentors, who include experienced entrepreneurs, investors, venture capitalists, accountants, and lawyers—often U-M alumni. Mentors and TechArb staff hold regular office hours with students to help them work through their ideas with the goal of building and growing actual companies. TechArb also provides students with summer grants so they can work full time on their venture. Numerous companies have been founded by students and cover a wide range of areas from the development of software applications for mobile devices to a clothing manufacturing company that uses recycled and eco-friendly materials.
- Innovate Blue, launched in 2014, is the university's academic home for entrepreneurial activities for undergraduate students, and it connects them to many of the programs and opportunities noted above. Innovate Blue is home to a 15-credit minor in entrepreneurship that equips undergraduate students from any background or area of study with the necessary skills and experience to translate ideas into real impact in the arts, sciences, commercial, and social areas. Innovate Blue also has a 9-credit supplemental program aimed at an even broader audience of students who want formal coursework in this field.

Energy Institute

Established in 2006 and building on the legacy of the Michigan Memorial Phoenix Project, which began in 1948, the Energy Institute builds on a strong energy research heritage at the heart of the nation's automotive and manufacturing industries to develop and integrate science, technology and policy solutions for the world's pressing energy challenges, in order to address the demand for economically and environmentally sound energy solutions that are urgent and global. In 2013, an addition to and renovation of the Michigan Memorial Phoenix Laboratory was completed for the Energy Institute. This project replaced building systems and created state-of-the-art laboratory spaces for energy-related research. The institute recently opened its Battery Fabrication and Characterization User Facility, a space developed in cooperation with the Michigan Economic Development Corporation and Ford Motor Company, to enable industry and university researcher collaboration on developing cheaper and longer lasting energy-storage devices.

University Research Corridor

One example of the university's commitment to the state's economy is its role in the University Research Corridor (URC), a collaboration between the University of Michigan, Michigan State University and Wayne State University that focuses on stimulating economic development in the state and region by leveraging the collective research assets of the three institutions. The URC is an umbrella organization that disseminates information to key stakeholders, including the business community, researchers and students, policymakers, and other investors. In doing so, the URC enhances outreach and collaborative efforts, speeds up technology transfer and development, and communicates the advantages of doing business in Michigan. The URC retained its second-place standing in the Innovation Power Ranking among the nation's most respected innovation clusters for the fourth year in row. The URC contributed \$16.5 billion in state economic activity in 2016 alone. Since 2002, the URC has cultivated 210 start-up companies, including 79 that have formed in the past five years.

Academic and Research Programs in the City of Detroit

The University of Michigan was founded in Detroit in 1817 and has continued its commitment to the city for 200 years. Currently, over 300 U-M programs and activities are held in the city that include education, research and scholarship, community service and outreach, and cultural exchange that mutually enrich both the U-M and Detroit communities.

A few examples of the university's Detroit partnerships and connections include:

 Sponsored and non-sponsored research projects with Wayne State University, Henry Ford Health System, the Karmanos Cancer Institute, the Automotive Research Center, the Detroit Schools Higher Education Consortium, and various local community groups. A recent example comes from the School of Public Health, which is working to combat health issues like asthma and cardiovascular disease through a \$2.8 million grant from the National Institute of Health and Environmental Sciences. To implement the grant, U-M researchers have partnered with academic peers and Detroit community organizations to form Community Action to Promote Healthy Environments, a collaborative initiative to help improve air quality and resident health in Detroit.

- Engaged learning opportunities and arrangements that enable U-M students to apply what they've learned in the classroom to real life, such as student teaching assignments in the Detroit Public Schools and clinical placements in Detroit-based hospitals, clinics, medical practices, and schools.
- Community service and outreach that immerses U-M students, faculty, and staff in the Detroit community through programs such as Michigan Engineering Zone that exposes Detroit middle and high schools students to science, engineering, and technology through hands-on learning experiences and the Semester in Detroit program where U-M students live, study, and work in Detroit, interning with Detroit-based community and cultural organizations to strengthen and transform themselves and to make a positive impact on the Detroit region.
- The university is exploring additional ways to work with Wayne State University toward common goals in Detroit.
- The university is currently exploring opportunities to better leverage the Horace H. Rackham Education Memorial building in Detroit to further its programs and outreach within the city. The first step is the purchase of approximately one third of the building not owned by the university that could make way for a future renovation.

STAFFING AND ENROLLMENT

Enrollment at the University of Michigan – Ann Arbor has been slowly increasing, from 33,600 in 1969 to about 46,000 today, with the intent to maintain enrollment within a few percent of this level over the next five years. The university believes that this represents a level appropriate for the size of the university's faculty, facilities, and funding. Increased enrollment in key programs is expected, for example, we anticipate an increase in demand for instruction in fields such as computer science and engineering; information sciences; and biological, biomedical and life sciences. Education in these fields is an important part of the university's mission, and it meets a very real need in the state and the nation. Detailed enrollment data by school and college follows this page.

Average class size varies by discipline. In the fall of 2016, 60 percent of the sections taught to undergraduate students contained fewer than 20 students. Some sections are taught to large groups where appropriate; sections with 50 or more students represented about 17 percent of the undergraduate sections taught in the fall of 2016.

Total headcount enrollment has grown by about 15.5 percent since the fall of 2006, and the volume of research has increased 75 percent. The number of General Fund full time equivalents (FTEs) has grown by about 12.9 percent overall from the fall of 2006 through fall of 2016. Non-academic staff General Fund FTEs grew by about 12.2 percent while the university has deliberately grown the General Fund academic staff ranks, which are up 14 percent since fall of 2006. Furthermore, in the past several years the university has launched initiatives to hire 150 new faculty members in a concerted effort to improve student-faculty ratio.

Impact of Distance Learning

Distance learning has been primarily used to combine technological advances with current methods of instruction for on-campus students. Some academic units, such as the College of Engineering; the College of Literature, Science, and the Arts; the School of Nursing; the School of Public Health; and the Stephen M. Ross School of Business, use distance learning to supplement their Ann Arbor offerings. This approach enhances the quality of the education provided to our students by ensuring that we maintain our competitive edge. Although this area is expected to grow, the university does not anticipate replacing on-campus programs with distance education, nor does the university expect the number of off-campus students to affect the overall enrollment.

FACILITY ASSESSMENT

Space Management

The university has campus-wide policies, processes, and reporting tools to support a culture of agile space management, more efficient utilization, and coordinated planning. The policies and tools address all types of space, including instructional, research, office, and food operations, and reinforce a culture where space is considered more of an institutional resource that is to be shared and managed effectively for the good of the institution.

Tools to measure classroom utilization and class time offerings and distribution have led to more efficient use of classrooms throughout the day and week and enable the campus to better manage demand during peak hours.

The campus better utilizes existing General Fund space overall and emphasizes renovating and repurposing space to meet campus needs first, before considering building expansion. Examples of creative repurposing include renovating:

- A decommissioned research facility at the North Campus Research Complex to house library, art, and other historical collections.
- Weiser Hall, an aging and outdated 1960s classroom building, to house international programs and other centers and institutes currently housed in numerous buildings around campus.
- A number of lesser-used classrooms in the Modern Languages Building into a testing center for students with special test-taking needs.
- A previously vacant university-owned warehouse, the Varsity Drive Building, into a multi-use facility that houses research labs and specimen collections for the College of Literature, Science, and the Arts.
- The former Ford Nuclear Reactor into the Nuclear Engineering Laboratory building a project that increased overall space utilization, resulting in a 20 percent increase in the total building square footage.

