Project Description

The new Central Campus Classroom Building is approximately 100,000 gross square feet with floor-to-floor heights to accommodate new classrooms. The building features a 550-seat auditorium, a 200-seat classroom "in the round" and other active learning classrooms. Adjacent to this new building the Ruthven Building has been renovated and

to work with LED lamps

Building Re-Use

Reuse of the existing building envelope and structure greatly reduces adverse environmental factors associated with new construction

- Original wood doors have been repurposed as wall paneling in both the University Hall and Reception Area
- The existing **roof system** was removed down to the concrete deck to provide roof insulation
- Insulation added to the existing **exterior walls** increase the thermal performance of the building envelope
- Windows were replaced with modern thermally broken frames and low-E insulated glazing, while maintaining the historic building's character

CHITECTURE, ENGINEERING AND CONSTRUCTION

U-M Building Number

repurposed to house administration and computational research space. The renovated building will also include a testing accommodation center in the lower level. The new classroom building and the Ruthven building are connected on the lower level.

historical light fixtures were retrofitted

The classroom "in the round" provides more equal access to the presenter, while assisted listening accommodations and barrier-free seating promote equity and inclusion

Daylight and Views

Curtain windows provide occupants with views to the outside and a connection to the campus community, while natural daylight reduces lighting loads and electrical consumption

Solar operated shades in public spaces reduce glare and reflect or absorb heat from the sun **Open Stairwell**

Stair use is encouraged promoting occupant health and well-being while reducing the electrical demands associated with elevator use