Through more disciplined practices and culture change, the university has slowed the growth of new General Fund space in the past 10 years. This would not have been possible without the campus-wide policies and tools described above.

Physical Properties

The university owns approximately 3,200 acres of property within the Ann Arbor area and approximately 21,000 acres overall (most within the State of Michigan). A summary of the university's land holdings is included as part II at the end of this section. A building list for the Ann Arbor area is also included as part III. The report includes the following attribute data: building number, building name, location, building type, gross square feet, original construction date, and the deferred maintenance backlog for the building. The approximate replacement value of the Ann Arbor area campus facilities is \$9 billion.

Facility Condition Assessment Program

The university's Facility Condition Assessment (FCA) program evaluates buildings on campus in an effort to identify infrastructure deficiencies and establish a priority for funding renovations and repairs. The objective of the program is to develop and maintain a 5-year model for buildings showing facility related needs (projects) and track the status of each project through completion. The model considers the highest priority needs and spreads such needs over a 5-year period. Needs addressed in the database include building components and systems: architectural, structural, civil, mechanical, electrical, occupational safety and security, life safety and fire protection, environmental health, and building accessibility. The database provides a good baseline of the overall condition of General Fund buildings. Overall, the FCA program provides a platform to implement an ongoing system of identification and prioritization of capital repair projects at the U-M. A more detailed description of the FCA program is located later in this section.

Campus Parking Structure Assessment

To complement the information in the FCA Program, the U-M every five years engages a parking restoration consultant to assess the condition of the existing parking structures within the system to develop a system-wide maintenance program that serves as a guide for future repairs and cost estimates (adjusted for inflation). An update to this Capital Improvement and Protection Plan (CIPP) was completed in 2015. While continually planning for parking on campus, the university also developed strategies for alternative transportation modes. Some examples include expanded bicycle access, ride share programs, and potential for high-capacity transit systems partnered with the City of Ann Arbor.

The existing parking system provides approximately 28,00 parking spaces to the university community members as well as visitors. The university has 15 parking structures and plus joint ownership with the City of Ann Arbor of a 16th structure, providing approximately 13,000 parking spaces.

The parking structures on campus vary in both type of construction, level of previous repairs and current condition. The plan for facility repairs and improvements based on the CIPP was continued. Replacement of the elevators at Glen structure, begun in 2015, was completed in March 2017. Other projects recently completed include concrete repairs and continuation of drain system repairs at Fletcher structure; installation of stair tower windows and concrete and waterproofing repairs at Simpson Circle Drive structure; concrete and waterproofing repairs at East Medical Center Drive, Palmer and Cardiovascular Center structures; and replacement of the elevator thresholds at Hill structure.

Numerous parking lots received asphalt repair maintenance, up to and including complete asphalt mill and overlay. Fiber-reinforced asphalt was used at three locations to assess its performance against traditional asphalt. This asphalt mix is designed to improve long-term performance against fatigue cracking and rutting deformation. Parking lot NC53, located on Hubbard St., is being expanded to provide approximately 300 additional spaces. Work will occur

concurrently with installation of the DTE Energy apex substation and spaces are anticipated to be available in January 2018.

Several staff participated on a committee for site improvement planning at the North Campus Research Complex (NCRC). The outcome is a near-term (5-year) program of site work to improve circulation, bus service and parking in advance of planned building occupancy. The first phase of that plan was completed earlier this year and included roadway improvements and reconstruction/expansion of two lots providing 50 additional parking spaces. Proposed 2018 projects include construction of a new lot on the site of a demolished building and reconstruction/expansion of an existing lot that combined will provide approximately 100 spaces.

Improving the sustainability features of the university's parking facilities continues to be a key goal. Installation of new LED lighting with integrated controls was completed in 2017 at Ann structure, and a similar relighting project to be completed in early 2018 is underway at North Entrance structure. Lighting upgrades using programmable LED fixtures also were completed in six parking lots, part of a multi-year plan of lot lighting improvements.

Additional projects planned for 2018 include completion of the final phase of drain system repairs and traffic topping installation at Fletcher structure; concrete and waterproofing repairs at Church, Glen, North Entrance and Ann structures; handrail replacement and stair repairs at NCRC structure and interior painting at North Entrance structure.

Utilities Assessment

Utilities master planning assessments are routinely updated to ensure the necessary production, distribution and collection systems for steam, natural gas, compressed air, potable water, electricity, chilled water and sanitary and storm sewer systems are in place to support the facilities needed to accomplish the university's academic and research missions. Projects are identified and implemented annually from these assessments. Currently, the university is planning to expand the electric generating capacity of the Central Power Plant by 15 MW. The additional power would be provided by gas turbine technology. Implementation of this arrangement will reduce university scope two emissions by approximately 100,000 MT of CO2 yearly and provide capacity for future growth load. The aging electrical switchgear in the Central Power Plant as well as several campus switching stations on central campus are planned for replacement over the next several years.

The steam tunnel system is in the midst of being reinforced in select areas to accommodate the weight of fire trucks that need to drive over the tunnels to access buildings. Projects on Ingalls Mall and Monroe Mall and near the Ruthven Museum Building were recently completed. Near term projects are planned along South University Avenue near Shapiro Library (2019) and in the area of the Medical School (2019).

Water, sewer, and storm water master planning efforts have routinely been conducted over the years. Projects that come out of these planning activities are prioritized into a capital plan. Over the next two years the following projects are anticipated to take place: water main replacement

on Hubbard Street; water main replacement on Bonisteel Boulevard; and a large stormwater detention/infiltration system near Mason Hall designed to eliminate or significantly reduce the flooding potential to buildings surrounding the Central Campus Diag. The university is also working with the city to model the storm and sanitary systems on Central Campus with the goal of developing a long-term plan for addressing a number of legacy issues that have existed for some time.

Facility Condition Assessment Program

Overview

The FCA Program includes a comprehensive database on the physical condition of the building portfolio. The database addresses the condition of most major building components and systems, including architectural, structural, civil, mechanical, electrical, life safety and fire protection, environmental health and occupational safety, and building accessibility. Deficiencies and anticipated needs are listed in the database as independent projects and assigned a priority, estimated budget, and classification. Costs related to the presence of environmental hazards (asbestos and lead-based paint) are not included. While the university has attempted to make the FCA Program as comprehensive as possible, it is a policy-neutral, technical assessment of existing conditions. It does not include costs related to programs and/or the reconfiguration of building spaces.

The FCA building condition and cost data are intended to serve the university community by: (1) identifying near-term needs to maintain standards and assure the service integrity of aging systems and building components; and (2) providing an information base to support the institution's process for shaping the future of its campus. The FCA Program, therefore, is not a comprehensive capital plan for building renewal.

Recommended scope of work is aimed at restoring the existing buildings as they presently exist, with some upgrades to meet codes, such as accessibility, and social norms, such as air-conditioning.

Program Benefits

The FCA Program provides the platform that is used to implement an ongoing system of identification and prioritization of capital repair projects within the U-M. The FCA Program has a wide range of benefits to several different departments within the university and provides:

- A central location for storing of facility condition data.
- A useful tool for organizing and prioritizing all deficiency corrective measures using standardized criteria. FCA reports can be viewed and printed using a wide variety of criteria.
- A facility condition needs index (FCNI) value. The FCNI is the cost required to correct all deficiencies in a building divided by the total replacement cost of that building. This indicator is useful in determining which buildings should be considered for major renovations or upgrades.
- A useful tool in the development of a five-year capital renewal model.

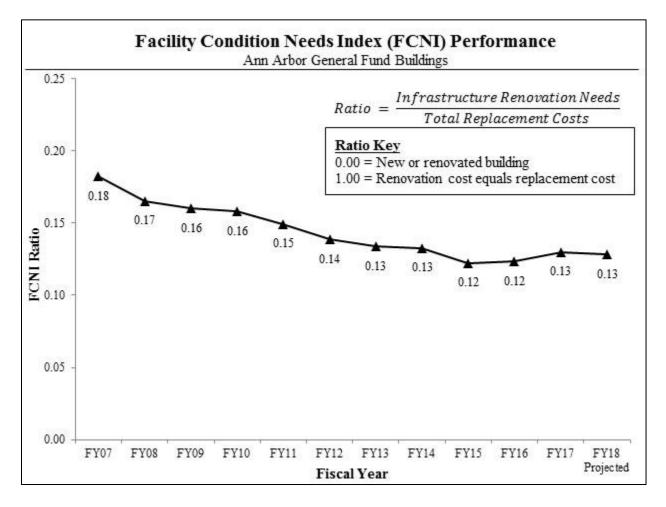

FCA Priority Classification System

The following system was developed to help clarify priorities and assist with consistency in planning and decision-making:

Priority		Definitions		
	······			
	Priority #1 Critical	Needed work that requires near-term action to accomplish one or more of the following: (1) restore building occupancy due to natural disaster or catastrophic failure (2) address cited or known life-threatening safety		
		hazard Needed work that requires near-term action to accomplish one or more of the following: (1) avoid situation from becoming a priority #1		
	Priority #2	(2) prevent accelerated deterioration of building component or system		
	High Priority	(3) replace component that has worn out or is no longer in service		
Necessary		(4) avoid loss of critical system that would significantly affect services, impact occupancy, or create a safety hazard		
		(5) address existing non-life-threatening safety hazard(6) maintain, restore, or upgrade conditions to minimum acceptable university standards		
		(7) reduce unacceptably high maintenance, energy and/or other operating costs (economically justified via payback)		
		(8) meet program requirements		
	Priority #3	Needed work that is expected to become a priority #1 or #2 within the next 10 years.		
	Necessary	,		
	Priority #4	Needed work that can probably wait more than 10		
Deferrable	-	years. This work will be completed during a building		
	Deferrable until	renewal.		
	Building Renewal			

Overall FCA Program Impact

The FCNI for campus buildings has been recorded for each fiscal year. The chart below shows FCNI history. This chart shows improvement of the General Fund FCNI through the years as infrastructure needs are addressed. Since fiscal year 2007, the FCNI has improved approximately 30 percent.

IMPLEMENTATION PLAN

Campus Planning

The university consistently ranks in the top ten of public universities in the United States, according to the U.S. News and World Report. Strategic facility investments allow the university to provide exemplary spaces serving a wide range of needs from classroom and research spaces, student residences and patient care, to athletics and the performing arts.

Several years ago, an integrated planning effort brought together major campus units into one comprehensive master plan. Integrated planning supports efficient resource allocation and identifies immediate, short-term and longer-term needs and planning opportunities to guide future land use planning and capacity targets, functional use requirements, transportation and pedestrian circulation, open space and recreational resources, and utility support. The comprehensive nature of this process ensures alignment between all units and prudent investment decisions.

As the university continues to experience new growth and expansion of existing programs and facilities, our commitment to making strategic facility investments remains a high priority. The U-M has maintained a strategic focus on transforming and enriching the student experience, resulting in a rigorous building renewal program for its residential halls and dining facilities. The university has also executed a significant renovation and expansion program for athletic facilities to address the aging condition of heritage structures, and to provide new amenities needed to remain competitive with U-M peers.

The effort to enhance transportation between campuses continues with the City of Ann Arbor, the Downtown Development Authority (DDA), the Ann Arbor Area Transportation Authority (AAATA), and the University of Michigan. The high capacity corridor as studied generally extends from the Ross Athletic Campus to Central Campus, the Medical Center Campus, North Campus and eventually East Medical Campus. The alternatives analysis phase of the study identified light rail as the preferred mode of transportation. Recently, several factors have caused the project team to refocus efforts to the core segments of the corridor, which carry the highest volume of trips. The most important of which are much higher than anticipated costs for the planning and impact analysis and uncertain state or federal funding. We have engaged with campus faculty experts in exploring potential lower-cost alternative concepts and newer technologies that may be available in the near-term. We will continue to work with our community partners for long-term planning.

The university continues to focus on ways to improve the quality of campus life with emphasis on locations and adjacencies, as well as the selection and organization of programs, services, offices, housing facilities, retail and amenities. In addition, improvement projects that will address facility needs for Recreational Sports and the University Unions are currently underway.

The university's housing system serves as home to approximately 10,000 undergraduate students in a typical year. Facilities include eighteen residence halls as well as 1,480 apartments on North

Campus that accommodate undergraduates, students with families and graduate students. Many years ago the university implemented a comprehensive capital plan to address significant building renewal of existing residence halls as well as new facilities for housing and dining. This included renovation of several heritage facilities as well as the construction of the first undergraduate residence hall in more than forty years, North Quadrangle Residential and Academic Complex.

Major improvements in student living and dining were accomplished through renovations to East Quadrangle in 2013, South Quadrangle in 2014, and to West Quadrangle in 2015. The university recently received two gold dining awards from the National Association of College and University Food Services for improvements to the South Quad dining center and the Fireside Café inside the Pierpont Commons. These highly coveted dining awards are given to colleges and universities that excel in incorporating new trends into their dining programs.

A new residence for graduate and professional students, the Munger Graduate Residences, opened its doors in August 2015. Made possible by a generous donation from philanthropist and alumnus Charles T. Munger, the facility houses 630 graduate students from multiple disciplines and provides opportunities for living and learning never before offered at the graduate level on the U-M campus.

Infrastructure planning continues as a critical component of the university's master plan. As the university continues to refine short-term and long-term facility needs, requirements for additional power, chilled water, domestic water, storm water, etc., will evolve. In addition, the university continues to explore ongoing regional storm water management strategies that will support new facilities through planned growth as well as impacts from renovation and maintenance projects. The university also anticipates a continued transformation to a more technology rich campus environment, which will certainly influence ongoing infrastructure requirements. Parking and transit requirements, and safe/efficient pedestrian circulation remain high priority design components with each upcoming project.

Major projects (over \$5 million) in various stages of planning, design or construction are detailed below. These projects support student life, collaboration and interdisciplinary learning, preservation of knowledge, international studies, and the university's commitment to nourish the arts and cultural activities on campus. Over the next five years, a wide variety of infrastructure needs or programmatic changes will emerge that will require the development of projects not on the lists. Although the university brings a consistent set of planning principles to all areas of campus, each campus has a unique set of dynamics. A brief description of the planning emphasis of each campus is provided.

Central Campus and Medical Center Campus

The development of Central Campus remains consistent with university planning principles that promote renovating and re-purposing existing facilities. A significant number of projects planned over the next several years in response to growth pressures by academic and research initiatives

focus on major renovations. A project to renovate and reuse the historic Alexander G. Ruthven Museums building includes renovations for dry laboratory computational research and administrative space. A building addition will provide new space to accommodate the growing need for active-learning classrooms and auditoriums. Once the renovation is complete, the university's administration will be relocated from the Fleming Administration Building to Ruthven. As part of our continued assessment of infrastructure needs and building conditions, we have determined that the Fleming Administration Building is too costly to repair and maintain, and it will be demolished.

Plans are also underway to renovate the 1915 Edward Henry Kraus Building to consolidate the School of Kinesiology and allow for future growth in programs. The renovation will address the building's deferred maintenance needs including full replacement of the mechanical, electrical and plumbing systems. Renovations for the College of Literature, Science and the Arts (LSA) will create new space to connect LSA undergraduates with opportunities such as internships and mentoring. A first floor renovation and building addition will house the college's Opportunity Hub and its internship program.

Addressing space needs for the College of Pharmacy remains a high priority for the university. The college offers a number of degrees in pharmaceutical sciences and engineering and medicinal chemistry and was recently named one of the top most affordable pharmacy schools in the United States. Over the past century, the college has delivered high-quality education and research, but this is becoming increasingly difficult to do in its current facilities. The college occupies space in six different campus building, four of which were built prior to 1960. The university is committed to helping the college identify long-term solutions that address the college's need for consolidated modern teaching and research spaces.

Another priority projects remains the renovation of and addition to the School of Dentistry's facilities in order to meet the school's academic, research and clinical needs. The state recently approved construction authorization as part of the university's FY17 Capital Outlay Request. This project will create a more welcoming, accessible facility with an improved patient entrance, modern teaching clinics and open, flexible research space.

Medical Center Campus planning continues to focus on redevelopment opportunities, as well as transportation and site improvements to support existing facilities. Longer term space needs to grow and improve inpatient clinical care may play a significant role in revisiting master planning assumptions. Michigan Medicine's ongoing strategic facilities master planning effort may have significant impact on planning for the future of the Medical Center Campus core area as well as the Wall Street district and the North Ingalls area.

North Campus

The development of North Campus continues to be a high priority planning focus. Efforts to strengthen and reinforce connections internally on North Campus, as well as between campuses, and strategies to further enliven and enrich student life on North Campus, remain a primary focus of ongoing planning activities. In addition, strategic facility master planning efforts are underway to address growth projections and space needs for the College of Engineering and the School of Information. A project to address this need is included as the FY19 Capital Outlay Project Request as described in Section VI.

The recent completion of the A. Alfred Taubman wing of the Art and Architecture Building provides new and reconfigured studio spaces, classrooms, and student support spaces for the Taubman College of Architecture and Urban Planning. While renovations to the George Granger Brown Memorial Laboratories, completed in fall 2016, bring key updates to instructional spaces and laboratories for the College of Engineering. Support from the State of Michigan capital outlay program was crucial to this project with the state providing \$30 million in capital outlay funding.

Mcity, a testing environment for automated and connected vehicles, opened in 2015 and has become the center for 21st century mobility. Locating the facility on North Campus allows many disciplines to come together to go beyond technical development and address key implementation issues related to social, regulatory and economic changes. Beginning this fall, Mcity is launching a driverless shuttle service on North Campus. This first-ever automated shuttle service is a critical project that will help researchers understand the challenges and opportunities presented by this type of mobility service.

A new high-tech Robotics Laboratory, currently in design, will bring faculty and students together from across multiple disciplines and will house research laboratories in an open plan to allow for greater collaboration and increased flexibility of space utilization. Ford Motor Company will occupy space in the building and work side-by-side with university researchers to accelerate autonomous vehicle research. Several key testing spaces include a robot walking lab, a flight testing lab and labs for electronics and software development.

Construction is underway to build M-Air, an outdoor fly lab for testing autonomous aerial vehicles (drones). The netted, four-story complex will be situated next to the Robotics Laboratory and will complement that facility's indoor drone testing environment. Together, the labs will allow a full spectrum of experiments. Researchers will be able to test unique control and sensing schemes and human-robot interaction. When M-Air opens in late 2019, U-M will be the only engineering school in the country with cutting-edge robotic test facilities for air, sea and land. These facilities are another example of the university's commitment to provide students and faculty best-in-class resources.

The North Campus Research Complex (NCRC) is home to approximately 2,550 occupants and continues to play a significant role in the future of North Campus. Since the acquisition of NCRC in 2009, more than 350 new jobs have been created and more than 30 partnerships have co-located here. Comprising 2.1 million square feet of space, NCRC provides an opportunity to bring together people and activities for research in health, biomedical sciences and other disciplines

without the enormous expense of building similar facilities. Planning is underway to renovate the last two empty buildings on the site to create more than 50 modern research laboratories. While construction is underway to renovate four NCRC buildings to collocate a large portion of Michigan Medicine's clinical pathology teams and educational programs. The project will enhance clinical laboratory functions necessary to meet present and future growth in test volumes, improve operational efficiency, and reduce the expense of having laboratories in multiple locations.

Ross Athletic Campus

The Ross Athletic Campus is primarily a venue for the Athletics Department, with numerous athletic fields and facilities. Facility program planning by the Athletic Department, and by Student Life – Recreational Sports, has resulted in a number of new projects that will enrich the experience for student athletes and for student recreation. Construction is underway for the Athletics South Competition and Performance Project, which will consolidate in one performance center specialized team spaces and shared resources for strength and conditioning, athletic medicine, a performance lab, meeting space and locker rooms, for men's and women's track and field, cross country, lacrosse, soccer and rowing. The project includes indoor and outdoor track competition venues, and a lacrosse stadium. Facility improvement projects are moving forward to support the intercollegiate football's strength and conditioning program including renovations that will provide updated spaces for athletic medicine, rehabilitation, and wellness and nutrition.

The Athletics Department recently initiated a strategic facility plan for the Ferry Field area. Facility needs within the historic core of the Ross Athletic Campus are being re-evaluated in response to the future shift of indoor and outdoor track south of the Michigan Golf Course.

Current and Planned Major Projects Ross Athletic Campus (>\$5M) FY17–FY22

East Medical Campus

East Medical Campus is primarily an outpatient clinical care complex that includes associated research and medical education activities. Opportunities for growth and investment by over the next fifteen years include new "cluster" development potential for ambulatory care and/or academic activities. Plans for future facilities at this location will fit within the framework of plans for Michigan Medicine and the university at large. Storm water management, transit and non-motorized transportation strategies, parking, and infrastructure improvements are all campus components that will be considered with any proposals that may come forward in the future.

Michigan Medicine Off-Campus

Ambulatory care activity has risen steadily over time and is now nearing two million visits per year. The need for strategically located outpatient facilities is core to the Michigan Medicine's plan to improve access to patient care. After the successful opening of the Northville Health Center in 2014, construction is underway on two additional off-campus facilities as noted below.

Michigan Medicine has expanded services into west Michigan under an affiliation agreement with Metro Health Corp. The agreement created a clinical care network that builds upon the strengths of the world-class U-M academic medical center and a very successful community-based health system. Together the two organizations are bringing health care innovation to west Michigan and beyond.

Current and Planned Major Projects Michigan Medicine Off-Campus (>\$5M) FY17–FY22

Infrastructure and Deferred Maintenance

Each year a significant number of infrastructure projects are prioritized through the Facility Condition Assessment program (as described in Section IV). A planning priority is to adapt existing facilities to meet current and future program needs for the campus by updating building infrastructure and re-programming/reconfiguring existing buildings. Re-programming and reconfiguring addresses building density, program and organization adjacencies, open site use, building addition or replacement options, and redistribution of the density to other areas.

The Capital Renewal Fund, established by the Office of the Provost, enables General Fund academic and administrative units to apply to have an aging building considered for renovation and reprogramming to address major infrastructure needs and to renew and extend the useful life of the building. The fund is used specifically for major renovations to an existing building and focuses on retaining the existing building footprint and square footage as much as possible. A key consideration during the review and selection process is how the building fits into the overall strategic vision and master plan for the physical campus.

In order to support a healthy and strong campus infrastructure for future generations, the university had a policy on fundraising related to facility endowments from 2009 to 2015 for newly named buildings. All such endowed funds are managed by the Executive Vice President and Chief Financial Officer (CFO). The CFO's office works closely with the users of the building to prioritize the facility needs and the uses of the endowment distributions to support capital maintenance and upkeep of the facility.

Status of State Building Authority Projects (Ann Arbor)

2025 Sustainability Goals and Strategies

The 2025 goals are based on a 2006 baseline for all goals with exception of the Sustainable Food Goal (as no baseline data was available). However, at the request of President Schlissel, the goals for greenhouse gas (GHG) reduction, waste reduction, and culture were re-evaluated beginning in the fall of 2014 in an effort to simulate faster implementation. Goal evaluation and adjustment will be based on many variables including but not limited to changes in technology, the State of Michigan energy platform, economics, and competing university priorities.

<u>Goal 1</u>: Decrease campus scope 1 and 2 carbon dioxide emissions by 25 percent by 2025. This goal focuses on reducing U-M's scope I and II greenhouse gas emissions for the Ann Arbor campus.

Successes to date:

- Planet Blue Operations Teams One way the university is addressing the growth in building energy demands is through the Plant Blue Operations Teams program, which actively engages the university community to conserve utilities thereby saving money and benefiting the environment.
- Expansion of building specific energy conservation projects throughout all General Fund and Auxiliary units of the institution.
- Introduction of a new renewable energy demonstration initiative that will link renewable energy technology to active research and curriculum on campus.
- The university continues to purchase wind renewable energy credits (RECs) through our DTE partnerships that account for 2-3 percent of the GHG emissions.
- The approval of the addition of a 15 MW turbine to the Central Power Plant which will reduce greenhouse gas emissions by 12 percent (expected completion 2020).

The U-M Design Guidelines for Design and Construction outline the institution's detailed requirements related to energy efficiency as well as sustainable design and environmental stewardship. The design guidelines and standard practices challenge architects to exceed the minimum baseline energy performance mandated by codes. Typical standard energy savings measures employed include additional insulation in foundation walls, exterior walls, and roof assemblies; energy efficient windows/glazing; occupancy sensors to reduce lighting levels; variable water flow controls; resetting of space temperatures based on occupancy sensors; and exhaust heat recovery.

Currently, under consideration is expanding the electric generating capacity of the Central Power Plant. The additional power would be provided by gas turbine technology. Implementation of this arrangement would reduce university scope two emissions by 85,000 MT of CO_2 yearly and provide capacity for future growth load.

Additionally, the university continues to evaluate energy and GHG reduction strategies including photovoltaics, wind and geothermal generation technologies. The purchase of additional REC's, building automation improvements, continuous monitoring of building systems, and the use of alternative bio-fuels in the Central Power Plant are actions in the early stages of implementation.

<u>Goal 2</u>: Decrease carbon intensity of passenger trips on U-M transportation options by 30 percent.

The university aims to reduce emissions associated with transportation by modeling and promoting sustainable transportation alternatives, such as public mass transit, car pools and van pools, and bike programs.

Successes to date:

- GreenRide is a web-based ride-matching system that helps university commuters find carpool/vanpool partners by searching for other employees who live nearby and have similar schedules. Over 7,000 employees have registered since the program launched in May 2008. The GreenRide program reduces the load on campus parking infrastructure, vehicle maintenance, and vehicle depreciation expenses. It reduces parking and campus traffic congestion and vehicle emissions, and contributes to the improvement of air quality.
- U-M Sponsored Vanpool system has entered its fourth decade of operation, with 640 employees participating in 104 vanpools.
- The university operates a large alternative fuel fleet with alternative fuel vehicles comprising more than 68 percent of the fleet. Of the 980 vehicles in the automobile class, more than 66 percent run on alternative fuels. Of the 332 cars and trucks that do not use alternative fuel, 37 are hybrid electric and 5 are fully electric.
- Of the 50 vehicles in the bus class, 100 percent run on alternative fuel, 25 of which are biodiesel hybrid electric.

<u>Goal 3</u>: Reduce waste tonnage diverted to disposal facilities by 40 percent.

Strategies include:

- Promote reuse, leverage new technologies, and reduce the use of disposable products such as plastic non-recyclable outer packaging.
- Establish and install university wide recycling, composting, waste bin, and related signage/labeling standards.
- Implement a university-wide organics composting program based on and expanding current programs in food service areas including the residence halls.
- Perform a detailed waste audit for Michigan Medicine to identify medical waste diversion opportunities.
- Develop purchasing and procurement strategies to increase the purchase of environmentally friendly products and decrease the purchase of products that contribute to the solid waste stream.
- Continue to expand the Sustainable Laboratory Program reducing chemical waste disposal.
- Work with university vendors to reduce packaging materials and minimum volume orders to reduce waste.

Successes to date include:

• Pre and post-consumer composting programs are in place in all residence hall dining facilities, 70 tons of food waste composted in FY17.

- Expansion of zero waste events across campus, 30,000 people engaged, 40 tons of material from events composted.
- Development of a zero-waste program for the Michigan Football Stadium full implementation in fall 2017.
- Establishing a new waste reduction program in Michigan Medicine to significantly reduce non-regulated medical waste from University Hospital and the Frankel Cardiovascular Center.

<u>Goal 4</u>: Protect Huron River water quality by reducing runoff from impervious surfaces and reducing the volume of land management chemicals used on campus by 40 percent.

The campus landscape is a critical part of the university's commitment to responsible environmental stewardship. The U-M has a legacy of landscape planning that is sensitive to water-use and inputs to the regional Huron River Watershed.

Strategies include:

- Apply an integrated landscaping approach that recognizes vegetation, soils, pavement systems, and storm water management as interlinked, and helps to restore the quality and capacity of the regional Huron River watershed.
- Minimize use of potable water for irrigation, increase water retained for beneficial purposes on campus, and improve the quality of water outflow.
- Reduce water use for infrastructure to the maximum extent possible.
- Reduce storm water runoff through on-site mitigation techniques such as rain gardens, storm water retention basins, or green roofs, when appropriate.
- Minimize irrigation through the use of drought resistant plantings and properly selected soils.
- Since 2006 use of pesticides have been reduced 54 percent.
- Since 2006 use of synthetic fertilizer has decreased 34 percent.
- Most of the reduction is due to a campus-wide effort to switch to organic fertilizer. At this time, it's estimated that 75 percent of fertilizer used on campus is organic.

<u>Goal 5</u>: Purchase 20 percent of U-M food in accordance with the U-M Sustainable Food Purchasing Guidelines.

The university purchases food for a variety of on-campus dining areas such as Residential Dining Services and MCatering and patient meals within the hospitals. Food is also purchased for retail areas including campus eateries and University Unions. MDining purchases represent 2/3 of on-campus dining spend and has made significant strides by engaging with new vendors that will help U-M meet this goal.

- Contracted with a local coffee roaster to provide Fair Trade/Organic coffee for the residential retail and dining halls.
- Contracted with a supplier that provides aggregation of produce from farmers in Southeast Michigan.
- Expanded local meat purchases.
- The Palmer Commons café operates a Farm to Table concept called Field's café.

While not always the case, the sustainability of food generally increases as the distance it travels from the point of harvest to consumption decreases. Minimizing transportation and refrigeration generally reduces fossil fuel consumption and carbon dioxide emissions. Local food also requires fewer preservatives and less packaging. In addition, local production often employs a more diverse crop strategy, which reduces pest susceptibility and the need for pesticide and chemical fertilizer use. Finally, supporting local farmers and growers keeps money circulating within the community longer and directly profits local producers.

Action Item: Community Awareness – The university will pursue stakeholder engagement, education, and evaluation strategies toward a campus-wide ethic of sustainability. The success of achieving the goals in the plan will require the active contribution of every member of the university community. The U-M cannot delegate responsibilities to a handful of departments, but rather must change behaviors as well as policies and practices. The president's committees took a hard look at this effort and made a number of recommendations around communication and marketing activities that can help improve community awareness and work toward faster goal implementation.

UNIVERSITY OF MICHIGAN – ANN ARBOR FISCAL YEAR 2019 CAPITAL OUTLAY PROJECT REQUEST

Institution Name:	University of Michigan – Ann Arbor
Project Title:	Computer Science and Engineering and School of Information
Project Focus:	Academic, research, and administrative support
Type of Project:	Building addition and minor renovation
Program Focus of Occupants:	Computer science, computer engineering, and information science
Approximate Square Footage:	163,000 gross square foot addition to the Beyster Building (98,000 net assignable square feet)
Total Estimated Cost:	\$145 million
Estimated Start/	Preliminary programming underway.
Completion Dates:	Construction completion TBD.

Is the Five-Year-Plan posted on the institution's public internet site?YesIs the requested project the top priority in the Five-Year Capital Outlay Plan?YesIs the requested project focused on a single, stand-alone facility?Yes

Describe the Project Purpose

The world around us is being transformed by technology and information every day, and how people (and society more broadly) engage with technology is shaping our culture and guiding our future. Boundaries are blurring between a range of disciplines (computer science, computer engineering, information science, etc.) that will lead to the next generation of innovations in transportation and mobility, education, manufacturing and healthcare, and more. This convergence of thinking and expertise is deeply interdisciplinary and is key to defining the future of technological innovation and its impact on society.

The University of Michigan (U-M) is positioning itself to play a leading role in interdisciplinary computing & information research, education and innovation, and in crafting this future by colocating two campus units that are essential to fulfilling this vision – the School of Information (SI) and the College of Engineering Computer Science and Engineering (CSE) Division – into one facility to better support the programmatic needs of each unit and increase interdisciplinary collaboration in the future.

School of Information

SI started as a program in library and information studies in 1926 when the Department of Library Science was created within the College of Literature, Science, and the Arts and later became a fully independent school in 1969. In response to rapid changes brought on by technology, the school broadened its teaching and research significantly in the 1990s and was renamed the School of Information.

Today, SI is a top-ranked school¹ focused on highly interdisciplinary programs and research that connect people, information, and technology in areas such as user experience research & design, human-computer interaction, health informatics, data analytics (big data analysis), library and information sciences, social computing, and computational social science.

Computer Science and Engineering Division

Founded in 1957 by computing pioneer Arthur Banks (an American mathematician whose work contributed to the design of the first general-purpose electronic digital computer, the "ENIAC"), CSE is one of the oldest and most respected computer science and engineering programs in the world. The program has a rich tradition of scientific and technological leadership in the world of computing with renowned alumni ranging from Edgar Codd, who contributed to the theory and practice of database management systems, to Larry Page, the co-founder of Google, all of whom have made lasting and major impacts to the computing world and world in general.

Today, CSE's success is reflected in its top 10 ranking² as a computer science and engineering program. Its world-class faculty and students explore and expand new directions of inquiry in a variety of areas, including mobile and cloud computing, ultra-low power and green computing, big data, machine learning, bio and health informatics, security and privacy, virtual environments, autonomous transportation, and more.

Through education, research, entrepreneurship, and collaboration, CSE and SI produce and nurture the bright minds who will guide us into the future, addressing societal problems and transforming our world through information and technology solutions. Enhancing the connections between these faculty and students will further advance our ability to create effective and impactful solutions.

Current Facility Constraints

Both SI and CSE have established a long history of successful programs and research but are severely constrained by their existing facilities, which are undersized and significantly hinder not only their current programs but also opportunities for future growth and interdisciplinary collaboration.

SI currently occupies 35,000 assignable square feet (asf) in the North Quadrangle Residential and Academic Complex (North Quad), which opened in 2006 and is located on the university's Central

¹ SI had the following U.S. News & World Report 2018 graduate program rankings: #1 Archives and Preservation, #1 Information Systems, and #5 overall for Library and Information Studies.

² CSE had the following U.S. News & World Report 2017 program rankings: #7 Computer Engineering (graduate), #8 Computer Engineering (undergraduate). In 2014, its Computer Science graduate program ranked #13.

Campus. In the planning leading to SI's location in North Quad, growth was anticipated, but by the time the school moved into their new space, it was already reaching full capacity. Since 2010, the school added two new degree programs (a Master of Health Informatics and a Bachelor of Science in Information) in response to student and industry demand, and experienced significant growth in student enrollment and faculty hires. For example, student enrollment increased from 425 students in 2011-12 to 820 students in 2017-18 (a 93 percent increase). SI faculty also increased from 31 in 2006 to more than 50 today (a 61 percent increase). In an effort to accommodate this growth, the school took on two nearby lease spaces (~8,000 asf) and is now exploring a third lease to temporarily address its space needs until a long-term solution is in place. Looking ahead, the school is planning to grow to ~850 students by 2021, doubling its enrollment from 2011.

CSE is in a similar situation. CSE occupies 44,000 asf in the Bob and Betty Beyster (Beyster) Building, a building on the university's North Campus that was completed in 2006. When CSE moved into the building, it had less than 600 students and 43 faculty members. Today, CSE has over 1,800 students (a 210 percent increase) and 71 faculty members (a 65 percent increase) occupying the same square footage that it has had for the past 11 years. Like SI, CSE has exceeded the capacity of its space and is unable to grow further due to space constraints. And projections suggest demand will continue to grow.

Impacts of Current Facility Constraints

Given the increasingly high demand for computer science and information graduates in the job market, both within the State of Michigan and nationally, the lack of space significantly hinders the ability of both of these programs to serve their students or to expand enrollments. These constraints also diminish the impact that additional technology-savvy graduates could contribute to the local and state workforce.

In addition to lack of space, physical separation also limits opportunities for SI and CSE to pursue the type of interdisciplinary collaboration that is vital to transformative innovation. With SI on the university's Central Campus and CSE on the university's North Campus, the two units are physically over two miles apart. The physical distance makes it challenging for them to collaborate or interact on a daily basis or in more meaningful ways, which is a missed opportunity given their complementary missions and strategic goals.

Project Vision

This capital project enables U-M to not only provide appropriate space to accommodate SI and CSE's current and future needs, but also to co-locate SI and CSE, creating a headquarters of computing & information innovation with a vision toward the future. Each program has a history of success on its own merits and each program's graduates and research are in high demand. Co-locating SI and CSE into one facility strengthens both programs by:

• *Providing appropriate physical space while leveraging economies of scale*. Both SI and CSE are constrained by their existing facilities, which were built when the two programs were half their current size. This project will provide enough space to meet the current and forecasted needs of each program, while finding opportunities for shared space and economies of scale.

- *Expanding opportunities for interdisciplinary courses and research*. This project enables the university to leverage the full spectrum of instructional and research activities offered by each individual program to deliver more interdisciplinary courses and research in the future.
- Supporting current and future job market and industry demands. More than 600 SI and CSE students graduate each year, but we need to do better to meet the growing demand for these types of skills and expertise in the workplace, particularly as industries continue to transform and to integrate computing technology into their products. For example, the automotive industry incorporates more and more computer technology into their vehicles, often using millions of lines of computer code per vehicle platform. With the advent of connected and autonomous vehicles and associated technologies, this trend is accelerating rapidly, not stopping, and puts the automotive industry into direct competition with technology giants, like Google, Apple, and Amazon. This project positions U-M to grow its SI and CSE programs to better support rapidly growing demand for technology talent within the State of Michigan and elsewhere.

Describe the Scope of the Project

The scope of this project is to accommodate the entire School of Information and to provide expansion space for CSE in one facility. To address these two combined needs, we plan to build a 163,000 gross square foot addition onto the Beyster Building, which currently houses CSE. A small amount of renovation will also be needed to the existing building to accommodate connections to the building addition.

The Beyster Building is 11 years old and is in excellent condition. It was originally designed and built to accommodate CSE and will continue to be needed for this purpose.

The Beyster addition will house all of SI and provide expansion space for CSE in a state-of-the-art environment that enables both units to successfully fulfill their respective instructional and research missions and support interdisciplinary collaboration. The facility will consist of instructional space, dry research labs, offices and student services/support space.

Both CSE and SI recently completed a preliminary programming study to define their respective needs in anticipation of this capital outlay project request. The study identified the following key priorities and needs for the project:

Research Space

• Create new, modern, and flexible dry research lab space to support the research needs of each unit independently and collaboratively now and in the future.

Instructional Space

- Create new, modern, and flexible classrooms that adapt to a variety of instructional pedagogies. This also helps address the need for more instructional capacity for the College of Engineering overall.
- Provide new class laboratory and maker space to enable students to practice what they've learned in class and apply it to various projects in creative and meaningful ways.

Student Services and Support Space

- Provide student service space for program areas such as career services, advising, international programs, and student organizations.
- Provide student lounge/gathering space to foster a sense of community and collaboration.

1. How does the project enhance Michigan's job creation, talent enhancement and economic growth initiatives on a local, regional, and/or statewide basis?

Both SI and CSE have a significant impact on the Michigan job market and economy by contributing talent to the workforce and innovation to industry, both of which will be enhanced by this capital project.

Contributions to Job Creation and Talent Enhancement

As one of the state's largest producers of science, technology, engineering, and math (STEM) talent, U-M contributes to the state's economic growth by first providing a high-quality STEM education that is continually in demand.

In 2007, the College of Engineering received 4,474 applications for admission. In 2016, that number grew to 14,666, an increase of 228 percent. During this same period, the university increased the College of Engineering's freshman class by 8 percent to accommodate some of the increased demand, a substantial fraction of which was driven by applicants interested in CSE. SI programs are also in high demand. For the current academic year (2017-18), SI welcomed the largest masters cohort in its history and demand for the school's Bachelor of Science in Information program continues to exceed expectations.

Based on the education that U-M SI and CSE students receive, the demand for SI and CSE talent in the workforce is high, as reflected in the following statistics from the career centers of both units. In 2015-16, there were over:

- 8,300+ jobs posted in SI and Engineering career centers, nearly 70 percent of which focused on computer science and engineering majors/backgrounds.
- 4,600+ interviews hosted on campus for students.
- 500+ employers participated in on-campus recruiting activities.
- 200+ CSE and SI internships accepted.
- Nearly 40 percent of all students providing employment information accepted jobs in the State of Michigan and we expect that to grow as exciting new opportunities are being created.

Contributions to Economic Growth

As two top-ranked, highly reputable programs, both SI and CSE contribute to the economy in a number of ways.

• Attracting students, faculty, and staff to the region. SI and CSE attract students, faculty, and staff from within the state and across the globe who make their residence in southeastern Michigan and contribute to all sectors of the local and state economy.

- Generating research expenditures. In fiscal year 2016, SI and CSE accounted for more than \$25 million in research expenditures. Since 2010, research expenditures for the two units exceeded \$200 million³. This funding was spent on employees, goods, services, and other expenses that support research activities and directly or indirectly benefitted the local, regional, and state economies.
- Innovating, inventing, and starting new companies. Since 2011 CSE research has led to more than 2,800 invention disclosures and 88 start-up companies. SI research has led to 16 invention disclosures/start-up companies.
- Cultivating the future workforce in high-demand fields. Since 2010, more than 3,500 students graduated from SI and CSE and entered the workforce, commanding starting salaries that range from ~\$70k (for an SI bachelor's degree) to in excess of \$100k (for CSE master's and PhD degrees). Graduates who remain in the state contribute their intellectual capital to the businesses in which they work and contribute financially to their local communities by renting or owning homes, shopping in stores, and going to restaurants, all of which benefits both the local and state economy.
- Attracting industry interest. Universities with top computer science-related programs tend to be magnets for attracting technology focused companies to the region. Examples of this type of attraction include Carnegie Mellon University (Uber, Yahoo!, Intel), Massachusetts Institute of Technology (MIT) (Bose, Hewlett Packard, iRobot), and University of Washington (Amazon, Microsoft). Locally, companies like Barracuda Networks, Notion, Duo Security, and Arbor Networks all have operations in Ann Arbor to be close to U-M, the University Research Corridor, and to benefit from being based on a technology- and innovation-focused area. The recent effort to attract Amazon to build their second headquarters in Michigan is based in part on the proximity to universities that produce talent and promote innovation.

The combination of all these contributions has, and will continue to have, a profound impact on the state's economic growth and competitiveness.

This project presents an exceptional opportunity for the university and the state to co-locate and expand capacity for these two high-demand programs that are foundational to nearly all sectors of the economy and to invest in fields that show no signs of slowing down. It provides critical state-of-the-art teaching, learning, and research space that will enable SI and CSE to continue attracting top students and researchers to the institution and to the state. It also provides researchers with a modern, collaborative research environment that enables them to expand their research portfolios and engage in new and innovative interdisciplinary research that can lead to more technology transfers and spin-off companies to enhance the state's economy in the future.

³ Since 2010, SI research expenditures were \$35.2M and CSE expenditures were \$165.8M.

2. How does the project enhance the core academic and/or research mission of the institution?

This project will have a significant impact on the academic and research missions of SI, CSE, and the institution by enabling SI and CSE to:

- Continue traditions of excellence and leadership as top-ranked programs by providing stateof-the-art teaching, learning, and research environments needed to recruit and retain top students and faculty
- Better compete for research funding and expand their research portfolios to include more innovative interdisciplinary activities
- Create a hub of computing and information science activity that attracts and engages others through planned and serendipitous interactions
- Develop and offer more classes that benefit both CSE and SI and give students and faculty from both programs more opportunities to engage and to learn from each other.

3. How does the project support investment in or adaptive re-purposing of existing facilities and infrastructure?

The university is leveraging an existing 11-year-old building (the Beyster Building), which is in excellent condition, and will add to it rather than construct an entirely new facility for SI and CSE. Other than minor renovation to accommodate connectivity/circulation to the new building addition, the current facility will not require major repurposing.

Additionally, while not directly part of this project scope, the space vacated by SI on Central Campus will be repurposed to address other university space needs.

4. Does the project address or mitigate any current health/safety deficiencies relative to existing facilities? If yes, please explain.

There are no current health/safety deficiencies within the existing building.

5. How does the institution measure utilization of its existing facilities, and how does it compare relative to established benchmarks for educational facilities? How does the project help to improve the utilization of existing space and infrastructure, or conversely how does the current utilization support the need for additional space and infrastructure?

With buildings varying in size, design, infrastructure and age, the university considers utilization of existing facilities primarily on a case-by-case, project-by-project basis.

The Bob and Betty Beyster Building (home to CSE) and the North Quadrangle Residential and Academic Complex (home to SI) have exceeded their respective capacities. As a result, both units have pursued creative solutions and made tough choices to adapt to the physical constraints they're experiencing. For example, in addition to SI leasing space off campus, CSE repurposed a

mailroom into faculty offices, purchased smaller desks to accommodate more students, and converted lunch rooms into graduate and undergraduate offices. CSE also shifted some instructional activities from North Campus to Central Campus to accommodate its capacity and space needs.

6. How does the institution intend to integrate sustainable design principles to enhance the efficiency and operations of the facility?

The university is fully committed to sustainability in teaching, research, and student life, and has a long history of environmental stewardship in its approach to facility design and construction. The university requires projects with a construction budget of \$10M or greater to exceed American Association of Heating, Refrigeration and Air Conditioning Engineers (ASHRAE) Energy Code 90.1-2007 by 30 percent. The university also requires the incorporation of numerous mandatory energy efficiency measures on projects, comprehensive evaluation of additional energy efficiency measures, and comprehensive modeling of energy usage for proposed projects and development of energy impact statements at each phase of design.

All projects (new construction, addition and renovation) with a construction budget of \$5M or greater are also subject to an environmental review process to help guide the design from a sustainable practices standpoint. At the conclusion of schematic design, the architect is required to develop a preliminary Leadership in Energy and Environmental Design (LEED) score for the project, using accredited personnel, as a measure of the project's overall sustainability. The combined SI and CSE project would adhere to these requirements and continue the institution's firm commitment to sustainability.

7. Are match resources currently available for the project? If <u>ves</u>, what is the source of the match resources? If <u>no</u>, identify the intended source and the estimated timeline for securing said resources.

The university has identified matching funds from an internal capital renewal fund that was established in fiscal year 2011 to address the growing need for major renovations in aging General Fund buildings. Additional funding will be provided by SI and College of Engineering fundraising and reserves to support this project.

8. If authorized for construction, the state typically provides a <u>maximum</u> of 75% of the total cost of university projects and 50% of the total cost for community college projects. Does the institution intend to commit additional resources that would reduce the state share from the amounts indicated? If so, by what amount?

Although the current state authorization anticipates a maximum state contribution of 75 percent toward the total cost of a project, we are very open to funding more than 25 percent, if required, as we did with our most recent state capital project authorization from fiscal year 2017-18 (HB-4323).

9. Will the completed project increase operating costs to the institution? If yes, please provide an estimated cost (annually, and over a five-year period) and indicate whether the institution has identified available funds to support the additional cost.

We estimate that the project will increase our annual operating costs by an average of \$2.2 million per year or approximately \$11 million over a five-year period. Funds have been identified to support these additional costs.

10. What impact, if any, will the project have on tuition costs?

The project will have no impact on future tuition costs.

11. If this project is not authorized, what are the impacts to the institution and its students?

Addressing the needs of SI and CSE remains a priority to the university. If the project is not authorized, the institution will either scale back the project or delay the project until all funding is available.

Scaling back the project means that some programmatic needs and square footage will be removed from the project scope, which will limit SI and CSE's ability to provide the highest quality experience for their students, faculty and staff.

Delaying the project means that both SI and CSE will continue to be:

- Significantly pressed for space and continue to operate in cramped, less than ideal facilities.
- Unable to address emerging needs for collaborative, research, and student project space.
- Unable to increase their enrollments beyond the current state, which, in turn, will constrain the number of students that enter the workforce in the future.
- Challenged to increase interdisciplinary collaboration due to the two-mile distance that physically separates them.
- At risk of losing students and faculty to other institutions that are not space-constrained and have modern, collaborative space to support teaching, learning, and research needs.
- At risk of missing research opportunities and associated funding from external agencies due to the lack of sufficient or appropriate lab space.

12. What alternatives to this project were considered? Why is the requested project preferable to those alternatives?

The alternatives to this project are to build a new standalone facility (either as a joint project or as two separate standalone buildings) or to place major additions onto SI and CSE's existing facilities to address their pressing space needs. All of these options would be costlier to do than the scope of this project, which leverages an existing building and economies of scale.

Both SI and CSE could also assume off-campus leased space to address their pressing space needs, but investing in privately-owned commercial property for a long-term solution away from campus versus investing in a university-owned facility is less than ideal and does not demonstrate good stewardship of university resources.
